Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

In short, it seems incomprehensible to me, that in this day, when environmental impacts are more fully understood, that you would even consider plowing under any of the last remaining coastal habitat that is so vital to wildlife and the quality of life in what remains of southern california, one of the most naturally beautiful landscapes on earth. Haven't we decimated enough. You know we have. Let us work to preserve what is most precious to southern california for ourselves and for future generations.
Thank you.
Sincerely,

Denise Croft

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Kirk Jackson

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

arlie parker

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Rodrigo Eguez

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Jason Pereira

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Alton Cullen

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,
Mark Lujan

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Pierre Denis

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Tiki Nilsen

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Esther Newman

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Chad Pollinger

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Zach Groban

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Steven Nasker

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Lin Heidt

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Richard Burton

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Mat Deveze

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Dionne Carlson

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Michael Henderson

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Gail Powell

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

You have got to be kidding me. How many times do we have to tell these people "no". No we don't want your toll road. No we don't want its impact on the environment. And no, we don't want its impact on what is supposed to be arterials for LOCAL traffic and our residential areas. This is a shameless attempt to circumvent previous decisions..

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Sarah Call

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

William Bregon Jr

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

mary moser

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Anthony Aurigemma

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

I Whitley

Please thoughtfully consider my plea to stop the TCA from moving forward with this "Road to Nowhere".
They have no concern for the environment and the importance of San Onofre State Beach as a public beach.
Also consider the financial cost of build the Toll Road. In these times of so many other important issues at hand that we as a state need to attend to.
Thank you ahead of time for your support on this matter.

Sincerely,

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Matthew Baldwin

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

James Provenzano

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

mike quiethawk

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Scott Iwamoto

TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Silka Kurth

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Reed Johnson

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year. There is also the environmental impact to the local wildlife in the area.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

As an Orange County resident, I oppose TCA's continued efforts to build a road that no one wants and can devastate my quality of life in this county. We need open spaces in California. That is one of the reasons we live here - to enjoy the scenery, the wildlife and the peace of this area. We don't have to pave over everything!

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Ken Marineau

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

Please deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

1. This segmentation approach is illegal under both state and federal law. The TCA is taking this illegal approach in an attempt to circumvent the full route's overwhelming rejection in 2008, by both the California Coastal Commission and the Bush Administration, due to its devastating environmental impacts.

2. The TCA's application does not meet the standards required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands and to San Juan Creek and its watershed that could subsequently impact coastal resources.

3. This 5-mile segment would be literally a "road to nowhere," ending at a dirt road with no clear way to get to I-5. The result would be increased traffic congestion along already-overburdened Ortega Highway (SR 74) through San Juan Capistrano.

Allowing the Tesoro Extension, or any other segment of the road, to be built would give the TCA momentum to complete the rest of their desired route, through to I-5 at San Mateo Creek. This would negate the 2008 rejection of the TCA"s desired route, negate the strong governmental and overwhelming popular opposition to this route.

For these reasons, please DENY the TCA's application for waste discharge requirements for the Tesoro Extension project.

Respectfully,

Celia Kutcher

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

William Barham

Subject: You Must Deny Tesoro Extension Waste Discharge Permit!!

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to the devastating impact it would have on the ecosystem. Despite having their plan rejected, the TCA remains undeterred and now plans to build the road in segments. As you surely know, THE SEGMENTATION APPROACH IS ILLEGAL UNDER BOTH STATE AND FEDERAL LAW. Do not let TCA perpetrate this sham attempt to defy our laws.

Further, the TCA's application does not appear to meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking the impact to wetlands, the San Juan Creek, and the surrounding watershed, all of which could subsequently negatively affect coastal resources. The first section of the road is not only environmentally damaging but would give the TCA momentum to complete the full road all the way to I-5, which would undeniably both devastate fragile watersheds and greatly affect San Onofre State Beach, a historic and beloved recreation spot for more than 2.4 million visitors and surfers each year.

As if the negative impact on the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents and others who pass through our borders. It is complete pretense that building this next segment would lessen the logjam of heavy traffic on I-5. It would simply overwhelm San Juan Capistrano and neighboring cities.

For these reasons, I urge the Regional Board to deny waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Jackie Dooley

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

Please save San Onofre State Beach for future generations. It is the last major undisturbed beach between Los Angeles and the Mexican border. It is an irreplacable cultural and environmental sanctuary. Its destruction in the name of an ill-conceived and unnecessary toll road would be a tremendous loss, not just for me, but for my family, friends and the thousands of other Californians that enjoy the natural beauty of San Onofre every year. Please deny the Tesoro discharge permit.

Below is the boilerplate text on this issue from Surfrider:

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Greg Meier

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Matt Carter

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I was active participant in the first attempt by TCA to implement a toll road and destroy a tremendous aspect of the California Coast. I would think with such precedent, denial of any permit to TCA as it relates to a toll road should be simple and straight forward. The public and appropriate agencies have spoken. Do the same. Deny the permit out right. To do otherwise is a gross betrayal of the public trust.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Randall Hartman

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Lowell Jarman

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Andre Willey

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Kenneth Smith

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

The other day I received a notice by email that from a Orange County Coalition that the majority of Orange County residents support the toll road. I do not. I have lived in Orange County for 27 years and have seen the increased development that every toll road brings. I do not have any associates or friends that support the extension of the toll road in Orange County. The TCA's actions and requests for permits to extend the toll road through Southern Orange County should be denied.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

wayne keck

Subject: yes YES Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to move forward the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is legal under both state and federal law.

TCA is not overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not environmentally damaging and the first segment of the road would give the TCA momentum to complete the full road as it shoulkd. Their full road would absolutely save the fragile watersheds, greatly improve San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

The impacts to the environment is not bad, this first 5-mile segment would be a literal "road to somewhere," ending at a dirt road and end traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to vote YES for waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to not extend the public comment period.

Sincerely,

larry Beltramo

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Kristina Ackermann

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

The citizens of California, the California Coastal Commission and the Bush Administration have clearly shown that this road is not supported and should not be built. Not in segments. Not at one time. It cannot be built at all as proposed by the TCA.

I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Gordana Kajer

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Mike Dummer

Subject: Please Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's (TCA) waste discharge requirements (WDR) application for the so-called Tesoro Extension -

In itself this "extension" would be a literal "road to nowhere" which could create traffic nightmares for thousands of Orange County residents. So the "extension" seems intended to be a first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected this proposed road due to its devastating impacts. Despite this rejection the TCA evidently plans to build the road in segments, even though a segmentation approach is illegal under both state and federal law.

The TCA's application before you apparently fails to meet standards required by the Southern Orange County Hydromodification Management Plan (HMP). TCA disregards both direct impacts - to wetlands and to the San Juan creek and the surrounding watershed - and also subsequent impacts to coastal resources.

The proposed extension in itself would be environmentally damaging. The full road - whose construction would be the only evident rational reason for the extension - would devastate fragile watersheds and greatly impact San Onofre State Beach - a beloved beach and surf recreation spot for nearly 2 1/2 million annual visitors.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project.

I also urge the Board to extend the public comment period to March 13th to allow this comment and others' comments to be included in the official record of proceedings.

Sincerely,

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Brent alex Sandberg

I may currently be living in Hawaii, but this is an issue that knows no bounds & I will continually voice my support against the construction of this road. I have been since they proposed the idea & I always will until Trestles Beach is designated protected & this idea is thrown out! Please, don't ruin one of California's natural treasures!!!

...and if you think the traffic is bad & merits a road, take a lesson from Hawaii, the traffic is HORRIFIC, but they still know that ruining what makes their state beautiful for human pollution is WRONG.

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Vanessa Lopez

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

The toll road experiment is a bust. Not one of them built in Orange County pulls its weight and all of them but the 91 Freeway express lane have damaged public parklands and open space forever. The 73 toll road was only constructed so builders could toss together the "town" of Aliso Viejo, which has only increased pressure on the 5 freeway's capacity and not alleviated anywhere near the traffic generated by their development. It bisected Laguna Coast Wilderness Park, interrupting wildlife corridors and adding pollution of all kinds, and the other toll roads have wrought similar damage. For this privilege, we taxpayers have to foot the bills that the TCA can't pay.

The last thing we need is another toll road that will only lead to far greater traffic, air pollution, and runoff into the ocean. And this land belongs to us, not the BIA! Their new scheme is to sneak it through the safeguards that protect our lands and try to build it in segments... a sneaky and fearful plan that betrays the unworthiness of this project.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County. The only purpose for this toll road is to let additional development to be built in fragile areas, some of the last large tracts of open space left in South Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected, the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Joel Isackson

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Blanche Welch

Subject: Support 241 Toll Road's Waste Discharge Requirement Permit

I support the Waste Discharge Requirement (WDR) permit submitted by the Foothill/Eastern Transportation Corridor Agency (TCA) for the Tesoro Extension project in Orange County.

Well-planned transportation and infrastructure projects like the Tesoro Extension build prosperous communities. With the large-scale residential/commercial construction underway at Rancho Mission Viejo, it's vital that I-5 have an alternative route - that route needs to be the 241 Toll Road's Tesoro Extension.

TCA will create, restore and/or enhance 34.82 acres of habitat for .4 acre of impact the extension will have. TCA will utilize best management practices to maintain existing drainage flow patterns and treat all road runoff to the maximum extent before discharging to receiving waters to maintain existing beneficial uses and meet water quality objectives established by the Regional Board and the Water Quality Control Plan for the San Diego Basin.

Join me and support TCA's WDR application.

Sincerely,

Patrick

Subject:	Support 241 Toll Road's Waste Discharge Requirement Permit

I support the Waste Discharge Requirement (WDR) permit submitted by the Foothill/Eastern Transportation Corridor Agency (TCA) for the Tesoro Extension project in Orange County.

Well-planned transportation and infrastructure projects like the Tesoro Extension build prosperous communities. With the large-scale residential/commercial construction underway at Rancho Mission Viejo, it's vital that I-5 have an alternative route - that route needs to be the 241 Toll Road's Tesoro Extension.

TCA will create, restore and/or enhance 34.82 acres of habitat for .4 acre of impact the extension will have. TCA will utilize best management practices to maintain existing drainage flow patterns and treat all road runoff to the maximum extent before discharging to receiving waters to maintain existing beneficial uses and meet water quality objectives established by the Regional Board and the Water Quality Control Plan for the San Diego Basin.

Join me and support TCA's WDR application.

Sincerely,

Robert

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

w armstrong

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Tamineh Tolentino

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Valerie Moore

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

merle moshiri

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Paul Szuszkiewicz

The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

ed bergman

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Lindsay Malinoski

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Reidun Carstens

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Jim Johnston

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Pierce Flynn

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Lynn Leslie

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

olivia kelly

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Rich Sialana

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Andrew Virtue

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Amy Krynicki

Subject: Deny Tesoro Extension Waste Discharge Permit--DO THE RIGHT THING!

Dear Mr. Bradford

There's no going back! It was decided before, please don't let it be frittered away...

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Ben Willetts

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Chris Wilinski

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Carey Strombotne

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,
Steve Hogan

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Michele Lewis

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Gayle Tarkington

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Chris Novak

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Westry Whitaker

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Megan Hamilton

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Shannon Unger

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road.

I am not falling for the TCA's ruse that this is a road with independent utility. The TCA has intended to build the full toll road to the I-5 even though they were turned down twice in 2008. They are now just trying to build it in sections and create an argument that since the first pieces are in place, now they have to finish the road. They are taking steps to wait for the right political an economic environment to make this final argument. Their full road would devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Alicia Campbell

Subject: Support 241 Toll Road's Waste Discharge Requirement Permit

I support the Waste Discharge Requirement (WDR) permit submitted by the Foothill/Eastern Transportation Corridor Agency (TCA) for the Tesoro Extension project in Orange County.

Well-planned transportation and infrastructure projects like the Tesoro Extension build prosperous communities. With the large-scale residential/commercial construction underway at Rancho Mission Viejo, it's vital that I-5 have an alternative route - that route needs to be the 241 Toll Road's Tesoro Extension.

TCA will create, restore and/or enhance 34.82 acres of habitat for .4 acre of impact the extension will have. TCA will utilize best management practices to maintain existing drainage flow patterns and treat all road runoff to the maximum extent before discharging to receiving waters to maintain existing beneficial uses and meet water quality objectives established by the Regional Board and the Water Quality Control Plan for the San Diego Basin.

Join me and support TCA's WDR application.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

Hello. My name is Kent Oberlin and I live in San Diego California. I run a few businesses and have a family to keep up with with two very little girls at ages 4 and 7 years. Needless to say I have a priority list I must stick to, of which my family is on and is number one! Number two on the list? Taking action and dutifully bearing my responsibility as an inhabitant of this beautiful nation and planet which I love dearly, to keep it as beautiful and bountiful as when I arrived!

I want my children to able to enjoy it as much as me as they grow into their own version of responsible citizens. That is why I am writing to you to voice my opinion regarding the subject of this email, the protection of one of the last stretches of untainted coastlines in Southern California, San Onofre State Beach.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Kent Oberlin

TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Ed Wall

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Matthew Willis

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Beth Donivan

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Chris Zamoscianyk

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

Hello Sir or Madam,

Below is a form letter and I support the content; however I wanted to include a short personal note in addition to the below letter. While I no longer live in southern California, stopping the toll road at Trestles remains a priority that is near and dear to my heart. I know of people who support this road simply because they are tired of traffic and think the toll road will alleviate it. What is traffic? It is imposed on by humans and our growing population. I am content to ask people to find alternate methods to get where they need to go including public transportation, train, and carpooling. I believe that a human inconvenience is not cause for destroying natural habitat. Our earth is already in peril - please do not condone more destruction by allowing this toll road. Thank you for your time.

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Jacqueline Thibeau

Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

Jenna Holland

Subject: Deny Tesoro Extension Waste Discharge Requirement

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

Subject: Support 241 Toll Road's Waste Discharge Requirement Permit

I support the Waste Discharge Requirement (WDR) permit submitted by the Foothill/Eastern Transportation Corridor Agency (TCA) for the Tesoro Extension project in Orange County.

Well-planned transportation and infrastructure projects like the Tesoro Extension build prosperous communities. With the large-scale residential/commercial construction underway at Rancho Mission Viejo, it's vital that I-5 have an alternative route - that route needs to be the 241 Toll Road's Tesoro Extension.

TCA will create, restore and/or enhance 34.82 acres of habitat for .4 acre of impact the extension will have. TCA will utilize best management practices to maintain existing drainage flow patterns and treat all road runoff to the maximum extent before discharging to receiving waters to maintain existing beneficial uses and meet water quality objectives established by the Regional Board and the Water Quality Control Plan for the San Diego Basin.

Join me and support TCA's WDR application.

Sincerely,

Bill

Subject: Deny Tesoro Extension Waste Discharge Permit

Dear Mr. Bradford

I urge the Regional Board to deny the Foothill/Eastern Transportation Corridor Agency's ("TCA") application for waste discharge requirements ("WDR") for the so-called Tesoro Extension, the first five-mile segment of the proposed Foothill-South Toll Road in southern Orange County.

In 2008, both the California Coastal Commission and the Bush Administration rejected the toll road due to its devastating impacts. Despite being rejected the TCA remains undeterred and now plans to build the road in segments. This segmentation approach is illegal under both state and federal law.

I am concerned the TCA's application does not meet the standards as required by the Southern Orange County Hydromodification Management Plan (HMP). TCA is overlooking impacts to wetlands, the San Juan creek, and the surrounding watershed that could subsequently impact coastal resources. The first section of the road is not only environmentally damaging, but this segment of the road would give the TCA momentum to complete the full road. Their full road would absolutely devastate fragile watersheds, greatly impact San Onofre State Beach and the beloved recreation spot for more than 2.4 million visitors/surfers each year.

As if the impacts to the environment were not bad enough, this first 5-mile segment would be a literal "road to nowhere," ending at a dirt road and threatening to create traffic nightmares for thousands of Orange County residents.

For these reasons, I urge the Regional Board to DENY waste discharge requirements for the so-called Tesoro Extension project. I also urge the Board to extend the public comment period to March 13th to allow my comments to be included in the official record of proceedings.

Sincerely,

ferial nassirzadeh
