Subject: Re: DCP for RTDOT folks

Here is our assumed basic monthly break down for the SRSCs for the scenarios in the FEB 15 DCP. The historic monthly data does vary a lot by water year – especially in the spring period depending on spring hydrology. But all in all, these data seem compatible with the normalized Bulletin 120 Sacramento Valley depletion analysis.

	Apr	May	Jun	Jul	Aug	Sep	Oct	Total
99% (base)	80	250	270	270	230	60	40	1,200
99% (adjusted)	50	220	290	290	250	60	40	1,200
90% (adjusted)	90	310	380	380	370	90	80	1,700
50% (base)	140	360	360	370	320	80	70	1,700

p.s. - the totals for rows 3 and 4 are adjusted slightly (from my previous totals) to account for some round-off adjusting.
