The base of the road will be armored with 18-inch minus rock, approximately 3-feet high, for a length of approximately 185 feet along the toe of the slope to protect the existing road from being eroded by Corral Hollow Creek. The work will be performed by State Parks equipment operators using an excavator to place rock to preserve the road and backfill with native material that originated from within the same watershed. 			performed dredging every three years or so, removing an average of 20,000 to 50,000 cubic yards of sediment each time the lake has been dredged. The greatest amount removed was 56,700 cubic yards in 1997. The exact amount of material removed is dependent on the size of preceding winter storms and the number of years between dredging operations.
