Requested changes or additions to the currently proposed "SF Basin Plan"

On page 358 (Rindler Creek) of the proposed Beneficial use Documentation Table, the Water Body Type is proposed as "Intermittent Stream" At this point of Rindler (confluence of Rindler and Blue Rock Springs Creek) it is "Perennial" and should be noted as such.

On page 359, (Blue Rock Springs Creek) is noted as Intermittent, this creeks Headwaters lie within the Blue Rock Springs Creek Golf Course, this Creek is fed by Ground Water, it runs year round, it should be noted as "Perennial" Though it is discharges into Rindler Creek, this Discharge takes place approx. 2500 Feet above Lake Chabot, should be considered a Tributary to the Mouth of the Lake.
Blue Rock Springs Creek should also be noted as "FRESH".

I have 7 years of involvement in stewardship of these waterways. My advocating for Lake Chabot requires and provides for me an understanding of our greater watershed. My requests noted above are not only to provide "Clarity" for you the Waterboard, but for all others who might refer to the SF Basin Plan. (2.3 Project Objectives)

CALIFORNIA REGIONAL WATER
