Subject:	Letter to the Regional Water Quality Control Board
Date:	Monday, January 07, 2019 8:54:45 PM

Dear Chair Young and Members of the Board:

California's state agencies should be leaders in complying with federal and state pollution laws that protect San Francisco Bay and other waterways. But the California Department of Transportation (Caltrans) has failed for years to comply with the Clean Water Act and its stormwater permit requirements to control trash.

More than two years after a formal Notice of Violation, Caltrans still has not produced an acceptable plan to halt its illegal pollution. We appreciate the Board finally proposing a Draft Order requiring Caltrans to take specific trash control measures, but that order must be significantly strengthened to reduce damage to the Bay. We urge you to revise the draft order to require:

- *Accelerated installation of full trash capture actions that intercept trash from an additional 1,000 acres each year to achieve 6,000 acres of treatment by 2024, and treatment of all significant trash generating areas – no less than 8,820 acres – by 2028,*
- *Submission by Caltrans of a detailed trash generation map and explicit work plan within 3 months of permit adoption, and commitment of budgeted funds to implement the order,*
- *Cooperative agreements with municipalities to fund operation and maintenance of trash capture devices in addition to installation.*

These changes are essential to protect the Bay's ecology and recreational value, achieve timely compliance with pollution laws, and hold Caltrans accountable for the same trash control requirements you impose on cities and counties. The Board should vote to approve the Order with these changes.

Thank you for taking these crucial actions to stop pollution of the Bay from Caltrans roads.

Sincerely,

Comments
Caltrans has a moral and legal responsibility to plan and respond to the litter contaminating our roadways and adjacent natural areas. Daily, I see litter lining Highway 1 as I commute past the north-bound tunnel neighboring Mountain Lake in the Presidio of San Francisco. Plastic waste, especially micro plastics, travel through the chain link fence and pollute the lake and park where rare wildlife species live. It is necessary to create and implement a plan to contain roadside waste so it does not wash downstream and harm our wildlife. The San Francisco Bay Area is a very special place to live, with high amounts of biodiversity--don't let roadside pollution be yet another factor in degrading our environment.
