WHEREAS, on September 16, 1983, in the San Luis Obispo City Hall Council Chambers, 990 Palm Street, San Luis Obispo, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that pages 2-3 and 2-4 (Table 2-1) of the Basin Plan be revised and amended as shown on Attachment A and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 16, 1983.

Executive Officer

ENVIRONMENTAL
ASSESSMENT
OF
WATER QUALITY
CONTROL PLAN,
CENTRAL COASTAL
BASIN AMENDMENT

Amendment of Beneficial Uses

July 8, 1983

As Required by the California Environmental Quality Act
and Federal Clean Water Act

DESCRIPTION OF THE PROJECT

The Water Quality Control Plan, Central Coastal Region (Basin Plan) is being updated to modify water quality standards for protection of beneficial uses of water resources in the region. The Basin Plan was adopted in April, 1975, according to provisions in the Federal Water Pollution Control Act (amended in 1977, as the Clean Water Act) and the California Water Code. The Clean Water Act requires a review of applicable water quality standards every three years. California Water Code requires periodic review of basin plans. This Basin Plan amendment is one product of the Central Coast Region's first triennial review.

In 1975, the Environmental Protection Agency (EPA) approved the Basin Plan with the condition that a REC-I designation be added to those waters without a REC-I designation in Table 2-1, "Existing and Anticipated Uses of Inland Surface Waters". A REC-I designation pertains to all recreational uses involving actual body contact with water, such as swimming, wading, water skiing, skin diving, surfing, sport fishing, uses in therapeutic spas, and other uses where ingestion of water is reasonably possible.

The Regional Water Quality Control Board (Regional Board) regarded EPA's condition as inappropriate because many waters are extremely shallow, drainageways may be dry most of the year, or water contact recreation is prohibited. However, the Regional Board agreed to reevaluate the REC-I designation for those waters not already designated as such as part of the continuing planning process. Because the Basin Plan is in the midst of the first triennial review, a review of the REC-I designation is in order.

Local agencies were contacted regarding REC-I possibilities for those surface waters not already designated as such. If REC-I uses were not likely, reasons for non-water contact recreation were also obtained. This amendment either designates a surface water with a REC-I beneficial use, where applicable, or states reasons why specific surface waters do not have a REC-I designation.

The proposed Basin Plan amendment must be approved by the Regional Board and the State Board before it becomes effective. In addition, the Environmental Protection Agency will be asked to approve the updated Plan.

ALTERNATIVES TO THE PROJECT

1. No action: The objectives of the Basin Plan amendments are to make the Basin Plan consistent with present Federal and State requirements and make water quality objectives and management practices responsive to water quality problems. If no action is taken, Regional Board staff and other responsible persons will not receive effective direction necessary to implement Federal and State requirements. The intent of the Basin Plan is to protect water quality and public health.

2. Adoption of more or restrictive standards and strategies: The proposed beneficial uses are reasonably achievable through coordinated control of all factors which affect water quality in the area. The proposed beneficial uses are consistent with the State Water Resources Control Board's guidelines and policies, including the nondegradation policy. Adoption of more restrictive beneficial uses would place an inordinate financial burden on those responsible for implementing the plan.
3. Adoption of less restrictive standards and management practices: Less restrictive standards and management practices would not provide adequate protection for water quality and public health.

ENVIRONMENTAL CHECKLIST FORM

I. BACKGROUND

1. Name of Proponent California Regional Water Quality Control Board, Central Coast Region

2. Address and Phone Number of Proponent:

1102-A Laurel Lane

San Luis Obispo, CA 93401

(805) 549-3147

3. Date of Checklist Submitted September 16, 1983

4. Agency Requiring Checklist Resources Agency

5. Name of Proposal, if applicable Revision and Amendment of the Water Quality Control Plan, Central Coastal Basin (Revision and Amendment of Table 2-1, "Existing and Anticipated Uses of Inland Surface Waters")

II. ENVIRONMENTAL IMPACTS

(Explanations of all "yes" and "maybe" answers are required on attached sheets.)

1. Earth. Will the proposal result in:

YES MAYBE NO

a. Unstable earth conditions or in changes in geologic substructures? ___ ___ X

b. Disruptions, displacements, compaction or overcovering of the soil? ___ ___ X

c. Change in topography or ground surface relief features? ___ ___ X

d. The destruction, covering or modification of any unique geologic or physical features? ___ ___ X

e. Any increase in wind or water erosion of soils, either on or off the site? ___ ___ X

f. Changes in deposition or erosion of beach sands, or changes in siltation, deposition or erosion which may modify the channel of a river or stream or the bed of the ocean or any bay, inlet or lake? ___ ___ X

g.	Exposure of people or property to geologic hazards such as earthquakes, landslides, mudslides, ground failure, or similar hazards?			X
2.	Air. Will the proposal result in:			
a.	Substantial air emissions or deterioration of ambient air quality?			X
b.	The creation of objectionable odors?			X
c.	Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally?			X
3.	Water. Will the proposal result in:			
a.	Changes in currents, or the course or direction of water movements, in either marine or fresh waters?			X
b.	Changes in absorption rates, drainage patterns or the rate and amount of surface water runoff?			X
c.	Alterations to the course or flow of flood waters?			X
d.	Change in the amount of surface water in any water body?			X
e.	Discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity?		X	
f.	Alteration of the direction or rate of flow of ground waters?			X
g.	Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations?			X
h.	Substantial reduction in the amount of water otherwise available for public water supplies?			X
i.	Exposure of people or property to water related hazards such as flooding or tidal waves?			X

4. Plant Life. Will the proposal result in:
- a. Change in the diversity of species, or number of any species of plants (including trees, shrubs, grass, crops, microflora and aquatic plants)? ___ ___ X
 - b. Reduction of the numbers of any unique, rare or endangered species of plants? ___ ___ X
 - c. Introduction of new species of plants into an area, or in a barrier to the normal replenishment of existing species? ___ ___ X
 - d. Reduction in acreage of any agricultural crop? ___ ___ X
5. Animal Life. Will the proposal result in:
- a. Change in the diversity of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects or microfauna)? ___ ___ X
 - b. Reduction of the numbers of any unique, rare or endangered species of animals? ___ ___ X
 - c. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? ___ ___ X
 - d. Deterioration to existing fish or wildlife habitat? ___ ___ X
6. Noise. Will the proposal result in:
- a. Increases in existing noise levels? ___ ___ X
 - b. Exposure of people to severe noise levels? ___ ___ X
7. Light and Glare. Will the proposal produce new light or glare? ___ ___ X
8. Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area? ___ ___ X
9. Natural Resources. Will the proposal result in:
- a. Increase in the rate of use of any natural resources? ___ X ___
 - b. Substantial depletion of any nonrenewable natural resource? ___ ___ X

- | | | | | |
|-----|--|-------|-------|-------|
| 10. | Risk of Upset. Does the proposal involve a risk of an explosion or the release of hazardous substances (including, but not limited to, oil, pesticides, chemicals or radiation) in the event of an accident or upset conditions? | _____ | _____ | X |
| 11. | Population. Will the proposal alter the location, distribution, density, or growth rate of the human population in the area? | _____ | _____ | X |
| 12. | Housing. Will the proposal affect existing housing, or create a demand for additional housing? | _____ | _____ | X |
| 13. | Transportation/Circulation. Will the proposal result in: | | | |
| | a. Generation of substantial additional vehicular movement? | _____ | _____ | X |
| | b. Effects on existing parking facilities, or demand for new parking? | _____ | _____ | X |
| | c. Substantial impact upon existing transportation systems? | _____ | _____ | X |
| | d. Alterations to present patterns of circulation or movement of people and/or goods? | _____ | _____ | X |
| | e. Alterations to waterborne, rail or air traffic? | _____ | _____ | X |
| | f. Increase in traffic hazards to motor vehicles, bicyclists or pedestrians? | _____ | _____ | X |
| 14. | Public Services. Will the proposal have an effect upon, or result in a need for new or altered governmental services in any of the following areas: | | | |
| | a. Fire protection? | _____ | _____ | X |
| | b. Police protection? | _____ | _____ | X |
| | c. Schools? | _____ | _____ | X |
| | d. Parks or other recreational facilities? | _____ | X | _____ |
| | e. Maintenance of public facilities, including roads? | _____ | _____ | X |
| | f. Other governmental services? | _____ | _____ | X |

15. Energy. Will the proposal result in:
- a. Use of substantial amounts of fuel or energy? _____ _____ X
 - b. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? _____ _____ X
16. Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities:
- a. Power or natural gas? _____ _____ X
 - b. Communications systems? _____ _____ X
 - c. Water? _____ _____ X
 - d. Sewer or septic tanks? _____ X _____
 - e. Storm water drainage? _____ X _____
 - f. Solid waste and disposal? _____ _____ X
17. Human Health. Will the proposal result in:
- a. Creation of any health hazard or potential health hazard (excluding mental health)? _____ _____ X
 - b. Exposure of people to potential health hazards? _____ _____ X
18. Aesthetics. Will the proposal result in the obstruction of any scenic vista or view open to the public, or will the proposal result in the creation of an aesthetically offensive site open to public view? _____ _____ X
19. Recreation. Will the proposal result in an impact upon the quality or quantity of existing recreational opportunities? _____ X _____
20. Archeological/Historical. Will the proposal result in an alteration of a significant archeological or historical site, structure, object or building? _____ _____ X
21. Mandatory Findings of Significance.

- a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? _____ X
- b. Does the project have the potential to achieve short-term to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time which long-term impacts will endure well into the future.) _____ X
- c. Does the project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environment is significant). _____ X
- d. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? _____ X

III. DISCUSSION OF ENVIRONMENTAL EVALUATION

IV. DETERMINATION

On the basis of this initial evaluation:

X

I find the proposed project COULD NOT have a significant effect on the environment.

I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

Date _____

(Signature) _____

DISCUSSION OF ENVIRONMENTAL

ENVIRONMENTAL IMPACTS

MITIGATION MEASURES

Items 3e, 16d & e

- ° This amendment may provide additional incentive for control actions that may improve fecal coliform concentrations and other water quality constituents

- ° This is a beneficial impact and requires no mitigation

Item 9a

- ° Increased use of surface waters for water contact recreation may result due to improved water quality

- ° This is a beneficial impact and requires no mitigation

Item 14d

- ° Where increase in water contact recreation results, a corresponding increase in demand for recreation facilities may occur

- ° This is a beneficial impact and requires no mitigation

Item 19

- ° Proposal may result in improved quality and quantity of existing recreational opportunities

- ° This is a beneficial impact and requires no mitigation

MITIGATION OF SIGNIFICANT ADVERSE ENVIRONMENTAL IMPACTS

There are no significant adverse environmental impacts which will result from implementation of the amended Basin Plan. The amended Basin Plan is intended to protect water quality and public health.

COMPLIANCE WITH CEQA

The preceding assessment of significant adverse environmental impacts, mitigation measures, and alternatives indicates that the amended Basin Plan complies with CEQA requirements (Public Resources Code 21000 et. seq.).

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-13

Revision and Amendment of Water Quality Control
Plan by the Addition of a Prohibition of Waste
Discharge from Individual Sewage Disposal
Systems Within the Los Osos/Baywood Park Area,
San Luis Obispo County

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,
- WHEREAS, Los Osos/Baywood Park is an unincorporated community, with a 1980 population of 10,933 persons located south of the City of Morro Bay, in San Luis Obispo County; and,
- WHEREAS, current zoning will accommodate a population in excess of 27,000 people and an average residential lot size of about 6600 ft²; and,
- WHEREAS, on-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal in the Los Osos/Baywood Park area; and,
- WHEREAS, the Los Osos/Baywood Park area soil permeability is rapid and there are substantial areas with high groundwater; and,
- WHEREAS, the majority of lots are too small to provide adequate dispersion of individual sewage disposal system effluent; and,

WHEREAS, the San Luis Obispo County Environmental Health Department has provided documentation concerning the problem of liquid waste disposal in the Los Osos/Baywood Park area; and,

WHEREAS, the County of San Luis Obispo is preparing an environmental impact report (EIR) in accordance with the California Environmental Quality Act and a project report that identifies adverse environmental impacts from continued use of septic tanks in the Los Osos/Baywood Park area and discusses alternatives to existing wastewater management practices; and,

WHEREAS, "Los Osos-Baywood Park/Phase I Water Quality Management Study" cites conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code; and,

WHEREAS, chemical analyses of wells in Los Osos/Baywood Park indicates 38% of the shallow wells tested in the Phase I study, taking water from the Old Dune Sands deposits portion of the aquifer, contain nitrate concentrations which exceed State Health Department Drinking Water Standards of 45 milligrams per liter; and,

WHEREAS, bacterial analyses of 42 wells tested in the Phase I study resulted in 26 wells indicating total coliform in violation of State Health Drinking Water Standards, and 2 wells indicating fecal coliform in violation of Basin Plan limits for groundwater; and,

WHEREAS, surface water bacterial analyses tested in the Phase I study indicated total and fecal coliform levels exceeding Basin Plan recommended limits for water contact recreation (REC-1); and,

WHEREAS, a letter from the California Health and Welfare Agency, Department of Health Services, states their concerns regarding the high nitrate levels in the waters of Los Osos/Baywood Park area, and recommends adequate measures be taken to correct the nitrate problems to bring the waters into compliance with California Drinking Water Standards; and,

WHEREAS, a letter from the San Luis Obispo County Health Agency Director cites violation of the public health limit for nitrates and recommends elimination of shallow groundwater usage and adoption of a discharge prohibition; and,

WHEREAS, the Regional Board is obligated to include a program of implementation for achieving water quality objectives in its Basin Plan; and,

WHEREAS, present and anticipated future beneficial uses of Los Osos/Baywood Park creeks include recreation and aquatic habitat; and,

WHEREAS, Los Osos Basin groundwaters are suitable for agricultural, municipal, domestic, and industrial water supply; and,

WHEREAS, a Regional Board staff report finds beneficial uses of Los Osos ground and surface waters are adversely affected by individual sewage disposal system discharges, there appears to be a trend of increasing degradation, and public health is jeopardized by occurrences of surfacing effluent; and,

WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Los Osos/Baywood Park individual sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,

WHEREAS, on September 16, 1983, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State; and,

WHEREAS, the Regional Board finds the aforesated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 5-66, after Item 7, following the legal description for Pasatiempo Pines (added by Resolution 83-09), insert the following prohibitions:

"8. Discharges of waste from individual and community sewage disposal systems are prohibited effective November 1, 1988, in the Los Osos/Baywood Park area, and more particularly described as:

"Groundwater Prohibition Zone

(Legal description to be provided for area prescribed by Regional Board).

"Failure to comply with any of the compliance dates established by Resolution 83-13 will prompt a Regional Board hearing at the earliest possible date to consider adoption of an immediate prohibition of discharge from additional individual and community sewage disposal systems."

Discharges from individual or community systems within the prohibition area in excess of an additional 1150 housing units (or equivalent) are prohibited, commencing with the date of State Water Resources Control Board approval.

BE IT FURTHER RESOLVED, that the above area is consistent with the recommendations of the staff report as shown on "Attachment A."

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or community sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Begin Design	November 1, 1984
Complete Design	November 1, 1985
Obtain Construction Funding	December 1, 1985
Begin Construction	April 1, 1986
Complete Construction	November 1, 1988

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, the County will continue a monitoring program, approved by the Regional Board staff, that will monitor ground water quality within the prohibition boundaries as set forth in this resolution, and also a monitoring program which covers areas outside the prohibition boundaries but within the urban reserve line as shown in Attachment A.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

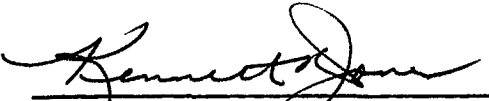

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith the Clean Water Grant Project Priority List to recognize the necessary structural solution for Los Osos/Baywood Park as a Priority "A" project.

BE IT FURTHER RESOLVED, that if the Board holds a hearing and adopts an immediate prohibition as described above, the prohibition is effective as of the date the Regional Water Quality Control Board adopts a prohibition of discharge from additional individual and community sewage disposal systems.

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 16, 1983.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-12

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coast Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (hereafter Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,
- WHEREAS, the Regional Board recognizes increased difficulties in financing and affording major public works systems, such as sewage collection, transport, treatment, and disposal projects; and,
- WHEREAS, properly planned and installed individual on-site sewage disposal systems can provide satisfactory wastewater treatment and disposal at minimal cost; and,
- WHEREAS, occurrence of water quality and public health problems from septic tank operations prompted the Regional Board to include septic tank regulations in the 1975 Basin Plan; and,
- WHEREAS, those regulations need to be updated and revised based upon more experience with on-site systems; and,
- WHEREAS, there is a need for guidelines for alternative on-site sewage disposal systems; and,
- WHEREAS, community on-site sewage disposal system failures have been common in the past; and
- WHEREAS, the Basin Plan does not specifically address community on-site sewage disposal systems; and,
- WHEREAS, guidelines are needed for community on-site sewage disposal systems; and,
- WHEREAS, Regional Board staff completed a study of on-site systems entitled "Individual/Community On-site Sewage Disposal Systems"; and,
- WHEREAS, the Individual/Community Sewage Disposal Systems Study identifies water quality, public health, and other problems resulting from improper siting, design, construction, and operation and maintenance; and,

WHEREAS, the Individual/Community On-site Sewage Disposal Systems Study recommends guidelines and constraints to prevent water quality and public health problems; and,

WHEREAS, drafts of proposed amendments have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, proposed amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to non-point source controls by the Regional Board and other authorities; and,

WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of this individual sewage disposal system policy will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on September 10, 1982, in the Board of Supervisors Hearing Room, 105 East Anapamu Street, Santa Barbara, California; on November 5, 1982, in the Seaside City Council Chambers, 440 Harcourt, Seaside, California; and on December 10, 1982, and September 16, 1983, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-48, revised version of Chapter 5, revise "Individual Disposal Systems" section to the following:

"INDIVIDUAL, ALTERNATIVE, AND COMMUNITY DISPOSAL SYSTEMS

On-site sewage disposal systems and other similar methods for liquid waste disposal are sometimes viewed as interim solutions in urbanizing areas, yet may be required to function for many years. On-site systems can be a viable long-term waste disposal method with proper siting, design, construction, and management. In establishing on-site system regulations, agencies must consider such systems as permanent, not interim systems to be replaced by public sewers. The reliability of these systems is highly dependent on land and soil constraints, proper design, proper construction, and proper operation and maintenance.

If on-site sewage treatment facilities are not carefully managed, problems can occur, including:

- ° odors or nuisance;
- ° surfacing effluent;
- ° disease transmission; and,
- ° pollution of surface and ground waters.

Odors and nuisance can be objectionable and annoying and may obstruct free use of property. Surfacing effluent (effluent which fails to percolate and rises to the ground surface) can be an annoyance, or health hazard to the resident and neighbors. In some cases, nearby surface waters may be polluted.

On-site sewage disposal systems are a potential mechanism for disease transmission. Sewage is capable of transmitting diseases from organisms which are discharged by an infected individual. These include dysentery, hepatitis, typhoid, cholera, and gastro-intestinal disorders.

Pollution of surface or ground waters can result from the discharge of on-site system wastes. Typical problem waste con-

stituents are total dissolved solids, phosphates, nitrates, heavy metals, bacteria, and viruses. Discharge of these wastes will, in some cases, destroy beneficial surface and ground water uses.

Subsurface disposal systems may be used to dispose of wastewater from: 1) individual residences; 2) multi-unit residences; 3) institutions or places of commerce; 4) industrial sanitary sources; and, 5) small communities. All individual and multi-unit residential developments are subject to criteria in this section of the Basin Plan. Commercial, institutional, and industrial developments with a discharge flow rate less than 2500 gallons per day generally are not regulated by waste discharge requirements; therefore, they must comply with these criteria. Community systems must also comply with criteria relating to this subject within the Basin Plan. Community systems are defined for the purposes of this Basin Plan as: 1) residential wastewater treatment systems for more than 5 units or more than 5 parcels; or, 2) commercial, institutional or industrial systems to treat sanitary wastewater equal to or greater than 2500 gallons per day (average daily flow). Systems of this type and size may be subject to waste discharge requirements.

Alternatives to conventional on-site system designs have been used when site constraints prevent the use of conventional systems. Examples of alternative systems include mound and evapotranspiration systems. Remote subdivisions, commercial centers, or industries may utilize conventional collection systems with community treatment systems and subsurface disposal fields for sanitary wastes. Alternative and community systems can pose serious water quality problems if improperly managed. Failures have been common in the past and are usually attributed to the following:

- ° Systems are inadequately or improperly sited, designed, or constructed.
- ° Long-term use is not considered.

- ° Inadequate operation and maintenance.

Corrective Actions for Existing Systems

Individual disposal systems can be regulated with relative ease when they are proposed for a particular site. For new systems, regulations generally provide for good design and construction practices. A more troublesome problem is presented by older septic tank systems where design and construction may have been less strictly controlled or where land development has intensified to an extent that percolation systems are too close together and there is no room left for replacement leaching areas. Where this situation develops to an extent that public health hazards and nuisance conditions develop, the most effective remedy is usually a sewer system. Where soil percolation rates are particularly fast, ground water degradation is possible, particularly increases in nitrate concentrations.

Sewer system planning should be emphasized in urbanizing areas served by septic tanks. A first step would be a monitoring system involving surface and ground waters to determine whether problems are developing. Where septic tank systems in urbanized areas are not scheduled for replacement by sewers and where public health hazards are not documented, septic tank maintenance procedures are encouraged to lessen the probability that a few major failures might force sewerage of an area which otherwise could be retained on individual systems without compromising water quality. Often a few systems will fail in an area where more frequent septic tank pumping, corrections to plumbing or leach fields, or in-home water conservation measures could prevent deterioration. Improvements of this kind should be enforced by a local septic tank maintenance district or local governing jurisdiction.

A septic tank subjected to greater hydraulic load can fail due to washout of

solids into percolation areas and plugging of the infiltrative surface. In some cases, excess wash water could be diverted to separate percolation areas by in-home plumbing changes. Dishwashers, garbage grinders, and washing machines could be eliminated. Water saving toilets, faucets, and shower heads are available to encourage low water use. Water use costs may also be structured to encourage more frugal use of water.

Local Governing Jurisdiction Actions

Disclosure and Compliance of Existing Wastewater Disposal System

Local governing jurisdictions should provide programs to assure conformance with this Basin Plan and local regulations. Inspection programs should assure site suitability tests are performed as necessary, and that tests are in accordance with standard procedures. Inspection should also assure proper system installation. Proper design and construction should be certified by the inspector. Concerned homeowners can be a tremendous asset in assuring proper construction. When a septic system permit is issued by the local agency, a handout specifying proper construction techniques should be made available to the general public. Systems must be inspected by the local agency before covering (backfilling).

Local agencies can use either staff inspectors or individuals under contract with the local government. Either way, a standard detailed checklist should be completed by the inspector to certify compliance.

Site suitability determinations should specify: 1) whether approval is for the entire lot or for specific locations of the lot; 2) if further tests are necessary; and, 3) if alternatives are necessary or available.

Where agency approval is necessary from various departments, final sign-offs should be on the same set of plans.

Home owners should be aware of the nature and requirements of their wastewater disposal system. Plans should be available in city or county offices showing placement of soil absorption systems. Since this is only feasible for new construction, local agencies should require septic system as-built plans as a condition of new construction final inspection. Plans would be kept on file for future use of property owners.

Prospective property buyers should be informed of any enforcement action affecting parcels or houses they wish to buy. For example, a parcel in a discharge prohibition area may be unbuildable for an indefinite period, or a developed parcel may be subject to significant user charges from a future sewer system. Local agencies should have prohibition area terms entered into the county record for each affected parcel. When a prospective buyer conducts a title search, terms of the prohibition would appear in the preliminary title report.

Dual leaching capabilities provide an immediate remedy in the event of system failure. For that reason, dual leachfields are considered appropriate for all systems. Furthermore, should wastewater flows increase, this area can be used until the system is expanded. But system expansion may not be possible if land is not set aside for this purpose. For these reasons, dedicated system expansion areas are also appropriate.

To protect this set-aside area from encroachment, the local agency should require restrictions on future use of the area as a condition of land division or building permit approval. For new subdivisions, Covenants, Conditions, and Restrictions (CC&R's) might provide an appropriate mechanism for protecting a set aside area. Future buyers of affected property would be notified of property use restrictions by reading CC&R's.

All on-site system owners need to be aware of proper operation and maintenance procedures. Local governing jurisdictions should mount a continuing public education program to provide home owners with on-site system operation and maintenance guidelines. Basin Plan information should be available at local agency health and building departments.

Local agencies should conduct an on-site system inspection program, particularly in areas where system failures are common or where systems with poor soils are approved. An agency inspector should periodically check each septic tank for pumping need and each system for proper operation. Homeowners should be alerted where evidence of system failure exists. Where nuisance or a potential public health hazard exists, a follow-up procedure should insure the situation is corrected. On-site systems should be constructed in a location that facilitates system inspection.

Another approach is periodically to mail homeowners a brochure reminding them how to maintain and inspect their on-site system. Homeowners should be notified that they should periodically check their septic tank for pumping need. Homeowners should also be notified of other problems indicative of system failure. Some examples include wet spots in drainfield area, lush grass growths, slowly draining wastewater, and sewage odors.

Many existing systems do not comply with current or proposed standards. Repairs to failing systems should be done under permit from the local agency. To the extent practicable, the local agency should require failing systems to be brought into compliance with Basin Plan recommendations. This could be a condition of granting a permit for repairs.

Land use changes on properties used for commerce, small institutions, or industries should not be approved by the local agency until the existing on-site system meets criteria of this Basin Plan and

local ordinances. A land use permit or business license could be used to alert the local agency of land use changes.

On-Site Wastewater Management Plans

On-site wastewater management should be implemented in urbanizing areas to investigate long-term cumulative impacts resulting from continued use of individual, alternative, and community on-site disposal systems. A wastewater disposal study should be conducted to determine the best Wastewater Management Plan that would provide site or basin specific wastewater re-use. This study should identify basin specific criteria to prevent water quality degradation and public health hazards and provide an evaluation of the effects of existing and proposed developments and changes in land use. These plans should be a comprehensive planning tool to specify on-site disposal system limitations to prevent ground or surface water degradation. Wastewater management plans should:

- contain a ground/surface water monitoring program;
- identify sites suitable for conventional septic systems;
- project on-site disposal system demand;
- determine sites and methods to best meet demand;
- project maximum population densities for each subdrainage basin to control degradation or contamination of ground or surface water;
- recommend establishment of septic tank maintenance districts, as needed; and,
- identify alternate means of disposing of sewage in the event of irreversible degradation from on-site disposal systems.

For areas where watershed-wide plans are not developed, conditions could be placed on new divisions of land or community systems to provide monitoring data or geologic information to contribute to the development of a Wastewater Management Plan.

Wastewater disposal alternatives should identify costs to each homeowner. A cost-effectiveness analysis, which considers socio-economic impacts of alternative plans, should be used to select the recommended plan.

On-site wastewater disposal zones, as discussed in Section 6950-6981 of the Health and Safety Code, may be an appropriate means of implementing on-site Wastewater Management Plans.

On-site Wastewater Management Plans shall be approved by the Regional Board.

Septic Tank Maintenance Districts

It may be appropriate for unsewered community on-site systems to be maintained by local on-site sewage disposal maintenance districts. These special districts could be administered through existing local governments such as County Water Districts, a Community Services District, or a County Service Area.

Septic tank maintenance districts should be responsible for operation and maintenance in conformance with this Water Quality Control Plan. Administrators should insure proper construction, installation, operation, and maintenance of on-site disposal systems. Maintenance districts should establish septic tank surveillance, maintenance and pumping programs; provide repairs to plumbing or leachfields; and encourage water conservation measures.

Criteria for New Systems

On-site sewage disposal system problems can be minimized with proper site loca-

tion, design, installation, operation, and maintenance. The following section recommends criteria for all new individual subsurface disposal systems and community sewage disposal systems.

Recommendations are arranged in sequence under the following categories: site suitability; system design; construction; individual system maintenance; community system design; and local agencies.

Manadatory criteria are listed on page 5--65 in the "Discharge Prohibition" section.

Site Suitability

Prior to permit approval, site investigation should determine on-site system suitability:

1. At least one soil boring or excavation per on-site system should be performed to determine soil suitability, depth to ground water, and depth to bedrock or impervious layer. Soil borings are particularly important for seepage pits. Impervious material is defined as having a percolation rate slower than 120 minutes per inch or having a clay content 60% or greater. The soil boring or excavation should extend at least 10 feet below the drainfield¹ bottom at each proposed location.

2. An excavation should be made to detect mottling or presence of underground channels, fissures, or cracks. Soils should be excavated to a depth of 4-5 feet below drainfield bottom.

3. For leachfields, at least three percolation test locations should be used to determine system acceptability. Tests should be performed at proposed subsurface disposal system sites and depths.

4. If no restrictive layers intersect, and geologic conditions permit surfacing, the setback distance from a cut, embank-

ment, or steep slope (greater than 30 percent) should be determined by projecting a line 20 percent down-gradient from the sidewall at the highest perforation of the discharge pipe. The leachfields should be setback far enough to prevent this projected line from intersecting the cut within 100 feet, measured horizontally, of the sidewall. If restrictive layers intersect cuts, embankments or steep slopes, and geologic conditions permit surfacing, the setback should be at least 100 feet measured from the top of the cut.

5. Natural ground slope of the disposal area should not exceed 20%.

6. For new land divisions, lot sizes less than 1 acre should not be permitted.

System Design

On-site systems should be designed according to the following recommendations:

1. Septic tanks should be designed to remove nearly 100% of settleable solids and should provide a high degree of anaerobic decomposition of colloidal and soluble organic solids.

2. Tank design must allow access for inspection and cleaning. The septic tank must be accessible for pumping.

3. If curtain drains discharge diverted ground water to subsurface soils, the upslope separation from a leachfield or pit should be 20 feet and the downslope separation should be 50 feet.

4. Leachfield application rate should not exceed the following:

Percolation Rate min./in	Loading Rate g.p.d./sq.ft.
1-20	0.8
21-30	0.6
31-60	0.25
61-120	0.10

5. Seepage pit application rate should not exceed 0.3 g.p.d./sq.ft.

¹"Drainfield" refers to either a leachfield or seepage pits.

6. Drainfield design should be based only upon useable permeable soil layers.

7. The minimum design flow rate should be 375 gallons per day per dwelling unit.

8. In clayey soils, systems should be constructed to place infiltrative surfaces in more permeable horizons.

9. Distance between drainfield trenches should be at least two times the effective trench depth.¹

10. Distance between seepage pits (nearest sidewall to sidewall) should be at least 20 feet.

11. Dual disposal fields (200% of original calculated disposal area) are recommended. Both drainfields should be constructed initially and diversion valves or boxes installed when access to the disposal system is restricted in such a way that future additions and repairs cannot be made easily.

12. For commercial systems, small institutions, or sanitary industrial systems design should be based on daily peak flow.

13. For commercial and institutional systems, pretreatment may be necessary if wastewater is significantly different from domestic wastewater.

14. Commercial systems, institutional systems, or domestic industrial systems should reserve an expansion area (i.e. dual drainfields must be installed and area for replacement of drainfield must be provided) to be set aside and protected from all uses except future drainfield repair and replacement.

15. Nutrient and heavy metal removal should be facilitated by planting ground cover vegetation over shallow subsurface drainfields. The plants must have the

following characteristics: (1) evergreen, (2) shallow root systems, (3) numerous leaves, (4) salt resistant, (5) ability to grow in soggy soils, and (6) low or no maintenance. Plants downstream of leaching area may also be effective in nutrient removal.

Design for Engineered Systems

1. Mound systems should be installed in accordance with criteria contained in Guidelines for Mound Systems by the State Water Resources Control Board.

2. Evapotranspiration systems should be installed in accordance with criteria contained in Guidelines for Evapotranspiration Systems by the State Water Resources Control Board. Exceptions are:

- a. For evapotranspiration systems, each month of the highest precipitation year and lowest evaporation year within the previous ten years of record should be used for design.
- b. Systems shall be designed by a registered civil engineer competent in sanitary engineering.

Construction

Water quality problems resulting from improper construction can be reduced by following these practices:

1. Subsurface disposal systems should have a slightly sloped finished grade to promote surface runoff.
2. Work should be scheduled only when infiltrative surfaces can be covered in one day to minimize windblown silt or rain clogging the soil.
3. In clayey soils, work should be done only when soil moisture content is low to avoid smeared infiltrative surfaces.

¹ "Effective trench depth" means depth below the bottom of the trench pipe.

4. Bottom and sidewall areas should be left with a rough surface. Any smeared or compacted surfaces should be removed.

5. Bottom of trenches or beds should be level throughout to prevent localized overloading.

6. Two inches of coarse sand should be placed on the bottom of trenches to prevent compacting soil when leachrock is dumped into drainfields. Fine sand should not be used as it may lead to system failure.

7. Surface runoff should be diverted around open trenches/pits to limit siltation of bottom area.

8. Prior to backfilling, the distribution system should be tested to check the hydraulic loading pattern.

9. Properly constructed distribution boxes or junction fittings should be installed to maintain equal flow to each trench. Distribution boxes should be placed with extreme care outside the leaching area to insure settling does not occur.

10. Risers to the ground surface and manholes should be installed over the septic tank inspection ports and access ports.

11. Drainfield should include an inspection pipe to check water level.

Additional construction precautions are discussed within the Environmental Protection Agency's Design Manual-On-site Wastewater Treatment and Disposal Systems.

Individual System Maintenance

Individual septic tanks should be maintained as follows:

1. Septic tanks should be inspected every two to five years to determine the need for pumping. If garbage grinders or dishwashers discharge into the septic tank, inspection should occur at least every two years.

2. Septic tanks should be pumped whenever: (1) the scum layer is within three inches of the outlet device; or (2) the sludge level is within eight inches of the bottom of the outlet device.

3. Drainfields should be alternated when drainfield inspection pipes reveal a high water level.

4. Disposal of septage (solid residue pumped from septic tanks) should be accomplished in a manner acceptable to the Executive Officer. In some areas, disposal may be to either a Class I or Class II solid waste site; in others, septage may be discharged to a municipal wastewater treatment facility.

Community System Design

Community systems should be designed and maintained to accommodate the following items:

1. Capacities should accommodate build-out population.

2. Design should be based upon peak daily flow estimates.

3. Design should consider contributions from infiltration throughout the collection system.

4. Septic tanks should be pumped when sludge and scum levels are greater than 1/3 of the depth of the first compartment.

5. Operation and maintenance should be in accordance with accepted sanitary practice.

6. Maintenance manuals should be provided to system users and maintenance personnel.

7. Discharge should not exceed 40 grams per day total nitrogen, on the average, per acre of total development overlying ground water recharge areas, unless local governing jurisdictions adopt Wastewater Management Plans subsequently approved by the Regional Board.

Local Agencies

Recommendations for local governing jurisdictions:

1. Adopt a standard percolation test procedure.

The California State Water Resources Control Board Guidelines for Evapotranspiration Systems provides a percolation test method recommended for use to standardize test results. A twelve inch diameter percolation test hole may be used.

2. Percolation tests should be continued until a stabilized rate is obtained.

3. Percolation test holes should be drilled with a hand auger. A hole could be hand augered or dug with hand tools at the bottom of a larger excavation made by a backhoe.

4. Percolation tests should be performed at a depth corresponding to the bottom of the subsurface disposal area.

5. Seepage pits should be utilized only after careful consideration of site suitability. Soil borings or excavations should be inspected either by permitting agency or individual under contract to the permitting agency.

6. Approve permit applications after checking plans for erosion control measures.

7. Inspect systems prior to covering to assure proper construction.

8. Require replacements or repairs to failing systems to be in conformance with Basin Plan recommendations, to the extent practicable.

9. For new land divisions, protect on-site disposal systems and expansion areas from encroachment by provisions in covenants, conditions, and restrictions.

10. Inform property buyers of the existence, location, operation, and maintenance of on-site disposal systems. Prospective home or property buyers should also be informed of any enforcement action (e.g. Basin Plan prohibitions) through the County Record.

11. Conduct public education programs to provide property owners with operation and maintenance guidelines.

12. Alternative system owners shall be provided an informational maintenance or replacement document by the appropriate governing jurisdiction. This document shall cite homeowner procedures to ensure maintenance, repair, or replacement of critical items within 48 hours following failure.

13. Where appropriate, septic tank systems should be maintained by local septic tank maintenance districts.

14. Wastewater Management Plans should be prepared and implemented for urbanizing and high density areas, including applicable portions of San Martin, San Lorenzo Valley, Carmel Valley, Carmel Highlands, Prunedale, Boronda, El Toro, Shandon, Templeton, Santa Margarita/Garden Farms, Los Osos/Baywood Park, Arroyo Grande, Nipomo, Los Alamos, upper Santa Ynez Valley, Los Olivos/Ballard and Mission Canyon.

15. Ordinances should be updated to reflect Basin Plan criteria.

In addition, the following items should be considered:

1. Water conservation and solids reduction practices are recommended. Garbage grinders should not be used in homes with septic tanks.

2. Metering and water use costs should be used to encourage water conservation.

3. Grease and oil should not be introduced into the system. Bleach, solvents, fungicides, and any other toxic material should not be poured into the system.

4. Reverse osmosis unit blowdown should not be discharged to on-site wastewater treatment systems overlying useable ground water. Offsite (factory regeneration) practices are recommended for water softeners.

5. If onsite water softener regeneration is necessary, minimum salt use in water softeners is recommended. This can be accomplished by minimizing regeneration time or limiting the number of regeneration cycles.

Page 5-63, replace management principle number fourteen with the following:

"14. The Regional Board intends to discourage high density development on septic tank disposal systems and generally will require increased size of parcels with slower percolation rates. Consideration of development will be based upon the percolation rates and engineering reports supplied. In any questionable situation, engineer designed systems will be required."

PROHIBITIONS

Page 5-65, replace paragraph beginning, "In addition, discharge from individual sewage systems, including..." with the following:

"Discharges from new soil absorption systems in sites with any of the following conditions are prohibited:

1. Soils or formations containing continuous channels, cracks, or fractures.¹

2. For seepage pits, soils or formations containing 60% or greater clay (a soil particle less than 2 microns in size) unless parcel size is at least 2 acres.

3. Distances between trench bottom and usable ground water, including perched ground water, less than separation specified by appropriate percolation rate:

Percolation Rate, min/in	Distance, ft
<1	50'
1-4	20'
5-29	8'
> 30	5'

4. For seepage pits, distances between pit bottom and useable groundwater, including perched ground water, less than separation specified by appropriate soil type:

Soil Type	Distance, ft
Gravels ²	50'
Gravels with few fines ³	20'
Other	10'

5. Distances between trench/pit bottom and bedrock or other impervious layer less than 10 feet.

6. For leachfields, where percolation rates are slower than 120 min/in, unless parcel size is at least 2 acres.

7. For leachfields, where soil percolation rates are slower than 60 min/in unless the effluent application rate is 0.1 gpd/ft² or less.

8. Areas subject to inundation from a 10 year flood.

9. Natural ground slope of the disposal area exceeds 30%.

10. Setback distances less than:

	Ft.
Domestic water supply wells in unconfined aquifer	100

Watercourse ⁴ where geologic conditions permit water migration	Ft. 100
Reservoir ⁵ spillway elevation	200
Springs, natural or any part of man made spring	100

11. While new septic tank systems should generally be limited to new divisions of land having a minimum parcel size of one acre, where soil and other physical constraints are particularly favorable, parcel size shall not be less than one half acre.

12. Within a reservoir⁵ watershed where the density for each land division is less than 2.5 acres for areas without approved Wastewater Management Plans.

13. For individual systems on new land divisions, and commercial, institutional, and sanitary industrial systems without an area set aside for dual leachfields (100% replacement area).

14. Commercial, institutional, or sanitary industrial systems not basing design on daily peak flow estimate.

15. Any site unable to maintain subsurface disposal.

1/Unless a set-back distance of at least 250 feet to any domestic water supply well or surface water is assured.

2/Gravels - soils with over 50% by weight coarser than a No. 200 sieve, over half of the coarse fraction is larger than a No. 4 sieve, and 5% or less is finer than a No. 200 sieve.

3/ Gravels with few fines - soils with over 50% by weight coarser than a No. 200 sieve, over half of the coarse fraction is larger than a No. 4 sieve, and 6-10% is finer than a No. 200 sieve.

4/ Watercourse-(1) A natural or artificial channel for passage of water. (2) A running stream of water. (3) A natural stream fed from permanent or natural sources, including rivers, creeks, runs, and rivulets. There must be a stream, usually flowing in a particular direction (though it need not flow continuously) in a definite channel, having a bed or banks and usually discharging into some other stream or body of water.

5/ Reservoir-A pond, lake, tank, basin, or other space either natural or created in whole or in part by the building of engineering structures, which is used for storage, regulation, and control of water, recreation, power, flood control or drinking.

In addition to previous prohibitions, community subsurface disposal systems (serving more than 5 parcels or more than 5 dwelling units) are prohibited unless:

1. Seepage pits have at least 15 feet separation between pit bottom and highest usable ground water, including perched ground water.

2. Sewerage facilities are operated by a public agency, unless a demonstration is made to the Board that an existing public agency is unavailable and formation of a new public agency is unreasonable. If such a demonstration is made, a private entity must be established with adequate financial, legal, and institutional resources to assume responsibility for waste discharges.

3. Dual disposal systems are installed (200% of total of original calculated disposal area).

4. An expansion area is included for replacement of the original system (300% total).

5. Community systems provide duplicate individual equipment components for components subject to failure

6. Discharge from community systems does not exceed 40 grams per day total nitrogen, on the average, per 1/2 acre of total development overlying ground water recharge areas, unless local governing jurisdictions adopt Wastewater Management Plans subsequently approved by the Regional Board.

Prohibition Areas

In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance the following prohibition areas are necessary:

1. Resolution 78-02, Nipomo discharge prohibition area
2. Resolution 79-07, Las Lomas-Hall discharge prohibition area
3. Resolution 79-08, Moss Landing discharge prohibition area
4. Resolution 82-10, San Lorenzo Valley discharge prohibition area
5. Resolution 83-01, Boronda discharge prohibition area
6. Resolution 83-04, Mission Canyon discharge prohibition area

PROHIBITION EXEMPTIONS

The Board or Executive Officer may grant an exemption to prohibitions for: 1) engineered new on-site disposal systems for sites unsuitable for standard systems; and 2) new or existing on-site systems within the specific prohibition areas cited above. Such exemptions may be granted only after presentation by the discharger of sufficient justification, including geologic and hydrologic evidence

that the continued operation of such system(s) in a particular area will not individually or collectively, directly or indirectly, result in pollution or nuisance, or affect water quality adversely.

Individual, alternative, and community systems shall not be approved for any area where it appears that the total discharge of leachate to the geological system, under fully developed conditions, will cause: 1) damage to public or private property; 2) ground or surface water degradation; 3) nuisance conditions; or, 4) a public health hazard. Interim use of septic tank systems may be permitted where alternate parcels are held in reserve until sewer systems are available.

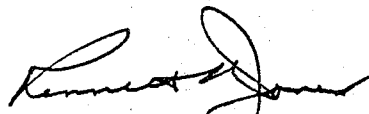

Requests for exemptions will not be considered until the local entity has reviewed the system and submitted the proposal for Regional Board review. Dischargers requesting exemptions must submit a Report of Waste Discharge. Exemptions will be subject to filing fees as established by the State Water Code.

Engineered systems shall be designed only by registered engineers competent in sanitary engineering. Engineers should be responsible for proper system operation. Engineers should be responsible for educating system users of proper operation and maintenance. Maintenance schedules should be established. Engineered systems should be inspected by designer during installation to insure conformance with approved plans.

Some engineered systems may be considered experimental by the Regional Board. Experimental systems will be handled with caution. A trial period of at least one year should be established whereby proper system operation must be demonstrated. Under such an approach, experimental systems are granted a one year conditional approval."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 16, 1983.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD—
CENTRAL COAST REGION

102 A LAUREL LANE
SAN LUIS OBISPO, CALIFORNIA 93401
(505) 549-3147

July 8, 1983

SEE MAILING LIST

Gentlemen:

SUBJECT: PROPOSED AMENDMENT TO THE WATER QUALITY CONTROL PLAN, CENTRAL
COASTAL BASIN (BASIN PLAN) FOR INDIVIDUAL/COMMUNITY DISPOSAL
SYSTEMS

The California Regional Water Quality Control Board, Central Coast Region, is proposing an amendment to its 1975 Water Quality Control Plan (Basin Plan) concerning individual/community on-site sewage disposal systems. As specified by the Porter-Cologne Water Quality Control Act, the Regional Water Quality Control Board is to formulate and adopt water quality control plans for all areas within the region. The Basin Plan is a means of regulating any activity or factor which may affect the quality of waters of the state and includes prevention and correction of water pollution or nuisance.

Enclosed are the following items for your review:

- 1) "Resolution 83-12, Concerning Revisions and Amendment of Water Quality Control Plan, Central Coast Basin (1st Draft)"; and,
- 2) California Environmental Quality Act compliance documents.

In addition, a staff report (December 1982) is available upon request. If you are not associated with a governmental agency, you will be charged a copying and mailing fee of \$4.28. It can also be reviewed in the Board Office.

A public hearing concerning the proposed amendment will be held:

Date: September 16, 1983
Time: 9:00 a.m.
Place: San Luis Obispo City Hall Council Chambers
990 Palm Street
San Luis Obispo, California

SEE MAILING LIST

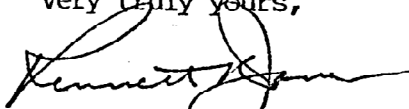

July 8, 1983

Page 2

Written testimony received by this office prior to the public hearing will be considered in formulating an amendment to the Basin Plan on this subject. However, written testimony received by August 3, 1983, will be considered in preparing subsequent drafts of this proposed resolution.

If you have any questions concerning this matter, please contact Angela Charpentier at (805) 549-3147.

Very truly yours,

KENNETH R. JONES
Executive Officer

cc: Regional Board Members

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

1st Draft 7-5-83

RESOLUTION NO. 83-12

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coast Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (hereafter Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,
- WHEREAS, the Regional Board recognizes increased difficulties in financing and affording major public works systems, such as sewage collection, transport, treatment, and disposal projects; and,
- WHEREAS, properly planned and installed individual on-site sewage disposal systems can provide satisfactory wastewater treatment and disposal at minimal cost; and,
- WHEREAS, occurrence of water quality and public health problems from septic tank operations prompted the Regional Board to include septic tank regulations in the 1975 Basin Plan; and,
- WHEREAS, those regulations need to be updated and revised based upon more experience with on-site systems; and,
- WHEREAS, there is a need for guidelines for alternative on-site sewage disposal systems; and,
- WHEREAS, community on-site sewage disposal system failures have been common in the past; and
- WHEREAS, the Basin Plan does not specifically address community on-site sewage disposal systems; and,
- WHEREAS, guidelines are needed for community on-site sewage disposal systems; and,
- WHEREAS, Regional Board staff completed a study of on-site systems entitled "Individual Sewage Disposal Systems/Community Systems"; and,
- WHEREAS, the Individual/Community Sewage Disposal Systems Study identifies water quality, public health, and other problems resulting from improper siting, design, construction, and operation and maintenance; and,

WHEREAS, the Individual/Community Sewage Disposal Systems Study recommends guidelines and constraints to prevent water quality and public health problems; and,

WHEREAS, drafts of proposed amendments have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, proposed amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to non-point source controls by the Regional Board and other authorities; and,

WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of this individual sewage disposal system policy will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on September 10, 1982, in the Board of Supervisors Hearing Room, 105 East Anapamu Street, Santa Barbara, California, on November 5, 1982, in the Seaside City Council Chambers, 440 Harcourt, Seaside, California, and on December 10, 1982, and September 16, 1983, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-48, revised version of Chapter 5, revise "Individual Disposal Systems" section to the following:

"INDIVIDUAL, ALTERNATIVE, AND COMMUNITY DISPOSAL SYSTEMS

On-site sewage disposal systems and other similar methods for liquid waste disposal are sometimes viewed as interim solutions in urbanizing areas, yet may be required to function for many years. On-site systems can be a viable long-term waste disposal method with proper siting, design, construction, and management. In establishing on-site system regulations, agencies must consider such systems as permanent, not interim systems to be replaced by public sewers. The reliability of these systems is highly dependent on land and soil constraints, proper design, proper construction, and proper operation and maintenance.

If on-site sewage treatment facilities are not carefully managed, problems can occur, including:

- ° odors or nuisance;
- ° surfacing effluent;
- ° disease transmission; and,
- ° pollution of surface and ground waters.

Odors and nuisance can be objectionable and annoying and may obstruct free use of property. Surfacing effluent (effluent which fails to percolate and rises to the ground surface) can be an annoyance, or health hazard to the resident and neighbors. In some cases, nearby surface waters may be polluted.

On-site sewage disposal systems are a potential mechanism for disease transmission. Sewage is capable of transmitting diseases from organisms which are discharged by an infected individual. These include dysentery, hepatitis, typhoid, cholera, and gastro-intestinal disorders.

Pollution of surface or ground waters can result from the discharge of on-site system wastes. Typical problem waste constituents are total dissolved solids, phosphates, nitrates, heavy metals, bacteria, and viruses. Discharge of these wastes will, in some cases, destroy beneficial surface and ground water uses.

Subsurface disposal systems may be used to dispose of wastewater from: 1) individual residences; 2) multi-unit residences; 3) institutions or places of commerce; 4) industrial sanitary sources; and, 5) small communities. All individual and multi-unit residential developments must comply with criteria in this section of the Basin Plan. Commercial, institutional, and industrial developments with a discharge flow rate less than 2500 gallons per day generally are not regulated by waste discharge requirements; therefore, they must comply with these criteria. Community systems must also comply with criteria relating to this subject within the Basin Plan. Community systems are defined for the purposes of this Basin Plan as: 1) residential wastewater treatment systems for more than 5 units or more than 5 parcels; or, 2) commercial, institutional or industrial systems to treat sanitary wastewater equal to or greater than 2500 gallons per day (average daily flow). Systems of this type and size may be subject to waste discharge requirements.

Alternatives to conventional on-site system designs have been used when site constraints prevent the use of conventional systems. Examples of alternative systems include mound and evapotranspiration systems. Remote subdivisions, commercial centers, or industries may utilize conventional collection systems with community treatment systems and subsurface disposal fields for sanitary wastes. Alternative and community systems can pose serious water quality problems if improperly managed. Failures have been common in the past and are usually attributed to the following:

- ° Systems are inadequately or improperly sited, designed, or constructed.
- ° Long-term use is not considered.
- ° Inadequate operation and maintenance.

Corrective Actions for Existing Systems

Individual disposal systems can be regulated with relative ease when they are proposed for a particular site. For new systems, regulations generally provide for good design and construction practices. ~~By~~ ~~the~~ ~~use~~ ~~of~~ ~~these~~ ~~systems~~ ~~can~~ ~~be~~ ~~made~~ ~~in~~ ~~conjunction~~ ~~with~~ ~~the~~ ~~use~~ ~~of~~ ~~these~~ ~~systems~~. A more troublesome problem is presented by older septic tank systems where design and construction may have been less strictly controlled or where land development has intensified to an extent that percolation systems are too close together and there is no room left for replacement leaching areas. Where this situation develops to an extent that public health hazards and nuisance conditions develop, the most effective remedy is usually a sewer system. Where soil percolation rates are particularly fast, ground water degradation is possible, particularly increases in nitrate concentrations.

Sewer system planning should be emphasized in urbanizing areas served by septic tanks. A first step would be a monitoring system involving surface and ground waters to determine whether problems are developing. Where septic tank systems in urbanized areas are not scheduled for replacement by sewers and where public health hazards are not documented, septic tank maintenance procedures are encouraged to lessen the probability that a few major failures might force sewerage of an area which otherwise could be retained on individual systems without compromising water quality. Often a few systems will fail in an area where more frequent septic tank pumping, corrections to plumbing or leach fields, or in-home water conservation measures could correct the system. Improvements of this kind should be en-

forced by a local septic tank maintenance district or local governing jurisdiction.

A septic tank subjected to greater hydraulic load can fail due to washout of solids into percolation areas and plugging of the infiltrative surface. For ~~these~~ ~~systems~~, home Dishwashers, garbage grinders, and washing machines could be eliminated. In some cases, excess wash water could be diverted to separate percolation areas by in-home plumbing changes. Water saving toilets, faucets, and shower heads are available to encourage low water use. Water use costs ~~may~~ ~~also~~ ~~be~~ ~~structured~~ ~~to~~ ~~encourage~~ ~~more~~ ~~frugal~~ ~~use~~ ~~of~~ ~~water~~.

Local Governing Jurisdiction Actions

Disclosure and Compliance of Existing Wastewater Disposal System

Local governing jurisdictions should provide programs to assure conformance with this Basin Plan and local regulations. Inspection programs should assure site suitability tests are performed as necessary, and that tests are in accordance with standard procedures. Inspection should also assure proper system installation. Proper design and construction should be certified by the inspector. Concerned homeowners can be a tremendous asset in assuring proper construction. When a septic system permit is issued by the local agency, a handout specifying proper construction techniques should be made available to the general public. Systems must be inspected by the local agency before covering backfilling).

Local agencies can use either agency inspectors or individuals under contract with the local agency. Either way, a standard detailed checklist should be completed by the inspector to certify compliance.

Site suitability determinations should specify: 1) whether approval is for the entire lot or for specific locations of the lot; 2) if further tests are necessary; and, 3) if alternatives are necessary or available.

Where agency approval is necessary from various departments, final sign-offs should be on the same set of plans.

Home buyers should be aware of the nature and requirements of their wastewater disposal system. Plans should be available in city or county offices showing placement of soil absorption systems. Since this is only feasible for new construction, local agencies should require septic system as-built plans as a condition of new construction final inspection. Plans would be kept on file for future use of property owners.

Prospective property buyers should be informed of any enforcement action affecting parcels or houses they wish to buy. For example, a parcel in a discharge prohibition area may be unbuildable for an indefinite period, or a developed parcel may be subject to significant user charges from a future sewer system. Local agencies ~~County Health Departments~~ should have prohibition area terms entered into the county record for each affected parcel. When a prospective buyer conducts a title search, terms of the prohibition would appear in the preliminary title report.

Dual leachfields are considered appropriate for all systems. Dual leaching capabilities provide an immediate remedy in the event of system failure. Furthermore, should wastewater flows increase, this area can be used until the system is expanded. But system expansion may not be possible if land is set aside for this purpose. For this reason, dedicated system expansion areas are also appropriate.

~~For the divisions of Land Planning and~~

~~County Health Departments should be notified of property use restrictions by reading CC&R's.~~

To protect this set-aside area from encroachment, the ~~county~~ local agency should require restrictions on future use of the area as a condition of land division approval. Set aside areas can be permanently designated on a parcel or subdivision map. For new subdivisions, Covenants, Conditions, and Restrictions (CC&R's) might provide an appropriate mechanism for protecting a set aside area. Future buyers of affected property would be notified of property use restrictions by reading CC&R's.

All on-site system owners need to be aware of proper operation and maintenance procedures. Local governing jurisdictions should mount a continuing public education program to provide home owners with on-site system operation and maintenance guidelines. Basin Plan information should be available at local agency ~~county~~ health and building departments.

Local agencies should conduct an on-site system inspection program, particularly in areas where system failures are common or where subdivisions with poor soils are approved. An agency inspector should periodically check each septic tank for pumping need and each system for proper operation. Homeowners should be alerted where evidence of system failure exists. Where nuisance or a potential public health hazard exists, a follow-up procedure should insure the situation is corrected. On-site systems should be constructed in a location that facilitates system inspection.

Another approach is to periodically mail homeowners a brochure reminding them to inspect their on-site system. Homeowners

should be notified that they should periodically check their septic tank for pumping need. Homeowners should also be notified of other problems indicative of system failure. Some examples include wet spots in drainfield area, lush grass growths, slowly draining wastewater, and sewage odors. A convenient mailing opportunity might be with property tax statements.

Many existing systems do not comply with current or proposed standards. Repairs to failing systems should be done under permit from the local agency/county. To the extent practicable, the local agency/county should require failing systems to be brought into compliance with Basin Plan recommendations. This could be a condition of granting a permit for repairs.

Land use changes on properties used for commerce, small institutions, or industries should not be approved by the local agency until the existing on-site system meets criteria of this Basin Plan and local ordinances. A land use permit could be one approach to alert the local agency of land use changes. Use permits cannot be carried over to the new land use.

On-Site Wastewater Management Plans

On-site wastewater management should be implemented in urbanizing areas to investigate long-term cumulative impacts resulting from continued use of individual, alternative, and community on-site disposal systems. A wastewater disposal study should be conducted to determine the best Wastewater Management Plan that would provide site or basin specific wastewater re-use and disposal criteria to prevent water quality degradation and public health hazards. Wastewater management plans should provide an evaluation of the effects of existing and proposed developments and changes in land use. These plans should be a comprehensive planning tool to specify on-site disposal system

limitations to prevent ground or surface water degradation. Wastewater management plans should:

- contain a ground/surface water monitoring program;
- identify sites suitable for conventional septic systems;
- project on-site disposal system use;
- project maximum population densities for each subdrainage basin to control degradation or contamination of ground or surface water;
- recommend establishment of septic tank maintenance districts, as needed; and,
- identify alternate means of disposing of sewage in the event of irreversible degradation from on-site disposal systems.

For areas where watershed-wide plans are not developed, conditons could be placed on new divisions of land or community systems to provide monitoring data or geologic information to contribute to the development of a Wastewater Management Plan. Wastewater disposal alternatives should identify costs to each homeowner. A costeffectiveness analysis, which considers socio-economic impacts of alternative plans, should be used to select the recommended plan. //Plans//should be developed for new divisions of city or community systems and existing high density areas utilizing on-site disposal.

On-site wastewater disposal zones, as discussed in Section 6950-6981 of the Health and Safety Code, may be an appropriate means of implementing on-site Wastewater Management Plans.

On-site Wastewater Management Plans shall be approved by the Regional Board.

Septic Tank Maintenance Districts

Site Suitability

It may be appropriate for unsewered community on-site systems to be maintained by local on-site sewage disposal maintenance districts. ~~These special districts could be administered through existing local governments such as County Water Districts, a Community Services District, or a County Service Area.~~

Septic tank maintenance districts should be responsible for determining site suitability in conformance with this Water Quality Control Plan. Administrators should insure proper construction, installation, operation, and maintenance of on-site disposal systems. Maintenance districts should establish septic tank surveillance, maintenance and pumping programs; provide repairs to plumbing or leachfields; and encourage water conservation measures.

Criteria for New Systems

On-site sewage disposal system problems can be minimized with proper site location, design, installation, operation, and maintenance. The following section recommends criteria for all new individual subsurface disposal systems and community sewage disposal systems. ~~These special districts could be administered through existing local governments such as County Water Districts, a Community Services District, or a County Service Area.~~

Recommendations are arranged in sequence under the following categories: site suitability; system design; construction; individual system maintenance; community system design; and local agencies.

Manadatory criteria are listed on page 5--65 in the "Discharge Prohibition" section.

Prior to permit approval, site investigation should determine on-site system suitability:

1. At least one soil boring or excavation per on-site system should be performed to determine soil suitability, depth to ground water, and depth to bedrock or impervious layer. Soil borings are particularly important for seepage pits. Impervious material is defined as having a percolation rate slower than 120 minutes per inch or having a clay content 60% or greater. The soil boring or excavation should extend at least 10 feet below the drainfield¹ ~~bottom~~ at each proposed location.
2. An excavation should be made to detect mottling or presence of underground channels, fissures, or cracks. Soils should be excavated to a depth of 4-5 feet ~~below~~ leachfield/seepage pit drainfield bottom.
3. For leachfields, at least three percolation test locations should be used to determine system acceptability. Tests should be performed at proposed subsurface disposal system sites and depths.
4. If no restrictive layers intersect, and geologic conditions permit surfacing, the setback distance from a cut, embankment, or steep slope (greater than 30 percent) should be determined by projecting a line 20 percent down-gradient from the sidewall at the highest perforation of the discharge pipe. The leachfields should be setback far enough to prevent this projected line from intersecting the cut within 100 feet, measured horizontally, of the sidewall. If restrictive layers intersect cuts, embankments or steep slopes, and geologic conditions permit surfacing, the setback should be at least 100 feet measured from the top of the cut.

1 "Drainfield" refers to either a leachfield or seepage pit.

5. Natural ground slope of the disposal area should not exceed 20%.

6. For new land divisions, lot sizes less than 1 acre should not be permitted.

System Design

On-site systems should be designed according to the following recommendations:

1. Septic tanks should be designed to remove nearly 100% of settleable solids and should provide a high degree of anaerobic decomposition of colloidal and soluble organic solids.

2. Tank design must allow access for inspection and cleaning. The septic tank must be accessible to a vacuum truck for pumping.

3. If curtain drains discharge diverted ground water to subsurface soils, the upslope separation from a leachfield or pit should be 20 feet and the downslope separation should be 50 feet. Discharge to ground surface is discouraged, especially downslope of the leachfield.

4. Leachfield application rate should not exceed the following:

Percolation Rate min./in	Loading Rate g.p.d./sq.ft.
1-20	0.8
21-30	0.6
31-60	0.25
61-120	0.10

5. Seepage pit application rate should not exceed 0.3 g.p.d./sq.ft.

6. ~~Leachfield/seepage/pit~~ Drainfield design should be based only upon useable permeable soil layers.

7. ~~Soil/absorption/system/design/showed~~

~~be based on average daily wastewater flow.~~ The minimum design flow rate should be 375 gallons per day per dwelling unit.

8. In clayey soils, systems should be constructed to place infiltrative surfaces in more permeable horizons.

9. Distance between drainfield trenches should be at least two times the effective trench depth.

10. Distance between seepage pits (sidewall to sidewall) should be at least 20 feet.

11. Dual disposal fields (200% of original calculated disposal area) are recommended. Both drainfields should be constructed initially and diversion valves or boxes installed when access to the disposal system is restricted in such a way that future/so/that additions and repairs cannot be made easily.

12. For commercial systems, small institutions, or domestic industrial systems design should be based on daily peak flow. ~~estimates based on the total number of people to be served.~~

13. For commercial and institutional systems, pretreatment may be necessary if wastewater is significantly different from domestic wastewater.

14. Commercial systems, institutional systems, or domestic industrial systems should reserve an expansion area (i.e. dual drainfields/leachfields must be installed and area for replacement of drainfield leachfield must be provided) to be set aside and protected from all uses except future drainfield leachfield repair and replacement.

15. Nutrient and heavy metal removal should be facilitated by planting ground cover vegetation over shallow subsurface drainfields. The plants must have the

following characteristics: (1) evergreen, (2) shallow root systems, (3) numerous leaves, (4) salt resistant, (5) ability to grow in soggy soils, and (6) low or no maintenance.

Design for Engineered Systems

1. Mound systems should be installed in accordance with criteria contained in Guidelines for Mound Systems by the State Water Resources Control Board. In cases of conflict with this Basin Plan, the more stringent criteria applies.

2. Evapotranspiration systems should be installed in accordance with criteria contained in Guidelines for Evapotranspiration Systems by the State Water Resources Control Board. In cases of conflict with this Basin Plan, the more stringent criteria applies, with the following exceptions:

a. ~~The highest precipitation rate/the lowest evaporation rate/for each year of the year/for the previous ten years of record should be used for design.~~

a. For evapotranspiration systems, each month of the highest precipitation year and lowest evaporation year within the previous ten years of record should be used for design.

b. Systems shall be designed by a registered civil engineer.

18. ~~Removal should be facilitated by drainage systems/should be designed/~~

Construction

Water quality problems resulting from improper construction can be reduced by following these practices:

1. Subsurface disposal systems should have a slightly sloped finished grade to promote surface runoff.

2. Work should be scheduled only when infiltrative surfaces can be covered in one day to minimize windblown silt or rain clogging the soil.

3. In clayey soils, work should be done only when soil moisture content is low to avoid smeared infiltrative surfaces.

4. Bottom and sidewall areas should be left with a rough surface. Any smeared or compacted surfaces should be removed.

5. Bottom of trenches or beds should be level throughout to prevent localized overloading.

6. Two inches of coarse sand should be placed on the bottom of trenches to prevent compacting soil when leachrock is dumped into drainfields. Fine sand should not be used as this may facilitate system failure.

7. Surface runoff should be diverted around open trenches/pits to limit siltation of bottom area.

8. Prior to backfilling, the distribution system should be loaded to test the hydraulic loading pattern.

9. Properly constructed distribution boxes or junction fittings should be installed to maintain equal flow to each trench. Distribution boxes/fittings should be placed with extreme care outside the leaching area to insure settling does not occur.

10. Risers to the ground surface and manholes should be installed over the septic tank inspection ports and access ports.

11. ~~Drainfields~~ Drainfields should include an inspection pipe to check water level.

12. Additional construction precautions are discussed within the Environmental Protection Agency's Design Manual-On-site Wastewater Treatment and Disposal Systems.

Individual System Maintenance

Individual septic tanks should be maintained as follows:

1. Septic tanks should be inspected every two to five years to determine the need for pumping. If garbage grinders or dishwashers discharge into the septic tank, inspection should occur at least every two years.
2. Septic tanks should be pumped whenever: (1) the ~~bottom of the~~ scum layer is within three inches of the ~~top of the~~ outlet device; or (2) the sludge level is within ~~eighteen~~ inches of the bottom of the ~~first compartment~~ outlet device.
3. Drainfields should be alternated when drainfield inspection pipes reveal a high water level.
4. Disposal of septage (solid residue pumped from septic tanks) should be accomplished in a manner acceptable to the Executive Officer. In some areas, disposal may be to either a Class I or Class II solid waste site; in others, septage may be discharged to a municipal wastewater treatment facility.

Community System Design

Community systems should be designed and maintained to accommodate the following items:

1. Capacities should accommodate build-out population.
2. Design should be based upon peak daily flow estimates.
3. Design should consider contributions from infiltration throughout the collection system.

4. Septic tanks should be pumped when sludge and scum levels are greater than 1/3 of the depth of the first compartment.

5. Operation and maintenance should be in accordance with accepted sanitary practice.

6. Maintenance manuals should be provided to system users and maintenance personnel. Manuals should emphasize that user negligence could result in increased operation and maintenance costs.

Local Agencies

Recommendations for local governing jurisdictions:

1. Adopt a standard percolation test procedure.

The California State Water Resources Control Board Guidelines for Evapotranspiration Systems provides a percolation test method recommended for use to standardize test results. A twelve inch diameter percolation test hole may be used.

2. Percolation tests should be continued until a stabilized rate is obtained.

3. Percolation test holes should be drilled with a hand auger. A hole could be hand augered at the bottom of a larger excavation made by a backhoe.

4. Percolation tests should be performed at a depth corresponding to the bottom of the subsurface disposal area.

5. Seepage pits should be utilized only after careful consideration of site suitability. Soil borings or excavations should be inspected either by permitting agency or individual under contract to the permitting agency.

6. ~~Public Works Departments should~~ Approve permit applications after checking plans for erosion control measures.

Approve permit applications after checking plans for erosion control measures.

7. Inspect systems prior to covering to assure proper construction.

8. Require replacements or repairs to failing systems to be in conformance with Basin Plan recommendations, to the extent practicable.

~~7.1. Before approving systems, assure they are in conformance with the State Map and the Basin Plan.~~

9. For new land divisions, protect on-site disposal systems and expansion areas from encroachment by provisions in covenants, conditions, and restrictions or additions to parcel maps.

10. Inform property buyers of the existence, location, operation, and maintenance of on-site disposal systems. Prospective home or property buyers should also be informed of any enforcement action (e.g. Basin Plan prohibitions) through the County Record.

11. Conduct public education programs to provide property owners with operation and maintenance guidelines.

12. Alternative system owners shall be provided an informational maintenance or replacement document by the appropriate governing jurisdiction. This document shall stipulate homeowner procedures to ensure maintenance, repair, or replacement of critical items within 48 hours following failure.

13. Where appropriate, septic tank systems should be maintained by local septic tank maintenance districts.

14. Wastewater Management Plans should be prepared and implemented for applicable portions of San Martin, San Lorenzo Valley, Carmel Valley, Carmel Highlands, Prunedale, El Toro/ Canyon Del Rey, Shandon, Creston, Templeton, Santa Margarita/Garden Farms, Los Osos/Baywood

Park, Arroyo Grande, Nipomo, Los Alamos, upper Santa Ynez Valley, and Los Olivos/Ballard.

15. Ordinances should be updated to reflect Basin Plan criteria.

In addition, the following items should be considered:

1. Water conservation and solids reduction practices are recommended. Garbage grinders should not be used in homes with septic tanks.

2. Metering and water rates should be used to encourage water conservation.

3. Grease and oil should not be introduced into the system. Bleach, solvents, fungicides, and any other toxic material should not be poured into the system.

4. Reverse osmosis unit blowdown should not be discharged to on-site wastewater treatment systems overlying useable ground water. Offsite (factory regeneration) practices are recommended for water softeners.

5. If onsite water softener regeneration is necessary, minimum salt use in water softeners is recommended. This can be accomplished by minimizing regeneration time or limiting the number of regeneration cycles.

Page 5-63, replace management principle number fourteen with the following:

"14. The Regional Board intends to discourage high density development on septic tank disposal systems and generally will require increased size of parcels with slower percolation rates. Consideration of development will be based upon the percolation rates and engineering reports supplied. In any questionable situation, engineer designed systems will be required."

PROHIBITIONS

Page 5-65, replace paragraph beginning, "In addition, discharge from individual sewage systems, including..." with the following:

"Discharges from non-engineered/~~any~~ soil absorption systems in sites with any of the following conditions are prohibited:

1. For seepage pits, soils or formations containing: a) mostly gravels with few fines (soils with over 50% by weight coarser than a No. 200 sieve, and over half of the coarse fraction larger than No. 4 sieve); b) continuous channels; and/or c) cracks or fractures unless: a) distance between drainfield bottom and highest ground water, including perched ground water, is greater than 50 feet; or, b) a set back distance of 250 feet to any domestic water supply well or surface water is assured.

2. For seepage pits, soils or formations containing 60% or greater ~~100%~~ clay (a soil particle less than 2 microns in size) unless parcel size is at least 5 acres.

3. Distances between trench bottom and highest beneficial ground water, including perched ground water, less than ~~100~~ feet. separation specified by appropriate percolation rate:

Percolation Rate, min/in	Distance, ft
<u>1-29</u>	<u>8</u>
<u>> 30</u>	<u>5</u>

4. For seepage pits, distances between pit bottom and highest beneficial ground water, including perched ground water, less than 10 feet.

5. Distances between trench/pit bottom and bedrock or other impervious layer less than 10 feet.

6. For leachfields in non-gravelly soils without continuous channels, where percolation rates are faster than 1 min/in unless: a) distance between trench bottom and highest beneficial ground water, including perched ground water, is at least 50 feet; or, b) a set back distance of at least 200 feet to any domestic water supply well or surface water is assured.

7. For leachfields, where percolation rates are slower than 120 min/in, unless parcel size is at least 5 acres.

8. For leachfields in non-gravelly soils without continuous channels, where soil percolation rates are faster than 5 min/in unless: a) the distance between trench bottom and highest beneficial ground water is at least 20 feet; or, b) a domestic water supply well or surface water set back distance of at least 200 feet is assured.

9. For leachfields, where soil percolation rates are slower than 60 min/in unless the effluent application rate is 0.1 gpd/ft² or less.

10. Areas subject to inundation from a 10 year flood.

11. Natural ground slope of the disposal area exceeding 30%.

12. Setback distances less than:

	Ft.
Domestic water supply wells in unconfined aquifer	100

Watercourse ¹ where geologic conditions permit water migration	<u>Ft.</u> 100
Spillway elevation of reservoirs ²	200
Springs, natural or any part of man made spring	100

13. For new land divisions without approved Wastewater Management Plans, lot size less than 1/2 acre.

14. Within a reservoir watershed where the density for each land division is less than 2.5 acres for areas without approved Wastewater Management Plans.

15. For new land divisions, individual systems without an area set aside for dual leachfields (100% replacement area).

16. Commercial, institutional, and sanitary industrial systems with dual disposal areas (200 % total of original calculated disposal area) not installed.

17. Commercial, institutional, or sanitary industrial systems not basing design on daily peak flow estimate.

18. Any site unable to maintain subsurface disposal.

In addition to previous prohibitions, community subsurface disposal systems (serving more than 5 parcels or more than 5 dwelling units) are prohibited unless:

1. Seepage pits have at least 15 feet separation between pit bottom and highest beneficial ground water, including perched ground water.
2. Sewerage facilities are operated by a public agency, unless a demonstration is made to the Board that an existing public agency is unavailable and formation of a new public agency is unreasonable. If such a demonstration is made, a private entity must be established with adequate financial, legal, and institutional resources to assume responsibility for waste discharges.
3. Dual disposal systems are installed (200% of total of original calculated disposal area).
4. An expansion area is included for replacement of the original system (300% total).
5. Community systems provide duplicate individual equipment components for components subject to failure.
6. Discharge from community systems does not exceed 40 grams per day total nitrogen, on the average, per acre of total development overlying ground water recharge areas, unless local governing jurisdictions adopt Wastewater Management Plans subsequently approved by the Regional Board.

Prohibition Areas

In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance the following prohibition areas are necessary:

~~Wastewater Management Plans for the following areas: ...~~

¹ Watercourse-(1) A natural or artificial channel for passage of water. (2) A running stream of water. (3) A natural stream fed from permanent or natural sources, including rivers, creeks, runs, and rivulets. There must be a stream, usually flowing in a particular direction (though it need not flow continuously) in a definite channel, having a bed or banks and usually discharging into some other stream or body of water.

² Reservoir-A pond, lake, tank, basin, or other space either natural or created in whole or in part by the building of engineering structures, which is used for storage, regulation, and control of water, recreation, power, flood control or drinking.

1. Resolution 78-02, Nipomo discharge prohibition area
2. Resolution 79-07, Las Lomas-Hall discharge prohibition area
3. Resolution 79-08, Moss Landing discharge prohibition area
4. Resolution 82-10, San Lorenzo Valley discharge prohibition area
5. Resolution 83-01, Boronda discharge prohibition area
6. Resolution 83-04, Mission Canyon discharge prohibition area

The Executive Officer shall administer these prohibitions. In those cases of question, the Regional Board shall consider exemptions.

The Board may grant an exemption to prohibitions ~~except~~ for: 1) engineered new on-site disposal systems where sufficient justification is provided; 2) new on site disposal systems after presentation of geologic and hydrologic evidence by the proposed discharger that such system(s) will not individually or collectively result in pollution or nuisance; and 3) existing on-site systems if it finds that the continued operation of such system(s) in a particular area will not, individually or collectively, directly or indirectly, affect water quality adversely. Dischargers requesting exemptions must submit a Report of Waste Discharge.

Individual, alternative, and community systems shall not be approved for any area where it appears that the total discharge of leachate to the geological system, under fully developed conditions, will cause: 1) damage to public or private property; 2) ground or surface water degradation; 3) nuisance conditions; or, 4) a public health hazard. Interim use of septic tank systems may be permitted where alternate parcels are held in reserve until sewer systems are available.

Exceptions to prohibitions may be considered for engineered systems where sufficient justification is provided. Public works and recycling systems shall not be permitted for areas where it appears that the total discharge of leachate to the geological system, under fully developed conditions, will cause damage to public or private property, degradation of water quality, or public health hazard. Interim use of septic tank systems may be permitted where alternate parcels are held in reserve until sewer systems are available. Engineered systems shall be designed only by registered engineers. Engineers should be responsible for proper system operation. Engineers should be responsible for educating system users of proper operation and maintenance. Maintenance schedules should be established. Engineered systems should be inspected by designer during installation to insure conformance with approved plans.

Individuals requesting exceptions may be asked to submit a Report of Waste Discharge.

Some engineered systems may be considered experimental by the Regional Board. Experimental systems will be handled with caution. A trial period of at least one year should be established whereby proper system operation must be demonstrated. Under such an approach, experimental systems are granted a one year conditional approval."

ENVIRONMENTAL CHECKLIST FOR

I. BACKGROUND

1. Name of Proponent California Regional Water Quality Control Board
2. Address and Phone Number of Proponent:
 - 1102 A Laurel Lane
 - San Luis Obispo, CA 93401
 - (805) 543-3147
3. Date of Checklist Submitted July 8, 1983
4. Agency Requiring Checklist Resources Agency
5. Name of Proposal, if applicable Individual/Community
Sewage Disposal System Policy - Region 3 Amendment to Water Quality Control Plan (Basin Plan).

II. ENVIRONMENTAL IMPACTS

(Explanations of all "yes" and "maybe" answers are required on attached sheets.)

	YES	MAYBE	NO
1. Earth. Will the proposal result in:			
a. Unstable earth conditions or in changes in geologic substructures?	___	<u>X</u>	___
b. Disruptions, displacements, compaction or overcovering of the soil?	<u>X</u>	___	___
c. Change in topography or ground surface relief features?	___	<u>X</u>	___
d. The destruction, covering or modification of any unique geologic or physical features?	___	<u>X</u>	___
e. Any increase in wind or water erosion of soils, either on or off the site?	___	<u>X</u>	___
f. Changes in deposition or erosion of beach sands, or changes in siltation, deposition or erosion which may modify the channel of a river or stream or the bed of the ocean or any bay, inlet or lake?	___	___	<u>X</u>

- | | | | | |
|--|--|-------|-------|-------|
| g. | Exposure of people or property to geologic hazards such as earthquakes, landslides, mudslides, ground failure, or similar hazards? | _____ | _____ | X |
| 2. Air. Will the proposal result in: | | | | |
| a. | Substantial air emissions or deterioration of ambient air quality? | _____ | _____ | X |
| b. | The creation of objectionable odors? | _____ | X | _____ |
| c. | Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? | _____ | _____ | X |
| 3. Water. Will the proposal result in: | | | | |
| a. | Changes in currents, or the course or direction of water movements, in either marine or fresh waters? | _____ | X | _____ |
| b. | Changes in absorption rates, drainage patterns or the rate and amount of surface water runoff? | _____ | X | _____ |
| c. | Alterations to the course or flow of flood waters? | _____ | X | _____ |
| d. | Change in the amount of surface water in any water body? | _____ | _____ | X |
| e. | Discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity? | _____ | X | _____ |
| f. | Alteration of the direction or rate of flow of ground waters? | _____ | X | _____ |
| g. | Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? | _____ | X | _____ |
| h. | Substantial reduction in the amount of water otherwise available for public water supplies? | _____ | _____ | X |
| i. | Exposure of people or property to water related hazards such as flooding or tidal waves? | _____ | _____ | X |

4. Plant Life. Will the proposal result in:
- | | | | |
|---|-------|--------------|-------|
| a. Change in the diversity of species, or number of any species of plants (including trees, shrubs, grass, crops, microflora and aquatic plants)? | _____ | <u> X </u> | _____ |
| b. Reduction of the numbers of any unique, rare or endangered species of plants? | _____ | <u> X </u> | _____ |
| c. Introduction of new species of plants into an area, or in a barrier to the normal replenishment of existing species? | _____ | <u> X </u> | _____ |
| d. Reduction in acreage of any agricultural crop? | _____ | <u> X </u> | _____ |
5. Animal Life. Will the proposal result in:
- | | | | |
|---|-------|-------|--------------|
| a. Change in the diversity of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects or microfauna)? | _____ | _____ | <u> X </u> |
| b. Reduction of the numbers of any unique, rare or endangered species of animals? | _____ | _____ | <u> X </u> |
| c. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? | _____ | _____ | <u> X </u> |
| d. Deterioration to existing fish or wildlife habitat? | _____ | _____ | <u> X </u> |
6. Noise. Will the proposal result in:
- | | | | |
|---|-------|--------------|--------------|
| a. Increases in existing noise levels? | _____ | <u> X </u> | _____ |
| b. Exposure of people to severe noise levels? | _____ | _____ | <u> X </u> |
7. Light and Glare. Will the proposal produce new light or glare?
- | | | |
|-------|-------|--------------|
| _____ | _____ | <u> X </u> |
|-------|-------|--------------|
8. Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area?
- | | | |
|-------|-------|--------------|
| _____ | _____ | <u> X </u> |
|-------|-------|--------------|
9. Natural Resources. Will the proposal result in:
- | | | | |
|--|--------------|-------|--------------|
| a. Increase in the rate of use of any natural resources? | <u> X </u> | _____ | _____ |
| b. Substantial depletion of any nonrenewable natural resource? | _____ | _____ | <u> X </u> |

- | | | | | |
|-----|--|-----|-----|-----|
| 10. | Risk of Upset. Does the proposal involve a risk of an explosion or the release of hazardous substances (including, but not limited to, oil, pesticides, chemicals or radiation) in the event of an accident or upset conditions? | ___ | ___ | X |
| 11. | Population. Will the proposal alter the location, distribution, density, or growth rate of the human population in the area? | ___ | X | ___ |
| 12. | Housing. Will the proposal affect existing housing, or create a demand for additional housing? | ___ | X | ___ |
| 13. | Transportation/Circulation. Will the proposal result in: | | | |
| | a. Generation of substantial additional vehicular movement? | ___ | ___ | X |
| | b. Effects on existing parking facilities, or demand for new parking? | ___ | ___ | X |
| | c. Substantial impact upon existing transportation systems? | ___ | ___ | X |
| | d. Alterations to present patterns of circulation or movement of people and/or goods? | ___ | ___ | X |
| | e. Alterations to waterborne, rail or air traffic? | ___ | ___ | X |
| | f. Increase in traffic hazards to motor vehicles, bicyclists or pedestrians? | ___ | ___ | X |
| 14. | Public Services. Will the proposal have an effect upon, or result in a need for new or altered governmental services in any of the following areas: | | | |
| | a. Fire protection? | ___ | ___ | X |
| | b. Police protection? | ___ | ___ | X |
| | c. Schools? | ___ | ___ | X |
| | d. Parks or other recreational facilities? | ___ | ___ | X |
| | e. Maintenance of public facilities, including roads? | X | ___ | ___ |
| | f. Other governmental services? | X | ___ | ___ |

15. Energy. Will the proposal result in:
- | | | | |
|---|-------|-------|--------------|
| a. Use of substantial amounts of fuel or energy? | _____ | _____ | <u> X </u> |
| b. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? | _____ | _____ | <u> X </u> |
16. Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities:
- | | | | |
|------------------------------|--------------|--------------|--------------|
| a. Power or natural gas? | _____ | _____ | <u> X </u> |
| b. Communications systems? | _____ | _____ | <u> X </u> |
| c. Water? | _____ | _____ | <u> X </u> |
| d. Sewer or septic tanks? | <u> X </u> | _____ | _____ |
| e. Storm water drainage? | _____ | <u> X </u> | _____ |
| f. Solid waste and disposal? | _____ | _____ | <u> X </u> |
17. Human Health. Will the proposal result in:
- | | | | |
|--|-------|--------------|--------------|
| a. Creation of any health hazard or potential health hazard (excluding mental health)? | _____ | _____ | <u> X </u> |
| b. Exposure of people to potential health hazards? | _____ | <u> X </u> | _____ |
18. Aesthetics. Will the proposal result in the obstruction of any scenic vista or view open to the public, or will the proposal result in the creation of an aesthetically offensive site open to public view?
- | | | | |
|--|-------|--------------|-------|
| | _____ | <u> X </u> | _____ |
|--|-------|--------------|-------|
19. Recreation. Will the proposal result in an impact upon the quality or quantity of existing recreational opportunities?
- | | | | |
|--|-------|--------------|-------|
| | _____ | <u> X </u> | _____ |
|--|-------|--------------|-------|
20. Archeological/Historical. Will the proposal result in an alteration of a significant archeological or historical site, structure, object or building?
- | | | | |
|--|-------|--------------|-------|
| | _____ | <u> X </u> | _____ |
|--|-------|--------------|-------|
21. Mandatory Findings of Significance.

- a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? _____ X

- b. Does the project have the potential to achieve short-term to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time which long-term impacts will endure well into the future.) _____ X

- c. Does the project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environment is significant). _____ X

- d. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? _____ X

III. DISCUSSION OF ENVIRONMENTAL EVALUATION

IV. DETERMINATION

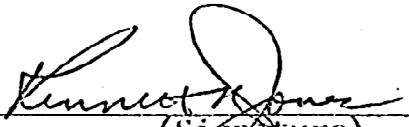

On the basis of this initial evaluation:

_____ I find the proposed project COULD NOT have a significant effect on the environment.

 X I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

_____ I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

Date 7/8/83

 (Signature)
 Executive Officer

DISCUSSION OF ENVIRONMENTAL EVALUATION

Systems would be installed with or without this proposed Basin Plan amendment. Consequently, many of the following impacts would occur regardless of the proposed amendment.

Environmental Impacts

Mitigation Measures

Item 1a

Construction of subsurface disposal systems will alter subsurface geology.

None. These impacts will be offset by improvements in water quality.

Item 1b & 1e

Construction of subsurface disposal systems will temporarily disrupt and displace the soil. Temporary soil excavation may be necessary to determine suitability of on-site system. Erosion may occur.

Amendment recommends that local governing agencies check for erosion control measures. Impacts will be offset by improved water quality.

Item 1c

Minimal changes in topography may occur to provide storm water runoff areas.

None. Impacts will be offset by improved water quality.

Item 2b

On-site sewage disposal systems can cause odors.

Local governing jurisdictions enforce a plumbing code that minimizes odors. This amendment should reduce odors from surfacing effluent.

Item 3a, 3f, 3g

Alternative sewage disposal systems with curtain drains may be constructed to lower groundwater in areas of high groundwater. On-site systems discharge to groundwater.

None. Impacts will be offset by improved water quality. This amendment is designed to protect groundwater from discharges.

Item 3b, 3c

Surface drainage control should be provided to divert surface runoff and flood waters from leachfield areas.

None. Impacts will be offset by improved water quality.

Item 3e

This policy will improve surface water quality.

None

Environmental Impacts

Mitigation Measures

Item 6a

Aerated systems and pumps may increase noise levels.

None. Impacts will be offset by improved water quality.

Item 9a

The Construction of on-site sewage treatment facilities will consume mineral resources.

None. Impacts will be offset by improved water quality. On-site systems may require fewer natural resources than public sewers.

Item 11

Population location and density may be altered because of constraints on on-site systems in some locations.

None. Impacts will be offset by improved water quality.

Item 12

In some areas, more stringent regulations may decrease availability of building sites for conventional systems. However, engineered systems may be installed as a substitute to meet water quality concerns. Engineered systems will cost more.

Many different types of innovative and alternative engineered systems can be a suitable substitute. This will result in increased cost to the discharger.

Item 14e, and 14f

Some on-site systems (particularly community systems) may be maintained by a public entity. In addition, local governing jurisdictions should perform public education programs, establish and maintain on-site maintenance districts, determine the need for sewerage, conduct On-Site Management Districts, and conduct Wastewater Management Plans in some areas, and provide adequate inspection and plan checking.

None. Impacts will be offset by improved water quality.

Item 16d

Policy provides guidelines for on-site sewage disposal systems

None. Alterations to on-site sewage disposal system policy will improve water quality.

Environmental Impacts

Mitigation Measures

Item 16e

Policy recommends diverting storm water away from disposal area.

None. Impacts will be offset by improved water quality.

Item 16f

Septage disposal policy remains unchanged.

Item 17b

Periodic inspection of on-site systems can be hazardous to individuals inadequately trained to maintain system.

Provide educational material regarding maintenance of on-site systems to residents.

Item 19

Water Quality improvements may improve the quality of some existing recreational water bodies.

None.

Items 1d, 1e, 4, 18, and 20

These impacts may occur as a result of local government decisions on growth and/or land use. Mitigation of these impacts is appropriately the local government's responsibility.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-09

Revision and Amendment of Water Quality Control
Plan by the Addition of a Prohibition of Waste
Discharge from Individual Sewage Disposal Systems
Within the Pasatiempo Area, Santa Cruz County

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,
- WHEREAS, Pasatiempo Pines area consists of about 1,300 persons located in and adjacent to the City of Scotts Valley in Santa Cruz County; and,
- WHEREAS, local groundwater is the only source of water for the area and is beneficially used for domestic and commercial use; and,
- WHEREAS, onsite soil absorption systems are the sole means of wastewater disposal in the Pasatiempo area; and,
- WHEREAS, Pasatiempo area soil permeabilities are rapid to very rapid and there is no impermeable zone between the ground surface and water table; and,
- WHEREAS, the majority of lots are too small to provide adequate dispersion of Individual Sewage Disposal System effluent in the ground water basin and the average lot size is 0.37 acres; and,
- WHEREAS, ground water studies indicate rising nitrate concentrations with increased residential land use; and,
- WHEREAS, the use of two water supply wells (Estrella and Champion) in the Pasatiempo Pines area was discontinued when testing revealed nitrate concentrations exceeded acceptable drinking water concentrations of 45 mg/l as NO₃; and,

- WHEREAS, the San Lorenzo Valley Water District is a public entity and provides water to area residences; and,
- WHEREAS, the State Department of Health Services considers the ground water to be a public health hazard due to nitrate contamination as defined in Section 13050(h) of the California Water code; and,
- WHEREAS, the City of Scotts Valley prepared an environmental impact report (EIR) in accordance with the California Environmental Quality Act and a project report that identifies adverse environmental impacts from continued use of septic tanks in the Pasatiempo Pines area and discusses alternatives to existing wastewater management practices; and,
- WHEREAS, the Regional Board is obligated to include a program of implementation for achieving water quality objectives in its Basin Plan; and,
- WHEREAS, a Regional Board staff report finds beneficial uses of Pasatiempo Pines ground water are adversely affected by individual sewage disposal system discharges, public health is jeopardized by nitrate contamination of domestic water supplies, and there appears to be a trend of increasing degradation; and,
- WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Pasatiempo Pines area individual sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,
- WHEREAS, On July 15, 1983, in the City Hall Council Chambers, 7351 Rosanna Street, Gilroy, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,
- WHEREAS, pursuant to Section 13280 of the California Water code, the Regional Board finds that discharges of wastes from new and existing ISDS which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State; and,

WHEREAS, the Regional Board finds the aforesated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coast Basin, be amended as follows:

Insert the following prohibition on Page 5-66 (retyped version of Chapter 5), bottom of page after paragraph ending with "...Tornoe Road to the Point of Beginning." (added by Resolution 83-04):

- "6. Discharges from additional individual or on-site sewage disposal systems are prohibited, and discharges from existing individual sewage disposal systems are prohibited effective July 1, 1986, in the areas in the Pasatiempo Pines and Lockwood Lane portion of Santa Cruz County and more particularly described as follows:

(Legal description to be provided for area prescribed by Regional Board)

BE IT FURTHER RESOLVED, that the above area is consistent with the recommendations of the staff report as shown on "Attachment A."

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, contained in the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or on-site sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Begin Design	September 1, 1983
Complete Design	May 1, 1984
Obtain Construction Funding	September 28, 1984
Begin Construction	March 1, 1985
COMPLETE CONSTRUCTION AND TERMINATE DISCHARGES FROM ONSITE SYSTEMS	July 1, 1986

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith all appropriate Clean Water Grant Project Priority Lists to recognize the necessary structural solution for Pasatiempo Pines as a Priority "A" project.

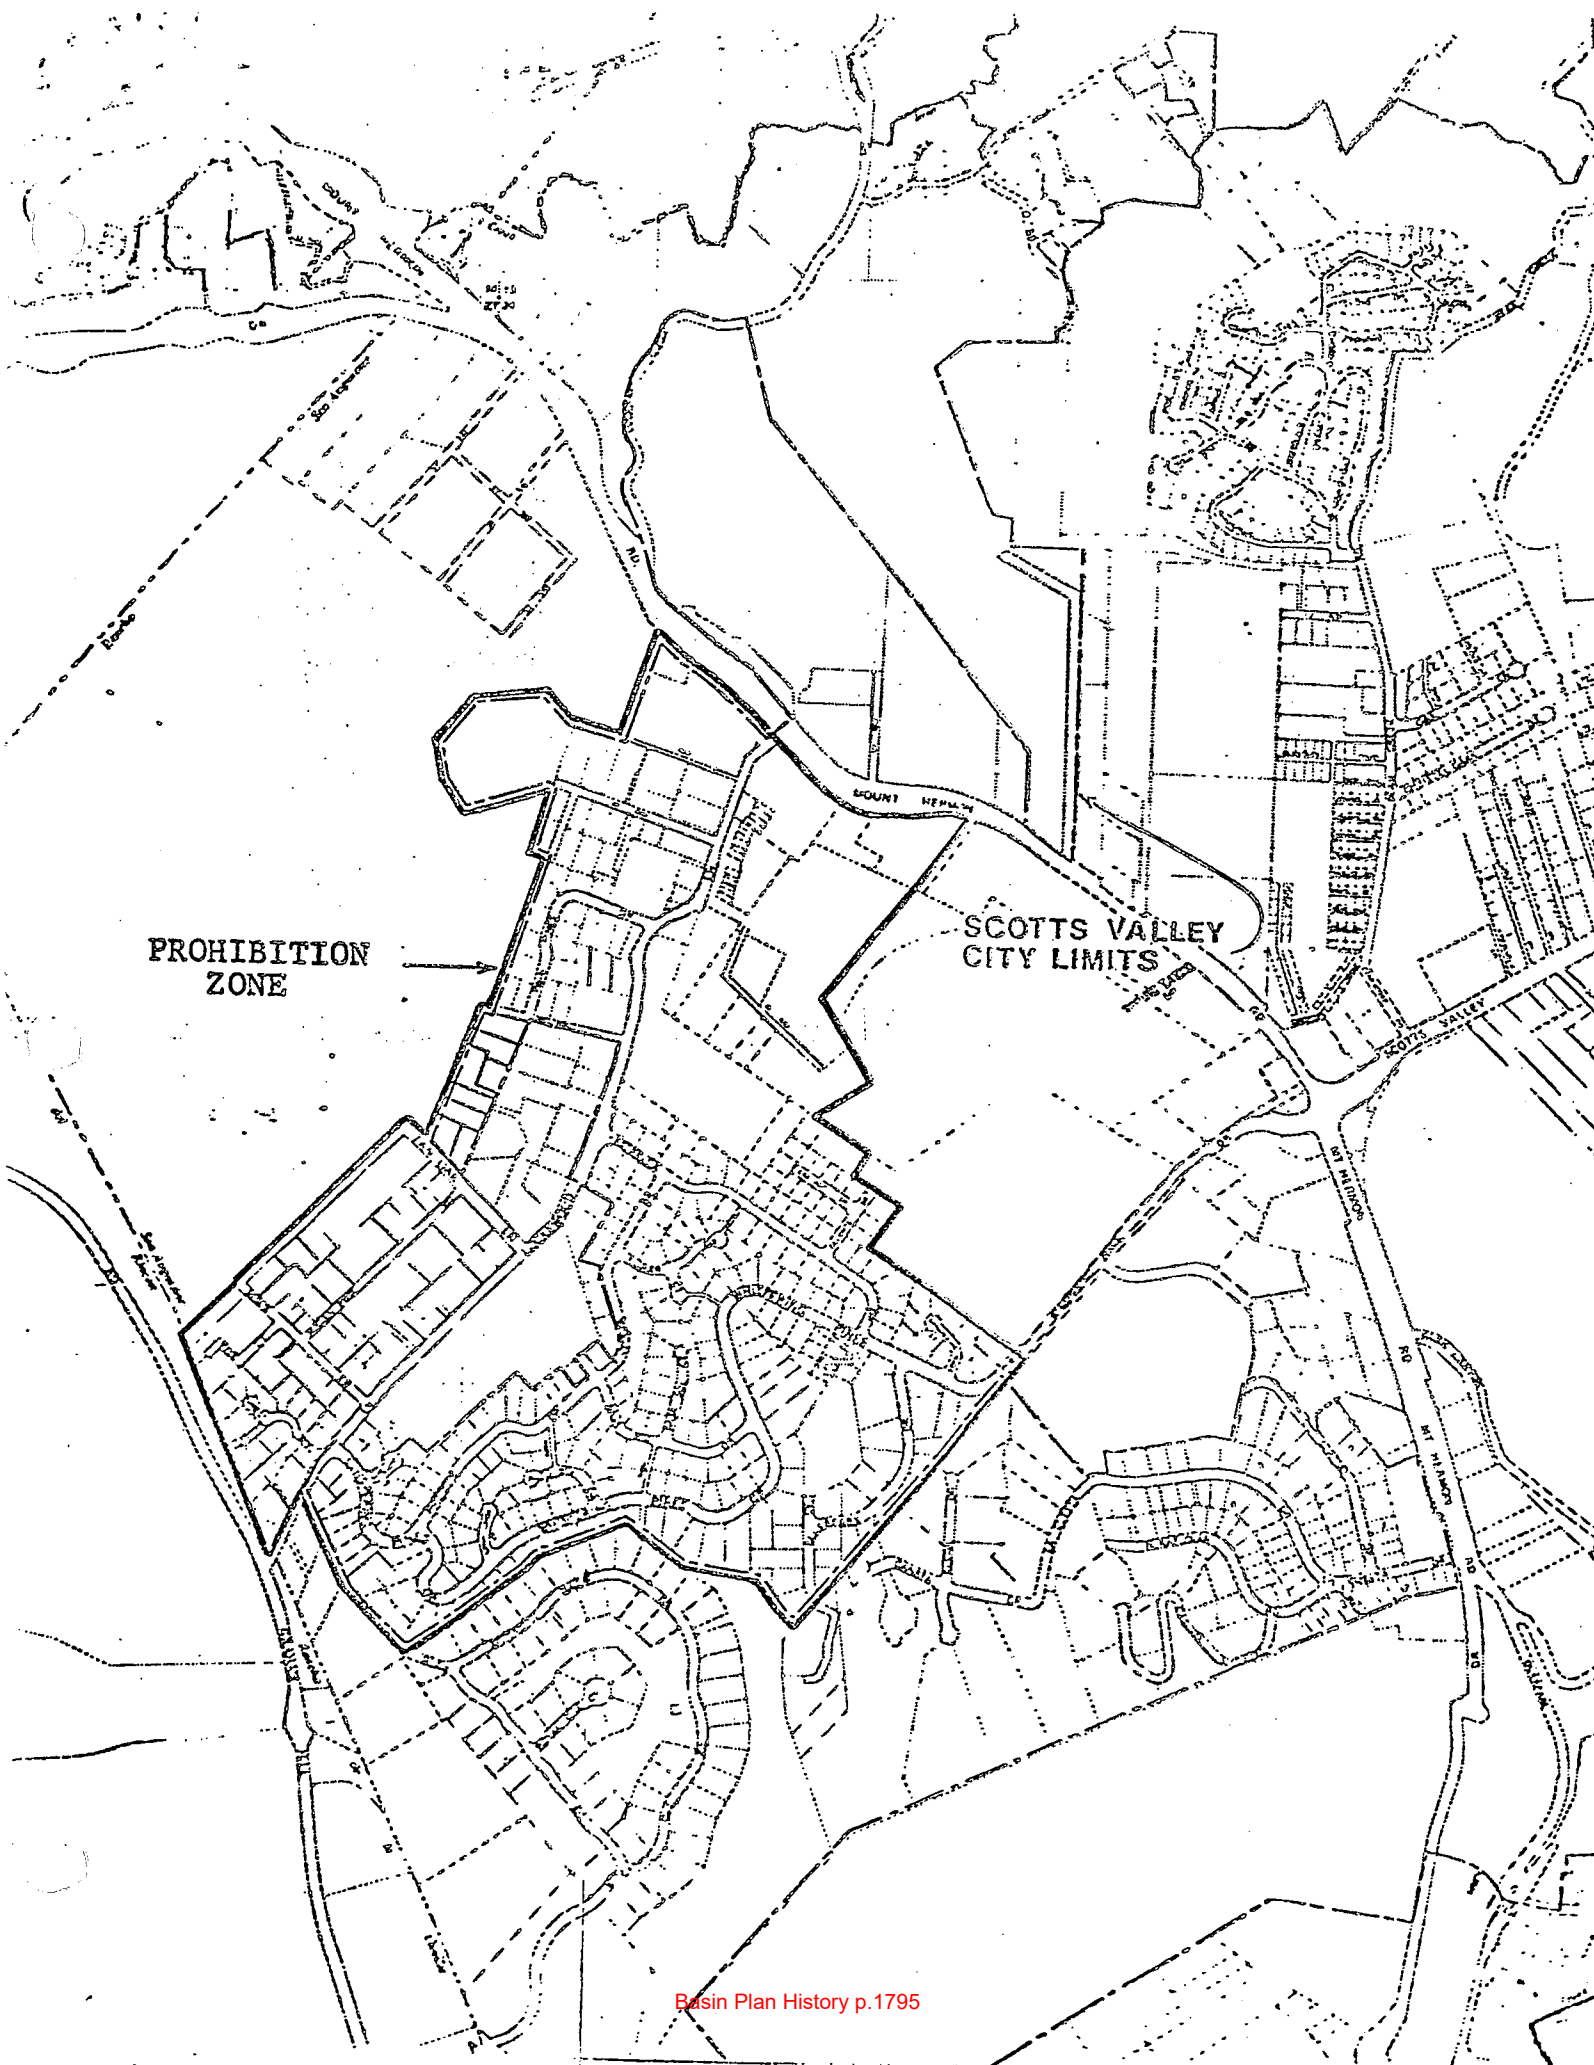

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 15, 1983.

Executive Officer

PROHIBITION
ZONE

SCOTT VALLEY
CITY LIMITS

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-07

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of nuisance; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, the Regional Board amended Chapter 5, Recommended Plan of said Basin Plan on July 9, 1982, including portions of the "Municipal Wastewater Management" section and related tables; and,
- WHEREAS, amendments of Chapter 5, Recommended Plan of said Basin Plan on July 9, 1982, did not address portions of municipal wastewater management related to the Salinas River, Carmel River, and Monterey Coastal Sub-Basins; and,
- WHEREAS, proposed revisions and amendments addressed herein apply to Chapter 5, Recommended Plan, of said Basin Plan, particularly municipal wastewater management in the Salinas River, Carmel River, and Monterey Coastal Sub-Basins; and,
- WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,
- WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217; and,

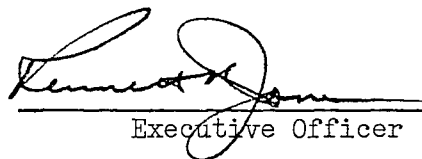

WHEREAS, on April 15, 1983, in San Luis Obispo, California, after public notice, the Regional Board received evidence and considered all factors concerning proposed revisions and amendments to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that portions of Chapter 5, "Recommended Plan," of the Water Quality Control Plan, Central Coastal Basin, beginning on page 5-23, be revised as shown on Attachment "A."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit the above-described portion of said Water Quality Control Plan as revised and amended to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the revised prohibition contained herein.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

Executive Officer

ATTACHMENT "A"

Salinas River Sub-Basin

The extensive Salinas River Sub-basin includes the Monterey Peninsula and southern coastal area of Monterey Bay, the City of Salinas, agricultural and small urban centers of the Salinas Valley, and recreational developments in the upper watersheds.

Monterey Peninsula-Salinas Region

The recommended plan for the Monterey Peninsula-Salinas area calls for consolidation of Monterey Peninsula, Salinas, Castroville, and Moss Landing municipal wastewater flows, including flows from a few areas that are not yet sewered. A primary objective of the original planning effort for that area was to identify the most cost-effective alternative for upgrading discharges from several sub-standard facilities in the southern portion of Monterey Bay. This effort eventually evolved into a plan for a consolidated, or regional, facility. As part of the plan, existing sub-standard facilities were improved to an acceptable interim level. The consolidated plan calls for relocation of wastewater discharges from southern Monterey Bay, and from the Salinas River and Tembladero Slough; to an area outside of the zone of prohibition described elsewhere in this plan. The Monterey Regional Water Pollution Control Agency was established to manage and implement regional consolidation. The service area of the Agency is defined by the boundaries of the Monterey Regional County Sanitation District and due to their close working relationship, these two entities are considered as one in this plan. A Facilities Plan completed in January, 1978, under the Clean Water Grant Program substantiates the Regional Project as the most cost-effective, environmentally acceptable, long-term wastewater management system for the study area. The four-stage project is defined in more detail as follows:

Stage 1 - Connect Pacific Grove by interceptor to an enlarged and upgraded Monterey wastewater treatment plant that provides secondary treatment. (This stage was completed in August, 1980.)

Stage 2 - Connect existing Monterey, Seaside, Fort Ord, Castroville, and the Salinas Main WWTP's to a common outfall pipeline that discharges into central Monterey Bay outside the zone of prohibition. The Salinas Alisal WWTP is not connected as part of Stage 2. Its discharge is scheduled to be terminated as part of Stage 3.

Stage 3 - Replace existing WWTP's of Stage 2, plus the Salinas Alisal WWTP, with a single WWTP that provides secondary treatment. This facility should include septage handling and treatment capabilities and, unless a more cost-effective or environmentally sound treatment alternative is determined before then, it should be completed by 1989.

Stage 4 - Implement wastewater reclamation near Castroville on agricultural lands producing edible crops. A wastewater reclamation demonstration project to determine the level of treatment needed to protect public health, as well as to assess marketability, is underway. It must be completed before implementation.

Agencies participating (directly or by contract) in the Regional Project are identified in Table 5-3. Until Stage 2 of the project is complete, wastewater flows from WWTP's serving cities of Monterey, Pacific Grove Seaside, Sand City, and Del Rey Oaks, as well as Fort Ord, will continue to discharge within the southern Monterey Bay zone of prohibition. This chapter prohibits discharge to the zone effective July 1, 1983. In a 1981 enforcement order, the Regional Board recognized that it may take up to April, 1984, to effect compliance with this prohibition.

Continued discharge of municipal wastewater to the Salinas River is essentially prohibited by virtue of designated water contact recreational use along the lower reach of the river (ref: Discharge Prohibitions, Inland Waters, paragraph #2). A discharge may continue if benefits can be realized from a direct discharge, but this has not proven to be the case and further study will be necessary if the recommended plan is to be changed. The domestic wastewater discharges from the Salinas WWTP's must be phased out as soon as completion of the regional system makes it possible to do so. While the Regional Project's most cost-effective plan delayed connection of the Alisal WWTP service area to the regional system until completion of Stage 3, continual delays in scheduling of Stage 3 are prolonging the discharge of municipal wastewater into the Salinas River. Without proof of the benefit of direct discharge and without the level of treatment necessary to assure protection of all beneficial uses of the river, the discharge from the Alisal WWTP must be removed from the river. Accordingly, connection of the Alisal WWTP to the regional system should be made as soon as possible regardless of the timing and future of Stage 3. Discharges of municipal waste to the Salinas River should be terminated as soon as feasible and in no case later than July 1, 1985.

The issue of continued discharge, which reduces to what benefits can be realized from a direct discharge, is based on a concern that termination of the discharge may have an impact on the riparian eco-system. The California Coastal Commission imposed a permit condition and the State Board's Division of Water Quality imposed a clean water grant condition requiring a mitigation study to be performed. The completed report and overseeing technical committee determined there would be no impact on the river downstream of Blanco Drain Outfall and was unable to validate an impact, and subsequent need for mitigation, on the river upstream of the outfall should wastewater discharges be terminated. A plan was subsequently prepared for a study of sufficient refinement to monitor the actual effects of flow reduction on wildlife habitat. The concern for a possible impact has not been validated and no beneficial use of continued discharge

has been established. The study has not included an investigation of nutrient or bacterial impacts should a discharge continue and, consequently, it offers no mitigation of the impact of a continued discharge. Further, it does not address the feasibility of mitigating this impact. Consequently, the Monterey Regional Water Pollution Control Agency has until July 1, 1985, either to validate its concern and implement a mitigation for continued flow or terminate the discharge. If Monterey County's proposed Arroyo Seco water project is realized, a portion of the lower reach of the river will convey municipal drinking water, adding further reason for terminating discharge of wastewater to the reach.

Discharge to Tembladero Slough is not expressly prohibited. However, "Management Principles" of this chapter clearly state discharges to aquatic environments shall be considered temporary. Policy for coastal lagoons, as expressed in the State's "Water Quality Control Policy of the Enclosed Bays and Estuaries of California," is to phase out municipal discharges at the earliest possible date. Consequently, no increase in the existing discharge to the slough should be allowed unless it is determined by Regional Board action to be in the best interest of public health and water quality. Any existing waste discharge to the slough should be considered temporary and should be terminated as soon as Stage 2 of the regional system makes it possible to do so.

While the discharge from the Castroville WWTP must be removed from Tembladero Slough, the existing WWTP is the only viable facility in the interim to receive wastewater from areas outside, but near, the Castroville County Sanitation District. For example, discharges from individual sewage disposal systems within the Moss Landing County Sanitation District are prohibited by this chapter. The best apparent project to achieve compliance with the prohibition is sewerage of the community and transport of all waste to the Castroville WWTP until Stage 3 is completed. Another example is the Castroville expanded service area project scheduled to sewer facilities such as Monte Del Lago Mobilehome Park and North Monterey County High School. It is important this project be completed as soon as possible to eliminate continual sewage discharges to Moro Cojo Slough from Monte Del Lago Mobilehome Park. New developments are not subject to this same urgency and should not be served by the Castroville WWTP until treatment and disposal capacity is available.

Although there are provisions for exception identified elsewhere in this chapter, the consolidated, or regional, WWTP identified as Stage 3 should provide secondary level treatment. All other considerations aside, the potential to provide large-scale reclamation of wastewater on agricultural lands through a relatively minor upgrading of a secondary plant is an opportunity too good, and too rare, to ignore. A multi-year study of viability of using reclaimed water for production of edible crops should demonstrate such use is practical and could prove of national importance. Reclamation would be in accord with goals, principles, and recommendations expressed throughout this chapter.

Since one purpose of consolidation is to reduce the number of independent facilities in order to achieve long-range economic and water quality benefits, facilities or service areas near the service area of the consolidated system should join with the system. This is especially true for facilities or areas that are not meeting terms of this document and that must complete significant capital improvements in order to do so. Table 5-3 identifies public and private facilities not participating in the Regional Project (as of January, 1982) that fall within this category:

Marina CWD - The Marina CWD discharges secondary-treated effluent within the zone of prohibition in southern Monterey Bay. The most cost-effective plan and the recommended alternative is for Marina CWD to join with the Regional Project. It has two other possible options: land disposal and extension of its existing outfall beyond the zone. Whatever it chooses, discharge into the zone must be eliminated by July 1, 1983.

Boronda CWD - This is an unsewered community where failing septic systems resulted in public health concerns and a prohibition of discharges from septic systems effective July, 1986. The area should be annexed to the City of Salinas and sewerred.

Monterey CSA #10 (Laguna Seca Ranch) - CSA #10 operates a community septic system outside the City of Monterey. The system has exhibited problems for years that are likely to continue until replaced. It is recommended that connection be made to the regional project through the City of Monterey or that a more sophisticated treatment and reclamation facility be constructed as a permanent solution by 1986.

Watertek (Oakhills Development) - A pond/spray irrigation system provides sewerage service for this development. The system encroaches on Moro Cojo Slough and is nearing its capacity. Use of the facility may continue until persistent water quality or public health concerns develop. However, any expansion of the facility that will develop on the slough will not be permitted. Development of the system beyond the capacity necessary to serve Oak Hills Development is not recommended. At present, additional development of the spray irrigation system is needed to maximize the system's allowable capacity and provide sufficient wet-weather capability.

Salinas Utility Services - This is a privately operated facility serving residences in part of the Toro area west of Salinas. It has been plagued with inconsistent maintenance, periodic flooding, and washout of the river crossing leading to the disposal area. The long-term goal is to phase out use of this facility in favor of

service by the regional system. In view of the limited capacity of the regional system, use of this facility may continue until persistent water quality or public health concerns develop. A possible interim alternative is to consolidate this facility with nearby major developments presently in the local planning process. A public entity should be formed to operate and maintain this facility: 1. if an increase in system capacity is proposed to accommodate new development or, 2. if ongoing ownership, problems, operation and maintenance problems, or waste discharge requirement violations persist through 1985.

Other areas within the study area of the Regional Project should be connected when feasible or necessary from a public health or water quality perspective. Examples include: Bolsa Knolls-Oak Park; Prunedale; and Spreckels. In the interim, a public management agency should be established to provide sewerage service to the community of Spreckels. Following closure of the Spreckels Sugar refinery in 1982, the community is without a long-term sewerage facility. Consolidation with the Regional Project is impractical at this stage, so the community should consolidate with projects proposed nearby. An interim solution should be completed by July, 1984. Areas served by individual septic systems may be able to defer sewerage indefinitely provided Monterey County implements measures to assure protection of water quality and public health. One such area is El Toro, where local controls based upon a 1981 groundwater report are being implemented to prevent overloading of the underlying groundwater basin.

New major residential developments proposed within the service area of the Regional Project should connect to the regional system unless studies can show that water quality and public health concerns can be properly mitigated. Sewerage feasibility studies and areal ground water studies should continue in this sub-basin to assure that adequate sewage treatment and disposal capabilities are maintained for both existing and proposed development.

Salinas Valley Region

Recommended plans for Salinas Valley communities, the U. S. Army's Fort Hunter Liggett, the California Army National Guard's Camp Roberts, and recreational areas in the upper watershed generally involve separate wastewater treatment and disposal facilities. Municipal facilities in this Region are identified in Table 5-3.

Small Dischargers (less than 0.5 mgd) along the Salinas River, including Guajular, Gonzales, Seledad, Greenfield, and San Miguel, should remain as separate treatment facilities with land disposal to evaporation/percolation systems and land application seasonal (irrigation) reuse systems where possible. Disposal should be managed to provide maximum nitrogen reduction (e.g., through crop irrigation or wet and dry cycle percolation). Future plant expansion and improvements are planned for Gonzales and Greenfield to ensure plans reliability and ability to meet future demands. The State Correctional Facility at Seledad is in the process of making facility improvements to replace worn-out equipment, improve disposal capabilities, and provide flood protection for disposal facilities. Basin. History 1102 City expansions shall include

means for nitrogen reduction. Shallow groundwater monitoring at these facilities will determine if additional improvements are necessary. The recommended plan for King City is to upgrade and expand existing facilities from 0.5 mgd to 0.8 mgd. Land disposal by percolation ponds and spray irrigation will continue. should consider expanding its service area to include Pine Canyon if development continues in that area.

(Note: For sake of brevity, the portions of the Basin Plan amended during July, 1982, concerning facilities from Camp Roberts north to Nacimiento Reservoir are not repeated here, but they do remain in the Basin Plan).

Dischargers in the San Antonio Reservoir watershed include Monterey County's Department of Parks and Recreation and the U. S. Army's Fort Hunter Liggett. There are no recommended changes to facilities operated by the Monterey County Department of Parks and Recreation. Monterey County Department of Parks operates wastewater treatment facilities for both north (Pleyte 0.03 mgd) and south (Lynch Harris Creek and Redenda Vista Recreational Site 0.14 mgd) San Antonio Lake recreational areas. The north site consists of primary treatment and disposal in oxidation/percolation evaporation ponds. The south facility consists of secondary trickling filter treatment with discharge to oxidation/percolation/evaporation ponds for disposal. With proper maintenance, these systems will adequately protect water quality. The U. S. Army, Fort Hunter Liggett, operates wastewater treatment facilities on the military reservation located adjacent to the San Antonio River. Existing treatment facilities consist of aerated treatment pond and spray disposal field. The recommended plan is to maintain the existing facilities with improvement of the spray disposal area.

Carmel River Sub-Basin

The Carmel River Sub-basin includes areas sewered by the Carmel Sanitary District and the Carmel Valley County Sanitation District, and extensive unsewered areas, particularly in the Carmel Highlands and Carmel Valley areas. Table 5-3 identifies recommended facilities in this sub-basin.

The existing Carmel Sanitary District treatment plant and outfall facility should be retained to provide for water quality control until reliable land disposal or reclamation programs are developed in Carmel Valley. Level II treatment is required for ocean disposal. The existing outfall can accommodate wet weather flow discharges during times when reclamation is not feasible.

A special study by the District is underway to determine the adequacy of the existing outfall with respect to State Ocean Plan requirements. The results of this study will outline what changes, if any, are required for the existing outfall.

The Carmel Sanitary District operates a secondary wastewater treatment plant with ocean disposal serving Carmel-by-the-Sea, Del Monte Forest, and a few adjacent areas. The outfall system terminates within a portion of Carmel Bay that is designated an Area of Special Biological Significance (ASBS).

While total removal of the discharge is not required in this special case, elimination of the discharge to the ASBS during summer months (May-October) must be achieved by July, 1989. A Facilities Plan completed in 1979 through the Clean Water Grant Program identifies wastewater reclamation as the appropriate project for compliance. The Pebble Beach Community Services District is participating in the reclamation project by contract. Discharge during summer months should be phased out beginning with partial reclamation in mid-1985 and finishing with full reclamation during summer months by July, 1989. Initial reclamation efforts will rely on water requirements of five golf courses in the area. Four additional years allow the District a total of ten years to find other reclaimed water users or practical land disposal alternatives.

Carmel Highlands and Carmel Valley also were addressed in the 1979 Facilities Plan. Ultimately, Carmel Highlands should be sewerred and connected to Carmel Sanitary District facilities. To prolong use of individual systems as long as possible, it is imperative that operation and maintenance of septic systems in the Carmel Highlands area be closely regulated by the Monterey County Health Department. Within the Carmel Valley, sewerred may be avoidable through judicious control of development and pollutant loading. To this end, the Monterey Peninsula Water Management District has implemented a ground water monitoring program and Monterey County has developed control measures in the Valley (a result of a wastewater study completed and approved in 1982).

~~Carmel-Highlands-wastewaters-should-be-transported-to-the-present-Carmel Sanitary-District-plant-for-treatment.--Comprehensive-studies-to-determine the-feasibility-of-establishing-separate-treatment-plants-should-be-completed before-mid-1976-for-the-Carmel-Valley-area;--these-studies-should-include-consideration-of-septic-tank--maintenance-and-feasibility-of-land-disposal-and wastewater-reclamation-for-areas-sewerred.--It-will-be-important-to-make-sure these-land-disposal-facilities-are-operated-in-conjunction-with-groundwater basin-operations.--Irrigation-possibilities-exist-for-the-upper-and-Mid-Valley-locations.--Land-disposal-in-the-lower-valley-might-best-be-directed toward-protecting-the-groundwater-basin-from-sea-water-intrusion.--More detailed-studies-of-groundwater-and-land-disposal-are-needed-prior-to-shifting-the-existing-discharge-to-Carmel-Vay-to-land-disposal-in-the-lower valley.--Accordingly,the-continual-use-of-ocean-disposal-is-allowable-as an-option-year-round-and-should-be-maintained-for-wet-season-disposal.--In the-event-a-higher-level-of-treatment-than-secondary-is-required,the-plan for-the-region-should-involve-collection-of-treated-effluent-from-the-Carmel Valley.--Effluent-would-be-transported-to-the-upper-valley.--An-advanced treatment-facility-would-be-constructed-at-the-Carmel-SD-facility-to-reclaim waters-for-transport-inland.--The-reclaimed-water-would-be-used-either-for groundwater-recharge-or-for-supplementing-supplies-developed-on-the-Carmel River.~~

~~Carmel-SD-will-continue-its-present-joint-exercise-of-powers-agreement-to treat-and-dispose-of-wastes-pumped-from-Pebble-Beach-SD.--Carmel-SD-should manage-wastewater-facilities-and-programs-in-Carmel-Valley-and-Carmel-Highlands.~~

Carmel Valley County Sanitation District operates three facilities in Carmel Valley. These include a level IV treatment plant with golf course reclamation at Carmel Valley Ranch and community septic tank/subsurface disposal systems at Village Green and White Oaks. No changes are recommended unless public health or water quality concerns develop. Should the need arise for specific septic system maintenance in Carmel Valley, local agencies should be considered for management responsibilities.

Monterey Coastal Sub-Basin

~~The only facility recommended for the Monterey Coastal Sub-basin is the construction of a land disposal system at Pfeiffer Big Sur State Park. Existing facilities at the Point Sur Naval Facility are adequate to meet the water quality control requirements of that discharge.~~

The U. S. Navy's Point Sur wastewater facilities and the State Department of Parks and Recreation, Pfeiffer Big Sur State Park, facilities are the only significant facilities in this sub-basin. Ocean discharge from the U. S. Navy is adequate. No changes are recommended. The subsurface land disposal system at Pfeiffer Big Sur State Park also seems adequate. If expansion to this facility is considered or if ground or surface water degradation from this discharge is detected, other means of disposal, such as reclamation, are recommended.

- 2) Facilities within the service area of the Regional Project with various institutional arrangements and timing (through Castroville CSD, the City of Monterey, or the City of Salinas, or through contract with the MRWPCA) for joining with the Regional System.
- 3) An entity within the MRWPCA Study Area recommended for participation by this plan, but which declined inclusion in design and construction and is consequently not within the service area of the Regional System. As a result, joining with the Regional System in the future will require additional capacity in that system.
- 4) A management agency must be established for this community.
- 5) Atascadero State Hospital maintains separate treatment facilities but discharges treated effluent to City of Atascadero percolation ponds.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-04

Revision and Amendment of Water Quality Control
Plan by the Addition of a Prohibition of Waste
Discharge from Individual Sewage Disposal
Systems Within the Mission Canyon Area,
Santa Barbara County

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (hereafter Basin Plan) on March 14, 1975, and amended the individual sewage disposal section of Chapter Five on December 10, 1982 (Resolution 82-09); and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,
- WHEREAS, most of Mission Canyon is an unincorporated community of 2400 persons located adjacent to the City of Santa Barbara, in Santa Barbara County; and,
- WHEREAS, on-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal in the Mission Canyon area; and,
- WHEREAS, the Mission Canyon area has slowly percolating soils, steep slopes and shallow depth to bedrock; and,
- WHEREAS, the predominate lot size in Mission Canyon of 6,000 to 10,000 square feet is too small to accommodate individual sewage disposal systems; and,
- WHEREAS, in 1973, the Santa Barbara County Department of Health Care Services prepared a complete compilation of available material in their Environmental Health Services files concerning the problem of liquid waste disposal in the Mission Canyon area of the County; and,
- WHEREAS, the report cites system failures in 25% of the sewage disposal systems, with 25 evapotranspiration (ET) systems, which are considered "last resort" systems. Of the 200 documented complaints, 44% (9% of the total parcels developed) dealt with surfacing effluent; and,

WHEREAS, the County Health Department conducted surface water sampling which indicated human waste contamination of Mission Creek; and,

WHEREAS, the County of Santa Barbara has designated Mission Canyon as a "Special Problems Area" under Resolution No. 78-313 due to poor site conditions that would not be conducive to individual septic systems, and a committee was established to review building permit applications; and,

WHEREAS, complaints have been documented by the County on sewage odors from Mission Creek downstream of the Mission Canyon area; and,

WHEREAS, the County of Santa Barbara is preparing an environmental impact report (EIR) in accordance with the California Environmental Quality Act and a project report that identifies adverse environmental impacts from continued use of septic tanks in the Mission Canyon area and discusses alternatives to existing wastewater management practices; and,

WHEREAS, Mission Canyon's Phase I report cites conditions which constitute contamination and pollution as defined in section 13050 of the California Water Code; and,

WHEREAS, the Regional Board is obligated to include a program of implementation for achieving water quality objectives in its Basin Plan; and,

WHEREAS, present and anticipated future uses of Mission Canyon creeks include recreation and aquatic habitat; and,

WHEREAS, Mission Canyon ground waters are suitable for agricultural, municipal, domestic, and industrial water supply; and,

WHEREAS, a Regional Board staff report finds beneficial uses of Mission Canyon's ground and surface waters are adversely affected by individual sewage disposal system discharges, and public health is jeopardized by occurrences of surfacing effluent; and,

WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Mission Canyon's individual sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,

WHEREAS, on February 25, 1983, in the Santa Barbara County Administrative Building, 4th Floor, Board of Supervisors Hearing Room, 105 East Anapamu, Santa Barbara, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State: and,

WHEREAS, the Regional Board finds the aforesated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coast Basin, be amended as follows:

Resolution 82-09, Page 10 under "Local Governing Jurisdiction Recommendation" section add "Mission Canyon" to the discussion pertaining to on-site wastewater management plans as follows:

- "13. On-site wastewater management plans should be prepared and implemented by local governing jurisdictions (e.g., County Planning Departments) for applicable portions of San Martin, San Lorenzo Valley, Carmel Valley, Carmel Highlands, Prunedale, El Toro/Canyon Del Rey, Santa Margarita/Garden Farms, Los Osos/Baywood Park, Arroyo Grande, Nipomo, Los Alamos, upper Santa Ynez Valley, Los Olivos/Ballard, and Mission Canyon."

Page 5-66, after Item 7.c. ending with "...with Boronda Road." (added by Resolution 83-01), insert the following prohibitions:

- "5. Discharge of waste from additional individual sewage disposal systems is prohibited and the discharge of waste from existing individual sewage disposal systems is prohibited after July 1, 1986, in portions of Mission Canyon, Santa Barbara County, and more particularly described as:

Surface Water Prohibition Zone

This zone is 200 (horizontal) feet wide and extends 100 feet either side of Mission Canyon, Rattlesnake Canyon and Lauro (Diablo) Canyon Creeks' surface water flow line. The Mission Canyon Creek 200 foot zone begins at the southwest corner of the county boundary and terminates at the northern-most boundary of Township 4 North, Range 27 West, Section 4 San Bernardino Base and Meridian. The Rattlesnake Canyon Creek 200 foot zone begins at the point of confluence with Mission Canyon Creek and terminates upstream at the city/ county boundary. The Lauro (Diablo) Canyon Creek 200 foot zone applies to the portion of the creek upstream from Lauro Reservoir

Prohibition Area Description

Prohibition area description is included as Attachment A.

BE IT FURTHER RESOLVED, that those parcels with existing systems within the surface water prohibition zone are subject to the conditions of the prohibition. The property owner must relocate the discharge outside the designated zone by July 1, 1986, to a site compatible with Basin Plan siting criteria.

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or on-site sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Begin Design	July 1, 1983
Complete Design	November 1, 1983
Obtain Construction Funding	September 30, 1984
Begin Construction	March 1, 1985
Complete Construction and terminate discharges from on-site systems	July 1, 1986

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with compliance schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith the Clean Water Grant Project Priority List to recognize the necessary structural solution for Mission Canyon as a Class "A" project.

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 25, 1983.

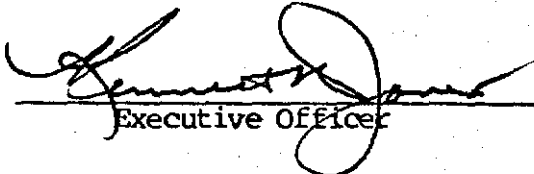

Executive Officer

FIGURE 6 PROHIBITION AREA

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-03

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coastal Basin
(Water Quality Objectives for Endrin and Radioactivity)

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, the Regional Board through adoption of Resolution No. 82-07 on July 9, 1982, and revised several water quality objectives of general application where references and data had been updated, including the standards for endrin and radioactivity; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,
- WHEREAS, the State Water Resources Control Board did not approve the revisions concerning endrin and radioactivity, but returned them to the Regional Board for reconsideration based on reasons stated in State Board Resolution No. 82-44; and,
- WHEREAS, the Regional Board is concerned that health of Central Coast residents is not adequately protected by Title 22 from adverse impacts from uranium-derived radionuclide concentrations in domestic water supplies and wishes to establish a numerical criteria equivalent to the U.S. Environmental Protection Agency's current advisory limit; and,
- WHEREAS, drafts of proposed revisions and amendments and environmental documents were provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,
- WHEREAS, on February 25, 1983, in Santa Barbara, California, the Regional Board reviewed staff documents pertaining to the amendment, including written comments and written staff responses, as well as additional evidence and testimony concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Basin Plan be revised and amended as follows:

Pages 4-8 and 4-9, Pesticides--amend the limiting concentration for endrin from 0.001 mg/l to 0.0002 mg/l.

Page 4-9, second column, under Radioactivity, amend to read:

Waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of radionuclides in excess of the limits specified in California Administrative Code, Title 22, Chapter 15, Article 5, Sections 64441 and 64443, Table 5, as listed below:

Constituent	Maximum Contaminant Level, pCi/l
Combined Radium-226 and Radium-228	5
Gross Alpha particle activity	15
(including Radium-226 but excluding Radon and Uranium)	
Tritium	20,000
Strontium-90	8
Gross Beta particle activity50

Until a radionuclide standard for uranium-derived alpha particles in domestic or municipal water supply is promulgated by the U.S. Environmental Protection Agency, waters designated for use as domestic or municipal supply (MUN) should not exhibit uranium-derived gross alpha particle activity in excess of 10 pCi/l, the U.S. Environmental Protection Agency's current advisory limit.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 25, 1983.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-01

Revision and Amendment of Water Quality Control Plan by the Addition of a Prohibition of Waste Discharge from Individual Sewage Disposal Systems Within the Boronda County Water District and Virginia Acres Area, Monterey County

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (hereafter Basin Plan) on March 14, 1975, and amended the section of Chapter Five concerning individual sewage disposal systems on December 10, 1982; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,

WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,

WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,

WHEREAS, Boronda (including Virginia Acres) is an unincorporated community of 1200 persons located adjacent to the City of Salinas in Monterey County; and,

WHEREAS, local groundwater is the only source of water for the area and is beneficially used to irrigate crops and for domestic, commercial, and light industrial use; and,

WHEREAS, on-site soil absorption systems are the sole means of wastewater disposal in the Boronda community; and,

WHEREAS, soils in the Boronda area have a low percolation rate; and,

WHEREAS, the majority of lots are 75' x 100' and are too small to accommodate individual sewage disposal systems; and,

WHEREAS, in May, June, and July of 1981, the Monterey County Health Department conducted a survey of 233 on-site individual sewage disposal systems in the Boronda area. The survey found evidence of sewage system failures in 59% of the sewage disposal systems. A second survey in January, 1982, revealed that 51% of the surveyed homes had instances of additions and/or repairs; 21% had had effluent surfacing; and 65% had leach system failures; and,

WHEREAS, the Monterey County Health Department concluded that the Boronda and Virginia Acres area has become a health problem due to failure of on-site sewage disposal systems and nitrate contamination of domestic water supply, and public sewerage is needed; and,

WHEREAS, the Monterey County Health Department had to prohibit use of one of two water supply wells in the Boronda area when testing revealed nitrate concentrations double the acceptable drinking water concentration. The only remaining water supply well failed to meet limitations for bacteria during three specific periods in 1980 and use of this well for domestic use was discontinued in December, 1981; and,

WHEREAS, the Boronda County Water District is a public entity formed on April 30, 1965, to provide water to district residences; and,

WHEREAS, the Boronda CWD prepared an environmental impact report (EIR) in accordance with the California Environmental Quality Act and a project report that identifies adverse environmental impacts from continued use of septic tanks in the Boronda area and discusses alternatives to existing wastewater management practices; and,

WHEREAS, Boronda's EIR and project report cite conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code; and,

WHEREAS, the Regional Board is obligated to include a program of implementation for achieving water quality objectives in its Basin Plan; and,

WHEREAS, a Regional Board staff report finds beneficial uses of Boronda's ground water are adversely affected by individual sewage disposal system discharges, and public health is further jeopardized by unacceptably high occurrences of surfacing effluent; and,

WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Boronda's individual sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,

WHEREAS, on January 14, 1983, in the City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State: and,

WHEREAS, the Regional Board finds the aforestated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coast Basin, be amended as follows:

Page 5-66 (of retyped version of Chapter 5), bottom of page after paragraph ending with "...approval of the Regional Board." (added by Resolution 82-10), insert the following prohibitions:

"7. Discharges from additional individual or on-site sewage disposal systems are prohibited, and discharges from existing individual sewage disposal systems are prohibited effective July 1, 1986, in the area in Monterey County described as follows:

- a. Boronda County Water District.
- b. Virginia Acres (area bounded by Boronda County Water District and Boronda Road).
- c. Parcels bounded by Boronda County Water District and Brooks Road (approximately 250 feet east of intersection with Boronda Road)."

BE IT FURTHER RESOLVED, that areas a, b, and c are consistent with the recommendations of the staff report, as shown on Attachment A.

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or on-site sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Negotiate institutional agreements, as required, among Boronda County Water District, Monterey County, City of Salinas, and Monterey Regional Water Pollution Control Agency.	July 1, 1983
Begin Design	November 1, 1983
Complete Design	August 1, 1984
Obtain Construction Funding	September 30, 1984
Begin Construction	March 1, 1985
Complete Construction and terminate discharges from on-site systems	July 1, 1986

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with compliance schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

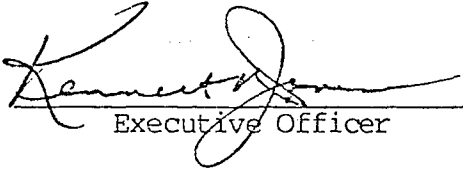

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith all appropriate Clean Water Grant Project Priority Lists to recognize the necessary structural solution for Boronda as a Class "A" project of the highest priority.

BE IT FURTHER RESOLVED, that the State Board is hereby requested to assist the local agencies in finding means to finance the design and construction of the recommended project (e.g., favorable consideration for a State Water Quality Control Fund loan for the local share of project costs).

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 14, 1983.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-10

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coast Basin,
(Prohibition of Individual Sewage Disposal Systems
in the San Lorenzo Valley of Santa Cruz County)
and a
Corresponding Request to Amend
Clean Water Grant Project Priority List)

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of pollution and nuisance; and,

WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,

WHEREAS, such areas exist within the San Lorenzo River watershed in Santa Cruz County and are identified herein as Class I and Class II areas, which are further shown on Attachment "A", included herein; and,

WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas; and,

WHEREAS, Surface and subsurface drainage in these areas is tributary to the San Lorenzo River system, a navigable waterway of the United States with identified beneficial uses of municipal and domestic supply, agricultural supply, industrial service supply, groundwater recharge, water contact recreation, non-contact water recreation, wildlife habitat, cold freshwater habitat, and fish migration and spawning; and,

WHEREAS, Beneficial uses of ground waters in San Lorenzo Valley include municipal and domestic water supply, industrial water supply, and agricultural water supply; and,

WHEREAS, the San Lorenzo River system was added to the "California Protected Waterways Plan" in 1975 as a waterway of extraordinary scenic, fishery, wildlife, or recreation values that the Resources Agency and local agencies preserve and enhance through all feasible management and regulatory programs; and,

WHEREAS, The San Lorenzo Valley Water District (hereafter District), 13060 Central Avenue, Boulder Creek, CA, 95006, is an organized California water district with all the powers thereof; and,

WHEREAS, Article 9.5 of Chapter 1, Part 5, Division 7, of the California Water Code was amended during September, 1980, to empower the District to ensure individual sewage disposal systems along the San Lorenzo River do not pollute the river, its tributaries, and groundwater; and,

WHEREAS, the aforementioned powers include performing technical and other investigations, requiring registration of individual sewage disposal systems, assessing fees for use of individual sewage disposal systems, and adopting and enforcing regulations for individual sewage disposal systems located within the San Lorenzo Valley to prevent contamination, nuisance, and pollution of surface and groundwaters; and,

WHEREAS, the County has adopted more stringent regulations for installation of individual sewage disposal systems in recent years; has, in effect, imposed a "prohibition" on new discharges from individual sewage disposal systems on 90 percent of the undeveloped lots in the chronic problem areas of four major communities; and has joined with the District in assessing the magnitude of the problem and in investigating remedies; and,

WHEREAS, other public entities exist or can be created within the San Lorenzo Valley that may wish, or may be created to assume, responsibility for regulation of septic systems in the area or divisions of the area described herein; and,

WHEREAS, the County of Santa Cruz (County) also regulates installation and use of individual sewage disposal systems and protects the public health and safety within San Lorenzo Valley as empowered by provisions of the California Health and Safety Code; and,

WHEREAS, an engineering consultant to the District completed the San Lorenzo Valleywide Wastewater Management Study, Phase I Report, of June, 1981, (201 Report) which implements a recommendation of the Water Quality Control Board, Central Coast Basin, to investigate the necessity of sewerage certain portions of the San Lorenzo Valley in order to protect beneficial uses and public health; and,

WHEREAS, use of individual sewage disposal systems are a primary source of bacteria and other pollutants in surface waters flowing through residential areas, including documented increases in coliform concentrations of 2000 percent and nitrate concentrations that stimulate algal growths that foul the stream's natural ecosystem; and,

- WHEREAS, high density, and threatened high density, development within turn-of-the century subdivisions; unfavorable site characteristics such as shallow groundwaters, impermeable soils, steep slopes, and shallow bedrock; threatened urban buildout over vital aquifer recharge areas; historically poor septic system maintenance practices; and chemical and water imbalances within the watershed all contribute to this water pollution; and,
- WHEREAS, surfacing effluent in individual absorption fields, direct discharges of raw and partially treated sewage to surface streams, and the aforementioned factors are evidence of public health hazards; and,
- WHEREAS, a second engineering consultant to the District completed the first phase of the San Lorenzo Valley 208 On-Site Wastewater Disposal Management Study, in September, 1981, (208 Report) which concludes cumulative use of individual sewage disposal systems is causing adverse effects on quality of surface waters and shallow groundwaters; and,
- WHEREAS, a draft final of the full 208 Report was completed during October, 1982, and it assesses impacts as a function of soil/geologic characteristics, depth to water table, distance of travel, and ground slope and recommends changes to local regulations, whether administered by the County, the District, or both, that will mitigate these cumulative effects; and,
- WHEREAS, five major communities generally identified herein as Felton, Ben Lomond, Wildwood and Lower Kings Creek, Boulder Creek, and West Glen Arbor (Class I areas) have allowed use of individual sewage disposal systems to progress too far for institutional remedies to be effective, now have chronic problem areas where system failure rates are up to 50 percent, and have no available properties hydrogeologically and technically capable of remedying existing violations of water quality objectives, impairments to beneficial uses of water, pollution, nuisance, contamination, and unreasonable degradation of water quality and these areas will necessitate a community structural alternative; and,
- WHEREAS, an engineering consultant to the District completed the San Lorenzo Valley Facilities Plan, Phase II Project Report of September, 1982, that evaluated various alternative projects for class I areas, including, among others, community systems which utilize subsurface disposal and combinations of individual and community systems that utilize subsurface disposal, and identifies the apparent best alternative plan; and,
- WHEREAS, by letter dated October 5, 1981, the County Health Officer determined that conditions within Class I areas constitute a threat to the water supply and therefore to the public health; and,

WHEREAS, fourteen additional communities generally defined herein as Forest Lakes, Mount Hermon, Brook Lomond, Brookdale, East Glen Arbor, Forest Springs, Forest Park, Brackenbrae, Riverside Grove, San Lorenzo Woods, Ramona Woods, San Lorenzo Park, Zayante, and Lompico (Class II areas) have allowed use of individual sewage disposal systems to progress to the point where septic system failure rates in certain areas are up to 45 percent and systems are creating conditions of pollution, nuisance, contamination, violation of water quality objectives, impairment of beneficial uses, and unreasonable degradation of water quality; and,

WHEREAS, public health risks and water pollution may be mitigated in Class II areas, in part, by implementing District and County institutional controls, such as improved siting and design criteria and a management program to assure maintenance for conventional and alternative individual systems; and,

WHEREAS, the Regional Board adopted Cleanup and Abatement Order No. 81-89 on October 10, 1981, ordering the District and County, jointly or severally, to complete a 201 Facilities Plan and EIR for elimination of deficient individual sewage disposal systems and to complete a 208 Report for changes to individual sewage disposal system regulations; and,

WHEREAS, Cleanup and Abatement Order No. 81-89 specified a time schedule to abate discharges from individual sewage disposal systems in chronic problem areas and to implement institutional mitigation measures in other problem areas; and,

WHEREAS, the Regional Board directed staff on October 10, 1981, to advise the State Water Resources Control Board, (hereafter State Board) of its concern over water quality impacts caused, directly and indirectly by water right permits authorizing increased surface water diversions; and,

WHEREAS, the staff of the State Board has completed a draft report for a fact-finding hearing concerning the "Zayante Creek/Lower San Lorenzo and the Upper San Lorenzo River Instream Beneficial Use Protection Program", which proposes the Regional Board establish controls on installation and use of septic systems in the San Lorenzo Valley as one part of an implementation plan to maintain and achieve beneficial uses of water contact recreation and esthetics, among others, and includes a proposal for additional conditions on water rights permits; and,

WHEREAS, there is substantial evidence in the record that discharge of waste from individual sewage disposal systems within Class I and Class II areas causes violation of water quality objectives, impairs present and future beneficial uses of water, causes pollution, nuisance, or contamination, and unreasonably degrades the quality of waters of the state; and,

- WHEREAS, few locations exist in the San Lorenzo Valley that are suitable for disposal of septage from septic systems and of sludge from treatment systems and where acceptable disposal sites outside of the valley are far away and involve considerable individual cost; and,
- WHEREAS, contributions to the aforesaid problems may also originate from systems located outside of the Class I and Class II areas, but within the San Lorenzo Valley north of Henry Cowell State Park, and improved design and siting criteria will reduce this contribution over the long-term; and,
- WHEREAS, the Board has received evidence that certain parcels within Class I areas are owned by persons who expended considerable time and effort progressing through an extremely complex building permit process to a point where they have building allocations and/or preliminary approval of local health authorities; and,
- WHEREAS, the federal Clean Water Grant Program has been amended to decrease cost-sharing ratios and discontinue cost-sharing of collection systems in October, 1984; and,
- WHEREAS, without clean water grant funds, the solution for Class I areas will not be economically feasible for local residents; and,
- WHEREAS, section 205(j) of the Federal Clean Water Act provides funds for local, regional, and state agencies to plan corrective and preventative actions to address pollution of priority water bodies; and,
- WHEREAS, Regional Board staff has prepared documents and followed procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (functional equivalent), and the Federal Clean Water Act; and,
- WHEREAS, drafts of proposed revisions and amendments were prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within the San Lorenzo Valley area; and,
- WHEREAS, the Regional Board has consulted with and considered the recommendations of affected local agencies; and,
- WHEREAS, on November 5, 1982, in the City Council Chambers, 440 Harcourt, Seaside, California, after due public notice, the Regional Board reviewed staff documents pertaining to the amendment, received evidence and testimony regarding the amendment, and considered all factors concerning the proposed amendment to the Basin Plan; and,
- WHEREAS, the Regional Board finds the aforesaid conditions to be true and in need of remedy to protect beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 5-66 (of retyped version of Chapter 5), bottom of page, after paragraph ending with "...POINT OF BEGINNING.", insert the following prohibitions:

"4. Discharges from individual sewage disposal systems within the San Lorenzo Valley north of Henry Cowell State Park shall be managed as follows:

a. Additional discharges within five major communities are prohibited where the affected area (Class I Area) is defined by the following Santa Cruz County Assessor's Parcel Numbers:

Ben Lomond Book 77, Pages*04 (Block 1, Lots 15, 16, 17, 20, 21, 27, 28, 29, 30, 31, 36, 37, 40, 41, 42, 47, 48, 50, 51, 52), 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18, 20, 21, 22, 23, 24 (Block 1 only), 25, 26, 27, 28

Book 78, Page 162-03

Boulder Creek Book 81, Pages*06, 07, 08, 09, 11, 12, 13, 14, 15 (all Block 1 and Block 2, Lots 1, 2, 3, 4, 8, 9, 11, 12), 16, 17, 20, 21, 22, 25, 26, 27, 28, 29

Book 82, Pages*20, 21, 22, 23, 27 (Block 1, Lot 12 only)

Book 89, Pages*16 (Block 3, Lot 1 and Block 5, Lots 3, 4, 5), 17 (Block 1, Lots 4, 5), 18

Book 90, Pages*01, 02, 11 (Block 1, Lots 17, 19, 21, 22, 23, 24, 25)

Lower Kings/Wildwood Book 83, Pages*04, 07, 08, 11, 12, 13 (Block 1, Lots 1, 2, 4, 5, 6, 18, 19 and Block 2)

Book 84, Pages*01,02,03,04,05,06,07,08,09,11

Book 85, Pages*13, 14, 16, 17, 18, 19

Glen Arbor Book 72, Pages*07, 11, 14, 15, 17, 18, (Block 1, Lots 25, 26; Block 2, Lots 1, 2, 3)

*Parcel numbers are indicated by complete pages, unless otherwise noted.

Felton Book 65, Pages*01, 02, 03, 04, 05, 06, 07,
08, 09, 11, 12, 13, 14, 15, 16,
17, 18, 21, 22

Book 71, Pages*03 (Block 01 lots 3, 13, 15,
16, 17, 18, 23, 24, 25, 26, 30,
38, 49, 50, 51, 62, 63, 64, 65),
04, 05, 06, 07, 15 (school
district property only), 16, 17,
17, 18, 19, 25, 26, 29

- b. Existing discharges within the Class I Area of subparagraph 4.a. are prohibited effective July 1, 1986.
- c. To preclude prohibition of discharges outside the Class I Area, the County of Santa Cruz shall act as lead agency in coordinating and establishing a program that will assure the Regional Board that:
 - ° additional systems in these areas will be designed, sized, located, spaced, and constructed in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.
 - ° existing systems within specific communities are systematically evaluated and redesigned, resized, relocated, and reconstructed as appropriate to protect and enhance water quality, protect and restore beneficial uses of water, and abate and prevent nuisance, pollution, and contamination, where the specific communities (Class II Area) are defined by the following Santa Cruz County Assessor's Parcel Numbers:

Forest Lakes Book 64, Pages*5,6,7,8,9,10,11,12, 13,14,15,16
(Block 1, lots 1,2,3), 17,22,
29,30 (All Block 1), 31,32,33
34

Book 65, Pages*19,20,23,24,25

Mount Hermon Book 66, Pages*1,2,3

East Glen Arbor Book 72, Pages*12,18 (Block 1, lots 1,2,8,10,
11,12,13,14,18,19,20,21,23,24,
27),19,24,25,27,28,29,30,35,37

Brook Lomond Book 78, Pages*6,7,8

Brookdale Book 79, Pages*9,10 (Block 1, lots 6,8,9,10,
12,13,14,15,18; Block 2, Lots
1, 2, 3, 4)

*Parcel numbers are indicated by complete pages, unless otherwise noted.

Forest Springs/ Forest Park/ Brackenbrae	Book 81, Pages 2 (Block 1, Lots 1, 2, 3, 4, 5, 6, 7, 8, 12, 14, 15), 3 (Block 1, lots 5,6,11,12), 4,5 (Block 1, lots 1, 2)
	Book 82, Pages 1, 2 (Block 1, lots 2, 3, 4, 5, 6, 10, 11, 12, 13, 15, 16, 17, 18, 19, 20, 21, 24, 26, 27, 28) 3, 4, 5, 7, 12, 31
	Book 83, Pages 16 (Block 1, lots 5, 7, 8, 13, 14, 15, 16, 18), 17 (Block 1, lot 4), 18, 19, 20, 21, 22, 23
Riverside Grove	Book 85, Pages*2, 3, 4, 5, 6, 8
San Lorenzo Woods/ Ramona Woods	Book 87, Pages*16, 18, 19, 20, 21
San Lorenzo Park	Book 87, Pages*7, 8, 9, 10, 11, 12
Zayante	Book 74, Pages*2,3,4,5,7,9,10,12,13,14,15,16
Lompico	Book 75, Pages*1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30

° systems within the Class II Area are regularly inspected and maintained in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.

- d. In fulfilling the responsibility identified in subparagraph 4.c., the County of Santa Cruz shall submit a written report before January 1, 1984, identifying actions which have been taken, and which must be taken, to achieve objectives, including recommendations for appropriate action by any entity, identification of sources of funding, a time schedule for actions to be taken, and a description of surveillance to be undertaken to determine compliance with objectives.

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that parcels within the Class I Area and with a Finding of Compliance and/or building permit allocation issued before November 6, 1982, are exempted from the prohibition of additional discharges (subparagraph "4.a." of the amendment), but not the prohibition of discharges that becomes effective July 1, 1986 (subparagraph "4.b." of the amendment).

*Parcel numbers are indicated by complete pages unless otherwise noted.

BE IT FURTHER RESOLVED, that addition to, or replacement and repair of, existing individual sewage disposal systems in the Class I Area is not prohibited before July 1, 1986, if the volume and type of discharge will not differ from that of the existing discharge.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual sewage disposal systems as described in Prohibition No. 4, above, shall be achieved according to the following time schedule:

<u>TASK</u>	<u>COMPLIANCE DATE</u>
1. Begin Design	April 1, 1983
2. Begin Construction	September 1, 1984
3. Complete Construction	April 1, 1986
4. Abate discharges from individual sewage disposal systems.	July 1, 1986

BE IT FURTHER RESOLVED, that the County of Santa Cruz shall complete the following tasks according to the following time schedule:

<u>TASK</u>	<u>COMPLIANCE DATE</u>
1. Complete the 208 study and publish a report evaluating septic system criteria and proposing appropriate recommendations.	February 1, 1983
2. Adopt improved criteria for design and construction of additional septic systems.	July 1, 1983

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with compliance schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Board is hereby requested to amend forthwith all appropriate Clean Water Grant Project Priority Lists to recognize the necessary structural solution to Class I areas as a Class "A" project of the highest priority.

BE IT FURTHER RESOLVED, that the State Board is hereby requested to assist the local agencies in finding means to design and construct a remedy to crucial septage disposal needs in the valley, including Clean Water Grant Program funds.

BE IT FURTHER RESOLVED, that the State Board adopt water rights conditions and controls that are sufficient to protect the instream uses of the San Lorenzo River system.

BE IT FURTHER RESOLVED, that the State Board is hereby requested to approve local planning efforts to correct and prevent pollution of the San Lorenzo River through management alternatives for section 205(j) funding assistance.

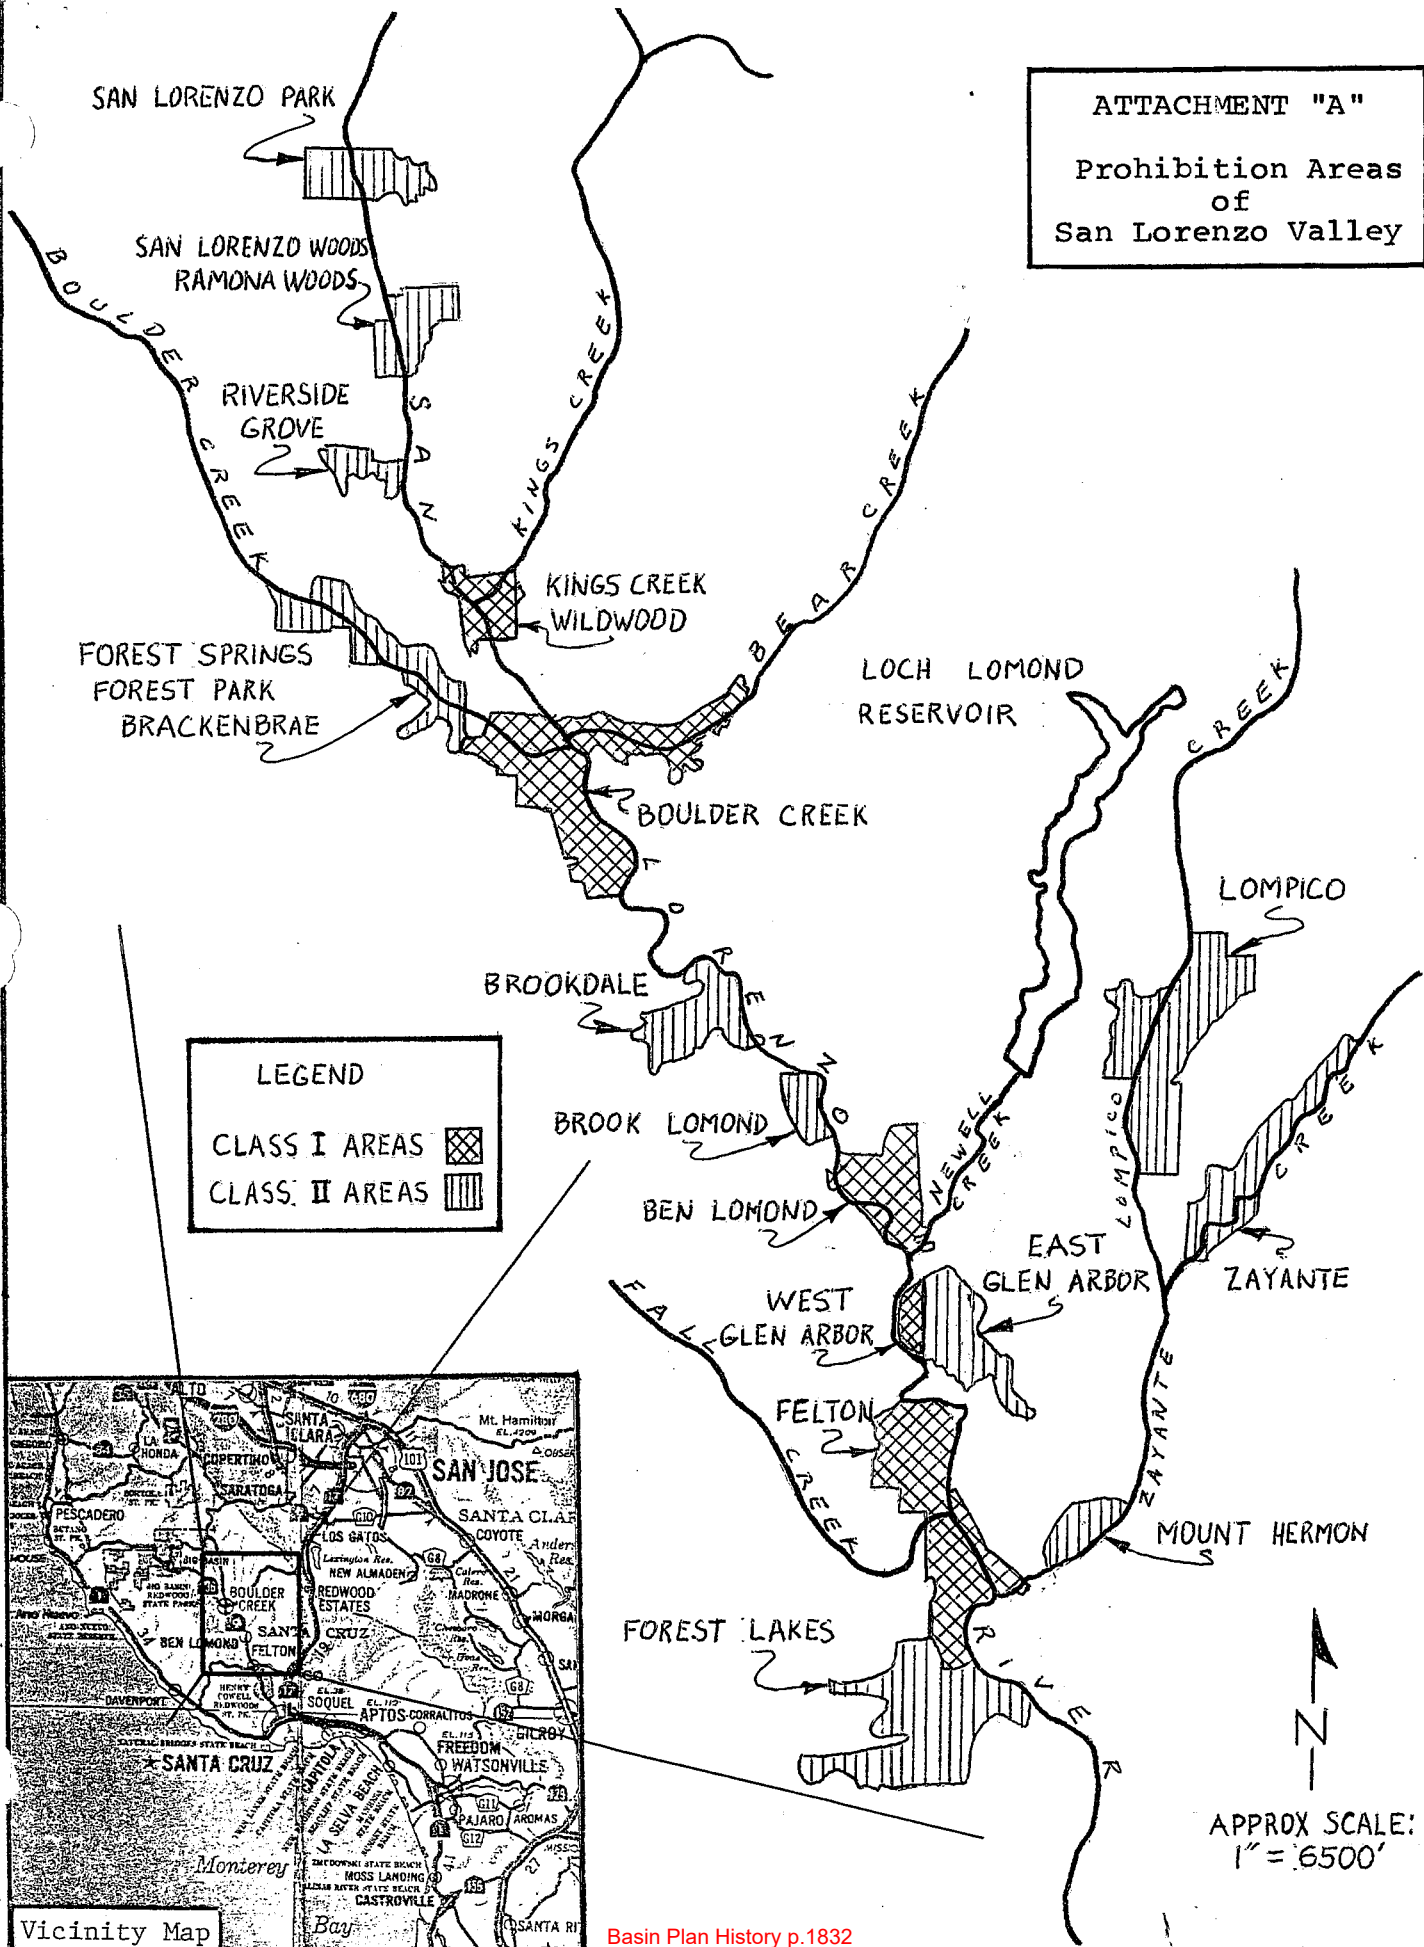

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval of the State Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the revised prohibition contained herein.

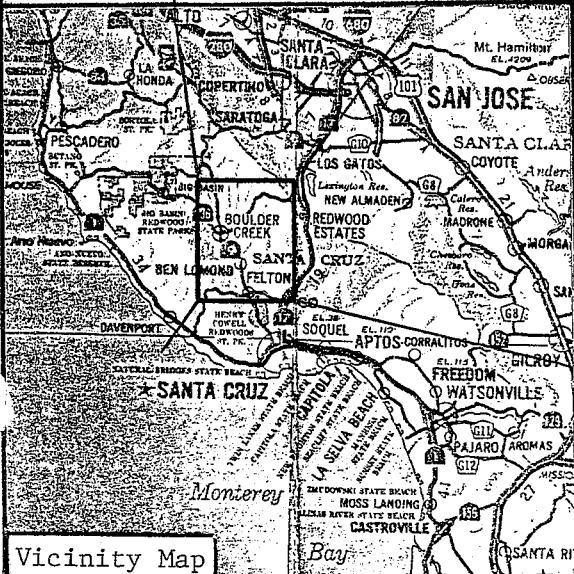

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on November 5, 1982.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-09

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coast Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (hereafter Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,
- WHEREAS, the Regional Board recognizes increased difficulties in financing and affording major public works systems, such as sewage collection, transport, treatment, and disposal projects; and,
- WHEREAS, properly planned and installed individual on-site sewage disposal systems can provide satisfactory wastewater treatment and disposal at minimal cost; and,
- WHEREAS, occurrence of water quality and public health problems from septic tank operations prompted the Regional Board to include septic tank regulations in the 1975 Basin Plan; and,
- WHEREAS, those regulations need to be updated and revised based upon more experience with on-site systems; and,
- WHEREAS, there is a need for guidelines for alternative on-site sewage disposal systems; and,
- WHEREAS, community on-site sewage disposal system failures have been common in the past; and
- WHEREAS, the Basin Plan does not specifically address community on-site sewage disposal systems; and,
- WHEREAS, guidelines are needed for community on-site sewage disposal systems; and,
- WHEREAS, Regional Board staff completed a study of on-site systems entitled "Individual Sewage Disposal Systems/Community Systems"; and,
- WHEREAS, the Individual/Community Sewage Disposal Systems Study identifies water quality, public health, and other problems resulting from improper siting, design, construction, and operation and maintenance; and,

WHEREAS, the Individual/Community Sewage Disposal Systems Study recommends guidelines and constraints to prevent water quality and public health problems; and,

WHEREAS, drafts of proposed amendments have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, proposed amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to non-point source controls by the Regional Board and other authorities; and,

WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of this individual sewage disposal system policy will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on September 10, 1982, in the Board of Supervisors Hearing Room, 105 East Anapamu Street, Santa Barbara, California, on November 5, 1982, in the Seaside City Council Chambers, 440 Harcourt, Seaside, California, and on December 10, 1982, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-48, revised version of Chapter 5, revise "Individual Disposal Systems" section to the following:

"INDIVIDUAL, ALTERNATIVE, AND COMMUNITY DISPOSAL SYSTEMS

On-site sewage disposal systems and other similar methods for liquid waste disposal are sometimes viewed as interim solutions in urbanizing areas, yet may be required to function for many years. On-site systems can be a viable long-term waste disposal method with proper siting, design, construction, and management. In establishing on-site system regulations, agencies must consider such systems as permanent, not interim systems to be replaced by public sewers. The reliability of these systems is highly dependent on land and soil constraints, proper design, proper construction, and proper operation and maintenance.

If on-site sewage treatment facilities are not carefully managed, problems can occur, including:

- ° odors or nuisance;
- ° surfacing effluent;
- ° disease transmission; and,
- ° pollution of surface and ground waters.

Odors and nuisance can be objectionable and annoying and may obstruct free use of property. Surfacing effluent (effluent which fails to percolate and rises to the ground surface) can be an annoyance, or health hazard to the resident and neighbors. In some cases, nearby surface waters may be polluted.

On-site sewage disposal systems are a potential mechanism for disease transmission. Sewage is capable of transmitting diseases from organisms which are discharged by an infected individual. These include dysentery, hepatitis, typhoid, cholera, and gastro-intestinal disorders.

Pollution of surface or ground waters can result from the discharge of on-site sys-

tem wastes. Typical problem waste constituents are total dissolved solids, phosphates, nitrates, heavy metals, bacteria, and viruses. Discharge of these wastes will, in some cases, destroy beneficial surface and ground water uses.

Subsurface disposal systems may be used to dispose of wastewater from: 1) individual residences; 2) multi-unit residences; 3) institutions or places of commerce; 4) industrial sanitary sources; and, 5) small communities. All individual and multi-unit residential developments must comply with criteria in this section of the Basin Plan. Commercial, institutional, and industrial developments with a discharge flow rate less than 2500 gallons per day generally are not regulated by waste discharge requirements; therefore, they must comply with these criteria. Community systems must also comply with criteria relating to this subject within the Basin Plan. Community systems are defined for the purposes of this Basin Plan as: 1) residential wastewater treatment systems for more than 5 units or more than 5 parcels; or, 2) commercial, institutional or industrial systems to treat sanitary wastewater equal to or greater than 2500 gallons per day (average daily flow). Systems of this type and size may be subject to waste discharge requirements.

Alternatives to conventional on-site system designs have been used when site constraints prevent the use of conventional systems. Examples of alternative systems include mound and evapotranspiration systems. Remote subdivisions, commercial centers, or industries may utilize conventional collection systems with community treatment systems and subsurface disposal fields for sanitary wastes. Alternative and community systems can pose serious water quality problems if improperly managed. Failures have been common in the past and are usually attributed to the following:

- ° Systems are inadequately or improperly sited, designed, or constructed.

- ° Long-term use is not considered.
- ° Inadequate operation and maintenance.

Corrective Actions for Existing Systems

Individual disposal systems can be regulated with relative ease when they are proposed for a particular site. Regulations generally provide for good design and construction practices and permit systems can be made a condition for building. A more troublesome problem is presented by older septic tank systems where design and construction may have been less strictly controlled or where land development has intensified to an extent that percolation systems are too close together and there is no room left for replacement leaching areas. Where this situation develops to an extent that public health hazards and nuisance conditions develop, the most effective remedy is usually a sewer system. Where soil percolation rates are particularly fast, ground water degradation is possible, particularly increases in nitrate concentrations.

Sewer system planning should be emphasized in urbanizing areas served by septic tanks. A first step would be a monitoring system involving surface and ground waters to determine whether problems are developing. Where septic tank systems in urbanized areas are not scheduled for replacement by sewers and where public health hazards are not documented, septic tank maintenance procedures are encouraged to lessen the probability that a few major failures might force sewerage of an area which otherwise could be retained on individual systems without compromising water quality. Often a few systems will fail in an area where more frequent septic tank pumping, corrections to plumbing or leach fields, or in-home water conservation measures could correct the system. Improvements of this kind should be enforced by a local septic tank maintenance district or local governing jurisdiction.

A septic tank subjected to greater hydraulic load can fail due to washout of solids into percolation areas and plugging of the infiltrative surface. For irreparable systems, home dishwashers, garbage grinders, and washing machines could be eliminated. In some cases, excess wash water could be diverted to separate percolation areas by in-home plumbing changes. Water saving toilets, faucets, and shower heads are available to encourage low water use. Water rates may also encourage more frugal use of water.

Local Governing Jurisdiction Actions

Disclosure and Compliance of Existing Wastewater Disposal System

Local governing jurisdictions should provide programs to assure conformance with this Basin Plan and local regulations. Inspection programs should assure site suitability tests are performed as necessary, and that tests are in accordance with standard procedures. Inspection should also assure proper system installation. Proper design and construction should be certified by the inspector. Systems must be inspected before covering.

Local agencies can use either agency inspectors or individuals under contract with the local agency. Either way, a standard detailed checklist should be completed by the inspector to certify compliance.

Site suitability determinations should specify: 1) whether approval is for the entire lot or for specific locations of the lot; 2) if further tests are necessary; and, 3) if alternatives are necessary or available.

Where agency approval is necessary from various departments, final sign-offs should be on the same set of plans.

Home buyers should be aware of the nature and requirements of their wastewater disposal system. Plans should be available in city or county offices showing placement of soil absorption systems. Since this is only feasible for new construction, local agencies should require septic system as-built plans as a condition of new construction final inspection. Plans would be kept on file for future use of property owners.

Prospective property buyers should be informed of any enforcement action affecting parcels or houses they wish to buy. For example, a parcel in a discharge prohibition area may be unbuildable for an indefinite period, or a developed parcel may be subject to significant user charges from a future sewer system. County Health Departments should have prohibition area terms entered into the county record for each affected parcel. When a prospective buyer conducts a title search, terms of the prohibition would appear in the preliminary title report.

For new divisions of land proposing to use community leachfields, dual leachfields must be installed and an area must be permanently set aside for 100% expansion of the original leaching area (i.e., 200% of the designed system will be installed and a total of 300% of the designed area will be available for disposal.) To protect this set-aside area from encroachment, the county should require restrictions on future use of the area as a condition of land division approval. Set aside areas can be permanently designated on a parcel or subdivision map. For new subdivisions, Covenants, Conditions, and Restrictions (CC&R's) might provide an appropriate mechanism for protecting a set-aside area. Future buyers of affected property would be notified of property use restrictions by reading CC&R's.

All on-site system owners need to be aware of proper operation and maintenance procedures. Local governing jurisdictions should mount a continuing public education program to provide home owners

with on-site system operation and maintenance guidelines. Basin Plan information should be available at County Health and Building Departments.

Many existing systems do not comply with current or proposed standards. Repairs to failing systems should be done under permit from the county. To the extent practicable, the county should require failing systems to be brought into compliance with Basin Plan recommendations. This could be a condition of granting a permit for repairs.

Land use changes on properties used for commerce, small institutions, or industries should not be approved by the local agency until the existing on-site system meets criteria of this Basin Plan and local ordinances. A land use permit could be one approach to alert the local agency of land use changes. Use permits cannot be carried over to the new land use.

On-Site Wastewater Management Plans

On-site wastewater management should be implemented in urbanizing areas to investigate long-term cumulative impacts resulting from continued use of individual, alternative, and community on-site disposal systems. A wastewater disposal study should be conducted to determine the best Wastewater Management Plans that would provide site or basin specific wastewater re-use and disposal criteria to prevent water quality degradation and public health hazards. Wastewater management plans should provide an evaluation of the effects of existing and proposed developments and changes in land use. These plans should be a comprehensive planning tool to specify on-site disposal system limitations to prevent ground or surface water degradation. Wastewater management plans should:

- ° contain a ground/surface water monitoring program;

- ° identify sites suitable for conventional septic systems;
- ° project on-site disposal system use;
- ° project maximum population densities for each subdrainage basin to control degradation or contamination of ground or surface water;
- ° recommend establishment of septic tank maintenance districts, as needed; and,
- ° identify alternate means of disposing of sewage in the event of irreversible degradation from on-site disposal systems.

Wastewater disposal alternatives should identify costs to each homeowner. A cost-effectiveness analysis, which considers socio-economic impacts of alternative plans, should be used to select the recommended plan. Plans should be developed for new divisions of land or community systems and existing high density areas utilizing on-site disposal.

On-site wastewater disposal zones, as discussed in Section 6950-6981 of the Health and Safety Code, may be an appropriate means of implementing on-site Wastewater Management Plans.

On-site Wastewater Management Plans shall be approved by the Regional Board.

Septic Tank Maintenance Districts

It may be appropriate for unsewered community on-site systems to be maintained by local on-site sewage disposal maintenance districts, preferably as established by County Government. These special districts could be administered through existing local governments such as County Water Districts, a Community Services District, or a County Service Area.

Septic tank maintenance districts should be responsible for determining site suitability in conformance with this Water

Quality Control Plan. Administrators should insure proper construction, installation, operation, and maintenance of on-site disposal systems. Maintenance districts should establish septic tank surveillance, maintenance and pumping programs; provide repairs to plumbing or leachfields; and encourage water conservation measures.

Criteria for New Systems

On-site sewage disposal system problems can be minimized with proper site location, design, installation, operation, and maintenance. The following section recommends criteria for all new individual subsurface disposal systems and community sewage disposal systems. Local governing jurisdictions should require replacements or repairs to failing systems to be in conformance with Basin Plan recommendations, to the extent practicable.

Recommendations are arranged in sequence under the following categories: site suitability; system design; construction; individual system maintenance; community system design; and local agencies.

Manadatory criteria are listed on page 5--65 in the "Discharge Prohibition" section.

Site Suitability

Prior to permit approval, site investigation should determine on-site system suitability:

1. At least one soil boring or excavation per on-site system should be performed to determine soil suitability, depth to ground water, and depth to bedrock or impervious layer. Soil borings are particularly important for seepage pits. Impervious material is defined as having a percolation rate slower than 120 minutes per inch or having a clay content 60% or greater. The soil boring or excavation should be at least 10 feet below drain-

field or leachfield bottom at each proposed location.

2. An excavation should be made to detect mottling or presence of underground channels, fissures, or cracks. Soils should be excavated to a depth of 4-5 feet below leachfield/seepage pit bottom.

3. For drainfields, at least three percolation test locations should be used to determine system acceptability. Tests should be performed at proposed subsurface disposal system sites.

4. If no restrictive layers intersect, and geologic conditions permit surfacing, the setback distance from a cut, embankment, or steep slope (greater than 30 percent) should be determined by projecting a line 20 percent down-gradient from the sidewall at the highest perforation of the discharge pipe. The leachfields should be setback far enough to prevent this projected line from intersecting the cut within 100 feet, measured horizontally, of the sidewall. If restrictive layers intersect cuts, embankments or steep slopes, and geologic conditions permit surfacing, the setback should be at least 100 feet measured from the top of the cut.

5. Natural ground slope of the disposal area should not exceed 20%.

6. For new land divisions, lot sizes less than 1 acre should not be permitted unless percolation rates are between 1 and 30 min/in.

System Design

On-site systems should be designed according to the following recommendations:

1. Septic tanks should be designed to remove nearly 100% of settleable solids and should provide a high degree of anaerobic decomposition of colloidal and soluble organic solids.

2. Tank design must allow access for inspection and cleaning. The septic tank

must be accessible to a vacuum truck for pumping.

3. If curtain drains discharge diverted ground water to subsurface soils, the upslope separation from a leachfield or pit should be 20 feet and the downslope separation should be 50 feet.

4. Leachfield application rate should not exceed the following:

Percolation Rate min./in	Loading Rate g.p.d./sq.ft.
1-20	0.8
21-30	0.6
31-60	0.25
61-120	0.10

5. Seepage pit application rate should not exceed 0.3 g.p.d./sq.ft.

6. Soil absorption system infiltrative area should be based on effective sidewall area. Effective sidewall area is based upon vertical trench depth measured from discharge pipe perforations to the bottom of the trench (both sides).

7. Leachfield/seepage pit design should be based only upon useable permeable soil layers.

8. Soil absorption system design should be based on average daily wastewater flow. The minimum design flow rate should be 375 gallons per day per dwelling unit.

9. In clayey soils, systems should be constructed to place infiltrative surfaces in more permeable horizons.

10. Distance between drainfield trenches should be at least two times the effective trench depth.

11. Distance between seepage pits (sidewall to sidewall) should be at least 20 feet.

12. Dual disposal fields (200% of original calculated disposal area) are recommended. Both drainfields should be con-

structed initially when access to the disposal system is restricted so that additions and repairs cannot be made easily.

13. For commercial systems, small institutions or domestic industrial systems design should be based on daily peak flow estimates based on the total number of people to be served.

14. For commercial and institutional systems, pretreatment may be necessary if wastewater is significantly different from domestic wastewater.

15. Commercial systems, institutional systems, or domestic industrial systems should reserve an expansion area (i.e. dual leachfields must be installed and area for replacement of leachfield must be provided) to be set aside and protected from all uses except future leachfield repair and replacement.

16. Mound systems should be installed in accordance with criteria contained in Guidelines for Mound Systems by the State Water Resources Control Board. In cases of conflict with this Basin Plan, the more stringent criteria applies.

17. Evapotranspiration systems should be installed in accordance with criteria contained in Guidelines for Evapotranspiration Systems by the State Water Resources Control Board. In cases of conflict with this Basin Plan, the more stringent criteria applies, with the following exceptions:

- a. The highest precipitation and the lowest evaporation for each month of the year for the previous ten years of record shall be used for design.
- b. Systems shall be designed by a registered civil engineer.

18. Nutrient and heavy metal removal should be facilitated by planting ground cover vegetation over shallow subsurface leachfields.

Construction

Water quality problems resulting from improper construction can be reduced by following these practices:

1. Subsurface disposal systems should have a slightly sloped finished grade to promote surface runoff.

2. Work should be scheduled only when infiltrative surfaces can be covered in one day to minimize windblown silt or rain clogging the soil.

3. In clayey soils, work should be done only when soil moisture content is low.

4. Bottom and sidewall areas should be left with a rough surface. Any smeared or compacted surfaces should be removed.

5. Bottom of trenches or beds should be level throughout to prevent localized overloading.

6. Sand should be placed on the bottom of trenches to prevent compacting soil when leachrock is dumped into drainfields.

7. Surface runoff should be diverted around open trenches to limit siltation of bottom area.

8. Properly constructed distribution boxes or junction fittings should be installed to maintain equal flow to each trench. Fittings should be placed with extreme care to insure settling does not occur.

9. Risers to the ground surface and man-holes should be installed over the septic tank inspection ports and access ports.

10. Leachfields/seepage pits should include an inspection pipe to check water level.

Individual System Maintenance

Individual septic tanks should be maintained as follows:

1. Septic tanks should be inspected every two to five years to determine the need for pumping. If garbage grinders or dishwashers discharge into the septic tank, inspection should occur at least every two years.

2. Septic tanks should be pumped whenever: (1) the bottom of the scum layer is within three inches of the top of the outlet device; or (2) the sludge level is within eighteen inches of the bottom of the first compartment outlet device.

3. Drainfields should be alternated when drainfield inspection pipes reveal a high water level.

4. Disposal of septage (solid residue pumped from septic tanks) should be accomplished in a manner acceptable to the Executive Officer. In some areas, disposal may be to either a Class I or Class II solid waste site; in others, septage may be discharged to a municipal wastewater treatment facility.

Community System Design

Community systems should be designed and maintained to accommodate the following items:

1. Capacities should accommodate build-out population.

2. Design should be based upon peak daily flow estimates.

3. Design should consider contributions from infiltration throughout the collection system.

4. Septic tanks should be pumped when sludge and scum levels are greater than 1/3 of the depth of the first compartment.

5. Operation and maintenance should be in accordance with accepted sanitary practice.

6. Maintenance manuals should be provided to system users and maintenance personnel.

Manuals should emphasize that user negligence could result in increased operation and maintenance costs.

Local Agencies

Recommendations for local governing jurisdictions:

1. Adopt a standard percolation test procedure.

The California State Water Resources Control Board Guidelines for Evapotranspiration Systems provides a percolation test method recommended for use to standardize test results. A twelve inch diameter percolation test hole may be used.

2. Percolation tests should be continued until a stabilized rate is obtained.

3. Percolation test holes should be drilled with a hand auger. A hole could be hand augered at the bottom of a larger excavation made by a backhoe.

4. Percolation tests should be performed at a depth corresponding to the bottom of the subsurface disposal area.

5. Seepage pits should be utilized only after careful consideration of site suitability. Soil borings or excavations should be inspected either by permitting agency or individual under contract to the permitting agency.

6. Public Works Departments should approve permit applications after checking plans for erosion control measures.

7. Before approving systems, assure lots are in conformance with the State Map Act (particularly small parcels).

8. Inform property buyers of the existence, location, operation, and maintenance of on-site disposal systems. Prospective home or property buyers should also be informed of any enforcement action (e.g. Basin Plan prohibitions) through the County Record.

9. Protect on-site disposal systems and expansion areas from encroachment by provisions in covenants, conditions, and restrictions or additions to parcel maps.

10. Conduct public education programs to provide property owners with operation and maintenance guidelines.

11. Alternative system owners shall be provided an informational maintenance or replacement document by the appropriate governing jurisdiction. This document shall stipulate homeowner procedures to ensure maintenance, repair, or replacement of critical items within 48 hours following failure.

12. Where appropriate, septic tank systems should be maintained by local septic tank maintenance districts.

13. Wastewater Management Plans should be prepared and implemented for applicable portions of San Martin, San Lorenzo Valley, Carmel Valley, Carmel Highlands, Prunedale, El Toro/ Canyon Del Rey, Shandon, Creston, Templeton, Santa Margarita/Garden Farms, Los Osos/Baywood Park, Arroyo Grande, Nipomo, Los Alamos, upper Santa Ynez Valley, and Los Olivos/Ballard.

14. Ordinances should be updated to reflect Basin Plan criteria.

In addition, the following items should be considered:

1. Water conservation and solids reduction practices are recommended. Garbage grinders should not be used in homes with septic tanks.

2. Metering and water rates should be used to encourage water conservation.

3. Grease and oil should not be introduced into the system. Bleach, solvents, fungicides, and any other toxic material should not be poured into the system.

4. Reverse osmosis unit blowdown should not be discharged to on-site wastewater treatment systems overlying useable ground water. Offsite (factory regeneration) practices are recommended for water softeners.

5. If onsite water softener regeneration is necessary, minimum salt use in water softeners is recommended. This can be accomplished by minimizing regeneration time or limiting the number of regeneration cycles.

Page 5-63, replace management principle number fourteen with the following:

"14. The Regional Board intends to discourage high density development on septic tank disposal systems and generally will require increased size of parcels with slower percolation rates. Consideration of development will be based upon the percolation rates and engineering reports supplied. In any questionable situation, engineer designed systems will be required."

PROHIBITIONS

Page 5-65, replace paragraph beginning, "In addition, discharge from individual sewage systems, including..." with the following:

"Discharges from new soil absorption systems in sites with any of the following conditions are prohibited:

1. Soils or formations containing: a) mostly gravels with few fines (soils with over 50% by weight coarser than a No. 200 sieve, and over half of the coarse fraction larger than No. 4 sieve); b) continuous channels; and/or c) cracks or fractures.

2. Soils or formations containing greater than 60% clay (a soil particle less than 2 microns in size).

3. Distances between trench bottom and highest beneficial ground water, including perched ground water, less than 10 feet.

4. For seepage pits, distances between pit bottom and highest beneficial ground water, including perched ground water, less than 10 feet.

5. Distances between trench/pit bottom and bedrock or other impervious layer less than 10 feet.

6. For leachfields, where percolation rates are faster than 1 min/in and slower than 120 min/in.

7. For leachfields, where soil percolation rates are faster than 5 min/in unless the distance between trench bottom and highest beneficial ground water is at least 20 feet.

8. For leachfields, where soil percolation rates are slower than 60 min/in unless the effluent application rate is 0.1 gpd/ft² or less.

9. Areas subject to inundation from a 10 year flood.

10. Natural ground slope of the disposal area exceeding 30%.

11. Setback distances less than:

	<u>Ft.</u>
Domestic water supply wells in unconfined aquifer	100
Watercourse*, where geologic conditions permit water migration	100
Spillway elevation of reservoirs*	200
Springs, natural or any part of man made spring	100

12. For new land divisions without approved Wastewater Management Plans, lot size less than 1 acre.

13. Within a reservoir watershed where the density for each land division is less than 2.5 acres for areas without approved Wastewater Management Plans.

14. For new land divisions, individual systems without an area set aside for dual leachfields (100% replacement area).

15. Commercial, institutional, and sanitary industrial systems with dual disposal areas (200 % total of original calculated disposal area) not installed.

16. Commercial, institutional, or sanitary industrial systems not basing design on daily peak flow estimate.

17. Any site unable to maintain subsurface disposal.

In addition to previous prohibitions, community (subsurface disposal) systems (serving more than 5 parcels or more than 5 dwelling units) are prohibited unless:

1. Seepage pits have at least 15 feet separation between pit bottom and highest beneficial ground water, including perched ground water.

2. Sewerage facilities are operated by a public agency, unless a demonstration is made to the Board that an existing public agency is unavailable and formation of a new public agency is unreasonable. If such a demonstration is made, a private

*as defined in "Glossary-Water and Wastewater Control Engineering" by the American Society of Civil Engineers (1981)

entity must be established with adequate financial, legal, and institutional resources to assume responsibility for waste discharges.

3. Dual disposal systems are installed (200% of total of original calculated disposal area).

4. An expansion area is included for replacement of the original system (300% total).

5. Community systems provide duplicate individual equipment components for components subject to failure.

6. Discharge from community systems does not exceed 40 grams per day total nitrogen, on the average, per acre overlying ground water recharge areas, unless local governing jurisdictions adopt Wastewater Management Plans subsequently approved by the Regional Board.

The Executive Officer shall administer these prohibitions. In those cases of question, the Regional Board shall consider exemptions for engineered systems.

Exceptions to prohibitions will be considered for engineered systems where sufficient justification is provided. Septic tanks and leaching systems shall not be planned for an area where it appears that the total discharge of leachate to the geological system under fully developed conditions will cause damage to public or private property, degrade ground water, or create a nuisance or public health hazard; interim use of septic tank systems may be permitted where alternate parcels are held in reserve until sewer systems are available. Engineered systems shall be designed only by registered engineers.

Engineers should be responsible for proper system operation. Engineers should be responsible for educating system users of

proper operation and maintenance. Maintenance schedules should be established.

Engineered systems should be inspected by designer during installation to insure conformance with approved plans.

Individuals requesting exceptions may be asked to submit a Report of Waste Discharge.

Some engineered systems may be considered experimental by the Regional Board. Experimental systems will be handled with caution. A trial period of at least one year should be established whereby proper system operation must be demonstrated. Under such an approach, experimental systems are granted a one year conditional approval.

In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance the following prohibition areas are necessary:

1. Discharges from additional individual/community subsurface disposal systems are prohibited after February 6, 1976, and discharges from existing individual disposal systems are prohibited effective April 1, 1981, in Monterey County Service Area No. 66, Las Lomas-Hall area.

2. Discharges from additional individual/community subsurface disposal systems are prohibited after July 9, 1976, and discharges from existing individual disposal systems are prohibited effective November 1, 1981, in the Moss Landing County Sanitation District.

3. Discharge of waste from additional individual sewage disposal systems is prohibited forthwith and the discharge of waste from existing individual sewage disposal systems is prohibited after July 1, 1982, in portions of the community of Nipomo, San Luis Obispo County and more particularly described as:

BEGINNING at the point of the southernmost property corner of Assessor's Parcel Number (APN) 92-331-8 near the intersection of Southland Street and Orchard Road; thence north-easterly along the northerly boundary line at Southland Street to intersect the easterly boundary line of U.S. Highway 101; thence north-westerly along said line to the westernmost property corner of APN 92-301-12; thence along a bearing approximately N 48° 15' to intersect the easterly boundary line of Oakglen Avenue; thence north-westerly along said line to the southerly boundary line of Division Street; thence along an extension of said line to the easterly boundary line of Thompson Avenue; thence northwesterly along said line to the south property corner of APN 90-081-10; thence northeasterly along southeastern boundary of said parcel to the east property corner; thence north-westerly along an extension of the westerly boundary line of Cedar Street to the northerly boundary line of Tefft Street; thence northeasterly along said line to the easternmost property corner of APN 90-371-58; thence northwesterly along an extension of the boundary of said parcel to the southerly boundary line of Chestnut Street; thence southwestward along said line to the westerly boundary line of Thompson Avenue; thence northwesterly along said line to the easternmost property corner of APN 90-151-13; thence along a bearing approximately S 48° W to intersect the easterly boundary line of Willow Road; thence southeasterly along said line to the southerly boundary line of Juniper Street; thence northeasterly along said line to the westernmost property corner of APN 92-131-06; thence along a bearing S 34° 30'E to the southerly boundary line of Tefft Street; thence southwestward along said line to the west corner of APN 92-132-34; thence along a bearing of S 34° 30'E to the southerly boundary line of Hill Street; thence northeasterly along said line to the west corner of APN 92-133-26; thence along a bearing of S 34° 30'E to intersect the northerly boundary line of Division Street; thence southwestward along said

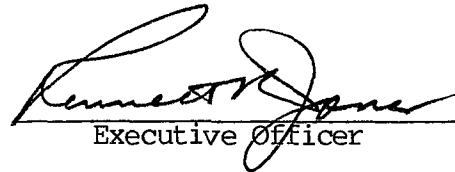

line to the easternmost property corner of APN 92-172-02; thence along a bearing approximately N 67° 28'W to the northernmost property corner of APN 92-454-20; thence along a bearing approximately S 22° 26'W to the westernmost property corner of APN 91-111-25; along a bearing approximately S 67° 28'E to intersect the easterly boundary line of Division Street; thence northeasterly along said line to the westernmost property corner of APN 92-181-13; thence along a bearing approximately S 64° 33'E to the southernmost property corner of APN 92-181-13; thence along a bearing approximately N 37° 30'E to the easterly boundary line of Orchard Road; thence southeasterly along said line to the true POINT OF BEGINNING.

The Board may grant an exemption to prohibition areas for: 1) engineered new on-site disposal systems where sufficient justification is provided; 2) new on site disposal systems after presentation of geologic and hydrologic evidence by the proposed discharger that such system(s) will not individually or collectively result in pollution or nuisance; and 3) existing on-site systems if it finds that the continued operation of such system(s) in a particular area will not, individually or collectively, directly or indirectly, affect water quality adversely. Dischargers requesting exemptions must submit a Report of Waste Discharge.

Individual, alternative, and community systems shall not be approved for any area where it appears that the total discharge of leachate to the geological system, under full developed conditions, will cause: 1) damage to public or private property; 2) ground or surface water degradation; 3) nuisance conditions; or, 4) a public health hazard."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 10, 1982.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-08

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, Regional Board staff prepared a study entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers"; and,
- WHEREAS, the aforesaid study identified beneficial uses and water quality objectives for each of the two rivers and cited several water quality objectives of general application where references and data had been updated; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, proposed revisions and amendments are specifically for the Salinas River and are to be made to Chapter 2, Beneficial Uses and Chapter 4, Water Quality Objectives of said Basin Plan; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,
- WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,
- WHEREAS, on July 9, 1982, in the Watsonville City Council Chambers, 250 Main Street, Watsonville, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan; and,

WHEREAS, the Regional Board recognizes Monterey County Flood Control and Water Conservation District has completed the Arroyo Seco Dam Feasibility Study Report and the District has reason to expect future uses of MUN, AGR, PROC, and IND for the lower Salinas River;

NOW, THEREFORE, BE IT RESOLVED, that pages 2-4 and 4-14 of the Basin Plan be revised and amended as shown on Attachment A, consisting of two pages and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board will revise the Basin Plan to reflect and protect uses that are part of the Arroyo Seco Dam Project when Monterey County determines the project is feasible and commits itself to project implementation.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-07

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin

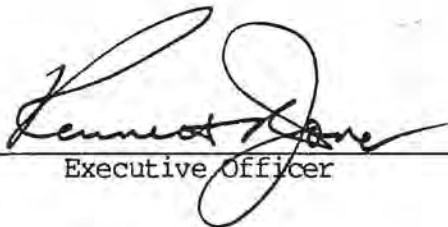

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, Regional Board staff prepared a study entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers"; and,
- WHEREAS, the aforesaid study identified beneficial uses and water quality objectives for each of the two rivers and cited several water quality objectives of general application where references and data had been updated; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, proposed revisions and amendments apply to Chapter 2, Beneficial Uses (specifically for the San Lorenzo River) and Chapter 4, Water Quality Objectives (some specific to the San Lorenzo River and some that apply to all inland surface waters), of said Basin Plan; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,
- WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,
- WHEREAS, on July 9, 1982, in the Watsonville City Council Chambers, 250 Main Street, Watsonville, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that pages 4-2, 4-4, 4-8, 4-9, 4-13, and 4-14 of the Basin Plan be revised and amended as shown on Attachment A, consisting of five pages and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

Page 4-2, second column, amend to read:

Thermal Plan

The "Water Quality Control Plan for the Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California", adopted by the State Water Resources Control Board on May 18, 1972, and amended September 18, 1975, specifies water quality objectives, effluent quality limits and discharge prohibitions related to thermal characteristics of enclosed bay and estuary waters and waste discharges.

Ocean Plan

The "Water Quality Control Plan for Ocean Waters of California"; Resolution No. ~~72-45~~ 78-2, was adopted by the State Water Resources Control Board on ~~July 6, 1972~~ January 19, 1978. (This 1978 plan is a major revision of the original plan adopted by State Water Resources Control Board Resolution 72-45 on July 6, 1972.) This 1978 plan establishes beneficial uses and water quality objectives for waters of the Pacific Ocean adjacent to the California Coast outside of enclosed bays, estuaries, and coastal lagoons. Also, the Ocean Plan prescribes effluent quality requirements and management principles for waste discharges and specifies certain waste discharge prohibitions.

The Ocean Plan also provides that the State Water Resources Control Board shall designate Areas of Special Biological Significance (ASBS) and requires wastes to be discharged a sufficient distance from these areas to assure maintenance of natural water quality conditions.

The State Water Resources Control Board declared its intent to periodically revise the Plan to reflect water quality objectives that are necessary to protect beneficial uses of ocean waters and to be consistent with current technology.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-06

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of nuisance; and,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,

WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, proposed revisions and amendments apply to Chapter 5, Recommended Plan, of said Basin Plan; and,

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217; and,

WHEREAS, on May 13, 1982 in Santa Barbara, California, after public notice, and on July 9, 1982, in Watsonville, California, the Regional Board received evidence and considered all factors concerning proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that pages 5-1 through 5-27 of the Water Quality Control Plan, Central Coastal Basin, be revised and amended as contained in Attachment A.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

CHAPTER 5. RECOMMENDED PLAN

This chapter describes recommended water quality control plans for the Central Coastal Basin. The diverse nature of the basin and factors influencing water quality require consideration of geographic sub-basins for most point source measures. Facility plans and other recommended control actions are described. In some cases, several acceptable options are described with preference given to a recommended plan or strategy or implementation approach.

The Central Coastal Basin environment is described in some detail in Chapter 11 (Chapters 8 through 17 are printed in Part II of the Basin Plan). Environmental sensitivity relative to wastewater disposal is discussed in Chapter 6. Land uses and economy are described in Chapter 12. The basin environment and economy can be related to the kinds of water quality problems which predominate this area. Groundwaters are highly mineralized in several sub-basins and most streams are ephemeral. Agricultural and oil extraction activities predominate and each has a potential effect on ground water salinity. These and other water quality problems are described in more detail in Chapter 14. Salt control is emphasized in the recommended plan, particularly as related to municipal dischargers to land, agricultural practices, and conjunctive management of surface and ground water resources. Water resource management is described in Chapter 13.

Selection of recommended plans is based on protection of beneficial uses described in Chapter 2 and water quality objectives and the non-degradation policy contained in Chapter 4. Treatment levels considered necessary for various municipal facility plans have been identified in terms of their relevance to various methods of disposal. Discussions of effluent disposal to ocean, estuary, stream, or land, and wastewater reclamation and sludge disposal are included in following sections. Facility Plans are compared in terms of environmental impacts in Chapter 17.

Recommended plans are provided for industrial wastewater management, solid waste management, and non-point sources such as urban runoff, agricultural wastewater management, soil disturbance activities, and industrial wastewater disposal practices. In addition, policies and prohibitions are described which affect water quality management.

POINT SOURCE MEASURES

Water quality control plans to regulate point source wasteloads in the Central Coastal Basin have been developed to insure protection of beneficial uses of water described in Chapter 2, as well as water quality objectives and non-degradation policies described in Chapter 4. In addition, effluent limits, applicable to various disposal modes, and waste discharge prohibitions, described in this chapter, influenced plan selection. Point source wastes can be generated by residential, commercial, industrial, agricultural, and certain recreational activities, and by solid waste disposal practices. Other wastes are considered under the category of non-point source wasteloads and are discussed in appropriate sections of this chapter.

Effluent Limits

Effluent limitations for disposal of treated point source wastes are based on water quality objectives for the area of effluent disposal, and applicable state and federal policies and effluent limits. Water quality objectives and policies are based on beneficial uses established for receiving waters. Decisions in treatment process selection are discussed for four general disposal modes considered; stream disposal, estuarine disposal, ocean disposal, and land disposal. There is no discussion provided for disposal to lakes or confined sloughs since this is prohibited. Separate discussions of treatment for wastewater reclamation and reuse and sludge processing and disposal are also provided.

The following discussions refer to levels of treatment to be achieved at municipal and industrial wastewater treatment facilities. Table 5-1 describes efficiencies expected from each level of treatment for biochemical oxygen demand, suspended solids, total nitrogen, and total phosphorus.

Stream Disposal

Most streams in the Central Coastal Basin are ephemeral in character. During summer months, there is little or no flow in stream channels. In several instances, flow during the dry season is composed of irrigation runoff or wastewater treatment plant effluent. Usually, these flows infiltrate into the stream bed a short distance downstream of discharges. In such instances, the concept of receiving water assimilative capacity has little meaning. Disposal of wastewater in ephemeral streams must be accomplished in a manner that safeguards public health and prevents nuisance conditions. Where possible, discharges should be beneficial as stream flow augmentation. When recharge of a useful ground water basin occurs through stream channel recharge, impacts on ground water quality must be considered.

There are a few streams in the basin which flow on a year-round basis and support an inland fishery. Disposal of wastewaters to such streams requires that essentially all oxygen demanding substances and toxicity be removed.

Principal factors governing treatment process selection for stream disposal are federal effluent limits, state public health regulations, and water quality requirements for beneficial use protection. As a minimum, secondary treatment, as defined by the Environmental Protection Agency, is required in all cases. EPA guidelines for best practicable treatment would also apply in these cases. Where water contact recreational use is to be protected, the California Administrative Code, Title 22, Section 60315, also requires coagulation, filtration, and disinfection providing a median coliform MPN of 2.2/100 ml. Where rapid percolation occurs, conventional secondary treatment is currently adequate. These regulatory guidelines establish minimum treatment processes for most stream discharges in the Central Coastal Basin, as biological oxidation with nitrification, coagulation, filtration, and disinfection. Detoxification is required where fishery protection is a concern. Detoxification would include effluent limits for identified toxicants, pursuant to Section 307 of the Federal Water Pollution Control Act. Source control of specific toxicants will be necessary to comply with the Act.

Estuarine Disposal

Receiving waters considered estuaries are one of two groups: (1) shallow waters of an open bay and (2) confined tidal estuaries, or lagoons. Flushing action is usually present in a shallow open bay and natural dispersion and dilution is available on a limited scale. In confined waters, flushing action is limited or nonexistent except during high stream inflow or storms. Since these shorelines frequently are heavily developed and waters are extensively used, requirements for wastewater disposal into such areas are the most stringent of any for marine receiving waters. The "Water Quality Control Policy for Enclosed Bays and Estuaries of California," adopted by the State Water Resources Control Board, prohibits discharge of waste to most enclosed bays and estuaries in the state, unless the discharge will enhance water quality.

Water quality objectives prevent discharges that could raise natural nutrient levels to an extent that nuisance algal blooms or other aquatic growths occur. Excessive eutrophication in coastal estuaries of California often is characterized by floating and stranded mats of green marine seaweeds Enteromorpha and Ulva. These algae generally grow on mud or other substrates in estuarine water and can produce nuisance conditions along shorelines. These algae have a high sulfur content and emit foul smelling hydrogen sulfide and mercaptans during decomposition. Caution should be given in determining control measures for estuaries, as many of the seasonal algal growths that occur on mud flats are natural and may not be significantly affected by waste discharges in the watershed. Where eutrophication problems are apparent, secondary treatment with denitrification, phosphorus removal, chlorination, and dechlorination should be provided prior to discharge.

Ocean Disposal

Federal guidelines for secondary treatment apply to ocean discharges. The State Water Resources Control Board's Water Quality Control Plan for Ocean Waters of California (Ocean Plan) establishes effluent limits achievable by alternative processes, such as advanced primary treatment. The Ocean Plan contains water quality objectives, requirements for effluent quality and management of waste discharges, and discharge prohibitions (including Areas of Special Biological Significance). Effluent quality requirements establish limitations for grease and oil, solids, turbidity, pH, and toxicity. Limits are also established for heavy metals, chlorine residual, total chlorinated pesticides, PCB's, and radioactivity outside the zone of initial dilution.

For municipal discharges, the Clean Water Act allows waiver of secondary treatment standards on a case-by-case basis. Secondary treatment waivers are further discussed as they apply to specific discharges in the following section on Municipal Wastewater Management. If full secondary treatment is required but funding is inadequate, treatment levels should be achieved through staged construction. Ocean Plan objectives can be achieved as an interim measure. Secondary treatment should be later added if waivers are not issued or if receiving water monitoring indicates additional treatment is necessary to protect ocean waters. Industrial wastewater management is discussed later in this chapter.

Land Disposal

Principal factors affecting treatment process selection for land disposal are the nature of soils and ground waters in the disposal areas and, where irrigation is involved, the nature of crops. Wastewater characteristics of particular concern are total salt content, nitrate, boron, pathogenic organisms, and toxic chemicals. Where percolation alone is considered, the nature of underlying ground waters is of particular concern. Treatment processes should be tailored to insure that local ground waters are not degraded. Nitrate removal is required in many cases where percolation is to usable ground water basins. Percolation basins operated in alternating wet and dry cycles can provide significant nitrogen removal through nitrification/denitrification processes in the soil column. Finer textured soils are more effective than coarse soils. Nitrate removal would not necessarily be required, and secondary treatment may be adequate where recharge is for other purposes such as prevention of salinity intrusion or where soil percolation constraints do not require further treatment. Monitoring in the immediate vicinity of the disposal site would be required in either case. Where the need for nitrate removal is not clear, removal would be considered at a possible future stage depending on monitoring results. Where irrigation is practiced and well controlled, this method will reduce nitrate concerns in the dry season. Vegetative uptake will utilize soluble nitrates which would otherwise move into ground water under a percolation operation. Demineralization techniques or source control of total dissolved solids is necessary in some inland areas where ground waters have been or may be degraded. Individual basins are discussed in Chapter Six. Presence of excessive salinity, boron, or sodium could be a basis for rejection of crop irrigation with effluent.

State Health Department regulations, described in Title 22 of the California Administrative Code, stipulate disinfection levels required for specific crops. In some cases, such as pasture for milking animals, the California Administrative Code requires oxidation with disinfection to a median number of coliform organisms of 23 MPN/100 ml. Environmental Protection Agency guidelines for secondary treatment do not apply to land disposal cases. However, municipal treatment facilities must provide effective solids removal and some soluble organics removal for percolation bed operations and for reduction of nuisance in wastewater effluent irrigation operations. Disinfection requirements are dictated by the disposal method. Oxidation ponds may be cost-effective in some locations and may be equivalent to secondary treatment.

Reclamation and Reuse

Reclamation and reuse shall be encouraged where feasible and beneficial. Where practicable, land disposal by spray irrigation shall be accomplished by proper reclamation techniques rather than by over-irrigation. This will aid water shortages and maximize nutrient removal.

Treatment process selection for reclamation of wastewater is dependent upon the intended reuse. Where irrigation reuse or ground water recharge is intended, treatment requirements will depend on conditions described under land disposal. Clearly, the nature of the crop to be irrigated, soil percolation,

and ground water characteristics are important considerations. Title 22 of the California Administrative Code provides wastewater reclamation criteria to regulate specific uses of reclaimed water. Where reuse is extended to water contact recreation, secondary treatment with coagulation, filtration, and disinfection is required. Where golf course irrigation is practiced, this level of treatment minus coagulation and filtration may be adequate. However, where more complete reclamation is envisioned, such as creation of recreational lakes for fishing, swimming, and water skiing, nutrient removal may also be required to minimize algae growths and to encourage fish propagation. Comparable treatment may also be needed for industrial water supplies used for cooling and uses where algae growth in transfer channels or cooling towers is of concern. Nitrogen removal and demineralization processes may also be necessary for selected reclamation projects as discussed under land disposal.

The State Department of Health has provided guidelines for reclaimed water uses involving domestic water supply. Three uses of reclaimed water are considered in a department position paper:

1. Groundwater recharge by surface spreading,
2. Direct injection into aquifers suitable for domestic water use,
3. Direct recycling of reclaimed water into a domestic water system or storage facility.

The State Department of Health Services has expressed concern that risks from the use of reclaimed wastewater may arise from pathogenic organisms, toxic chemicals and from long-term health effects associated with stable organic materials which may remain after treatment. Accordingly, a conservative position has evolved which can be summarized as follows:

1. Surface spreading of small amounts of reclaimed water to underground basins has the greatest potential; however, near term proposal plans which involve recharge of substantial volumes of reclaimed water into a small basin are not recommended.
2. Injection of reclaimed water for groundwater replenishment is not recommended as a near term measure; however, injection may be considered as a future option and for saline water repulsion, particularly where injection is to a brackish water zone.
3. Direct recycling to a domestic water supply is not considered acceptable within the next decade because of uncertain health and social implications. The Health Department can be expected to reject such direct recycling alternatives although this may be retained as a future option.

Pretreatment Programs

State and Federal regulations require certain municipalities to develop and administer pretreatment programs to control the discharge of industrial wastes to the treatment plant. All municipal plants with design flows greater than 5.0 MGD (discharged to navigable waters) are required to develop and implement a pretreatment program. Other municipalities may be required to develop a pretreatment program if circumstances warrant such a program. The Environmental Protection Agency has established

specific industrial subcategories of industries which discharge certain quantities or concentrations of pollutants to municipal systems. Pretreatment is required to meet industrial effluent standards established for each category. The objectives of a pretreatment program are to: (1) prevent introduction of pollutants into publicly owned treatment works which will interfere with treatment operations and/or use or disposal of municipal sludge, (2) prevent introduction of pollutants into publicly owned treatment works which will pass through treatment works or be incompatible with treatment techniques, (3) increase feasibility of recycling and reclaiming municipal and industrial wastewaters and sludges, and (4) enforce applicable EPA Categorical Standards. A pretreatment program must include: (1) a local pretreatment ordinance, (2) a use permit system, (3) a program of monitoring and inspection to insure compliance with the ordinance and use permit, and (4) an enforcement program sufficient to obtain compliance with provisions of the ordinance or use permit. Pretreatment programs are further discussed as they apply to specific dischargers in the section on Municipal Wastewater Management.

Sludge Processing and Disposal

Sludge treatment and disposal is usually the most difficult aspect of wastewater treatment. Biological sludges have a higher nutrient content than primary treatment sludges and are thus more desirable as a soil conditioner, but handling problems are compounded. Chemical precipitation will produce a great quantity of sludge that is composed of inorganic material. Such sludges may be digested but require greater digestion tank capacity than is necessary for biological sludges. The large inorganic content of chemical precipitation sludges may also render them less desirable as a soil conditioner. Polymers are widely used to increase settling and thickening efficiencies, and to reduce chemical sludge handling problems. Increasing power costs have made sludge energy recovery projects economically attractive.

Burial of digested sludge or incinerated residues, often mixed with garbage and other solid wastes, has been a common method of disposal. Dewatering is generally economically desirable to reduce weight, volume, and transport costs. Soil conditioning as a means of digested sludge disposal and of returning humus material and nutrients to the soil has been practiced in many parts of the world for many years. Liquid sludge, heat-dried sludge, dewatered sludge, and composted sludge have all been used successfully as soil conditioners. Some means of sterilizing the sludge (such as heat drying or wet combustion) is usually required prior to unrestricted sale to the public. Experience has shown that demand for such a product is generally limited or seasonal and that some disposal method is necessary.

Examples of disposal of liquid or dewatered digested sludge as a soil conditioner are numerous. Some treatment plants have contracts with local farmers for the use of digested sludge in agriculture. This practice is widespread in Great Britain and is becoming more popular in the United States. Dewatered and air-dried sludge cake has also been used in many major city parks. Some municipal sludges are digested, composted, packaged, and sold commercially as soil amendments. Most communities in the Central Coastal Basin dispose of sludge in liquid or dewatered form on land fill, dump sites, or on local farms. Continuation of this practice is recommended where beneficial uses of soil and water are not adversely affected. Wastewater heavy metals tend to concentrate in sludge. Proper application rates are required to avoid unacceptable metal concentrations in the soil (cadmium is of particular concern).

Many of the world's major coastal cities have discharged sludge to the ocean for years. This practice has in some cases resulted in detrimental conditions while in others, significant impacts have not been shown. The federal government and many state governments have banned the use of federal and state monies in any system that returns sludge to the receiving waters. Some states have banned the practice outright. California's Ocean Plan prohibits discharge of municipal and industrial waste sludge directly to the ocean, or into a waste stream that discharges to the ocean. The contention of the regulatory agency is that return of the sludge negates the purpose of the wastewater treatment process. Though controversial, this legal ban has shifted advantages away from ocean disposal to land disposal and reclamation, or to incineration, depending on local conditions. Land is more readily available for sludge disposal or use on agricultural land in the Central Coastal Basin than in more intensively urbanized areas of California.

Funding and Compliance Dates

Funding of municipal wastewater treatment projects under federal-state grant projects proceeds in accordance with State priorities and availability of funds. Needs for upgrading water quality control facilities are established on a case-by-case basis. Higher priority is given for improvements necessary to eliminate documented water quality and/or public health problems. These projects include ocean outfall extensions, treatment efficiency improvements, odor and nuisance control, and increases in plant capacity as appropriate. Those projects which provide for improvement in water quality and provide for wastewater reclamation in areas with documented water shortages shall also receive a high priority. Funds and progress have been too limited for realization of the 1977 deadline for secondary treatment. As a result, the 1977 amendments to the Federal Water Pollution Control Act allow for time extension on a case-by-case basis up to July 1, 1983. Amendments in late 1981 (HR 4503), further extend this date to July 1, 1988. HR 4503 also allows additional time, until December 29, 1982, for municipalities to apply for a waiver from secondary treatment requirements for deep ocean discharges.

Load Reductions

Table 5-2 shows the estimated flowrates and loadings of BOD, suspended solids, nitrogen, and phosphorus for various communities in the basin for 1970, 1980, and 2000. Flows in several service areas have been or will be consolidated and treated at regional facilities as indicated in Table 5-3. Reductions in biochemical oxygen demand (BOD), suspended solids (SS), nitrogen (N), and phosphorus (P) loadings were calculated by applying treatment removal percentages to the influent loadings as presented in Table 5-1. Load reductions shown for 1980 and 2000 levels of development provide for at least the minimum 85 percent BOD and suspended solids removal to comply with federal effluent limit requirements.

Population Projections

Federal regulations require that water quality management plans (Basin Plans) identify population projections for purposes of determining municipal waste treatment facilities needs. For such purposes, this Basin Plan endorses projections based upon current state administrative regulations pertaining to use of population projections for construction of municipal treatment works.

Table 5.1 Treatment Removal Percentages

Treatment level	Percent removal			
	BOD ₅	Suspended solids	Total N	Total P
Primary ^a	30	65	5	5
Advanced Primary ^b	40	75	5	10
Secondary ^c	85	85	10	25
Secondary with denitrification ^d	95	90	90	25
Secondary with nutrient removal ^e	95	95	90	90

- a. Primary treatment includes physical operations such as screening and sedimentation to remove floating and settleable solids.
- b. Advanced primary treatment adds chemically enhanced settling or partial biological treatment.
- c. Secondary treatment adds biological and chemical processes to increase removal of organic constituents of wastewater.
- d. Secondary treatment as described above with the addition of unit operations designed to remove nitrogen gas from wastewater.
- e. Secondary treatment with nitrogen and phosphorous removal.

Municipal Wastewater Management

Municipal wastewater conveyance, treatment, and disposal facilities recommended for the Central Coastal Basin are described in the following pages. Feasibility level planning was used to identify the most economical and environmentally protective water quality management system for each municipal discharger. In many cases, more detailed facilities plans or the facility are now complete. In these cases, the recommended project from the facilities plan is summarized.

Recommended plans for municipal facilities are described in geographic sequence by hydrographic sub-basin and in some cases by regions within a sub-basin. Hydrographic sub-basins are identified in Chapter 1, Figure 1-1. An overview of the plan for major municipal facilities including facility consolidations and disposal operations is provided in Figure 5-1. For each municipal facility within a sub-basin, a brief facility description is provided followed by the recommended plan and implementation responsibilities. Levels of wastewater treatment and treatment efficiencies are defined in Table 5-1. Institutional arrangements for implementing recommended plans are summarized in Table 5-3.

Table 5-3 lists hydrographic sub-basins and, where appropriate, regions within sub-basins. Agencies owning and operating treatment facilities within sub-basins or regions are listed in the column entitled "Treatment Facilities". A management agency column identifies regional agencies that have, or have been recommended for, collection, treatment, disposal, or possibly reclamation responsibility for two or more participating or contracting agencies. Participating agencies have partial responsibility for operations through membership in the management agency. A contracting agency has a formal agreement with a management agency for service. Participating agencies and contracting agencies usually retain responsibility for sewage collection and contract with the management agency for other services. The agency responsible for operation of wastewater treatment and disposal facilities must comply with discharge requirements and permits issued by regulatory agencies. Accordingly, the operating agency must be empowered to provide all water quality related control operations, including source control and monitoring within tributary sewer systems where necessary, to comply with waste discharge requirements.

The following are recommended plans for municipal wastewater facilities for the Central Coast Basin. Numbers in parentheses throughout the chapter refer to design capacity unless otherwise stated. Pretreatment programs and modifications to secondary treatment are discussed as part of the recommended plan where applicable. Further discussion of these topics can be found under the sub-headings "Ocean Disposal" and "Pretreatment Programs" at the beginning of this chapter.

- 1) The flows from the Aptos, East Cliff, and Capitola SD's are transported to the City of Santa Cruz WWTP, although the sanitation district is located in the Aptos-Soquel Sub-basin.
- 2) Atascadero State Hospital maintains separate treatment facilities but discharges treated effluent to City of Atascadero percolation ponds.

Santa Cruz Coastal Sub-basin

The Santa Cruz Coastal Sub-basin contains several small waste dischargers (less than 0.10 mgd) including Davenport County Sanitation District, Big Basin State Park on Waddell Creek, and the Department of Forestry's Ben Lomond Conservation Facility.

Davenport County Sanitation District was created in 1979 to provide sewer and water services to the Davenport-Newtown area located on the coast north of Santa Cruz. The recommended plan for the Davenport-Newtown area is to construct interceptors and an aerated wastewater lagoon on property owned by Lone Star Industries. Disposal will be through evaporation/percolation and industrial reuse. Davenport County Sanitation District will be responsible for wastewater collection, treatment, and disposal. Current Sewer Maintenance District responsibilities will be assumed by DCSD when transport and treatment facilities are completed.

The recommended plan for Big Basin State Park facilities (.04 mgd), located in the upper portion of the sub-basin, stresses upgraded treatment for stream-flow augmentation. Existing secondary treatment with sand filtration will be upgraded to include coagulation and reliability modifications. These improvements will qualify this stream discharge as an acceptable wastewater reclamation project. The discharge is upstream from a popular swimming hole, so the plan emphasizes the need to enhance water quality and protect beneficial uses in Waddell Creek. The State Department of Parks and Recreation is responsible for implementation.

The recommended plan for the Ben Lomond Conservation Facility, located in the upper portion of the sub-basin, is to retain the existing septic tank, evaporation/percolation ponds, and spray field. Existing facilities are adequate so long as operation and maintenance are effective.

San Lorenzo River Sub-Basin

The San Lorenzo River Sub-basin includes discharges from the City of Santa Cruz and the City of Scotts Valley, in addition to unsewered areas and several small waste dischargers (less than 0.10 mgd). Small sewered areas of the San Lorenzo Valley include Santa Cruz County Service Area #7 (Boulder Creek Golf and Country Club) and SCCSA #10 (Rolling Woods Subdivision).

The City of Santa Cruz operates a wastewater collection, primary treatment, and ocean disposal system with a capacity of 21 mgd. Sewerage service is provided to the City of Santa Cruz, Santa Cruz County Sanitation District, and the City of Scotts Valley. The SCCSD serves and represents Aptos and Seacliff, both in the Aptos-Soquel Sub-basin. In September, 1979, the City applied to EPA for a waiver from secondary treatment requirements (see discussion on Ocean Disposal). The recommended plan for the City is to build a new extended outfall and upgrade the existing treatment plant at Neary's Lagoon. If modification of the secondary treatment requirement is granted, facilities will be upgraded from primary to advanced primary. If modification of the

secondary treatment requirement is not granted, facilities will be upgraded to secondary treatment. A determination on the waiver application is expected late 1982. Mitigation measures to reduce impacts to Neary's Lagoon must be resolved before plans can proceed. The City is also preparing a pretreatment program to be implemented by July 1, 1983, by a regional management agency consisting of the City of Santa Cruz, Santa Cruz County Sanitation District, and the City of Scotts Valley.

Wastewaters from sewerred areas of the City of Scotts Valley are transported to Scotts Valley's secondary treatment plant. Effluent is transported through a land outfall to the City of Santa Cruz marine outfall for disposal to the Pacific Ocean. During the dry season, reclaimed wastewater is supplied to several primary users. The recommended plan for Scotts Valley includes: (1) increasing wastewater treatment capacity from 0.45 mgd to 0.79 mgd, (2) providing reclaimed water to Pasatiempo Golf Course for irrigation purposes, (3) transportation of excess reclaimed water through the Scotts Valley Land Outfall to the City of Santa Cruz ocean outfall, and (4) utilization of the Kaiser Pit for emergency disposal of peak wet weather flows to prevent an overflow of treated wastewater onto the beach from the existing Santa Cruz Marine Outfall structure. Use of Kaiser Pit will be terminated upon completion of the new City of Santa Cruz Marine Outfall. Implementation of this plan will be accomplished by the Cities of Scotts Valley and Santa Cruz.

Wastewater management in San Lorenzo Valley is provided by three community treatment and disposal facilities (Bear Creek Estates, Big Basin Woods, and Boulder Creek Golf and Country Club). Remaining areas are served by individually owned septic tank and soil absorption systems. The recommended plan for Bear Creek Estates involves a change in method of treatment and disposal. The existing extended aeration treatment plant and spray field will be replaced by septic tank treatment with disposal to a soil absorption system. Implementation of this plan is the responsibility of San Lorenzo Valley Water District and Bear Creek Estates.

The recommended plan for Big Basin Woods Subdivision is to retain the existing extended aeration treatment facility with leachfield disposal, presently operating at approximately 10 percent of total capacity (.035 mgd). Flow from County Service Area #7 has been diverted to Big Basin Woods' leachfield during equipment repair periods. Leachfield capacity is adequate to serve both Big Basin Woods and CSA #7. Existing facilities are adequate so long as operation and maintenance are effective. This plan will be implemented by Big Basin Sanitation Company, Big Basin Woods Subdivision, and the San Lorenzo Valley Water District.

The recommended plan for Boulder Creek Golf and Country Club is to retain the existing activated sludge treatment facility with irrigation and leachfield disposal, which is operating at 15 percent capacity. Existing facilities are adequate so long as operation and maintenance are effective. Operation and maintenance of the system is the responsibility of the Santa Cruz County Department of Public Works. This plan will be implemented by Santa Cruz County Service Area #7 through Santa Cruz County Department of Public Works and San Lorenzo Valley Water District.

Rolling Woods Subdivision, Santa Cruz County Service Area No. 10, provides treatment with a redwood bark biofilter and disposes treated effluent through percolation pits. This facility should be replaced with an interceptor that would convey wastes to the City of Santa Cruz for treatment and disposal.

Individually owned septic tank leachfield systems in the SLV are being studied closely to identify problem areas and determine the suitability of these problem areas for the continued use of septic systems. Alternatives will be proposed and evaluated to reduce septic system problems. Specific design criteria for conventional and modified septic systems will be developed as part of on-going studies funded under Sections 201 & 208 of the Clean Water Act.

Aptos - Soquel Sub-Basin

Dischargers in the Aptos-Soquel Sub-basin include Santa Cruz County Service Area #5 (Sand Dollar Beach and Canon del Sol), SCCSA #20 (Trestle Beach) and Monterey Bay Academy. Flows from Aptos and East Cliff are conveyed through interceptors and pumping facilities for treatment at the City of Santa Cruz Wastewater Treatment Facilities in the San Lorenzo River Sub-basin.

The recommended plan for SCCSA #5 is to retain the existing extended aeration package treatment plant and disposal to seepage pits. Wastewater treatment and disposal at Canon del Sol will be by the same methods as Sand Dollar Beach. Facilities will be adequate so long as operation and maintenance are effective. This plan will be implemented by SCCSA #5 through Santa Cruz County Department of Public Works.

Wastewater treatment at Trestle Beach (SCCSA #20) will be provided by an extended aeration package treatment plant with disposal to seepage pits. This plan will be implemented by SCCSA #20 through the Santa Cruz County Department of Public Works. It is recommended that CSA #5 and #20 be connected to regional collection systems when service is extended to adjacent areas.

The recommended plan for the Monterey Bay Academy is to retain the existing settling pond with disposal to a series of evaporation-percolation ponds.

Pajaro River Sub-Basin

Developed regions in the Pajaro River Sub-basin include the corridor from Morgan Hill through San Martin to Gilroy in south Santa Clara County, the Hollister area, and Watsonville.

Gilroy Region

The Gilroy region includes the unsewered San Martin area and the City of Gilroy's advanced primary treatment and land disposal facilities serving the cities of Gilroy and Morgan Hill. Present flows of 3.6 mgd constitute 60% of the design capacity of 6.1 mgd. Primary treatment is provided via two recently constructed oxidation ponds with subsurface aeration. Effluent disposal is to a series of evaporation/percolation ponds. Wastewater reclamation facilities were constructed in 1977 to alleviate water shortages during drought conditions. When reclamation facilities are in use (seasonally), primary effluent is provided further treatment in an aeration pond. Effluent is then screened, chlorinated, and pumped through nine miles of distribution pipe to various users (for irrigation purposes). Industrial flows of 6.3 mgd are treated and disposed of in a separate series of sedimentation, oxidation, and percolation ponds.

The recommended plan for the Gilroy-Morgan Hill wastewater treatment facilities is to complete geohydrological assessments to determine impacts of continued effluent disposal by percolation at the Gilroy site. If beneficial uses of surface and ground waters are not adequately protected, other treatment and/or disposal methods must be used. A possible solution is to allow percolation ponds to seal (by eliminating yearly pond bottom ripping operation) and disposing of effluent by evaporation and/or exportation to a suitable disposal or reclamation area. If current percolation practices are not causing receiving water problems, feasibility of existing disposal area expansion should be considered.

Currently, the cities of Gilroy and Morgan Hill are responsible for collection, treatment, and disposal of wastewater. They are also responsible for operating the wastewater reclamation facilities. Santa Clara Valley Water District is responsible for administrative tasks for the reclamation system. In addition, the cities of Gilroy and Morgan Hill must submit a pretreatment program which is to be implemented by July 1, 1983.

The recommended plan for the San Martin area is to retain the use of individual on-site systems for sewage disposal. High nitrate levels have been reported in the area's groundwater, the major water supply source for the area. Recent studies and planning efforts determined that provision of sewage collection and treatment is not a feasible solution to high nitrate levels in the ground water. County consultants recommended the County pursue other methods of providing a water supply that is free of excessive nitrate concentration, and further, that new septic tank discharges should be limited to a minimum parcel size of five acres.

Hollister Region

Small discharges (less than 0.10 mgd) in the Hollister region include flows from San Benito County Facilities, Sunnyslope County Water District, and Tres Pinos County Water District. City of Hollister wastewater is treated at the City of Hollister Wastewater Treatment Facilities (1.2 mgd). San Juan Bautista wastewater is treated at the City of San Juan Bautista Wastewater Treatment Facilities (.15 mgd).

The recommended plan for Tres Pinos is to retain the existing evaporation/percolation ponds. The recommended plan for San Benito County Hospital Facilities is to study the feasibility of constructing interceptors to the Hollister facilities. Existing facilities consisting of aerated pond treatment followed by land disposal to evaporation/percolation ponds may be maintained if project level studies determine this to be the more feasible method of wastewater treatment and disposal. Sunnyslope County Water District owns and operates a wastewater treatment and disposal system serving approximately 300 homes in Ridgemark Estates subdivision located approximately $2\frac{1}{2}$ miles southeast of Hollister. Wastewater is treated in two aerated ponds and disposed of in evaporation/percolation ponds. Effluent may be used in the future to irrigate a golf course.

The recommended plan for the City of Hollister is to retain the existing advanced primary treatment facilities and percolation ponds which started operating in 1979. The Hollister industrial system is to be maintained separately to receive seasonal flows from the spinach and tomato processing operations.

The recommended plan for the City of San Juan Bautista is to evaluate alternatives for improving treatment facilities to meet waste discharge requirements. The City currently discharges secondary effluent to a drainage ditch tributary to Pajaro River.

Land disposal of wastewaters in the Hollister region must be monitored carefully to assure ground water quality is protected. Salt source control is stressed to reduce effluent salinity to levels acceptable for disposal to local ground waters.

Watsonville Region

Wastewaters in the Watsonville region are transported to regional treatment facilities in Watsonville with a design capacity of 13.4 mgd. Collection, primary treatment, and disposal to Monterey Bay is provided for the City of Watsonville, and the local sewerage entities of Freedom County Sanitation District, Pajaro County Sanitation District and Salsipuedes Sanitary District. The City submitted an application to EPA for modification of secondary treatment requirements. Project level studies determined ocean disposal to be the most feasible method of waste disposal. Ocean outfall improvements and a phased approach to secondary treatment are included in Watsonville's Clean Water Grant Project. If a waiver from secondary treatment is granted, the project will only provide advanced primary treatment. Local sewerage entities retain ownership and direct responsibility for wastewater collection and transport systems up to the point of discharge to interceptors owned and operated by Watsonville. The City must submit a pretreatment program by July 1, 1982, to be implemented by July 1, 1983.

Salinas River Sub-Basin

The extensive Salinas River Sub-basin includes the Monterey Peninsula and southern coastal area of Monterey Bay, the City of Salinas, agricultural and small urban centers of the Salinas Valley, and recreational developments in the upper watersheds.

Salinas Valley Region

Recommended plans for the Salinas Valley communities and recreational areas in the upper watershed generally involve separate wastewater treatment and disposal facilities.

Small dischargers (less than 0.5 mgd) along the Salinas River, including Chualar, Gonzales, Soledad, Greenfield, and San Miguel, are to remain on separate treatment facilities with land disposal to percolation ponds and seasonal irrigation reuse. Disposal should be managed to provide maximum nitrogen reduction (e.g., through crop irrigation or wet and dry cycle percolation). Future plant expansion and improvements are planned for Gonzales and Greenfield to ensure plant reliability and ability to meet future demands. The State Correctional Facility at Soledad is in the process of making facility improvements to replace worn out equipment, improve disposal capabilities, and provide flood protection for disposal facilities.

The recommended plan for King City is to upgrade and expand existing facilities from 0.5 mgd to 0.8 mgd. Land disposal by percolation ponds and spray irrigation will continue.

The City of Paso Robles owns and operates a secondary treatment plant (2.2 mgd) utilizing trickling filtration followed by oxidation ponds. Disposal is by evaporation and percolation from the oxidation ponds and by discharging from the last pond to the Salinas River channel. Use of reclaimed water should be investigated and implemented, if feasible. A reduction of inorganic salt in the effluent would increase its desirability to potential users. A report, "Water Quality in the Paso Robles Area," published by the California Department of Water Resources in 1981 made water quality control recommendations; including a recommendation for more stringent control of total dissolved solids and sodium in the City's wastewater treatment plant discharge. A public hearing on all the Department's recommendations contained in the report will be held by the Board later this year.

The recommended plan for the California Youth Authority - Paso Robles Airport Wastewater treatment plant (.10 mgd) is to retain the recently enlarged and upgraded facilities. Disposal is to a series of oxidation-percolation ponds located adjacent to Huerhuero Creek. Wastewater reclamation uses should be investigated. An effluent pump exists at the plant in case wastewater reclamation potential develops. Implementation of this plan is the responsibility of the City of El Paso de Los Robles.

Atascadero County Sanitation District (.83 mgd) owns and operates a wastewater collection, treatment, and disposal system serving the City of Atascadero. Secondary treatment by the activated sludge process is provided, followed by land disposal to percolation ponds and by irrigation of a golf course and lands surrounding the plant. Flows at or near plant capacity are being treated. San Luis Obispo County Health Department has documented public health problems and water quality problems arising from failing on-site sewage disposal systems in areas within the City. The City plans to construct a new treatment plant (1.4 mgd) near the existing effluent disposal site for Atascadero State Hospital. The recommended plan (and a condition of receiving a grant for construction) is to sewer areas presently served by failing on-site systems. The City of Atascadero will assume responsibility for operation and maintenance of the wastewater facilities in the near future. Atascadero County Sanitation District will be responsible for implementing this plan until the change occurs.

Dischargers in the Nacimiento Reservoir area include San Luis Obispo County Service Area #7A, Oak Shores Development (0.1 mgd); San Luis Obispo County Service Area #19, Heritage Ranch Development (0.35 mgd); Water World Resort, Ltd., Lake Nacimiento Resort (0.036 mgd); and North Shore Ski and Boat Club, Inc. (0.01 mgd). Wastewater facilities for the Oak Shores Development consists of two aerated treatment ponds and spray disposal on pasture land. Part of the collection system is located below the spillway elevation of Nacimiento Reservoir. This has been a source of excessive infiltration in the collection system. The County should make appropriate improvements to remedy this problem. Wastewater at Heritage Ranch is treated in aerated lagoons, discharged to a holding pond, and then to evaporation/percolation beds, both located outside the Nacimiento Reservoir watershed. To protect ground water in the area, it is recommended that the aerated lagoon be lined. Spring water above the lagoons should be intercepted and diverted around the treatment ponds. Waste water

from Lake Nacimiento Resort is piped to septic tanks at several locations. Septic tank effluent is pumped to evaporation/percolation ponds located outside the reservoir watershed. It is planned to add a spray field to the disposal facility. North Shore Ski and Boat Club, Inc., owns and operates a septic tank/leachfield system on the shore of Nacimiento Reservoir. The recommended plan is to maintain separate treatment facilities at Nacimiento Reservoir as described.

Camp Roberts is a U. S. Army installation that is leased by the California National Guard as a major training site. Wastewater flows that vary from 3000 gpd in winter to nearly 1.0 mgd in summer are treated to secondary levels prior to disposal in a series of percolation/evaporation ponds located near the Salinas River. The facility was upgraded in 1980 and there are no additional recommendations.

Dischargers in the San Antonio Reservoir watershed include Monterey County, Department of Parks and U. S. Army, Fort Hunter Liggett. Monterey County Department of Parks operates wastewater treatment facilities for both north (Pleyto-0.03 mgd) and south (Lynch-Harris Creek and Redonda Vista Recreational Site-0.14 mgd) San Antonio Lake recreational areas. The north site consists of primary treatment and disposal in oxidation/percolation/evaporation ponds. The south facility consists of secondary trickling filter treatment with discharge to oxidation/percolation/evaporation ponds for disposal. With proper maintenance, these systems will adequately protect water quality. The U. S. Army, Fort Hunter Liggett operates wastewater treatment facilities on the military reservation located adjacent to San Antonio River. Existing treatment facilities consist of aerated treatment pond and spray disposal field. The recommended plan is to maintain the existing facilities with improvement of the spray disposal area.

San Luis Obispo Coastal Sub-Basin

Municipal wastewater management plans for the San Luis Obispo Coastal Sub-Basin are described for each of four hydrographic regions: North Coast, Morro Bay, San Luis Obispo Creek, and South County Regions.

North Coast Region

Dischargers in the North Coast Region include Cambria Community Services District (1.0 mgd) and San Simeon Acres Community Services District (.15 mgd).

Recent changes to the secondary treatment facilities at Cambria include expansion of design capacity to 1.0 mgd and construction of a land outfall and spray irrigation system for effluent disposal. The recommended plan for Cambria is to construct an effluent holding reservoir. Excess effluent that cannot be spray-irrigated will be pumped to the reservoir for later land disposal or discharged through an aggregate filter to Van Gordon Creek. Implementation of this plan is the responsibility of Cambria Community Services District.

San Simeon Acres Community Services District owns and operates a secondary treatment (activated sludge) plant with design capacity of 0.15 mgd. Wastewater generated at Hearst Castel and within the community is treated and discharged to the Pacific Ocean through a broken ocean outfall. The recommended plan is to retain the treatment plant and repair the outfall.

Morro Region

Dischargers in the Morro Region include the City of Morro Bay and Cayucos Sanitary District (1.7 mgd), California Men's Colony (2 mgd), and Los Osos-Baywood septic tank leachfield systems.

The City of Morro Bay and the Cayucos Sanitary District jointly own secondary treatment facilities with ocean outfall disposal. Wastewater flows at, or near, treatment plant capacity are being treated and discharged through a newly constructed ocean outfall. The recommended plan is to upgrade the existing wastewater collection and treatment systems. Due to a lack of grant funds, construction of much needed improvements is to occur in two phases. The first phase will include construction of treatment plant improvements to meet State Ocean Plan requirements. Facilities improvements include the addition of a secondary clarifier, solids handling equipment, chlorination/dechlorination facilities, and replacement of outdated mechanical and electrical equipment. In order to maximize plant capacity and meet Ocean Plan requirements, part of the effluent will receive primary treatment only and part will receive secondary treatment. Primary and secondary effluent will be blended before disposal to the Pacific Ocean. The second phase will involve upgrading and expansion for full secondary treatment when funds are available (unless the Environmental Protection Agency grants a secondary treatment waiver).

Recently renovated wastewater treatment facilities at California Men's Colony also serve the California National Guard Camp, Cuesta College, the County Educational Center and the County Operational Facility. Secondary treatment with filtration, nutrient removal, and subsequent disposal to Chorro Creek (stream flow augmentation) is provided. Effluent is also used to irrigate fodder crops on nearby lands owned by California State Polytechnic University. The recommended plan for CMC also calls for correction of sewer system infiltration/inflow problems. Studies are being conducted to determine the feasibility of reactivating the West Facility which could house an additional 900 inmates and 200 staff. If this reactivation occurs, treatment plant capacity will need to be expanded. This expansion is the responsibility of the Department of Corrections with cooperative efforts from the California National Guard Camp, Cuesta College, the County Educational Center, and the County Operational Facility.

Development on small lots in Los Osos-Baywood has resulted in one of the most densely populated areas without public sewers on the central coast. Septic tank effluent is discharged in predominantly sandy soil over a ground water basin which is the sole source of water for the area. Some wells have approached and exceeded the public health maximum nitrate concentration limit. The County of San Luis Obispo is conducting a Clean Water Grant funded study of this situation. Phase One will be an analysis of ground water degradation and its causes. If sufficient evidence of wastewater disposal problems exists, various treatment, disposal, and water resources management alternatives will be evaluated (Phase Two).

San Luis Obispo Creek Region

Dischargers in the San Luis Obispo Creek Region include the City of San Luis Obispo (5 mgd), Avila Beach County Water District (0.180 mgd), and San Luis Obispo County Service Area #18, Country Club Estates (0.09 mgd).

The City of San Luis Obispo wastewater treatment facilities will serve as a regional plant for the City and certain proximal unincorporated county areas. Trickling filters provide secondary treatment before disposal to San Luis Obispo Creek. Effluent is also reused on a nearby City-owned pasture. Infiltration and inflow in the wastewater collection system cause excessively high wet weather flows. The treatment plant is unable to handle peak flows. Consequently, waste flows greater than 9.0 mgd are discharged to San Luis Obispo Creek untreated or partially treated. The recommended plan for San Luis Obispo is to improve the treatment facility in order to provide better wastewater treatment and to prevent by-passing of untreated wastes to San Luis Obispo Creek. Design capacity will be increased to 5.23 mgd. Following completion of treatment plant improvements, and if funds become available, the City has proposed to reuse treated wastewater to maintain a constant water level in Laguna Lake and to irrigate a park and golf course. It is further recommended that the City implement a source control program for pretreatment of industrial wastes by July 1, 1983.

The small community of Avila Beach is served by a small primary wastewater treatment plant owned and operated by the Avila Beach County Water District. Design capacity of the plant is 0.18 mgd; current average flow is only 0.06 mgd. Wastewater disposal is through an ocean outfall to the Pacific Ocean. The District is required to meet State Ocean Plan requirements. Monitoring frequency for heavy metals should be increased to determine compliance with six-month median limits based on the Ocean Plan. Additional treatment and/or outfall modification will be necessary if monitoring indicates existing facilities are not sufficient to consistently meet Ocean Plan requirements. Oceanographic studies would be required to determine appropriate modifications (e.g., lengthen the outfall and add a multiport diffuser). Monitoring reports and oceanographic studies (if needed) are the responsibility of Avila Beach County Water District.

Country Club Estates (San Luis Obispo County Service Area #18) is a small subdivision in South San Luis Obispo County which relies on septic tank systems for wastewater treatment and disposal. A septic tank system performance survey was completed in January, 1981, which identified significant public health hazards from numerous failing septic tank systems in the subdivision. The County's facilities plan for CSA #18 is to construct a small secondary treatment plant (.09 mgd) with effluent disposal via golf course irrigation and evaporation-percolation ponds.

South County Region

Dischargers in the South County Region include the City of Pismo Beach (1.2 mgd), South San Luis Obispo County Sanitation District (2.5 mgd), and Lopez Recreation Area Wastewater Treatment Plant (0.10 mgd). These dischargers provide secondary treatment of wastewater through three separate activated sludge plants. The recommended plan for Pismo Beach is to expand the existing treatment plant and construct a land outfall to the South San Luis Obispo County Sanitation District ocean outfall. Future treatment plant enlargements should provide duplicate process units for improved operation and maintenance.

South San Luis Obispo County Sanitation District disposes of secondary effluent through a new ocean outfall to the Pacific Ocean. The recommended plan for South San Luis Obispo County Sanitation District is to enlarge the existing treatment facilities to 3.0 mgd, since daily flows are at or near design capacity. Addition of polymers or ferric chloride to the activated sludge may help improve process performance in the meantime. A reclamation feasibility study is underway and should be completed. Both Pismo Beach and South San Luis Obispo County Sanitation District could apply for secondary treatment waivers. "Phased" expansion projects similar to Morro Bay's strategy should be considered. That is, an initial phase of construction could provide Ocean Plan level treatment (e.g., blended primary and secondary effluent). A subsequent phase could provide additional process unit capacity to provide full secondary treatment, if required.

The recommended plan for Lopez Recreation Area consists of minor wastewater treatment plant upgrading to ensure reliable operation and to prevent sewage overflows from the collection system into Lopez Lake. Lopez Lake serves as a municipal water supply for downstream coastal communities. It is further recommended that land disposal of wastes and reclamation of water for spray irrigation be continued. Ground water quality monitoring should be used to provide warning of any potential ground water problems downstream of the disposal area. Implementation of this plan is the responsibility of the County of San Luis Obispo.

Soda Lake Sub-Basin

There are no municipal sewerage systems in the Soda Lake Sub-Basin; recommended practices for individual disposal systems will pertain to this area.

Santa Maria River Sub-Basin

The municipal wastewater management plans for the Santa Maria Valley and the Cuyama Valley Region are described separately as follows:

Santa Maria Valley Region

It is recommended that separate wastewater treatment and disposal/reclamation facilities be maintained by the City of Guadalupe (0.5 mgd), the City of Santa Maria (7.8 mgd), and the Laguna County Sanitation District (2.4 mgd). Discharge will be to land in each case. Also included in this sub-basin is the unsewered community of Nipomo.

The City of Guadalupe provides primary treatment with aeration. The existing plant is being replaced by an aerated lagoon system to improve wastewater treatment. An unincorporated neighborhood known as the Gularte tract is located adjacent to Guadalupe. A lift station and interceptor are recommended to transport Gularte's wastewater to the City's collection system. The recommended plan for Guadalupe is to complete treatment plant construction and to continue effluent discharge to land. Use of reclaimed water to irrigate nearby pasture lands is encouraged and should be maximized. Implementation of this plan is the responsibility of the City of Guadalupe. The County of Santa Barbara will be responsible for wastewater collection and transport systems for Gularte tract up to the point of discharge to interceptors owned and operated by Guadalupe.

The City of Santa Maria provides wastewater collection, treatment, and disposal services to the City of Santa Maria, Santa Maria Airport District, and part of Laguna County Sanitation District. Biological secondary treatment is provided with disposal to percolation ponds and irrigation lands. The recommended plan for Santa Maria is to retain the existing treatment and disposal facilities. Since the Santa Maria ground water basin is in a state of adverse dissolved solids balance, it is imperative that quantities of total dissolved solids, sodium, chloride, nitrogen, and nitrogen compounds be kept to a minimum by implementing a strict source control ordinance. Additional measures - importing better quality water, drilling new wells, partial desalting, etc. - may be required in the future to provide a suitable water supply for the area. Laguna County Sanitation District retains ownership and direct responsibility for wastewater collection and transport systems up to the point of discharge into interceptors owned and operated by the City of Santa Maria.

A secondary wastewater treatment plant owned and operated by Laguna County Sanitation District treats most of the wastewater generated within the District. The recommended plan for Laguna is to improve plant performance and increase capacity through a staged construction plan. Recommended improvements include increasing capacity and reliability of the Orcutt Lift Station, increasing sludge drying bed area, and expanding effluent pumping, storage, and conveyance facilities. Funding of future improvements and plant expansions would be through connection and user charges. Laguna County Sanitation District is responsible for implementation of the recommended plan.

Failing individual on-site sewage disposal systems in the community of Nipomo have been documented by the San Luis Obispo County Health Department. Failing septic systems are a threat to ground water quality and public health. A draft facilities plan to solve sewage disposal problems in the community suggested creation of an On-Site Maintenance District (OSMD) responsible for "approving the installation of new systems, as well as ensuring that faulty (failing) systems are repaired or replaced." Due to small lot sizes and poor soils in Nipomo Valley, this solution does not appear to be an acceptable water quality management practice for the entire area. Adequate treatment and disposal facilities are recommended. Implementation is the responsibility of the Nipomo Community Services District working in cooperation with concerned agencies. Financial hardship is evident in Nipomo and implementation will depend on the extent of sewerage and grant availability.

Cuyama Valley Region

Existing facilities at the New Cuyama Wastewater Treatment Plant provide primary treatment of wastewater, with some aeration. Effluent is chlorinated before discharge to Salisbury Creek. The recommended plan for New Cuyama is to study existing facilities, determine future needs of the community, and, since water is in short supply, explore wastewater reclamation alternatives. The Estado Corporation is legally responsible for wastewater facilities. The Cuyama Valley Community, Incorporated is the responsible part for water supply in New Cuyama. It is recommended that exploratory wells be drilled to find a higher quality water supply. If a lower salt content water is not available, the existing water supply should be partially demineralized.

San Antonio Creek Sub-Basin

There are no municipal wastewater treatment facilities in this sub-basin. Wastewater disposal in the community of Los Alamos is through individual on-site systems, which are discussed later in this chapter. Sewerage feasibility studies have been initiated in the community of Los Alamos to determine if a central collection, treatment, and disposal system is required to protect water quality and public health. Implementation of any recommendations from these studies is the responsibility of Los Alamos Community Services District.

Filter and water softener backwash water from the water supply facility operated by Vandenberg Air Force Base is disposed to ponds overlying poor quality ground water.

Santa Ynez River Sub-Basin

Municipal wastewater management plans for the Santa Ynez River Sub-Basin are described separately for Lompoc Valley and Upper Santa Ynez Region.

Lompoc Valley Region

Wastewater in the Lompoc Valley Region is treated at: (1) the Lompoc Regional Wastewater Treatment Plant (5.0 mgd), (2) La Purisma Canyon and Rucker Road Wastewater Treatment Facilities owned by Mission Hills Community Services District (0.2 mgd), and (3) small wastewater treatment facilities at Vandenberg Air Force Base. Wastewater is also reclaimed by treatment facilities located at the U. S. Penitentiary, Lompoc (0.3 mgd). Parts of Lompoc Valley ground water basin are in a state of adverse salt balance. It is imperative that impacts of waste discharges to land be reduced by implementing strict salt limitations and source control programs.

The City of Lompoc operates a secondary treatment facility and discharges treated effluent to Santa Ynez River. The City also provides service to sewered areas of Vandenberg Air Force Base, and Park Water Company (Vandenberg Village Subdivision). The recommended plan for Lompoc is to control mineral concentrations in the effluent by enforcing strict limits on discharges to the sewer system and to develop and implement a pretreatment program. Implementation of this plan is the responsibility of the City of Lompoc. Vandenberg Air Force Base and Park Water Company retain ownership and direct responsibility for wastewater collection and transport systems up to the point of discharge into the wastewater treatment plant and/or interceptors owned and operated by the City of Lompoc.

Existing facilities owned by Mission Hills Community Services District consist of wastewater treatment and disposal in oxidation-percolation ponds. Presently, sewage treatment ponds occupy two sites: the La Purisma Canyon Plant and Rucker Road Plant. Overflow from La Purisma Canyon Plant is diverted by pipeline to the lower Rucker Road Plant. The Facilities Plan for Lompoc (1972) recommended construction of an interceptor from the community of Mission Hills to Lompoc's collection system. In 1980, the Mission Hills Community Services District was formed, assuming ownership and responsibility for water supply and sewage disposal in Mission Hills. Facilities planning efforts by MHCS D

determined that the interceptor project was not cost-effective. MHCS is currently studying treatment and disposal/reclamation alternatives. Expansion and upgrading of the La Purisima Plant and elimination of the Rucker Road Plant is planned. Waste Discharge Requirements prohibit discharge of untreated wastewater to ground water. The District proposes to reclaim effluent by irrigation. The District has received funding for the project from Farmers Home Administration.

There are isolated areas of Vandenberg Air Force Base that are not served by the Base's collection system. Separate treatment and disposal systems exist to serve these areas. Due to the isolation of these systems, it is recommended that they be retained. However construction of evaporation/percolation ponds is needed in some cases. Efficient operation and maintenance of these systems is imperative to protect public health and water quality.

Existing facilities at the U. S. Penitentiary provide secondary treatment of wastewater. Treated wastewater is reclaimed for irrigation of forage crop land. The recommended plan for the penitentiary is to complete construction of treatment facilities to expand plant capacity to 0.6 mgd. The new facilities may be operated in parallel or series with the existing plant. All treatment ponds must be sealed to prevent percolation of wastewaters to underlying ground waters. The U. S. Department of Justice is responsible for implementation of this plan.

Upper Santa Ynez Region

It is recommended that enlarged, upgraded wastewater treatment and disposal facilities be maintained separately at Buellton Community Services District (.3 mgd), Solvang Municipal Improvement District (.8 mgd), and Cachuma County Sanitation District (.22 mgd). Secondary treatment prior to land disposal coupled with a strict source control program will be necessary to protect local ground waters in these three areas.

The recommended plan for Buellton Community Services District is to expand plant capacity to 0.65 mgd by constructing a two-stage extended aeration plant. Facilities planning by the District determined this alternative to be least costly, simplest to operate, and to involve less new construction than any other alternative considered. It is further recommended that studies be conducted to determine whether or not additional evaporation/percolation ponds will be required for effluent disposal. Buellton Community Services District will implement this plan.

Solvang Municipal Improvement District operates secondary wastewater treatment facilities with effluent disposal to evaporation-percolation ponds. Since the disposal ponds are located in a flood-prone area, it is imperative that sufficient disinfection capacity be available to disinfect effluent during wet weather. The recommended plan for SMID is to expand plant capacity to 1.2 mgd immediately for wasteflows within the District and to accommodate wasteflows from the nearby community of Santa Ynez, which has had a public health problem due to failing septic tank systems. Further expansion of capacity should then be considered for ongoing growth in areas adjacent to present District boundaries. Implementation of this plan is the responsibility

of both Solvang Municipal Improvement District and Santa Ynez Community Services District. Need for, and feasibility of providing, sewerage facilities for the Los Olivos-Ballard areas should be investigated by the County of Santa Barbara. It is recommended that treatment and disposal service for this area be contracted with Solvang Municipal Improvement District.

The recommended plan for Cachuma County Sanitation District is to continue to treat and dispose of wastewater in percolation ponds and spray fields outside the Cachuma Reservoir watershed. Since ground waters downgradient from the spray field are used for domestic water supply, sampling of the nearest down-gradient well is recommended to insure that water supply quality is not adversely affected by the discharge.

Santa Barbara Coastal Sub-Basin

Municipal wastewater treatment and disposal agencies in the Santa Barbara Coastal Sub-Basin are: Goleta Sanitary District (10.5 mgd), City of Santa Barbara (11.0 mgd), Montecito Sanitary District (1.0 mgd), Carpenteria Sanitary District (2.0 mgd), and Summerland Sanitary District (.15 mgd).

Goleta Sanitary District operates a wastewater collection system within the District and a treatment and ocean disposal system to provide service to Goleta Sanitary District, Isla Vista Sanitary District, University of California at Santa Barbara, Santa Barbara Municipal Airport, and a small part of Santa Barbara County owned property. EPA recently granted the District a waiver from secondary treatment requirements. As a condition of this waiver, EPA will require that the District reactivate its existing trickling filter and that the plant be operated at a maximum flow of 7.3 mgd. In order to meet EPA's conditions and Ocean Plan criteria, part of the effluent will receive primary treatment only and part will receive secondary treatment. Primary and secondary effluent will be blended before disposal to the Pacific Ocean. The District is also responsible for preparing and implementing a pretreatment program by July 1, 1983. Isla Vista Sanitary District, University of California at Santa Barbara, Santa Barbara Municipal Airport, and Santa Barbara County retain ownership and direct responsibility for wastewater collection and transport systems up to the point of discharge into interceptors owned and operated by Goleta Sanitary District.

The recommended plan for the City of Santa Barbara is to retain El Estero Wastewater Treatment Plant, with disposal to the Pacific Ocean, but to improve sludge treatment and disposal techniques. The City must prepare and implement a pretreatment program by July 1, 1983.

An unincorporated community in Mission Canyon above the City of Santa Barbara utilizes individual disposal systems on small lots. On-site system failures have been excessive due to poor soil conditions and steep terrain. Densely populated areas of Mission Canyon should be sewered and served by the City's El Estero plant. A county service area or special district should be formed to implement this plan.

The recommended plan for Montecito Sanitary District is to upgrade and expand the District's existing secondary treatment facilities to 1.5 mgd. Construction is to begin in mid-1982. Improvements to the plant will include addition of dechlorination facilities, standby power, and dual processes. Disposal to the Pacific Ocean will continue.

The recommended plan for Carpenteria Sanitary District is to retain existing secondary treatment facilities with disposal to the Pacific Ocean. In order to reduce effluent chlorine residual, dechlorination should be provided.

The recommended plan for Summerland Sanitary District is to expand and upgrade existing facilities to insure reliable plant operations. Recommended improvements are addition of dechlorination facilities, standby power, and dual processes.

Because the Santa Barbara sub-basin is a water-short area, wastewater reclamation and reuse programs have been investigated. Reclamation was determined to be non-cost-effective at this time for the City of Santa Barbara. The Department of Water Resources has determined that reclamation of Goleta Sanitary District wastewater by the Goleta Water District may be feasible as part of the state water project. As economics and water supplies fluctuate, feasibility studies should be reevaluated. Coordination with agricultural interests is encouraged as there are demands for irrigation water, particularly in the western part of the sub-basin. Strict salt source control programs would improve potential for wastewater reuse.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-04

Concerning Revisions and Amendment of Water
Quality Control Plan, Central Coast Basin
(Mushroom Farm Operations)

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, proposed revisions and amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to non-point source controls by the Regional Board and other authorities; and,
- WHEREAS, Regional Board staff completed a study entitled "Special Investigation-Mushroom Farms (Mushroom Farms Study); and,
- WHEREAS, the Mushroom Farms Study identifies water quality problems resulting from improper management of mushroom farm waste discharges and recommends guidelines to mitigate water quality problems; and
- WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of this mushroom farm operations policy will not have a significant adverse effect on the environment; and,
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on March 19, 1982, in the Municipal Center Board Room, 1644 Oak Street, Solvang, California and July 9, 1982, in the City Hall Council Chambers, 250 Main Street, Watsonville, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-48, following "Improved Salt Management Techniques" section add the following:

"MUSHROOM FARM OPERATIONS

Mushroom farm operations present surface or groundwater problems if not properly managed.

Typical Mushroom Farm Operation: Compost is needed as a growing base medium to produce mushrooms. Typically compost is produced onsite from straw, horse manure, cottonseed meal, or other organic matter. During composting, the organic material breaks down into a useable protein source for mushrooms. Water, added to assist the composting process, is constantly leaching through compost piles. Once compost is ready for use, it is placed in mushroom growing trays. After mushroom harvesting, steaming and fumigation sterilize the growing house and spent compost. Spent compost is then removed to "spent compost storage areas" and marketed as a soil additive or disposed of in some other manner.

Types of Wastes Discharged: Composting operations are typically carried out on concrete composting slabs. Compost is frequently sprayed with water. Excess water typically drains into a sump. Normally, excess water is recycled by pumping it back to spray the pile. In summer very little runoff or leachate is produced from composting. During the rainy season the sump collects more runoff from the compost slab than is recycled. Discharge to drainageways or containment sumps may result.

When mushroom beds are irrigated, excess water drains from concrete floors to drainageways or disposal sumps. This water contains peat moss, soluble substances from beds, salt from salt pans (used to "sanitize" the footwear of persons entering the cultivating room), and whatever is on the floor, such as pesticide residues and mushroom stems, at the time the floor is washed.

Steam is used for tray sterilization and to heat and sterilize growing houses. Prior to entering boilers, water is softened and treated with an organic or inorganic corrosion and scale inhibitors. Salt is used as a water softener regenerant. Discharge of water softener regenerant and boiler blowdown to drainageways or disposal sumps may occur.

Solid wastes consisting of pesticide bags, mushroom roots and stumps, cardboard boxes, spent compost, and general debris are generated by mushroom farms.

Some of the disinfectants, fungicides, and pesticides being sprayed on the floor, walls, and mushrooms are occasionally washed off during washdown of the facility. Generally, pesticides used in this business have a relatively short life.

Possible Water Quality Problems: Compost leachate and irrigation/washwater is high in biochemical oxygen demand (B.O.D.). BOD is generally considered high if the concentration exceeds 30 mg/l, but this can vary from situation to situation. If discharged to surface waters, these wastes may depress dissolved oxygen to a critical level, and provide a nutrient source for undesirable aquatic growth. Improper disposal may also cause impacts on ground water. Nitrates are a particular concern.

Discharges of water softener regenerant and boiler blowdown may degrade surface and ground waters if improperly disposed. These wastes are high in Total Dissolved Solids, Sodium, and Chloride concentrations. Boiler blowdown may also contain organic or inorganic corrosion and scale inhibitors which could present toxicity problems if improperly disposed.

Solid wastes can be a problem if improperly disposed.

Disinfectants, fungicides, and pesticides do not appear to present water quality problems based on inspections and limited sampling. These biocides can be a problem if handled improperly.

Surface water runoff entering mushroom farm operations can become contaminated if runoff contacts any of the sources described above.

Additional Concerns:

Wastes can create a nuisance. Public health can be jeopardized if vectors develop among solid wastes. Further, odors resulting from storage of wastes can become offensive and may obstruct the free use of neighboring property.

Recommendations:

1. Spent irrigation/washwater and compost leachate may be reused to spray compost piles.
2. Spent irrigation/washwater, compost leachate, and contaminated surface water runoff should be collected for treatment, storage, and disposal in lined ponds, unless shown by geohydrologic analysis that ground water will not be affected. If needed, aeration should be provided to stabilize organic substances and prevent odor problems. Dissolved oxygen of 1.0 mg/l or more is recommended for storage ponds.

3. Mushroom farm wastes, excluding water softener regenerant, may be used to irrigate farm crops during dry weather months. When salt is properly handled, the sodium and chloride content of these waters should be suitable for this purpose. The discharger must demonstrate to the Regional Board that irrigation water will not degrade beneficial water uses.
4. When irrigation is utilized, application rates and irrigation practices should be suitable to the crops irrigated.
5. Water softener regenerant and boiler blowdown should be disposed of separately from spent irrigation/washwater. Since its volume is small and concentration of pollutants is high, it is best to evaporate the liquid on a lined drying bed, or provide a documented test by a registered Engineer or laboratory that the soils permeability in the disposal area is 10^{-6} cm/sec or less. Two drying beds should be used for the purpose of holding salt/regenerant liquid and boiler blowdown waste. Discharges to beds are alternated to allow sufficient drying time.
6. Drying bed residue from any disposal pond should be disposed at a suitable solid waste disposal site.
7. As an alternative, water softener regenerant and boiler blowdown can be hauled in liquid form to a suitable disposal site, or discharged to the ocean through a suitable outfall.
8. Chemical alternatives for sanitizing footwear to replace salt pans should be investigated by farm operators.
9. If used, salt sanitation pans should be at least 4 inches deep and elevated to prevent contact between salt and water. Salt solution should remain in pans until disposed. Spent salt should be dumped into a sealed container and disposed at a suitable site.
10. Solid waste should be routinely collected and disposed at a suitable site.

Mushroom farm discharge prohibitions are on page 5-65."

Page 5-65, following inland waters prohibition No. 6, insert the following prohibitions:

"Mushroom farm operators shall comply with the following prohibitions by October 1, 1983:

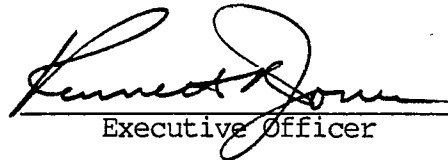

1. Discharge of inadequately treated waste, including leachate, high B.O.D., high nutrient waste, and contaminated surface water runoff to drainageways, surface waters, and ground waters is prohibited.
2. Discharge of untreated water softener regenerant and boiler blowdown waste in a manner that pollutes any non-saline surface or groundwater is prohibited.

3. Discharge and/or storage of waste including spent compost, in a manner promoting nuisance and vector development is prohibited.
4. Disposal of sludges, salt residues, pesticide residues, and solid waste in a manner not accepted by the Regional Board is prohibited.

Any mushroom farm operators unable to meet these prohibitions may be required to file a report of waste discharge."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 79-12

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coast Basin

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, proposed revisions and amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to nonpoint source controls by other authorities; and,
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,
- WHEREAS, the State Water Resources Control Board has prepared negative declarations in accordance with the California Environmental Quality Act (Public Resources Code, Section 21108) and State Guidelines, and determined there will be no substantial adverse change in the environment as a result of the project; and,
- WHEREAS, a hearing was held by this Board on November 9, 1979, to receive testimony concerning the proposed revisions and amendment to said Plan;
- NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-37, 2nd column, beginning with the eighth line:

"Construction debris should not be left in the flood plain; revegetation of cuts and fills should be encouraged. California Department of Transportation (CALTRANS) has prepared a document entitled 'Best Management Practices for Control of Water Pollution (Transportation activities)', that sets forth procedures used by CALTRANS to address transportation activities which might impact water quality.

These procedures are summarized under 'Control Actions' in the latter part of this chapter. Past and potential impacts from CALTRANS activities may result from the above problems and may include impacts resulting from questionable maintenance practices, chemical spills, and discharges of silt and cement. Land development projects in sensitive areas."

Page 5-44, top of second column, insert the following, prior to "Recommended Actions by Other Authorities":

"CALIFORNIA DEPARTMENT OF TRANSPORTATION

"Water Quality Studies

"In developing control measures for CALTRANS projects, three basic types of studies are conducted for water quality protection:

"1. Transportation System Planning - Emphasizes broad scale water quality problems. The focus is on regional factors such as variations in regional surface and groundwater hydrology, existing water quality, and land use. Such studies are not site-specific.

"2. Project Level Planning - Emphasis is on runoff associated problems (erosion and sedimentation). Detailed hydrologic and hydraulic analyses are made where warranted. Information is used in selecting project alternatives.

"3. Construction - This type is usually associated with waste discharge requirements (issued by Regional Board). The intent is to monitor and control the contractor's operations.

"Construction Control

"Standard specifications for water pollution control have been prepared by CALTRANS, are set forth in the CALTRANS' BMP document, and are incorporated as part of project design. Where warranted, special specifications are prepared by CALTRANS on a project-by-project basis. For every project, contractors must submit a plan for water pollution control to the CALTRANS resident engineer. During the course of any construction project, operations may be temporarily halted if inadequate provision has been made for water quality protection. Remedial work may be required.

"In addition to CALTRANS specifications, Federal and State permits (including waste discharge requirements) are made a part of project requirements.

"Operation and Maintenance

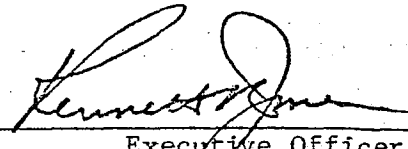

- "1. Accidental Chemical Spills - A procedural manual has been developed by each CALTRANS district to standardize cleanup procedures. CALTRANS maintenance personnel are equipped and trained to handle such situations.
- "2. Erosion Control - Where slopes show evidence of erosion, remedial stabilization measures must be taken. Debris is disposed of at approved disposal sites."

Page 5-44, revise next to last paragraph prior to "Recommended Actions by Other Authorities" as follows:

"Practices and procedures in the Forest Service's ~~and~~, BLM's, and CALTRANS' 208 reports constitute proper management for water quality protection and are considered BMP's. Further, these agencies have expressed a willingness and capability to implement practices and to revise practices which are currently inadequate. Management agency agreements have been prepared between the State Board and each of these agencies which designates BLM, ~~and~~ the Forest Service, and CALTRANS as management agencies responsible for implementing BMP's for water quality protection on lands under the control of each of these respective agencies. The management agency agreements (etc.) . . ."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on November 9, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 79-09

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coast Basin

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,

WHEREAS, the Regional Board has determined that discharge of sediment from land disturbance activities within the Central Coast Region is, in some instances, altering the quality of the waters of the state to a degree which unreasonably affects such waters for beneficial uses or facilities which serve such uses, and is, in some instances, creating a nuisance; and,

WHEREAS, the Regional Board and other water quality planning agencies within the Region have undertaken studies pursuant to Section 208 of the Clean Water Act of 1977 to assess the erosion and sediment problems, determine needs, establish priorities, schedule corrective actions, describe regulatory programs, and identify implementing agencies as necessary to ensure reasonable protection; and,

WHEREAS, the Basin Plan presently contains various recommendations and prohibitions for control of sediment; and,

WHEREAS, the California Association of Resource Conservation Districts, under the Section 208 Program and under contract with the Regional Board and State Water Resources Control Board, completed a study entitled "Erosion and Sediment in California Central Coastal Watersheds", (Erosion Study); and,

WHEREAS, the Erosion Study identifies some water quality problems due to sediments, identifies contributory sources of erosion, finds existing control programs inadequate, and recommends certain remedial measures, including recommendations that the Regional Board:

1. adopt a clear policy on control of non-point sources of pollutants, particularly erosion,
2. take an active role in organizing and coordinating the efforts of agencies with the organization and expertise, or institutional influence, to effect control of non-point sources of pollution, including integration of land and water programs,

3. develop methods and criteria for problem assessment, and

4. undertake a public information program; and,

WHEREAS, to implement these recommendations, the Regional Board must revise and amend the Basin Plan, specifically, Chapter 5, Implementation Plan, relating to non-point source controls by the Regional Board and other authorities; and,

WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment and due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on September 14, 1979, in the City Hall Rotunda, 200 Lincoln Avenue, Salinas, California; on October 12, 1979, in the Board of Supervisors' Hearing Room, 105 East Anapamu Street, Santa Barbara, California; and on November 9, 1979, in the City Council Chambers, 990 Palm Street, San Luis Obispo, California, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan; and,

WHEREAS, the Regional Board has determined there is a need for an erosion and sediment control policy as embodied in this resolution; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalence), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this erosion and sediment control policy will not have a significant adverse affect on the environment.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-29, last paragraph under Non-point Source Measures, revise to read:

(NOTE: This portion of the Basin Plan discusses the causes of various types of non-point source pollution problems and makes general recommendations on how such problems may be prevented. This merely updates the introduction.)

"Effluent limits and facility requirements are not readily applicable to most non-point wastewater sources. ~~Most controls are accomplished through upgraded practices or by prohibition of polluting activities.~~ Controls emphasize use of upgraded on-site practices; improved regulatory controls such as performance standards, policies, and inspection programs; and first-line implementation by local agencies. Topical discus-

sions of significant non-point source measures applicable to the Central Coastal Basin are provided for urban runoff management, agricultural wastewater management, individual waste disposal practices and construction and logging land disturbance activities."

Page 5-37, first column, under "Land Disturbance Activities", (as amended 6/8/79); amend to read:

(NOTE: This portion of the Basin Plan discusses various non-point source discharges by type, e.g., individual sewage disposal systems and urban runoff management; and makes various recommendations for regulation and/or siting constraints that would mitigate problem occurrence, e.g., recommended maximum 30% slope and one acre minimum parcel size for individual systems.)

"Construction, mining, and associated other soil disturbance activities which may disturb or expose soil or otherwise increase susceptibility of land areas to erosion are difficult to regulate effectively. Construction or logging may often begin and end with no obvious impairment of stream quality; however, erosion or land slides the following winter may be directly related to earlier land disturbance or tree cutting. Mining and quarrying activities are generally longer in duration. Land sensitivity to erosion can be assessed before land disturbances are permitted, environmental constraints could be identified for use in screening construction or logging permits and could be a basis for adding special conditions to waste discharge requirements where applicable.

Under contract with the Regional Board, the California Association of Resource Conservation Districts completed a study entitled, 'Erosion and Sediment in California Central Coast Watersheds - A Study of Best Management Practices' (Erosion Study), dated June, 1979. This Erosion Study, funded under Section 208 of the Clean Water Act, assesses impacts of erosion and sedimentation on water quality and beneficial uses in nondesignated planning areas (San Benito, San Luis Obispo, and Santa Barbara Counties) of the Central Coast Region. This Erosion Study and supporting documents have been used by the Regional Board in developing erosion and sedimentation control policy.

Non-point source pollution in the remainder of the Region is addressed by designated planning agencies through their respective Areawide Waste Treatment Management Plans. Designated agencies and the areas affected within this Region include: Association of Bay Area Governments (portions of San Mateo and Santa Clara Counties), Association of Monterey Bay Area Governments (Santa Cruz and Monterey Counties), and Ventura County Board of Supervisors (portion of Ventura County). The policy herein described is compatible with those plans and within the scope of Regional Board authority.

The Erosion Study and Areawide Waste Treatment Management Plans identify examples of accelerated erosion resulting from insufficient land management of soil cultivation, grazing, silvaculture, construction, and off-road vehicle activities, as well as wild-fires.

Adverse impacts of sediment are identified, in part, as: impairment of water supplies and groundwater recharge, siltation of streams and reservoirs, impairment of navigable waters, loss of fish and wildlife habitat, degradation of recreational waters, transport of pathogens and toxic substances, increased flooding, increased soil loss, and increased costs associated with maintenance and operation of water storage and transport facilities. Recommendations based on conclusions of the Erosion Study and practices recommended in Areawide Waste Treatment Management Plans are a means to reduce unnecessary soil loss due to erosion and to minimize adverse water quality impacts resulting from sediment. When a practice or combination of practices is found to be the most effective, practical (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by non-point sources to a level compatible with water quality goals, it is designated a Best Management Practice (BMP).

General recommendations based on conclusions of the Erosion Study are:

1. Soil conservation control measures should be used to minimize impacts that would otherwise result from soil erosion. Control measures are identified according to systems, which are then broken down into subsystems of erosion control techniques or component measures. For example, a system for control of erosion from construction sites would identify component measures such as debris basins, access roads, hillside ditches, etc. Other conservation control systems include: conservation cropping, conservation irrigation, roadside erosion control, critical area treatment, diversions and ditches, grade stabilization, pasture and range management, runoff and sediment control ponds and basins, streambank and channel protection, and watershed, wildlife, and recreation land improvement. These control measures are comparable to the USDA Soil Conservation Services' Resource Management Sub-system approach as referenced in AMBAG's 'Water Quality Management Plan for the Monterey Bay Region', dated July 1978, and in ABAG's 'Handbook of Best Management Practices', dated October 1977.

Experience has shown that no one control measure best solves an existing, or prevents a potential, pollution problem - - - especially in the area of soil erosion and sedimentation. As land use, the land user, and various situations change, so does the need for control measures. Before application, an on-site investigation with the land user is necessary to determine which practice or set of practices will be most effective and acceptable.

2. Erosion control should be implemented in a reasonable manner with as much implementation responsibility remaining with existing local entities and programs as is possible and consistent with water quality goals.
3. The Regional Board and local units of government should establish a clear policy for control of erosion, including consideration of off-site and cumulative impacts and the imposition of performance standards according to the sensitivity of the area where land is to be disturbed.
4. Effective ordinances and regulatory programs should be adopted by local units of government. Effective programs would allow only land disturbance activities consistent with the waste load capacity of the watershed, require preparation of erosion and sediment control plans with specific contents and with attention to both off-site/onsite impacts, identify performance standards, be at least comparable to the model ordinance in the 'Erosion and Sediment Control Handbook', dated May 1978, and have provisions for inspection follow-up, enforcement, and referral.
5. Watersheds with critical erosion and sediment problems should be identified by one or more concerned agencies such as the California Department of Fish and Game, the Regional Board, the local Environmental Health, Planning, or Engineering Departments, the local Flood Control District, or the local Resource Conservation District, and then referred to the remaining agencies by a designated local coordinating agency for determining the scope, nature, and significance of the identified problem. The designated local agency would evaluate the adequacy and appropriateness of the total assessment, including an assessment of the problem and causes, alternatives considered, recommended interim and permanent control measures, and the amount and sources of funding,. The evaluation would then be submitted as an Impact Findings Report for consideration and decision by the local governing body.
6. Comprehensive and continuous training should be mandatory for building and grading inspectors, engineers, and planners involved in approving, designing, or inspecting erosion control plans and on-site control measures. The training program would preferably be conducted on an inter-county/agency basis and be administered through a USDA Soil Conservation Service cooperative training arrangement or through seminars conducted by the USDA Soil Conservation Service and University of California Cooperative Extension seminars. The Soil Conservation Society of America should be requested to assist in establishing an effective training program, including public education to heighten awareness of the adverse affects of erosion and sediment on soil and water resources.

7. More intensive erosion controls should be considered within four watersheds (Lauro Reservoir and Devereaux Ranch Slough in Santa Barbara County and Pismo Lake and Morro Bay in San Luis Obispo County) with apparent critical erosion and sediment problems. Alternative practices that may be implemented to effect the necessary level of control are assigned a relative priority."

5-40, under Regional Water Quality Control Board, Goals, add:

"6. Reduce and prevent accelerated (man-caused) erosion to the level necessary to restore and protect beneficial uses of receiving waters now significantly impaired or threatened with impairment by sediment."

Page 5-41-1, under "Management Principles", add the following:

(NOTE: Management principles provide guidelines for the regulation of waste treatment and disposal. For example, other principles refer to zero discharge of pollutants by 1985 and to pretreatment.)

- ✓ "15. Property owners are considered ultimately responsible for all activities and practices that could result in adverse affects on water quality from waste discharges and surface runoff.
16. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary. impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the state.
17. General recommendations for erosion control, numbered one through six under 'Land Disturbance Activities', are considered by the Regional Board to be Best Management Practices (BMP's), as are those BMP's identified in approved areawide Water Quality Management Plans.
18. In implementing BMP's through local units of government, or through state and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the areawide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually to reflect recent achievements, new information and new concerns.
19. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.

20. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger are exempt from this chapter providing such exemption is in the public interest.
21. Regulation of sediment discharges from routine annual agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
22. Regulation of discharges from state and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance."

Page 5-42-1, following individual sewage disposal system prohibitions, insert the following paragraph:

(NOTE: Basin Plan Prohibitions provide the Regional Board's "bottom line" performance standard. They are not subject to staff discretion unless explicitly stated otherwise. Prohibitions are directly enforceable through cease and desist orders. In this instance, all five prohibitions can be satisfied by planning for necessary erosion control with the appropriate agency before initiating a sediment-generating activity. Regional Board enforcement would be by exception and would likely occur only where water quality was threatened and a cooperative remedy was not forthcoming.)

"Significant soil disturbance activities not exempted pursuant to Regional Board 'Management Principles' are prohibited:

1. In geologically unstable areas,
2. On slopes in excess of thirty percent (excluding agricultural activities), and
3. On soils rated a severe erosion hazard by soil specialists (as recognized by the Executive Officer) where water quality may be adversely impacted;

unless,

1. In the case of agriculture, operations comply with a Farm Conservation or Farm Management Plan approved by a Resource Conservation District or the USDA Soil Conservation Service;
2. In the case of construction and land development, an erosion and sediment control plan or its equivalent (e.g., EIR, local ordinance) prescribes best management practices to minimize erosion during the activity, and the plan is certified

or approved, and will be enforced by a local unit of government through persons trained in erosion control techniques; or,

3. There is no threat to downstream beneficial uses of water, as certified by the Executive Officer of the Regional Board."

Page 5-44, first column, revise the title and add the following after "~~Recommended~~ Control Actions", item No. 27.":

(NOTE: This section sets forth performance criteria or the regulatory posture of the Regional Board regarding recommendations made earlier in the chapter. For example, this is where the plan specifies that new animal confinement facilities shall be protected from 100-year peak stream flows.

These control actions do not have the strength of prohibitions in that they are not directly enforceable. However, they may be enforced if there is a threat to water quality and they would be placed in waste discharge requirements if requirements were adopted.)

- "28. Erosion from non-point pollution sources shall be minimized through implementation of BMP's (identified under 'Management Principles', page 5-41-1, and described under 'Land Disturbance Activities', page 5-47).
29. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be installed prior to November 15 each year.
30. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
31. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.
32. Design and maintenance of erosion and sediment control structures, e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.
33. Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion.
34. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded

slope length shall not be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

35. Use of soil sterilants is discouraged and should be minimized."

Page 5-44, top of second column, under "Other Agencies' Programs" (added June 8, 1979), revise first paragraph as indicated below:

(NOTE: This section was added to describe the role of other key agencies as they pertain to water quality.)

"To insure that impacts on water quality from non-point sources of pollution are held to a minimum and that goals and management principles of the Regional Board are met, water quality management programs for implementation by land managing agencies have been developed through the areawide planning process. For non-point sources of pollution, this requires identification of Best Management Practices (BMP's). *BMP's are defined as a practice or a combination of practices that is found to be the most effective practicable (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by nonpoint sources to a level compatible with water quality goals. BMP's are determined only after problem assessment, examination of alternative practices, and appropriate public participation in the BMP development process*".

and at the end of section, add:

"Resource Conservation Districts (RCD's) and the U. S. D. A. Soil Conservation Service are organizations that assist property owners in applying effective conservation and land management practices. The program includes technical, educational, and planning services to property owners and local governments who request assistance. It has been relatively successful considering its voluntary nature and resource limitations. The Soil Conservation Service has a major role in the Rural Clean Water Program.

The U. S. D. A. Agricultural Stabilization and Conservation Service administers the cost-sharing aspects of the Agricultural Conservation Program, allocating available monies to farmers and ranchers for erosion and sedimentation control and water conservation projects.

Cities and Counties, as general purpose governments, have broad powers to adopt specific and general plans; to regulate land use, subdividing, grading, and private construction; and to construct and operate public works facilities. Local authority to regulate existing and potential discharges of sediment has been exercised to varying degrees throughout the region.

Many Cities and Counties within the coastal zone are developing Local Coastal Programs. Programs may include land use and grading

restrictions designed to reduce erosion and sediment problems to a level necessary to protect long-term productivity of soils and waters within the coastal zone. Regulation by the California Coastal Commission and Regional Coastal Commissions provide this protection now. Local Coastal Programs should be certified by the California Coastal Commission by June 30, 1981.

The State Department of Fish and Game promotes the protection and improvement of streams, lakes, and natural habitat areas for fish and wildlife; regulates stream alteration; and compels cleanup of fouled streams."

Page 5-45, under "~~Recommended~~ Actions by Other Authorities", add:

(NOTE: This section has previously been limited to conceptual recommendations for other governmental entities that would benefit the water quality program. Because of their general nature, they are not enforceable. The following amendments relating to submittal of reports are more specific and are enforceable in that they comply with provisions of the California Water Code where the Regional Board may request reports.)

- "11. The federal government should increase its support of erosion and sediment control programs by increasing its technical staffs, increasing cost-share funds, increasing the availability of low-interest loans, and changing its income tax laws to encourage the use of best management practices for erosion and sediment control.
12. The State of California should establish an erosion and sediment control program that includes incentives for the individual - such as cost-sharing, changes in state law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
13. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of best management practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
14. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices identified under Regional Board 'Management Principles'.
15. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with best management practices by January 31, 1981, for their land areas within the Coastal Zone.

16. Resource Conservation Districts, the U. S. D. A. Soil Conservation Service, the California Department of Transportation, and the Extension Service, in conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who review erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.
17. Counties and cities should work with the Regional Board to mutually identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation by January 31, 1981.
18. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Regional Board will be processed entirely by that county or city."

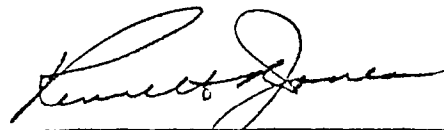

Renumber paragraphs 9. and 10. to 19. and 20., respectively (regarding offshore oil and salt control).

BE IT FURTHER RESOLVED THAT Counties and Cities within the nondesignated area shall submit a report to the Regional Board by July 1, 1980, comparing existing programs with BMP's, identifying costs and limitations and proposing a time schedule for meeting the terms of the Basin Plan.

BE IT FURTHER RESOLVED THAT governments having jurisdiction within Lauro Reservoir, Deveraux Ranch Slough, and Pismo Lake Watersheds evaluate the recommendations and procedures described in Chapter VI of the Erosion Study and report back to this Board by July 1, 1980, on whether these recommendations are, in whole or in part, Best Management Practices.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on November 9, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1122-A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 79-08

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COAST BASIN

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coast Basin (Basin Plan) on March 14, 1975; and,

WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste is prohibited; and,

WHEREAS, one such area is the Community of Moss Landing and surrounding area, which is governed by the Moss Landing County Sanitation District, and located in the County of Monterey about 12 miles northwest of the City of Salinas, as identified herein and on the attached vicinity map; and,

WHEREAS, surface drainage and subsurface drainage is tributary to Elkhorn Slough (an estuarine sanctuary) and Moss Landing Harbor, both navigable waterways of the United States with identified beneficial uses of industrial service supply, wildlife habitat, non-contact water recreation, and water contact recreation; and,

WHEREAS, in about 1968, the Monterey County Department of Environmental Health identified water pollution and a public health hazard in the Moss Landing area and imposed a building ban and posted the harbor and Elkhorn Slough as unsafe for harvesting shellfish and water contact recreation; and,

WHEREAS, the aforementioned condition and measures caused a 1976 survey by the Monterey County Department of Environmental Health, which documented a septic tank system failure rate that averaged 50 percent between 1970 and 1975; and,

WHEREAS, septic tank failures are defined as sewage overflows, system repairs, system replacement, and pumping more than once every three years; and,

WHEREAS, the Monterey County Department of Environmental Health attributes failure to small lots, shallow groundwater tables, land gradients, and/or poor soil percolation; and,

WHEREAS, continued installation and usage of individual leaching and percolation systems in the affected area will increase the threat to public health and will further unreasonably impair water quality; and,

WHEREAS, on July 9, 1976, and December 10, 1976, after due public notice and in accordance with Section 13244 of the California Water Code, the Regional Board conducted public hearings and considered all evidence concerning discharges from individual disposal systems within

and near the community of Moss Landing, and adopted Basin Plan amendments prohibiting discharges from new individual disposal systems forthwith, and prohibiting discharges from existing individual disposal systems effective July 1, 1979; and,

WHEREAS, Moss Landing County Sanitation District is receiving Clean Water Grant funding and following Clean Water Grant regulations to identify and complete the project necessary to comply with the prohibition; and,

WHEREAS, unforeseen and unavoidable delays in the project have caused violation of the July 1, 1979, deadline and Monterey County Department of Public Works, on behalf of Moss Landing County Sanitation District, has requested an extension of the prohibition date in a letter dated April 24, 1979; and,

WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code became effective in 1977 and defines criteria for such prohibition areas, including promulgation of standard language by the State Water Resources Control Board and the Regional Board finds that discharge of waste from new and existing individual sewage disposal systems will result in violation of water quality objectives, will impair beneficial uses of water, will cause pollution, nuisance, or contamination, or will unreasonably degrade the quality of waters of the state; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (CEQA functional equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds this action will not have a significant adverse affect on the environment; and,

WHEREAS, on September 14, 1979, in the City Council Rotunda, 200 Lincoln Street, Salinas, California, after due public notice, the Board received evidence and considered all factors concerning the above amendments.

NOW, THEREFORE, BE IT RESOLVED THAT *Chapter 5, Discharge Prohibitions section, be amended by adding the following:*

the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Revise text on pages 5-42 and 5-42-1, "Discharge Prohibitions" to read (cross-outs are deletions and underlined portions are additions, except as otherwise noted)

"2. *3/* Discharges from additional individual disposal systems are prohibited after July 9, 1976, and discharges from existing individual disposal systems are prohibited effective *July 1, 1979, in the area described as follows:* November 1, 1981, in the Moss Landing County Sanitation District."

(NOTE: See Attachment B for reference and delete prohibition area description of Parcel A and Parcel B contained in paragraph 3. on pages 5-42 and 5-42-1)

"Exception to the above prohibitions may be granted whenever the board finds that the continued operation of individual disposal systems in a particular area will not, individually or collectively, directly or indirectly, adversely affect water quality."

"The Board may grant an exemption to the prohibition for; (1) new individual disposal systems after presentation of geologic and hydrologic evidence by the proposed discharger that such system(s) will not individually or collectively result in a pollution or nuisance, and (2) existing individual disposal systems if it finds that the continued operation of such system(s) in a particular area will not, individually or collectively, directly or indirectly, affect water quality adversely."; and,

BE IT FURTHER RESOLVED, compliance with the above prohibition shall be achieved according to the following time schedule:

<u>TASK</u>	<u>COMPLIANCE DATE</u>
1. Begin Construction	6-1-78 <u>11-1-80</u>
2. Complete Construction	7-1-79 <u>and, 11-1-81; and,</u>

BE IT FURTHER RESOLVED the ~~Community~~ of Moss Landing County Sanitation District, its agents or assigns, shall submit written proof to the Regional Board within 15 days after each specified date; and,

BE IT FURTHER RESOLVED, the Moss Landing County Sanitation District shall take all possible and necessary action to correct, minimize, and prevent any individual disposal system failure which occurs within its boundary of control until such time individual disposal systems are eliminated; and,

BE IT FURTHER RESOLVED, the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code; and,

BE IT FURTHER RESOLVED, upon approval of the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the revised prohibition contained herein.

I, KENNETH R. JONES, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 14, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1122-A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 79-07

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COAST BASIN

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted a Water Quality Control Plan, Central Coast Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, in April 1975, the Monterey County Department of Environmental Health surveyed 232 individual sewage disposal systems in the Community of Las Lomas-Hall and found 141, or 60 percent, unsatisfactory; and,
- WHEREAS, unsatisfactory systems exhibit sewage overflow to the ground surface, seepage from the absorption field to natural drainage courses, inadequate capacity, and irreparable damage; and,
- WHEREAS, this area of concern is bounded by Monterey County Service Area No. 66 (CSA #66), as established by local election on March 2, 1976; and,
- WHEREAS, CSA #66 is located in northern Monterey County about three miles southeast of the City of Watsonville, Santa Cruz County, in Sections 22 and 27 of T12S, R2E, MDB&M, as shown on the attached maps; and,
- WHEREAS, surface drainage and subsurface drainage is tributary to Elkhorn Slough, a navigable waterway and estuarine sanctuary with beneficial uses of industrial service supply, wildlife habitat, water contact recreation, and non-water contact recreation; and,
- WHEREAS, continued use of existing individual disposal systems in the affected area unreasonably threatens public health and beneficial uses; and,
- WHEREAS, on February 6, 1976, and May 13, 1976, after due public notice and in accordance with Section 13244 of the California Water Code, the Regional Board conducted public hearings and considered all evidence concerning discharges from individual disposal systems within and near boundaries of CSA #66, and adopted Basin Plan amendments prohibiting discharges from additional individual waste discharges after February 6, 1976, and discharges from all individual disposal systems in CSA #66 after July 1, 1979, as shown on Attachment "B"; and,
- WHEREAS, CSA #66 is receiving State Clean Water Grant funding and following Clean Water Grant regulations to identify and complete the project necessary to comply with the prohibition; and,

WHEREAS, unforeseen and unavoidable delays in the project have caused violation of the July 1, 1979, deadline and Monterey County Department of Public Works, on behalf of CSA #66, has requested an extension of the prohibition date in a letter dated May 14, 1979, and a reduction of prohibition boundaries so they coincide with those of CSA #66; and,

WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code became effective in 1977 and defines criteria for such prohibition areas, including promulgation of standard language by the State Water Resources Control Board and the Regional Board finds that discharge of waste from new and existing individual sewage disposal systems will result in violation of water quality objectives, will impair beneficial uses of water, will cause pollution, nuisance, or contamination, or will unreasonably degrade the quality of waters of the state; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (CEQA functional equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds this action will not have a significant adverse affect on the environment; and,

WHEREAS, on September 14, 1979, in the City Council Rotunda, 200 Lincoln Street, Salinas, California, after due public notice, the Regional Board received evidence and considered all factors concerning the above amendments.

NOW, THEREFORE, BE IT RESOLVED THAT the Water Quality Control Plan, Central Coast Basin, be revised and amended as follows:

Revise text on Page 5-42, "Discharge Prohibitions" to read (cross-outs are deletions and underlined portions are additions, except as otherwise noted)

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health, and prevent nuisance:

- 1/ ~~The use of individual disposal systems is prohibited in Monterey County Service Area No. 66, Las Lomas-Hall, after July 1, 1979.~~
- 2/ ~~Additional waste discharges are prohibited after February 6, 1976, in that portion of Monterey County commonly known as Las Lomas-Hall, note particularly described as: 1/1~~

(Note: See Attachment "B" for reference, and delete Additional Individual Disposal System Prohibition Area description contained in Paragraph 2, page 5-42)

- "1. Discharges from additional individual disposal systems are prohibited after February 6, 1976, and discharges from existing individual disposal systems are prohibited effective April 1, 1981, in Monterey County Service Area No. 66, Las Lomas-Hall area."

(Note: shown on Attachment "C".)

"Exception to the above prohibitions may be granted whenever the Board finds that the continued operation of individual disposal systems in a particular area will not, individually or collectively, directly or indirectly, adversely affect water quality!"

"The Board may grant an exemption to the prohibition for (1) new individual disposal systems after presentation of geologic and hydrologic evidence by the proposed discharger that such system(s) will not individually or collectively result in a pollution or nuisance, and (2) existing individual disposal systems if it finds that the continued operation of such system(s) in a particular area will not, individually or collectively, directly or indirectly, affect water quality adversely."; and,

BE IT FURTHER RESOLVED, compliance with the above prohibition shall be achieved according to the following time schedule:

		<u>Compliance Date</u>
	<i>1/ Complete Project Report</i>	<i>4-1-77</i>
<u>1.</u>	<i>2/ Complete Plans & Specifications</i>	<i>10-1-77 9-1-79</i>
<u>2.</u>	<i>3/ Begin Construction</i>	<i>4-1-78 3-15-80</i>
<u>3.</u>	<i>4/ Complete Compliance with Prohibition</i>	<i>7-1-78; and 4-1-81; and,</i>

BE IT FURTHER RESOLVED, Monterey County Service Area No. 66, its agents or assigns, shall submit written proof of compliance to the Regional Board within 15 days after each specified date; and,

BE IT FURTHER RESOLVED, Monterey County Service Area No. 66 shall take all possible and necessary action to correct, minimize, and prevent any individual disposal system failure which occurs within its boundary of control, until such time individual disposal systems are eliminated; and,

BE IT FURTHER RESOLVED, the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code; and,

BE IT FURTHER RESOLVED, upon approval of the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the revised prohibition contained herein.

I, Kenneth R. Jones, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 14, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 79-06

Resolution Regarding Marina County Water District's
Petition to Delete the Southern Monterey Bay Discharge
Prohibition Zone from the Basin Plan

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 25, 1975, pursuant to Section 13240, et. seq. of the California Water Code and,

WHEREAS, The Basin Plan was reviewed and approved by the California State Water Resources Control Board and the United States Environmental Protection Agency; and,

WHEREAS, The Basin Plan prohibits waste discharges to the southern extreme of Monterey Bay, inshore from an imaginary line extending from Point Pinos (36°-38.3' N., 121°-56.0' W.) to the mouth of the Salinas River (36°-44.9' N., 121°-48.3' W.), effective July 1, 1983, and

WHEREAS, the Marina County Water District discharges treated wastewater to the southern Monterey Bay prohibition zone, and

WHEREAS, in April, 1979, Marina County Water District challenged the southern Monterey Bay prohibition zone, as contained in the Basin Plan, and waste discharge requirements and enforcement orders based on this prohibition, and

WHEREAS, during a public hearing on June 18, 1979, the Regional Board received testimony and reconsidered factors which prompted prohibition zone establishment, including:

1. Weak ocean currents and sluggish circulation
2. High ammonia concentrations and nutrient build-up
3. Adverse affects on designated Areas of Biological Significance
4. History of beach contamination
5. Importance of water-contact recreation and marine habitat
6. Projected wastewater flow increases
7. Political, social, and economic concerns, and

NOW, THEREFORE, be it resolved, that the Regional Board finds the following:

1. The establishment of the southern Monterey Bay prohibition zone in the Basin Plan was appropriate, based on information available at that time.
2. Data available since Basin Plan adoption supports the southern Monterey Bay discharge prohibition.

3. Amendment of the Basin Plan with respect to the southern Monterey Bay discharge prohibition zone is unwarranted.

I, Kenneth R. Jones, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 18, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 79-05

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coast Basin

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and

WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and

WHEREAS, proposed revisions and amendments apply to Chapter 5, Implementation Plan, of said Basin Plan, and specifically to ocean discharge criteria, and nonpoint source controls by other authorities; and

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and

WHEREAS, the State Water Resources Control Board has prepared negative declarations in accordance with the California Environmental Quality Act (Public Resources Code, Section 21108) and State Guidelines, and determined there will be no substantial adverse change in the environment as a result of the project; and,

WHEREAS, a hearing was held by this Board on June 8, 1979, to receive testimony concerning the proposed revisions and amendment to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 5-4, revise to read:

"Ocean Disposal

"Process selection for ocean discharge is less clear than either the stream or estuary disposal cases. The present Federal guidelines for secondary treatment (level II) apply to ocean discharges; the State Ocean Plan establishes ~~different~~ effluent limits achievable by alternative processes, such as ~~physical chemical~~ primary treatment (level I). Effluent quality requirements in the State Ocean Plan stress control of coliform organisms, toxicants, solids and floatables. ~~solids and floatables~~ There is opposition to the direct order for secondary treatment in the

case of discharge through long deep outfalls to marine waters. Relevant treatment may well be other than secondary and more cost-effective alternatives may be apparent. A recent report to the President by the National Water Commission voices such concern. Such concern may lead to a change in the Federal Water Pollution Control Act. The 1977 amendments to the Federal Water Pollution Control Act allows for modification of secondary treatment standards on a case-by-case basis. The details of such modification have not yet been established by the Federal Government."

"Accordingly, where treatment plant upgrading is underway, secondary treatment is accepted; where treatment plant upgrading is not yet underway achievement of the secondary treatment (level II) requirement now mandated by federal guidelines should be achieved by means of staging levels of treatment. Primary treatment (level I) should be achieved as an interim measure; secondary treatment (level II) should be later achieved as this issue is clarified and more grant funds become available. Funding of treatment projects under federal-state grant projects can be expected to proceed with reference to State priorities wherein limited funds will be applied to the most needed projects. Upgrading of water quality control facilities discharging to the ocean should be directed clearly to established needs on a case-by-case basis. Higher priority is suggested for such improvements as ocean necessary to eliminate documented water quality and/or public health problems, including ocean outfall extensions; enhanced removal of coliform organisms, toxicants, solids, or floatables; odor and nuisance control; outfall extensions, odor control, enhanced removal of toxicity of floatables, and increase in plant capacity as appropriate. Those projects which provide for improvement in water quality and provide for wastewater reclamation in areas with documented water shortages shall also receive a high priority. Lower priority should be given for cases of plant upgrading from primary to secondary treatment for deep ocean discharge unless alternatives explored clearly indicate this is cost-effective or existing treatment for ocean disposal is believed to be satisfactory. It is probable that funds will be too limited for realization of the 1977 goal for secondary treatment known to be marginal. Funds have been too limited for realization of the 1977 goal for secondary treatment requirements. As a result, the 1977 amendments to the Federal Water Pollution Control Act allow for time extension on a case-by-case basis up to, but in no event later than, July 1, 1973."

Page 5-6, first column, before MUNICIPAL WASTEWATER MANAGEMENT insert:

"Population Projections

"Federal regulations require that water quality management plans identify population projections for purposes of determining municipal waste treatment facilities needs. For such purposes this plan endorses the projections based upon current state administrative regulations pertaining to use of population projections for construction of municipal treatment works."

Page 5-37, first column, amend section title to read:

"LAND DISTURBANCE CONSTRUCTION, MINING AND LOGGING ACTIVITIES"

Page 5-38, first column, add the following section before the "Control Actions" subtitle:

"Agency Activities

"The United States Forest Service has prepared a report entitled, 'Water Quality Management Plan for the National Forest Systems Lands Within the Nondesignated Planning Areas of California', dated April, 1979. The report assesses water quality problems, evaluates current practices, and sets forth procedures used by the Forest Service to address activities that might affect water quality. About 72 percent of Los Padres National Forest (which encompasses 1,964,408 gross acres) is within the Central Coast Region. Water and watershed protection were the chief reasons the forest was established. Approximately 1.5 million acre feet of water per year are used by people living adjacent to the forest for domestic and agricultural purposes. Less than five percent of the area is commercial forest land and most wood production is fuel wood sales."

"A qualitative assessment of water quality problems on National Forest lands within the Central Coast Region was conducted primarily from information gathered by Forest Service and Regional Board staff. Fire management and recreation are activities with the greatest influence on water quality. Other major activities with potential impact on water quality include road construction, road maintenance, and grazing. Fire management can cause degradation from sediments, nutrients, and bacteria, but the major cause might well be off-road vehicles and misuse of unimproved roads by all vehicles. Road construction has been a source of problems along the Cuyama River. No significant effects from overgrazing or silvicultural practices were noted."

"The United States Department of the Interior, Bureau of Land Management (BLM), has management responsibility for approximately 320,000 acres within the Central Coast Region. Management activities occurring on this land have potential for significantly affecting water quality (e.g., mining, grazing, recreation, road construction, off-road vehicles, etc.). The BLM prepared and submitted to the State a report entitled, 'BLM California 208 Report'. The report includes (a) a discussion of existing or potential water quality problems on BLM lands, (b) a discussion of current BLM practices and policies including a description of the BLM planning process, (c) a description of the 'decision-making process' which leads to the actual selection of management solutions on a project-specific basis, and (d) general policies."

"The problem assessment identifies nonpoint sources of water pollution originating on lands administered by the BLM. Problems were qualitatively assessed by BLM with information provided primarily by Regional Board staff. Most of the identified water quality problems on BLM lands within the Central Coast Region result from recreation. There is improper grazing management on the Temblor range in eastern San Luis Obispo County (BLM's Bakersfield District) that is causing sedimentation of retention structures for beneficial uses. In BLM's Folsom District, off-road vehicles, recreation roads, and natural erosion in the Clear Creek drainage are causing asbestos-laden sediment to impact downstream beneficial uses. In the same area, abandoned and active mines are causing similar impacts."

Page 5-38, first column, revise the first paragraph under "Control Actions" to read as follows:

"In order to ensure that the beneficial uses of water resources are preserved, the State Water Resources Control Board, ~~and~~ the Central Coast Regional Water Quality Control Board, and other agencies have adopted a number of policies and plans to serve as a foundation for water quality management and/or guidelines for facilities development . . ."

Page 5-39, revise to read:

"Ocean Plan

"The 'Water Quality Control Plan - Ocean Waters of California', adopted by ~~the State Water Resources Control Board~~ on July 6, 1972, and amended on January 19, 1978, by the State Water Resources Control Board, is designed to protect the ocean waters for use and enjoyment by the people through the control of waste discharges to the ocean. The plan sets forth water quality objectives for ocean waters. The objectives impose limits on bacteriological, physical, chemical, biological, toxic, and radioactive characteristics for ocean waters in numerical and descriptive terms. The plan describes requirements for management and design of systems discharging wastewaters to the ocean and effluent quality requirements for discharges. Systems must be designed and operated in a manner that will maintain the indigenous marine life and a healthy and diverse marine community. Effluent quality limitations and toxic material limitations are numerical. Discharge prohibitions are placed on hazardous substances, warfare agents and high level radioactive wastes, sludge and digester supernatant, and bypassed untreated waste discharges. Areas of Special Biological Significance are to be designated in which maintenance of natural quality conditions must be assured. Discharge requirements must include maximum allowable daily mass emission rates and maximum allowable monthly mass emission rates for each effluent quality constituent included therein specify effluent requirements in terms of mass emission rate limits."

Page 5-40, first column, revise to read:

- "1. The State Water Quality Control Plan ~~for~~ - Ocean Waters ~~should be~~ was revised and updated in ~~1973~~ 1978. following final publication of Water Quality Criteria for Water Quality and Information for the Restoration and Maintenance of Aquatic Integrity, and the Measurement and Classification of Water Pursuant to Section 304(A)1 of 21 Public Law 92-500
- "2. State policies for surface waters and for bays and estuaries should be further considered in light of information cited in 1/ above the revised Ocean Plan of 1978."
- "4. Erosion control policies to enforce improved practices and applicable prohibitions to land development, road construction, mining and logging activities should be formulated for statewide application; these policies should contain regionalized factors or be provided as guidelines for final formulation by the Regional Water Quality Control Boards!"
- "4. Erosion and sedimentation control policies should be established based on (a) pilot studies conducted by the U. S. Soil Conservation Service which recommended best management practices for erosion problems, (b) a state-wide study by

the California Association of Resource Conservation Districts on institutional solutions to sedimentation problems, and (c) findings of erosion studies conducted in the Central Coast Region as part of nondesignated area 208 planning."

Page 5-42-1, revise last paragraph as follows:

"The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for ~~from~~ logging, construction, and other soil disturbance activities of associated activity of whatever nature into any stream in the basin and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited."

Page 5-42-2, revise first paragraph as follows:

"The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from ~~any~~ logging, construction, and ~~associated activity of whatever nature~~ other soil disturbance activities at locations above the anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited."

Page 5-42-2, delete prohibition number 3 under "Waters Subject to Tidal Action":

"3/ Tidal waters within 1000 feet of the coast and 100-foot depth contour, measured from mean low water. An exception to this prohibition may be allowed by the Board in prescribing waste discharge requirements after finding that all beneficial water uses will otherwise be protected."

Page 5-44, top of second column, insert the following, prior to "Recommended Actions by Other Authorities":

"Other Agencies Programs"

"To insure that impacts on water quality from non-point sources of pollution are held to a minimum and that goals and management principles of the Regional Board are met, water quality management programs for implementation by land managing agencies have been developed through the areawide planning process. For non-point sources of pollution, this requires identification of Best Management Practices (BMP's). BMP's are defined as a practice or a combination of practices that is found to be the most effective practicable (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by non-point sources to a level compatible with water quality goals. BMP's are determined only after problem assessment, examination of alternative practices, and appropriate public participation in the BMP development process."

"Within the Central Coast Region, federal and state agencies control substantial portions of land. All retain their own land management programs, but are required by regulation to cooperate and give support to state planning agencies in formulating and implementing water quality management plans. Federal Law also directs

federal agencies to comply with requirements formulated to meet the objectives of the federal act. Federal and State implementing agencies and appropriate best management practices are:

"BUREAU OF LAND MANAGEMENT"

"The 'BLM California 208 Report; which was presented to the Regional Board on June 8, 1979; primarily defines a method for developing and applying BMP's. However, it does identify specific BMP's for grazing and recreation."

"The process for determining management practices on a site-specific basis applies to all BLM activities and is divided into three major phases: (1) consideration of site characteristics and water quality concerns, (2) definition and application of BMP's through contract clauses, leases, stipulations, etc., and (3) evaluation of BMP effectiveness and practice modification, if necessary."

"UNITED STATES FOREST SERVICE"

"During preparation of the Forest Service's 'Water Quality Management Plan for National Forest Systems Lands Within the Nondesignated Planning Area of California', adopted April, 1979, Forest Service manuals, guidelines, regulations, etc., were reviewed for identification of those practices which are directly or indirectly for the purpose of protecting water quality. The report identifies and discusses ninety-eight such practices in eight activity categories (i.e., timber harvesting, road and building site construction, mining, recreation, vegetative manipulation, fire supervision and prescribed burning, watershed management, and grazing). Ninety-four of the practices are presented as BMP's, while four practices need improvement, and four practices need development. A course of action for improving inadequacies of current practices and for development of new practices is identified."

"The practices/procedures contained in the Forest Service 208 plan are at a level of detail appropriate for all Forest Service operations statewide. These practices must be flexible to account for varying geographic conditions. The plan also includes a description of the 'decision-making' process which leads to the actual selections of management solutions on a project-specific basis. There are several steps in this process at which Regional Boards can be involved and there is a public involvement program to identify and respond to concerns of interested public. The most critical point of involvement is Step 1, identification of issues, concerns, and opportunities. Once this step is completed, the need for and time of future involvement in subsequent steps can be identified."

"Practices and procedures in the Forest Service's and BLM's 208 reports constitute proper management for water quality protection and are considered BMP's. Further, these agencies have expressed a willingness and capability to implement practices and to revise practices which are currently inadequate. Management agency agreements have been prepared between the State Board and each of these agencies which designates BLM and the Forest Service as management agencies responsible for implementing BMP's for water quality protection on lands under the control of each of these respective agencies. The management agency agreement further provides for State/Regional Board working relationships with each agency and establishes

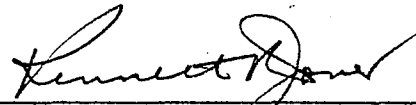

See 5/4/80

a mechanism by which the State and Regional Boards will, on a continuing basis and in conjunction with each of these agencies, identify and address water quality management issues of concern to all parties."

"The Management agency agreements, as approved by the State Water Resources Control Board and each of the agencies, are a part of this Water Quality Control Plan by reference. Management agency agreements will be reviewed and updated annually to reflect recent achievements, new information, and new concerns."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 8, 1979.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 78-02

Revision and Amendment of Water Quality Control Plan by the Addition of a Prohibition of Waste Discharge from Individual Sewage Disposal Systems Within the Nipomo Area, San Luis Obispo County.

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (hereafter Regional Board) adopted the Water Quality Control Plan for the Central Coast Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, the Regional Board may amend said Basin Plan to prohibit certain waste discharges in a documented problem area; and,
- WHEREAS, Nipomo is an unincorporated community of about 5,250 persons located in southern San Luis Obispo County in Section 21, T12N, R34W, SBB&M, as shown on Attachment "A"; and,
- WHEREAS, the Basin Plan recommends that failing individual disposal systems be phased out where public health and water quality is threatened and that new Individual Sewage Disposal Systems be sited on a minimum lot size of one (1) acre; and,
- WHEREAS, local groundwaters are beneficially used for domestic and agricultural water supply and groundwater levels are approximately 50 feet below ground surface in the northeast to approximately 250 feet below ground surface in the southwest; and,
- WHEREAS, soils in the northeastern part of Nipomo have a high clay content and low percolation rate, while soils in the southwestern part consist of sand with high percolation rates; and,
- WHEREAS, lot sizes in the northeastern part of Nipomo are too small to accommodate individual sewage disposal systems, while some dwellings in the southwestern part of Nipomo are connected to community septic tank/leach field systems that are too small for long term use; and,
- WHEREAS, in March, 1975, the San Luis Obispo County Health Department conducted a survey of 271 on-site individual sewage disposal systems in the Nipomo area. The survey found evidence of sewage system failures in 149 (55%) of the sewage disposal

systems, including 107 (40%) instances of addition and/or repairs to the original systems; 79 (29%) instances of sluggish or inoperative plumbing; 69 (38%) instances of leach line failures; and 68 (37%) instances of excessive pumping (defined as more than once in three years); and,

WHEREAS, the San Luis Obispo County Health Department has found several water supply wells in the Nipomo area that are located near septic tank leach fields and which exhibit levels of coliform and fecal coliform bacteria, nitrates, chlorides, and/or total dissolved solids that violate Basin Plan water quality objectives and threaten beneficial uses described above; including one instance of a typhoid epidemic; and,

WHEREAS, the Nipomo Community Services District is a public entity formed for the purpose of supplying acceptable quality water supply and wastewater disposal service to the community of Nipomo; and

WHEREAS, on March 17, 1978, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from Individual Sewage Disposal System's on water quality and public health; and,

WHEREAS, the Nipomo Community Services District prepared a final environmental impact report in accordance with the California Environmental Quality Act that discusses construction and use of a community wastewater collection, treatment, and disposal system and identifies adverse environmental impacts from continued use of septic tanks in the Nipomo area that will be mitigated if the terms of this resolution are met; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual disposal systems and community collection and disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; or will unreasonably degrade the quality of waters of the state;

NOW, THEREFORE, BE IT RESOLVED, that Chapter 5, Discharge Prohibitions Section of the Basin Plan, be amended by adding the following:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance, discharge of waste from additional individual sewage disposal systems is prohibited forthwith and the discharge of waste from existing individual sewage disposal systems is prohibited after July 1, 1982, in portions of the community of Nipomo, San Luis Obispo County, shown on the Attachment "A" and more particularly described as:

BEGINNING at the point of the southernmost property corner of
Basin Plan History p.1925

Assessor's Parcel Number (APN) 92-331-8 near the intersection of Southland Street and Orchard Road; thence north-easterly along the northerly boundary line at Southland Street to intersect the easterly boundary line of U. S. Highway 101; thence northwesterly along said line to the westernmost property corner of APN 92-301-12; thence along a bearing approximately $N 48^{\circ} 15'$ to intersect the easterly boundary line of Oakglen Avenue; thence northwesterly along said line to the southerly boundary line of Division Street; thence along an extension of said line to the easterly boundary line of Thompson Avenue; thence northwesterly along said line to the south property corner of APN 90-081-10; thence northeasterly along southeastern boundary of said parcel to the east property corner; thence northwesterly along an extension of the westerly boundary line of Cedar Street to the northerly boundary line of Tefft Street; thence northeasterly along said line to the easternmost property corner of APN 90-371-58; thence northwesterly along an extension of the boundary of said parcel to the southerly boundary line of Chestnut Street; thence southwesterly along said line to the westerly boundary line of Thompson Avenue; thence northwesterly along said line to the easternmost property corner of APN 90-151-13; thence along a bearing approximately $S 48^{\circ} W$ to intersect the easterly boundary line of Willow Road; thence southeasterly along said line to the southerly boundary line of Juniper Street; thence northeasterly along said line to the westernmost property corner of APN 92-131-06; thence along a bearing $S 34^{\circ} 30'E$ to the southerly boundary line of Tefft Street; thence southwesterly along said line to the west corner of APN 92-132-34; thence along a bearing of $S 34^{\circ} 30'E$ to the southerly boundary line of Hill Street; thence northeasterly along said line to the west corner of APN 92-133-26; thence along a bearing of $S 34^{\circ} 30'E$ to intersect the northerly boundary line of Division Street; thence southwesterly along said line to the easternmost property corner of APN 92-172-02; thence along a bearing approximately $N 67^{\circ} 28'W$ to the northernmost property corner of APN 92-454-20; thence along a bearing approximately $S 22^{\circ} 26'W$ to the westernmost property corner of APN 91-111-25; along a bearing approximately $S 67^{\circ} 28'E$ to intersect the easterly boundary line of Division Street; thence northeasterly along said line to the westernmost property corner of APN 92-181-13; thence along a bearing approximately $S 64^{\circ} 33'E$ to the southernmost property corner of APN 92-181-13; thence along a bearing approximately $N 37^{\circ} 30'E$ to the easterly boundary line of Orchard Road; thence southeasterly along said line to the true POINT OF BEGINNING."

BE IT FURTHER RESOLVED THAT Chapter 5, Discharge Prohibitions Section of the Basin Plan, be amended by adding the following:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health, and

prevent nuisance, discharge of waste from additional individual sewage disposal systems proposed on parcels of less than one (1) acre is prohibited in a portion of the community of Nipomo, San Luis Obispo County, as shown on Attachment "B" and more particularly described as:

"BEGINNING at the point of the southernmost property corner of Assessor's Parcel Number (APN) 92-331-8 near the intersection of Southland Street and Orchard Road; thence northeasterly along said line to the northeasterly boundary line of Oak Glen Avenue; thence northwesterly along said line to the southerly boundary line of Division Street; thence along an extension of said line to the easterly boundary line of Thompson Avenue; thence northwesterly along said line to the south property corner of APN 90-081-10; thence northeasterly along southeastern boundary of said parcel to the east property corner; thence northwesterly along an extension of the westerly boundary line of Cedar Street to the northerly boundary line of Tefft Street; thence northeasterly along said line to the easternmost property corner of APN 90-371-58; thence northwesterly along an extension of the boundary of said parcel to the southerly boundary line of Chestnut Street; thence southwestwardly along said line to the westerly boundary line of Thompson Avenue, thence northwesterly along said line to the northernmost property corner of APN 90-155-13; thence along a bearing approximately S 48° W to the westerly boundary line of Willow Road; thence southeasterly long said line to the northernmost corner of APN 92-121-2; thence along a bearing approximately S 22° 30' W to the southerly boundary line of Las Flores Road; thence southeasterly along said line to the northernmost property corner of APN 92-443-2; thence along a bearing approximately S 22° 30' W to the westernmost property corner of APN 92-441-1; thence southeasterly along the southerly property boundary line of APN's 92-441-1 through 92-441-10; thence along an imaginary line to the westernmost property corner of APN 92-181-1; thence southeasterly along the southerly property boundary line of APN's 92-181-1 and 92-181-18 to the southernmost corner of APN 92-181-18; thence along a bearing approximately N 37° 30' E to the northerly boundary line of Orchard Road; thence northwesterly along said line to the true POINT OF BEGINNING."

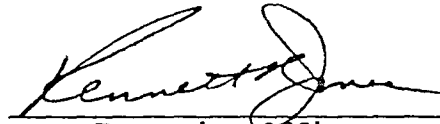

BE IT FURTHER RESOLVED THAT, the Regional Board may grant an exemption to these prohibitions for (1) new individual sewage disposal systems that will not individually or collectively result in a pollution or nuisance, and (2) existing individual sewage disposal systems in a particular area that will not, individually or collectively, directly or indirectly, adversely affect water quality.

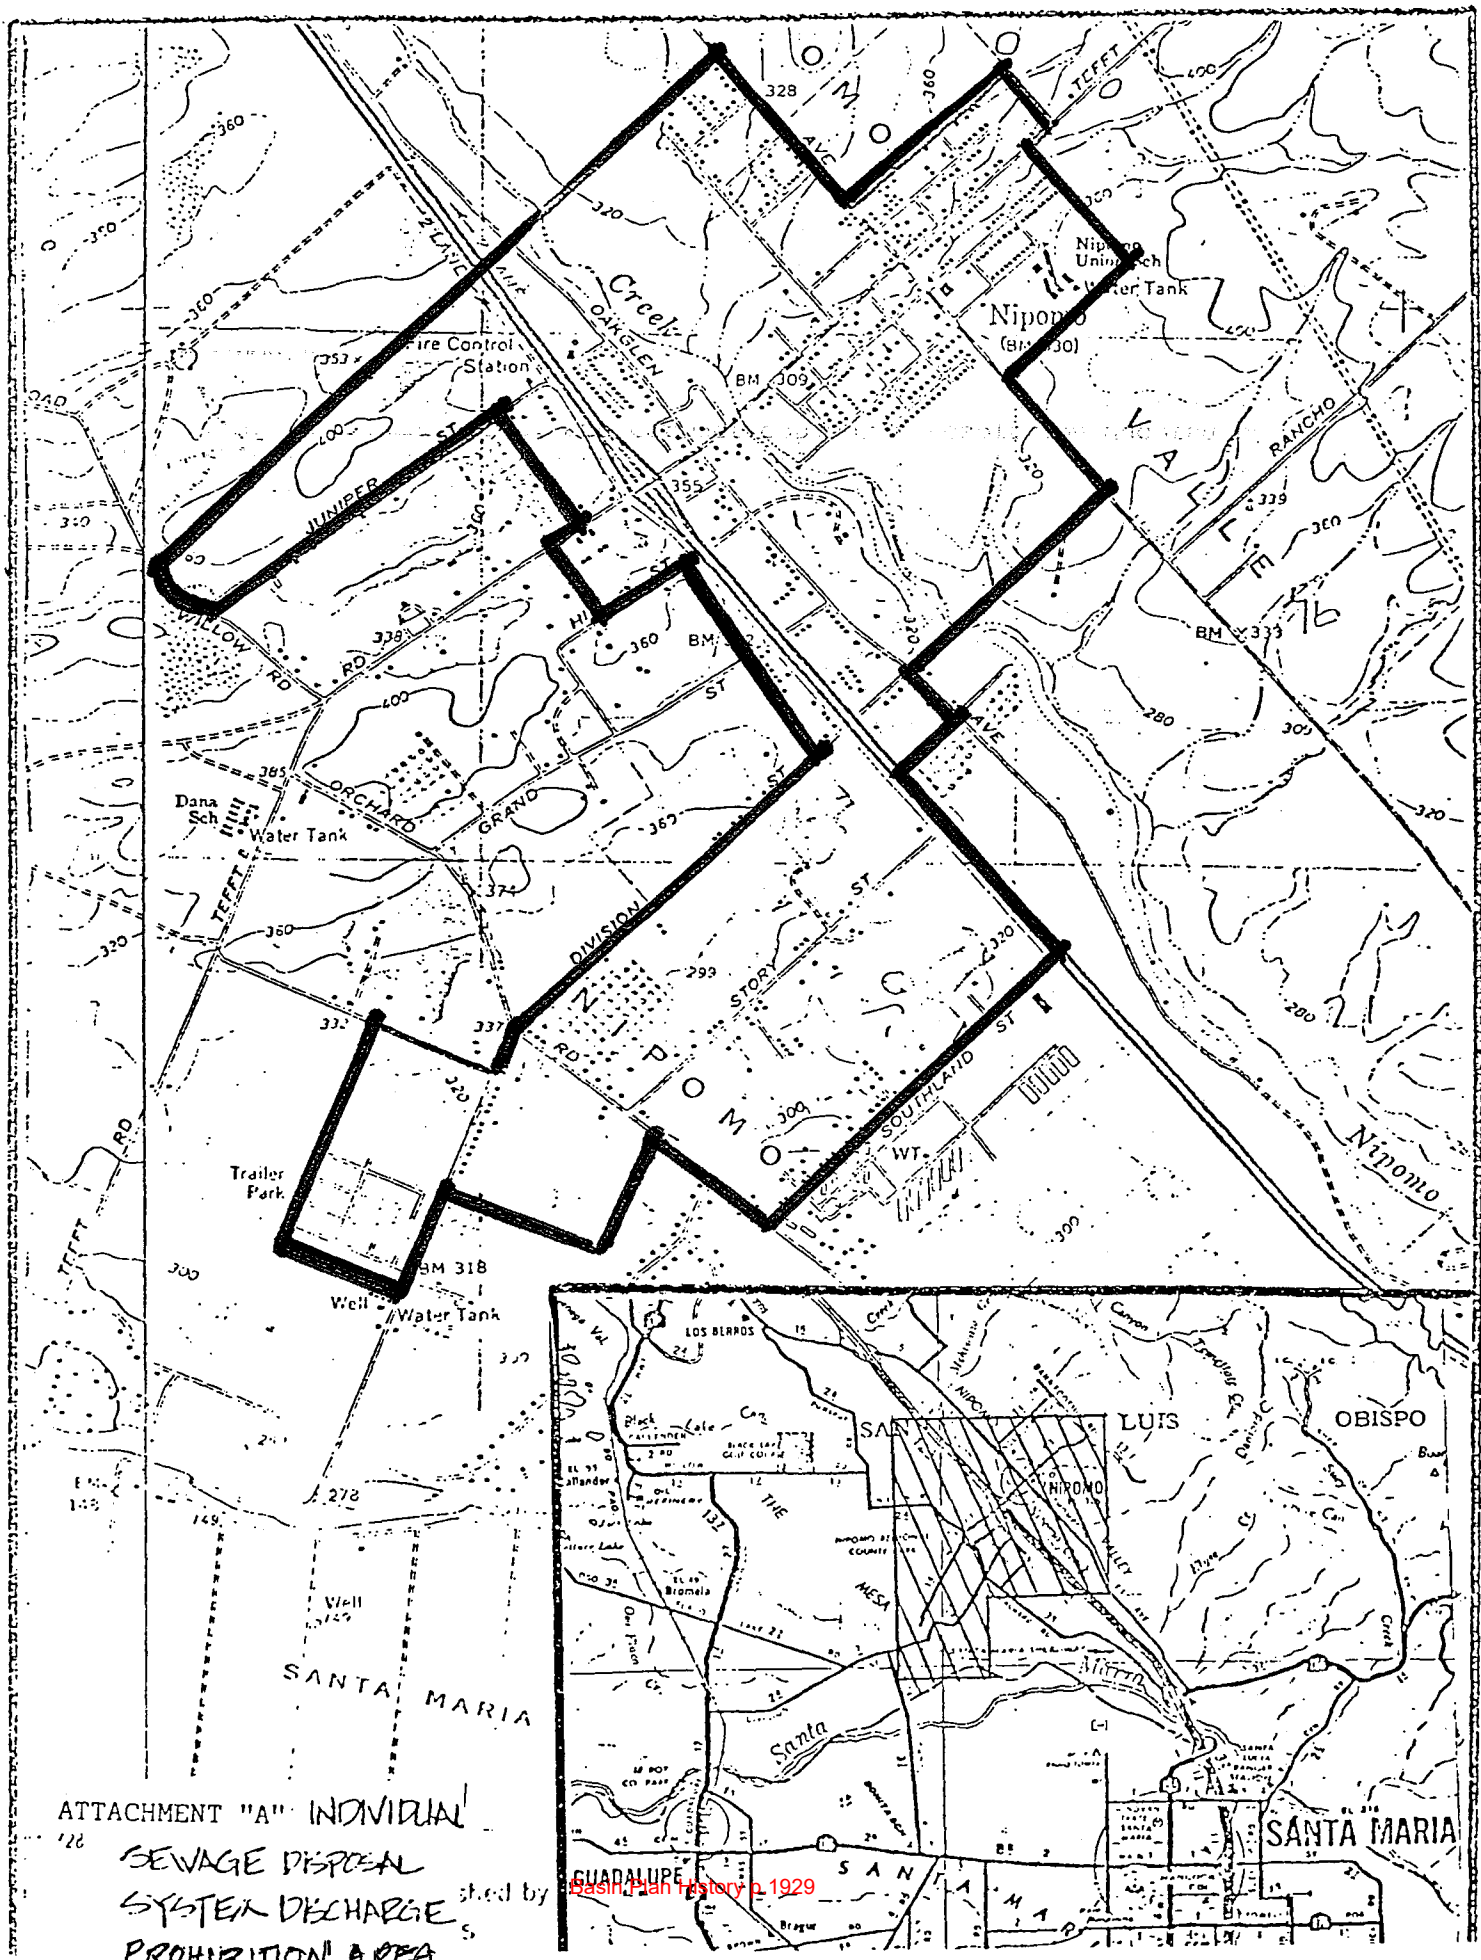

BE IT FURTHER RESOLVED THAT, the Regional Board may grant a conditional exemption to these prohibitions where an authorized public agency provides satisfactory assurance to the Regional Board that individual disposal systems in a particular area will be

appropriately designed, located, sized, spaced, constructed, and maintained to protect water quality; protect beneficial uses; and prevent nuisance, pollution, and contamination.

BE IT FURTHER RESOLVED THAT, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

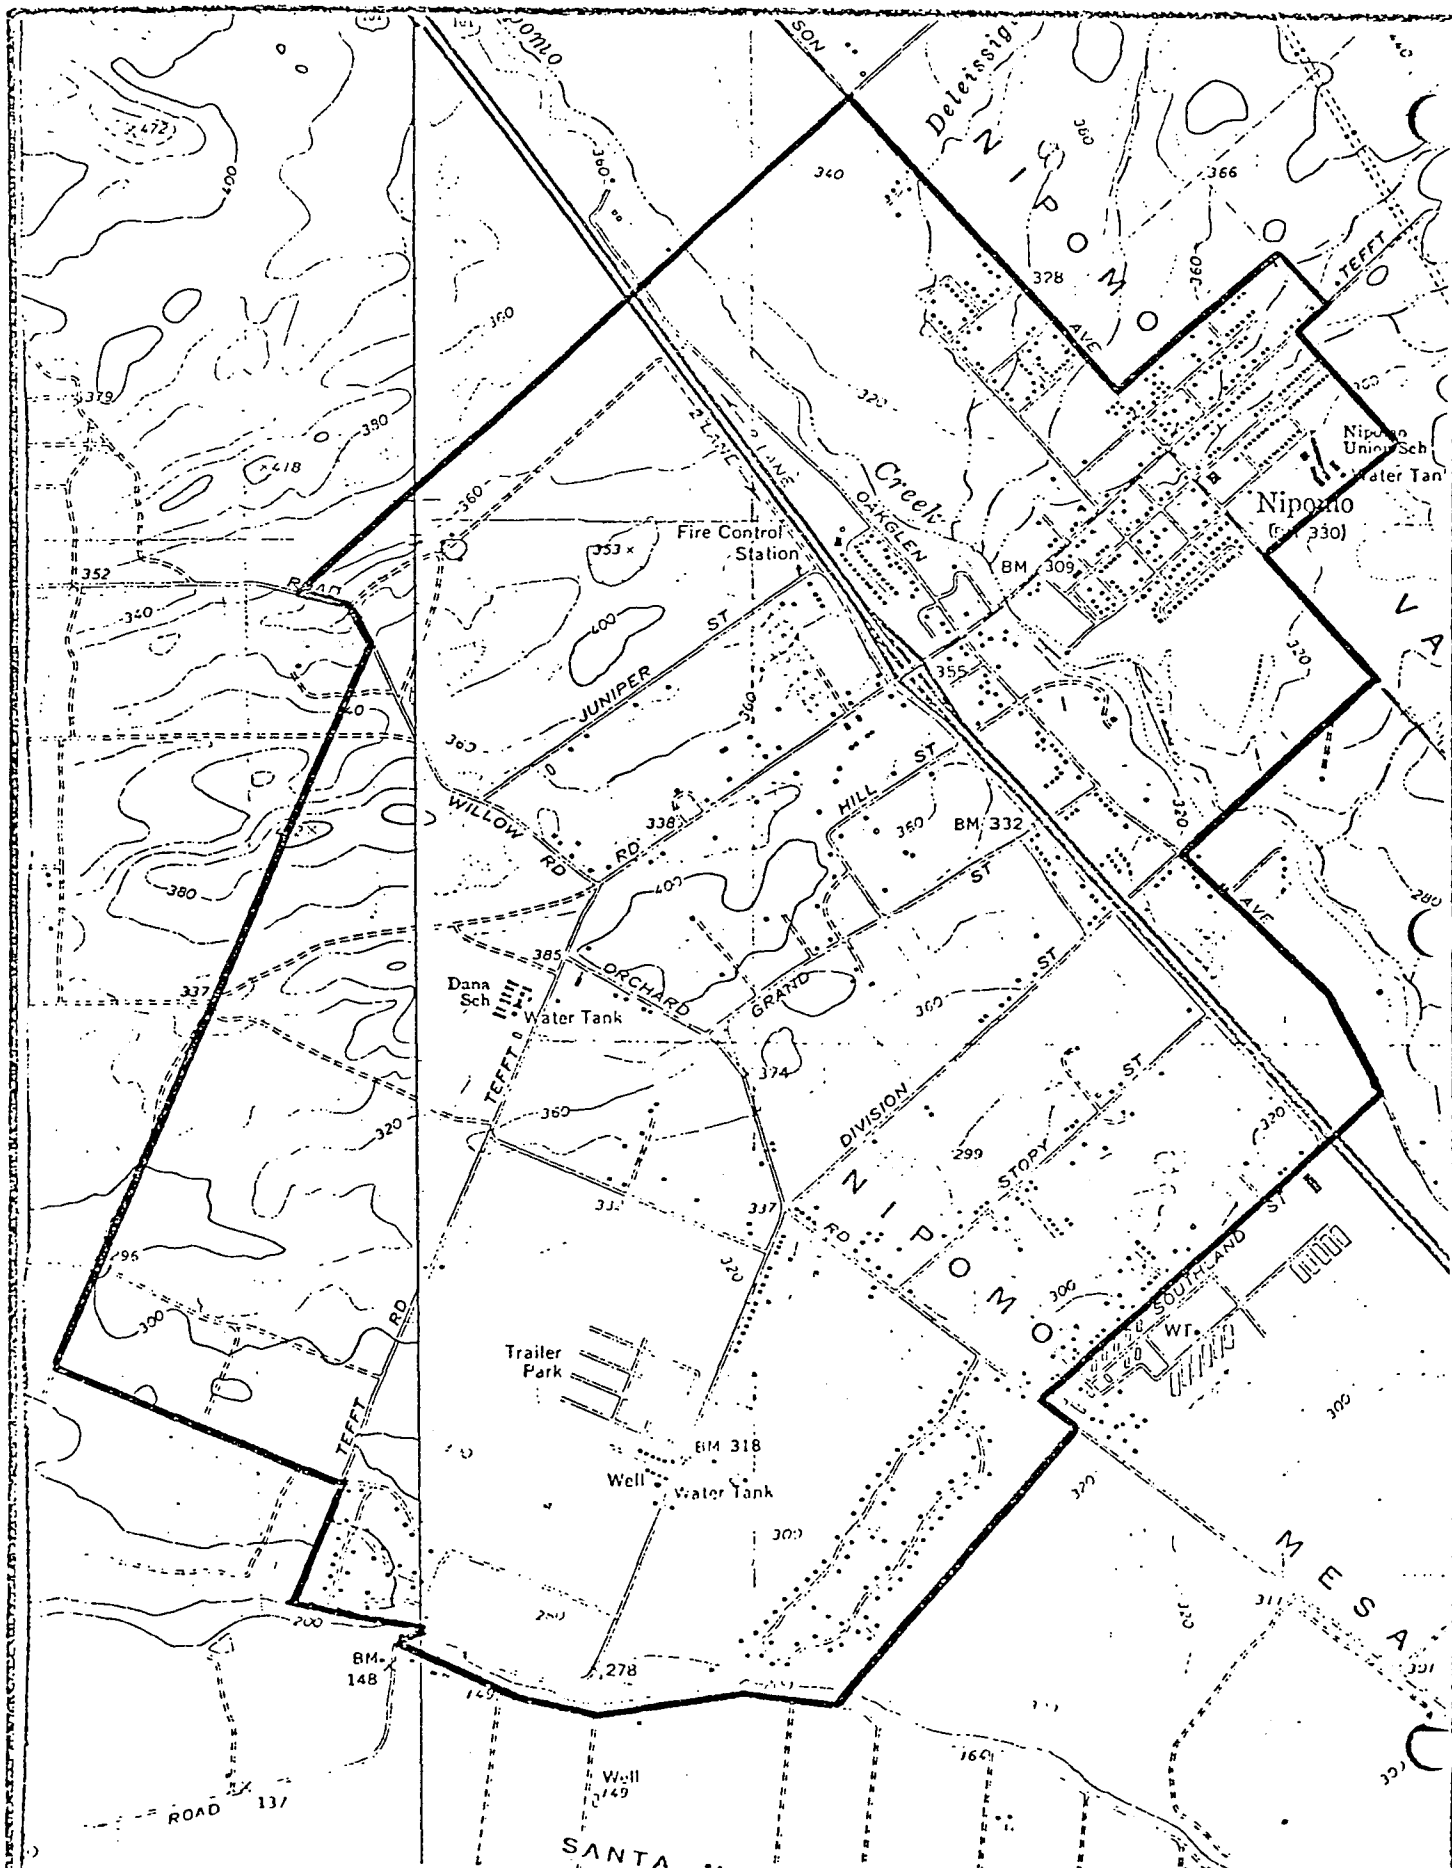

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on March 17, 1978.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

Resolution No. 77-04

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coastal Basin

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and

WHEREAS, drafts of proposed revisions and amendments have been prepared and submitted to interested persons and agencies for review and comment; and

WHEREAS, proposed revisions and amendments apply to Chapter 4, Water Quality Objectives, and Chapter 5, Implementation Plan, of said Basin Plan, and specifically to inland surface water quality objectives for biostimulants and prohibitions effecting inland surface and tidal waters; and

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and

WHEREAS, a hearing was held by this Board on June 10, 1977, to receive testimony concerning the proposed revisions and amendment to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

"FOREWORD", beginning with the last paragraph of the first page, revise to read:

"Although the intent of this comprehensive planning effort has been to provide positive and firm direction for water quality control for many years into the future, it is recognized that adequate provision must be made for changing conditions and technology. Thus, a major premise in the development of the basin plans has been that these plans will be maintained current. Revisions will be made at least annually. Unlike traditional plans which often become obsolete within a few years after their preparation, the comprehensive water quality control plans will be updated as deemed necessary to maintain pace with technology, policies, and physical changes in the basin. In addition, an up-to-date inventory of dischargers and information pertaining to treatment and disposal methods, waste

discharge requirements, effluent quality, and compliance schedules are available upon request by writing:

California Regional Water Quality Control Board
Central Coast Region
1122-A Laurel Lane
San Luis Obispo, California 93401"

Page 4-6, under "Objectives for Inland Surface Waters, Enclosed Bays and Estuaries", delete Table 4-3 and change the following to read:

"Biostimulatory Substances

Waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses. ~~Numerical objectives for nutrients are specified in Table 4-3.~~

Page 5-39, under CONTROL ACTIONS, update to read:

"Thermal Plan

The State Water Resources Control Board adopted on May 18, 1972, a 'Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries in California', referred to as the 'Thermal Plan'. The plan, amended on September 18, 1975, specifies limiting conditions of temperature in wastewaters discharged into interstate and coastal waters, estuaries and enclosed bays... The plan requires the earliest possible compliance, but not later than ~~January 1, 1976~~ July 1, 1977."

Page 5-42, "Discharge Prohibitions, Inland Waters" revise as follows and move to Page 5-41, "Discharge Prohibitions, All Waters":

✓ "The Discharge of wastes which do not comply with the following conditions are toxic or hazardous pollutants to community waste treatment systems is prohibited in concentrations that:

1. Wastes discharged to surface waters shall be essentially free of toxic substances, grease, oil, and phenolic compounds, Exceed applicable federal pre-treatment standards,
2. Wastes discharged to groundwaters shall be free of toxic substances in excess of accepted drinking water standards, taste, odor, or color producing substances and nitrogenous compounds in quantities which could result in a ground water nitrate concentration above 43 mg/L, Endanger safe and continuous operation of wastewater treatment facilities,
3. Waste discharges shall not contain materials in concentrations which are hazardous to human, plant, animal, or

aquatic life, endanger public health and safety, and

4. Cause violation of applicable water quality objectives.

"The Discharge of elevated temperature wastes in excess of the liquids specified in Chapter 4, Water Quality Objectives, into COLD intrastate waters is prohibited where it may cause the natural temperature of the receiving water to exceed limits specified in Chapter 4, Water Quality Objectives.

* * * * *

"The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from any logging, construction or associated similar activity of whatever nature at locations above the anticipated high waterline of any stream in the basin where they it may be washed discharged into said state waters by rainfall or runoff in quantities deleterious to fish, wildlife and other beneficial uses from less than a 25-year, 24-hour rainfall event is prohibited."

"Waters Subject to Tidal Action. Waste dischargers to the following areas are prohibited:

- "1. Effective July 1, 1977 1979, in the northern extreme of Monterey Bay, northern and southern extremes within the following areas, inshore from an imaginary line extending from Santa Cruz Point (36°-57.0'N, 122°-01.5'W) to the mouth of the Pajaro River (36°-51.0'N, 121°-48.6'W) and inshore from a line extending from Point Pinos to the mouth of the Salinas River, and the offshore area within a three-mile radius of Point Pinos, in ocean waters within a three (3) mile radius of Point Pinos (36°-38.3'N, 121°-56.0'W), excepting the area described in No. 2 below.
- "2. Carmel Bay, within 1000 feet from the Point Lobos Preserve of the State Department of Parks. Effective July 1, 1983, in the southern extreme of Monterey Bay, inshore from an imaginary line extending from Point Pinos (36°-38.3'N, 121°-56.0'W) to the mouth of the Salinas River (36°-44.9'N, 121°-48.3'W)."

"The Discharge of wastes into Areas of Special Biological Significance or close enough to such areas to such areas to is prohibited where it will alter their natural water quality conditions is prohibited in Areas of Special Biological Significance. Areas of Special Biological Significance are:

- "1. Ano Nuevo Point and Island, San Mateo County, including ocean waters within three nautical miles offshore and defined by extensions of Cascade Creek on the north and the Santa Cruz-San Mateo County line on the south.

- "2. Pacific Grove Marine Gardens Fish Refuge and Hopkins Marine Life Refuge, Monterey County, including Monterey Bay waters bounded by Point Alones on the east, by Point Pinos on the west, and extending offshore to the 60-foot depth contour (about 0.7 miles).
- "3. Carmel Bay, Monterey County, including all bay waters enclosed by an imaginary line extending between Pescadero Point and Granite Point.
- "4. Point Lobos Ecological Reserve, Monterey County, including ocean waters within one-quarter (0.25) mile offshore from Granite Point southerly to the southernmost boundary of Point Lobos Reserve State Park.
- "5. Julia Pfeiffer Burns Underwater Park, Monterey County, including ocean waters within an area extending about one (1.0) mile offshore and about two and one-half (2.5) miles south of Partington Point.
- "6. Salmon Creek, Monterey County, including ocean waters within one-thousand (1000) feet or more offshore, bounded on the south by an extension of the Monterey-San Luis Obispo County line, and extending northward about three (3) miles.
- "7. San Miguel, Santa Rosa, and Santa Cruz Islands, Santa Barbara County, including ocean waters within about one (1) nautical mile offshore."

* * * * *

"No person, whether engaged in commerce or otherwise, shall place, throw, deposit or discharge, or cause to be placed, thrown, deposited or discharged on or in tidal waters any untreated waste or waste matter, except vessel wash-down water, from any vessel. Excepting vessel wash-down waters, disposal or waste matter or untreated waste from vessel to tidal water is prohibited."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 10, 1977.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

Resolution No. 77-01

Concerning Amendment of the
Water Quality Control Plan, Central Coastal Basin

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, may amend the Basin Plan; and

WHEREAS, drafts of a proposed amendment have been prepared and submitted to interested persons and agencies for review and comment; and

WHEREAS, the proposed amendment applies to Chapter 4, Water Quality Objectives, of said Basin Plan and specifically to inland surface water quality objectives for biostimulants and bacteria; and

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and

WHEREAS, a hearing was held by the Regional Board on January 14, 1977, to receive testimony concerning proposed amendment to said Basin Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Basin Plan be amended as follows:

- "1. Add to the water quality objective for biostimulants, page 4-6, the following paragraph:

'Numerical objectives in Table 4-3 may be waived in waste discharge requirements and National Pollutant Discharge Elimination Permits on a case-by-case basis where environmental and engineering factors show that less restrictive limits will not unreasonably impair beneficial uses.'

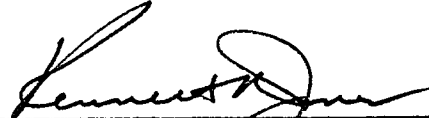

- "2. Change Paragraph 2 of the water quality objective for bacteria, page 4-8, to read:

'In waters designated for noncontact recreation (REC-2) and not designated for contact recreation (REC-1), the fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 2000/100 ml, nor shall more than ten percent of samples collected during any 30-day period exceed 4,000/100 ml.'

BE IT FURTHER RESOLVED, that the Executive Officer of the Regional Board submit said amendment to the Basin Plan to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full,

true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 14, 1977.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1122-A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 76-08

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COAST REGION

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, adopted a Water Quality Control Plan (Basin Plan) for the Central Coast Basin on March 14, 1975; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, the Board may amend said Basin Plan to prohibit certain waste discharges in a documented problem area; and,
- WHEREAS, one such problem area is the Community of Moss Landing and surrounding area, located in the County of Monterey about 12 miles northwest of the City of Salinas and identified herein, as well as on the attached vicinity map; and,
- WHEREAS, surface drainage and subsurface drainage is tributary to Elkhorn Slough and Moss Landing Harbor, navigable waterways of the United States with identified beneficial uses of industrial service supply, wildlife habitat, and non-contact water recreation; and water contact recreation is an anticipated beneficial use, and
- WHEREAS, in about 1968, the Monterey County Department of Environmental Health identified water pollution and a public health hazard in the Moss Landing area and imposed a building ban and posted the harbor and Elkhorn Slough as unsafe for harvesting shellfish and water contact recreation; and,
- WHEREAS, the aforementioned condition and measures caused a 1976 survey by the Monterey County Department of Environmental Health which documented a septic tank system failure rate that averaged 50 percent between 1970 and 1975;
- WHEREAS, septic tank failures are defined as sewage overflows, system repairs, system replacement, and pumping more than once every three years; and
- WHEREAS, the Monterey County Department of Environmental Health attributes failure to small lots, shallow groundwater tables, land gradients, and/or poor soil percolation; and,
- WHEREAS, continued installation and usage of individual leaching and percolation systems in the affected area will increase the threat to public health and will further unreasonably impair water quality; and,

WHEREAS, on July 9, 1976, in the City Council Chambers, 440 Harcourt Avenue, Seaside, California, after due public notice, the Board conducted a public hearing, in accordance with Section 13244 of the California Water Code, received evidence, and considered all factors concerning the prohibition of individual disposal systems in and near the Community of Moss Landing;

NOW, THEREFORE, BE IT RESOLVED THAT Chapter 5, Discharge Prohibitions section, be amended by adding the following:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance, additional individual disposal systems are prohibited forthwith and existing individual disposal systems are prohibited effective July 1, 1979, in the area described as follows:

Parcel A -- BEGINNING at the intersection of the southerly prolongation of Potrero Road and the mean high tide line of the Pacific Ocean; thence East along said southerly line to the intersection of the easterly line of California State Highway Number One; thence north along said easterly line to the intersection of the northerly bank of the Elkhorn Slough; thence easterly along said bank for a distance of 250 feet; thence northerly leaving said northerly bank for a distance of 300 feet; thence westerly for a distance of 250 feet to the easterly line of said State Highway; thence northerly along said easterly line to the intersection of the prolongation of the southerly boundary of Assessor's Parcel 413-022-02; thence easterly leaving said easterly line for a distance of 700 feet; thence northerly to the intersection of a line, said line being a distance of 150 feet south of the northerly line of Assessor's Parcel 413-022-04; thence westerly along said line to the intersection of said easterly line of said State Highway; thence northerly along said easterly line to the intersection of the easterly prolongation of the northerly line of Jetty Road; thence westerly along said northerly line to a point of intersection with the easterly boundary of Jetty Beach State Park; thence northerly and westerly along said boundary and its prolongation to said mean high tide line; thence southerly along said high tide line and crossing the mouth of the Elkhorn Slough to the PLACE OF BEGINNING.

Parcel B -- BEGINNING at the point of the southerly corner of Assessor's Parcel Number 413-012-02, said corner being on the westerly line of California State Highway Number One; thence northerly along the westerly line of said Assessor's Parcel to the intersection of the southerly line of Struve Road; thence westerly along said southerly line and its

prolongation to the intersection of the westerly line of Section 5, T. 13S., R. 2E; thence northerly to the intersection of the prolongation of the northerly line of Springfield Park No. 1 Subd.; thence easterly along said northerly line to the northeast corner of Lot 34 of said subd.; thence northeasterly and northerly along the westerly line of Assessor's Parcel Numbers 413-061-36, 37 and 413-051-26 and the latter's prolongation to an intersection with the southerly line of Assessor's Parcel Number 413-051-17; thence westerly along said southerly line and its prolongation to its intersection with the easterly line of said parcel; thence northerly along said westerly line to the intersection of the northerly line of said parcel; thence easterly along said northerly line to the intersection of the westerly line of the aforementioned State Highway; thence southerly along said westerly line to the POINT OF BEGINNING."

"An exception to this prohibition may be granted whenever the Board finds that the continued operation of individual disposal systems in a particular area will not, individually or collectively, directly or indirectly, adversely affect water quality."

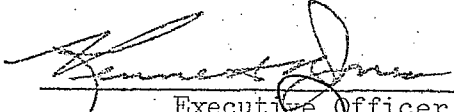

BE IT FURTHER RESOLVED THAT compliance with the above prohibition shall be achieved according to the following time schedule:

	<u>Compliance Date</u>
1. Complete Plans & Specifications	12-1-77
2. Begin Construction	6-1-78
3. Complete Compliance with Prohibition	7-1-79; and,

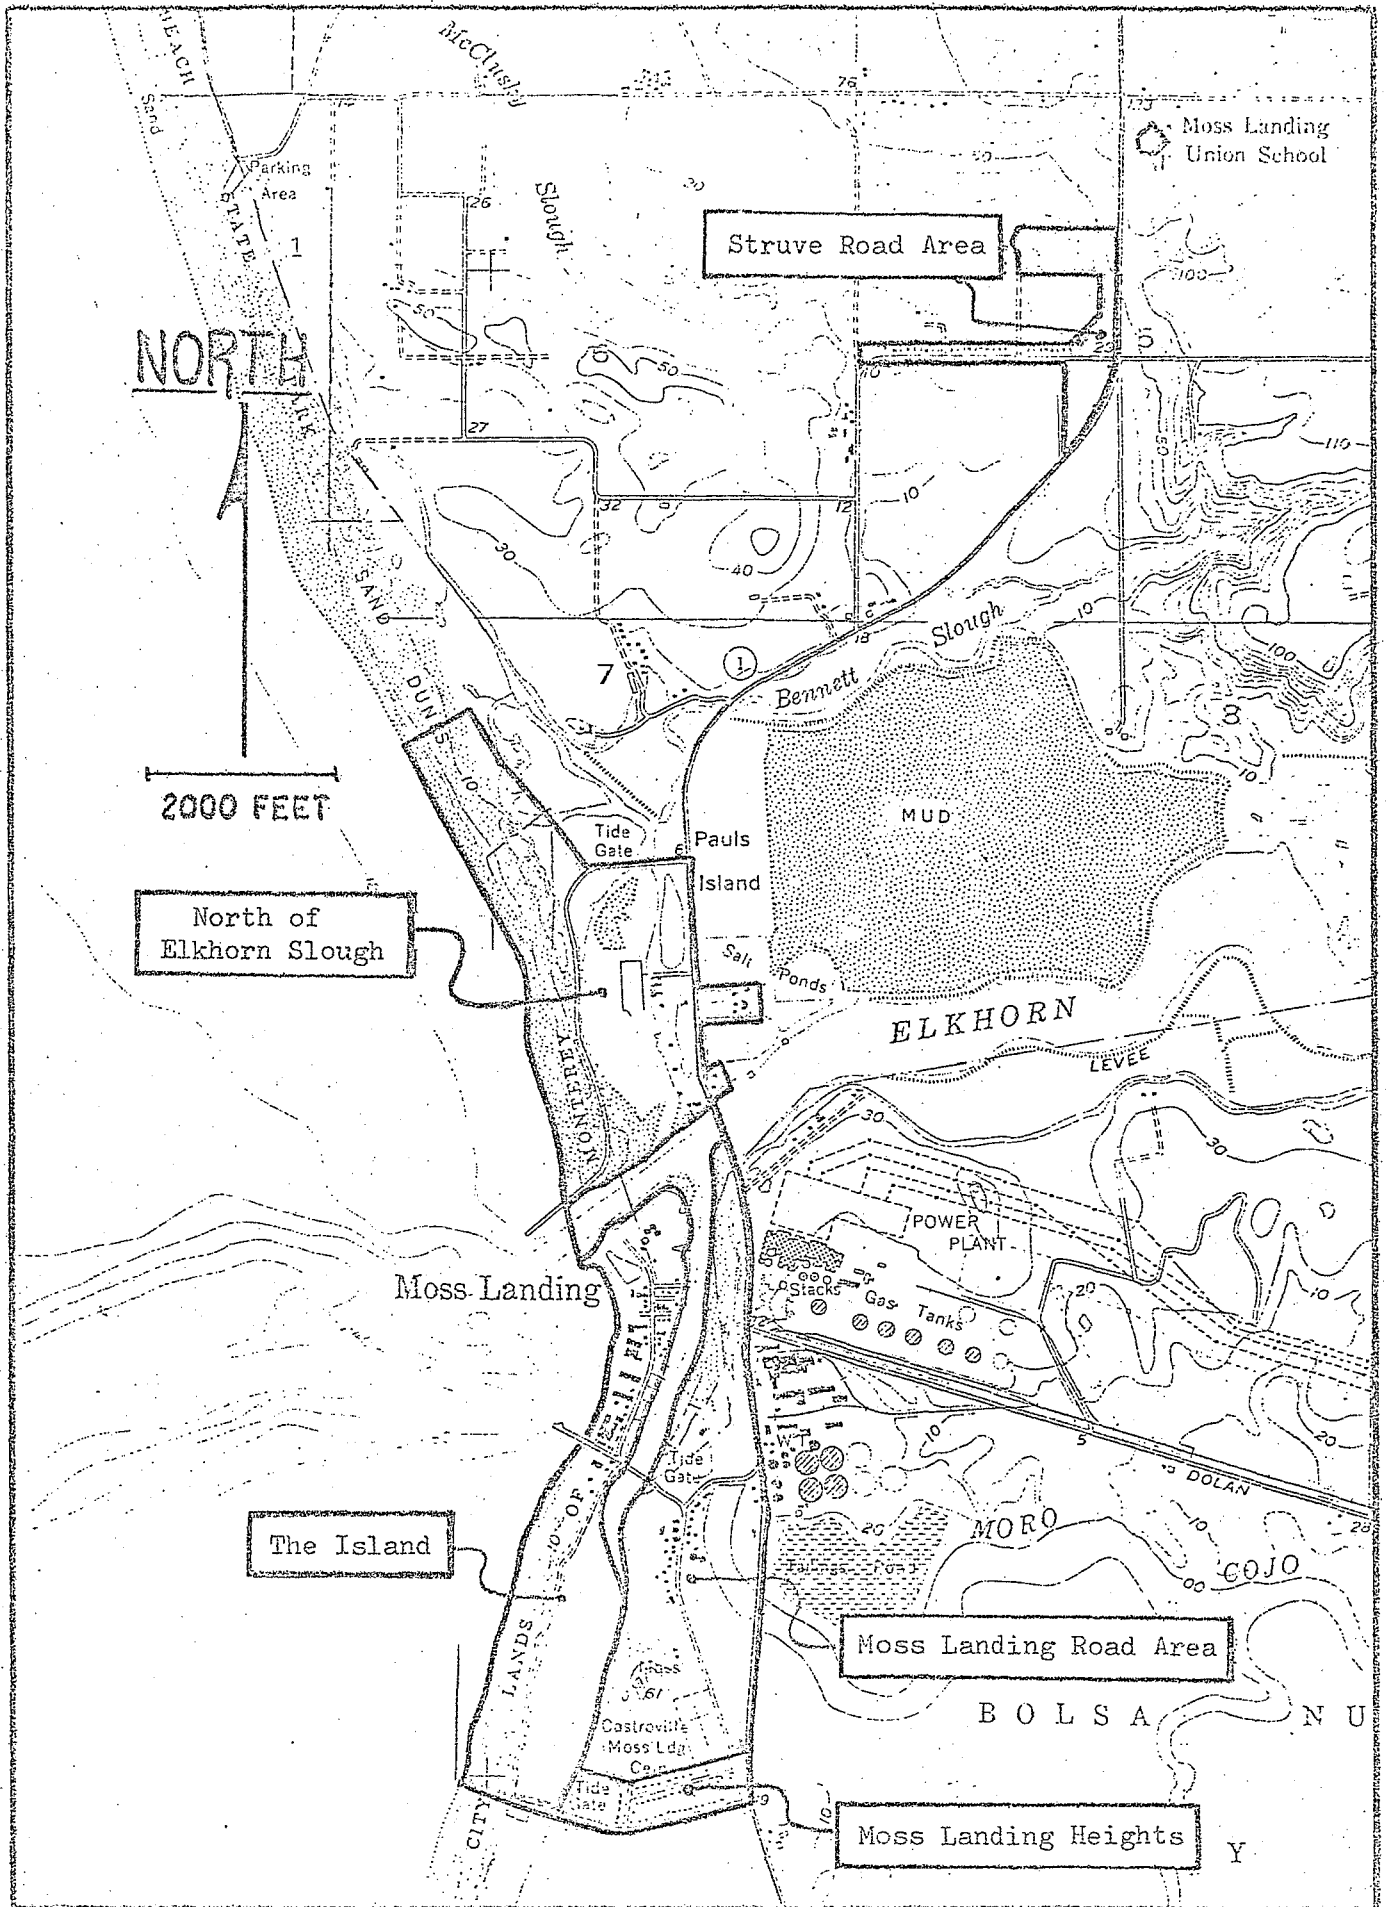

BE IT FURTHER RESOLVED, the Community of Moss Landing, its agents or assigns, shall submit written proof of compliance to the Regional Board within 15 days after each specified date; and,

BE IT FURTHER RESOLVED, the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code; and,

I, KENNETH R. JONES, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region on July 9, 1976.

 Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1122-A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 76-08

Amended Resolution

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COAST REGION

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, adopted a Water Quality Control Plan (Basin Plan) for the Central Coast Basin on March 14, 1975; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, the Board may amend said Basin Plan to prohibit certain waste discharges in a documented problem area; and,
- WHEREAS, one such problem area is the Community of Moss Landing and surrounding area, located in the County of Monterey about 12 miles northwest of the City of Salinas and identified herein, as well as on the attached vicinity map; and,
- WHEREAS, surface drainage and subsurface drainage is tributary to Elkhorn Slough and Moss Landing Harbor, navigable waterways of the United States with identified beneficial uses of industrial service supply, wildlife habitat, and non-contact water recreation, and water contact recreation is an anticipated beneficial use; and
- WHEREAS, in about 1968, the Monterey County Department of Environmental Health identified water pollution and a public health hazard in the Moss Landing area and imposed a building ban and posted the harbor and Elkhorn Slough as unsafe for harvesting shellfish and water contact recreation; and,
- WHEREAS, the aforementioned condition and measures caused a 1976 survey by the Monterey County Department of Environmental Health which documented a septic tank system failure rate that averaged 50 percent between 1970 and 1975;
- WHEREAS, septic tank failures are defined as sewage overflows, system repairs, system replacement, and pumping more than once every three years; and
- WHEREAS, the Monterey County Department of Environmental Health attributes failure to small lots, shallow groundwater tables, land gradients, and/or poor soil percolation; and,
- WHEREAS, continued installation and usage of individual leaching and percolation systems in the affected area will increase the threat to public health and will further unreasonably impair water quality; and,

WHEREAS, on July 9, 1976, in the City Council Chambers, 440 Harcourt Avenue, Seaside, California, after due public notice, the Board conducted a public hearing, in accordance with Section 13244 of the California Water Code, received evidence, and considered all factors concerning the prohibition of individual disposal systems in and near the Community of Moss Landing;

WHEREAS, on November 18, 1976, in the City Council Chambers, 440 Harcourt Avenue, Seaside, California, after due public notice, a Panel of the Board conducted a public hearing, in accordance with Section 13244 of the California Water Code, received evidence, and considered all factors concerning the prohibition of individual disposal systems in and near the Community of Moss Landing; and

WHEREAS, on December 10, 1976, in the City Council Chambers, 990 Palm Street, San Luis Obispo, California, the Board received the recommendation of the Hearing Panel and reviewed the record of the hearing;

NOW, THEREFORE, BE IT RESOLVED THAT Chapter 5, Discharge Prohibitions section, be amended by adding the following:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance, discharges from additional individual disposal systems are prohibited forthwith and discharges from existing individual disposal systems are prohibited effective July 1, 1979, in the area described as follows:

Parcel A -- BEGINNING at the intersection of the southerly prolongation of Potrero Road and the mean high tide line of the Pacific Ocean; thence East along said southerly line to the intersection of the easterly line of California State Highway Number One; thence north along said easterly line to the intersection of the northerly bank of the Elkhorn Slough; thence easterly along said bank for a distance of 250 feet; thence northerly leaving said northerly bank for a distance of 300 feet; thence westerly for a distance of 250 feet to the easterly line of said State Highway; thence northerly along said easterly line to the intersection of the prolongation of the southerly boundary of Assessor's Parcel 413-022-02; thence easterly leaving said easterly line for a distance of 700 feet; thence northerly to the intersection of a line, said line being a distance of 150 feet south of the northerly line of Assessor's Parcel 413-022-04; thence westerly along said line to the intersection of said easterly line of said State Highway; thence northerly along said easterly line to the intersection of the easterly prolongation of the northerly line of Jetty Road; thence westerly along said northerly line to a point of intersection with the easterly boundary of Jetty Beach State Park; thence northerly and westerly along said boundary and its prolongation to said mean high tide line; thence southerly along said high tide line and crossing the mouth of the Elkhorn Slough to the PLACE OF BEGINNING.

Parcel B -- BEGINNING at the point of the southerly corner of Assessor's Parcel Number 413-012-02, said corner being on the westerly line of California State Highway Number One; thence northerly along the westerly line of said Assessor's Parcel to the intersection of the southerly line of Struve Road; thence westerly along said southerly line and its prolongation to the intersection of the westerly line of Section 5, T. 13S., R. 2E; thence northerly to the intersection of the prolongation of the northerly line of Springfield Park No. 1 Subd.; thence easterly along said northerly line to the northeast corner of Lot 34 of said subd.; thence northeasterly and northerly along the westerly line of Assessor's Parcel Numbers 413-061-36, 37 and 413-051-26 and the latter's prolongation to an intersection with the southerly line of Assessor's Parcel Number 413-051-17; thence westerly along said southerly line and its prolongation to its intersection with the easterly line of said parcel; thence northerly along said westerly line to the intersection of the northerly line of said parcel; thence easterly along said northerly line to the intersection of the westerly line of the aforementioned State Highway; thence southerly along said westerly line to the POINT OF BEGINNING."

"An exception to this prohibition may be granted whenever the Board finds that the continued operation of individual disposal systems in a particular area will not, individually or collectively, directly or indirectly, adversely affect water quality."

BE IT FURTHER RESOLVED THAT compliance with the above prohibition shall be achieved according to the following time schedule:

	<u>Compliance Date</u>
1. Complete Plans & Specifications	12-1-77
2. Begin Construction	6-1-78
3. Complete Compliance with Prohibition	7-1-79; and,

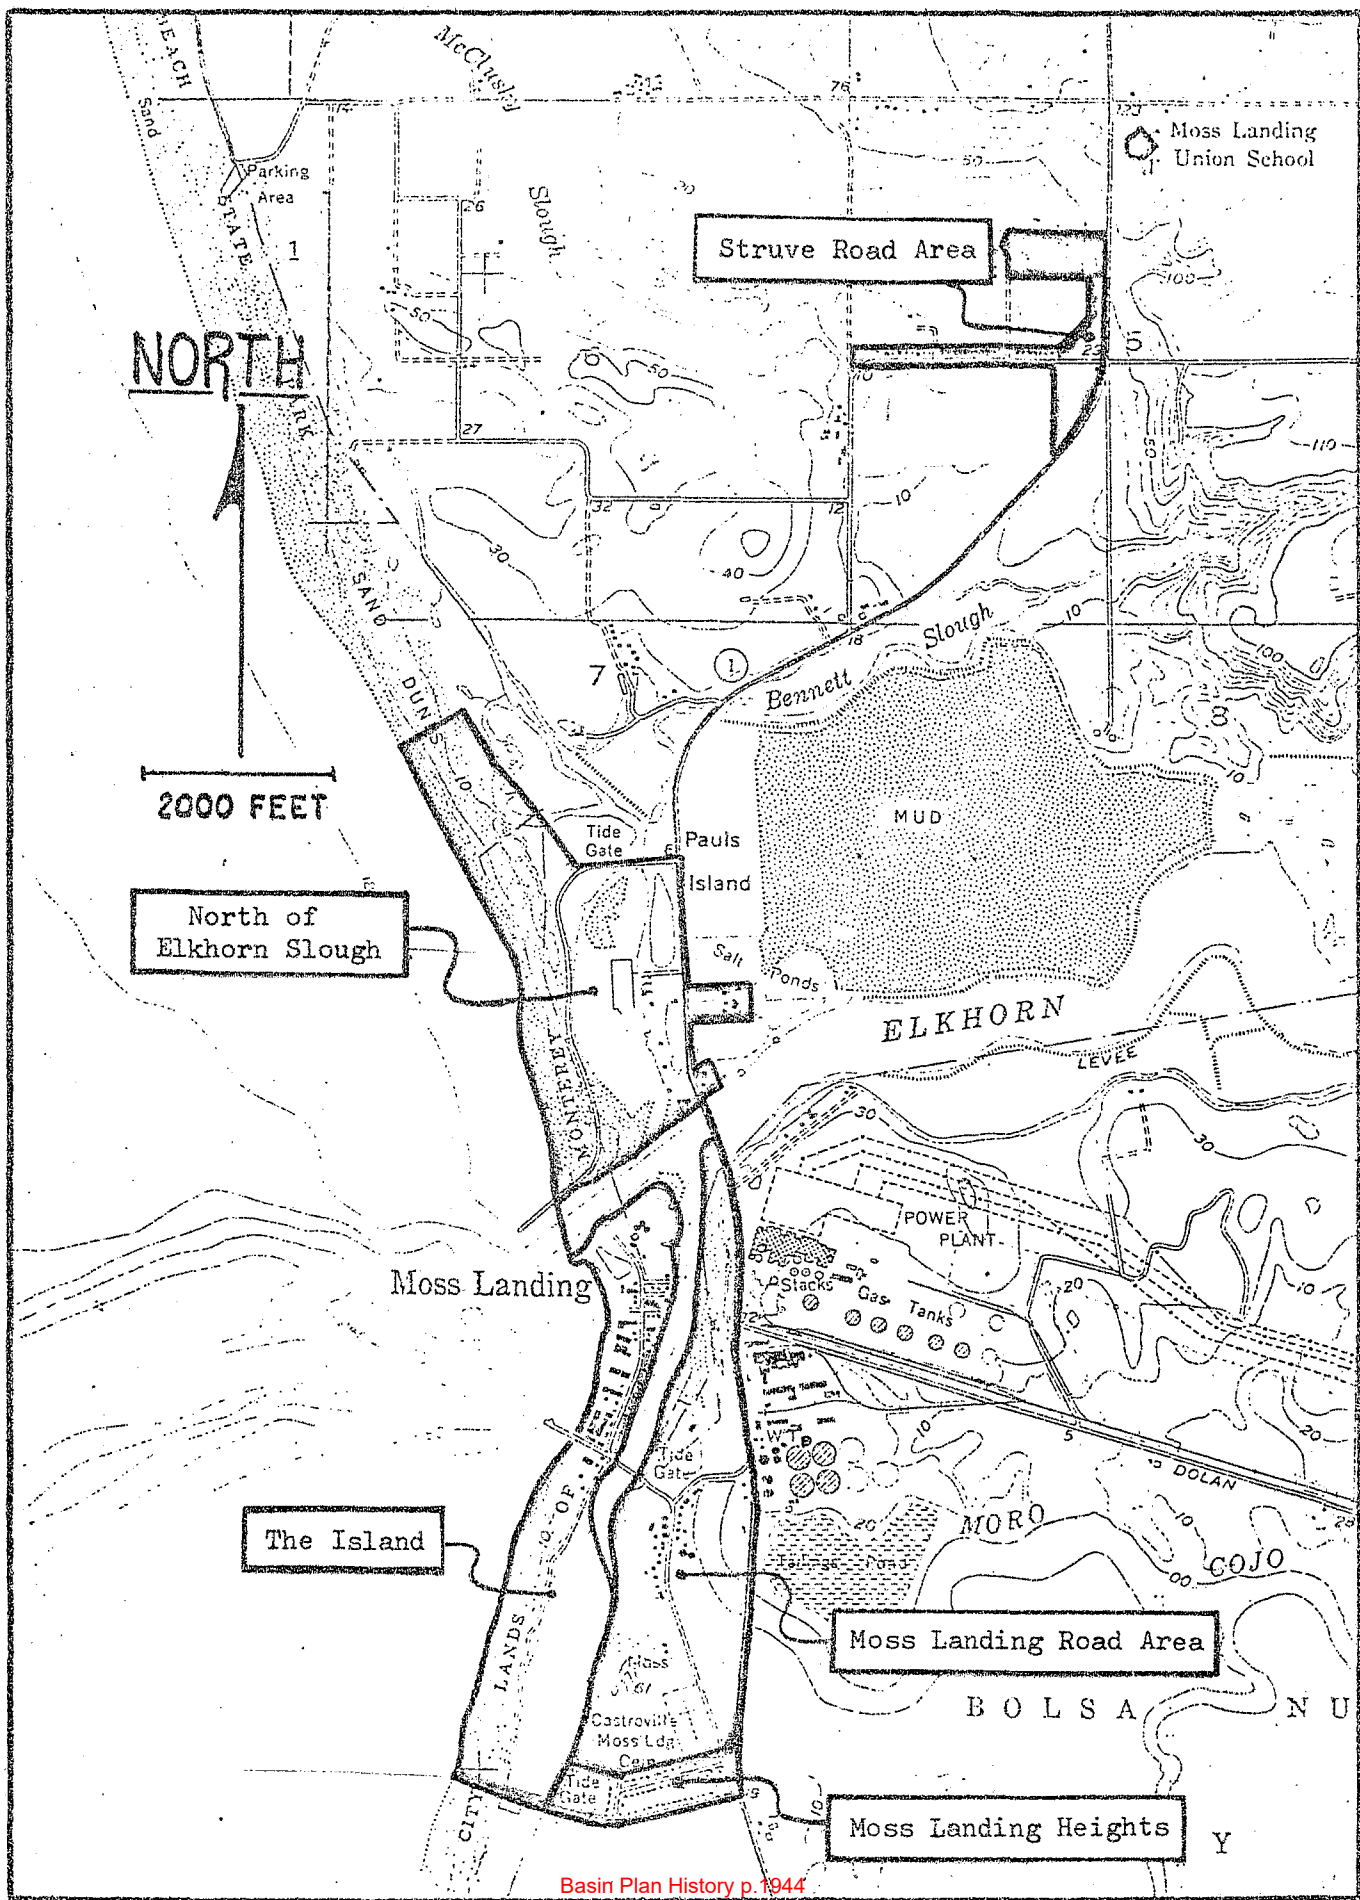

BE IT FURTHER RESOLVED, the Community of Moss Landing, its agents or assigns, shall submit written proof of compliance to the Regional Board within 15 days after each specified date; and,

BE IT FURTHER RESOLVED, the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code; and,

I, KENNETH R. JONES, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region on July 9, 1976, and amended on December 10, 1976.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

Resolution No. 76-05

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coastal Basin

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, did on March 14, 1975, adopt a Water Quality Control Plan, Central Coastal Basin; and
- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, after due notice and public hearing in accordance with Water Code Section 13244, has determined that said Plan requires further revision and amendment; and
- WHEREAS, drafts of proposed revisions and amendments have been prepared and submitted to interested persons and agencies for review and comment; and
- WHEREAS, proposed revisions and amendment apply specifically to Chapter 2, Present and Potential Beneficial Uses, of said Basin Plan; and
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and
- WHEREAS, a hearing was held by this Board on June 11, 1976, to receive testimony concerning the proposed revisions and amendment to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the revisions and amendment to the Water Quality Control Plan, Central Coastal Basin, consisting of the attached Table 2-1, Present and Anticipated Future Uses of Inland Surface Waters, and Table 2-2, Present and Anticipated Future Uses of Coastal Waters, considered by the Board on June 11, 1976, are hereby adopted.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 11, 1976.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1122-A Laurel Lane
San Luis Obispo, California 93401

Rescinded
9-11-87

RESOLUTION NO. 76-03

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COAST BASIN

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, adopted a Water Quality Control Plan (Basin Plan) for the Central Coast Basin on March 14, 1975; and
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and
- WHEREAS, in April 1975, the Monterey County Department of Environmental Health surveyed 232 individual sewage disposal systems in one such area and found 141, or 60 percent, unsatisfactory; and
- WHEREAS, unsatisfactory systems exhibit sewage overflow to the ground surface, seepage from the absorption field to natural drainage courses, inadequate capacity, and irreparable damage; and
- WHEREAS, this area of concern includes the Monterey County Community Service Area No. 66 (CSA #66) established by local election March 2, 1976, which includes the Community of Las Lomas-Hall; and
- WHEREAS, CSA #66 is located in northern Monterey County about three miles southeast of the City of Watsonville, Santa Cruz County, in Sections 22 and 27 of T12S, R2E, MDB&M; and
- WHEREAS, surface drainage and subsurface drainage is tributary to Elkhorn Slough, a navigable waterway with beneficial uses of industrial service supply, wildlife habitat, and water contact and non-water contact recreation; and
- WHEREAS, after considering all factors and evidence presented at a public hearing on February 6, 1976, the Regional Board adopted Resolution No. 76-01 prohibiting additional individual disposal systems in Las Lomas-Hall, as defined therein; and
- WHEREAS, continued use of existing individual disposal systems in the affected area unreasonably threatens public health and beneficial uses; and
- WHEREAS, on May 13, 1976, in the City Hall Conference Room, 440 Harcourt Avenue, Seaside, California, after due public notice, the Board conducted a public hearing, in accordance with Section 13244 of the California Water Code, received evidence, and considered all factors concerning the prohibition of individual disposal systems in CSA #66;

NOW, THEREFORE BE IT RESOLVED, Chapter 5, discharge prohibitions section, of said Basin Plan is hereby amended, as follows:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance, the use of individual disposal systems is prohibited in Monterey County Service Area No. 66, Las Lomas-Hall, after July 1, 1979."; and

BE IT FURTHER RESOLVED, that compliance with the above prohibition shall be achieved according to the following time schedule:

	<u>Compliance Date</u>
1. Complete Project Report	4-1-77
2. Complete Plans & Specifications	10-1-77
3. Begin Construction	4-1-78
4. Complete Compliance with Prohibition	7-1-79; and

BE IT FURTHER RESOLVED, Monterey County Service Area No. 66, its agent or assignee, shall submit written proof of compliance to the Regional Board within 15 days after each specified date; and

BE IT FURTHER RESOLVED, the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code; and

BE IT FURTHER RESOLVED, upon approval of the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the prohibition contained herein.

I, Kenneth R. Jones, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region, on May 13, 1976.

 Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 76-01

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN
CENTRAL COASTAL BASIN

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and
- WHEREAS, said Basin Plan was approved by the State Water Resources Control Board on March 20, 1975; and
- WHEREAS, a sanitary survey conducted during April 1975 by the Monterey County Department of Environmental Health indicated that 141 or 60 percent of 232 individual sewage systems surveyed were declared unsatisfactory; and
- WHEREAS, unsatisfactory systems include those experiencing sewage overflows to the ground surface, those experiencing seepage from absorption fields into natural drainage courses, and those requiring pumping more frequently than once every two years, and those impossible to repair; and
- WHEREAS, the area of concern is the entire area enclosed by the heavy dashed line on the attached Vicinity Map of the Las Lomas Hall area; and
- WHEREAS, continued installation and usage of individual leaching and percolation systems will increase the threat to public health and will further unreasonably impair water quality; and
- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, after due notice and public hearing in accordance with Section 13244 of the California Water Code, has determined that said Basin Plan requires revision and amendment;

NOW, THEREFORE BE IT RESOLVED, that said Basin Plan is hereby revised and amended in the following particulars:

CHAPTER 5, Discharge Prohibitions section:

Add new paragraphs as follows:

"In order to achieve water quality objectives, protect present and future beneficial water uses, protect public health and prevent nuisance, additional waste discharges are prohibited after February 6, 1976, as follows.

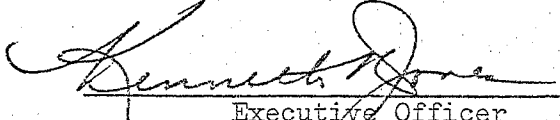

In that portion of Monterey County commonly known as Las Lomas - Hall, more particularly described as... beginning at the Section corner common to Sec. 22, 23,

26, 27 in said Township and Range; thence north along the Section line to a point where an extended east-west line will connect with the northeast property corner of assessor's parcel #119-261-20; thence westerly along said northern property line to the first property corner common to the south property line of those parcels having frontage on Garin Road; thence westerly along the south property line of the Garin Road parcels to the intersection with the east property line of assessor's parcel #119-011-15; thence southerly along said line until its intersection with a line extended north from Bloom Road; thence southerly along said line until its intersection with a line extended north from Bloom Road; thence southerly along that line and Bloom Road to its intersection with the boundary of Rancho Balsa de San Cayetano; thence easterly along said boundary to the east Section line of Section 27; thence north along said line to the point of beginning."

"An exception to this prohibition may be granted whenever the Board finds that the continued operation of individual sewage disposal systems in a particular area will not, individually or collectively, directly or indirectly, adversely affect water quality."

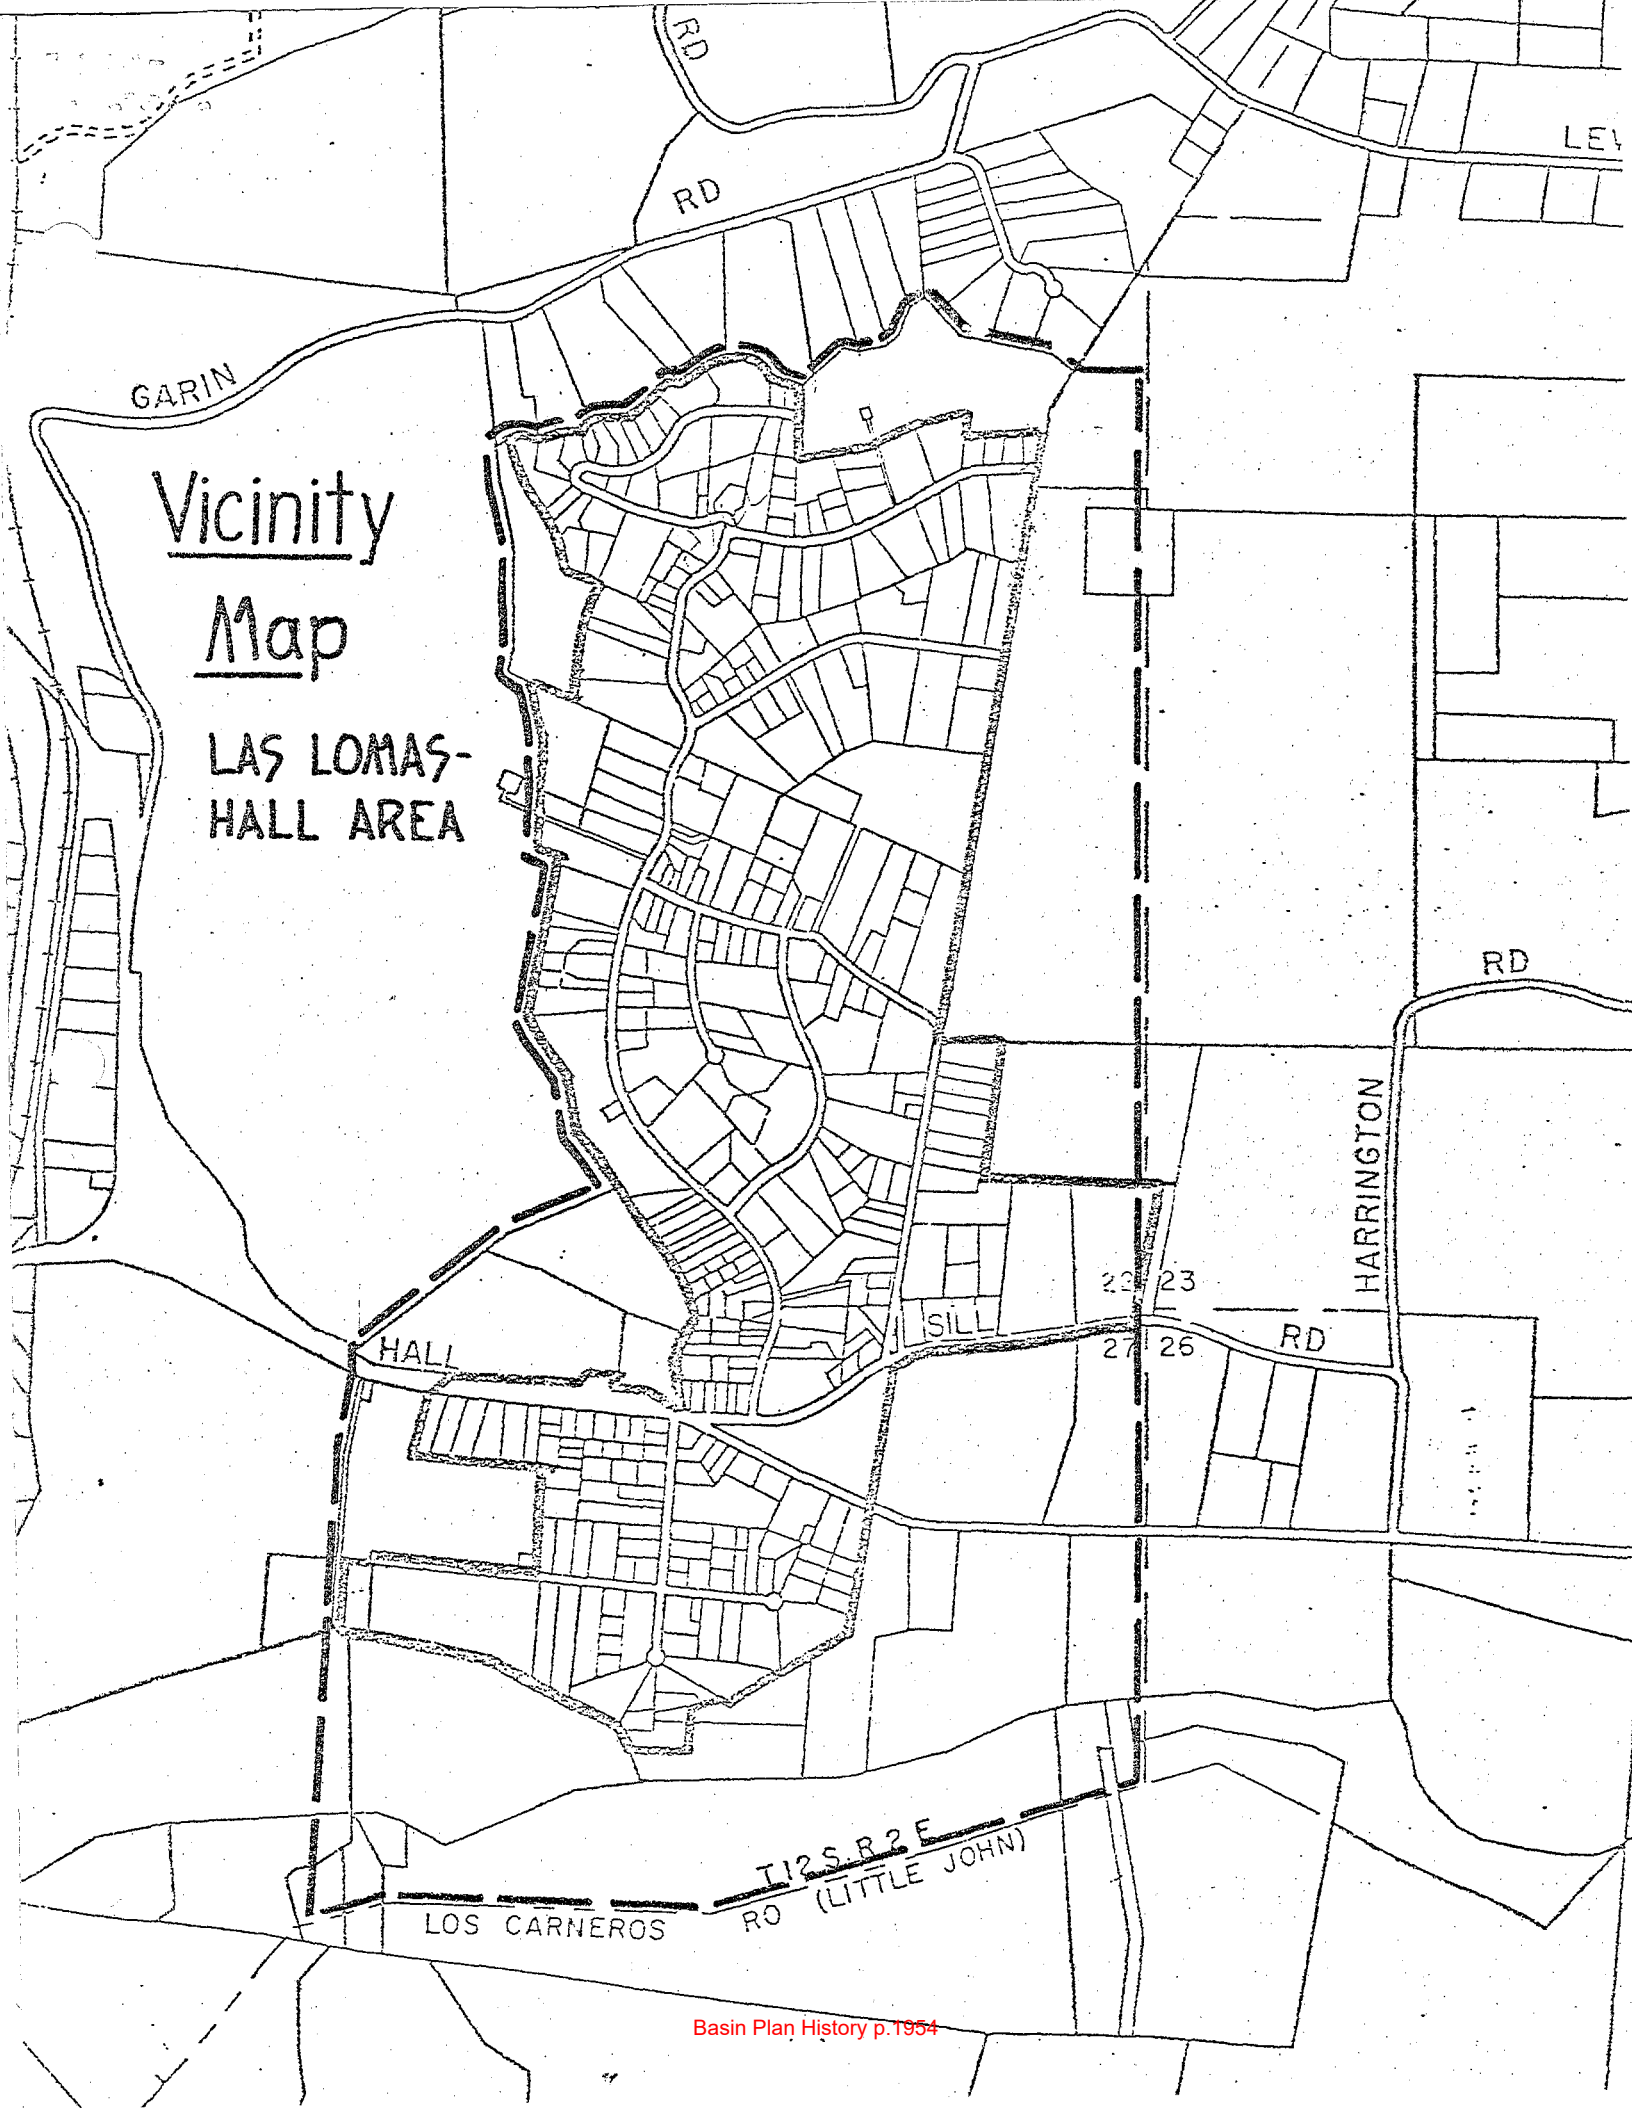

BE IT FURTHER RESOLVED that the Executive Officer of this Regional Board is hereby directed to submit said Basin Plan, as amended and revised, to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

I, KENNETH R. JONES, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 6, 1976.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

Resolution No. 75-2

Concerning Revisions and Amendment of Water
Quality Control Plan, Central Coastal Basin No. 3

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, did on September 13, 1974, adopt a Water Quality Control Plan, Central Coastal Basin; and

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, after due notice and public hearing in accordance with Water Code Section 13244, has determined that said Plan requires further revision and amendment, and

WHEREAS, drafts of proposed revisions and amendment have been prepared and submitted to interested persons and agencies for review and comment, and

WHEREAS, proposed revisions and amendment apply specifically to Chapters 4, 5 and 7 of said Basin Plan, and

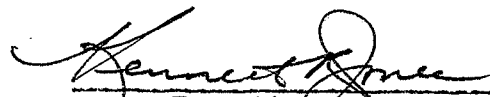

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and

WHEREAS, a hearing was held by this Board on March 14, 1975, to receive testimony concerning the proposed revisions and amendment to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the revisions and amendment to the Water Quality Control Plan, Central Coastal Basin included in the "Recommendations of Regional Board Staff for Amendments to Water Quality Control Plan Report, Central Coastal Basin, for Consideration of Regional Board No. 3 at the March 14, 1975, Meeting" are hereby adopted.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit said Water Quality Control Plan as revised and amended, to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on March 14, 1975.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

Summary of Amendments to Water Quality Control Plan,
Central Coastal Basin

Chapter 4 - Water Quality Objectives

The State Water Resources Control Board has directed that water quality objectives be established for reasonable regulation of controllable water quality factors, that general objectives be assigned to the waters of the Basin as a whole rather than by beneficial use, and that statewide plans and policies be uniformly and accurately applied throughout the state. Based on this premise much of the proposed format and language has been developed at the State Board level, modified by a census of regional staff representatives, tentatively approved by EPA staff, and forwarded to regions for final preparation.

Specific changes include:

1. Addition of a maximum 3-year period between public hearings for the purpose of updating and revision of the water quality objectives.
2. Deletion of the former table 4-1, "Water Quality Criteria for Beneficial Uses".
3. Inclusion by reference of all existing statewide plans and policies which include or relate to water quality objectives.
4. Supersession of all previously existing water quality objectives.
5. Categorical establishment of the nondegradation policy as the prevailing objective for all waters of the Basin.
6. Application of maximum and minimum acceptable values for dissolved oxygen and pH to Basin ocean waters, which were not provided for in the existing Ocean Plan.
7. Application of uniform language principle to objectives for inland surface waters, enclosed bays and estuaries, with the following additions:
 - a. Turbidity objective includes a contingency for necessary dredging operations and is extended to include bays and estuaries.
 - b. pH objectives have been revised and are specified as two major pH ranges.
 - c. Thermal objectives have been expanded beyond the provisions of the Thermal Plan to include intrastate waters.
 - d. Toxicity objectives have been applied to enclosed bays and estuaries in addition to surface waters. This objective, as stated, has been accepted by EPA.

- e. Pesticide objectives are as specified in SWRCB memo dated 11/8/74.
 - f. Chemical objectives are as prescribed by the SWRCB. Table 4-4 has been expanded to reflect the latest data from Water Quality Criteria 1972.
 - g. Objectives for "other organics" have been retained and updated.
 - h. Radionuclide narrative prepared by SWRCB adds a general radionuclide objective.
 - i. Table 4-7 "Median Surface Water Quality Objectives", has been expanded to include additional inland surface waters and more constituents.
8. Groundwater objectives incorporate SWRCB recommendations including expansion of Table 4-8, "Median Groundwater Objectives".

Chapter 5 - Implementation Plan

Chapter 5 has been revised in accordance with the recommendations of the SWRCB to distinguish between advisory and control actions. Specifically the proposed revisions, commencing with page 5-29, "Nonpoint Source Measures", include:

1. Addition of detailed summations of pertinent State Board Plans and Policies adopted to facilitate statewide control of water quality.
2. Distinction between the above mentioned control actions and the endorsed state-level advisory actions.
3. Incorporation of the Regional Goals and Management Principles heretofore contained in Chapter V of the Interim Water Quality Control Plan for the Central Coastal Basin and adopted by this Board on June 10, 1971.
4. Clearer separation of existing Regional Board control actions and actions to be taken under advisement by the Board.
5. Categorization of actions by Other Authorities and Legislation as actions to be taken under advisement.

Chapter 7 - Surveillance

The State Water Resources Control Board has provided the regions with a standard descriptive narrative of the surveillance program in an attempt to provide for accuracy and uniformity. The revised chapter appropriately emphasizes the importance of an adequate surveillance program to the enforcement and planning programs.

No conceptual revisions are involved; general changes being limited to addition or expansion of program task descriptions. Specific changes include:

1. References to Sections of PL 92-500,(Federal Water Pollution Control Act) that are dependent upon a thorough surveillance program have been amended.

2. Program Objectives 7 and 8 have been extended to include water quality segments and waste discharge requirements respectively.

3. Program Tasks have been revised to include the separate tasks of Complaint Monitoring, Surveillance System Design, and Groundwater Network. In contrast, former tasks 9 and 10 were incorporated into the remaining tasks.

4. Estuarine Monitoring has been updated as provided in the "Water Quality Control Policy for the Enclosed Bays and Estuaries of California".

5. An addendum to Table 7-3 "Dischargers with Monitoring Programs", has been included to reflect the additions and deletions since adoption of the Basin Plan Report in September 1974.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 74-1

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN (Interim)
CENTRAL COASTAL, BASIN 3

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, did on June 10, 1971, adopt a Water Quality Control Plan (Interim), Central Coastal, Basin 3, (hereafter "Interim Plan"), which Interim Plan has been heretofore amended; and

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, after public hearing in accordance with Water Code Section 13244, has determined that said Interim Plan, as amended, requires further revision and amendment;

NOW, THEREFORE, BE IT RESOLVED that said Interim Plan is hereby revised and amended in the following particulars:

1. Chapter VI, DISCHARGE PROHIBITIONS section:

"Waters Subject to Tidal Action

Waste discharges to the following areas are prohibited:

1. Effective July 1, 1977, in Monterey Bay, northern and southern extremes within the following areas: inshore from a line extending from Santa Cruz Point to the mouth of the Pajaro River; inshore from a line extending from Point Piños to the mouth of the Salinas River; and the offshore area within a three-mile radius of Point Piños."

2. Chapter VII, SALINAS SUB-BASIN section:

Substitute the following paragraph for the second paragraph:

"Several possible wastewater treatment and disposal schemes are available to the Castroville, Salinas, and Marina areas. Marina could join a Monterey Peninsula system and export effluent via a common transmission line to the Salinas Valley for disposal and eventual reclamation. Salinas could consolidate and upgrade its existing plants and/or join with the Monterey Peninsula system for treatment and disposal in the Salinas Valley area. Reclamation and reuse for irrigation or groundwater recharge in the Salinas Valley would be a prime objective for the future. Castroville could develop a reclamation facility near its present plant or consolidate with a regional system."

3. Chapter VII, CARMEL-POINT PINOS SUB-BASIN, section:

Substitute the following paragraphs:

"Complete protection of the waters of Monterey and Carmel Bays and the Carmel River will require the construction of interceptor lines, consolidated treatment plants, and several wastewater reclamation projects. Ultimately, all of the urbanized areas of the sub-basin could be served by sewers which terminate exclusively in reclamation projects. It may be possible to use effluent from the present Carmel Sanitary District treatment plant and another plant to be built in Carmel Valley for either percolation or injection into the Carmel Valley ground water basin."

"Wastewater from Pacific Grove will be transported to the existing Monterey plant for treatment. Effluent from existing plants at Monterey, Seaside, and Fort Ord will be collected in a common transmission line and transported north to the central portion of Monterey Bay near the Salinas River. Ultimately a lower Salinas Valley regional treatment plant will be constructed which may serve the Monterey Peninsula as well as northern Monterey County. Disposal options available include consolidation and reclamation and reuse. Effluent from the existing Salinas plant can be disposed of either through an outfall to the Bay or to the Salinas River, or by reclamation and reuse for irrigation in the lower Salinas Valley. The initial phases of a consolidated project are scheduled for completion in 1976. Local reclamation projects could take a portion of sewage produced on the peninsula and provide a source of water to irrigate some of the numerous golf courses, located nearby or be injected in the ground water basin near Seaside.

"In addition to the treatment and disposal facilities already mentioned, this sub-basin will require the construction of sewage collection systems in several rapidly developing areas. The Laguna Seca-Hidden Hills area can be served by extensions to the present Monterey or Seaside systems, or by the system which will be built to serve Carmel Valley."

BE IT FURTHER RESOLVED that the Executive Officer of this Regional Board is hereby directed to submit said Interim Plan, as amended and revised, to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 11, 1974.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 72-4

CONCERNING REVISION AND AMENDMENT OF
WATER QUALITY CONTROL PLAN (Interim),
CENTRAL COASTAL, BASIN 3

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, did on June 10, 1971, adopt a Water Quality Control Plan (Interim), Central Coastal, Basin 3, (hereafter "Interim Plan"), which Interim Plan has been heretofore amended; and

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region, after public hearing in accordance with Water Code Section 13244, has determined that said Interim Plan, as amended, requires further revision and amendment;

NOW, THEREFORE, BE IT RESOLVED that said Interim Plan is hereby revised and amended in the following particulars:

1. Appendix A of said Interim Plan is revised to read in accordance with Appendix A attached hereto and incorporated herein.
2. Chapters V, VI and VII of said Interim Plan are revised to read in accordance with Chapters V, VI and VII attached hereto and incorporated herein.

BE IT FURTHER RESOLVED that the Executive Officer of this Regional Board is hereby directed to submit said Interim Plan, as amended and revised, to the State Water Resources Control Board for approval pursuant to Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 8, 1972.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD

CENTRAL COAST REGION

RESOLUTION NO. 71-3

ADOPTING AN

INTERIM WATER QUALITY CONTROL PLAN

for

CENTRAL COASTAL BASIN

WHEREAS it is the intent of the California Regional Water Quality Control Board, Central Coast Region, to establish controls for factors affecting water quality in the Central Coastal Basin; and

WHEREAS the Board conducted a public hearing on May 5, 1971, after notice to all interested persons in accordance with Section 13244 of the Water Code, and has considered the evidence introduced at that hearing with regard to this Water Quality Control Plan; now therefore be it

RESOLVED that the Water Quality Control Plan for Central Coastal Basin as set forth in the attached copy is hereby adopted; and be it

FURTHER
RESOLVED that all water quality control plans adopted prior to this date are hereby repealed; and be it

FURTHER
RESOLVED that the Project List which is titled "Appendix A" is recommended for adoption by the State Water Resources Control Board.

June 10, 1971

WILLARD T. BRANSON
Chairman

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 70-2

WATER QUALITY CONTROL PLAN TO REGULATE DISCHARGES FROM WASTE DISPOSAL
SYSTEMS WITHIN NACIMIENTO RESERVOIR WATERSHED, SAN LUIS OBISPO COUNTY

WHEREAS, Article 3, California Water Code, defines Regional Water Quality Control Plans; and

WHEREAS, Section 13240, California Water Code states that "each regional board shall formulate and adopt water quality control plans for all areas within the region. Such plans shall conform to the policies set forth in Chapter 1 (commencing with Section 13000) of this division and any state policy for water quality control. During the process of formulating such plans the regional boards shall consult with and consider the recommendations of affected state and local agencies. Such plans shall be periodically reviewed and may be revised."; and

WHEREAS, Section 13243, California Water Code, states that "A regional board, in a water quality control plan or in waste discharge requirements, may specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted."; and

WHEREAS, the Nacimiento Reservoir Watershed, including all major and minor tributaries to the Nacimiento River and all underlying ground waters lies within the jurisdiction of the California Regional Water Quality Control Board, Central Coast Region; and

WHEREAS, adequate notice and review has been made and public hearings held in which the Board has heard all persons present and desiring to be heard concerning this matter; and

WHEREAS, both surface and ground water in the Nacimiento River Basin are subject to extensive uses which are to be protected, including municipal, domestic, industrial and agricultural water supply, recreation, fish and wildlife habitat, swimming, boating, aesthetic enjoyment and ground water recharge; and

WHEREAS, it is the intent of the California Regional Water Quality Control Board, Central Coast Region, to establish policy such that the water resources of the region be put to beneficial use to the fullest extent of which they are capable and that the waste or unreasonable use or unreasonable method of use of water be prevented; now, therefore, be it

RESOLVED that the Board does hereby adopt the attached Water Quality Control Plan to Regulate Discharges from Waste Disposal Systems Within Nacimiento Reservoir Watershed, San Luis Obispo County; and be it further

RESOLVED, that the Board does fully intend to protect the quality of Nacimiento Reservoir and underlying ground waters by implementing this water quality control plan through surveillance and enforcement programs; and be it further

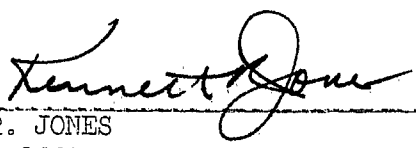

RESOLVED that copies of this Resolution and attached statement be transmitted to the State Water Resources Control Board for review, in accordance with Section 13245 of the California Water Code; and be it further

RESOLVED, that copies of the statement be transmitted to all interested persons.

Adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 23, 1970.

EUGENE E. BRENDLIN
Chairman

ATTEST:

KENNETH R. JONES
Executive Officer

CENTRAL COASTAL REGIONAL WATER QUALITY CONTROL BOARD

RESOLUTION NO. 69-5

WATER QUALITY CONTROL POLICY FOR SALINAS RIVER BASIN
AND UNDERLYING GROUND WATERS, SAN LUIS OBISPO AND MONTEREY COUNTIES.

WHEREAS, Section 13052(e) of the California Water Code states that each regional board, with respect to its region, shall:

"Formulate and adopt long-range plans and policies with respect to water pollution control and water quality control within the region in conformity with the policies set forth in Chapter 1 (commencing at Section 13000) and any water quality control policy adopted at any time by the state board."; and,

WHEREAS, the Salinas River Basin, including all major and minor tributaries to the Salinas River and all underlying ground waters lies within the jurisdiction of the Central Coastal Regional Water Quality Control Board; and

WHEREAS, adequate notice and review has been made and public hearings held in which the Board has heard all persons present and desiring to be heard concerning this matter; and,

WHEREAS, both surface and ground water in the Salinas River Basin are subject to extensive uses which are to be protected, including municipal, domestic, industrial and agricultural water supply, recreation, fish and wildlife habitat, swimming, boating, aesthetic enjoyment and ground water recharge; and,

WHEREAS, it is the intent of the Central Coastal Regional Water Quality Control Board to establish policy such that the water resources of the region be put to beneficial use to the fullest extent of which they are capable and that the waste or unreasonable use or unreasonable method of use of water be prevented; therefore, be it

RESOLVED, that the Board does hereby adopt the attached Water Quality Control Policy for the Salinas River Basin and Underlying Ground Waters, and be it further

RESOLVED, that the Board does fully intend to protect the quality of the Salinas River Basin and underlying ground waters by implementing this water quality control policy through surveillance and enforcement programs; and be it further

RESOLVED, that this policy statement supersedes the Policy Statement for the Discharge of Sewage Effluents and Industrial Wastes in the Salinas River Basin, adopted June 9, 1961; and be it further

RESOLVED, that copies of this Resolution and attached statement be transmitted to the State Water Resources Control Board for review, in accordance with Section 13052.2 of the California Water Code; and be it further

RESOLVED, that copies of the statement be transmitted to all interested persons.

Adopted by the Central Coastal Regional Water Quality Control Board on June 15, 1969.

CENTRAL COASTAL REGIONAL WATER QUALITY CONTROL BOARD

RESOLUTION NO. 68-6

ADOPTING WATER QUALITY CONTROL POLICY FOR SAN LORENZO RIVER BASIN
AND UNDERLYING GROUND WATERS, SANTA CRUZ COUNTY

WHEREAS, Section 13052(e) of the California Water Code states that each regional board, with respect to its region, shall:

"Formulate and adopt long-range plans and policies with respect to water pollution control and water quality control within the region in conformity with the policies set forth in Chapter 1 (commencing at Section 13000) and any water quality control policy adopted at any time by the state board."; and,

WHEREAS, the San Lorenzo River Basin, including all major and minor tributaries to the San Lorenzo River and all underlying ground waters, Santa Cruz County, lies within the jurisdiction of the Central Coastal Regional Water Quality Control Board; and

WHEREAS, adequate notice and review has been made and public hearings held in which the Board has heard all persons present and desiring to be heard concerning this matter; and,

WHEREAS, both surface and ground water in the San Lorenzo River Basin are subject to extensive uses which are to be protected, including municipal, domestic, industrial and agricultural water supply, recreation, fish and wildlife habitat, swimming, boating, aesthetic enjoyment and ground water recharge; and,

WHEREAS, it is the intent of the Central Coastal Regional Water Quality Control Board to establish policy such that the water resources of the region be put to beneficial use to the fullest extent of which they are capable and that the waste or unreasonable use or unreasonable method of use of water be prevented; therefore, be it

RESOLVED, that the Board does hereby adopt the attached Water Quality Control Policy for the San Lorenzo River Basin and Underlying Ground Waters, and be it further

RESOLVED, that the Board does fully intend to protect the quality of the San Lorenzo River Basin and underlying ground waters by implementing this water quality control policy through surveillance and enforcement programs; and be it further

RESOLVED, that this policy statement supersedes the Policy Statement for the Discharge of Sewage Effluents in the San Lorenzo River Basin, adopted October 31, 1963; and be it further

RESOLVED, that copies of this Resolution and attached statement be transmitted to the State Water Resources Control Board for review, in accordance with Section 13052.2 of the California Water Code; and be it further

RESOLVED, that copies of the statement be transmitted to all interested persons.

Adopted by the Central Coastal Regional Water Quality Control Board on December 13, 1968.

CENTRAL COASTAL REGIONAL WATER QUALITY CONTROL BOARD

RESOLUTION NO. 68 - 3

ADOPTING WATER QUALITY CONTROL POLICY FOR PAJARO RIVER BASIN, SOUTHERN SANTA CLARA, SAN BENITO, SANTA CRUZ, AND NORTHERN MONTEREY COUNTIES.

WHEREAS, Section 13052(e) of the California Water Code states that each regional board, with respect to its region, shall:

"Formulate and adopt long-range plans and policies with respect to water pollution control and water quality control within the region in conformity with the policies set forth in Chapter 1 (commencing at Section 13000) and any water quality control policy adopted at any time by the state board."; and,

WHEREAS, the Pajaro River Basin, including all major and minor tributaries to the Pajaro River and all underlying ground water sub-basins, Southern Santa Clara, San Benito, Santa Cruz and Northern Monterey Counties, lies within the jurisdiction of the Central Coastal Regional Water Quality Control Board; and,

WHEREAS, adequate notice and review has been made and public hearings held in which the Board has heard all persons present and desiring to be heard concerning this matter; and,

WHEREAS, both surface and ground water in the Pajaro River Basin are subject to extensive uses which are to be protected, including domestic, industrial and agricultural water supply, recreation, fish and wildlife habitat, swimming, boating, aesthetic enjoyment and ground water recharge; and,

WHEREAS, it is the intent of the Central Coastal Regional Water Quality Control Board to establish policy such that the water resources of the Region be put to beneficial use to the fullest extent of which they are capable and that the waste or unreasonable use or unreasonable method of use of water be prevented; therefore, be it

RESOLVED, that the Board does hereby adopt the attached Water Quality Control Policy for the Pajaro River Basin and Underlying Ground Waters, and be it further

RESOLVED, that the Board does fully intend to protect the quality of the Pajaro River Basin and underlying ground waters by implementing this water quality control policy through surveillance and enforcement programs; and be it further

RESOLVED, that this policy statement supersedes the tentative Statement of Policy for Ground and Surface Waters in Southern Santa Clara County, dated September 1954, and the Statement of Policy for Tidal Waters in the Moss Landing-Mouth of Pajaro River Area, dated November 1955; and be it further

RESOLVED, that copies of this Resolution and attached statement be transmitted to the State Water Resources Control Board for review, in accordance with Section 13052.2 of the California Water Code; and be it further

RESOLVED, that copies of the statement be transmitted to all interested persons.

Adopted by the Central Coastal Regional Water Quality Control Board on June 21, 1968.

RESOLVED, That the Board adopt the attached Water Quality Criteria and Statement of Policy for Saline Waters, South Coastal Portion Santa Barbara County (Point Arguello to Rincon Point); and be it further

RESOLVED, That the Board declares its intent to protect quality of saline waters of South Coastal portion of Santa Barbara County by enforcing this policy and criteria through conduct of surveillance and enforcement programs; and be it further

RESOLVED, That copies of this Resolution and attached statement be transmitted to the State Water Quality Control Board for its review, in accordance with Section 13052.2, California Water Code; and be it further

RESOLVED, That copies of the statement be transmitted to all interested persons.

Adopted by the Central Coastal Regional Water Quality Control Board on September 15, 1966.

Kenneth R. Jones, Executive Officer

Appendix 2. Basin Plan amendments approved by the California State Water Resources Control Board

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2016-0018**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN (BASIN PLAN) TO ADOPT TOTAL MAXIMUM DAILY
LOADS FOR NITROGEN COMPOUNDS AND ORTHOPHOSPHATE IN STREAMS
OF THE PAJARO RIVER BASIN

WHEREAS:

1. On July 30, 2015, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted [Resolution No. R3-2015-0004](#) amending the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) to establish total maximum daily loads (TMDLs) and an associated implementation plan for nitrogen compounds and orthophosphate in streams of the Pajaro River basin.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the federal Clean Water Act and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for nitrogen compounds and orthophosphate in streams of the Pajaro River basin are set at levels necessary to attain and maintain the applicable water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing the nitrogen compounds and orthophosphate TMDLs as units of concentration in this Basin Plan amendment is appropriate because attaining concentration-based water quality targets will result in the restoration and protection of relevant beneficial uses.
4. The Central Coast Water Board concurred with the analyses contained in the final TMDL Report, the California Environmental Quality Act (CEQA) "Substitute Environmental Documents" for the Basin Plan amendments (including the CEQA Checklist and Analysis), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.

5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise water quality control plans; with section 13242, which requires a program of implementation to achieve water quality objectives; and with section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CLEAN WATER ACT section 303(d).
6. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing these TMDLs is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting nutrient-related water quality impairments of the Pajaro River basin.
7. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the California Office of Administrative Law. The TMDLs must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Resources Control Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2015-0004.
2. Authorizes and directs the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2015-0004 and the administrative record for this action to the California Office of Administrative Law and the TMDLs to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 5, 2016.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2014-0003**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN TO REVISE THE ONSITE WASTEWATER SYSTEM
IMPLEMENTATION PROGRAM

WHEREAS:

1. On June 19, 2012, the State Water Resources Control Board (State Water Board) adopted Water Quality Control Policy for Siting, Design, Operation, and Maintenance of Onsite Wastewater Treatment Systems (OWTS Policy). The OWTS Policy was approved by the California Office of Administrative Law on November 13, 2012, and became effective on May 13, 2013.
2. On May 30, 2013, the Regional Water Quality Control Board, Central Coast Region adopted [Resolution R3-2013-0005](#), an amendment to the Water Quality Control Plan for the Central Coastal Basin to revise the onsite wastewater implementation sections of the Basin Plan and to incorporate by reference the OWTS Policy into the Basin Plan. Resolution R3-2013-0005 also rescinds three resolutions related to onsite systems that were not approved by the State Water Board ([Resolution No. R3-2008-0005](#), [Resolution No. R3-2009-0012](#), and [Resolution No. R3-2011-0004](#)).
3. A Substitute Environmental Document (SED) was prepared by the State Water Board for the OWTS Policy in accordance with the Water Board's certified regulatory program (Cal. Code Regs., tit. 23 §§3777-3781). The State Water Board approved the OWTS Policy and the SED on June 19, 2012. The Basin Plan amendment removes existing Basin Plan provisions regulating onsite systems and incorporates the OWTS Policy. No substantive changes or modifications to the previously approved OWTS Policy are proposed, no substantial changes with respect to circumstances under which the project will be undertaken have occurred, and no new information triggers the need for supplemental or subsequent CEQA analysis.
4. Central Coast Water Board found the Basin Plan amendment to be completely within the scope of the OWTS Policy as analyzed by the State Water Board in the SED. As such, the recommended actions do not require further environmental review pursuant to the certified regulatory program or CEQA (Pub. Res. Code §21166; Cal. Code Regs. tit. 14, §§15161, 15163).
5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise basin plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted.
6. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the California Office of Administrative Law.

THEREFORE BE IT RESOLVED THAT:

The State Water Resources Control Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2013-0005.
2. Authorizes and directs the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2013-0005 and the administrative record for this action to the California Office of Administrative Law.

CERTIFICATION

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2014-0033**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE
CENTRAL COASTAL BASIN TO ADOPT TOTAL MAXIMUM DAILY LOADS FOR TOXICITY
AND PESTICIDES IN THE SANTA MARIA RIVER WATERSHED
(RESOLUTION NO. R3-2014-0009)

WHEREAS:

1. On January 30, 2014, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted [Resolution No. R3-2014-0009](#) amending the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) to establish Total Maximum Daily Loads (TMDLs) and an associated implementation plan for toxicity and pesticides in the Santa Maria River watershed.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for toxicity and pesticides in the Lower Santa Maria River Watershed are set at levels necessary to attain and maintain the applicable narrative water quality objectives, taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as toxicity or another appropriate measure (40 CFR §130.2(i)). Expressing these TMDLs in terms of toxicity and concentration is appropriate in this case because these measures demonstrate attainment of applicable narrative water quality objectives for toxicity and pesticides.
4. The Central Coast Water Board concurred with the analyses contained in the Final Project Report, the California Environmental Quality Act "Substitute Environmental Document" for the Basin Plan amendments (including the CEQA Checklist), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.

5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise Basin Plans, section 13242, which requires a program of implementation to achieve water quality objectives, and section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).
6. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDL is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting the toxicity and pesticide impairments of the Santa Maria River watershed.
7. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by California Office of Administrative Law. The TMDL must also receive approval from the U.S. Environmental Protection Agency.
8. The Executive Officer of the Central Coast Water Board may propose approval of revised TMDL numeric targets, consistent with requirements necessary for such an approval, if the Executive Officer determines that the revised TMDL numeric targets are more appropriate than those approved in this resolution.
9. The TMDL numeric targets predict the conditions necessary to achieve the TMDLs assigned to the impaired waterbodies. The timeline anticipated to achieve the TMDLs following approval by the Office of Administrative Law is 30 years for organochlorine pesticides, 15 years for pyrethroid pesticides, 15 years for malathion pesticides, and by October 2016 for chlorpyrifos and diazinon pesticides. The timeline to achieve the TMDL numeric targets is the same as the timeline to achieve the TMDLs.
10. The State Water Board staff is presently developing a statewide approach for toxicity that contemplates the use of the test of significant toxicity (TST). This statewide approach will be considered by the State Water Board at a future meeting. While a Central Coast Water Board technical report references the TST, neither this board's approval of the basin plan amendment nor the basin plan amendment require the use of the TST.

THEREFORE BE IT RESOLVED THAT:

The State Water Resources Control Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2014-0009.
2. Authorizes and directs the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2014-0009 and the administrative record for this action to the California Office of Administrative Law and the TMDL to the U.S. Environmental Protection Agency for approval.

3. Expects the Central Coast Water Board to follow the evolving regulation of pyrethroids in the Central Valley region, engage as appropriate in that process, conduct further stakeholder process locally within the Central Coast region, and to consider revisions consistent with whereas 8.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on July 2, 2014.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2014-0009**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE
CENTRAL COASTAL BASIN TO ADOPT TOTAL MAXIMUM DAILY LOADS FOR NITROGEN
COMPOUNDS AND ORTHOPHOSPHATE IN THE LOWER SANTA MARIA RIVER
WATERSHED AND TRIBUTARIES TO OSO FLACO LAKE

WHEREAS:

1. On May 30, 2013, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted [Resolution No. R3-2013-0013](#) amending the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) to establish total maximum daily loads (TMDLs) and an associated implementation plan for nitrogen compounds and orthophosphate in the Lower Santa Maria River Watershed and Tributaries to Oso Flaco Lake.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for nitrogen compounds and orthophosphate in the Lower Santa Maria River Watershed and Tributaries to Oso Flaco Lake are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate in this case because an existing concentration-based water quality objective was used as the basis for determining the impairment and the basis for the TMDL numeric targets.
4. The Central Coast Water Board concurred with the analyses contained in the Final Project Report, the California Environmental Quality Act "Substitute Environmental Document" for the Basin Plan amendments (including the CEQA Checklist), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.

5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise Basin Plans, section 13242, which requires a program of implementation to achieve water quality objectives, and section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).
6. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDL is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting the nutrient-related impairments of the Lower Santa Maria River Watershed and Tributaries to Oso Flaco Lake.
7. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Resources Control Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2013-0013.
2. Authorizes and directs the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2013-0013 and the administrative record for this action to the California Office of Administrative Law and the TMDL to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2014-0008**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN TO ADOPT TOTAL MAXIMUM DAILY LOADS FOR NITROGEN COMPOUNDS AND ORTHOPHOSPHATE IN THE LOWER SALINAS RIVER AND RECLAMATION CANAL BASIN, AND THE MORO COJO SLOUGH SUBWATERSHED

WHEREAS:

1. On March 14, 2013, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted [Resolution No. R3-2013-0008](#) amending the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) to establish total maximum daily loads (TMDLs) and an associated implementation plan for nitrogen compounds and orthophosphate in the Lower Salinas River and Reclamation Canal Basin, and the Moro Cojo Slough Subwatershed.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for nitrogen compounds and orthophosphate in the Lower Salinas River and Reclamation Canal Basin, and the Moro Cojo Slough Subwatershed are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate in this case because an existing concentration-based water quality objective was used as the basis for determining the impairment and the basis for the TMDL numeric targets.
4. The Central Coast Water Board concurred with the analyses contained in the Final Project Report, the California Environmental Quality Act "Substitute Environmental Document" for the Basin Plan amendments (including the CEQA Checklist), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.

5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise Basin Plans, section 13242, which requires a program of implementation to achieve water quality objectives, and section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).
6. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDL is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting the fecal indicator bacteria impairments of the Santa Maria River Watershed.
7. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Resources Control Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2013-0008.
2. Authorizes and directs the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2013-0008 and the administrative record for this action to the California Office of Administrative Law and the TMDL to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on February 4, 2014.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2012-0055**

APPROVING AMENDMENTS THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO: 1) ADOPT TOTAL MAXIMUM DAILY LOADS FOR FECAL INDICATOR BACTERIA IN THE SANTA MARIA RIVER WATERSHED; AND 2) ADD THE SANTA MARIA RIVER WATERSHED (INCLUDING THE OSO FLACO SUBWATERSHED) TO THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION.

WHEREAS:

1. On March 15, 2012, the Central Coast Water Board adopted [Resolution No. R3-2012-0002](#) amending the Basin Plan to establish a Total Maximum Daily Load (TMDL) and implementation plan for fecal indicator bacteria in the Santa Maria River Watershed and add the Santa Maria River Watershed (including Oso Flaco subwatershed) to the Domestic Animal Waste Discharge Prohibition.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the Santa Maria River Watershed requires compliance with the Domestic Animal Waste Discharge Prohibition for discharges in the Santa Maria River Watershed. Supporting documentation for adding the Santa Maria River Watershed to the above-named prohibition is provided in the Final Project Report for Total Maximum Daily Loads for Fecal Indicator Bacteria in the Santa Maria River Watershed. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the Santa Maria River Watershed to the Domestic Animal Waste Discharge Prohibition.
4. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for fecal indicator bacteria in the Santa Maria River Watershed are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also

state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate in this case because an existing concentration-based water quality objective was used as the basis for determining the impairment and the basis for the TMDL numeric targets.

5. The Central Coast Water Board concurred with the analyses contained in the Final Project Report, the California Environmental Quality Act "Substitute Environmental Document" for the Basin Plan amendments (including the CEQA Checklist), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise Basin Plans, section 13242, which requires a program of implementation to achieve water quality objectives, and section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).
7. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDL is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting the fecal indicator bacteria impairments of the Santa Maria River Watershed.
8. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2012-0002.
2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2012-0002 as approved and the administrative record for this action to the Office of Administrative Law and the TMDL to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 16, 2012.

Clerk to the Board

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2011-0040**

APPROVING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO: 1) ADOPT TOTAL MAXIMUM DAILY LOADS FOR FECAL COLIFORM IN LOWER SALINAS RIVER WATERSHED; 2) ADD THE LOWER SALINAS RIVER WATERSHED TO THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION; AND 3) ADD THE LOWER SALINAS RIVER WATERSHED TO THE HUMAN FECAL MATERIAL DISCHARGE PROHIBITION.

WHEREAS:

1. On September 2, 2010, the Central Coast Water Board adopted [Resolution No. R3-2010-0017](#) amending the Basin Plan to establish a Total Maximum Daily Load (TMDL) and implementation plan for fecal coliform in the Lower Salinas River Watershed, add the Lower Salinas River Watershed to the Domestic Animal Waste Discharge Prohibition, and add the Lower Salinas River Watershed to the Human Fecal Material Discharge Prohibition.
2. The Central Coast Water Board found the Basin Plan amendment was consistent with the provisions of State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12.
3. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the Lower Salinas River Watershed requires compliance with the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition for discharges in the Lower Salinas River Watershed. Supporting documentation for adding the Lower Salinas River Watershed to the above-named prohibitions is provided in the Final Project Report for Total Maximum Daily Loads for Fecal Coliform in the Lower Salinas River Watershed. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the Lower Salinas River Watershed to the Human Fecal Material Discharge and the Domestic Animal Waste Discharge Prohibitions.
4. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for fecal coliform in the Lower Salinas River Watershed are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate in this case because an existing concentration-based water quality objective was used as the basis for determining the impairment.

5. The Central Coast Water Board concurred with the analyses contained in the [Final Project Report, the California Environmental Quality Act "Substitute Environmental Document"](#) for the Basin Plan amendments (including the CEQA Checklist), the staff report, and responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that regional water quality control boards may revise Basin Plans, section 13242, which requires a program of implementation to achieve water quality objectives, and section 13243, which authorizes regional water quality control boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).
7. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDL is established in the TMDL project report, the section 303(d) list, and the data contained in the administrative record documenting the pathogen impairments of the Lower Salinas River Watershed.
8. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also receive approval from the U.S. Environmental Protection Agency.
9. Central Coast Water Board staff determined that minor, non-substantive changes to the language of the Basin Plan amendment were necessary to correct minor clerical errors, to improve clarity, and to ensure that the amendment is consistent with the Basin Plan update adopted under Resolution No. R3-2010-0017. The Central Coast Water Board's Executive Officer submitted these minor changes in a memorandum dated October 7, 2010.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2010-0017.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2010-0017 as approved and the administrative record for this action to the Office of Administrative Law and the TMDL to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2011-0019**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR
THE CENTRAL COAST REGION (BASIN PLAN) TO 1) ADD THE
CORRALITOS/SALSIPUEDES CREEK WATERSHED TO
THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION AND
THE HUMAN FECAL MATERIAL DISCHARGE PROHIBITION, AND
(2) ESTABLISH TOTAL MAXIMUM DAILY LOADS FOR FECAL COLIFORM
IN CORRALITOS/SALSIPUEDES CREEK WATERSHED

WHEREAS:

1. On March 20, 2009, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted [Resolution No. R3-2009-0009](#) amending the Basin Plan to: (1) add the Corralitos/Salsipuedes Creek Watershed (Corralitos Creek Watershed including its subwatershed, Salsipuedes Creek Watershed)(Watershed) as an area subject to the Domestic Animal Waste Discharge Prohibition and the Human Fecal Material Discharge Prohibition and (2) establish Total Maximum Daily Loads for fecal coliform in Corralitos/Salsipuedes Creek Watershed.
2. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the Watershed requires compliance with the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition for discharges in the Watershed. Supporting documentation for adding the Watershed to the above-named prohibitions is provided in the Final Project Report for Total Maximum Daily Loads for fecal coliform in Corralitos and Salsipuedes Creeks. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the Watershed to the Human Fecal Material Discharge and the Domestic Animal Waste Discharge Prohibitions.
3. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA, and U.S. EPA guidance documents. A TMDL is defined as “the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background” (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for fecal coliform in the Watershed have been set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7 (c) (1)). The regulations in 40 CFR section 130.7 also state that TMDLs must take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate because an existing concentration-based water quality objective is used as the basis for the TMDLs numeric target.

4. The Central Coast Water Board found that the establishment of these TMDLs is consistent with the provisions of the State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR section 131.12. Adoption of these TMDLs will result in improved water quality throughout the region and maintain the level of water quality necessary to protect present and potential beneficial uses.
5. The Central Coast Water Board concurred with the analysis contained in the Final Project Report, the California Environmental Quality Act "substitute environmental documentation" for the Basin Plan amendment, including the CEQA Checklist, the staff report and the responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes Regional Water Quality Control Boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of federal Clean Water Act (CWA) section 303(d).
7. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing the TMDLs is established in the TMDLs staff report, the section 303(d) list, and the data contained in the administrative record documenting the fecal coliform impairments of the Corralitos/Salsipuedes Creek Watershed.
8. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the Office of Administrative Law (OAL). The TMDLs must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2009-0009.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2009-0009, as approved, and the administrative record for this action to the OAL and the TMDLs to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 19, 2011.

Clerk to the Board

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2011-0010**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO: (1) REMOVE THE SHELLFISH HARVESTING BENEFICIAL USE FOR SAN LORENZO RIVER ESTUARY, (2) ADD THE SAN LORENZO RIVER WATERSHED TO THE HUMAN FECAL MATERIAL DISCHARGE PROHIBITION AND THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION, AND (3) ESTABLISH TOTAL MAXIMUM DAILY LOADS FOR PATHOGENS IN SAN LORENZO RIVER ESTUARY, SAN LORENZO RIVER, BRANCIFORTE CREEK, CAMP EVERS CREEK, CARBONERA CREEK, AND LOMPICO CREEK

WHEREAS:

1. On May 8, 2009, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted Resolution No. R3-2009-0023 ([Attachment I](#)) amending the Basin Plan to: (1) remove the Shellfish Harvesting (SHELL) beneficial use for San Lorenzo River Estuary, (2) add the San Lorenzo River Watershed to the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition, and (3) establish Total Maximum Daily Loads (TMDLs) for pathogens in San Lorenzo River Watershed.
2. The federal regulations at 40 Code of Federal Regulations (CFR) section 131.10(g) allow the Central Coast Water Board to remove a designated use, which is not an “existing” use, if the state can demonstrate that achieving the use is not feasible based on the factors set forth in that section. Shellfish harvesting is not an “existing use” as that term is defined in 40 CFR section 131.3 because the shellfish harvesting use has not been attained in the water body on or after November 28, 1975. The removal of the SHELL beneficial use is based on the results of a Use Attainability Analysis (UAA) in the San Lorenzo River Estuary. Central Coast Water Board staff developed the UAA in 2004 and 2005 to determine the historic, actual, and potential shellfish harvesting activities in the San Lorenzo River Estuary. The UAA is necessary to conform to 40 CFR section 131.10(j) because the action involves a designated use specified in Clean Water Act (CWA) section 101(a)(2). The amendment and the UAA only address the fishable goal (“protection and propagation of fish, shellfish, and wildlife”) as it pertains to shellfish harvesting and does not address other fishable goals or the swimmable goal included in the water contact recreation designation contained in section 101(a)(2) of the CWA. The fishable goal of the CWA is also protected under other beneficial uses (including cold fresh water habitat) designated in the Basin Plan for the San Lorenzo River Estuary.
3. The Central Coast Water Board found that the removal of the shellfish harvesting beneficial use from the San Lorenzo River Estuary and the establishment of these TMDLs and Basin Plan amendments for the San Lorenzo River Watershed were consistent with the provisions of State Water Resources Control Board (State Water Board) [Resolution No. 68-16](#), “Statement of Policy with Respect to Maintaining High Quality of Waters in California” and 40 CFR section 131.12.

4. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the San Lorenzo River Watershed requires compliance with the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition for discharges in the San Lorenzo River Watershed. Supporting documentation for adding the San Lorenzo River Watershed to the above-named prohibitions is provided in the Final Project Report for Total Maximum Daily Loads for Pathogens in San Lorenzo River Estuary, San Lorenzo River, Branciforte Creek, Camp Evers Creek, Carbonera Creek, and Lompico Creek. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the San Lorenzo River Watershed to the Human Fecal Material Discharge and the Domestic Animal Waste Discharge Prohibitions.
5. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA, and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as “the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background” (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for pathogens in the San Lorenzo River Watershed are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate in this case because an existing concentration-based water quality objective was used as the basis for determining the impairment, and the basis for the numeric targets in the TMDLs numeric target.
6. The Central Coast Water Board concurred with the Use Attainability Analysis and the analysis contained in the Final Project Report, the California Environmental Quality Act “Substitute Environmental Document” for the Basin Plan Amendments (including the CEQA Checklist), the staff report, responses to comments, and found that these analyses comply with the requirements of the State Water Board’s certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board’s obligations attendant with the adoption of regulations “requiring the installation of pollution control equipment, or a performance standard or treatment requirement,” as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board’s environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
7. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes Regional Water Quality Control Boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of CWA section 303(d).

8. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing a TMDL is established in the TMDLs staff report, the CWA section 303(d) List of Water Quality Limited Segments, and the data contained in the administrative record documenting the pathogen impairments of the San Lorenzo River Watershed.
9. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the Office of Administrative Law (OAL). The TMDLs and SHELL de-designation must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2009-0023.
2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2009-0023, as approved, and the administrative record for this action to the OAL and the TMDLs and shellfish harvesting de-designation to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on March 1, 2011.

 Clerk to the Board

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2010-0038**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO (1) ADD THE APTOS CREEK WATERSHED TO THE HUMAN FECAL MATERIAL DISCHARGE PROHIBITION AND THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION, AND
(2) ESTABLISH TOTAL MAXIMUM DAILY LOADS FOR PATHOGENS IN APTOS CREEK, VALENCIA CREEK, AND TROUT GULCH

WHEREAS:

1. On May 08, 2009, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted Resolution No. R3-2009-0025 ([Attachment I](#)) amending the Basin Plan to add the Aptos Creek Watershed to the Human Fecal Material Discharge Prohibition, add the Aptos Creek Watershed to the Domestic Animal Discharge Prohibition, and establish Total Maximum Daily Loads (TMDLs) for pathogens in Aptos Creek, Valencia Creek, and Trout Gulch.
2. The elements of a TMDL are described in 40 Code of Federal Regulations (CFR) sections 130.2 and 130.7 and section 303(d) of the Clean Water Act (CWA), and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as “the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background” (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for pathogens in the Aptos Creek Watershed have been set at levels necessary to attain and maintain the applicable numeric water quality objectives, taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR §130.7 (c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs must take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate because in this case an existing concentration-based water quality objective was used as the basis for the TMDLs’ numeric target.
3. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the Aptos Creek Watershed requires compliance with the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition for discharges in the Aptos Creek Watershed. Supporting documentation for adding the Aptos Creek Watershed is provided in the Final Project Reports for Total Maximum Daily Loads for Pathogens in Aptos Creek, Valencia Creek and Trout Gulch. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the Aptos Creek Watershed to the Human Fecal Material Discharge and the Domestic Animal Waste Discharge Prohibitions.

4. The Central Coast Water Board found that the establishment of these TMDLs is consistent with the provisions of the State Water Resources Control Board (State Water Board) Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR 131.12. Adoption of these TMDLs will result in improved water quality throughout the region and maintain the level of water quality necessary to protect present and potential beneficial uses.
5. The Central Coast Water Board concurred with the analysis contained in the Final Project Report, the California Environmental Quality Act substitute environmental documentation for the Basin Plan Amendment, including the CEQA Checklist, the staff report and the responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes Regional Water Quality Control Boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the three TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of federal CWA section 303(d).
7. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing a TMDL is established in the TMDLs staff report, the CWA section 303(d) List of Water Quality Limited Segments, and the data contained in the administrative record documenting the pathogen impairments of the Aptos Creek Watershed.
8. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the Office of Administrative Law (OAL). The TMDLs must also receive approval from the U.S. Environmental Protection Agency (U.S. EPA).

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2009-0025.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2009-0025, as approved, and the administrative record for this action to the OAL and the TMDLs to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 3, 2010.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2010-0031**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO: (1) REMOVE THE SHELLFISH HARVESTING BENEFICIAL USE FOR SOQUEL LAGOON, (2) ADD THE SOQUEL LAGOON WATERSHED TO THE HUMAN FECAL MATERIAL DISCHARGE PROHIBITION AND THE DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION, AND (3) ESTABLISH TOTAL MAXIMUM DAILY LOADS FOR PATHOGENS IN SOQUEL LAGOON, SOQUEL CREEK, AND NOBLE GULCH

WHEREAS:

1. On May 8, 2009, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted Resolution No. R3-2009-0024 ([Attachment I](#)) amending the Basin Plan to: (1) Remove the Shellfish Harvesting Beneficial Use for Soquel Lagoon, (2) Add the Soquel Lagoon Watershed to the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition, and (3) establish Total Maximum Daily Loads (TMDLs) for Pathogens in Soquel Lagoon, Soquel Creek, and Noble Gulch.
2. The federal regulations at 40 Code of Federal Regulations (CFR) section 131.10(g) allow the Central Coast Water Board to remove a designated use, which is not an “existing” use, if the state can demonstrate that achieving the use is not feasible based on the factors set forth in that section. Shellfish harvesting is not an “existing use” as that term is defined in 40 CFR 131.3 because the shellfish harvesting use has not been attained in the water body on or after November 28, 1975. The removal of the SHELL beneficial use is based on the results of a Use Attainability Analysis (UAA) in Soquel Lagoon. Central Coast Water Board staff developed the UAA in 2004 and 2005 to determine the historic, actual, and potential shellfish harvesting activities in Soquel Lagoon. The UAA is necessary to conform to 40 CFR section 131.10(j), because the action involves a designated use specified in Clean Water Act (CWA) section 101(a)(2). The amendment and the UAA only addresses the fishable goal (“protection and propagation of fish, shellfish, and wildlife”) as it pertains to shellfish harvesting and does not address other fishable goals or the swimmable goal included in the water contact recreation designation contained in section 101(a)(2) of the CWA. The fishable goal of the CWA is also protected under other beneficial uses (including cold fresh water habitat) designated in the Basin Plan for the Soquel Lagoon.
3. The Central Coast Water Board found that the removal of the shellfish harvesting beneficial use from the Soquel Lagoon and the establishment of these TMDLs and Basin Plan amendments for the Soquel Lagoon Watershed were consistent with the provisions of State Water Resources Control Board (State Water Board) Resolution No. 68-16, “Statement of Policy with Respect to Maintaining High Quality of Waters in California” and 40 CFR section 131.12.

4. The Central Coast Water Board may, pursuant to California Water Code section 13243, specify certain conditions or areas where the discharge of waste, or certain types of waste, will not be permitted (i.e., prohibitions). The Implementation Plan for the TMDLs for the Soquel Lagoon Watershed requires compliance with the Human Fecal Material Discharge Prohibition and the Domestic Animal Waste Discharge Prohibition for discharges in the Soquel Lagoon Watershed. Supporting documentation for adding the Soquel Lagoon Watershed to the above-named prohibitions is provided in the Final Project Report for Total Maximum Daily Loads for Fecal Coliform in Soquel Lagoon, Soquel Creek, and Noble Gulch. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for adding the Soquel Lagoon Watershed to the Human Fecal Material Discharge and the Domestic Animal Waste Discharge Prohibitions.
5. The elements of a TMDL are described in 40 CFR sections 130.2 and 130.7 and section 303(d) of the CWA, and U.S. Environmental Protection Agency guidance documents. A TMDL is defined as “the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background.” (40 CFR §130.2). The Central Coast Water Board has determined that the TMDLs for pathogens in the Soquel Lagoon Watershed have been set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality. (40 CFR §130.7(c)(1)). The regulations in 40 CFR section 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate. (40 CFR §130.2(i)). Expressing these TMDLs as units of concentration is appropriate because in this case an existing concentration-based water quality objective was used as the basis for the TMDLs numeric target.
6. The Central Coast Water Board concurred with the Use Attainability Analysis and the analysis contained in the Final Project Report, the California Environmental Quality Act “Substitute Environmental Document” for the Basin Plan amendments (including the CEQA Checklist), the staff report, responses to comments, and found that these analyses comply with the requirements of the State Water Board’s certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board’s obligations attendant with the adoption of regulations “requiring the installation of pollution control equipment, or a performance standard or treatment requirement,” as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board’s environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
7. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes Regional Water Quality Control Boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of federal CWA section 303(d).

8. The regulatory action meets the "Necessity" standard of the Administrative Procedures Act, Government Code, section 11353, subd. (b). The necessity of developing a TMDL is established in the TMDLs staff report, the CWA section 303(d) List of Water Quality Limited Segments, and the data contained in the administrative record documenting the pathogen impairments of the Soquel Lagoon Watershed.
9. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the Office of Administrative Law (OAL). The TMDLs and SHELL de-designation must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2009-0024.
2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2009-0024, as approved, and the administrative record for this action to the OAL and the TMDLs and shellfish harvesting de-designation to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on July 6, 2010.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2010-0015**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO (1) ADD TOTAL MAXIMUM DAILY LOADS FOR FECAL COLIFORM IN THE PAJARO RIVER WATERSHED (INCLUDING PAJARO RIVER, SAN BENITO RIVER, LLAGAS CREEK, TEQUISQUITA SLOUGH, SAN JUAN CREEK, CARNADERO/UVAS CREEK, BIRD CREEK, PESCADERO CREEK, TRES PINOS CREEK, FURLONG (JONES) CREEK, SANTA ANA CREEK, AND PACHECHO CREEK); (2) ADD A DOMESTIC ANIMAL WASTE DISCHARGE PROHIBITION; AND (3) ADD A HUMAN FECAL MATERIAL DISCHARGE PROHIBITION

WHEREAS:

1. On March 20, 2009, the Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted Resolution No. R3-2009-0008 ([Attachment I](#)) amending the Basin Plan to: (1) add Total Maximum Daily Loads (TMDLs) for fecal coliform in the Pajaro River Watershed; (2) add a domestic animal waste discharge prohibition; and (3) add a human fecal material discharge prohibition.
2. The Central Coast Water Board may prohibit certain types of waste discharge pursuant to California Water Code section 13243. The implementation plan for the TMDLs for the Pajaro River Watershed requires compliance with two prohibitions for fecal material pollution discharges. Supporting documentation for creation of the domestic animal waste discharge prohibition and human fecal material discharge prohibition is provided in the Final Project Reports for Total Maximum Daily Load for fecal coliform in Pajaro River, San Benito River, Llagas Creek, Tequisquita Slough, San Juan Creek, Carnadero/Uvas Creek, Bird Creek, Pescadero Creek, Tres Pinos Creek, Furlong (Jones) Creek, Santa Ana Creek, and Pachecho Creek. Consistent with California Water Code section 13244, the Central Coast Water Board complied with public notice and hearing requirements for the prohibitions.
3. The Central Coast Water Board found that the adoption of these TMDLs for the Pajaro River Watershed were consistent with the provisions of State Water Board [Resolution No. 68-16](#), "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR 131.12.
4. The elements of a TMDL are described in 40 CFR 130.2 and 130.7, section 303(d) of the Clean Water Act, and U.S. EPA guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). The Central Coast Water Board determined that the TMDLs for fecal coliform in the Pajaro River Watershed are set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge or uncertainty concerning the relationship between effluent limitations and water quality (40 CFR 130.7 (c) (1)). The regulations in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading, and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR 130.2(i)). Expressing these TMDLs as units of concentration is

appropriate because an existing concentration-based water quality objective is used as the basis for the TMDLs numeric target.

5. The Central Coast Water Board concurred with the analysis contained in the Final Project Report, the California Environmental Quality Act (CEQA) "Substitute Environmental Document" for the Basin Plan Amendments, including the CEQA Checklist, the staff report and the responses to comments, and found that these analyses comply with the requirements of the State Water Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board found that these analyses fulfill the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. The Central Coast Water Board's environmental analysis has taken into account a reasonable range of environmental, economic, and technical factors.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans; section 13242, which requires a program of implementation to achieve water quality objectives; and section 13243 which authorizes Regional Water Quality Control Boards to specify certain conditions or areas where the discharges of certain types of waste will not be permitted. The State Water Board also finds that the TMDLs, as reflected in the Basin Plan amendment, are consistent with the requirements of federal Clean Water Act (CWA) section 303(d).
7. The regulatory action meets the "Necessity" standard of the Administrative Procedure Act, Government Code, section 11353, subdivision (b). The necessity of developing a TMDL is established in the TMDLs project report, the section 303(d) list, and the data contained in the administrative record documenting the pathogen impairments of the Pajaro River Watershed.
8. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by the Office of Administrative Law (OAL). The TMDLs must also receive approval from the U.S. Environmental Protection Agency.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2009-0008.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2009-0008, as approved, and the administrative record for this action to the OAL and the TMDLs to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 20, 2010.

Jeanine Townsend
Clerk to the Board

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906**

RESOLUTION NO. R3-2005-0132

**AMENDING THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST BASIN
TO INCLUDE PAJARO RIVER TOTAL MAXIMUM DAILY LOADS AND IMPLEMENTATION
PLAN FOR SEDIMENT INCLUDING LLAGAS CREEK, RIDER CREEK, AND SAN BENITO
RIVER AND A LAND DISTURBANCE PROHIBITION**

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region hereby finds that:

1. The California Regional Water Quality Control Board, Central Coast Region (Water Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Water Board periodically revises and amends the Basin Plan. The Water Board has determined the Basin Plan requires further revision and amendment to incorporate Pajaro River Total Maximum Daily Loads (TMDL) and Implementation Plan for Sediment, including Llagas Creek, Rider Creek, and San Benito River and a Land Disturbance Prohibition.
3. The Water Board proposes to amend the Basin Plan by inserting amendments into Chapter Four, Section IX (Total Maximum Daily Loads) and Chapter Four, Section VIII.E.1 (Land Disturbance Prohibitions).
4. Section 303(d) of the Clean Water Act (CWA) requires states to identify and prepare a list of water bodies that do not meet water quality standards and to establish TMDLs for listed waterbodies.
5. The Pajaro River, Llagas Creek, Rider Creek, and San Benito River were identified on California's 2002 303(d) list as impaired by sedimentation/siltation.
6. The Pajaro River watershed lies within the central coast of California and includes the counties of San Benito, Santa Clara, Santa Cruz, and Monterey. Major tributaries to the Pajaro River are the San Benito River, Tres Pinos Creek, Santa Ana Creek, Pacheco Creek, Llagas Creek, Uvas Creek, and Corralitos Creek. Rider Creek is tributary to Corralitos Creek. The Pajaro River watershed encompasses approximately 1,300 square miles and drains into Monterey Bay.
7. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as USEPA guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). The Water Board has determined that the Pajaro River TMDL for Sediment is set at levels necessary to attain and maintain the applicable narrative water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). The regulations in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality

parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR 130.2(i)).

8. Upon establishment of TMDLs by the State or USEPA, the state is required to incorporate the TMDLs, along with appropriate implementation measures, into the State Water Quality Management Plan (40 CFR 130.6 (c)(1), 130.7; CWC sections 13050(j), 13242). The Basin Plan, and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the Water Board.
9. The TMDL implementation plan requires compliance with a new land disturbance prohibition for sediment within the Pajaro River watershed. The Water Board may prohibit certain types of waste discharge pursuant to CWC 13243. Dischargers may demonstrate compliance with the prohibition by submitting and implementing a Nonpoint Source Pollution Control Implementation Program that is consistent with the Policy for Implementation and Enforcement of the Nonpoint Source Pollution Control Program or documentation that demonstrates there is no activity that may cause discharges of sediment. Consistent with CWC 13244, the Water Board conducted public notice and hearing requirements for the proposed land disturbance prohibition.
10. Pursuant to CWC section 13241, the Water Board considered, in adopting the Land Disturbance Prohibition in the Pajaro River watershed: (a) past, present, and probable future beneficial uses of water. (b) Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto. (c) Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area. (d) Economic considerations. (e) The need for developing housing within the region. (f) The need to develop and use recycled water. The Water Board finds that: the prohibition will protect and enhance present and probable future beneficial uses of the Pajaro River watershed; the prohibition is a reasonable and necessary part of coordinated actions to achieve improved water quality conditions in the area; considering all cost information that the Water Board has received, costs to achieve compliance with the prohibition are reasonable relative to the benefit of improved water quality; the need for developing housing within the region is not relevant; and the need to develop and use recycled water is not relevant.
11. The Water Board's goal for establishing these TMDLs is to protect cold fresh water habitat, migration of aquatic organisms, and spawning, reproduction, and/or early development beneficial uses (COLD, MIGR, and SPWN, respectively) as defined in the Basin Plan.
12. The suspended sediment numeric targets are based on concentration and duration, which provides an exposure-based approach. This numeric target approach is new for Sediment TMDLs in California and has not been used before.
13. Water Board staff submitted a TMDL report to an external scientific review panel on April 12, 2005, as required by Health & Safety Code Section 57004. Water Board staff edited the Project Report or provided a written response that explained the basis for not incorporating the comments, or the comments did not result in any changes to the proposed Basin Plan Amendment. The scientific portions of the TMDL and implementation plan are based on sound scientific knowledge, methods, and practices in accordance with Section 57004.
14. Interested persons and the public have been informed of TMDL progress from the early stages of TMDL development. Efforts to inform the public and solicit public comment included public meetings, presentations to special interest groups, several individual meetings with vested stakeholders, and a number of telephone conversations with interested parties. Public notification of

the amendment to the Basin Plan occurred 45 days preceding the Board hearing. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies. Water Board staff responded to oral and written comments received from the public.

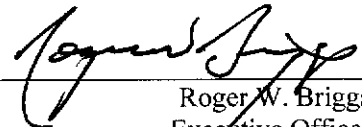

15. The Water Board considered costs of implementing measures to achieve these TMDLs. The costs to implement these TMDLs will be incurred by identified responsible parties. These costs are reasonable relative to the water quality benefits to be derived from implementing the TMDLs.
16. Implementation of this TMDL will require the identification of numerous landowners and operators across a diverse landscape and subsequent notification to comply with the conditional prohibition or submit nonpoint source implementation program plans. The Water Board intends to identify and notify these parties. However, the level of effort and a schedule to complete the identification and notification remains uncertain at this time, and will depend on staff availability, budget, and relationship to other water quality priorities.
17. Anti-Degradation – This order is consistent with the provisions of the State Water Resources Control Board Resolution No. 68-16, “Statement of Policy with Respect to Maintaining High Quality of Waters in California” and 40 CFR 131.12. The TMDL will result in improved water quality throughout the region and maintains the level of water quality necessary to protect existing and anticipated beneficial uses.
18. The Water Board concurs with the analysis contained in the Final Project Report; the California Environmental Quality Act “Substitute Document” Report for Basin Plan Amendment, including the CEQA Checklist; the staff report and responses to comments; and finds that the analysis complies with the requirements of the State Water Resources Control Board’s (State Board) certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Water Board finds that the analysis fulfills the Water Board’s obligations attendant with the adoption of regulations “requiring the installation of pollution control equipment, or a performance standard or treatment requirement,” as set forth in section 21159 of the Public Resources Code. All public comments were considered.
19. The Basin Plan amendment incorporating TMDLs for sediment for the Pajaro River including, Llagas Creek, Rider Creek, and San Benito River and a Land Disturbance Prohibition must be submitted for review and approval by the State Board, the State Office of Administrative Law (OAL), and the US Environmental Protection Agency (USEPA). The Basin Plan amendment will become effective upon approval by OAL.
20. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and is therefore exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
21. On December 2, 2005 in San Luis Obispo, California, the Water Board held a public hearing and heard and considered all public comments and evidence in the record.

THEREFORE, be it resolved that:

1. Pursuant to sections 13240, 13242, 13243, and 13244 of the California Water Code, the Water Board, after considering the entire record, including the oral testimony at the hearing, hereby adopts the amendment on “Attachment-Proposed Basin Plan Amendments.”

2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Water Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the USEPA. The Water Board shall file a Notice of Decision with the Secretary of Resources and the Governor's Office of Planning and Research (State Clearinghouse) after approval by OAL and USEPA.
4. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
5. If, during its approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Water Board of any such changes.

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on December 2, 2005.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2005-0132

ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS

AMENDMENT NO. 1. Revise the September 8, 1994 Basin Plan, Chapter 4 as follows:

Add the following to Chapter 4 after IX. G.:

IX. H. PAJARO RIVER TOTAL MAXIMUM DAILY LOADS FOR SEDIMENT INCLUDING LLAGAS CREEK, RIDER CREEK, AND SAN BENITO RIVER

The Regional Water Quality Control Board adopted this TMDL on December 2, 2005.

This TMDL was approved by:

The State Water Resources Control Board on _____.

The California Office of Administrative Law on _____. (*Effective date*)

The U.S. Environmental Protection Agency on _____.

Problem Statement

Anthropogenic watershed disturbances have accelerated the natural processes of erosion and sedimentation in the Pajaro River, including Llagas Creek, Rider Creek, and San Benito River. Special studies have identified a variety of watershed conditions that have lead to excessive sedimentation. Excessive sedimentation has caused an exceedance of the narrative, general water quality objective for sediment because sediment load and rate have interfered with the beneficial uses of these waterbodies including, fish and wildlife (COLD, MIGR, and SPWN).

The narrative objective states, "the suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses."

Numeric Targets (interpretation of the narrative water quality objective)

This TMDL establishes numeric targets as indicators of the narrative, general water quality objective for sediment. This TMDL uses two types of numeric targets: suspended sediment concentration-duration and streambed characteristics. Numeric targets for suspended sediment concentration-duration are presented in Table 1. Numeric targets for streambed characteristics are presented in Table 2.

Table 1 - Numeric Targets for Suspended Sediment Concentrations

Major Subwatershed ^b	Duration (Days)	Maximum Concentration of Exposure Category Range (mg/L)	Numeric Targets ^a	
			Number of Instances Greater than Maximum Concentration.	Maximum Duration of Instances (days)
Tres Pinos	1	1808	15	22
	2	665	42	44
	6	244	36	51
	14	244	20	51
	49	90	5	108
San Benito	1	1808	9	9
	2	665	30	21
	6	244	29	35
	14	244	14	35
	49	90	2	60
Llagas	1	1808	0	0
	2	665	0	1
	6	244	9	15
	14	244	1	15
	49	90	0	28

	49	90	0	36
Mouth of Pajaro	1	1808	0	1
	2	665	0	2
	6	244	8	11
	14	244	0	11
	49	90	0	36

^a Targets based on a 15-year model run for the period from 1986 to 2000.

^b Major subwatersheds of the Pajaro River.

Table 2 - Numeric Targets for Streambed Characteristics

Parameter	Numeric Target ¹
Residual Pool Volume ²	V* = Mean values ≤ 0.21 Max values ≤ 0.45
Median Diameter (D ₅₀) of Sediment Particles in Spawning Gravels	D ₅₀ = Mean values ≥ 69 mm Minimum values ≥ 37 mm
Percent of Fine Fines (< 0.85 mm) in Spawning Gravels	Percent fine fines $\leq 21\%$
Percent of Coarse Fines (< 6.0 mm) in Spawning Gravels	Percent coarse fines $\leq 30\%$

¹ Target values are for sampling reach(es) within an individual waterbody.

² Residual Pool Volume refers to the portion of a pool in a stream that is available for fish to occupy. Pool habitat is the primary habitat for steelhead in summer. Overwintering habitat requirements include deeper pools, undercut banks, side channels, and especially large, unembedded rocks, which provide shelter for fish against the high flows of winter. V* gives a direct measurement of the impact of sediment on pool volume. It is the ratio of the amount of *pool volume filled by fine, mobile sediment*, to *total pool volume*. Qualifying pools are defined by Regional Board sampling protocol (2002).

Source Analysis

Sources of sediment include the following nonpoint and point source discharge activities occurring within the respective land use source categories. Nonpoint sources include irrigated agriculture activities upon crop, fallow and orchard lands; timber harvesting activities upon forested lands; grazing activities upon pasture and range lands; urban and rural residential development, roads, farm animal and livestock boarding upon urban lands; unpaved roads in the San Benito watershed, and paved and unpaved roads in the Corralitos Creek and Rider Creek watersheds upon lands in the roads landuse category; hydromodification-related activities upon all types of land use; off-road recreational vehicle areas; sand and gravel mining; as well as natural erosion and landslides. Point sources include the small Municipal Separate Storm Sewer Systems (MS4s) of Watsonville, Hollister, Gilroy, and Morgan Hill.

TMDLs and Allocations

TMDLs and load allocations are assigned to sources for seven watersheds as represented in Table 3. These allocations are modeled load values that are necessary to meet the suspended sediment concentration-duration targets. The Regional Board will determine that the TMDL is attained when the numeric targets are achieved. When numeric targets are achieved, the Regional Board will assume that these loads are met.

Margin of Safety

The total load includes an implicit margin of safety that was derived through conservative assumptions.

Table 3 – TMDLs and Load Allocations

Major Subwatershed	Allocations ¹ (LA/WLA)	Source Category							Total Load
		Crop, Fallow, and Orchard	Forest ²	Pasture and Range	Urban Lands ³	Roads	Barren ²	Sand and Gravel Mining	
Tres Pinos	LA	477	352	41085	312		11551		53,778
	WLA				1				
San Benito	LA	1971	2083	19863	327	1180	14128	27	39,679
	WLA				100				
Llagas	LA	596	326	6978	354		144	0	9,185
	WLA				787				
Uvas	LA	946	989	12454	280		369		15,177
	WLA				139				
Upper Pajaro	LA	4114	1228	37664	356		425	3	43,951
	WLA				161				
Corralitos (including Rider Creek)	LA	3544	4536	2427	443	79	73	2	11,389 ⁴
	WLA				284				
Mouth of Pajaro	LA	3047	58	3055	383		500	35	7,268 ⁴
	WLA				191				

Notes:

¹ Annual load allocations (LA) and waste load allocations (WLA) expressed in metric tones (1 metric ton equals 1,000 kilograms). Blank cells indicate no allocations for specified source category.

² Forest includes loads from natural sources and from timber harvesting operations; Barren includes loads from natural sources only.

³ Load allocations for urban lands outside of NPDES Phase 2 urban boundaries. Waste load allocations for urban lands within NPDES Phase 2 urban boundaries.

⁴ Number rounded.

Implementation

The following actions will be taken to reduce sediment discharges from activities that occur within each of the land use source categories (headings) below. Regional Board staff intends to identify and notify the parties responsible for the activities according to the schedule below; however, if staff resources are insufficient or other water quality priorities emerge, this schedule will be modified.

Crop, Fallow, and Orchard Lands

Landowners and operators of crop, fallow, and orchard lands, where irrigated agricultural activities are conducted, will implement agricultural management measures and perform monitoring and reporting pursuant to the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated

Lands and the Monitoring and Reporting Program, Order No. R3-2004-0117. This is an existing, on-going activity.

Forest Lands

Landowners and operators of forest lands, where timber harvest activities are conducted, will implement timber harvest management measures and perform monitoring and reporting pursuant to the General Conditional Waiver of Waste Discharge Requirements for Timber Harvest Activities and the Monitoring and Reporting Program, Order No. R3-2005-0066. This is an existing, on-going activity.

Pasture and Range

Owners and operators of pasture and range lands, where grazing activities occur, must comply with the land disturbance prohibition.

Within one year following approval of the TMDLs by the Office of Administrative Law, the Executive Officer will notify the owners and operators of pasture and range lands of the prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Nonpoint Source Pollution Control Implementation Program (Program) or documentation submitted in compliance with the prohibition within six months of the submittal date. Should the Program or documentation require modification, or if a party fails to submit a Program or documentation, the Executive Officer may issue a civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements to assure compliance with the prohibition.

Urban Lands

Urban lands include the small communities of Watsonville, Hollister, Gilroy, and Morgan Hill (cities), rural properties throughout the watershed with farm animals or livestock boarding (rural properties), and roads throughout the watershed. These lands do not include unpaved roads in San Benito River watershed, and paved and unpaved roads within the Corralitos Creek and Rider Creek subwatersheds (See Roads below).

The cities must obtain a Municipal Separate Storm Sewer System (MS4) permit. Their Storm Water Management Programs must include specific actions to reduce sediment discharges pursuant to Clean Water Act Section 402(p)(3)(B) and Section D of State Board Order No. 2003-005, NPDES General Permit No. CAS000004 for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems. The cities will then describe the actions taken as part of their annual report. If necessary, the Regional Board's Executive Officer can require more stringent sediment controls. This is an existing requirement and an on-going activity.

Owners and operators of rural properties and roads must comply with the land disturbance prohibition.

Within one year following approval of the TMDLs by the Office of Administrative Law, the Executive Officer will notify the owners and operators of rural properties and roads of the prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Program or documentation submitted in compliance with the prohibition within six months of the submittal date. Should the Program or documentation require modification, or if a party fails to submit a Program or documentation, the Executive Officer may issue a civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements to assure compliance with the prohibition.

Roads

Within one year following approval of the TMDLs by the Office of Administrative Law, the Executive Officer will notify the owners and operators of unpaved roads within the San Benito River watershed and paved and unpaved roads within the Corralitos Creek and Rider Creek watersheds of the prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Program or documentation submitted in compliance with the prohibition within six months of the submittal date. Should the Program or documentation require modification, or if a party fails to submit a Program or documentation, the Executive Officer may issue a civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements to assure compliance with the prohibition.

Sand and Gravel Mining

Within six months following approval of the TMDLs by the Office of Administrative Law and pursuant to Section 13263(e) of the CWC, Regional Board staff will review existing waste discharge requirements (WDRs) for sand and gravel mining operations and revise or require activities to: 1) assess cumulative impacts, including fluvial geomorphic impacts, upon the beneficial uses of the San Benito River; 2) mitigate the impacts identified; and 3) monitor the effectiveness of mitigation activities. One year following approval of the TMDLs by the Office of Administrative Law, pursuant to Section 13267 of the CWC, the Executive Officer will require owners and operators of sand and gravel mining operations to submit a plan to assess cumulative impacts, including fluvial geomorphic impacts, upon the beneficial uses of the San Benito River. The Executive Officer will comply with the requirements of section 13267 when issuing the orders. Regional Board staff will encourage sand and gravel mining operators to conduct the cumulative impacts assessment cooperatively.

Streambank Erosion

Owners and operators of properties where hydromodification activities occur must comply with the land disturbance prohibition.

Within one year following approval of the TMDLs by the Office of Administrative Law, the Executive Officer will notify the owners and operators of properties where hydromodification activities occur of the prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Program or documentation submitted in compliance with the prohibition within six months of the submittal date. Should the Program or documentation require modification, or if a party fails to submit a Program or documentation, the Executive Officer may issue a civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements to assure compliance with the prohibition.

Monitoring

Regional Board staff will develop a monitoring program to measure in-stream numeric targets within five years following TMDL approval. The program will be consistent with other Central Coast Region sediment TMDLs, regional sediment monitoring programs, and in cooperation with implementing parties. If Regional Board staff concludes that sediment contributions from individual landowners should be monitored in addition to in-stream numeric targets, the Executive Officer will establish such monitoring requirements in compliance with section 13267.

Tracking and Evaluation

Regional Board staff will conduct a review every three years beginning three years after TMDL approval by the Office of Administrative Law. Regional Board staff will utilize required reports, as well as other available information, to review implementation efforts of responsible parties and progress being made towards achieving the allocations. Regional Board staff will also review numeric target monitoring (see above) to determine progress towards TMDL achievement in the waterbody. The numeric targets, not

actual loads or reductions in loads, will be measured, as they are a more direct indicator of beneficial use protection. Regional Board staff may conclude and articulate that ongoing implementation efforts may ultimately be insufficient to achieve the allocations and numeric targets. If staff makes this determination, staff will recommend that additional reporting, monitoring, or implementation efforts be required either by the Executive Officer (e.g. pursuant to CWC section 13267 or section 13383) or by the Regional Board (e.g. through revisions of existing permits and/or a Basin Plan Amendment). At any particular date, Regional Board staff may conclude and articulate that implementation efforts and results are likely to result in achieving the allocations and numeric target, in which case existing and anticipated implementation efforts should continue.

Three-year reviews will continue until the TMDLs are achieved. The target date to achieve the TMDLs is forty-five years after implementation commences.

AMENDMENT NO. 2. Revise the September 8, 1994 Basin Plan, Chapter 4 as follows:

Add the following to the end of Chapter 4 in VIII.E.1, Land Disturbance Prohibitions:

The controllable discharge of soil, silt, or earthen material from any grazing, farm animal and livestock, hydromodification, road, or other activity of whatever nature into waters of the State within the Pajaro River watershed is prohibited.

The controllable discharge of soil, silt, or earthen material from any grazing, farm animal and livestock, hydromodification, road, or other activity of whatever nature to a location where such material could pass into waters of the State within the Pajaro River watershed is prohibited.

The above two prohibitions do not apply to any discharge regulated by National Pollutant Discharge Elimination System permits, Waste Discharge Requirements or waivers of Waste Discharge Requirements.

The above two prohibitions do not apply to any grazing, farm animal and livestock, hydromodification, or road activity if the owner or operator:

- i. Submits a Nonpoint Source Pollution Control Implementation Program, consistent with the *Policy for Implementation and Enforcement of the Nonpoint Source Pollution Control Program, May 20, 2004*, that is approved by the Executive Officer, or
- ii. Demonstrates there is no activity that may cause soil, silt, or earthen material to pass into waters of the state within the Pajaro River watershed, as approved by the Executive Officer.

This Land Disturbance Prohibition takes effect three years following approval by the U.S. Environmental Protection Agency.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2006 - 0068**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST REGION (BASIN PLAN) TO ESTABLISH
TOTAL MAXIMUM DAILY LOADS (TMDLs)
AND A LAND DISTURBANCE PROHIBITION FOR SEDIMENT IN PAJARO RIVER
(INCLUDING LLAGAS CREEK, RIDER CREEK, AND SAN BENITO RIVER)

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted a revised Basin Plan on February 11, 1994, which was approved by the State Water Resources Control Board (State Water Board) on May 18, 1994 and by the Office of Administrative Law (OAL) on September 7, 1994.
2. On December 2, 2005, the Central Coast Water Board adopted Resolution No. R3-2005-0132 ([Attachment](#)) amending the Basin Plan to establish TMDLs and a land disturbance prohibition for sediment in the Pajaro River.
3. Central Coast Water Board staff prepared documents and followed procedures satisfying environmental documentation requirements of the California Environmental Quality Act.
4. Central Coast Water Board staff found that the adoption of this amendment would result in no adverse effect on wildlife, and the amendment would be consistent with the State Antidegradation Policy (State Water Board Resolution No. 68-16) and federal antidegradation requirements.
5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans, and section 13242, which requires a program of implementation of water quality objectives. The State Water Board also finds that the TMDLs and land disturbance prohibition as reflected in the Basin Plan amendment are consistent with the requirements of federal Clean Water Act section 303(d).
6. The State Water Board finds, for purposes of clarifying the Central Coast Water Board's TMDL language, that, for the purposes of assessing success of the TMDL, the "Numeric Targets for Suspended Sediment Conditions" must be met within 15 years of development of the monitoring program. The Central Coast Water Board will use compliance with these targets, among other factors, in evaluating the need to revise any of the assumptions in the TMDL.
7. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDLs must also be approved by the U.S. Environmental Protection Agency (USEPA).

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2005-0132, subject to the Central Coast Water Board Executive Officer making non-substantive amendments to Footnote 'c' of Table 1 to ensure consistency with Finding 6. In the amendment to Table I, Footnote c, the first sentence should read: Numeric targets are comprised of two components: a maximum number of exceedance events that may occur in any consecutive 15 years after development of the monitoring program and the maximum duration (consecutive days) in which the maximum SSC value for each range can be exceeded in 15 years."
2. Authorizes the Executive Director or designee to submit the amendment adopted pursuant to Central Coast Water Board Resolution No. R3-2005-0132, as approved, and the administrative record for this action to OAL and the TMDLs to USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 21, 2006.

March 24, 2006

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906

RESOLUTION NO. R3-2006-0025
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN TO INCLUDE
WATSONVILLE SLOUGH TOTAL MAXIMUM DAILY LOAD
AND IMPLEMENTATION PLAN FOR PATHOGENS,
WATSONVILLE SLOUGH WATERSHED LIVESTOCK WASTE DISCHARGE PROHIBITION,
AND REMOVAL OF THE SHELLFISH HARVESTING BENEFICIAL USE FROM
WATSONVILLE SLOUGH AND TRIBUTARIES

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region hereby finds that:

1. The California Regional Water Quality Control Board, Central Coast Region (Water Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Water Board periodically revises and amends the Basin Plan. The Water Board has determined the Basin Plan requires further revision and amendment to incorporate a Total Maximum Daily Load (TMDL) and Implementation Plan for Pathogens for Watsonville Slough.
3. The Water Board proposes to amend the Basin Plan by inserting amendments into the following section:
 - a. Chapter Two, Table 2-1: "Identified Uses of Inland Surface Waters"
 - b. Chapter Four, Sections VIII (Nonpoint Source Measures) and IX (Total Maximum Daily Loads)
 - c. Chapter Five, Section IV.E (Other Specific Prohibition Subjects)
4. Section 303(d) of the Clean Water Act (CWA) requires states to identify and prepare a list of water bodies that do not meet water quality standards and to establish TMDLs for listed waterbodies.
5. Watsonville Slough is listed on California's 303(d) list as impaired due to non-attainment of existing Basin Plan water quality objectives for pathogens.
6. Watsonville Slough is located in Santa Cruz County, California. The watershed area drains approximately 13,000 acres generally north of the Slough itself, which flows into the mouth of the Pajaro River at Monterey Bay, ultimately draining into the Pacific Ocean. Tributaries to Watsonville Slough include Struve Slough, Hanson Slough, and Harkins Slough. Gallighan Slough flows into Harkins Slough.
7. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as USEPA guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). The Water Board has determined that the Watsonville Slough Pathogen TMDL is set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40

- CFR 130.7(c)(1)). The regulations in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR 130.2(i)). Expressing this TMDL as units of concentration is appropriate because an existing concentration based water quality objective is used as the basis for the numeric target.
8. Upon establishment of TMDLs by the State or USEPA, the state is required to incorporate the TMDLs, along with appropriate implementation measures, into the State Water Quality Management Plan (40 CFR 130.6 (c)(1), 130.7; California Water Code (CWC) sections 13050(j), 13242). The Basin Plan, and applicable statewide plans, serve as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the Water Board.
 9. The TMDL implementation plan requires compliance with a new livestock waste discharge prohibition within the Watsonville Slough Watershed. The Water Board may prohibit certain types of waste discharge pursuant to CWC 13243. Consistent with CWC 13244, the Water Board conducted public notice and hearing requirements for the proposed waste discharge prohibition.
 10. Pursuant to CWC section 13241, the Water Board considered several factors in developing the livestock waste discharge prohibition in Watsonville Sloughs. The Board concludes the following:
 - a. The prohibition will not affect past, present, or probable future beneficial uses of Watsonville Sloughs.
 - b. Environmental characteristics of the waterbody will not be affected.
 - c. Improved water quality conditions can reasonably be achieved through the coordinated control of all factors that affect water quality in the area, as provided in the Implementation Plan.
 - d. Costs to achieve compliance with the prohibition are reasonable relative to the benefit of improved water quality.
 - e. The need for developing housing within the region is not relevant.
 - f. The need to develop and use recycled water is not relevant.
 11. The Water Board's goal for establishing the above mentioned TMDL is to protect the contact and non-contact water recreation beneficial uses (REC-1 and REC-2, respectively) as defined in the Basin Plan.
 12. The Water Board has determined that the shellfish harvesting (SHELL) beneficial use designation as it pertains to Watsonville, Harkins, Gallighan, Struve, and Hanson Sloughs should be removed.
 13. The proposed removal of the SHELL beneficial use is based on the results of a Use Attainability Analysis (UAA) of this beneficial use in Watsonville Slough and its tributaries, performed by Water Board staff. Staff conducted this analysis in Spring 2005 to determine actual and potential SHELL use of the Sloughs. The UAA is necessary to conform to 40 Code of Federal Regulations, section 131.10(j) because the action involves a designated use specified in CWA section 101(a)(2). The proposed amendment and the UAA only address the fishable goal ("protection and propagation of fish, shellfish, and wildlife") as it pertains to shellfish harvesting and do not address other fishable goals or the swimmable goal included in the REC-1 designation contained in section 101(a)(2) of the CWA. The fishable goal of the CWA is also protected under other beneficial uses (including WARM) designated in the Basin Plan for the affected waterbodies.
 14. CWA factors for allowing a State to remove a designated use are listed in Section 131.10(g). Based on staff's UAA, three factors preclude attainment of SHELL in Watsonville Slough and its tributaries. These factors are as follows:
 - a. Natural, ephemeral, intermittent, or low flow conditions or water levels prevent the attainment of the beneficial use.

- b. Diversions, and other types of hydrologic modifications preclude the attainment of the beneficial use, and it is not feasible to restore the water body to its original condition or to operate such modification in a way that would result in the attainment of the use.
 - c. Physical conditions related to the natural features of the water body, including lack of a proper substrate, preclude attainment of aquatic life protection uses.
15. Pursuant to CWC section 13241, the Water Board considered several factors in deciding to remove the SHELL beneficial use in Watsonville Sloughs. Staff concluded that shellfish harvesting is not a past, present, or probable future beneficial use of Watsonville Sloughs. In removing the SHELL beneficial use, staff concluded the following:
 - a. Environmental characteristics of the waterbody will not be affected.
 - b. Water quality conditions that could reasonably be achieved through the coordinated control of all factors that affect water quality in the area will not be affected.
 - c. De-designation of the SHELL beneficial use does not impose any costs other than the Water Board's costs of preparing the amendment.
 - d. The need for developing housing within the region is not relevant.
 - e. The need to develop and use recycled water is not relevant.
16. The removal of the SHELL beneficial use is consistent with the Antidegradation Policy, as it will not lower the water quality of the Watsonville Slough and its tributaries relative to existing conditions. In assigning water quality objectives to the uses that exist, the Basin Plan Amendment fulfills the requirement of protecting the level of water quality necessary to protect existing and anticipated beneficial uses.
17. The Water Board's goal in de-designating the SHELL beneficial use is to assign bacterial water quality objectives that accurately reflect the existing and potential uses of Watsonville Slough and tributaries. For this purpose, "existing uses" means those uses actually attained on or after November 28, 1975 (40 CFR §131.3(e)).
18. Water Board staff submitted a TMDL report, including the proposed waste discharge prohibition and proposed removal of the SHELL beneficial use in Watsonville Slough and tributaries, to an external scientific review panel in October of 2005 as required by Health & Safety Code Section 57004. Water Board staff edited the Project Report or provided a written response that explained the basis for not incorporating the comments, or the comments did not result in any changes to the proposed Basin Plan Amendment. The scientific portions of the TMDL and implementation plan, the waste discharge prohibition, and the proposed removal of the SHELL beneficial use, are based on sound scientific knowledge, methods, and practices in accordance with Section 57004.
19. Water Board staff implemented a process to inform interested persons and the public about the TMDL, the waste discharge prohibition, and removal of the SHELL beneficial use designation for Watsonville Slough and tributaries. Water Board staff's efforts to inform the public and solicit comment include public meetings, presentations to special interest groups, individual meetings with vested stakeholders, and numerous telephone conversations with interested parties. Public notification of the amendment to the Basin Plan occurred 45 days preceding the Board hearing. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies. Water Board staff responded to oral and written comments received from the public.
20. The Water Board considered costs of implementing measures to achieve the TMDL. The costs to implement the TMDL will be incurred by identified responsible parties. These costs are reasonable relative to the water quality benefits to be derived from implementing the TMDL.

21. Anti-Degradation — This order is consistent with the provisions of the State Water Resources Control Board (State Board) Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR 131.12. The TMDL will result in improved water quality throughout the region and maintains the level of water quality necessary to protect existing and anticipated beneficial uses.
22. The Water Board concurs with the analysis contained in the Final Project Report, including the Use Attainability Analysis, the California Environmental Quality Act "Substitute Document" Report for Basin Plan Amendment, including the CEQA Checklist, the staff report and the responses to comments, and finds that these analyses comply with the requirements of the State Board's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Water Board finds that these analyses fulfill the Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. All public comments were considered.
23. The Water Board must submit the Basin Plan amendment incorporating a TMDL for pathogens for Watsonville Slough, the livestock waste discharge prohibition, and the removal of the SHELL beneficial use for Watsonville Slough and tributaries to the State Board, the State Office of Administrative Law (OAL), and the US Environmental Protection Agency (USEPA), for approval. The TMDL and Implementation Plan will become effective upon approval by OAL. The prohibition and the de-designation of the SHELL beneficial use will become effective upon approval by USEPA.
24. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and is therefore exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
25. On March 24, 2006 in San Luis Obispo, California, the Water Board held a public hearing and heard and considered all public comments and evidence in the record.

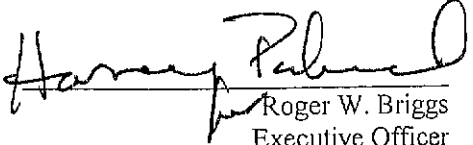

THEREFORE, be it resolved that:

1. Pursuant to sections 13240, 13242, 13243, and 13244 of the CWC, the Water Board, after considering the entire record, including the oral testimony at the hearing, hereby adopts the amendment in "Attachment-Proposed Basin Plan Amendments."
2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the CWC.
3. The Water Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the CWC and forward it to OAL and the USEPA. The Water Board shall file a Notice of Decision with the Secretary of Resources and the Governor's Office of Planning and Research (State Clearinghouse) after approval by OAL and USEPA.
4. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
5. If, during its approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Water Board of any such changes.

000725

March 24, 2006

I, **Roger W. Briggs, Executive Officer**, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on March 24, 2006.

Roger W. Briggs
Executive Officer

000726

RESOLUTION NO. R3-2006-0025

ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS

AMENDMENT NO. 1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to Chapter 4 after IX. H.:

IX. I. TOTAL MAXIMUM DAILY LOAD FOR PATHOGENS FOR WATSONVILLE SLOUGH

The Regional Water Quality Control Board adopted this TMDL on March 24, 2006.

This TMDL was approved by:

The State Water Resources Control Board on _____.

The California Office of Administrative Law on _____, (*Effective date*)

The U.S. Environmental Protection Agency on _____.

Problem Statement

The beneficial uses of water contact recreation (REC-1) and non-contact water recreation (REC-2) are not supported in Watsonville Slough or its tributaries, Struve, Hanson, Harkins and Gallighan Sloughs, because fecal coliform concentrations there exceed existing Basin Plan numeric water quality objectives protecting these beneficial uses.

Numeric Target

Fecal coliform concentration, based on a minimum of five samples for any 30-day period, shall not exceed a log mean of 200 MPN per 100mL, nor shall more than ten percent of total samples collected during any 30-day period exceed 400 MPN per 100mL.

Source Analysis

Controllable sources of fecal coliform bacteria in Watsonville Slough and its tributaries include humans, pets, livestock, and land-applied non-sterile manure in irrigated agriculture. Genetic data indicate that the major sources of fecal coliform causing exceedance of the REC-1 standard are natural avian populations. Genetic analysis of Watsonville Slough water samples from both winter and summer periods confirmed birds, cows, and dogs (with birds contributing the most and dogs the least); human fecal coliform bacteria was confirmed in Harkins and Struve Sloughs, but in lower amounts than cow, bird and dog fecal coliform.

TMDL and Allocations

The TMDL for pathogens in Watsonville Slough is a receiving water concentration equal to the numeric target for fecal coliform. The allocation to each responsible party is the receiving water fecal coliform concentration equal to the TMDL. These allocations focus on reducing or eliminating the controllable sources of fecal coliform. The table below shows the allocations with respect to responsible party and waterbody.

The allocation to background (including natural sources from birds) is also the receiving water fecal coliform concentration equal to the TMDL. The parties responsible for the allocation to controllable sources are not responsible for the allocation to natural sources.

000727

ALLOCATIONS AND RESPONSIBLE PARTIES

WASTE LOAD ALLOCATIONS		Receiving Water Fecal Coliform (MPN/100mL) ¹
Waterbody	Responsible Party	
Watsonville, Struve, Harkins Sloughs	Santa Cruz County (Urban Stormwater)	≤ 200
Watsonville, Struve, Harkins, Gallighan, Hanson Sloughs	City of Watsonville (Urban Stormwater)	≤ 200
Harkins Slough	Santa Cruz Co. Freedom Sanitation District (Sanitary Sewer Collection System)	≤ 200
Watsonville & Struve Sloughs	City of Watsonville (Sanitary Sewer Collection System)	≤ 200
Gallighan Slough	Santa Cruz County (Landfill Stormwater)	≤ 200
LOAD ALLOCATIONS		Receiving Water Fecal Coliform (MPN/100mL) ¹
Watsonville & Harkins Sloughs	Operators or owners of irrigated lands who land-apply non-sterile manure	≤ 200
Watsonville & Harkins Sloughs	Operators or owners of livestock facilities and animals	≤ 200
¹ As log mean of five (5) samples taken in a 30-day period occurring within each season.		

The TMDL is considered achieved when the allocations assigned to the controllable and natural sources are met, or when the numeric targets are consistently met in all tributaries and Watsonville Slough.

Margin of Safety

A margin of safety is incorporated in the TMDL through conservative assumptions.

Implementation and Monitoring

Landfill Stormwater Monitoring

Within six months following adoption of this TMDL by the Office of Administrative Law, the Executive Officer will require the County of Santa Cruz to include fecal coliform monitoring in the Buena Vista Landfill Waste Discharge Requirements (Order No. 94-29), per Section 13267 of the CWC.

THE FOLLOWING ACTIONS WILL REDUCE FECAL COLIFORM BACTERIA LOADING FROM HUMANS AND PETS:

Urban Stormwater

The City of Watsonville (City) and County of Santa Cruz (County) must revise their Stormwater Management Plans to indicate how and when they will conduct public participation and outreach regarding specific actions that individuals can take to reduce pathogen loading and to indicate how and when they will develop and implement an enforceable means of reducing fecal coliform loading from pet waste (e.g., an ordinance). Within six months following adoption of this TMDL by the Office of Administrative Law, the Executive Officer will (i) issue a letter pursuant to Section 13383 of the California Water Code (CWC), requiring these changes to be described in the annual report required by the Small MS4 Permit (State Board Order No. 2003-005, NPDES General Permit No.CAS000004 for Municipal Separate Storm Sewer Systems) and (ii) require appropriate modifications to the Stormwater Management Plans pursuant to Section G of the General Permit.

The City and County public participation and outreach efforts must include the following tasks:

- a. Educating the public about sources of fecal coliform and its associated health risks in surface waters.

- b. Identifying and promoting specific actions that responsible parties can implement to reduce pathogen loading from sources such as homeless encampments, agricultural field workers, and homeowners who contribute waste from domestic pets.

The City and County must monitor receiving water and stormwater outfalls that may be contributing fecal coliform to the sloughs. Within six months following adoption of this TMDL by the Office of Administrative Law, the Executive Officer will issue a letter pursuant to Section 13267 and/or 13383 of the CWC, requiring a technical report that describes a monitoring plan and schedule that includes sampling sites in receiving water and at stormwater outfalls. The City and County may submit the monitoring results in subsequent annual reports already required by the Small MS4 Permit or submit them in a separate technical report.

Sanitary Sewer Collection System

The City and County are required to improve maintenance of their sewage collection systems, including identification, correction, and prevention of sewage leaks, in portions of the collection systems that run through, or adjacent to, tributaries to Watsonville Slough (Action 1B, Table 1). Within six months following adoption of this TMDL by the Office of Administrative Law, the Executive Officer will issue a letter pursuant to Section 13267 of the CWC, requiring a technical report that describes how and when they will conduct improved system maintenance in portions of the system most likely to affect the Sloughs. One year following adoption of this TMDL by the Office of Administrative Law, Water Board staff will evaluate proposed sewer system maintenance for the City and the County of Santa Cruz Freedom Sanitation District as described in the technical report and determine whether appropriate changes to the maintenance have been made or whether any changes to the Waste Discharge Requirements (currently, Order No. R3-2003-0041, and No. R3-2003-0040, respectively) are warranted.

THE FOLLOWING ACTIONS WILL REDUCE FECAL COLIFORM BACTERIA LOADING FROM LIVESTOCK AND LAND-APPLIED NON-STERILE MANURE:

Livestock Sources

Operators or owners of livestock facilities and animals must comply with the proposed Watsonville Slough Watershed Livestock Waste Discharge Prohibition to implement their load allocations. Within one year following approval of the TMDL by the Office of Administrative Law, the Executive Officer will notify the owners and operators of livestock facilities, and the owners of animals, of the proposed Watsonville Slough Watershed Livestock Waste Discharge Prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Nonpoint Source Pollution Control Implementation Program (Program) or documentation submitted in compliance with the prohibition within six months of the submittal date. Should the Program or documentation require modification, or if a party fails to submit a Program or documentation, the Executive Officer may issue a civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements to assure compliance with the prohibition. Alternatively, dischargers may comply by immediately ceasing all discharges in violation of the Prohibition.

Responsible parties must submit monitoring data or other evidence that demonstrates compliance with the Watsonville Slough Watershed Livestock Waste Discharge Prohibition. The Executive Officer will determine whether the information submitted demonstrates compliance.

Irrigated Land Sources

Operators or owners of irrigated lands where non-sterile manure is applied must comply with the Conditional Waiver of Waste Discharge Requirements for Discharges from Irrigated Lands to implement their load allocations. Staff expects management measures implemented pursuant to this waiver for irrigated lands will be adequate to reduce or eliminate pathogen discharges where farmers apply non-sterile manure to the land. However, compliance with the conditions in the waiver does not meet all of the requirements of the proposed Watsonville Slough Watershed Livestock Waste Discharge Prohibition. Since the Conditional Waiver does

March 24, 2006

not include any regulation or monitoring of pathogen discharges, operators or owners of irrigated lands where non-sterile manure is applied must also submit reports that demonstrate that they do not discharge pathogens, or explain how pathogen discharges are being addressed.

Within six months following approval of the TMDL by the Office of Administrative Law, the Executive Officer will notify responsible parties of the proposed Watsonville Slough Watershed Livestock Waste Discharge Prohibition and conditions for compliance with the prohibition. The Executive Officer will review and approve, or request modification of, the Nonpoint Source Pollution Control Implementation Program (Program), or other documentation submitted in compliance with the prohibition, within six months of the submittal date. Should the Program or documentation require modification, or if a responsible party fails to submit a Program or documentation, the Executive Officer may issue an administrative civil liability complaint pursuant to section 13268 or 13350 of the CWC, or alternatively, propose individual or general waste discharge requirements or conditional waivers to assure compliance with the prohibition. Alternatively, dischargers may comply by immediately ceasing all discharges in violation of the Prohibition.

Tracking and Evaluation

Water Board staff will conduct a review every three years beginning three years after TMDL approval by the Office of Administrative Law. Water Board staff will use Annual Reports and any other available information to determine progress toward compliance. Water Board staff may conclude that ongoing implementation efforts are insufficient to ultimately achieve the allocations and numeric target. If staff makes this determination, staff will recommend that additional reporting, monitoring, or implementation efforts be required either through authority of the Executive Officer (e.g. pursuant to CWC section 13267 or section 13383) or the Water Board (e.g. through revisions of existing permits and/or a Basin Plan Amendment). Water Board staff may also conclude that implementation efforts are likely to achieve compliance, and therefore existing implementation efforts should continue.

Responsible parties will continue monitoring according to this plan for at least three years, at which time Water Board staff will determine the need for continuing or otherwise modifying the monitoring requirements. Responsible parties may also demonstrate that controllable sources of pathogens are not contributing to exceedance of water quality objectives in receiving waters. If this is the case, staff may consider re-evaluating the targets and allocations. For example, staff may propose a site-specific objective for Watsonville Sloughs, to be approved by the Water Board. The site-specific objective would be based on evidence that natural, or "background" sources alone were the cause of exceedances of the Basin Plan water quality objective for fecal coliform.

Three-year reviews will continue until the TMDL is achieved. The target date to achieve the TMDL is ten years after implementation commences.

000730

Table 1 IMPLEMENTATION ACTIONS OF RESPONSIBLE PARTIES

Responsible Party	Source Category	Management Measure	Action
County of Santa Cruz and City of Watsonville	1A Human	Public Participation and Outreach	Educate the public, including the homeless, regarding sources of fecal coliform and associated health risks of fecal coliform in surface waters of the Watsonville Slough Watershed. Educate the public regarding actions that individuals can take to reduce pathogen loading in the Watershed. Revise Stormwater Management Plan and submit to Water Board for approval, monitor, and report.
	1B Human	Human Source Elimination and Prevention	Maintain the sewage collection system, including identification, correction, and prevention of sewage leaks into tributaries to Watsonville Slough. Revise Sewer System Management Plan and submit to Water Board for approval, monitor, and report.
	1C Pets	Pet Waste Management	Develop and implement enforceable means (e.g., an ordinance) of reducing/eliminating fecal coliform loading from pet waste. Educate the public regarding actions that individuals can take to reduce loading in the Watershed. Revise Stormwater Management Plan and submit to Water Board for approval, monitor, and report.
Operators or owners of livestock facilities and animals	2A Livestock	Farm Animal and Livestock Facilities Management	Develop and implement strategies to reduce/eliminate fecal coliform loading from farm animal and livestock facilities (e.g., pens, corrals, barns) into surface waters of the Watsonville Slough Watershed. Submit <i>Nonpoint Source Control Implementation Program</i> to the Executive Officer of the Water Board and monitor and report, or, document and report to the Water Board that no discharge is occurring from animal facilities.
	2B Livestock	Grazing Management	Protect sensitive areas (including streambanks, sloughs, wetlands, and riparian zones) by reducing direct loadings of animal wastes from grazing areas into surface waters of the Watsonville Slough Watershed. Submit <i>Nonpoint Source Control Implementation Program</i> to the Executive Officer of the Water Board and monitor and report, or, document and report to the Water Board that no discharge is occurring from grazing activities.
Operators or owners of irrigated lands who land-apply non-sterile manure	3 Land-Applied Non-Sterile Manure on Irrigated lands	Irrigated Land Management	Develop, implement and report on measures to reduce/eliminate fecal coliform loading from land-applied non-sterile manure into surface waters of the Watsonville Slough Watershed. Document and report to the Water Board that measures are in place and monitor to demonstrate effectiveness.

AMENDMENT NO. 2. Revise the September 8, 1994 Basin Plan as follows:

Add the following at the end of Chapter 4

VIII.E.6. WATSONVILLE SLOUGH WATERSHED LIVESTOCK WASTE DISCHARGE PROHIBITION

1. The direct or indirect discharge of livestock animal waste from any grazing operations, non-sterile manure application, farm animal and livestock facilities including paddocks, pens, corrals, barns, sheds, or other activity of whatever nature into waters of the State within the Watsonville Slough Watershed is prohibited.

The above prohibition does not apply to any farm animal or livestock facility and/or any facility where non-sterile manure is applied if the owner or operator:

000731

- i. Submits a Nonpoint Source Pollution Control Implementation Program, consistent with the *Policy for Implementation and Enforcement of the Nonpoint Source Pollution Control Program*, that is approved by the Executive Officer, or
- ii. Demonstrates to the satisfaction of the Executive Officer that its activities do not cause livestock waste to pass into waters of the state within the Watsonville Slough Watershed, or
- iii. Is regulated under Waster Discharge Requirements or an NPDES permit, or a conditional waiver of waste discharge requirements that explicitly addresses compliance with the Watsonville Slough TMDL for Pathogens.

This Livestock Waste Discharge Prohibition takes effect two years following approval by the U.S. Environmental Protection Agency.

Add the following at the end of Chapter 5, IV.E. Other Specific Prohibition Subjects:

Watsonville Slough Watershed Livestock Waste Discharge Prohibition

AMENDMENT NO. 3. Revise the September 8, 1994 Basin Plan, Chapter Two, as follows:

Amend portion of Table 2-1. Identified Uses of Inland Surface Waters, pertaining to Watsonville Slough and tributaries:

Waterbody Names	MUN	AGR	PRO	IND	GWR	REC1	REC2	WILD	COLD	WARM	MIGR	SPWN	BIOL	RARE	EST	FRESH	NAV	POW	COMM	AQUA	SAL	SHELL
Watsonville Slough						X	X	X		X		X	X	X	X				X			X
Struve Slough						X	X	X		X		X	X	X	X				X			X
Hanson Slough						X	X	X		X		X	X	X	X				X			X
Harkins Slough						X	X	X		X		X	X	X	X				X			X
Gallighan Slough						X	X	X		X		X		X	X				X			X

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2006 - 0067**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST REGION (BASIN PLAN) TO ESTABLISH A WATSONVILLE SLOUGH TOTAL MAXIMUM DAILY LOAD (TMDL) FOR PATHOGENS, ESTABLISH A WATSONVILLE SLOUGH WATERSHED LIVESTOCK WASTE DISCHARGE PROHIBITION, AND REMOVE THE SHELLFISH HARVESTING BENEFICIAL USE FROM WATSONVILLE SLOUGH AND TRIBUTARIES

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted a revised Basin Plan on February 11, 1994, which was approved by the State Water Resources Control Board (State Water Board) on May 18, 1994 and by the Office of Administrative Law (OAL) on September 7, 1994.
2. On March 24, 2006, the Central Coast Water Board adopted Resolution No. R3-2006-0025 ([Attachment 1](#)) amending the Basin Plan to establish a TMDL for Pathogens, establish a Livestock Waste Discharge Prohibition, and remove the SHELL beneficial use from the Watsonville Slough and its tributaries.
3. Central Coast Water Board found that the analysis contained in the Final Project Report, including the Use Attainability Analysis, the California Environmental Quality Act (CEQA) "Substitute Document" Report for Basin Plan Amendment, including the CEQA Checklist, the staff report and the responses to comments prepared by Central Coast Water Board staff, complies with the requirements of the State Water Board's certified regulatory CEQA process, as set fourth in the California Code of Regulations, Title 23, section 3775 et seq.
4. Central Coast Water Board found that adoption of this amendment would result in no adverse effect on wildlife, and the amendment would be consistent with the State Antidegradation Policy (State Water Board Resolution No. 68-16) and federal antidegradation requirements.
5. State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans, and section 13242, which requires a program of implementation of water quality objectives. The State Water Board also finds that the TMDL, livestock waste discharge prohibition, and removal of the SHELL beneficial use dedesignation as reflected in the Basin Plan amendment are consistent with the requirements of federal Clean Water Act section 303(c)(d).
6. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL and SHELL dedesignation must also be approved by the U.S. Environmental Protection Agency (USEPA).

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2006-0025.
2. Authorizes the Executive Director or designee to submit to OAL the amendment adopted under Central Coast Water Board Resolution No. R3-2006-0025, as approved, and the administrative record for this action and to submit to USEPA for approval the TMDL and SHELL dedesignation.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 21, 2006.

AYE: Tam M. Doduc

September 9, 2005

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906**

**RESOLUTION NO. R3-2005-0106
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN TO INCLUDE THE
SAN LUIS OBISPO CREEK TOTAL MAXIMUM DAILY LOAD AND
IMPLEMENTATION PLAN FOR NITRATE-NITROGEN**

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region hereby finds that:

The California Regional Water Quality Control Board, Central Coast Region (Central Coast Water Board), adopted the Water Quality Control Plan for the Central Coast Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.

2. The Central Coast Water Board periodically revises and amends the Basin Plan. The Central Coast Water Board has determined the Basin Plan requires further revision and amendment to incorporate the San Luis Obispo Creek Total Maximum Daily Load (TMDL) for Nitrate-Nitrogen (Nitrate-N).
3. The Central Coast Water Board proposes to amend the Basin Plan by inserting amendments into Chapter Four, Section IX (Total Maximum Daily Loads).
4. Section 303(d) of the Clean Water Act (CWA) requires states to identify and prepare a list of water bodies that do not meet water quality standards and to establish TMDLs for listed waterbodies.
5. San Luis Obispo Creek was identified on California's 1994 303(d) list as impaired by nutrients due to exceedence of the existing Basin Plan objective protecting the municipal and domestic supply (MUN) beneficial use.
6. San Luis Obispo Creek is located in San Luis Obispo County, California. The headwaters are located immediately north-east of the City of San Luis Obispo and flow southwest for approximately 17 miles towards Avila Beach, California, ultimately draining into the Pacific Ocean at Avila Bay.

7. The Final Project Report contains a Problem Statement, Numeric Targets, Source Analysis, Total Maximum Load, Linkage Analysis, Load Allocations, Margin of Safety, an Implementation Plan, and a Monitoring Plan.
8. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as USEPA guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). The Central Coast Water Board has determined that the San Luis Obispo Creek Nitrate-N TMDL is set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). The regulations in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR 130.2(i)).
9. Upon establishment of TMDLs by the State or US Environmental Protection Agency (USEPA), the State is required to incorporate the TMDLs, along with appropriate implementation measures, into the State Water Quality Management Plan (40 CFR 130.6 (c)(1), 130.7; CWC sections 13050(j), 13242). The Basin Plan, and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the Central Coast Water Board.
10. The Central Coast Water Board's goal for establishing the above mentioned TMDL is to protect the municipal and domestic water supply beneficial use (MUN) as defined in the Basin Plan.
11. Central Coast Water Board staff submitted a TMDL Project Report to an external scientific review panel on March 16, 2005 as required by Health & Safety Code Section 57004. Central Coast Water Board staff edited the Project Report or provided a written response that explained the basis for not incorporating the comments, or the comments did not result in any changes to the proposed Basin Plan Amendment. The scientific portions of the TMDL and implementation plan are based on sound scientific knowledge, methods, and practices in accordance with Section 57004.
12. Interested persons and the public have been informed of TMDL progress from the early stages of TMDL development. Efforts to inform the public and solicit public comment include public meetings, presentations to special interest groups, several individual meetings with vested stakeholders, and a number of telephone conversations with interested parties. Water Board staff provided public notification of the amendment to the Basin Plan 45 days preceding the Board hearing. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies. Central Coast Water Board staff responded to oral and written comments received from the public.

13. The Central Coast Water Board considered costs of implementing measures to achieve the TMDL. The costs to implement the TMDL will be incurred by identified responsible parties. These costs are reasonable relative to the water quality benefits to be derived from implementing the TMDL.
14. Anti-Degradation – This Resolution is consistent with the provisions of the State Water Resources Control Board Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR 131.12. The TMDL will result in improved water quality and maintains the level of water quality necessary to protect existing and anticipated beneficial uses.
15. The Central Coast Water Board concurs with the analysis contained in the Final Project Report, California Environmental Quality Act "Substitute Document" Report for Basin Plan Amendment, including the CEQA Checklist, the staff report and the responses to comments and finds that the analysis complies with the requirements of the State Water Resources Control Board's (State Water Board) certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Central Coast Water Board finds that the analysis fulfills the Central Coast Water Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. All public comments were considered.
16. The Basin Plan amendment incorporating a TMDL for nitrate-N for San Luis Obispo Creek must be submitted for review and approval by the State Water Board, the State Office of Administrative Law (OAL), and the USEPA. The Basin Plan amendment will become effective upon approval by OAL.
17. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and is therefore exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
18. On September 9, 2005, in San Luis Obispo, California, the Central Coast Water Board held a public hearing and heard and considered all public comments and evidence in the record.

THEREFORE, be it resolved that:

- 1 Pursuant to sections 13240 and 13242 of the California Water Code, the Central Coast Water Board, after considering the entire record, including the oral testimony at the hearing, hereby adopts the amendment: "Attachment A: Attachment -Proposed Basin Plan Amendments."
2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Water Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Central Coast Water Board requests that the State Water Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the

September 9, 2005

California Water Code and forward it to OAL and the USEPA. The Central Coast Water Board shall file a Notice of Decision with the Secretary of Resources and the Governor's Office of Planning and Research (State Clearinghouse) after approval by OAL and USEPA.

4. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
5. If, during its approval process, the State Water Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed, the Executive Officer may make such changes, and shall inform the Central Coast Water Board of any such changes.

I, **Roger W. Briggs, Executive Officer**, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on September 9, 2005.

for Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2005-0106

ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to Chapter 4 after IX. F.

IX. G. SAN LUIS OBISPO CREEK TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION PLAN FOR NITRATE-NITROGEN

The Regional Water Quality Control Board adopted this TMDL on September 9, 2005.

This TMDL was approved by:

The State Water Resources Control Board on _____

The California Office of Administrative Law on _____ (*Effective date*)

The U.S. Environmental Protection Agency on _____

Problem Statement

The municipal and domestic supply of water beneficial use (MUN) is not being supported because nitrate-N concentrations in San Luis Obispo Creek exceed the existing Basin Plan numeric objective protecting the MUN beneficial use.

Numeric Target

The numeric target used to calculate the TMDL is a nitrate-N concentration of 10 mg/L-N.

Source Analysis

Nitrate-N sources contributing to the problem identified in the Problem Statement are, in decreasing order of contribution: City of San Luis Obispo Water Reclamation Facility (WRF), croplands, background, reservoirs, and residential areas.

TMDL and Allocations

The TMDL is a receiving water nitrate-N concentration equal to the numeric target. The following allocations are necessary to achieve the TMDL.

Wasteload Allocations:

City of San Luis Obispo WRF effluent: The monthly mean nitrate-N concentration of effluent shall not exceed 10 mg/L-N.

Load Allocations:

- Croplands in Prefumo Creek Watershed: shall not cause nitrate-N concentration in receiving waters to exceed 10 mg/L-N.
- Background: Nitrate concentration of 0.1 mg/L-N.

Load and wasteload allocations to sources currently meeting water quality standards:

- The following wasteload and load allocations ensure that the receiving water will achieve compliance with water quality standards at the earliest possible date, continue to meet

water quality standards after the above wasteload and load allocations are attained, and comply with state and federal anti-degradation requirements.

- Residential Sources Wasteload Allocation:
 - Storm water discharge shall not cause an increase in receiving water nitrate-N concentration greater than the current increase in nitrate-N concentration resulting from the discharge.
- Reservoir Sources Load Allocation (Laguna Lake):
 - Reservoir discharge shall not cause an increase in receiving water nitrate-N concentration greater than the current increase in nitrate-N concentration resulting from the discharge.

Margin of Safety: Nitrate concentration of 2.2 mg/L-N.

IMPLEMENTATION

The following actions will be taken to implement the TMDL.

WRF Source:

The Central Coast Water Board will incorporate an effluent limit for nitrate-N in the City of San Luis Obispo's National Pollutant Discharge Elimination System permit (NPDES permit) for the WRF, consistent with the allocations described in the Wasteload Allocations section above. The effluent limit will be incorporated in the NPDES permit at the first permit renewal following TMDL approval by the Central Coast Water Board (expected in May 2007).

The Central Coast Water Board intends to issue a Cease and Desist Order (CDO) or Time Schedule Order to the WRF concurrently with the NPDES permit, requiring the WRF to reduce nitrate-N concentration in the effluent. The CDO will contain a time schedule establishing the time allowed to comply with the order.

The Central Coast Water Board will consider a revision of the wasteload allocation and corresponding effluent limit for the WRF if an amendment to the Basin Plan removing or revising the MUN beneficial use and corresponding numeric objective for nitrate is approved by USEPA.

Residential Source (Storm water):

- The City of San Luis Obispo, the County of San Luis Obispo, and Cal Poly State University will implement management practices consistent with and required by Small MS4 Permits regulating storm water discharge in San Luis Obispo Creek watershed, and will submit annual reports as required by such permits. If implementation actions are insufficient to achieve the TMDL, additional implementation actions will be required through approval by the Executive Officer (e.g., pursuant to CWC section 13267 or section 13383) or by the Central Coast Water Board (e.g., by requiring revisions of existing storm water management plans and/or a Basin Plan Amendment).

Reservoir Source

- Implementation measures to achieve the allocation to the reservoir source are carried out through the Residential Source (Storm water) implementation actions.

Cropland Source:

- Landowners and operators of irrigated lands in Prefumo Creek watershed will implement actions needed to achieve the allocations to croplands pursuant to the Conditional Waiver of Waste Discharge Requirements for Discharges to Irrigated Lands (Conditional Waiver). Implementation and monitoring requirements for parties engaged in agricultural activities are consistent with, and rely upon, the Conditional Waiver.
- Monitoring reports and data associated with the Conditional Waiver, as well as other information, will be used to determine whether management measures being taken are sufficient to achieve the TMDL by the year 2012. Central Coast Water Board staff will make this determination every three years as described in the Tracking and Monitoring section below. If implementation actions are insufficient to achieve the TMDL, additional implementation actions will be required through approval by the Executive Officer (e.g., pursuant to CWC section 13267 or section 13383) or by the Central Coast Water Board; the Executive Officer or the Central Coast Water Board will approve of additional actions as soon as practicable.

Monitoring

The following actions will be taken to implement monitoring requirements.

The Executive Officer (EO) or the Central Coast Water Board will amend the Monitoring and Reporting Program (M&RP) of the City's NPDES permit for the WRF to incorporate effluent and stream monitoring for nitrate-N, and to incorporate reporting of these monitoring activities. The City of San Luis Obispo will comply with the amended M&RP as soon as the EO or the Water Board issues the revised program (anticipated to occur at the next permit renewal following TMDL approval by the Central Coast Water Board [expected in May 2007]).

Implementation and monitoring requirements for parties engaged in agricultural activities are consistent with, and rely upon, the Conditional Waiver.

Tracking and Monitoring

- Central Coast Water Board staff will conduct a review of implementation activities every three years, beginning three years after TMDL approval by the Office of Administrative Law, unless funding is unavailable. Central Coast Water Board staff will utilize annual reports associated with Small MS4 permits, as well as other available information, to review water quality data and implementation efforts of implementing parties and progress being made towards achieving the allocations and the numeric target. Central Coast Water Board staff may conclude that ongoing implementation efforts may be insufficient to ultimately achieve the allocations and numeric target. If staff makes this determination, staff will recommend that additional reporting, monitoring, or implementation efforts be required either through approval by the Executive Officer (e.g.,

pursuant to CWC section 13267 or section 13383) or by the Central Coast Water Board (e.g., through revisions of existing permits and/or a Basin Plan Amendment). Central Coast Water Board staff may conclude that to date, implementation efforts and results are likely to result in achieving the allocations and numeric target, in which case existing and anticipated implementation efforts will continue.

Three-year reviews will continue until the TMDL is achieved, unless funding is unavailable. The target date to achieve the TMDL is during or before the year 2012.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2006 - 0045**

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST REGION (BASIN PLAN) TO ESTABLISH A
TOTAL MAXIMUM DAILY LOAD (TMDL) FOR
NITRATE-NITROGEN (NO₃-N) IN SAN LUIS OBISPO CREEK

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted a revised Basin Plan on February 11, 1994, which was approved by the State Water Resources Control Board (State Water Board) on May 18, 1994 and by the Office of Administrative Law (OAL) on September 7, 1994.
2. On September 9, 2005, the Central Coast Water Board adopted Resolution No. R3-2005-0106 ([Attachment](#)) amending the Basin Plan to establish a TMDL for NO₃-N in San Luis Obispo Creek.
3. Central Coast Water Board staff prepared documents and followed procedures satisfying the requirements of the California Environmental Quality Act.
4. The Central Coast Water Board found that this amendment would result in no adverse effect on wildlife, and the amendment would be consistent with the State Antidegradation Policy (State Water Board Resolution No. 68-16) and federal antidegradation requirements.
5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans, and section 13242, which requires a program of implementation of water quality objectives. The State Water Board also finds that the TMDL as reflected in the Basin Plan amendment is consistent with the requirements of federal Clean Water Act section 303(d).
6. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also be approved by the U.S. Environmental Protection Agency (USEPA).

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan to establish a TMDL for NO₃-N in San Luis Obispo Creek as adopted under Central Coast Water Board Resolution No. R3-2005-0106.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2005-0106, as approved, and the administrative record for this action to OAL and the TMDL to USEPA for approval.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on June 21, 2006.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401

RESOLUTION NO. R3-2005-0013
AMENDING THE WATER QUALITY CONTROL PLAN
REPEAL BASIN PLAN RESOLUTION NO. 73-05 AND SECTION 5(F) OF
BASIN PLAN RESOLUTION NO. 89-04

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (hereafter Water Board) finds:

1. The Water Board adopted a policy regarding beneficial use of oil field waste materials in the Santa Maria Valley (Resolution No. 73-05) on December 14, 1973.
2. The Water Board expanded the beneficial use of oil field waste materials policy to apply throughout the region (Resolution No. 89-04) on November 17, 1989.
3. The Water Board adopted the current Water Quality Control Plan, Central Coastal Basin (Basin Plan) on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies. Resolution Nos. 73-05 and 89-04 are included in the Basin Plan as Appendix A-16 and A-17, respectively.
4. The Water Board periodically revises and amends the Basin Plan. Water Board staff determined the Basin Plan requires further revision and amendment to repeal the reuse policy for oil field waste materials throughout the region. The Water Board will regulate oil field waste materials using waste discharge requirements (WDRs) or waiver of WDRs on oil field leases and fee-properties. The Water Board will consider regulation of oil field waste materials on oil field lease and fee properties using waivers of WDRs at the September 9, 2005 Water Board meeting in San Luis Obispo.
5. In January 2005, Water Board staff contacted State Water Resources Control Board (State Water Board) staff to inquire if repeal of Appendix A-16 and Section 5(f) of Appendix A-17 of the Basin Plan required external scientific review to comply with Health and Safety Code Section 57004. State Water Board staff indicated that external scientific review was not required for repeal of the Water Board policy for reuse of oil field wastes.
6. Interested persons and the public have been informed of the Water Board's intent to repeal Appendix A-16 and Section 5(f) of Appendix A-17 of the Basin Plan. Efforts to inform the public and solicit public comment include a public meeting/ workshop, several individual meetings with vested stakeholders, and a number of telephone conversations with interested parties. Notice of public hearing was given by advertising in newspapers

requesting such notice and applicable government agencies. Water Board staff responded to oral and written comments received from the public.

7. The Water Board considered costs of repealing Resolution No. 73-05 and Section 5(f) of Resolution No. 89-04. If repealed, the Water Board will need to adopt waivers of WDRs for the storage and re-use of petroleum waste materials. Dischargers will be required to submit a Report of Waste Discharge and appropriate filing fee, based on the level of complexity and threat to water quality. The Water Board has considered the costs of implementing the amendment to dischargers, and finds these costs to be reasonable relative to the water quality benefits derived from implementing the Basin Plan amendment.
8. Anti-Degradation – This Resolution is consistent with the provisions of the State Water Board Resolution No. 68-16, “Statement of Policy with Respect to Maintaining High Quality of Waters in California” and 40 Code of Federal Regulations (CFR) 131.12. Regulation of oil field wastes using WDRs or a WDR waiver provides more regulatory oversight compared to the re-use policy described in Resolution No. 73-05 and Section 5(f) of Resolution No. 89-04. Therefore, the Basin Plan amendment will result in improved water quality throughout the region and maintains the level of water quality necessary to protect existing and anticipated beneficial uses.
9. The Water Board concurs with the analysis contained in the Environmental Checklist, the staff report, and the responses to comments and finds that the analysis complies with the requirements of the State Board’s regulations, as set forth in the California Code of Regulations (CCR), Title 23, section 3775 et seq. Adoption of this Resolution is a ministerial act that is not subject to the California Environmental Quality Act (CEQA). Adoption of this Resolution is also not a “project” that requires compliance with the CEQA (California Public Resources Code §21000 et seq.). The Water Board is not directly undertaking an activity, funding an activity or issuing a permit or other entitlement for use (Public Resources Code section 21065; 14 CCR. §15378). Due to the Executive Officer’s October 22, 2002 letter, no one can legally discharge pursuant to Resolution Nos. 73-05 or 89-04. The Water Board is not approving any activity (14 CCR. §15352). This is a clerical amendment to bring the Basin Plan into compliance with current law. Water Board staff has also prepared a general waiver to regulate waste piles (Waste Pile Waiver), and a general waiver to regulate beneficial reuse of oily waste (Reuse Waiver). The general waivers supercede the outdated Resolutions. Water Board staff has prepared documentation to comply with the CEQA for those two projects (Waste Pile and Reuse Waivers).
10. The proposed amendment will be to repeal Resolution No. 73-05 and section 5(f) noted in Resolution No. 89-04, which amended Resolution No. 73-05 to apply throughout the Region. References to the above-noted resolutions will be deleted in the Basin Plan’s Table of Contents and text. The strikethrough version of the Basin Plan text, which references Resolutions Nos. 73-05 and 89-04 (Section VI.C, page V-17), is included as Attachment 1. The strikethrough version of Resolution No. 73-05 is included as

Attachment 2. The strikethrough version of Resolution No. 89-04 is included as Attachment 3.

11. The effect of the amendment will be throughout the Region, but more specifically in Monterey, San Luis Obispo and Santa Barbara Counties, where active oil fields that generate petroleum waste materials are located.
12. The Basin Plan amendment must be submitted for review and approval by the State Water Resources Control Board (State Board) and the State Office of Administrative Law (OAL). The Basin Plan amendment will become effective upon approval by OAL. The subject Resolution will become effective immediately.
13. The amendment to the Basin Plan will result in no potential for adverse effect, either individually or cumulatively, on wildlife and is therefore exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
14. On September 9, 2005 in San Luis Obispo, California, the Water Board held a public hearing and heard and considered all public comments and evidence in the record.

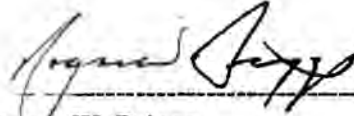

THEREFORE, BE IT RESOLVED, that:

- 1 Pursuant to CWC sections 13240, the Water Board, after considering the entire record, including oral testimony at the hearing, hereby adopts the Basin Plan amendments attached as Attachments 1, 2, and 3.
2. The Water Board's Executive Officer is directed to forward copies of the Basin Plan amendments to the State Water Board in accordance with the requirements of CWC Section 13245.
3. The Water Board requests that the State Water Board approve the Basin Plan amendments in accordance with the requirements of CWC sections 13245 and 13246, and forward it to OAL for approval. The Water Board shall file a Notice of Decision with the Secretary of Resources and the Governor's Office of Planning and Research (State Clearinghouse) after approval by OAL.
4. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
5. If, during its approval process, the State Water Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Water Board of any such changes.

Resolution No. R3-2005-0013

September 9, 2005

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the Resolution adopted by the Central Coast Water Board, on September 9, 2005.

Roger W. Briggs
Executive Officer

~~CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION~~

~~RESOLUTION NO. 73-5~~

~~ADOPTING POLICY REGARDING BENEFICIAL USE OF
OIL FIELD WASTE MATERIALS IN THE SANTA
MARIA VALLEY OIL FIELDS, SANTA BARBARA COUNTY~~

~~WHEREAS, Water Code Section 13224 states:~~

~~“Each Regional Board may issue policy statements relating to any water quality matter within its jurisdiction.”; and~~

~~WHEREAS, oil field waste materials, including but not limited to “drilling muds”, oily wastes and brines, generally contain toxic substances and materials which could significantly impair the quality of usable waters and generally constitute Group I wastes as defined by California Administrative Code, Title 23, Chapter 3, Subchapter 15, Article 3, Section 2520; and~~

~~WHEREAS, Group I wastes, such as oil field waste materials, may ordinarily be deposited only at a Class I or Class II 1 disposal site; and~~

~~WHEREAS, California Administrative Code, Title 23, Chapter 3, Subchapter 15, Article 5, Section 2540, provides:~~

~~“The Regional Board may waive the reporting of solid waste discharges, or approval and classification of disposal sites or types of sites, or the establishment of waste discharge requirements as provided by Section 13269 of the Water Code when an operation will not unreasonably affect water quality because of the type of waste and disposal operation, or an operation is in compliance with ordinances or regulations of other governmental agencies which adequately protect water quality. Such waivers shall be conditional and may be terminated by the Regional Board at any time.”; and~~

~~WHEREAS, Water Code Sections 14040 and 14041 state:~~

~~“Each Regional Board shall approve sites suitable for the disposal of different kinds of liquid wastes, consistent with the classifications that shall be adopted by the state board, and may adopt regulations for disposal of liquid waste at such approved sites that it deems are necessary for the protection of the quality of the waters of the state.”~~

~~“The hauler of liquid waste shall dispose of liquid waste in accordance with the regulations adopted by the Regional Board and shall dispose of only such type of waste as was designated for a particular site.”; and~~

Draft Resolution No. R3-2005-0013, Attachment 2

~~WHEREAS, under appropriate circumstances, certain clean fresh water “drilling muds” may be usable for beneficial purposes such as sealing of agricultural reservoir sites, improving tillability of certain solids, and stabilizing sandy soils without causing water quality problems or nuisance conditions; and,~~

~~WHEREAS, under appropriate circumstances, certain oily wastes may be usable for beneficial purposes such as dust control, weed abatement and road construction without causing water quality problems or nuisance conditions; and~~

~~WHEREAS, in the Santa Maria Valley oil fields, it appears possible, with appropriate care, to separate these oil field waste materials which may be appropriate for beneficial uses from those materials not suitable for beneficial uses;~~

~~NOW THEREFORE BE IT RESOLVED that the following shall constitute the policy of this Board regarding beneficial use of oil field waste materials in the Santa Maria Valley oil fields, Santa Barbara County:~~

- ~~1. Except as hereafter expressly provided, all oil field waste materials, including but not limited to “drilling muds”, oily wastes, and brines, shall be deposited at an appropriate and approved Class I or Class II 1 disposal site.~~
- ~~2. The following oil field waste materials may be deposited for an appropriate beneficial use at sites other than a Class I or Class II 1 disposal site provided that such site has been approved in advance by the Executive Officer of this Board, the amount of oil field waste material to be deposited and used at such site is reasonable, and adequate use practices for the control of oil field waste materials on such site are assured:
 - ~~(a) Clean, fresh water drilling mud removed from the drilling of an oil well prior to the time that the first production string of casing is installed.~~
 - ~~(b) Clean oil, not mixed with contaminants such as salt brines or toxic materials.~~~~
- ~~3. The Executive Officer may, upon written request, approve a site for a specified use or uses of those oil field waste materials specified in Paragraph 2 above, when the Executive Officer is reasonably assured that use of such site in the manner and for the purpose proposed will not adversely affect water quality or lead to nuisance conditions. Requests for site approval shall contain such information as may be required by the Executive Officer, and at a minimum shall contain:
 - ~~(a) A description of the site at which deposit and use of oil field waste materials will be made, and assurance that such materials will be used solely at and retained on such site~~
 - ~~(b) A description of the type of oil field waste material which will be used, the purpose or purposes for which it will be used, and the maximum quantity or quantities which will be used.~~~~

Draft Resolution No. R3-2005-0013, Attachment 2

- ~~(c) Assurance that the applicant or a competent agent, will be present at the time of each delivery of oil field waste material.~~
 - ~~(d) A proposed plan of use, specifically including cultivation practices and/or other appropriate control uses and measures, which will be taken to protect water quality and prevent nuisance.~~
 - ~~(e) Certification that the proposed use or uses of oil field waste materials comply with all city, county, or other local use and zoning requirements and that all necessary use permits will be obtained and maintained.~~
 - ~~(f) Certification that the applicant will submit such monitoring and technical reports as may be required by the Executive Officer.~~
 - ~~(g) Certification that the applicant is the owner of the site at which deposit and use of oil field waste materials will be made, or written consent of the owner of such site to the proposed use.~~
- ~~4. In the event that the Executive Officer determines that there is reasonable assurance that the use of oil field waste materials at the site proposed and in the manner proposed will not adversely affect water quality or lead to nuisance conditions, the Executive Officer may, in writing, approve such site. The approval shall be contingent upon full and exact compliance with all statements, representations and assurances contained in the request, and shall further provide that:~~
- ~~(a) Site approval may be withdrawn at any time, in the discretion of the Executive Officer, upon a determination that further use of the site for deposit or use of oil field waste materials will or may adversely affect water quality or create nuisance conditions.~~
 - ~~(b) Site approval does not relieve the landowner, or any other person, from otherwise complying with all state and local laws, rules, regulations and ordinances, and specifically does not constitute a license for use of oil field waste materials except in strict accord with the request and approval.~~
- ~~5. The Executive Officer shall remove site approval in the event of violation of any of the statements, representations, and assurances contained in the request.~~

~~I, Kenneth R. Jones, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 14, 1973.~~

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 89-04

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

The Water Quality Control Plan, Central Coastal Basin (Basin Plan) was approved by the State Water Resources Control Board (State Board) on March 20, 1975.

2. Since March 20, 1975, thirty-seven Basin Plan amendments have been approved by the Regional Water Quality Control Board (Regional Board) and the State Board.
- 3 Since 1975, several changes in water quality regulations and administrative procedures have occurred.
4. An updated Basin Plan incorporating all previously approved amendments, updated regulations, and procedures is needed.
5. Several significant new Basin Plan amendments are needed:
 - a. Revise PCB and Phthalate Ester objective for all Inland Surface Waters, Enclosed Bays, and Estuaries in the Water Quality Objectives chapter.
 - b. Update "Municipal Wastewater Management Plans" in the Implementation Plan chapter.
 - c. Update "Solid Waste Management" in the Implementation Plan Chapter.
 - d. Add "Water Quality Limited Segments" designation in the Plans and Policies chapter.
 - e. Add general toxic or hazardous materials discharge prohibition to all waters in the Plans and Policies chapter.
 - f. ~~Amend Resolution 73-05, "Adopting Policy Regarding beneficial Use of Oil Field Waste Materials in the Santa Maria Valley Oil Fields, Santa Barbara county" to apply Regionwide.~~

Draft Resolution No. R3-2005-0013, Attachment 3

- g. Add Regional Board policy for Highway Grooving Residues in the Plans and Policies chapter.
 - h. Add Regional Board Policy for Waiver of Regulation of Specific Types of Waste Dischargers in the Plans and Policies chapter.
 - i. Add Water Bodies Needing Intensive surveillance in the Surveillance and Monitoring chapter.
6. Several additional changes (as described in Attachment "A") are necessary to update the 1975 Basin Plan.
7. Several minor wording changes are necessary to improve the readability of the Basin Plan.
8. Drafts of the proposed Basin Plan have been prepared and distributed to interested persons and agencies for review and comment.
9. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these objectives will not have a significant adverse effect on the environment.
10. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
11. On September 8, 1989, and November 17, 1989, in the Salinas City Council Chamber Rotunda, 200 Lincoln Avenue, Salinas, California, and in the Embassy Suites-Edna Room, 333 Madonna Road, San Luis Obispo, California, respectively, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the Plan.

THEREFORE BE IT RESOLVED:

1. All amendments mentioned above and in Attachment "A", will not have a significant adverse impact on the environmental and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.
2. All amendments mentioned above and in Attachment "A" are adopted.

Resolution No. R3-2005-0013, Attachment 3

3. Any minor editorial changes to correct data or grammar and/or clarify meaning in the final copy which may not be included in Attachment "A", are also adopted.
4. Staff responses which propose specific Basin Plan changes provided in the Regional Water Quality Control Board letter dated October 12, 1989, are adopted.
5. The State Board is requested to approve the proposed updated Basin Plan with amendments in accordance with Sections 13245 and 13246 of the California Water Code.
6. Upon approval, the State Board is requested to transmit the updated Basin Plan to the U.S. Environmental Protection Agency for approval.

I, WILLIAM R. LEONARD, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on November 17, 1989.

(ORIGINAL SIGNED BY WILLIAM R. LEONARD)

Resolution No. R3-2005-0013, Attachment 4

REPORT FOR BASIN PLAN AMENDMENT

(RESOLUTION NO. R3-2005-0013)

The Central Coast Regional Water Quality Control Board (Water Board) is proposing an amendment to the Water Quality Control Plan (Basin Plan). The Basin Plan serves as the cornerstone for water quality protection through identification of beneficial uses of surface and groundwaters, establishment of water quality objectives to protect beneficial uses, and establishment of an implementation plan to achieve those objectives.

The project consists of a ministerial clerical amendment and is exempt from the California Environmental Quality Act (CEQA). The environmental analysis contained in this Report for Basin Plan Amendment and accompanying documents, including the Environmental Checklist, the staff report and the responses to comments complies with the requirements of the State Water Board's certified regulatory process, as set forth in California Code of Regulations (CCR), Title 23, section 3775 et seq. All public comments were considered.

DESCRIPTION OF PROPOSED ACTIVITY

This section describes the changes proposed and alternatives to this proposal. The purpose of this amendment is to rescind Resolution No. 73-5 and the applicable section of Resolution No. 84-04.

On December 14, 1973, the Central Coast Water Board adopted a policy regarding beneficial use of oil field waste materials in the Santa Maria Valley (Resolution No. 73-5, Basin Plan Appendix A-16). Subsequently, on November 17, 1989, the Water Board expanded that policy to apply throughout the region (Resolution No. 89-04, Basin Plan Appendix A-17).

Resolution No. 73-5 limited oil field waste material reuse to:

- (a) clean, fresh-water drilling mud removed from the drilling of an oil well prior to the time that the first production string of casing is installed, and
- (b) clean oil, not mixed with contaminants such as salt brines or toxic materials.

More than a waiver of waste discharge requirements (WDRs), provisions in Resolution No. 73-05 included (1) requiring regional boards to approve sites suitable for disposal of different kinds of liquid waste (based on former, now repealed, California Water Code [CWC] sections 14040 and 14041); (2) a mandate that all oil field waste be disposed of at Class I or Class II facilities; and (3) identification of a specific procedure under which the Executive Officer may waive waste discharge requirements for beneficial use of fresh-water drilling mud and clean oil.

Staff recommends repealing Resolution No. 73-05 and the applicable portion of Resolution No. 89-04, because staff is proposing adoption of updated general waiver of waste discharge requirements that supercede the older resolutions. The key findings of the old resolutions are out of date and conflict with newer laws and regulations. The subject Basin Plan resolutions limit the reuse of oil field waste more stringently than needed to protect water quality. Additionally, other provisions of the Basin Plan, as well as other applicable laws and regulations, provide the water quality protection provided by Resolution No. 73-05.

Resolution No. R3-2005-0013, Attachment 4

Alternatives to this proposal include:

1. Incomplete adoption of the proposed amendment.

For example, the Water Board could amend only a portion of Resolution No. 73-05, such as deleting references to the now repealed, former CWC sections 14040 and 14041. This alternative is not recommended, because adequate water quality protection from discharges of oil field waste is provided under other provisions of the Basin Plan, laws and regulations. Basin Plan provisions must be implemented in waste discharge requirements and waivers of waste discharge requirements. Some Basin Plan water quality objectives that protect ground water and fresh surface waters from oil field waste include prohibition of discharge of toxic chemicals in toxic amounts, discharge of hazardous wastes in excess of maximum contaminant levels and discharge of chemicals imparting undesirable tastes and odors. Ocean Water Quality is protected by water quality objectives in the State Water Board's Ocean Plan, which is incorporated into the Basin Plan. The Basin Plan contains other water quality protections, including a prohibition against the discharge of oil or any residual products of petroleum except in accordance with waste discharge requirements or other provisions of the Porter-Cologne Act. (Basin Plan, Chapter V., section IV.A.)

In addition, the Toxic Pits Cleanup Act stringently regulates discharges of liquid hazardous wastes to surface impoundments. CCR Title 23, Chapter 15 and Title 27 provide detailed regulation for storage and disposal of hazardous and non-hazardous wastes to land.

In the case that the Water Board would authorize the reuse of specific kinds of petroleum wastes, the intent is that there not be a disposal or discharge to ground or surface waters. Any waste discharge requirements or waiver would be drafted to assure that reuse is carried out so that there will be no discharges in violations of water quality objectives and prohibitions.

2. Take no action.

This alternative is not recommended, because Resolution No. 73-05 is sorely outdated and conflicts with newer laws and regulations, and the proposed waste discharge requirements and waiver that Water Board staff is separately recommending. Staff has prepared appropriate CEQA documents for those actions. In addition, Resolution No. 73-05 should be repealed because its waiver portion has already be repealed by statute. The remaining requirement that all oil field waste be disposed at a Class I or Class II facility is too rigid and is not necessary to reasonably protect water quality.

II. APPLICABLE INFORMATON:

1. Lead Agency Name and Address:

Central Coast Water Board
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906

2. Contact Person and Phone Number:

Sheila Soderberg (805) 549-3592

3. Project Location:

Central Coast Region

Resolution No. R3-2005-0013, Attachment 4

4. Project Sponsor's Name and Address:

Central Coast Water Board
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906

5. Other Public Agencies whose Approval is Required:

U.S. Environmental Protection Agency; U.S. Fish and Wildlife Service; U.S. Army Corps of Engineers, Interstate Oil and Gas Compact Commission; California Department of Fish & Game; California Department of Conservation, Division of Oil, Gas and Geothermal Resources Santa Maria and Coalinga Offices; California Department of Transportation; California Department of Toxic Substances Control; California Office of Health Hazard Assessment; California Air Resources Board; Santa Barbara County Planning and Development; Santa Barbara County Energy Division; Santa Barbara County Petroleum Division; Santa Barbara County Fire Protection Division; Santa Barbara County Health Department; Santa Barbara County Air Pollution Control District; San Luis Obispo County Planning and Building; San Luis Obispo County Fire Department; San Luis Obispo County Health Department; San Luis Obispo County Air Pollution Control District; Monterey County Planning and Building; Monterey County Fire Department; Monterey County Health Department; Monterey County Air Pollution Control District; Santa Clara County Planning and Building; Santa Clara County Fire Department; Santa Clara County Health Department; Santa Clara County Air Pollution Control District; San Benito County Planning and Building; San Benito County Fire Department; San Benito County Health Department; San Benito County Air Pollution Control District; City of Santa Maria Planning Department; City of Santa Maria Fire Department; City of Goleta Planning Department; City of Goleta Fire Department; Santa Barbara City Planning Department and Santa Barbara City Fire Department.

ENVIRONMENTAL CHECKLIST

II. EVALUATION OF ENVIRONMENTAL IMPACTS:

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
1. AESTHETICS -- Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially damage scenic resources, including, But not limited to, trees, rock outcroppings, and historic buildings with a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. AGRICULTURE RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

3. AIR QUALITY -- Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is not attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4. BIOLOGICAL RESOURCES -- Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

e) Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
5. CULTURAL RESOURCES -- Would the project:				
a) Cause a substantial adverse change in the significance of a historical resource as defined in §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Cause a substantial adverse change in the significance of an archaeological resource pursuant to §15064.5?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Directly or indirectly destroy a unique paleontological resource or site or unique geologic feature?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Disturb any human remains, including those interred outside of formal cemeteries?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
6. GEOLOGY AND SOILS -- Would the project:				
a) Expose people or structures to potential substantial adverse effects, including the risk of loss, injury, or death involving:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Rupture of a known earthquake fault, as delineated on the most recent Alquist-Priolo Earthquake Fault Zoning Map issued by the State Geologist for the area or based on other substantial evidence of a known fault? Refer to Division of Mines and Geology Special Publication 42.	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
ii) Strong seismic ground shaking	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iii) Seismic-related ground failure, including liquefaction?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
iv) Landslides?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in substantial soil erosion or the loss of topsoil?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on- or off-site landslide, lateral spreading, subsidence, liquefaction or collapse?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial risks to life or property	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

e) Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
7. HAZARDS AND HAZARDOUS MATERIALS Would the project:				
a) Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project result in a safety hazard for people residing or working in the project area?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Expose people or structures to a significant risk of loss injury or death involving wildland fires, including where wildlands are adjacent to urbanized areas or where residences are intermixed with wildlands?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
8. HYDROLOGY AND WATER QUALITY - Would the project:				
a) Violate any water quality standards or waste discharge requirements?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

b) Substantially deplete ground water supplies or interfere substantially with ground water recharge such that there would be a net deficit in aquifer volume or a lowering of the local ground water table level (e.g., the production rate of pre-existing nearby wells would drop to a level which would not support existing land uses or planned uses for which permits have been granted)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, in a manner, which would result in substantial erosion or siltation on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially alter the existing drainage pattern of the site or area, including through the alteration of the course of a stream or river, or substantially increase the rate or amount of surface runoff in a manner, which would result in flooding on- or off-site?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create or contribute runoff water, which would exceed the capacity of existing or planned stormwater drainage systems or provide substantial additional sources of polluted runoff?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Otherwise substantially degrade water quality?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Place housing within a 100-year flood hazard area as mapped on a federal Flood Hazard Boundary or Flood Insurance Rate Map or other flood hazard delineation map?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
h) Place within a 100-year flood hazard area structures which would impede or redirect flood flows?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
i) Expose people or structures to a significant risk of loss, injury or death involving flooding, including flooding as a result of the failure of a levee or dam?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
j) Inundation by seiche, tsunami, or mudflow?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
9. LAND USE AND PLANNING Would the project:				
a) Physically divide an established community?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Conflict with any applicable land use plan, policy, or regulation of an agency with jurisdiction over the project (including, but not limited to the general plan, specific plan, local coastal program, or zoning ordinance) adopted for the purpose of avoiding or mitigating an environmental effect?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

c) Conflict with any applicable habitat conservation plan or natural community conservation plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
10. MINERAL RESOURCES -- Would the project				
a) Result in the loss of availability of a known mineral resource that would be of value to the region and the residents of the state?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Result in the loss of availability of a locally -important mineral resource recovery site delineated on a local general plan, specific plan or other land use plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
11. NOISE Would the project result in				
a) Exposure of persons to or generation of noise levels in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) A substantial permanent increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) A substantial temporary or periodic increase in ambient noise levels in the project vicinity above levels existing without the project?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) For a project located within an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) For a project within the vicinity of a private airstrip, would the project expose people residing or working in the project area to excessive noise levels?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
12. POPULATION AND HOUSING -- Would the project:				
a) Induce substantial population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Displace substantial numbers of existing housing, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Displace substantial numbers of people, necessitating the construction of replacement housing elsewhere?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

13. PUBLIC SERVICES				
a) Would the project result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times or other performance objectives for any of the public services:	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Fire protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Police protection?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Schools?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Parks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
Other public facilities?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
14. RECREATION --				
a) Would the project increase the use of existing neighborhood and regional parks or other recreational facilities such that substantial physical deterioration of the facility would occur or be accelerated?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Does the project include recreational facilities or require the construction or expansion of recreational facilities which might have an adverse physical effect on the environment?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
15. TRANSPORTATION/TRAFFIC -- Would the project:				
a) Cause an increase in traffic which is substantial in relation to the existing traffic load and capacity of the street system (i.e., result in a substantial increase in either the number of vehicle trips, the volume to capacity ratio on roads, or congestion at intersections)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Exceed, either individually or cumulatively, a level of service standard established by the county congestion management agency for designated roads or highways?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a change in air traffic patterns, including either an increase in traffic levels or a change in location that results in substantial safety risks?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Substantially increase hazards due to a design feature (e.g., sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in inadequate emergency access?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Result in inadequate parking capacity?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

g) Conflict with adopted policies, plans, or programs supporting alternative transportation (e.g., bus turnouts, bicycle racks)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
16. UTILITIES AND SERVICE SYSTEMS - Would the project:				
a) Exceed wastewater treatment requirements of the applicable Regional Water Quality Control Board?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Require or result in the construction of new water or wastewater treatment facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Require or result in the construction of new storm water drainage facilities or expansion of existing facilities, the construction of which could cause significant environmental effects?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Have sufficient water supplies available to serve the project from existing entitlements and resources, or are new or expanded entitlements needed?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
f) Be served by a landfill with sufficient permitted capacity to accommodate the project's solid waste disposal needs?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
g) Comply with federal, state, and local statutes and regulations related to solid waste?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
17. MANDATORY FINDINGS OF SIGNIFICANCE				
a) Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self-sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

Resolution No. R3-2005-0013, Attachment 4

b) Does the project have impacts that are individually limited, but cumulatively considerable? ("Cumulatively considerable" means that the incremental effects of a project are considerable when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

III. **ENVIRONMENTAL EVALUATION** (of checklist questions answered Potentially Significant Impact, Less than Significant with Mitigation Incorporation, or Less than Significant Impact): not applicable.

See Resolution No. R3-2005-0013 attached.

**STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2006-0029**

**APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST REGION (BASIN PLAN)
INCORPORATING NON-REGULATORY REVISIONS**

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Central Coast Water Board) adopted an updated Basin Plan on February 11, 1994, which was approved by the State Water Resources Control Board (State Water Board) on May 18, 1994 and by the Office of Administrative Law (OAL) on September 7, 1994.
2. In 1999, Senate Bill 390 (Chapter 686, Statutes of 1999) amended the Water Code, section 13269, to require all waivers of waste discharge requirements to expire on January 1, 2003 unless reissued.
3. On September 9, 2005, the Central Coast Water Board adopted a general waiver of waste discharge requirements for petroleum impacted soil waste piles on oil field properties and reuse of crude oil impacted soil and non-hazardous sandblasting aggregate at oil field properties.
4. On September 9, 2005, the Central Coast Water Board adopted Resolution No. R3-2005-0013 ([Attachment](#)) incorporating non-regulatory revisions to the Basin Plan. The amendment imposes no new regulatory requirements. The changes are intended solely to bring the Basin Plan into compliance with current law.
5. Central Coast Water Board staff prepared documents and followed procedures satisfying State laws and regulations.
6. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans.
7. A non-regulatory Basin Plan amendment does not become effective until approved by the State Water Board and until OAL has concurred on its non-regulatory status.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Basin Plan adopted under Central Coast Water Board Resolution No. R3-2005-0013.

2. Authorizes the Executive Director or designee to submit the amendment adopted under Central Coast Water Board Resolution No. R3-2005-0013 to OAL for concurrence on its non-regulatory status and to the U.S. Environmental Protection Agency for informational purposes.

CERTIFICATION

The undersigned Clerk to the Board does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 15, 2006.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2006 - 0008

REVISION TO SOURCES OF DRINKING WATER POLICY TO
ESTABLISH A SITE-SPECIFIC EXCEPTION FOR OLD ALAMO CREEK

WHEREAS:

1. The State Water Resources Control Board (State Water Board) adopted the Sources of Drinking Water Policy (Policy) in 1988 in Resolution No. [88-63](#).
2. In 2002, the State Water Board reviewed waste discharge requirements for the City of Vacaville's Easterly Wastewater Treatment Plant on the State Water Board's own motion and adopted Water Quality Order [2002-0015](#) (Vacaville Order). Vacaville discharges treated effluent from the Easterly plant to Old Alamo Creek. In the Vacaville Order, the State Water Board concluded that drinking water supply (MUN) is not an existing beneficial use for Old Alamo Creek and that it probably cannot be feasibly attained in the future. The State Water Board committed to consider a site-specific exception from State Water Board Resolution No. 88-63 (Source of Drinking Water Policy) for the creek if the Central Valley Regional Water Quality Control Board (Central Valley Water Board) amended its Water Quality Control Plan (Basin Plan) to dedesignate MUN as a beneficial use for the creek.
3. On April 28, 2005, the Central Valley Water Board adopted Resolution No. [R5-2005-0053](#), which amended its Basin Plan to dedesignate the MUN use for Old Alamo Creek.
4. The Central Valley Water Board's Final Staff Report (April 2005) for the amendment indicates that ephemeral, intermittent, or low flows together with hydrologic modifications prevent MUN from being attained in Old Alamo Creek. Further, releasing additional treated sewage effluent from Vacaville's treatment plant will not allow MUN to be attained. The State Department of Health Services classifies Old Alamo Creek as an extremely impaired source for drinking water supply. Both quality concerns and the public's general unwillingness to accept the use of effluent for direct potable supply make it unlikely that the creek will support MUN in the future.
5. The Policy states that all State waters are considered suitable or potentially suitable for MUN with certain exceptions. The State Water Board concluded in the Vacaville Order that none of the Policy's exceptions specifically applied to Old Alamo Creek.
6. Nevertheless, a site-specific exception to the Policy is appropriate because MUN is not an existing use for the creek nor can this use be feasibly attained in the future. Although the Policy's exceptions do not specifically apply, the circumstances for Old Alamo Creek

are similar to the bases for several exceptions in the Policy (e.g., the exceptions for modified channels and for sources with low yield).

7. On January 18, 2006, the State Water Board held a public hearing on the proposed revision to the Policy.
8. The State Water Board found that the action under consideration is not a “project” within the meaning of Public Resources Code section 21065, in that it has no potential to result in either a direct or reasonably foreseeable indirect change to the physical environment, and, therefore, this action is exempt from the requirements of the California Environmental Quality Act.

THEREFORE BE IT RESOLVED THAT:

The State Water Board revises the Policy as indicated in the attached copy of the Policy.

CERTIFICATION

The undersigned, Acting Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Board held on February 1, 2006.

Selica Potter
Acting Clerk to the Board

STATE WATER BOARD
RESOLUTION NO. 2005-0050

ADOPTION OF THE WATER QUALITY CONTROL
POLICY FOR ADDRESSING IMPAIRED WATERS:
REGULATORY STRUCTURE AND OPTIONS (POLICY)

WHEREAS:

1. Section 303(d) of the federal Clean Water Act (CWA) requires states to identify waters that do not meet applicable water quality standards and prioritize such waters for the purposes of developing Total Maximum Daily Loads (TMDLs) [40 Code of Federal Regulations 130.7(b)(6)(1)].
2. Section 13191.3(a) of the California Water Code (CWC) requires the State Water Resources Control Board (SWRCB) to prepare guidelines to be used by SWRCB and the Regional Water Quality Control Boards (RWQCBs) in listing, delisting, developing, and implementing TMDLs pursuant to section 303(d) of the federal CWA [33 United States Code (USC) section 1313(d)].
3. The California Assembly Bill 982 Public Advisory Group (PAG) was established in 2000 to assist in the evaluation of SWRCB's water quality programs' structure and effectiveness as it relates to the implementation of section 303(d) of CWA [33 USC section 1313(d)] and applicable federal regulations.
4. CWC section 13191.3(b) also requires SWRCB to consider the consensus recommendations adopted by PAG when preparing the guidelines.
5. SWRCB issued the draft Policy (Attachment 1) and draft Guidance for Addressing Impaired Waters in California (Guidance Document) (Attachment 2) for public comment in December 2003 and issued revised documents for public comment in November 2004.
6. SWRCB, in compliance with CWC section 13147, held a public hearing in Sacramento, California on February 2, 2005 on the Policy and carefully considered all testimony and comments received. A "Preface" was added to the document to further clarify the SWRCB's intent as well as several clarifications. The changes are minor and non-substantive.
7. SWRCB finds that adoption of the Policy and the Guidance Document is not subject to the California Environmental Quality Act (CEQA) because it is not a "project" as defined in section 15378 of title 14 of the California Code of Regulations (CCR). Furthermore, even if it was a project, section 15308 of title 14 of the CCR categorically exempts from CEQA actions taken by a regulatory agency to assure the maintenance, restoration, enhancement, or protection of the environment "where the regulatory process involves procedures for protection of the environment." Adoption of the Policy and the Guidance Document has no potential to result in a foreseeable direct or indirect change on the environment. The drafts merely document and formalize existing procedures to implement TMDLs, based upon existing law, regulations, and practice. While the application of the Policy or the Guidance

Document in any specific instance may well constitute a "project," formally documenting the procedures to be employed does not.

8. The regulatory provisions of the Policy do not become effective until they are approved by the Office of Administrative Law.

THEREFORE BE IT RESOLVED THAT:

The SWRCB:

1. Approves the final Guidance Document;
2. Adopts the Policy; and
3. Authorizes the Executive Director to submit the Policy to the Office of Administrative Law for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Board held on June 16, 2005.

Debbie Irvin
Clerk to the Board

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401-7906**

**RESOLUTION NO. R3-2004-0142
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN TO INCLUDE
SAN LUIS OBISPO CREEK TOTAL MAXIMUM DAILY LOAD
AND IMPLEMENTATION PLAN FOR PATHOGENS**

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region hereby finds that:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Regional Board periodically revises and amends the Basin Plan. The Regional Board has determined the Basin Plan requires further revision and amendment to incorporate a Total Maximum Daily Load (TMDL) and Implementation Plan for Pathogens for San Luis Obispo Creek.
3. The Regional Board proposes to amend the Basin Plan by inserting amendments into Chapter Four, Section IX (Total Maximum Daily Loads).
4. Section 303(d) of the Clean Water Act (CWA) requires states to identify and prepare a list of water bodies that do not meet water quality standards and to establish TMDLs for listed waterbodies.
5. San Luis Obispo Creek was identified on California's 1996 303(d) list as impaired by pathogens due to exceedence of existing Basin Plan objectives protecting water contact and non-contact water recreation beneficial uses.
6. San Luis Obispo Creek is located in San Luis Obispo County, California. The headwaters are located immediately north-east of the City of San Luis Obispo and flow southwest for approximately 17 miles towards Avila Beach, California, ultimately draining into the Pacific Ocean at Avila Bay.
7. The elements of a TMDL are described in 40 CFR 130.2 and 130.7 and section 303(d) of the CWA, as well as USEPA guidance documents. A TMDL is defined as "the sum of individual waste load allocations for point sources and load allocations for nonpoint sources and natural background" (40 CFR 130.2). The Regional Board has determined that the San Luis Obispo Creek Pathogen TMDL is set at levels necessary to attain and maintain the applicable numeric water quality objectives taking into account seasonal variations and any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). The regulations in 40 CFR 130.7 also state that TMDLs shall take into account critical conditions for stream flow, loading and water quality parameters. TMDLs are often expressed as a mass load of the pollutant but can be expressed as a unit of concentration if appropriate (40 CFR 130.2(i)). Expressing this TMDL as units of concentration is appropriate because an existing concentration based water quality objective is used as the basis for the numeric target.

8. Upon establishment of TMDLs by the State or USEPA, the state is required to incorporate the TMDLs, along with appropriate implementation measures, into the State Water Quality Management Plan (40 CFR 130.6 (c)(1), 130.7; CWC sections 13050(j), 13242). The Basin Plan, and applicable statewide plans, serves as the State Water Quality Management Plan governing the watersheds under the jurisdiction of the Regional Board.
9. The Regional Board's goal for establishing the above mentioned TMDL is to protect the contact and non-contact water recreation beneficial uses (REC-1 and REC-2, respectively) as defined in the Basin Plan.
10. Regional Board staff submitted a TMDL report to an external scientific review panel on May 25, 2004 as required by Health & Safety Code Section 57004. Regional Board staff edited the Project Report or provided a written response that explained the basis for not incorporating the comments, or the comments did not result in any changes to the proposed Basin Plan Amendment. The scientific portions of the TMDL and implementation plan are based on sound scientific knowledge, methods, and practices in accordance with Section 57004.
11. Interested persons and the public have been informed of TMDL progress from the early stages of TMDL development. Efforts to inform the public and solicit public comment include public meetings, presentations to special interest groups, several individual meetings with vested stakeholders, and a number of telephone conversations with interested parties. Public notification of the amendment to the Basin Plan occurred 45 days preceding the Board hearing. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies. Regional Board staff responded to oral and written comments received from the public.
12. The Regional Board considered costs of implementing measures to achieve the TMDL. The costs to implement the TMDL will be incurred by identified responsible parties. These costs are reasonable relative to the water quality benefits to be derived from implementing the TMDL.
13. Anti-Degradation – This order is consistent with the provisions of the State Water Resources Control Board Resolution No. 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California" and 40 CFR 131.12. The TMDL will result in improved water quality throughout the region and maintains the level of water quality necessary to protect existing and anticipated beneficial uses.
14. The Regional Board concurs with the analysis contained in the Final Project Report, California Environmental Quality Act "Substitute Document" Report for Basin Plan Amendment, including the CEQA Checklist, the staff report and the responses to comments and find that the analysis complies with the requirements of the SWRCB's certified regulatory CEQA process, as set forth in California Code of Regulations, Title 23, section 3775 et seq. Furthermore, the Regional Board finds that the analysis fulfills the Regional Board's obligations attendant with the adoption of regulations "requiring the installation of pollution control equipment, or a performance standard or treatment requirement," as set forth in section 21159 of the Public Resources Code. All public comments were considered.
15. The Basin Plan amendment incorporating a TMDL for pathogens for San Luis Obispo Creek must be submitted for review and approval by the State Water Resources Control Board (State Board), the State Office of Administrative Law (OAL), and the US Environmental Protection Agency (USEPA). The Basin Plan amendment will become effective upon approval by OAL.

December 3, 2004

16. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and is therefore exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
17. On December 3, 2004 in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public comments and evidence in the record.

THEREFORE, be it resolved that:

Pursuant to sections 13240 and 13242 of the California Water Code, the Regional Board, after considering the entire record, including the oral testimony at the hearing, hereby adopts the amendment on "Attachment-Proposed Basin Plan Amendments."

2. The Executive Officer is directed to forward copies of the Basin Plan amendment to the State Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code and forward it to OAL and the USEPA. The Regional Board shall file a Notice of Decision with the Secretary of Resources and the Governor's Office of Planning and Research (State Clearinghouse) after approval by OAL and USEPA.
4. The Executive Officer is authorized to sign a Certificate of Fee Exemption.
5. If, during its approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Regional Board of any such changes.

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on December 3, 2004.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2004-0142

ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to Chapter 4 after IX. F.

IX. G. TOTAL MAXIMUM DAILY LOAD FOR PATHOGENS FOR SAN LUIS OBISPO CREEK

The Regional Water Quality Control Board adopted this TMDL on December 3, 2004.

This TMDL was approved by:

The State Water Resources Control Board on _____.

The California Office of Administrative Law on _____ (*Effective date*)

The U.S. Environmental Protection Agency on _____.

Problem Statement

The beneficial uses of non-contact water recreation and water contact recreation are not being supported because fecal coliform concentration in San Luis Obispo Creek exceeds existing Basin Plan numeric objectives protecting these beneficial uses.

Numeric Target

Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200 MPN per 100mL, nor shall more than ten percent of total samples collected during any 30-day period exceed 400 MPN per 100mL.

Source Analysis

The fecal coliform sources contributing to the problems identified in the Problem Statement are, in decreasing order of contribution: urban, human, birds and bats roosting in the tunnel, livestock, and background. DNA analysis of samples drawn between sites 10.3 and 10.9 (see map in Figure-1) in San Luis Obispo Creek indicate that the following sources and corresponding frequencies are present: human (41%), avian (17%), combined sewer overflow (15%), canine (11%), rodent (5%), dog (4%), raccoon (3%), feline (3%), opossum (1%).

TMDL and Allocations

The TMDL is a receiving water concentration equal to the numeric target. The TMDL is considered achieved when the allocations assigned to individual reaches are consistently met or numeric targets are consistently met in all reaches.

Allocations are expressed as receiving water fecal coliform concentration. Table-1 shows the allocations with respect to location and responsible party. The reaches referred to in Table-1 are illustrated in Figure-1.

Locations of the sites illustrated in Figure-1 are described as follows:

- Site 10.0: located along the main stem of San Luis Obispo Creek (Creek) at the bridge crossing the Creek on Marsh Street. This location is downstream of the confluence of the main stem of the Creek with Stenner Creek.
- Site 10.3: located along the main stem of the Creek at Mission Plaza, immediately downstream of the downstream end of the tunnel.
- Site 10.9: located along the main stem of the Creek at the upstream end of the tunnel.
- STEN0.0: located at the mouth of Stenner Creek before its confluence with San Luis Obispo Creek.
- STEN1.5: located in Stenner Creek at its crossing with Highland Drive on the campus of Cal Poly.
- BRIZ1.0: located in Brizziolari Creek at its crossing with Via Carte Drive on Cal Poly campus; this site is located downstream of the bull-test animal unit.

- **Site 12.5:** located along the main stem of the Creek at Cuesta Park near the Highway 101 bridge.

Waste Load Allocations: Allocations to the City of San Luis Obispo are waste load allocations (WLAs). The WLAs will be implemented by the City's NPDES permit for the Water Reclamation Facility for control of sewer sources. The WLAs will also be implemented by the City's General Municipal Stormwater permit for the control of urban sources as well as animal sources from the tunnelized area of the Creek.

Allocations to the County of San Luis Obispo are WLAs. The WLAs will be implemented by the County's General Municipal Stormwater permit for the control of urban sources.

A portion of the total allocation to California Polytechnic State University, San Luis Obispo (Cal Poly) is a WLA. The allocation at site STEN1.5 shown in Table-1 is a WLA. The WLA will be implemented by Cal Poly's General Municipal Stormwater permit for the control of urban sources.

Load Allocations: Cal Poly is allocated a load allocation (LA) for the livestock sources along Brizzolari Creek. The LA will be implemented by Cal Poly's WDR permit for the control of animal sources (see site BRIZ1.0 in Table-1).

Allocation for Background: The allocation to Background is included in the WLAs and LA. The background allocation is a receiving water concentration of 81 MPN/100 mL. Therefore, the allocations in Table-1 include the allocation to background.

Figure-1: Allocation Sites

Table-1 ALLOCATIONS AND RESPONSIBLE PARTIES				
Allocations in San Luis Obispo Creek				Receiving Water Fecal Coliform Concentration (MPN/100mL)¹
From Site:	To Upstream Site:	Responsible Party^{2,3,4}	Allocation Type⁵	
12.5	All upstream sites	County	WLA	≤ 200
10.9	12.0	City	WLA	≤ 200
10.0	10.9	City	WLA	≤ 200
Allocations in Stenner and Brizzolari Creeks				Receiving Water Fecal Coliform Concentration (MPN/100mL)¹
From Site:	To Upstream Site:	Responsible Party^{2,3,4}	Allocation Type⁵	
STEN1.5	All upstream sites	Cal Poly	WLA	≤ 200
STEN0.0	STEN1.5	City	WLA	≤ 200
BRIZI.0	All upstream sites	Cal Poly	LA	≤ 200
Allocations for reaches not specifically noted above:				
For stream reaches not specifically noted above, the allocation for any discharge loading fecal coliform into San Luis Obispo Creek or any of its tributaries is as follows:				
<ul style="list-style-type: none"> Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200 MPN per 100mL, nor shall more than 10% of the total samples during any 30-day period exceed 400 MPN per 100mL. 				
¹ As log mean of 5 samples taken in a 30-day period occurring within each season. ² County implies County of San Luis Obispo ³ City implies City of San Luis Obispo ⁴ Cal Poly implies California Polytechnic State University, San Luis Obispo Campus ⁵ WLA implies Waste Load Allocation, LA implies Load Allocation				

Margin of Safety

A margin of safety is incorporated in the TMDL through conservative assumptions. The conservative assumptions include: 1) assumption of zero bacterial die-off, 2) TMDL and allocation calculations are predominantly based on data collected during low-flow conditions, which, in the case of San Luis Obispo Creek, skews towards a worst-case scenario.

IMPLEMENTATION

The following actions will occur within one year of TMDL approval by the Office of Administrative Law.

HUMAN SOURCES

The City will implement actions described in Table 3, item 1F, to control human sources as currently required by the NPDES permit for the Water Reclamation Facility (WRF).

The Executive Officer (EO) or the Regional Board will amend the Monitoring and Reporting Program (M&RP) of the City's NPDES permit for the WRF to incorporate stream monitoring for fecal coliform. The EO or Regional Board will also amend the M&RP to incorporate reporting of such stream monitoring activities.

URBAN SOURCES

The City will amend its Storm Water Management Plan (SWMP) to include actions described in Table-3, items 1A, 1B, 1C, 1D, and 1E, pursuant to Section D of State Board Order No. 2003-005, NPDES General Permit No. CAS000004 for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (Small MS4 Permit). The City will then describe the actions taken in Table-3 as part of its annual report

required by the Small MS4 Permit. If the City does not make these changes by submittal of the next annual report, the Executive Officer will require such changes.

The Executive Officer or the Regional Board will amend the Monitoring and Reporting Program of the City's small MS4 Permit to incorporate stream monitoring of fecal coliform and reporting of such monitoring, if additional monitoring-beyond that amended to the Monitoring and Reporting Program for the City's NPDES Permit for the WRF-is necessary.

Cal Poly will amend their SWMP to include specific actions described in Table-3, items 3A, 3B, and 3D. Cal Poly will then describe actions taken in Table-3 as part of their annual report required by the Small MS4 Permit. If Cal Poly does not make these changes by submittal of next annual report for this permit, the Executive Officer will require such changes.

The County of San Luis Obispo (County) will amend its SWMP to include specific actions described in Table-3, items 2A, 2B, 2C, and 2D, pursuant to Section D of the Small MS4 Permit. The County will then describe actions taken in Table-3 as part of its annual report required by the Small MS4 Permit. If the County does not make these changes by submittal of next annual report for this permit, the Executive Officer will require such changes.

LIVESTOCK SOURCES

Cal Poly will eliminate discharges of animal waste from seepage to surface waters from irrigated wastewater and flow to surface waters from confined animal operations, as currently required by Cal Poly's Waste Discharge Requirements.

Cal Poly has agreed to use management practices described in Table-3, item 3C, as described in its Water Quality Management Plan.

Cal Poly will conduct stream monitoring and report results as currently required by the M&RP of Cal Poly's Waste Discharge Requirements.

Additionally, the EO will amend the M&RP associated with Cal Poly's Waste Discharge Requirements to require annual reporting of specific measures that have been identified in the Water Quality Management Plan and have been and/or will be taken to reduce fecal coliform loading from livestock and urban sources.

THREE-YEAR REVIEWS

Regional Board staff will conduct a review every three years beginning three years after TMDL approval by the Office of Administrative Law. Regional Board staff will utilize Annual Reports, as well as other available information, to review water quality data and implementation efforts of responsible parties and progress being made towards achieving the allocations and the numeric target. Regional Board staff may conclude and articulate that ongoing implementation efforts may be insufficient to ultimately achieve the allocations and numeric target. If staff makes this determination, staff will recommend that additional reporting, monitoring, or implementation efforts be required either through approval by the Executive Officer (e.g. pursuant to CWC section 13267 or section 13383) or by the Regional Board (e.g. through revisions of existing permits and/or a Basin Plan Amendment). Regional Board staff may conclude and articulate that to date, implementation efforts and results are likely to result in achieving the allocations and numeric target, in which case existing and anticipated implementation efforts should continue.

Three-year reviews will continue until the TMDL is achieved. The target date to achieve the TMDL is ten years after implementation commences.

Table-3 IMPLEMENTATION ACTIONS OF RESPONSIBLE PARTIES			
Responsible Party	Item	Best Management Practice	Discussion
City of San Luis Obispo	1A	Public Participation and Outreach	Educate the public regarding sources of fecal coliform and associated health risks of fecal coliform in surface waters. Educate the public regarding actions that individuals can take to reduce loading.
	1B	Pet Waste Management	Develop and implement enforceable means (e.g. an ordinance) of reducing/eliminating fecal coliform loading from pet waste.
	1C	Wild Animal Waste Management	Develop and implement strategies to reduce/eliminate fecal coliform loading from wild animals inhabiting the tunnelized area of the Creek.
	1D	Illicit Discharge Detection and Elimination	Develop and implement strategies to detect and eliminate illicit discharges (whether mistaken or deliberate) of sewage to the Creek.
	1E	Pollution Prevention and Good Housekeeping	Develop and implement strategies to reduce/eliminate fecal coliform loading from streets, parking lots, sidewalks, and other urban areas potentially collecting and discharging fecal coliform to the Creek.
	1F	Human Source Elimination and Prevention	Maintain the sewage collection system, including identification of sewage leaks, the correction of sewage leaks, and prevention of sewage leaks.
County of San Luis Obispo	2A	Public Participation and Outreach	Educate the public regarding sources of fecal coliform and associated health risks of fecal coliform in surface waters. Educate the public regarding actions that individuals can take to reduce loading.
	2B	Pet Waste Management	Develop and implement enforceable means (e.g. an ordinance) of reducing/eliminating fecal coliform loading from pet waste.
	2C	Illicit Discharge Detection and Elimination	Develop and implement strategies to detect and eliminate illicit discharges (whether mistaken or deliberate) of sewage to the Creek.
	2D	Pollution Prevention and Good Housekeeping	Develop and implement strategies to reduce/eliminate fecal coliform loading from streets, parking lots, sidewalks, and other urban areas potentially collecting and discharging fecal coliform to the Creek.
Cal Poly State University	3A	Public Participation and Outreach	Educate the public regarding sources of fecal coliform and associated health risks of fecal coliform in surface waters. Educate the public regarding actions that individuals can take to reduce loading.
	3B	Pet Waste Management	Develop and implement enforceable means of reducing/eliminating fecal coliform loading from pet waste.
	3C	Grazing Management	Develop and implement strategies to reduce/eliminate fecal coliform loading from livestock grazing.
	3D	Pollution Prevention and Good Housekeeping	Develop and implement strategies to reduce/eliminate fecal coliform loading from streets, parking lots, sidewalks, and other urban areas potentially collecting and discharging fecal coliform to the Creek.

STATE WATER BOARD
RESOLUTION NO. 2005 - 0037

APPROVING AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST REGION
INCORPORATING A TOTAL MAXIMUM DAILY LOAD
FOR PATHOGENS IN SAN LUIS OBISPO CREEK

WHEREAS:

1. The Central Coast Water Board adopted a revised Water Quality Control Plan for the Central Coast Region (Basin Plan) on February 11, 1994, which was approved by the State Water Resources Control Board (State Water Board) on May 18, 1994, by the Office of Administrative Law (OAL) on September 7, 1994, and by the U.S. Environmental Protection Agency (USEPA) on May 29, 2000.
2. On December 3, 2004, the Central Coast Water Board adopted Resolution No. R3-2004-0142 (Attachment) amending the Basin Plan to incorporate a Total Maximum Daily Load (TMDL) for pathogens in San Luis Obispo Creek.
3. Central Coast Water Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act and other State laws and regulations.
4. The Central Coast Water Board found that the additions of this amendment would result in no adverse effect on wildlife, and the amendment would be consistent with the State Antidegradation Policy (State Water Board Resolution No. 68-16) and federal antidegradation requirements.
5. The State Water Board finds that the Basin Plan amendment is in conformance with Water Code section 13240, which specifies that Regional Water Quality Control Boards may revise Basin Plans, and section 13242, which requires a program of implementation of water objectives.
6. A Basin Plan amendment does not become effective until approved by the State Water Board and until the regulatory provisions are approved by OAL. The TMDL must also be approved by USEPA.

THEREFORE BE IT RESOLVED THAT:

The State Water Board:

1. Approves the amendment to the Central Coast Water Board Basin Plan to incorporate a TMDL for pathogens in San Luis Obispo Creek as approved in Central Coast Water Board Resolution [No. R3-2004-0142](#).
2. Authorizes the Executive Director to transmit the amendment and administrative record for this action to OAL and the TMDL to USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Board held on May 19, 2005.

/s/ _____
Debbie Irvin
Clerk to the Board

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
81 Higuera Street, Suite 200
San Luis Obispo, California 93401-5427

RESOLUTION NO. R3-2002-0094

Amending the Water Quality Control Plan (Basin Plan) for the Central Coast Region to include a revised and updated Monitoring and Assessment Chapter (Chapter 6)

And requesting approval from the State Water Resources Control Board

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

1. *WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Region (Basin Plan), on September 8, 1994;*
2. *The Regional Board periodically revises and amends the Basin Plan; and*
3. *The proposed amendment to the Basin Plan was developed in accordance with section 13240 et seq. of the California Water Code, and the Regional Board considered the appropriate factors identified therein;*
4. *The amendment will replace the existing Surveillance and Monitoring Chapter of the Basin Plan,*
5. *The Basin Plan amendment incorporating a revised and updated Monitoring and Assessment Chapter must be submitted for review and approval by the State Water Resources Control Board.*
6. *The amendment meets the "Necessity" standard of the Administrative Procedure Act, Government Code §11353(b); and*
7. *Staff has made the finding that the proposed amendment is an administrative update of editorial nature only and contains no new or altered regulatory provisions; therefore, CEQA requirements do not apply; and*
8. *Drafts of the staff report and proposed amendment have been prepared and distributed to interested persons and agencies for review and comment; and*
9. *Notice of public hearing was given by advertising in newspapers of general circulation within the Region; and*
10. *On December 13, 2002, in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public testimony; and*
11. *The proposed amendments to the Basin Plan were developed in accordance with Water Code Section 13240 et seq.; and*

000142

12. *The amendment results in no potential for adverse effect, either individually or cumulatively, on wildlife;*

THEREFORE, BE IT RESOLVED, that

1. *Pursuant to sections 13240 and 13241 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment shown in "Attachment B - Proposed Basin Plan Amendment". The amendment will not take effect until approved by the State Board.*

The Regional Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board in accordance with the requirements of section 13245 of the California Water Code.

3. *The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code.*
4. *The environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified following approval of the revised Basin Plan by the State Board.*
5. *The Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results in a "De Minimus" impact finding.*
6. *If during the approval process, the State Board determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.*

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region.

Adopted on 12-24-02
Date

Roger W. Briggs
Executive Officer

I. INTRODUCTION

The effectiveness of a water quality control program cannot be judged without the information supplied by a comprehensive and systematic surveillance and monitoring and assessment program. This chapter describes statewide and regional monitoring and assessment programs designed to provide scientific information on water quality in the Central Coast Region. The Regional Board uses information produced by these programs to satisfy requirements of both the federal Clean Water Act

(<http://www.swrcb.ca.gov/rwqcb3/>) and applicable portions of the state's Porter-Cologne Water Quality Control Act.

Historically, a wide variety of interested State, federal, and local agencies have sampled, analyzed, and tracked water quality. The State Board monitoring program coordinates existing information, gathering and supplementing it where necessary to meet data needs.

The State Board is the lead agency in California directing surveillance and monitoring of water

~~quality. A routine program of systematic sampling of the State's waters is now in existence. The activity is coordinated through and assisted by the California Department of Water Resources (DWR) and Health Services (DOHS) as well as the United States Geologic Survey (USGS) and the Environmental Protection Agency (EPA).~~

~~This chapter contains a discussion of the objectives and various elements of the State and Regional Boards' programs.~~

Monitoring information is presented for both regulatory and ambient monitoring programs at the State and Regional level. Regulatory monitoring programs address compliance issues related to discharges to waters of the State. Ambient monitoring programs address overall quality of waters of the State, generally without regard to specific dischargers.

II. PROGRAM OBJECTIVES

~~The overall~~General objectives of an adequate surveillance and of statewide and regional monitoring and assessment programs are:

To measure the achievement of water quality goals and objectives specified in this plan.

2. To measure specific effects of water quality changes on the established beneficial uses.
3. To measure background conditions of water quality and long-term trends in water quality.
4. To locate and identify sources of water pollution that pose an acute, accumulative, and/or chronic threat to the environment.
5. To provide information needed to correlate receiving water quality to mass emissions of pollutants by waste dischargers.
6. To provide data for determining waste discharger compliance with permit conditions.
7. To measure waste loads discharged to receiving waters and to identify the limits of their effect, and in water quality limited segments to, prepare

waste load allocations necessary to achieve water quality control.

8. To provide documentation necessary to support enforcement of permit conditions and waste discharge requirements.
9. To provide data needed to carry on the continuing planning process.
10. To measure the effects of water rights decisions on water quality and to guide the State Board in its responsibility to regulate unappropriated water for the control of quality.
11. To provide a clearinghouse for the collection and dissemination of water quality data gathered by other agencies and private parties cooperating in the program.
12. To prepare reports on water quality conditions as required by federal and State regulations and other users requesting water quality data.

III. QUALITY CONTROL AND DATA MANAGEMENT

Federal regulations and State policy require the preparation and implementation of Quality Assurance/Quality Control Plans for most monitoring carried out by the Regional Board's staff or its contractors. Regional Board monitoring activities are usually conducted under the Quality Assurance Program Plan developed for the Surface Water Ambient Monitoring Program (SWAMP).

Sample analysis Dischargers generally must be conducted by use a State-certified laboratoryies approved by the Regional Board's Executive Officer and/or Regional Board's laboratory. The ;the laboratory must have an approved Quality Assurance/Quality Control program and must be certified under the California Department of Health Services (DHS) Accreditation Program. In some instances, DHS certification may not be required, provided the laboratory has appropriate performance based standards.

~~Discharger monitoring reports are kept in the Regional Board's files; older files are microfiched.~~

~~The Board has increasingly sophisticated computer facilities for analysis of data collected in special studies. "Raw" data are periodically made available to the State Board for entry into the statewide Water Quality Information System database for use by other agencies.~~

~~The results of special studies are generally summarized in the Regional Board staff reports and are discussed at public meetings of the Regional Board. The results of complaint monitoring are provided to the person or agency submitting the complaint. Copies of the Regional Board planning documents and special studies reports are provided to public and university libraries.~~

~~III. STATE WATER RESOURCES CONTROL BOARD PROGRAM TASKS~~

IV. REGULATORY MONITORING AND ASSESSMENT

IV.A. COMPLIANCE MONITORING

~~A significant component of the State's regulatory monitoring relates specifically to discharges of pollutants from known sources. All entities holding Regional Board Discharge Orders must conduct regular sampling and analysis of waste released to surface and ground waters. Entities granted a discharge waiver may also be subject to monitoring requirements as a condition of the waiver.~~

~~The specific chemical and physical parameters to monitor, types of sampling and analyses (e.g., waste stream sampling, toxicity tests, etc.), frequency, and other specific requirements are determined on a case-by-case basis according to the nature of the discharge and potential environmental effects. Each Order or waiver issued by the Regional Board describes the specific compliance monitoring requirements for that Order or waiver holder.~~

~~Monitoring data collected by point source dischargers and nonpoint pollution control programs are used to:~~

- ~~• Determine compliance with and provide documentation to support enforcement of Order or waiver conditions;~~
- ~~• Provide information needed to relate receiving water quality to mass emission of pollutants by dischargers.~~

~~Discharger self-monitoring reports, generated as a result of an Order, are collected and reviewed by Regional Board staff for compliance. Any necessary enforcement actions are the responsibility of, and are carried out by, the Regional Board. Self-monitoring reports are normally submitted by the discharger on a regular basis (monthly, quarterly, or semi-annually) as specified by the Order conditions.~~

~~Compliance monitoring includes a control procedure whereby Regional Board personnel periodically visit each discharger on both an announced and unannounced "Facility Inspection" basis. The intent of announced visits is to work with the discharger to review his procedures in order to assure quality control. The intent of the unannounced inspections is to survey the operation, inspect the discharge area, and collect, check, or reference samples. Data from self-monitoring may also be supplemented with information obtained by Regional Board staff through special studies, such as those characterizing the variability of the discharge, pollutant levels in nearby receiving water and biota, and characterization of pollutant loads attributable to urban runoff.~~

IV.B. COMPLAINT INVESTIGATION

~~Complaint Monitoring involves investigation of complaints of citizens and public or governmental agencies on the discharge of pollutants or creation of nuisance conditions. It is the responsibility of the Regional Board to address the complaint, including preparation of reports, letters, or other follow-up actions, to document the observed conditions, and to inform the State Board, complainant, and discharger of the observed conditions.~~

IV.C. AERIAL SURVEILLANCE

Aerial surveillance is used primarily to gather photographic records of discharges, water quality conditions, and conditions at solid waste disposal sites in the Region. Aerial surveillance is particularly effective because of the overall view of a facility that is obtained and because many facilities can be observed in a short period of time.

V. AMBIENT MONITORING AND ASSESSMENT

III.AV.A. STATE-WIDE SURFACE WATER MONITORING PROGRAMS

Section 13160 of the Porter-Cologne Water Quality Control Act delegates primary responsibility for coordination and control of water quality in California to the State Board. Section 13163 of the Act states that in conducting this mission, the State Board is to coordinate water quality investigations, recognizing that other State agencies may have primary statutory responsibility for such investigations.

~~Pursuant to these mandates, the State Board developed and in April 1976 established a coordinated Primary Water Quality Monitoring Network for California~~ has established multiple water quality monitoring programs for California. Other agencies that conduct water-quality monitoring include Participants in the Coordinated Network included the California Departments of Health Services (DHS), California Department of Water Resources (DWR), and California Department of Fish and Game (DFG), California Department of Pesticide Regulation (DPR), California Department of Toxic Substances Control (DTSC), and the United States Department of the Interior, Federal Bureau of Reclamation; the U.S. United States Geological Survey (USGS); and, the United States Environmental Protection Agency (USEPA).

V.A.1. SURFACE WATER AMBIENT MONITORING PROGRAM

The Porter-Cologne Water Quality Control Act and the federal Clean Water Act (CWA) direct water quality programs to implement efforts intended to protect and restore the integrity of waters of the State. Ambient monitoring is independent of regulatory water quality programs and serves as a measure of the overall quality of water resources and the overall effectiveness of the Regional Board's prevention, regulatory, and remedial actions.

The Surface Water Ambient Monitoring Program (SWAMP) is designed as an ongoing program to assess the effectiveness of State and Regional Board regulatory water quality programs, to develop a statewide picture of the status and trends in surface water quality, and to develop site-specific information in areas that are known or suspected to have water quality problems. In particular, SWAMP is intended to meet four goals:

1. Identify specific problems preventing the State Board, the Regional Board, and the public from realizing beneficial uses in targeted watersheds.
2. Create an ambient monitoring program that addresses all hydrologic units of the state using consistent and objective monitoring, sampling and analysis methods; consistent data quality and assurance protocols; and centralized data management.
3. Document ambient water quality conditions in potentially clean and polluted areas.
4. Provide data to evaluate the effectiveness of water quality regulatory programs in protecting beneficial uses of waters of the State.

In achieving these goals, each of the State and Regional Board monitoring programs (e.g., State Mussell Watch, Toxic Substances Monitoring) are incorporated into SWAMP to ensure a coordinated approach without duplication. Fiscal Year (FY) 00-01 marked the first year of implementation of the SWAMP Program. The Central Coast Ambient Monitoring Program (CCAMP), which has been underway since 1997, represents the Central Coast Region's participation in the statewide SWAMP Program. More detailed information on the SWAMP program can be found at the State Board website (<http://www.swrcb.ca.gov>). A summary of the CCAMP program is contained in this chapter.

~~The goal of the Primary Network is to provide an overall, continuing assessment of water quality in the State. This goal is to be achieved by statewide~~

~~monitoring of water quality parameters that can affect beneficial uses of State waters. Among such parameters, toxic substances have received increasing attention in federal and State water pollution control activities; accordingly, Toxic Substances Monitoring and the State Mussel Watch program are included in the Primary Network.~~

III.A.1.V.A.2. TOXIC SUBSTANCE MONITORING PROGRAM

~~One alternative in monitoring for toxic substances (toxic elements and organic compounds) is to collect and analyze water samples. A major problem with this approach is that toxic discharges are likely to occur in an intermittent fashion and are thus likely to be missed with "grab" sampling of the water. Another limitation to analyzing water samples is that, generally, harmful toxicants are present in low concentrations in the water. The process of bioaccumulation acts to concentrate toxicants through the aquatic food web. Therefore, in the Toxic Substances Monitoring Program the flesh of fish and other aquatic organisms is analyzed for toxic metals and synthetic organic compounds.~~

The Toxic Substance Monitoring (TSM) Program was initiated in 1976 by the State Board to provide a uniform statewide approach to the detection and evaluation of toxic substances in organisms found in fresh, estuarine, and marine waters of the State. The TSM program uses resident fish and other aquatic organisms (primarily crayfish) to monitor pollutant levels through tissue analysis. Results of tissue analyses reflect exposure to contaminants over extended periods of time and therefore provide a field-based estimate for long-term exposure of people, fish, and other wildlife to pollutants in the food chain. This approach also allows for capture of potentially toxic discharges that occur on an intermittent basis that might otherwise be missed with "grab" sampling of water.

~~The Toxic Substances Monitoring (TSM) portion of the Primary Network has been integrated with other Primary Network Monitoring. Streams and lakes were ranked according to various criteria established to indicate their importance to the State in terms of water quality. From this process, the water bodies ranked Priority 1, or highest priority, were included in the Primary Network; routine chemical and biological water monitoring is performed by DWR and/or the USGS; and toxic substances monitoring of resident~~

~~organisms is performed by the Department of Fish and Game.~~

The primary objectives of the Primary Network TSM program are:

- ~~To develop statewide baseline data and to demonstrate trends in the occurrence of toxic elements and organic substances in the aquatic biota.~~
- To assess impacts of accumulated toxicants upon the usability of State waters by man.
- To assess impacts of accumulated toxicants upon the aquatic biota.
- Where problem concentrations of toxicants are detected, to attempt to identify sources of toxicants and to relate concentrations found in the biota to concentrations found in the water.

TSM reports have been published periodically since 1977. The samples collected in the TSM program are benthic invertebrates and predator fish. Tissue samples are analyzed for important metals, including arsenic, cadmium, chromium, copper, lead, nickel, silver, and zinc and fish flesh is analyzed for mercury. In addition, both invertebrate and fish flesh tissue samples are analyzed for 55 synthetic organic compounds, most of which are pesticides (Table 6VI-1). TSM reports have been published annually since 1977. Both TSM and State Mussel Watch (SMW) Program publications and data can be found at the State Board website (<http://www.swrcb.ca.gov>).

TABLE 6-1. SYNTHETIC ORGANIC COMPOUNDS ANALYZED IN THE TOXIC SUBSTANCES MONITORING AND STATE MUSSEL WATCH PROGRAMS

<u>COMPOUND</u>	<u>COMPOUND</u>	<u>COMPOUND</u>
Aldrin	DDMU pp	Nitrofen (TOK)
Benefin	DDT pp	Oxychlorance
BHC α	Dialifor	Parathion, ethyl
BHC β	Diazinon	Parathion, methyl
BHC γ (lindane)	Dichlofenthion	PCB 1248
BHC δ	Dicofol (Kelthane)	PCB 1254
Carbophenothion	Dieldrin	PCB 1260
CDEC (Vege dex)	Endosulfan I (Thiodan I)	PCNB (Quintozene)
Chlorbenside	Endrin	Perthane
cis-Chlordane	EPN	Phenkapton
trans-Chlordane	Ehtion	Phorate (Thimet)
Chloroneb	Fenitrothion	Ronnel
Chlorpyrifos (Dursban)	Fonofos (Dyfonate)	Strobane
Dacthal	Heptachlor	Tetradifon (Tedion)
DDE op	Heptachlor epoxide	Toxaphene
DDE pp	Hexachlorobenzene (HCB)	2,4-D isopropyl ester
DDD op	Methoxychlor pp '	2,4-D isobutyl ester
DDMS pp	Mirex	2,4-D n-butyl ester

III.A.2.V.A.3. STATE MUSSEL WATCH PROGRAM

The State Mussel Watch (SMW) program has been integrated with the Primary Network Monitoring to provide documentation of the quality of coastal marine and estuarine waters. The SMW program fulfills the goal of providing the State with long-term trends in the quality of these waters. is a long-term marine water-quality monitoring program initiated in 1977. The SMW program uses resident and transplanted bivalves (e.g., mussels and clams) to monitor pollutant levels at coastal reference stations and selected sites in bays and estuaries to identify or confirm potential toxic substance pollution.

Mussels were chosen are used as the indicator-sentinel organisms for trace metals and synthetic organic compounds in the coastal and estuarine waters. Although the mussel populations of bays and estuaries are of a different species than those found in the open coast, their suitability as sentinels for monitoring the presence of toxic pollutants stems from several factors including: (1) their ubiquity along the California coast; (2) their ability to concentrate pollutants above ambient sea water levels and to provide a time-averaged sample; and (3) their non-motile nature which permits a localized measurement of water quality.

The primary goals of the SMW program are as follows:

1. To provide long-term monitoring of selected toxic substances in coastal waters;
2. To provide an important element in a comprehensive water quality monitoring strategy;
3. To identify on a year-to-year basis specific areas where concentrations of toxic materials are higher than naturally occurring background levels.

Tissue samples are analyzed for The trace metals analyzed for in mussel tissues including aluminum, cadmium, chromium, copper, lead, manganese, mercury, nickel, silver and zinc. and for sSynthetic organic compounds analyzed for are summarized listed in Table 6VI-1. When compared with alternative sampling designs, such as seawater and sediment sampling, SMW is a more cost effective

~~program. Reports have been published annually since 1978.~~

During the 1977 and 1978 sampling periods, the focus of the SMW program was, for the most part, on open coast monitoring of sites outside the vicinity of known pollutant point sources. Monitoring water quality in the State Board's designated Water Quality Protection Areas (formerly known as Areas of Special Biological Significance (ASBS)), to establish baseline conditions relating to the range of typical conditions in water, sediment and biota, was given prime importance in the early years of the program.

Based on identification of "hot spot" areas during 1977 and 1978, intensive sampling of these areas was implemented in 1979. Such a sampling strategy was intended to confirm previous findings, establish the magnitude of the potential problem and identify pollutant sources. The program has since evolved to include transplanting M. californianus mussels into selected California bays and estuaries at specific sites to confirm potential toxic substance pollution, i.e.g., in the vicinity of dischargers. In some cases the SMW program deploys freshwater clams or other organisms into fresh water streams and rivers to provide information about toxic substance pollution in watershed systems.

As with the TSM, statewide SMW reports are published periodically, available at the State Board website (<http://www.swrcb.ca.gov>).

III.B. LAKE SURVEILLANCE

~~This element is responsive to the requirements set forth in Section 314 of PL 92-500 and applicable federal regulations. The State is required to identify and determine the present trophic condition of all publicly owned fresh water lakes. The lakes inventory is updated on a two-year cycle to include additional data as it becomes available and to indicate changes in trophic conditions.~~

V.A.4. GROUNDWATER AMBIENT MONITORING AND ASSESSMENT

The State Board, pursuant to provisions of the 1999 Budget Act, has developed a statewide Groundwater Ambient Monitoring and Assessment (GAMA) Program, which includes the collaborative efforts of

other state and federal agencies also charged with groundwater monitoring responsibilities. The goal of GAMA is to provide information on the quality of California's groundwater and assess relative susceptibility of groundwater resources in California, especially those used as a drinking water supply. The GAMA program has two primary components: the California Aquifer Susceptibility (CAS) Assessment, which addresses public drinking water wells, and the Voluntary Domestic Well Assessment Project which addresses private domestic drinking water wells.

V.A.4.a. CALIFORNIA AQUIFER SUSCEPTIBILITY ASSESSMENT

The State Board, in coordination with the DHS, DWR, and local water districts and purveyors, is implementing the California Aquifer Susceptibility (CAS) Assessment to determine water quality and relative susceptibility of groundwater that serves as a source for public water supplies to possible contaminants. CAS employs a groundwater age dating technique (tritium-helium analysis) and low-level detection (microgram/liter range) of volatile organic compounds (VOCs) to assess aquifer susceptibility. A fundamental premise of the CAS assessment is that groundwater age can be used as a guide for assessing aquifer susceptibility, i.e., young groundwater age implies relatively rapid recharge of surface water to the aquifer, and therefore potentially rapid migration of surface contaminants to the aquifer. Low-level VOC detection is used to corroborate age-dating data and to also identify public supply wells that are already impacted by contaminants, but are still below action levels. This provides an "early warning system" for potentially significant VOC contamination.

In coordination with the USGS and Lawrence Livermore National Laboratory (LLNL), the CAS assessment is designed to sample the approximately 16,000 public supply wells statewide, beginning with more urbanized areas. Sampling began in September 2000 and will continue for the next several years over the entire state, depending on the availability of funding. General constituents sampled by the USGS and LLNL for low-level VOC analysis are available at the State Board website (<http://www.swrcb.ca.gov>). Additional constituents may be chosen based upon specific site or land-use conditions.

Groundwater quality, age-dating, and hydrogeologic data collected as part of the CAS assessment are managed utilizing the Geographical and

Environmental Information Management System (GEIMS)/GeoTracker system, an internet-accessible geographic information system (GIS) that provides access to water quality data. GeoTracker can be found at <http://geotracker.swrcb.ca.gov/>.

V.A.4.b. VOLUNTARY DOMESTIC WELL ASSESSMENT

The Voluntary Domestic Well Assessment Program consists of sampling domestic wells for various constituents that may be found in domestic well water, including nitrates, total and fecal coliform bacteria, Methyl tert-Butyl Ether (MTBE), and various minerals. This information is provided to domestic well owners and groundwater agencies. The Voluntary Domestic Well Assessment Program focuses on specific areas, as resources permit and are chosen based upon existing knowledge of water quality and land use, in coordination with local environmental agencies. The State Board incurs the costs of sampling and analysis.

V.A.5. GROUNDWATER QUALITY MONITORING ACT OF 2001

Assembly Bill 599 (AB 599), effective January 1, 2002, established the Groundwater Quality Monitoring Act of 2001 (sections 10780-10782.3 of the California Water Code). The Act requires the State Board to integrate existing monitoring programs with new program elements, as necessary, for the purpose of establishing a comprehensive groundwater monitoring program capable of assessing each groundwater basin in the state, either through direct or other statistically reliable sampling approaches. A second fundamental component of this Act is to increase the availability of water quality data and information to the public.

AB 599 requires the State Board to create an Interagency Task Force (ITF) to identify actions necessary to establish a groundwater-quality monitoring program, and to identify measures that would increase coordination among agencies that collect groundwater quality information. In addition, the State Board is also to convene a Public Advisory Committee (PAC) to the ITF. The AB 599 PAC is to consist of representatives from federal agencies, public water systems, environmental organizations, local water agencies, agriculture, groundwater

management entities, and the business community. In coordination with the ITF and the PAC, the State Board must submit to the Governor and the Legislature, on or before March 1, 2003, a report that includes a description of a comprehensive groundwater-quality monitoring program for the State.

V.B. REGIONAL MONITORING PROGRAMS

V.B.1 CENTRAL COAST AMBIENT MONITORING PROGRAM

In 1998, the Central Coast Ambient Monitoring Program (CCAMP) was formally established by the Regional Board to provide integrated and systematic information on surface water quality in the Region, in order to evaluate the effectiveness of Regional Board efforts to meet Basin Plan water quality objectives and protect beneficial uses. CCAMP's general program objectives are to:

- 1) Acquire and evaluate existing monitoring data and other information, from agencies, volunteer programs, and other sources.
- 2) Collect ambient monitoring data for the Region's watersheds, coastal confluences, and nearshore areas.
- 3) Conduct periodic detailed assessments of the Region's watersheds, groundwater basins, coastal confluences, and nearshore areas.
- 4) Utilize monitoring data and other information to maintain and update the Region's Water Quality Assessments and list of impaired waterbodies and beneficial uses.
- 5) Provide information presentations through the use of geographic information systems technology and other forms of graphic visualization.
- 6) Provide data and information dissemination services through the Internet.
- 7) Conduct periodic assessments of other programs' activities to eliminate gaps, overlaps, and duplications of effort, and utilize external information whenever possible as a component of the Ambient Monitoring Program.

- 8) Work with other monitoring programs, including volunteer programs, to develop consistent monitoring protocols and methods, quality control standards, data management procedures, and to encourage efforts consistent with regionwide monitoring goals.
- 9) Coordinate data management activities with other programs to maximize accessibility and usability of data.

The CCAMP monitoring strategy calls for dividing the Region into five watershed rotation areas and conducting synoptic, tributary-based sampling each year in one of the areas. Over a five-year period, each of the major Hydrologic Units in the Region are monitored and evaluated. In addition to the tributary-based site selection approach, additional monitoring sites are established in each rotation area to provide focused attention on watersheds and waterbodies known to have water quality impairments or other issues of interest.

The CCAMP strategy for establishing and maintaining permanent long-term monitoring sites provides a framework for trend analysis and detection of emergent water quality problems. CCAMP uses a variety of monitoring approaches to characterize water quality conditions and trends in coastal watersheds, including:

- Rapid bioassessment using benthic invertebrates
- Conventional water quality analysis
- Analysis of tissue, water, and sediment for organic chemicals and metals
- Toxicity evaluations
- Habitat assessments

To develop a broad picture of the overall health of waters in the Region, a similar baseline monitoring study design is applied in each rotation area. This provides for compatibility across the Region and allows for prioritization of problems across a relatively large spatial scale. The CCAMP strategy also allows for incorporation of watershed-specific knowledge so that questions which are narrower in focus can be addressed. For example, in watersheds where TMDL assessments are being conducted, additional information is collected as necessary to support development of the analysis. Special studies are undertaken as funding and staffing permits to further focus monitoring on questions of interest specific to individual watersheds.

Coastal Confluences monitoring is another CCAMP program component that focuses on monitoring "integrator sites" at the lower ends of rivers and creeks at their outflow to the ocean. Sampling at these sites is conducted continuously, rather than in a five-year rotation. These sites aid in long-term trend detection, regional priority setting, and understanding inputs to the nearshore environment.

CCAMP nearshore monitoring activities are varied. In the Monterey Bay area, CCAMP has worked with ocean dischargers to redesign and combine receiving water monitoring programs to form the Central Coast Long-term Environmental Assessment Network (CCLEAN). This program characterizes loading of organic pollutants, nutrients and pathogen indicators from discharges and river mouths to the ocean. It also documents associated nearshore conditions, including chemical concentrations in mussel tissue, and nearshore nutrient and toxic phytoplankton concentrations. The CCAMP program directs funding and other support to other marine monitoring activities, including sand crab, mussel, and sea otter tissue analysis for organic chemicals, polynuclear aromatic hydrocarbons, metals, toxic phytoplankton and specific pathogens. CCAMP staff are also working with the local research community to expand the network of instrumented moorings in nearshore areas, with particular focus on nitrate, chlorophyll, and toxic phytoplankton.

More information on the CCAMP program can be found at <http://www.swrcb.ca.gov/rwqcb3/>. The CCAMP program is conducted in coordination with the TSM and SMW monitoring programs, and satisfies Regional Board requirements for participation in the statewide SWAMP program.

V.C. ASSESSMENTS

III.C. V.C.1. BIENNIAL WATER QUALITY INVENTORY STATE WATER QUALITY INVENTORY (305(b)) REPORT

Pursuant to Section 305(b) of the Federal Clean Water Act (PL 92-500), the State Board is required to submit a report on the status of the State's water quality to the USEPA at least every two years. The CWA establishes a process for States to use to develop information on the quality of their water

resources (see USEPA 305(b) reporting guidelines). Specific requirements for this process are also found in Sections 106(e), 204(a), 303(d), and 314(a) of the CWA. Section 305(b) of the CWA specifies that each state must develop a program to monitor the quality of its surface waters and prepare a report describing the status of its water quality; Section 106(e) requests, but does not require, that each state also include the status of ground waters of the state in the report.

Section 305(b) of PL 92-500 requires the State to prepare and submit biennially to EPA the Water Quality Inventory. This report includes: The 305(b) process is the principal means by which the USEPA, Congress, and the public evaluate: 1) whether U.S. waters meet water quality standards; 2) progress made in maintaining and restoring water quality; and 3) the extent of remaining problems. Water quality assessment information from California's nine Regional Boards is compiled and presented in conformance with USEPAs 305(b) reporting guidelines through tabulation of a description of the general water quality of major navigable waters in of the State during the preceding years, including (b) an analysis of the extent to which significant navigable waters provide for the protection and propagation of a balanced population of shellfish, fish and wildlife, and allow recreational activities in and on the water; a summary of current designated use support, individual beneficial use support, major causes and sources impacting designated beneficial uses, and associated public health concerns. The Report also contains (e) an analysis of the extent to which elimination of the discharge of pollutants is being employed or will be needed; and (d) an estimate of the environmental impact, the economic, and social costs necessary to achieve the "no discharge" objective of PL 92-500, the economic and social benefits of such achievement and estimate of the date of such achievement. Recommendations as to the programs which must be taken to control them are provided, along with estimates of the cost, a brief description of water pollution control policies and programs designed to manage water quality.

Data collection and analyses already being carried out by the State in the permits, planning, facilities, monitoring and enforcement programs is utilized in preparing the reports on the quality of the waters of California. The first report was published in 1975 with subsequent reports in 1977 and 1979. The next biennial report is due in 1990. Assessment information used for compiling and reporting the

305(b) report is contained in the State's Geospatial Waterbody System (GeoWBS) database, structured for the purpose of producing the 305(b) Report.

IV.V.C.2. STATE WATER QUALITY ASSESSMENT REPORT

~~The State Board has been preparing "Section 305(b) Reports" since the mid 1970's. Most of these reports have been fairly general in nature, highlighting a few significant problem areas and estimating total area or stream mileage of waters statewide which were classified as "good", "medium", or "poor" quality. In 1989, the State Board began a more detailed Water Quality Assessment process to fulfill U.S. EPA reporting requirements and to provide the basis for prioritizing funding under the State's Clean Water Strategy.~~

~~The Water Quality Assessment is a computer database. It includes a table which lists water bodies of each region alphabetically by water body type (lakes, streams, ground water, etc). Initially, Regional Boards were directed to include at least all water bodies mentioned by name in their Basin Plans in the Water Quality Assessment table. Additional water bodies are to be added in future updates of the Water Quality Assessment, with the eventual goal of including all waters of the region. The 1992 Water Quality Assessment for the Central Coast Region includes approximately 400 entries.~~

~~For each water body, the Water Quality Assessment table identifies the wetland, lake, or ground water basin area or the stream mileage classified as having "good", "intermediate", "impaired", or "unknown" water quality. The table includes space for brief narrative problem descriptions. It identifies problem sources as point, nonpoint, or both. It also indicates whether the water body is included on one or more of the following federal "lists" (numbers refer to sections of the Clean Water Act):~~

~~131.11 Segments which may be affected by toxic pollutants, or segments with concentrations of toxic pollutants that warrant concern.~~

~~303(d) List of Water Quality Limited Segments where objectives or goals of the Clean Water Act are not attainable with the Best~~

~~Available Treatment/Best Control Technology.~~

~~304(M) A "mini list" of waters not meeting State adopted numeric water quality objectives due to toxic point sources and/or nonpoint sources after implementation of Best Available Treatment/Best Control Technology.~~

~~304(S) A "short list" of waters not achieving water quality standards due to point source implementation of Best Available Treatment/Best Control Technology.~~

~~304(L) A "long list" of waters not meeting water quality goals of the Clean Water Act after implementation of Best Available Treatment/Best Control Technology due to either point sources or nonpoint source discharges.~~

~~314 A list of lake priorities for restoration.~~

~~319 A list of impaired surface water bodies from nonpoint source problems due to both toxic and nontoxic pollutants.~~

~~The information used by Regional Board staff in compiling and revising the Water Quality Assessment table includes the type of monitoring data discussed in this chapter, records of past Regional Board enforcement actions, professional judgment of Regional Board scientists and engineers, and public comments.~~

~~The Water Quality Assessment database also includes the capability to print out a more detailed "Fact Sheet" for each water body in the table. Fact Sheets can include longer problem descriptions, information on threatened or impaired beneficial uses, and summaries of current and projected remedial actions by the State Board and/or the Regional Board. Due to time constraints and, in many cases, lack of information, detailed Fact Sheets have not been prepared for all water bodies in the Central Coast Region's Water Quality Assessment table. Additional Fact Sheets will be added during the ongoing Water Quality Assessment update process.~~

~~The Water Quality Assessments adopted by the nine Regional Boards were combined into a statewide Water Quality Assessment which was formally adopted by the State Board. The State Board is using the system to print out statewide "reports", statistical~~

~~tables, graphs, and charts summarizing the total numbers or percentages of water bodies affected by different types of water quality problems. The State Board also uses information in the Water Quality Assessment to prioritize proposals affecting specific water bodies.~~

The Water Quality Assessment (WQA) report is a biennial compilation of water quality information similar to the biennial Water Quality Inventory (305(b)) report; however, the WQA report contains specific information for individual water bodies of the region rather than generalized summaries for waterbody types of the region. Specifically, the WQA categorizes the water quality of each water body by reporting the degree to which beneficial uses are supported (see Basin Plan Chapter 2 for beneficial uses). The levels of beneficial use support are described as: fully supporting, fully supporting but threatened, partially supporting, not supporting, and not assessed. In addition to a description of the level of beneficial use support for each water body, the WQA contains narrative assessment (comments) for selected water bodies of the Region and identifies water bodies included on the Federal 303(d) "list" (numbers refer to sections of the Clean Water Act). The 303(d) list is a list of impaired waters where objectives or goals of the Clean Water Act are not attainable through standard regulatory controls. States are required to prioritize these water bodies for Total Maximum Daily Load (TMDL) development.

As with the 305(b) report, the information used by Regional Board staff in compiling and revising the WQA includes the type of monitoring data discussed in this chapter, records of past Regional Board enforcement actions, professional judgment of Regional Board scientists and engineers, and public comment. WQA information is stored in the GeoWBS database system.

V.C.3. CLEAN WATER ACT SECTION 303(d) LIST OF IMPAIRED WATERS

Section 303(d) of the Federal Clean Water Act requires states to identify waterbodies that do not meet water quality objectives and are not supporting their beneficial uses. Each state must submit an updated list, called the 303(d) list, to the USEPA every two years. In addition to identifying the waterbodies that are not supporting beneficial uses, the list also identifies the pollutant or stressor causing

impairment, and establishes a schedule for developing a control plan to address the impairment.

To develop the list of impaired waters, Regional Board staff relies on data and information collected in the Central Coast Ambient Monitoring Program and other State monitoring programs, along with data and information available from local government or citizen organizations. Staff consider the quality, quantity, timing, and location of data and information for each specified waterbody and the pollutant or stressor potentially causing impairment in that waterbody. Typically, staff compares the levels of the pollutant or stressor to established legal water quality limits (e.g., water quality objectives or other criteria indicating acceptable water quality conditions).

If a waterbody is found to be impaired for a particular pollutant or stressor, it is placed on the list. Once a waterbody and associated stressor pollutant are placed on the list, specific and focused monitoring and assessment efforts are conducted to more fully characterize the nature of the impairment, including identification of the pollutant source(s), and to develop solutions to address the impairment.

V.C.4. CENTRAL COAST AMBIENT MONITORING PROGRAM ASSESSMENTS

Water quality data collected in the CCAMP program is compiled and analyzed to produce watershed assessment reports for the Region. Reports are generated for both surface waters and groundwaters in each watershed, following the CCAMP 5-year rotation monitoring schedule discussed above.

V.C.4.a. SURFACE WATER ASSESSMENTS

Surface water assessments are developed using data collected through the CCAMP program and other available information sources, including water quality data from the California Department of Health Services (DHS), United States Geological Survey (USGS), Department of Fish and Game (DFG), Department of Pesticide Regulation (DPR), Toxic Substance Monitoring (TSM) program, National Pollutant Discharge Elimination System (NPDES) discharge data, county data, city data, relevant water quality reports, and any other available literature. Water quality data is also combined with

hydrogeomorphic data, land use data, etc., to develop watershed scale assessments, which are, in turn, used to update the 305(b) report and support TMDL development.

V.C.4.b. GROUNDWATER ASSESSMENTS

CCAMP does not actively collect groundwater data, but uses existing sources of data and other available water quality information to develop assessments of groundwater conditions. Data and other information are compiled from the DHS, USGS, California Department of Water Resources (DWR), DPR, and city or county information sources.

Data for both surface and groundwater assessments are evaluated for pollutants of concern, water quality standards exceedances, pollutant levels that warrant attention, beneficial use impairment, spatial and temporal trends, data gaps, and other pertinent information. General evaluations of relationships between surface water and groundwater pollutants are also included in the assessments. Assessment information is then used to develop recommendations for action, to assess future research and monitoring needs, to update the 305(b) report and support TMDL development, and to support permit review activities.

Watershed assessment reports and associated water quality data are available at the CCAMP website (see <http://www.swrcb.ca.gov/rwqcb3/> and click on CCAMP).

V. REGIONAL WATER QUALITY CONTROL BOARD PROGRAM TASKS

V.A. COMPLIANCE MONITORING

This task determines permit compliance, validates self monitoring reports, checks receiving water standards compliance, and provides data for enforcement actions. Data obtained are added to the water quality supply data for regulation, enforcement,

planning, and facilities development activities. Discharger compliance monitoring and enforcement actions are the responsibility of, and will normally be carried out wholly by, the Regional Board staff. Standards Compliance Monitoring will be coordinated by the State Board and use data available from other program tasks.

The scope of the Waste Discharger Compliance Monitoring Program for the basin will be dependent on the number and complexity of Waste Discharger Requirements (NPDES and other Permits) issued by the Regional Board. Waste discharge requirements may or may not include a specific discharger self-monitoring and reporting requirement on the effluent and receiving water.

The program includes a specific procedure whereby each discharger is regularly visited by Regional Board staff on both an announced and an unannounced "Facility Inspection" basis. The intent of announced visits is to work with the discharger through personal contact and communication to review his procedures in order to assure quality control. The intent of the unannounced inspections is to survey the operation, inspect the discharge area, and collect, check, or reference samples.

V.B. SELF-MONITORING REPORT REVIEW

Discharger self monitoring reports generated as a result of permits and waste discharge requirements are collected and reviewed by the Regional Board for obvious errors or omissions and entered into the data bank for checking. Significant reports of noncompliance are made immediately upon detection. Other data desired by the Regional or State Board will be rendered on a routine basis. Self monitoring reports are normally submitted by the discharger on a monthly or quarterly basis as required by the permit conditions.

V.C. COMPLAINT INVESTIGATION

The Complaint Monitoring task involves the investigation of complaints received from the general public and other interested parties. It is a Regional Board responsibility which includes preparation of

reports, letters, or taking other follow up actions to document observed conditions and to inform the State Board and complainant and discharger of the observed conditions.

V.D. AERIAL SURVEILLANCE

Aerial surveillance is used primarily to obtain photographic records of discharge conditions and to identify discharge sources. Aerial surveillance is particularly effective because of the overall view of a facility that is obtained and because many facilities can be observed in a short period of time.

V.E. V.D. NONPOINT SOURCE INVESTIGATIONS, OTHER MONITORING AND ASSESSMENT ACTIVITIES

The objective in this task is Nonpoint source investigations are conducted to (a) identify the location and nature of the sources of nonpoint pollutants; (b) develop information on the quantity, strength, character, and variability of nonpoint source pollutants; (c) evaluate impacts on receiving water quality and biota; (d) provide information useful in management of nonpoint source pollution; and (e) monitor results of any control plan. Investigations will be typically undertaken on a statewide priority basis through local agency and watershed group efforts, funded by Federal Clean Water Act grants and other sources.

V.F. INTENSIVE SURVEYS

Special studies and intensive monitoring surveys are conducted to provide obtain detailed information about a specific water quality problem which, in turn, can be used to data to locate and evaluate violations of receiving water standards, and make waste load allocations. They These studies usually involve are usually localized, intermittent sampling at a higher than normal frequency. These surveys are specially designed to evaluate problems in impaired

waterbodies water quality class segments, areas of special biological significance Water Quality Protection Areas (formerly known as Areas of Special Biological Significance), or hydrologic units requiring sampling in addition to routine monitoring programs. Surveys are repeated at appropriate intervals depending on parameters involved, variability of conditions, and changes in hydrologic or effluent regimes. Results from these special studies may be used for addressing impairments identified on the 303(d) List, including Total Maximum Daily Load development, Water Quality Assessment and 305(b) Report updates, and other waterbody assessment activities.

Intensive surveys are needed for several water bodies. The data are needed for one or more of the following reasons:

- a. A water quality problem is suspected, however, little data is available to substantiate the existence or degree of a problem;
- b. A water quality screening is needed to verify the Regional Board's judgment of the water quality status, or;
- c. A water body is suspected to be water quality limited.

Table 6-2 lists each water body, the constituent needing sampling, and the reason it should be sampled. The Regional Board urgently requests the State Board to make money available for intensive surveys.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2003 - 0063

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL
PLAN FOR THE CENTRAL COAST REGION TO REVISE AND UPDATE
CHAPTER 6, MONITORING AND ASSESSMENT

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Regional Board) revised its Water Quality Control Plan for the Central Coast Region (Basin Plan) by Resolution No. 94-01 on February 11, 1994 which was approved by the State Water Resources Control Board (SWRCB) on May 18, 1994, the Office of Administrative Law (OAL) on September 7, 1994, and the U.S. Environmental Protection Agency (USEPA) on May 29, 2000.
2. On December 24, 2002, the Regional Board adopted Resolution No. R3-2002-0094 ([Attachment](#)) amending the Basin Plan by revising and updating Chapter 6, Monitoring and Assessment.
3. The amendment is merely descriptive of existing programs and requirements and therefore is not subject to the California Environmental Quality Act.
4. This Basin Plan amendment does not become effective until approved by SWRCB and until the regulatory provisions are approved by OAL.

THEREFORE BE IT RESOLVED THAT:

SWRCB:

1. Approves the amendment to the Basin Plan replacing Chapter 6, Monitoring and Assessment, as adopted under Regional Board Resolution No. R3-2002-0094.
2. Authorizes the Executive Director or designee to submit the amendment adopted under Regional Board Resolution No. R3-2002-0094 and the administrative record for this action to OAL for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board Meeting held on September 16, 2003.

Debbie Irvin
Clerk to the Board

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

RESOLUTION NO. R3-2002-0051
(REVISED FEBRUARY 7, 2003)
(REVISED MAY 16, 2003)
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN
TO INCLUDE
MORRO BAY TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION PLAN
FOR SEDIMENT INCLUDING
CHORRO CREEK, LOS OSOS CREEK AND THE MORRO BAY ESTUARY

The California Regional Water Quality Control Board, Central Coast Region hereby finds:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on March 14, 1975. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Regional Board periodically revises and amends the Basin Plan. The Regional Board has determined the Basin Plan requires further revision and amendment to incorporate a Total Maximum Daily Load (TMDL) and Implementation Plan for Sediment including Chorro Creek, Los Osos Creek and the Morro Bay Estuary.
3. The Regional Board proposes to amend the Basin Plan by inserting amendments into Chapter Four, Section IX Total Maximum Daily Loads.
4. Section 303(d) of the Clean Water Act requires States to identify and to prepare a list of water bodies that do not meet water quality objectives and then to establish load and waste load allocations, or a TMDL, for each water body, which will ensure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
5. Chorro Creek, Los Osos Creek, and the Morro Bay Estuary were identified as impaired by sediment on the 1998 Clean Water Act Section 303(d) list of impaired water bodies. Therefore, the Regional Board is required to adopt a TMDL for those water bodies and incorporate the TMDL and associated Implementation Plan into the Basin Plan (40 CFR 130.6(c)(1), 130.7, Water Code section 13242).
6. Chorro Creek, Los Osos Creek, and the Morro Bay Estuary are located entirely within San Luis Obispo County.
7. The TMDL contains a Problem Statement, Source Analysis, Numeric Targets, Total Maximum Load, Load Allocations, an Implementation Plan, and a Monitoring Plan.
8. The Problem identified in the TMDL is summarized as follows: Over time all estuaries eventually fill with sediment due to the natural processes of erosion and sedimentation. However, the concern with

Morro Bay is that these natural processes have been accelerated due to anthropogenic watershed disturbances. Studies conducted by various authors over the past 25 years have concluded that the rate of sedimentation to Morro Bay has rapidly increased. These studies have also documented and quantified the loss of Morro Bay's acreage, volume, and tidal prism, as well as an increase in sedimentation in Chorro and Los Osos Creeks. These results imply that encroachment from the margins and aggradation of the shallowest areas within the Bay are the processes causing the decrease in volume. The narrative objective for sediment in the Basin Plan has been exceeded resulting in adverse impacts to several beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD), Estuarine and Marine Habitat (EST, MAR, BIOL), Water Contact and Non-Contact Recreation, and Navigation (REC1, REC2, NAV).

9. The TMDL characterizes sources of sediment by land use categories, erosion categories, and subwatersheds. Contributing land uses include rangeland, brushland, woodland, cropland, and urban, due to grazing, row crop and land development activities (e.g., roads, homes). Erosion categories include sheet and rill, streambanks, roads, and gullies. Sheet and rill contribute the most sediment by erosion category. The Chorro and Los Osos Creeks subwatersheds deliver an average of approximately 70,000 tons per year of sediment into the estuary. The Chorro Creek watershed is estimated to contribute 86 percent of the total sediment produced in the Morro Bay watershed. These subwatersheds contain the vast majority of the upland areas of the Morro Bay watershed—areas of steepest slope and highest rainfall intensity and are the most significant source of sediment loading to Morro Bay. Virtually all sediment loading comes from non-point sources, although there is minor contribution from other land uses subject to regulation under NPDES stormwater permits, Waste Discharge Requirements, and clean up and abatement order.
10. The numeric targets and TMDL is summarized as follows: Because the sediment objectives in the Basin Plan are narrative, rather than numeric, this TMDL establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. This TMDL uses multiple numeric targets. For Chorro and Los Osos Creeks these targets are assigned to Residual Pool Volume, and Median Diameter of Sediment Particles in Spawning Gravels. In Morro Bay Estuary a numeric target is established for Tidal Prism Volume. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to Morro Bay from Chorro and Los Osos Creeks. Furthermore, direct measurement of loads would not characterize the *effect* of those loads on beneficial uses. The parameters selected do characterize effect by targeting specific habitat requirements for aquatic organisms. The selection of these targets does not preclude efforts to directly measure loading, however the natural variability inherent in annual sediment loads in this region is large enough to suggest that clear trends could not readily be identified from results of loading data collected in the near term.
11. The Regional Board Staff assigned sediment load allocations to subwatersheds of the Morro Bay Watershed, and achievement of these numeric targets will indicate when load allocations are met.
12. The Implementation Plan relies on the State Water Resource Control Board's Plan for California's Nonpoint Source Pollution Control Program, (Resolution 99-114, adopted December 14, 1999) and on existing or anticipated regulatory activities where responsible dischargers are identified. The Nonpoint Source Plan guides the Regional Board in its control of nonpoint source pollution by implementing the "Three-Tiered Approach." Self-determined actions will be relied on to achieve the water quality goals being established in this TMDL as long as proposed actions are implemented and interim targets set forth in this TMDL are being achieved. The specific self-determined projects for the first three years of TMDL implementation are set forth in detail in the list of Trackable Implementation Actions. At this time the Implementation Plan relies principally on the activities of the Morro Bay National Estuary Program and the Coastal San Luis Resource Conservation District and other public and private groups, that are not dischargers responsible for causing erosion, to implement the self-

A000131

determined projects identified as items 1 through 11 in the list of Trackable Implementation Actions in the Amendment. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, evaluation of progress indicates regulatory mechanisms are needed to implement actions that will result in attainment of the numeric targets, this will be achieved on a case-by-case basis using existing authority or, if necessary, by amending the TMDL implementation program through a Basin Plan amendment.

13. The TMDL Implementation Plan calls for monitoring the four numeric targets specified in finding 10, above, as well as tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking and reporting status and effectiveness of voluntary implementation actions, and some monitoring of numeric targets, rests with the Morro Bay National Estuary Program. The Regional Board will consult with the MBNEP regarding monitoring numeric targets and progress on implementation actions. If voluntary implementation action projects are not implemented, or if numeric targets are not achieved, Regional Board staff may identify responsible dischargers and recommend regulatory mechanisms. Also, as more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified.
14. The Regional Board Staff conducted TMDL outreach by coordinating with forums and events of the Morro Bay National Estuary Program and Farm Bureau, as well as direct outreach to an Estuary Program technical committee (Implementation Committee) and a TMDL steering committee of stakeholders for review and comment. Public review and comment were solicited after completion of the TMDL report and during the public meeting of this Regional Board on May 31, 2002.
15. The Morro Bay National Estuary Program's Comprehensive Conservation and Management Plan for Morro Bay Estuary advocates Total Maximum Daily Loads for siltation, as a means to protect Morro Bay Estuary.
16. The Regional Board submitted the TMDL and a corresponding proposed Basin Plan amendment to an external scientific review panel. On September 17, 2001, the review panel submitted its response to the Regional Board, which stated that in general, the TMDL and proposed Basin Plan amendment presented a sound and scientifically justifiable program for decreasing the rate of sediment filling Morro Bay and improving stream channel conditions as habitat for fish. In addition, the review panel identified several specific areas of concern. The Regional Board revised the proposed Basin Plan amendment in response to the comments submitted by the review panel.
17. Water Code section 13141 mandates that prior to implementation of any agricultural water quality control program, an estimate of the total cost of such a program, together with an identification of potential sources of financing, shall be indicated in any regional water quality control plan. The TMDL and Implementation Plan, in Chapter 8.7, contain an estimate of the cost of preventing erosion and sedimentation via implementation of Best Management Practices. The cost of implementing the Best Management Practices in the TMDL Implementation Plan will be incurred by the implementers and offset with grants, loans, in-kind donations, and matching funds as much as possible.
18. This Basin Plan amendment must be submitted for review and approval by the State Water Resources Control Board, the State Office of Administrative Law (OAL), and the USEPA. The Basin Plan amendment will become effective upon approval by the State Board OAL and USEPA.
19. This amendment meets the "Necessity" standard of the Administrative Procedure Act, Government Code §11353(b).
20. The Regional Board has determined that the TMDL for sediment for Chorro Creek, Los Osos Creek and Morro Bay Estuary, is set at levels necessary to attain and maintain the applicable narrative water

quality objectives (there are no applicable numeric objectives) with seasonal variations and margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). The TMDL also takes into account critical conditions for stream flow, loading and water quality parameters.

21. The basin planning process has been certified as functionally equivalent to the California Environmental Quality Act requirements for preparing environmental documents (Public Resources Code, Section 21000 et seq.) and as such, the required environmental documentation has been prepared. Drafts of the Notice of Filing, staff report, environmental checklist, and alternatives analysis proposed amendment have been prepared and distributed to interested persons and agencies for review and comment in accordance with Title 23 California Code of Regulations section 3777. All public comments were considered. No significant environmental impacts will result from approval of this Basin Plan amendment.
22. The proposed amendments to the Water Basin Plan were developed in accordance with California Water Code Section 13240 et seq.
23. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies.
24. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and so is exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
25. On May 31, 2002 in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public comments and evidence in the record and adopted Resolution R3-2002-0051.
26. In preparing to present this Basin Plan Amendment to the State Board, State Board technical and legal staff reviewed the resolution and identified several concerns that caused Regional Board Staff to propose revisions to the resolution.
27. On February 7, 2003, in San Luis Obispo, the Regional Board considered public comments on the revisions and re-adopted resolution no. R3-2002-0051.
28. On March 17, 2003, State Board returned the Administrative Record to the Regional Board with a memo stating that Regional Board adoption procedures did not comply with section 3777 of Title 23 California Code of Regulations, which requires consideration of reasonable alternatives to the proposed amendment that would achieve the stated goal.
29. On May 16, 2003, in Watsonville, California, the Regional Board held a public meeting and re-heard this item to correct the omission stated above. The Regional Board provided 45-days public notice of this meeting and filing of an environmental document. The Regional Board heard and considered all public comments and evidence in the record.

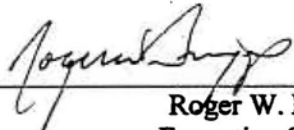

THEREFORE, BE IT RESOLVED,

1. The Basin Plan is hereby amended by adding to Chapter Four, Section IX Total Maximum Daily Loads by reference the TMDL and Implementation Plan entitled Morro Bay Total Maximum Daily Load for Sediment (including Chorro Creek, Los Osos Creek and the Morro Bay Estuary), dated April 24, 2002. Because this document is approximately 100 pages long, it is too cumbersome to be

reproduced in its entirety in the Basin Plan. While the entire document is incorporated by reference, key elements, as presented in Exhibit A to this resolution, will be reproduced in the Basin Plan.

2. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
3. The environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified.
4. The Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results from adoption of this Basin Plan amendment.
5. The Regional Board shall file a CEQA Notice of Decision with the Secretary for Resources, following approval of the revised Basin Plan by the State Board, California Office of Administrative Law, and the U.S. Environmental Protection Agency. A Certificate of Fee Exemption will be included with the Notice of Decision.
6. If during approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, **Roger W. Briggs, Executive Officer**, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on May 16, 2003.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2002-0051

ATTACHMENT—PROPOSED BASIN PLAN AMENDMENTS

Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to chapter 4 under IX TOTAL MAXIMUM DAILY LOADS:

IX.A MORRO BAY TOTAL MAXIMUM DAILY LOAD FOR SEDIMENT (INCLUDING CHORRO CREEK, LOS OSOS CREEK AND THE MORRO BAY ESTUARY)

This TMDL was adopted by the Regional Water Quality Control Board on [insert date].

This TMDL was approved by:

The State Water Resources Control Board on [insert date].

The California Office of Administrative Law on [insert date] (effective date).

The U.S. Environmental Protection Agency on [insert date].

TMDL ELEMENTS

Element	
Problem Statement	Over time, all estuaries eventually fill with sediment due to the natural processes of erosion and sedimentation. In Morro Bay these natural processes have been accelerated due to anthropogenic watershed disturbances, resulting in impairment of Beneficial Uses, principally biological resources, but also recreational uses, including: RARE, MIGR, SPWN, WILD, EST, MAR, BIOL, REC1, REC2, NAV. This impairment indicates an exceedance of the Basin Plan narrative objective for sediment, which states that: "the suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses."

Element		
Numeric Targets	Parameter	Numeric Target
	Chorro and Los Osos Creeks and Tributaries Streambed Sediment	
	Residual Pool Volume ¹	V* (a ratio) = Mean values ≤ 0.21 (mean of at least 6 pools per sampling reach) Max values ≤ 0.45
	Median Diameter (D ₅₀) of Sediment Particles in Spawning Gravels	D ₅₀ = Mean values ≥ 69 mm Minimum values ≥ 37 mm
	Percent of Fine Fines (< 0.85 mm) in Spawning Gravels	Percent fine fines ≤ 21%
	Percent of Coarse Fines (all fines < 6.0 mm) in Spawning Gravels	Percent coarse fines ≤ 30%
	Morro Bay and Estuary	
Tidal Prism Volume	4,200 acre-feet	
Loading Allocations ² (TMDL expressed as annual load)	Watershed	Total (tons/year, rounded to nearest ton)
	Chorro Creek at Reservoir	6,541
	Dairy Creek	440
	Pennington Creek	966
	San Luisito Creek	7,315
	San Bernardo Creek	10,270
	Minor Tributaries	4,489
	Chorro Creek	30,021
	Los Osos Creek	3,052
	Warden Creek and Tributaries	1,812
	Los Osos Creek	4,864
Morro Bay Watershed	34,885	

¹ Residual Pool Volume refers to the portion of a pool in a stream that is available for fish to occupy. Pool habitat is the primary habitat for steelhead in summer. Overwintering habitat requirements include deeper pools, undercut banks, side channels, and especially large, unembedded rocks, which provide shelter for fish against the high flows of winter. V* gives a direct measurement of the impact of sediment on pool volume. It is the ratio of the amount of pool volume filled in with fine, mobile sediment, to total scour pool volume. Qualifying pools are those having a gradient less than 5%, a minimum depth twice the riffle-crest depth, a fairly even spacing between tributaries, and are located on streams fifth order or smaller.

² These loading allocations are 50% of the estimated current sediment loading to Morro bay.

<p>Implementation</p>	<p>The sediment load to Morro Bay, Los Osos Creek and Chorro Creek derives from nonpoint sources (NPS) and point sources. As such, implementation will rely on the State's Plan for NPS pollution control (CWC §13369) and continued implementation of existing regulatory controls as appropriate for point sources, including storm water pursuant to NPDES surface water discharge regulations and Waste Discharge Requirements (Porter Cologne).</p> <p>At this time, implementation emphasizes the activities of the Morro Bay National Estuary Program, Coastal San Luis Resources Conservation District, and other public and private groups that are not currently identified as dischargers responsible for sediment loading, to implement self-determined activities (see Table: Trackable Implementation Actions). Other actions, currently required because of another program, will be evaluated to make sure progress is taking place (see Table: Trackable Implementation Actions identifying Responsible Dischargers). Regional Board Staff will meet annually with the implementing parties identified in the list of Trackable Implementation Actions to provide technical assistance and to evaluate and track progress (see Implementation Schedule for details). If at the end of year three, implementing parties fail to complete these self-determined activities or resulting management practices fail to reduce sediment loads, then Regional Board staff may conduct inspections and investigations to identify individual responsible dischargers (e.g., landowners or public agencies). Regional Board staff may rely on Section 13267 of the California Water Code or other appropriate authorities for investigation and identification of individual responsible dischargers. Regional Board staff will also rely on Section 13267 of the California Water Code to require reporting and/or monitoring to determine the level of implementation of identified activities to reduce erosion and sediment. If necessary, the Regional Board may rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean-up and abate sediment discharges and/or prevent the threat of discharges on a case-by case basis. Additionally, Implementation Actions (in the Table of Implementation Actions) may be required as conditions of compliance with storm water permits and Waste Discharge Requirements.</p> <p>If at the end of the third year, self-determined actions have not been completed, staff will develop a regulatory approach (rather than a self-determined approach) and present a revised implementation plan to the Regional Board as a Basin Plan Amendment.</p> <p>Direct measurement of sediment loading is not proposed for this TMDL. Numeric Targets, which characterize the effect of loading are to be measured in lieu of loadings. The 50-year schedule for achieving the TMDL acknowledges that implementation actions taken in the near term are expected to take years to produce a response as measured through Numeric Target monitoring. Allocations will achieve the targets because over the long term, these allocated sediment loads are expected to result in changes in sediment distributions in the channel and the estuary that meet water quality objectives.</p> <p>Numeric targets and other parameters will be monitored to ensure that numeric targets are met. The Regional Board will rely on existing or planned efforts for this monitoring (e.g., Morro Bay National Estuary Program, Central Coast Ambient Monitoring Program).</p>
<p>Margin of Safety</p>	<p>An implicit margin of safety has been incorporated into this TMDL through the use of conservative assumptions throughout the source analysis and characterization of beneficial use impacts. The margin of safety is required due to uncertainty in calculations of sediment loading and of the effects of this loading on beneficial uses of the Morro Bay Estuary, Chorro Creek and Los Osos Creek.</p>

Trackable Implementation Actions

PROJECT NAME		ACTION	SCHEDULE	IMPLEMENTING PARTY
1	Hollister Ranch Acquisition	Design and construct floodplain restoration project	January 2002-May 2005	CSLRCD and MBNEP
2	Los Osos Creek Wetland Restoration Project	Design and construct Los Osos Creek wetland restoration project	Fall 2000-Spring 2004	CSLRCD and MBNEP
3	Watershed Crew Curriculum	Develop a curriculum that will provide training for a year-round crew of Civilian Conservation Corps	Winter 2001-Fall 2001	CCC
4	Catalogue of Erosion Control Projects	Develop a list of areas in need of erosion control projects	Spring 2001-Fall 2001; on-going	MBNEP
5	Project Clearwater	Provide technical assistance and cost sharing to install BMPs	2001-June 2004; on-going	CSLRCD
6	Agricultural Water Quality Program	Develop and implement a voluntary, cost-effective, and landowner/manager-directed program	2001-2002; on-going	Farm Bureau
7	Land Acquisitions and Conservation Easements	Acquire or otherwise protect lands in cooperation with willing land owners	2000-2010; on-going	MBNEP
8	Fire Management Plan	Develop and implement a Fire Management Plan	2001-2006; on-going	CDF
9	Maintenance of Sediment Basins Above Chorro Reservoir	Continue maintenance of the sediment basins above Chorro Reservoir	on-going	California Army National Guard
10	Road Maintenance	Increase the use of management measures for road maintenance and construction	2001-2006; on-going	County of San Luis Obispo, Public and Private Landowners; California Department of Transportation
11	Sediment Traps	Install sediment traps	2000-2007; on-going	CSLRCD; Natural Resource Conservation Service; DFG; Public and Private Land Owners
PROJECT NAME		ACTION	SCHEDULE	RESPONSIBLE DISCHARGERS
12	Primera Mine Rehabilitation and Erosion Control	Remediation of Primera Mine	2003	California Army National Guard
13	Stormwater Sediment Control on Roads	Include specific road sediment control measures in County stormwater management plan prior to enrollment in Stormwater Permit; track implementation of BMPs	Prior to March 2003; on-going	County of San Luis Obispo
14		Track implementation of BMPs in Stormwater Permit	On-going	Caltrans
15	Water Quality Management Plans on Chorro Creek Ranches	Implement Waste Discharge Requirements to address Chorro Creek Ranches	Fall 2002-Fall 2003	California Polytechnic State University

Implementation Schedule

At End of Implementation Year:	IMPLEMENTATION MILESTONE			MONITORING ACTIVITY		
	<i>Chorro Creek</i>	<i>Los Osos Creek</i>	<i>Morro Bay</i>	<i>Chorro Creek</i>	<i>Los Osos Creek</i>	<i>Morro Bay</i>
1	RB and MBNEP Staff meet to review progress. RB and County Staff meet to review inclusion of road erosion control measures in Stormwater Management Plan.			Baseline Streambed Parameters ³ , Turbidity		
2	<i>As above</i> RB and MBNEP Staff meet to review progress; RB requests implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions			Baseline Streambed Parameters, Turbidity		
4	RB and MBNEP Staff meet to review progress			Baseline Streambed Parameters, Turbidity		
5	RB and MBNEP Staff meet to review progress	RB Staff calculate: 5-year changes to Bay area and volume		Baseline Streambed Parameters, Turbidity		Bathymetry survey
6	RB and MBNEP Staff meet to review progress; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions			Baseline Streambed Parameters, Turbidity		
7	RB and MBNEP Staff meet to review progress			Baseline Streambed Parameters, Turbidity		
8	<i>As above</i>					
9	RB and MBNEP Staff meet to review progress; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions					
10	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data	RB Staff calculate: 5-year changes to Bay area and volume				Bathymetry survey
11	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data					

³ Streambed Parameters, which are the Numeric Targets, include Residual Pool Volume, Median Diameter of Sediment Particles, Percent Fine Sediment, and Percent Coarse Sediment.

15	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions	RB Staff calculate: 5-year changes to Bay area and volume	Streambed Parameters Turbidity	Bathymetry survey
16-49	<i>Repeat as above with 3-, 5- and 10-year milestones.</i> Numeric targets achieved; load reduction achieved			

A 0001 AN

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2003 - 0062

APPROVING AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST REGION INCORPORATING
A TOTAL MAXIMUM DAILY LOAD FOR SEDIMENT FOR
CHORRO CREEK, LOS OSOS CREEK, AND THE MORRO BAY ESTUARY

WHEREAS:

1. The Central Coast Water Quality Control Board (Regional Board) adopted a revised Water Quality Control Plan for the Central Coast Region (Basin Plan) on February 11, 1994 which was approved by the State Water Resources Control Board (SWRCB) on May 18, 1994, by the Office of Administrative Law (OAL) on September 7, 1994, and by the U.S. Environmental Protection Agency (USEPA) on May 29, 2000.
2. On May 31, 2002, the Regional Board adopted Resolution No. R3-2002-051 amending the Basin Plan by establishing a Total Maximum Daily Load (TMDL) for sediment in Chorro Creek, Los Osos Creek and the Morro Bay Estuary. On May 16, 2003, the Regional Board re-adopted Resolution No. R3-2002-051 ([Attachment](#)) amending the TMDL.
3. SWRCB finds that the sediment TMDL is in conformance with the requirements for TMDL development specified in section 303(d) of the federal Clean Water Act, and SWRCB Resolution No. 68-16.
4. Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act and other State laws and regulations.
5. This Basin Plan amendment does not become effective until approved by SWRCB and until the regulatory provisions are approved by the OAL. USEPA must also approve the TMDL.

THEREFORE BE IT RESOLVED THAT:

SWRCB:

1. Approves the amendment to the Basin Plan as adopted under Regional Board Resolution No. R3-2002-051.
2. Authorizes the Executive Director or designee to submit the amendment and administrative record for this action to OAL and the TMDL to USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 16, 2003.

Debbie Irvin
Clerk to the Board

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906**

**RESOLUTION NO. R3-2002-0063
(REVISED MAY 16, 2003)
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN
TO INCLUDE
SAN LORENZO RIVER TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION PLAN
FOR SEDIMENT INCLUDING
CARBONERA CREEK, LOMPICO CREEK AND SHINGLE MILL CREEK**

The California Regional Water Quality Control Board, Central Coast Region hereby finds:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Regional Board periodically revises and amends the Basin Plan. The Regional Board has determined the Basin Plan requires further revision and amendment to incorporate a San Lorenzo River Total Maximum Daily Load (TMDL) and Implementation Plan for Sediment, including Carbonera Creek, Lompico Creek, and Shingle Mill Creek.
3. The Regional Board proposes to amend the Basin plan by inserting amendments into Chapter Four, Section IX Total Maximum Daily Loads.
4. Section 303(d) of the Clean Water Act requires States to identify and to prepare a list of water bodies that do not meet water quality objectives and then to establish load and waste load allocations, or a TMDL, for each water body, which will ensure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
5. The San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek were identified as impaired by sediment on the 1998 Clean Water Act Section 303(d) list of impaired water bodies. Therefore, the Regional Board is required to adopt a TMDL for those water bodies and incorporate the TMDL and associated Implementation Plan into the Basin Plan. (40 CFR 130.6(c)(1), 130.7, Water Code section 13242).
6. The San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek are located entirely within Santa Cruz County.
7. The TMDL report contains a Problem Statement, Source Analysis, Numeric Targets, Total Maximum Load, Load Allocation, an Implementation Plan, and a Monitoring Plan.
8. The Problem is as follows: The natural processes of erosion and sedimentation in the San Lorenzo River Watershed have been accelerated due to anthropogenic watershed disturbances. The San Lorenzo

001241

River and its tributaries, Carbonera Creek, Lompico Creek and Shingle Mill Creek exceed narrative water quality objectives for settleable materials because beneficial uses associated with anadromous fisheries have been adversely impacted by sediment. Studies conducted by various authors have concluded that erosion rates are accelerated beyond natural rates. These studies have also documented and quantified the decline in anadromous fisheries and the quality of fish habitat. Excessive sedimentation has interfered with the beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD).

9. The Source of sediment can be described by source category, and by subwatershed. Contributing sources include: Timber Harvest Plan (THP) Roads, Public and Private Roads, Active and Recent THP Parcels, Other Urban and Rural Lands, Mass Wasting, and Channel/Bank Erosion. Sediment loading in the 15 subwatersheds ranges from an estimated 877 to 54,836 tons per year. Sediment loading to the San Lorenzo River is approximately 419,369 tons per year. The Upper San Lorenzo River, Kings Creek, Ben Lomond, Bear Creek, and Zayante Creek subwatersheds each contribute more than ten percent of the total loading. Virtually all controllable sediment comes from non-point sources, as well as land uses subject to regulation under NPDES stormwater permits, and Waste Discharge Requirements.
10. The TMDL is: The overall target for the San Lorenzo River Watershed is a 27 percent reduction in the estimated current loading. This results in TMDLs for the San Lorenzo River of 306,139 tons/year; for Shingle Mill Creek, 857 tons/year; for Carbonera Creek, 11,728 tons/year; and for Lompico Creek, 9,542 tons/year. The TMDL for each waterbody is allocated to the source categories identified in finding 9, above. The allocations are based on source reductions attainable through implementation of management practices and other related measures.
11. Because the sediment objectives in the Basin Plan are narrative, rather than numeric, the TMDL report establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. Targets are assigned to Residual Pool Volume, Percentage of Fine Particles and Median Diameter of Sediment Particles in Spawning Gravels. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to the listed waterbodies. Furthermore, direct measurement of loads would not characterize the *effect* of those loads on beneficial uses. The parameters selected do characterize effect by targeting specific habitat requirements for aquatic organisms. The selection of these targets does not preclude efforts to directly measure loading, however the natural variability inherent in annual sediment loads in this region is large enough to suggest that clear trends could not readily be identified by data collection in the near term.
12. The TMDL will be achieved by implementing the State Water Resource Control Board's Nonpoint Source Pollution Control Program Plan, Resolution 99-114, adopted December 4, 1999, and on existing or anticipated regulatory activities where responsible dischargers are identified. The Nonpoint Source Plan guides the Regional Board in its control of nonpoint source pollution by implementing the "Three-Tiered Approach." For nonpoint source discharges, the Regional Board will rely upon Tier 1 (self-determined cooperative efforts) to achieve this TMDL as long as proposed actions are implemented and sufficient progress toward attaining the numeric targets is being achieved. At this time implementation emphasizes the activities of the Santa Cruz County Departments of Planning and Public Works, of the Santa Cruz County Resource Conservation District, and of other public and private groups, not currently identified as dischargers responsible for causing erosion, to implement Tier 1, self-determined activities (Implementation Actions C through R in the list of Trackable Implementation Actions in the Amendment). These entities' failure to implement Tier 1, self-determined activities to reduce sedimentation could trigger Board actions, authorized through Section 13267 of the California Water Code, including investigation and identification of individual responsible dischargers (e.g., landowners or public agencies). If necessary, the Regional Board may

001242

rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean up and abate sediment discharges and/or prevent the threat of discharges. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, evaluation of progress indicates regulatory mechanisms are needed to implement actions that will result in attainment of the numeric targets, this will be achieved on a case-by-case basis using existing authority or if necessary, by amending the TMDL implementation program through a Basin Plan amendment.

13. To regulate sediment discharges derived from storm water, implementation relies on National Pollutant Discharge Elimination System (NPDES) general permits, anticipated to be in place by March 2003, covering municipalities and construction activities. Implementation Actions T, U, and V (see following list of Trackable Implementation Actions) identify actions that will be required of entities enrolling in these general permits. These actions will be required pursuant to the terms of the general permits, so this portion of the implementation program also does not impose any new regulatory requirements. If the management practices are not included in these Plans, the Regional Board will work with dischargers to condition the Plans on an individual basis, will consider issuing individual Storm Water permits, or waste discharger requirements, and/or, if necessary take actions to enforce the terms of the permits or waste discharge requirements. The Regional Board will take any such actions on a case-by-case basis using existing authority or if necessary, by amending the TMDL implementation program through a Basin Plan amendment.
14. The TMDL will be evaluated by monitoring the four numeric targets specified in finding 11, above, as well as by tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking, reporting status, and evaluating the effectiveness of voluntary implementation actions, is shared by the Regional Board and participating members of the San Lorenzo River Technical Advisory Committee. Initially the Regional Board will be responsible for monitoring numeric targets and progress on implementation actions in consultation with the Committee. As more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified thorough an amendment to the Basin Plan, as appropriate.
15. The Regional Board Staff conducted outreach by coordinating with the San Lorenzo River Technical Advisory Committee and Interested Parties for review and comment on the TMDL report. Public review and comment were solicited after completion of the TMDL report and during the public meeting of this Regional Board on September 20, 2002.
16. The Regional Board submitted the TMDL Report to an external scientific review panel on March 29, 2002 as required by Health and Safety Code Section 57004. The review panel submitted its response to the Regional Board on April 29, 2002. The review panel commented on several specific areas of concern. The Regional Board revised the proposed Basin Plan amendment in response to the comments submitted by the review panel, or prepared a written response, which explained its basis for not incorporating their comments.
17. The TMDL report contains an estimate of the cost of preventing erosion and sedimentation via implementation of Implementation Actions and management practices, pursuant to Public Resources Code, Section 21159 (a)(3)(c). The cost of implementation will be incurred by the implementers and offset with grants, loans, in-kind donations, and matching funds as much as possible.
18. This Basin Plan amendment must be submitted for review and approval by the State Water Resources Control Board and the State Office of Administrative Law (OAL). The TMDL must further be approved by the USEPA. The Basin Plan amendment will become effective upon approval by the State Board and OAL.

001243

19. This amendment meets the "Necessity" standard of the Administrative Procedure Act, Government Code §11353(b).
20. The Regional Board has determined that the TMDL for sediment for the San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek, is set at levels necessary to attain and maintain the applicable narrative water quality objectives (there are no applicable numeric objectives) with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
21. The basin planning process has been certified as functionally equivalent to the California Environmental Quality Act requirements for preparing environmental documents (Public Resources Code, Section 21000 et seq.) and as such, the required environmental documentation and CEQA environmental checklist have been prepared. Drafts of the Notice of Filing, staff report, environmental checklist, and proposed amendment have been prepared and distributed to interested persons and agencies for review and comment in accordance with Title 23 California Code of Regulations section 3777. All public comments were considered. No significant environmental impacts will result from approval of this Basin Plan amendment.
22. The proposed amendments to the Basin Plan were developed in accordance with California Water Code Section 13240 et seq.
23. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies.
24. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and so is exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
25. On September 20, 2002 in Salinas, California, the Regional Board held a public hearing and heard and considered all public comments and evidence in the record and adopted Resolution no. R3-2002-0063.
26. On March 17, 2003, State Board returned the Administrative Record to the Regional Board with a memo stating that Regional Board adoption procedures did not comply with section 3777 of Title 23 California Code of Regulations, which requires consideration of reasonable alternatives to the proposed amendment that would achieve the stated goal.
27. On May 16, 2003, in Watsonville, California, the Regional Board held a public meeting and reheard this item to correct the omission stated above. The Regional Board gave 45 days public notice for this meeting and filing of an environmental document. The Regional Board heard and considered all public comments and evidence in the record.

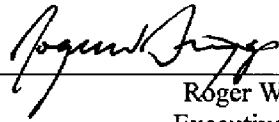

THEREFORE, BE IT RESOLVED,

1. The Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment shown on "Attachment-Proposed Basin Plan Amendments." The amendment will not take effect until approved by the State Board and the California Office of Administrative Law.
2. The Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board (State Board). The State Board is requested to approve the Basin Plan amendment in

accordance with the requirements of sections 13245 and 13246 of the California Water Code, and upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law for approval.

3. The environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. The Regional Board shall file a CEQA Notice of Decision with the Secretary for Resources. Following approval of the revised Basin Plan by the State Board and the California Office of Administrative Law. A Certificate of Fee Exemption will be included with the Notice of Decision.
4. The Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results from adoption of this Basin Plan amendment.
5. If during approval process the State Board or the Office of Administrative Law determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on May 16, 2003.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2002-0063**ATTACHMENT—PROPOSED BASIN PLAN AMENDMENTS**

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to chapter 4 under the section, IX A:

**IX.B SAN LORENZO RIVER TOTAL MAXIMUM DAILY LOAD FOR SEDIMENT
(INCLUDING CARBONERA CREEK, LOMPICO CREEK, AND SHINGLE MILL CREEK)**

This TMDL was adopted by the Regional Water Quality Control Board on May 16, 2003.

This TMDL was approved by:

The State Water Resources Control Board on insert date.

The California Office of Administrative Law on insert date (effective date).

The U.S. Environmental Protection Agency on insert date.

TMDL ELEMENTS**Problem Statement:**

The natural processes of erosion and sedimentation in the San Lorenzo River Watershed have been accelerated due to anthropogenic watershed disturbances. Studies conducted by various authors have concluded that erosion rates were two to four times natural rates. These studies have also documented and quantified the decline in anadromous fisheries and the quality of fish habitat. Excessive Sedimentation has interfered with the beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD).

Numeric Targets (interpretation of the narrative water quality objectives for settleable solids and sediment):

Because the sediment objectives in the Basin Plan are narrative, rather than numeric, this Basin Plan amendment establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to the listed waterbodies. Attainment of Numeric Targets will be measured over a ten-year rolling time period. Numeric targets for the listed waterbodies and compliance points on tributaries are as follows:

001246

Parameter	Numeric Target ¹
Residual Pool Volume (V^*) ²	$V^* =$ Mean values ≤ 0.21 Max values ≤ 0.45
Median Diameter (D_{50}) of Sediment Particles in Spawning Gravels	$D_{50} =$ Mean values ≥ 69 mm Minimum values ≥ 37 mm
Percent of Fine Fines (< 0.85 mm) in Spawning Gravels	Percent fine fines $\leq 21\%$
Percent of Coarse Fines (< 6.0 mm) in Spawning Gravels	Percent coarse fines $\leq 30\%$

¹ Target values are for sampling reach(es) within an individual waterbody.

² Residual Pool Volume refers to the portion of a pool in a stream that is available for fish to occupy. Pool habitat is the primary habitat for steelhead in summer. Overwintering habitat requirements include deeper pools, undercut banks, side channels, and especially large, unembedded rocks, which provide shelter for fish against the high flows of winter. V^* gives a direct measurement of the impact of sediment on pool volume. It is the ratio of the amount of *pool volume filled by fine, mobile sediment*, to *total pool volume*. Qualifying pools are those having a gradient less than 5%, a minimum depth twice the riffle-crest depth, a fairly even spacing between tributaries, and are located on streams fifth order or smaller.

001247

Total Maximum Daily Load and Load Allocations

The Total Maximum Daily Load (expressed here as an annual load) was based on reductions necessary to achieve desired conditions of streambed sediment parameters (embeddedness and fraction of sediment particles less than 4mm in diameter). Desired conditions taken from values published in the scientific literature were 27% lower on average for the San Lorenzo River, Carbonera Creek and Shingle Mill Creek, and 24% lower on Lompico Creek, than measured values in these waterbodies, respectively. Load allocations were based on percent attainable reductions in each sediment source category.

Natural background sediment load was not calculated as a separate allocation of the TMDL. The Mass Wasting and Channel/Bank Erosion categories account for natural and anthropogenic loads associated with these processes. The load from Timber Harvest Plan Roads, Public/Private Roads, Timber Harvest Plan Lands and Other Urban and Rural Lands is assumed to be entirely anthropogenically derived and controllable.

Sediment Source Category	Allocations (tons/year)			
	Shingle Mill Creek	Carbonera Creek	Lompico Creek	San Lorenzo River
Upland Timber Harvest Plan (THP) Roads	0	419	362	25,215
Streamside THP Roads on Steep Slopes	0	182	164	10,949
Upland Public/Private Roads	146	1,235	367	13,835
Streamside Public/Private Roads on Steep Slopes	77	135	239	6,178
THP Land	0	23	16	1,057
Other Urban and Rural Land	310	2,622	965	43,368
Mass Wasting	0	4,082	6,440	157,388
Channel/Bank Erosion	324	3,030	989	48,149
Total Allocation = TMDL³	857	11,728	9,542	306,139

Implementation Plan

The sediment load to the San Lorenzo River, Lompico Creek, Carbonera Creek, and Shingle Mill Creek derives from nonpoint sources (NPS) and point sources. As such, implementation to achieve the TMDL will rely on the State's Plan for NPS pollution control (CWC §13369) and on existing and anticipated independent regulatory programs for regulated storm water discharges.

At this time implementation emphasizes the activities of the Santa Cruz County Departments of Planning and Public Works, the Santa Cruz County Resource Conservation District, and other public and private groups, not currently identified as dischargers responsible for causing erosion, to implement self-determined activities (Implementation Actions C through R, see following list, Trackable Implementation Actions). Regional Board staff will meet annually with these "Implementing Parties" identified in the list of Trackable Implementation Actions to provide technical assistance, and to evaluate and track progress (See following Implementation Compliance Schedule). By the end of the first year of implementation, the Regional Board and the implementing parties will establish a time schedule for completion of Trackable Implementation Actions C

³ The term "Total Maximum Daily Load" or "TMDL" is used here for familiarity. The allowable loads for the San Lorenzo River and its tributaries are actually expressed as a Total Annual Loads (tons/year). This expression of load accounts for seasonal variation in sediment loads explained by the seasonality of rainfall in this region of the Central Coast.

through R. If the Regional Board along with implementing parties do not establish the time schedule by the end of year one, Regional Board Staff will present a time schedule for completion of these actions as a Basin Plan Amendment. If the Regional Board determines that the implementing parties have failed to complete these self-determined activities and/or resulting management practices have failed to reduce sedimentation per the time schedule established, Regional Board staff intends to conduct inspections and investigations to identify individual responsible dischargers (e.g., landowners or regulated public agencies). Regional Board staff may rely on Section 13267 of the California Water Code and other appropriate authorities for investigation and identification of individual responsible dischargers. Regional Board staff will also rely on Section 13267 of the California Water Code to require reporting and/or monitoring to determine the level of implementation of management practices to reduce sedimentation. If necessary, the Regional Board may rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean up and abate sediment discharges and/or prevent the threat of discharges. The Implementation Actions identified in this Implementation Plan do not identify the specific management practices that will result in sediment reduction. As such the management practices developed through pursuit of the Implementation Actions are not intended to be independently enforceable by the Regional Board. Therefore, the Regional Board will rely on scheduled 3-year reviews to track Implementation Actions and the effectiveness of management practices to determine whether to continue with Tier 1, self-determined implementation. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, self-determined actions have not been completed, staff will develop a regulatory approach (rather than a self-determined approach) and present a revised implementation plan to the Regional Board as a Basin Plan amendment.

To regulate sediment discharges derived from regulated storm water discharges, implementation relies on National Pollutant Discharge Elimination System (NPDES) general permits covering municipalities and construction activities anticipated to be in place by March 2003. Implementation Actions S, T and U (see following list, Trackable Implementation Actions) identify actions that will be required of entities enrolling in these general permits. These entities are identified as "Responsible Dischargers" on this list. These actions will be required pursuant to the terms of the general permits, so this portion of the implementation program also does not impose any new regulatory requirements. To the extent the discharge is addressed by a Storm Water Permit, the Regional Board anticipates that management practices developed from any of the Implementation Actions (in the list of Trackable Implementation Actions) will be included in Storm Water Management Plans and Storm Water Pollution Prevention Plans. If the management practices are not included in these Plans, the Regional Board will work with dischargers to condition the Plans on an individual basis, will consider issuing individual Storm Water permits or waste discharge requirements, and/or, if necessary take actions to enforce the terms of the permits or waste discharge requirements. The Regional Board will take any such actions on a case-by-case basis using existing authority or if necessary, by amendment of the TMDL implementation program.

Margin of Safety

A margin of safety has been established implicitly in the TMDL calculation through conservative assumptions used in establishing the percent reduction from existing loads necessary to protect beneficial uses.

Monitoring

The TMDL will be evaluated by monitoring the four numeric targets specified above, as well as by tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking, reporting status, and evaluating the effectiveness of voluntary implementation actions, is shared by the Regional Board and participating members of the San Lorenzo River Technical Advisory Committee. Initially the Regional Board will be responsible for monitoring numeric targets. Any monitoring besides that for numeric targets, including turbidity monitoring by the San Lorenzo Valley Water District and the City of Santa Cruz Water Agency, as well as "comprehensive" monitoring of parameters affecting cold water fisheries conducted by various agencies, will be on a voluntary basis. Monitoring efforts pursuant to existing or anticipated regulatory programs or other voluntary efforts will be evaluated along with monitoring for numeric

001249

targets. The Board will evaluate progress on implementation actions in consultation with the San Lorenzo River Technical Advisory Committee. As more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified through an amendment to the Basin Plan, as appropriate.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2003 - 0061

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL
PLAN FOR THE CENTRAL COAST REGION TO INCORPORATE A
TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION
PLAN FOR SEDIMENT IN THE SAN LORENZO RIVER, INCLUDING
CARBONERA CREEK, LOMPICO CREEK, AND SHINGLE MILL CREEK

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Regional Board) revised its Water Quality Control Plan for the Central Coast Region (Basin Plan) by Resolution No. 94-01 on February 11, 1994, which was approved by the State Water Resources Control Board (SWRCB) on May 18, 1994, by the Office of Administrative Law (OAL) on September 7, 1994, and by the U.S. Environmental Protection Agency (USEPA) on May 29, 2000.
2. On September 20, 2002, the Regional Board adopted Resolution No. R3-2002-0063 ([Attachment](#)) amending the Basin Plan to incorporate a Total Maximum Daily Load (TMDL) and Implementation Plan for Sediment in the San Lorenzo River, including Carbonera Creek, Lompico Creek, and Shingle Mill Creek, and on May 16, 2003 the Regional Board re-adopted the TMDL adding a California Environmental Quality Act (CEQA) consideration of alternative actions to the administrative record.
3. SWRCB finds that the Basin Plan amendment to incorporate a TMDL and Implementation Plan for Sediment in the San Lorenzo River, including Carbonera Creek, Lompico Creek, and Shingle Mill Creek is in conformance with the requirements for TMDL development specified in Section 303(d) of the federal Clean Water Act, and with Water Code section 13240 which specifies that Regional Water Quality Control Boards shall periodically review and may revise Basin Plans.
4. Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with CEQA and all other applicable State laws and regulations.
5. A Basin Plan amendment does not become effective until approved by SWRCB and until the regulatory provisions are approved by OAL. A TMDL must also be approved by USEPA.

THEREFORE BE IT RESOLVED THAT:

SWRCB:

1. Approves the amendment to the Central Coast Basin Plan to incorporate a TMDL and Implementation Plan for Sediment in the San Lorenzo River, including Carbonera Creek, Lompico Creek, and Shingle Mill Creek.

2. Authorizes the Executive Director or designee to transmit the amendment and administrative record for this action to OAL, and to transmit the TMDL to USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 16, 2003.

Debbie Irvin
Clerk to the Board

ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to chapter 4 after IX. D.:

RESOLUTION NO. R3-2002-0117

IX. E. TOTAL MAXIMUM DAILY LOAD FOR PATHOGENS FOR MORRO BAY AND CHORRO AND LOS OSOS CREEKS

The Regional Water Quality Control Board adopted this TMDL on insert date.

This TMDL was approved by:

The State Water Resources Control Board on insert date.

The California Office of Administrative Law on insert date. (*Effective date*)

The U.S. Environmental Protection Agency on insert date.

TMDL Elements

Element													
Problem Statement	<p>Numeric water quality objectives for fecal coliform set by the Regional Board and standards enforced by the California Department of Health Services (DHS) pursuant to the United States Department of Health Services Food and Drug Administration's National Shellfish Sanitation Program have been exceeded for shellfish harvesting and water contact recreation in Morro Bay. Elevated levels of fecal coliform in Morro Bay and Chorro and Los Osos Creeks indicate that pathogens are impairing water contact recreation and shellfish harvesting in these water bodies. High levels of pathogens may cause disease in humans and may also adversely affect marine animals. Portions of Morro Bay have been closed by DHS for commercial shellfish harvesting since 1996, and advisories have been posted to warn the public to avoid water contact activities. Morro Bay was identified as impaired for pathogens on the 1998 Clean Water Act Section 303(d) list of impaired water bodies.</p>												
Numeric Targets	<p>Numeric targets for <u>Morro Bay</u>, based on regulations¹ that DHS follows</p> <table border="1" data-bbox="460 1173 1252 1266"> <tr> <th colspan="2" data-bbox="460 1173 1252 1205">Fecal Coliform</th> </tr> <tr> <th data-bbox="460 1205 855 1236">Geometric Mean</th> <th data-bbox="855 1205 1252 1236">Maximum</th> </tr> <tr> <td data-bbox="460 1236 855 1266">14 MPN/100 mL^a</td> <td data-bbox="855 1236 1252 1266">43 MPN/100 mL^b</td> </tr> </table> <p>a: Based on the geometric mean of monthly sampling b: No more than 10% of total samples may exceed this number</p> <p>Numeric targets for Chorro and Los Osos Creeks and fresh water seeps² to Morro Bay, based on Basin Plan objective</p> <table border="1" data-bbox="460 1402 1252 1495"> <tr> <th colspan="2" data-bbox="460 1402 1252 1434">Fecal Coliform</th> </tr> <tr> <th data-bbox="460 1434 855 1465">Geometric Mean</th> <th data-bbox="855 1434 1252 1465">Maximum</th> </tr> <tr> <td data-bbox="460 1465 855 1495">200 MPN/100 mL^a</td> <td data-bbox="855 1465 1252 1495">400 MPN/100 mL^b</td> </tr> </table> <p>a: Geometric mean of not less than five samples over a period of 30 days b: Not more than 10% of total samples during a period of 30 days exceed</p>	Fecal Coliform		Geometric Mean	Maximum	14 MPN/100 mL ^a	43 MPN/100 mL ^b	Fecal Coliform		Geometric Mean	Maximum	200 MPN/100 mL ^a	400 MPN/100 mL ^b
Fecal Coliform													
Geometric Mean	Maximum												
14 MPN/100 mL ^a	43 MPN/100 mL ^b												
Fecal Coliform													
Geometric Mean	Maximum												
200 MPN/100 mL ^a	400 MPN/100 mL ^b												

¹ National Shellfish Sanitation Program, Model Ordinance, Chapter IV, 0.02, D

² Seeps are defined as any surfacing ground water flowing into Morro Bay from the east shore of the Bay, south of Los Osos Creek.

Element	
Allocations and TMDL	<p>This TMDL is expressed as concentrations that are equal to the numeric targets. For Bay waters, a geometric mean of 14 MPN/100 mL must be achieved and no more than 10% of the samples may be over 43 MPN/100 mL for <u>fecal coliform</u>. For tributaries (Chorro and Los Osos Creeks and fresh water seeps) to the Bay, the geometric mean shall not exceed 200 MPN/100 mL over a 30-day period nor shall 10% of the samples exceed 400 MPN/100 mL over any 30-day period for <u>fecal coliform</u>. Point and nonpoint sources cannot exceed the concentrations specified above. Therefore, the wasteload allocations and load allocations, which include background levels, are also equal to the numeric targets.</p>
Margin of Safety	<p>A margin of safety has been established implicitly through the use of protective numeric targets.</p>
Linkage Analysis	<p>Allocations are equal to the numeric targets which equal the water quality objectives.</p>
Implementation	<p>The bacterial load to Morro Bay derives from nonpoint sources (NPS) and point sources. As such, implementation will rely on the State's Plan for NPS pollution control (CWC §13369) and continued implementation of existing regulatory controls as appropriate for point sources, including storm water pursuant to NPDES surface water discharge regulations and Waste Discharge Requirements (Porter Cologne).</p> <p>Implementation emphasizes the activities of the Morro Bay National Estuary Program, Coastal San Luis Resources Conservation District, Farm Bureau, University of California Cooperative Extension, Natural Resources Conservation Service, Public/Private Landowners, Morro Bay Harbor Department, California Department of Fish and Game, City of Morro Bay, United States Coast Guard, San Luis Obispo County, Division of Animal Services, all of whom are not currently identified as dischargers responsible for bacterial loading, to implement self-determined activities (see Table: Trackable Implementation Actions (self-determined)). Other actions, currently required because of another Regional Water Quality Control Board (Regional Board) regulatory program, will be evaluated to make sure progress is taking place (see Table: Trackable Implementation Actions identified under existing regulatory programs). Regional Board Staff will meet annually with the implementing parties identified in the list of Trackable Implementation Actions Tables to provide technical assistance and to evaluate and track progress (see Table: Morro Bay TMDL for Pathogens Implementation Schedule for details). If at the end of year three, implementing parties fail to initiate these self-determined activities and/or resulting management practices fail to reduce bacterial loads and/or the numeric targets are not being met, then Regional Board staff will conduct inspections and investigations to identify individual responsible dischargers (e.g., landowners or public agencies). Regional Board staff may rely on Section 13267 of the California Water Code and other appropriate authorities for investigation and identification of individual responsible dischargers. Regional Board staff will also rely on Section 13267 of the California Water Code to require reporting and/or monitoring to determine the level of implementation of identified activities to reduce bacteria. If necessary, the Regional Board may rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean-up and abate bacterial discharges and/or prevent the threat of discharges on a case-by case basis. Additionally, Implementation Actions (in the Table of Implementation Actions) may be identified as conditions of compliance with storm water permits and Waste Discharge Requirements.</p> <p>If at the end of the third year, self-determined actions have not been initiated, staff will develop a regulatory approach (rather than a self-determined approach) and present a revised implementation plan to the Regional Board as a Basin Plan Amendment.</p>
Monitoring	<p>Monitoring will be performed and evaluated by the DHS according to their regulations, the Morro Bay National Estuary Volunteer Program and the Regional Board to ensure that numeric targets are met and implementation actions are taking place. Should the Morro Bay National Estuary Volunteer Program be unable to sample, the Regional Board will sample to the extent practicable. Regional Board staff will review data on a triennial basis, at a minimum, and determine if progress towards fecal coliform reduction is adequate and whether changes to implementation actions are warranted (as described above).</p>

Trackable Implementation Actions (self-determined)

PROJECT NAME	ACTION	SCHEDULE	IMPLEMENTING PARTIES
Grazing Management	Implement grazing management measures that reduce bacterial levels	Ongoing - 2012	MBNEP, CSLRCD, Farm Bureau, UCCE, NRCS, Public/Private Landowners
Boat Management, Pump-outs	Upgrade pump-out facilities, provide new facilities, improve accessibility	2002-2005	MBHD
Remove unpermitted moorings	Remove illegal moorings and prevent future ones	Ongoing - 2007	CDFG, MBNEP
Remove derelict boats	Remove abandoned, derelict boats and vessels in back bay	Ongoing - 2007	CDFG, MBNEP
Manage live aboard boating situation	Continue issuing permits to live aboards, continue with inspections	Ongoing - 2012	City of Morro Bay, USCG, CDFG, MBHD
Educate Public about proper boat waste disposal	Educate public about proper waste disposal	Ongoing - 2012	MBNEP, MBHD
Pet waste management	Create an off leash dog park, provide supplies to pick-up pet waste, ordinance	Ongoing -2012	MBNEP, City of Morro Bay, San Luis Obispo County
Septic System Maintenance	Inspect and maintain all septic systems throughout the watershed	2004 - continuous	San Luis Obispo County, LOCSO
Spay/neuter pets	Educate public to promote spaying and neutering pets	Ongoing -2012	Division of animal services
Reduce the number of feral dogs/cats	Reduce the number of feral dogs/cats	Ongoing - 2012	Division of animal services, feral cat caretakers

CDFG – California Department of Fish and Game
 CSLRCD – Coastal San Luis Resources Conservation District
 MBHD – Morro Bay Harbor Department
 MBNEP – Morro Bay National Estuary Program
 NRCS – Natural Resources Conservation Service
 UCCE – University of California Cooperative Extension

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2003 - 0060

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR
THE CENTRAL COAST REGION TO ESTABLISH A TOTAL MAXIMUM DAILY LOAD FOR PATHOGENS FOR
MORRO BAY AND CHORRO AND LOS OSOS CREEKS

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Regional Board) adopted a revised Water Quality Control Plan (Basin Plan) on February 11, 1994, which was approved by the State Water Resources Control Board (SWRCB) on May 18, 1994, by the Office of Administrative Law (OAL) on September 7, 1994, and by the U.S. Environmental Protection Agency (USEPA) on May 29, 2000.
2. Morro Bay was identified in 1998 as water quality limited by pathogens for Shellfish Harvesting and Water Contact Recreation.
3. On December 13, 2002, the Regional Board adopted Resolution No. R3-2002-0117 to incorporate a Total Maximum Daily Load (TMDL) for pathogens in Morro Bay, Chorro and Los Osos Creeks, and freshwater seeps into the Basin Plan; and on May 16, 2003, the Regional Board adopted revisions to the TMDL ([Attachment 1](#)).
4. SWRCB finds that the Basin Plan amendment titled "A total maximum daily load and implementation plan for pathogens for Morro Bay and Chorro and Los Osos Creeks" is in conformance with the requirements for TMDL development specified in section 303(d) of the Federal Clean Water Act.
5. Regional Board Resolution No. 2002-0117 delegated to the Regional Board Executive Officer authority to make minor, non-substantive corrections to the adopted amendment, if needed, for clarity or consistency. By memorandum dated August 12, 2003, the Regional Board Executive Officer has made the necessary corrections to the amendment ([Attachment 2](#)).
6. The Regional Board prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act and other State laws and regulations.
7. A Basin Plan amendment does not become effective until approved by SWRCB and until the amendment's regulatory provisions are approved by OAL.

THEREFORE BE IT RESOLVED THAT:

SWRCB:

1. Approves the amendment to the Regional Board Basin Plan adopted under Regional Board Resolution No. R3-2002-0117 as corrected by the Executive Officer.
2. Authorizes the Executive Director or designee to transmit the amendment and administrative record for this action to OAL and the TMDL to USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 16, 2003.

Debbie Irvin
Clerk to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 2001 - 125

APPROVING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST REGION
REMOVING A NITRATE OBJECTIVE FOR THE SAN LORENZO RIVER

WHEREAS:

1. The Central Coast Regional Water Quality Control Board (Central Coast Regional Board) revised its Water Quality Control Plan (Basin Plan) on April 14, 1995 and the amendments to that plan took effect on November 2, 1995.
2. On June 2, 2000, the Central Coast Regional Board adopted Resolution 00-001 (attached) amending the Basin Plan to remove a numeric nitrate objective of 0.25 mg/L for the San Lorenzo River.
2. The Central Coast Regional Board staff followed appropriate procedures to satisfy the environmental documentation requirement of the California Environmental Quality Act (PL 92-500 and PL 95-217) and other State laws and regulations. The Central Coast Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.
3. The State Water Resources Control Board (SWRCB) finds that the Basin Plan amendment to remove the numeric nitrate objective for the San Lorenzo River is in conformance with Water Code Section 13240 which specifies that Regional Water Quality Control Boards shall periodically review and may revise Basin Plans.
4. A Basin Plan amendment does not become effective until approved by the SWRCB and until the regulatory provisions are approved by the Office of Administrative Law (OAL) and provisions related to surface water standards are approved by the U.S. Environmental Protection Agency (USEPA).

THEREFORE BE IT RESOLVED THAT:

The SWRCB:

1. Approves the amendment to the Central Coast Regional Board Basin Plan to remove the numeric nitrate objective for the San Lorenzo River.
2. Authorizes the Executive Director or designee to transmit the amendment and administrative record for this action to OAL and USEPA for approval.

CERTIFICATION

The undersigned, Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on November 15, 2001.

/s/
Maureen Marché
Clerk to the Board

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
San Luis Obispo, California**

RESOLUTION NO.00-001

**ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN AND
REQUESTING APPROVAL FROM THE STATE WATER RESOURCES CONTROL
BOARD TO**

REMOVE THE NITRATE OBJECTIVE FOR SAN LORENZO RIVER

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975.

WHEREAS, the Regional Board periodically revises and amends the Basin Plan,

WHEREAS, the current nitrate objective for the San Lorenzo River is not reasonable. For example, the existing objective is below background concentrations,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment,

WHEREAS, water quality will be protected by the narrative water quality objectives. Regional Board Resolution 95-04 also encourages the County to implement reduced nitrate discharge measures contained within the San Lorenzo Nitrate Management Plan, Phase II Final Report, February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service. Water quality will also be protected by the nitrate target contained within the draft San Lorenzo River nitrate TMDL once it is approved by the U.S. EPA,

WHEREAS, drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment,

WHEREAS, Regional Board staff followed appropriate procedures to satisfy the environmental documentation requirement of the California Environmental Quality Act (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment,

WHEREAS, notice of public hearing was given by advertising in newspapers of general circulation within the Region,

***AND WHEREAS**, on June 2, 2000, in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public testimony.*

THEREFORE, BE IT RESOLVED that based on the draft Basin Plan amendment. The environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant adverse effect on the environment,

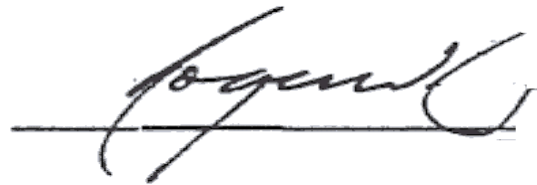

THEREFORE, BE IT RESOLVED that the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse,

THEREFORE, BE IT RESOLVED that when appropriate, the Regional Board shall replace the nitrate objective with a TMDL nitrate target for San Lorenzo River or U.S. EPA nutrient criteria,

THEREFORE, BE IT RESOLVED that the Basin Plan amendment shown on “Attachment A—Basin Plan Amendment” is approved. The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency,

AND THEREFORE, BE IT RESOLVED that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.

I, ROGER W. BRIGGS, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 2, 2000.

A handwritten signature in black ink, appearing to read "Roger W. Briggs", is written over a horizontal line.

June 2, 2000

Date

RESOLUTION NO. 00-001
ATTACHMENT A -- BASIN PLAN AMENDMENT

The following Basin Plan amendment is proposed. New language is shown in **bold** and deleted language is ~~stuck out~~.

1. Revise the September 8, 1998 Basin Plan, Chapter Three, page III-14 as follows:

~~A specific monthly mean objective for Nitrate (as NO₃) of 0.25 mg/l shall apply to both the upper and lower San Lorenzo River to protect beneficial uses from adverse biostimulatory effects. Specific biostimulant objectives for other surface waters will be added to this section in tabular form once they are determined from further studies.~~

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 95-53

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST BASIN
REGARDING ON-SITE SEPTIC SYSTEMS

WHEREAS:

1. The Regional Water Quality Control Board, Central Coast Region (CCRWQCB), adopted a revised Water Quality Control Plan for the Central Coast Basin (Basin Plan) on February 11, 1994, under Resolution No. 94-01, and the Basin Plan was approved by the State Water Resources Control Board (SWRCB) in May 1994 and by the Office of Administrative Law (OAL) in September 1994.
2. On April 14, 1995, the CCRWQCB adopted Resolution No. 95-04 (Attachment) revising the Basin Plan by rescinding an on-site septic system prohibition and replacing it with regulation of on-site systems through implementation of a Wastewater Management Plan for the San Lorenzo River Watershed, Santa Cruz County.
3. In adopting the amendment, two statements (stated in Resolved No. 1 of this Resolution) were incorporated which introduced clarity problems and, therefore, cannot be approved.
4. Section 303(c) of the Federal Clean Water Act requires that water quality standards be reviewed and revised, if appropriate, at least every three years, and Section 13240 of the California Water Code provides that Basin Plans be periodically reviewed and, if appropriate, revised.
5. The CCRWQCB prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.).
6. The CCRWQCB Resolution No. 95-04 was adopted in accordance with State laws and regulations.
7. Basin Plan amendments do not become effective until approved by the SWRCB and until regulatory provisions are approved by OAL.

THEREFORE BE IT RESOLVED THAT:

The SWRCB:

1. Approves the Basin Plan amendment adopted by CCRWQCB Resolution No. 95-04 on April 14, 1995, with the exception of the portions shown below in "strikeout" format which are disapproved:
 - a. Attachment A, item 1, middle of paragraph
"Alternatives have been evaluated and solutions proposed to reduce septic system problems and to respond to this Plan's discharge prohibition in certain areas of the valley."
 - b. Attachment A, item 1, final sentence
"~~Implementation of the Wastewater Management Plan precludes the Regional Board from reestablishing the discharge prohibition.~~"
2. Authorizes staff to submit the approved revision of the Basin Plan to OAL for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 17, 1995.

Maureen Marché
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 94-115

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST REGION

WHEREAS:

1. The Regional Water Quality Control Board, Central Coast Region (RWQCB), adopted a revised Water Quality Control Plan for the Central Coast Region (Basin Plan) on February 11, 1994, and the State Water Resources Control Board (SWRCB) approved the revised Basin Plan on May 18, 1994 under Resolution No. 94-44.
2. Section 303(c) of the Federal Clean Water Act requires that water quality standards be reviewed and revised, if appropriate, at least every three years, and Section 13240 of the California Water Code provides that Basin Plans be periodically reviewed and may be revised.
3. On September 8, 1994, the RWQCB adopted Resolution No. 94-06 (Attachment) revising Basin Plan Table 2-1, Identified Uses of Inland Surface Waters, in the following areas:
 - a. Added eight beneficial use categories not previously listed in Table 2-1 for inland surface waters, and assigned the uses to appropriate water bodies.
 - b. Added 29 water bodies not previously listed in Table 2-1, and assigned appropriate beneficial uses to them.
 - c. Revised several beneficial use definitions.
 - d. Revised two beneficial use designations for Struve Slough which were assigned in error when the Basin Plan was revised on February 11, 1994.
 - e. Replaced existing "E" and intermittent "I" listings with an "X" to indicate that a beneficial use is present in the water body.
4. The RWQCB prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.).
5. The SWRCB will work with the Department of Fish and Game to ensure that threatened or endangered species are protected, pursuant to Fish and Game Code Section 2055.
6. The RWQCB Resolution No. 94-06 was adopted in accordance with State laws and regulations.

7. Basin Plan amendments do not become effective until approved by the SWRCB and until regulatory provisions are approved by the Office of Administrative Law (OAL).

THEREFORE BE IT RESOLVED THAT:

The SWRCB:

1. Approves the Basin Plan amendment adopted by RWQCB Resolution No. 94-06 on September 8, 1994 with the understanding that:
 - a. The RWQCB shall continue to implement provisions of existing State and federal laws regarding the discharge of toxic pollutants. In particular, the RWQCB shall issue National Pollutant Discharge Elimination System permits in compliance with the Porter-Cologne Water Quality Control Act and applicable State and federal regulations, including, but not limited to, 40 CFR, Section 122.44(d).
 - b. Within three years after the Department of Fish and Game (DFG) notifies the RWQCB that specific water bodies support threatened or endangered species and that scientific evidence indicates that certain existing water quality objectives for these water bodies do not adequately protect such species, the RWQCB shall determine, in consultation with DFG, whether these objectives are adequately protective. In cases where such existing objectives do not provide adequate protection for threatened and endangered species, the RWQCB shall develop and adopt adequately protective site-specific objectives for these constituents.
2. Authorizes staff to forward the Basin Plan amendment to the U.S. Environmental Protection Agency and the regulatory provisions of the Basin Plan amendment to OAL for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on November 17, 1994.

CENTRAL COAST REGION

RESOLUTION NO. 94-06

ADOPTING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The California Water Code directs the Regional Water Quality Control Boards (Regional Boards) to adopt Water Quality Control Plans (Basin Plans) and to revise them as necessary.
2. This Regional Board, at the February 11, 1994 Board Meeting, directed staff to include the latest Beneficial Use categories approved by the State Water Resources Control Board in Table 2-1 of the Basin Plan.
3. The Regional Board, and others, proposed waters not previously listed in Table 2-1 for designation of beneficial uses.
4. Regional Board staff proposes that the Existing "E" and Intermittent "I" designations are confusing; and that all water body designations in Table 2-1 be identified with an "X" indicating that the beneficial use occurs, at least part of the year and/or in some segment of the water body.
5. Regional Board staff was advised of at least one error in the current Table 2-1 which should be corrected.
6. Drafts of the proposed revisions have been prepared and distributed to interested persons and agencies for review and comment.
7. The specific amendment proposed is shown in Attachment "A - Appendix One and Two".
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of this amendment will not have a significant adverse effect on the environment.
9. Amendment of the Administrative Procedure Act, Government Code Section 11340, requires Basin Plan amendments be submitted to the California Office of Administrative Law.
10. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and on threatened and endangered plant and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made a conditional finding of "no jeopardy" pursuant to the California Endangered Species Act.
11. The Department of Fish and Game conditions their approval with the understanding that: "Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents."

12. Due notice of public hearing was given by advertising in eight newspapers of general circulation within the Region.
13. On September 8, 1994, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of this amendment by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents.
4. The Basin Plan amendment shown on Attachment "A - Appendix One and Two" is approved. The amendment will not take effect until approved by the State Board and the Office of Administrative Law.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the Environmental Protection Agency for approval.

I, ROGER W, BRIGGS, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on September 8, 1994.

Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 94-44

APPROVAL OF A REVISED WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST REGION

WHEREAS:

1. The Regional Water Quality Control Board, Central Coast Region (RWQCB), adopted a revised Water Quality Control Plan for the Central Coast Region (Basin Plan) on November 17, 1989, and the State Water Resources Control Board (SWRCB) approved the revised Basin Plan on August 16, 1990 under Resolution No. 90-87.
2. Section 303(c) of the Federal Clean Water Act requires that water quality standards be reviewed and revised if appropriate at least every three years, and Section 13240 of the California Water Code provides that Basin Plans be periodically reviewed and may be revised.
3. On February 11, 1994, RWQCB adopted Resolution No. 94-01 (Attachment) further revising the Basin Plan in the following areas:
 - a. Revised beneficial use definitions to be consistent with statewide format,
 - b. Designated beneficial uses for approximately 300 additional water bodies and revised beneficial use designations for approximately 150 water bodies,
 - c. Updated water quality objectives for organic chemicals,
 - d. Added water quality objectives for the Paso Robles ground water basin,
 - e. Updated RWQCB program descriptions,
 - f. Updated the list of SWRCB and RWQCB Plans and Policies,
 - g. Added a new section on Quality Control and Data Management, and
 - h. Added a description of the Water Quality Assessment.
4. A proposed amendment to footnote "a", pages II-2 through II-5, of the Basin Plan would violate provisions of the Federal Clean Water Act and, therefore, is not approvable.

5. RWQCB prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.).
6. RWQCB Resolution No. 94-01 was adopted in accordance with State laws and regulations.
7. Basin Plan amendments do not become effective until approved by SWRCB and until regulatory provisions are approved by the Office of Administrative Law (OAL).

THEREFORE BE IT RESOLVED:

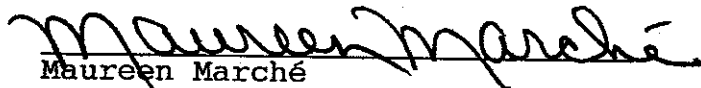

That SWRCB:

1. Accepts RWQCB Resolution No. 94-01 as fulfillment of its Triennial Review.
2. Approves the revised Basin Plan, with the exception of proposed amendment to footnote "a", pages II-2 through II-5, adopted by RWQCB Resolution No. 94-01 on February 11, 1994 with the understanding that:
 - a. RWQCB shall continue to implement provisions of existing State and Federal law regarding the discharge of toxic pollutants. In particular, the RWQCB shall issue National Pollutant Discharge Elimination System permits in compliance with the Porter-Cologne Water Quality Control Act and applicable State and Federal regulations, including, but not limited to, 40 CFR, Section 122.44(d).
 - b. Within four months of SWRCB approval of the Central Coast Basin Plan, RWQCB shall initiate consultation with the Department of Fish and Game (DFG) under the California Endangered Species Act regarding the need for future Basin Plan amendments.
 - c. Within three years after DFG notifies RWQCB that specific water bodies support threatened or endangered species and that scientific evidence indicates that certain existing water quality objectives for these water bodies do not adequately protect such species, RWQCB shall determine, in consultation with DFG, whether these objectives are adequately protective. In cases where such existing objectives do not provide adequate protection for threatened and endangered species, RWQCB shall develop and adopt adequately protective site-specific objectives for these constituents.

3. Authorizes staff to forward the revised Basin Plan to the U.S. Environmental Protection Agency and the regulatory provisions to OAL for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 18, 1994.

Maureen Marché
Administrative Assistant to the Board

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 94-01

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The Federal Clean Water Act directs states to adopt water quality standards and to review them on a triennial basis. The California Water Code directs the Regional Water Quality Control Board (Regional Board) to adopt Water Quality Control Plans (Basin Plans) and to update them periodically.
2. The Water Quality Control Plan, Central Coastal Basin (Basin Plan) was approved by the State Water Resources Control Board (State Board) on March 20, 1975 and a revised Basin Plan was approved by the State Board on August 16, 1990.
3. The State Board identified the need for comprehensive update of all Regional Board Basin Plans statewide and provided contract funding for a variety of studies to facilitate this process.
4. Several major Basin Plan amendments are proposed herein to partially satisfy Basin Plan Update Program requirements:
 - a. Revise Beneficial Use definitions to statewide consistent format.
 - b. Assign Beneficial Uses to approximately 300 water bodies and revise Beneficial Uses for approximately 150 water bodies.
 - c. Update organic chemicals objectives.
 - d. Add ground water objectives for the Paso Robles ground water basin.
 - e. Update Regional Board program descriptions.
 - f. Update State/Regional Board Plans and Policies.
 - g. Add description of Quality Control and Data Management.
 - h. Add description of Water Quality Assessment.

The specific amendment proposed is shown in Attachment "A".

5. Several additional minor changes (as described in Attachment "A") are also necessary to update the Basin Plan. Changes are proposed to clarify, edit, or correct the current Basin Plan.
6. This Basin Plan revision update process satisfies the federal triennial review requirements of Section 303 (c) of the Clean Water Act and the periodic review requirements of Water Code Act Section 12340.
7. Drafts of the proposed amendments have been prepared and distributed to interested persons and agencies for review and comment.
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional

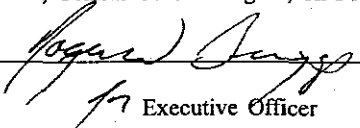

Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.

9. The State Board is required to adopt numerical water quality objectives for toxics in accordance with Section 303(C)(2)(b) of the Clean Water Act. The State Board adopted objectives in the California Inland Surface Waters Plan, April 1992, and the California Enclosed Bays and Estuaries Plan, April, 1991. These Plans are currently implemented by the Regional Board. These Plans are being contested in court. It is uncertain whether the Plans will be upheld in their current form.
10. State Board Plans are in effect after approval by the California Office of Administrative Law. These Plans supersede Basin Plans to the extent of any conflict. State Board Plans must be implemented by the Regional Board whether the Plans are referenced in the Basin Plan or not.
11. Amendment of the Administrative Procedure Act, Government Code Section 11340, requires Basin Plan amendments be submitted to the California Office of Administrative Law.
12. A "Summary of Necessity for the Regulatory Provisions (Attachment D)", has been prepared as required by the California Office of Administrative Law.
13. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and on threatened and endangered plant and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made a conditional determination of "no jeopardy" pursuant to the California Endangered Species Act. A finding of "no jeopardy" is conditioned upon the Regional Board implementing water quality objectives in accordance with Section 303(C)(1) of the Clean Water Act by June 1, 1995.
14. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
15. On February 11, 1994, in the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. The Basin Plan amendment shown on Attachment "A" is approved. The amendments will not take effect until approved by the State Board and the Office of Administrative Law.
4. The Regional Board intends to implement water quality objectives adopted by the State Board in accordance with Section 303(C)(1) of the Clean Water Act by June 1, 1995.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the Environmental Protection Agency for approval.

I, **WILLIAM R. LEONARD**, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on February 11, 1994.

Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 91-9

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST BASIN
PROVIDING A WAIVER TO THE MONTEREY BAY
PROHIBITION ZONE FOR DISCHARGES FROM
DESALINIZATION AND CIRCULATING SEAWATER SYSTEMS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (Basin Plan) on March 14, 1975.
2. Division 7 of the Water Code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. On September 14, 1990, following a public hearing, the Central Coast Regional Board adopted Resolution No. 90-05 (Attachment) amending the Basin Plan to add on page V-9 under "Waters Subject to Tidal Action":

"Discharges to the Monterey Bay Prohibition Zone from desalinization units and circulating seawater system discharges may be permitted after each proposal satisfies California Environmental Quality Act Requirements and completes the National Pollutant Discharge Elimination System process."
4. The Pacific Grove Marine Gardens Fish Refuge and Hopkins Marine Life Refuge Area of Special Biological Significance (ASBS) is located within the Monterey Bay Prohibition Zone, and point source discharges to the ASBS continue to be prohibited unless a specific exception is approved by the State Water Resources Control Board (State Board), pursuant to the Water Quality Control Plan for Ocean Waters of California (Ocean Plan).
5. The Central Coast Regional Board prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (CEQA, Public Resources Code Section 21000 et seq.).
6. The Central Coast Regional Board Resolution No. 90-05 was adopted in accordance with State laws and regulations.
7. Basin Plan amendments do not become effective until approved by the State Board.

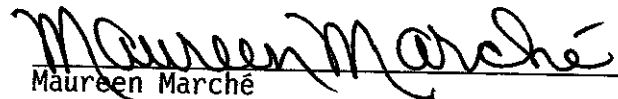

THEREFORE BE IT RESOLVED:

That the State Board:

1. Approves the Basin Plan amendment adopted by Central Coast Regional Board Resolution No. 90-05 on September 14, 1990 with the condition that any discharge to the ASBS is prohibited unless an exception to the Ocean Plan is approved by the State Board.
2. Directs staff to submit the Basin Plan amendment and this State Board Resolution to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 24, 1991.

Maureen Marché
Administrative Assistant to the Board

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
 1102 A Laurel Lane
 San Luis Obispo, CA 93401

RESOLUTION NO. 90-05

**Adopting Monterey Bay Desalinization Discharge Waiver
 Amendment to the Water Quality Control Plan
 and Requesting Approval From the
 State Water Resources Control Board**

WHEREAS:

1. The Water Quality Control Plan for the Central Coastal Basin (Basin Plan) prohibits "waste discharges" into the northern and southern extremities of Monterey Bay (Prohibition Zone). (This prohibition is contained in the Plans and Policies Discharge Prohibitions section of the Basin Plan.)
2. The Prohibition Zone was established because sluggish circulation in the Bay's extremities caused waste parameters to accumulate. The zone was established to reduce accumulation of ammonia nitrogen and bacteria in the northern and southern corners of the Bay.
3. Desalinization discharges do not contribute the type of pollutants which are of concern in the Prohibition Zone.
4. Circulating seawater systems from aquariums and marine labs may contribute some pollutants of concern. However, these are generally of minor amounts and can be regulated through the NPDES process.
5. Sufficient regulatory mechanisms exist to protect Monterey Bay from desalinization and circulating seawater discharges.
6. A Basin Plan Amendment is necessary to allow desalinization and circulating seawater discharges in Monterey Bay.
7. Drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment.
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and Federal Clean Water Act of 1977 (PL 92-500 and PL 95217). The Regional Board finds adoption of this amendment will not have a significant adverse effect on the environment.
9. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
10. On September 14, 1990 in the Seaside City Council Chambers, 440 Harcourt Avenue, Seaside, California after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the Plan.

THEREFORE BE IT RESOLVED:

1. The Basin Plan for the Central Coast Region be amended as follows on Page V-9 under "Waters Subject to Tidal Action" but before "Areas of Special Biological Significance" (November or July, 1989 draft):

Ample
FILE COPY

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 90-87

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST BASIN
RESULTING IN COMPREHENSIVE REVISIONS IN
CONTENT AND FORMAT

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (Basin Plan) on March 14, 1975.
2. Division 7 of the Water Code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. The Central Coast Regional Board prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (CEQA, Public Resources Code Section 21000 et seq.).
4. On November 17, 1989, following a public hearing, the Central Coast Regional Board adopted Resolution No. 89-04 (Attachment) amending the Basin Plan to:
 - a. Revise PCB and phthalate ester water quality objectives for all inland surface waters, enclosed bays, and estuaries in the Water Quality Objectives chapter.
 - b. Update "Municipal Wastewater Management Plans" in the Implementation Plan chapter.
 - c. Update "Solid Waste Management" in the Implementation Plan chapter.
 - d. Add "Water Quality Limited Segments" designations in the Plans and Policies chapter.
 - e. Add general toxic or hazardous materials discharge prohibition to all waters in the Plans and Policies chapter.
 - f. Amend Resolution No. 73-05, "Adopting Policy Regarding Beneficial Use of Oil Field Waste Materials in the Santa Maria Valley Oil Fields, Santa Barbara County" to apply regionwide.

- g. Add Central Coast Regional Board "Policy for Highway Grooving Residues" in the Plans and Policies chapter.
 - h. Add Central Coast Regional Board "Policy for Waiver of Regulation of Specific Types of Waste Dischargers" in the Plans and Policies chapter.
 - i. Add a list of Water Bodies Needing Intensive Surveillance in the Surveillance and Monitoring chapter.
 - j. Add changes as described in Resolution No. 89-04 Attachment A, as necessary, to reformat and update the 1975 Basin Plan.
 - k. Include several minor wording changes necessary to improve the readability of the Basin Plan.
5. The State Water Resources Control Board (State Board) finds that the proposed interim PCB and phthalate ester objectives are not adequately substantiated and need to be reconsidered after adoption of the State Board's Statewide Inland Surface Water Plan and receipt of technical guidance on appropriate phthalate ester objectives.
 6. The State Board finds that the water quality limited segment list (item 4.d above) proposed for inclusion in the revised Basin Plan is inconsistent with the Statewide Water Quality Assessment adopted by the State Board on April 4, 1990.
 7. The Central Coast Regional Board Resolution No. 89-04 was adopted in accordance with State laws and regulations.
 8. Basin Plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

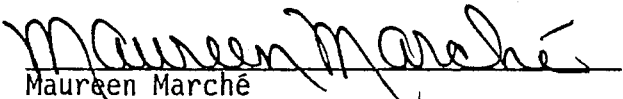

That the State Board:

1. Approves the Basin Plan amendment adopted by Central Coast Regional Board Resolution No. 89-04 on November 17, 1989 with the following provisions:
 - a. The proposed interim PCB and phthalate ester objectives are not approved and further action on the objectives is deferred until the State Board adopts the Statewide Inland Surface Waters Plan and provides technical guidance on appropriate phthalate ester objectives.
 - b. The water quality limited segment list proposed for inclusion in the Plans and Policies chapter of the Basin Plan is not approved.

2. Directs staff to submit the Basin Plan amendment and this State Board Resolution to the U.S. Environmental Protection Agency for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 16, 1990.

Maureen Marché
Administrative Assistant to the Board

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 89-04

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The Water Quality Control Plan, Central Coastal Basin (Basin Plan) was approved by the State Water Resources Control Board (State Board) on March 20, 1975.
2. Since March 20, 1975, thirty-seven Basin Plan amendments have been approved by the Regional Water Quality Control Board (Regional Board) and the State Board.
3. Since 1975, several changes in water quality regulations and administrative procedures have occurred.
4. An updated Basin Plan incorporating all previously approved amendments, updated regulations, and procedures is needed.
5. Several significant new Basin Plan amendments are needed:
 - a. Revise PCB and Phthalate Ester objective for all Inland Surface Waters, Enclosed Bays, and Estuaries in the Water Quality Objectives chapter.
 - b. Update "Municipal Wastewater Management Plans" in the Implementation Plan chapter.
 - c. Update "Solid Waste Management" in the Implementation Plan chapter.
 - d. Add "Water Quality Limited Segments" designation in the Plans and Policies chapter.
 - e. Add general toxic or hazardous materials discharge prohibition to all waters in the Plans and Policies chapter.
 - f. Amend Resolution 73-05, "Adopting Policy Regarding Beneficial Use of Oil Field Waste Materials in the Santa Maria Valley Oil Fields, Santa Barbara County" to apply Regionwide.
 - g. Add Regional Board policy for Highway Grooving Residues in the Plans and Policies chapter.

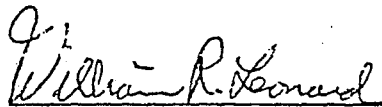

- h. Add Regional Board Policy for Waiver of Regulation of Specific Types of Waste Dischargers in the Plans and Policies chapter.
- i. Add Water Bodies Needing Intensive Surveillance in the Surveillance and Monitoring chapter.
6. Several additional changes (as described in Attachment "A") are necessary to update the 1975 Basin Plan.
7. Several minor wording changes are necessary to improve the readability of the Basin Plan.
8. Drafts of the proposed Basin Plan have been prepared and distributed to interested persons and agencies for review and comment.
9. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these objectives will not have a significant adverse effect on the environment.
10. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
11. On September 8, 1989, and November 17, 1989, in the Salinas City Council Chamber Rotunda, 200 Lincoln Avenue, Salinas, California, and in the Embassy Suites-Edna Room, 333 Madonna Road, San Luis Obispo, California, respectively, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the Plan.

THEREFORE BE IT RESOLVED:

1. All amendments mentioned above and in Attachment "A," will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.
2. All amendments mentioned above and in Attachment "A" are adopted.
3. Any minor editorial changes to correct data or grammar and/or clarify meaning in the final copy which may not be included in Attachment "A", are also adopted.

4. Staff responses which propose specific Basin Plan changes provided in the Regional Water Quality Control Board letter dated October 12, 1989, are adopted.
5. The State Board is requested to approve the proposed updated Basin Plan with amendments in accordance with Sections 13245 and 13246 of the California Water Code.
6. Upon approval, the State Board is requested to transmit the updated Basin Plan to the U.S. Environmental Protection Agency for approval.

I, WILLIAM R. LEONARD, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on November 17, 1989.

Executive Officer

sm4:89-04.Res

ATTACHMENT A
MINOR BASIN PLAN AMENDMENTS
CENTRAL COASTAL BASIN

CHAPTER 1. Revise Basin Plan Format:

- a) Add Introduction Chapter
- b) Continuing Planning Section added to Introduction Chapter
- c) Delete Historical Beneficial Uses Chapter
- d) Delete Historical Water Quality Objectives
- e) Revise format of Water Quality Objectives Chapter (chapter arranged by beneficial uses and water body type)
- f) Plan Assessment Chapter deleted
- g) Add Plans and Policies chapter (Chapter 5)

CHAPTER 2. Present and Potential Beneficial Uses Chapter

- a) "Selection Considerations" section deleted (this section discussed conditions by which "historical beneficial uses" could be deleted.)
- b) "Present Uses" section deleted (information summarized in current Chapter 1)
- c) "Projected Water Demands" deleted (Section is out of date)
- d) Reorganized Table 2-1 to coordinate with 1986 Hydrologic Basin Map prepared by the State Water Resources Control Board
- e) Add footnote to Table 2-1 Municipal Beneficial Use Column reading "In accordance with State Water Resources Control Board Resolution 88-63".
- f) "Newell Creek Res." changed to "Loch Lomond Res." in Table 2-1
- g) Changed footnote "b" Table 2-1 from "swamp" to "wetland"
- h) Addition of table listing ground water basins and map showing ground water basins from DWR Bulletin 118.
- i) Definition of "Water Contact Recreation" amended to include "sail boarding" and "jet skiing".
- j) Delete "The Ocean Plan, and hence the designation of areas of special biological significance, is not applicable to vessel wastes, the control of dredging, or the disposal of dredging spoil." (Ocean Plan already includes this statement; redundant in Basin Plan).

- k) Delete "The staff will advise other agencies to whom the list of designated areas is to be provided, that the basis for this action by the Board is limited to considerations related to protection of marine life from waste discharges." (This statement is superfluous; Agencies are aware of designated ASBS areas.)
- l) Carmel Bay added to ASBS areas in accordance with past State Water Resources Control Board approval.
- m) "Recommended Beneficial Uses" section deleted. ("Present and Potential Beneficial Uses" adequately covers this section).
- n) Minor word changes made throughout chapter to improve readability.

CHAPTER 3. Water Quality Objectives Chapter (Formerly Chapter 4)

- a) Delete following section, "For planning purposes there are three basic long-term strategies for water pollution control. These are to be applied to specific geographic areas or to be compared in terms of their relative impact on an area of designated use, whichever is deemed appropriated. The strategies are defined as follows:
 - i) Elimination of all waste discharges from both point sources and diffuse sources,
 - ii) Elimination of direct point source waste discharges and regulation of diffuse sources,
 - iii) Elimination of discharge of pollutants into navigable waters.

Strategy number one, in effect, restricts land use and is consistent with policies to protect wilderness areas, selected water supply catchments, and some areas of special biological significance. Strategy two is consistent with maintenance of certain wild rivers and protection of sensitive aquatic habitats where no allocation of stream assimilation capacity can be provided for controllable discharges unless water reclamation concepts are applied. Strategy three is consistent with the long-term national goals of the Federal Water Pollution Control Act with the understanding that pollutants will be defined in relevant terms and that best

practicable treatment would be consistently applied on a case-by-case basis depending on the physical character of the receiving water and the beneficial uses to be protected."

b) "Non-Degradation Policy" changed to "Anti-Degradation Policy"

c) Paragraph added:

"Several water quality objectives listed herein originate from the California Code of Regulations, Title 22, If Title 22 concentrations are amended, Basin Plan objectives are automatically amended to correspond with the new regulations."

d) Tables 4-1 and 4-2 deleted:

These tables compare 1970 water quality to planning criteria. These tables are not used to regulate dischargers.

e) Water quality objectives changed to comply with California Code of Regulations, Title 22.

f) Table 3-2 (previously Table 4-6) "Sodium Absorption Ration (SAR)" corrected to "SAR, adj"; correction was made according to L.V. Wilcox, U.S. Salinity Lab, memo Dec. 30, 1966.

g) Table 3-2 (previously Table 4-6) footnote "c" clarified to refer to Appendix A-23 for calculation support material.

h) Soda Lake removed from Table 3-6 (previously Table 4-8). No median surface water quality objectives were provided in original Basin Plan. Table 3-6 referenced a footnote "b" but no footnote "b" was provided.

i) Minor word changes made throughout chapter to improve readability.

CHAPTER 4. Implementation Plan Chapter 4 (Formerly Chapter 5)

a) Introductory paragraphs eliminated; brief introduction and outline provided instead.

b) Table 5-1 eliminated

- c) Introduction paragraph added to "Reclamation and Reuse" chapter
- d) Paragraph added to "Sludge Processing and Disposal" section (last paragraph)
- e) Introductory Paragraphs under "Municipal Wastewater Management" deleted
- f) Figure 5-1 deleted-not used in implementation program
- g) Table 5-2 deleted-out of date
- h) Table 5-3 deleted-not necessary
- i) Table 5-4 deleted-out of date
- j) Table 5-5 deleted-out of date
- k) Municipal Wastewater Management Plan section updated
- l) 1st paragraph under "Industrial Wastewater Management" deleted. Paragraph referred to alternative industrial management plans in Chapter 16. This reference is unnecessary.
- m) Last sentence in second paragraph under "Industrial Wastewater Management" deleted. This sentence was not necessary.
- n) Last paragraph under "Industrial Wastewater Management" section deleted. This paragraph is not necessary.
- o) "Solid Waste Management" section updated
- p) "Storm Water Management" section added
- q) "Irrigation Operations-Need for Salt Management" Section, add to end of paragraph beginning "Compromises and trade-offs will be necessary": "5. Change Crops Grown"
- r) "Improved Salt Management Techniques" Section, second paragraph, change last sentence to read "Present Statewide efficiency of water use may average 50 to 60 percent, but individual uses will vary from an estimated low of 30 percent where water is plentiful and inexpensive to a high of 95 percent where water quantity is limited and/or the price is high."
- s) Changes made in "Individual, Alternative, and Community Systems":

- i) Change last sentence under "Septic Tank Maintenance Districts" to: "Maintenance districts should establish septic tank surveillance, maintenance and pumping programs, where appropriate; provide repairs..."
- ii) Sentence added to first paragraph under "Criteria for New Systems":
"Local governing jurisdictions should incorporate these guidelines into their local ordinances. These recommendations will be used by the Regional Board for Regional Board regulated systems and exemptions."
- iii) Dual disposal field recommendation changed from: ~~"Both drainfields should be constructed initially and diversion valves or boxes installed when access to the disposal system is restricted in such a way that future additions and repairs cannot be made easily"~~ to "Dual disposal fields (200% of original calculated area) are recommended."
- iv) Definition of "gravels" and "gravels w/few fines" clarified.
- v) Section (d) of San Lorenzo Valley prohibition eliminated. The prohibition was historical and unnecessary.
- vi) Last paragraph of Baywood Park/Los Osos prohibition deleted. This prohibition was historical and unnecessary.
- t) Land disturbance prohibition changed from: "The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen material from any logging, construction, or similar activity where it may be discharged into State waters by runoff from less than a 25-year, 24-hour rainfall event is prohibited" to:

"The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from logging, construction, and other soil disturbance activities at locations above the

anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited."

- u) "Legislation" section deleted. This section was obsolete.
- v) Minor word changes made throughout chapter to improve readability.

CHAPTER 5. Plans and Policies Chapter 5
(Formerly Part of Chapter 4)

- a) Delete State Water Resources Control Board Recommended Control Action #10. Action-read:

"The non-degradation policy of 1968 should be revised or clarified to recognize short-term and long-term aspects of ground water management as affected by irrigated agriculture and an environmental impact assessment should be prepared on this policy."

This revision never occurred.

- b) Delete Regional Water Quality Control Board Management Principle #7:
"Applicants for state and federal grants for construction of waste treatment facilities shall be required to submit proof of implementation of source control and industrial waste ordinances, including an equitable system of cost recovery."

The grant program no longer exists.

- c) Add to "Recommended State Water Resources Control Board Control Actions" section to read:
"The State Water Resources Control Board should consider water quality effects when reviewing water rights permits."
- d) Revise Regional Water Quality Control Board Management Principle #12 to read: "The discharge of pollutants into surface fresh waters shall be discontinued."

e) Discharge Prohibition for Toxic or Hazardous Pollutants for all Waters--"community waste treatment systems" changed to "publicly owned treatment works"

f) Regional Water Quality Control Board Control Action #1 deleted:

"The Regional Water Quality Control Board should implement water quality control plan provisions through establishment of requirements and timetables for compliance with plan actions."

This action is unnecessary since the Regional Water Quality Control Board must accomplish this action according to Porter-Cologne Water Quality Control Act requirements. This policy is redundant.

g) Delete Regional Water Quality Control Board Control Action #9:

"Industrial schedules of compliance with the State Ocean Plan and PL92-500 including time tables, should be established by mid-1976. Dischargers should effect compliance with the 1977 and 1983 effluent limitations."

This action is unnecessary since Porter-Cologne Water Quality Control Act requires compliance. This policy is redundant.

h) Delete Regional Water Quality Control Board Action #21:

"Designate temporary or permanent salt sinks within each water basin that can accept waters of quality too poor for reuse in agriculture. As a minimum step, designate the Pacific Ocean and Soda Lake as acceptable salt sinks."

This policy conflicts with State Water Resources Control Board Resolution 88-63, Sources of Drinking Water Policy.

- i) Actions by Other Authorities #1 changed to read: "The Association of Monterey Bay Area Governments (AMBAG) should coordinate with local agencies and the Regional Board relative to implementation of water quality control plans in that area.
- j) Regional Board policies added

Several policies were previously adopted by the Regional Board. These policies are included for public information regarding Regional Board policies. New policies (or old policies never formally adopted) are adopted by this resolution (Resolution 89-04).
- k) Minor word changes made throughout chapter to improve readability.

CHAPTER 6. Surveillance and Monitoring Chapter 6
(Formerly Chapter 7)

- a) Introduction rewritten
- b) "Program Tasks" section deleted-unnecessary
- c) Surveillance Section rewritten; now titled "State Water Resources Control Board Program Tasks" and "Regional Water Quality Control Board Program Tasks"

sm4:Res.Att

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 89-75

APPROVAL OF THE AMENDMENTS TO THE WATER QUALITY
CONTROL PLANS INCORPORATING THE SOURCES OF DRINKING
WATER POLICY

WHEREAS:

1. California Water Code Section 13140 provides that the State Water Resources Control Board (State Board) shall formulate and adopt State policy for water quality control.
2. California Water Code Section 13240 provides that Water Quality Control Plans (Basin Plans) shall conform to any State policy for water quality control.
3. The State Board adopted Resolution No. 88-63 entitled Sources of Drinking Water Policy (Policy) on May 19, 1988 as State policy for water quality control (Attachment No. 1).
4. The Policy declares that, with certain exceptions that may be designated by the Regional Boards, all waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Water Quality Control Boards (Regional Boards).
5. The Policy indicates that Regional Boards may apply the exceptions by designating beneficial uses that do not include municipal or domestic water supply for any specific waterbodies which meet the criteria.
6. A waterbody listed in the Basin Plan which has a current beneficial use designation(s) other than municipal or domestic supply retains such a designation unless the applicable Regional Board acts to change such designation(s).
7. Incorporation of State Board Resolution No. 88-63 into the Basin Plans will conform the Basin Plans to the Policy.
8. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq., of the Public Resources Code and appropriate notices and waiting periods have been complied with.
9. All Regional Boards held public hearings and considered all testimony and comments received on this matter and determined that adoption of the proposed Basin Plan amendments will not have a significant adverse effect on the environment.

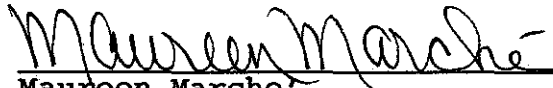

10. All Regional Boards adopted resolutions incorporating the Sources of Drinking Water Policy (Attachment No. 2).
11. Copies of the Regional Board resolutions, along with other appropriate materials, were submitted to the State Board for approval.
12. Basin Plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

That the State Board approves the amendments regarding incorporation of the Sources of Drinking Water Policy (State Board Resolution No. 88-63) in all Basin Plans as indicated in Attachment No. 2 to this Resolution.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 17, 1989.

Maureen Marche
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 88-94

CONSIDERATION OF APPROVAL OF WASTE DISCHARGE REQUIREMENT WAIVER POLICIES ADOPTED BY THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARDS, NORTH COAST (RESOLUTION NO. 87-113), SAN FRANCISCO BAY (RESOLUTION NOS. 83-3 AND 88-088), CENTRAL COAST (REGIONAL BOARD AGENDA ITEM NO. 7 DATED APRIL 15, 1983), CENTRAL VALLEY (RESOLUTION NO. 82-036), LAHONTAN (RESOLUTION NO. 6-88-18), COLORADO RIVER BASIN (RESOLUTION NO. 83-1), SANTA ANA (RESOLUTION NO. 84-48), AND SAN DIEGO (RESOLUTION NO. 83-21) REGIONS

WHEREAS:

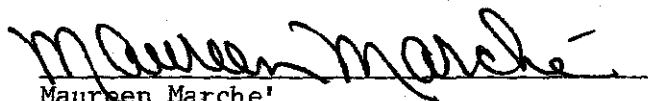

1. California Water Code (CWC), Section 13245.5 requires that the State Board approve Regional Board guidelines before those guidelines can become effective.
2. The Office of Chief Counsel has determined that Regional Board waste discharge requirement waiver policies (waiver policies) constitute guidelines.
3. State Board Resolution No. 73-42 also required that the State Board approve Regional Board waiver policies.
4. Pursuant to CWC, Section 12345.5 and State Board Resolution No. 73-42, the California Regional Water Quality Control Boards, North Coast, San Francisco Bay, Central Coast, Central Valley, Lahontan, Colorado River Basin, Santa Ana, and San Diego Region have submitted the attached waiver policies for State Board consideration.
5. These waiver policies are consistent with all applicable laws, regulations, and the Administrative Procedures Manual.

THEREFORE BE IT RESOLVED:

That the State Board approves waste discharge requirement waiver policies adopted by the California Regional Water Quality Control Boards, North Coast (Resolution No. 87-113), San Francisco Bay (Resolution Nos. 83-3 and 88-088), Central Coast (Regional Board Agenda Item No. 7 dated April 15, 1983), Central Valley (Resolution No. 82-036), Lahontan (Resolution No. 6-88-18), Colorado River Basin (Resolution No. 83-1), Santa Ana (Resolution No. 84-48), and San Diego (Resolution No. 83-21) Regions.

CERTIFICATION

The undersigned, Administrative Assistant to the State Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 18, 1988.

Maureen Marche
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 88-63
(as revised by Resolution No. 2006-0008)

ADOPTION OF POLICY ENTITLED
"SOURCES OF DRINKING WATER"

WHEREAS

- 1 California Water Code section 13140 provides that the State Board shall formulate and adopt State Policy for Water Quality Control; and,
2. California Water Code section 13240 provides that Water Quality Plans "shall conform" to any State Policy for Water Quality Control; and,
3. The Regional Boards can conform the Water Quality Control Plans to this policy by amending the plans to incorporate the policy; and,
4. The State Board must approve any conforming amendments pursuant to Water Code section 13245; and,
5. "Sources of drinking water" shall be defined in the Water Quality Control Plans as those water bodies with beneficial uses designated as suitable, or potentially suitable, for municipal or domestic water supply (MUN); and,
6. The Water Quality Control Plans do not provide sufficient detail in the description of water bodies designated MUN to judge clearly what is, or is not, a source of drinking water for various purposes.
7. On February 1, 2006, the State Board adopted Resolution No. 2006-0008, which amended this policy to establish a site-specific exception for Old Alamo Creek.

THEREFORE BE IT RESOLVED:

All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards¹ with the exception² of:

¹ This policy does not affect any determination of what is a potential source of drinking water for the limited purposes of maintaining a surface impoundment after June 30, 1988, pursuant to Section 25208.4 of the Health and Safety Code.

² This policy contains general categories for exceptions from the policy. On February 1, 2006, the State Board adopted Resolution No. 2006-0008, which established a site-specific exception from the policy for Old Alamo Creek. The rationale for the site-specific exception is contained in the resolution and in State Board Order WQO 2002-0015, II.A.2.d.

1. Surface and ground waters where:

- a. The total dissolved solids (TDS) exceed 3,000 mg/L (5,000 uS/cm, electrical conductivity) and it is not reasonably expected by Regional Boards to supply a public water system, or
- b. There is contamination, either by natural processes or by human activity (unrelated to the specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices, or
- c. The water source does not provide sufficient water to supply a single well capable of producing an average, sustained yield of 200 gallons per day.

2. Surface Waters Where:

- a. The water is in systems designed or modified to collect or treat municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards; or,
- b. The water is in systems designed or modified for the primary purpose of conveying or holding agricultural drainage waters, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards.

3. Ground water where:

The aquifer is regulated as a geothermal energy producing source or has been exempted administratively pursuant to 40 Code of Federal Regulations, section 146.4 for the purpose of underground injection of fluids associated with the production of hydrocarbon or geothermal energy, provided that these fluids do not constitute a hazardous waste under 40 CFR, section 261.3.

4. Regional Board Authority to Amend Use Designations:

Any body of water which has a current specific designation previously assigned to it by a Regional Board in Water Quality Control Plans may retain that designation at the Regional Board's discretion. Where a body of water is not currently designated as MUN but, in the opinion of a Regional Board, is presently or potentially suitable for MUN, the Regional Board shall include MUN in the beneficial use designation.

The Regional Boards shall also assure that the beneficial uses of municipal and domestic supply are designated for protection wherever those uses are presently being attained, and assure that any changes in beneficial use designations for waters of the State are

consistent with all applicable regulations adopted by the Environmental Protection Agency.

The Regional Boards shall review and revise the Water Quality Control Plans to incorporate this policy.

CERTIFICATION

The undersigned, Acting Clerk to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 19, 1988, and amended on February 1, 2006.

A handwritten signature in black ink, appearing to read "Selica Potter", written in a cursive style. The signature is positioned above a horizontal line.

Selica Potter
Acting Clerk to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 88- 63

ADOPTION OF POLICY ENTITLED
"SOURCES OF DRINKING WATER"

WHEREAS:

1. California Water Code Section 13140 provides that the State Board shall formulate and adopt State Policy for Water Quality Control; and,
2. California Water Code Section 13240 provides that Water Quality Control Plans "shall conform" to any State Policy for Water Quality Control; and,
3. The Regional Boards can conform the Water Quality Control Plans to this policy by amending the plans to incorporate the policy; and,
4. The State Board must approve any conforming amendments pursuant to Water Code Section 13245; and,
5. "Sources of drinking water" shall be defined in Water Quality Control Plans as those water bodies with beneficial uses designated as suitable, or potentially suitable, for municipal or domestic water supply (MUN); and,
6. The Water Quality Control Plans do not provide sufficient detail in the description of water bodies designated MUN to judge clearly what is, or is not, a source of drinking water for various purposes.

THEREFORE BE IT RESOLVED:

All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards¹ with the exception of:

1. Surface and ground waters where:
 - a. The total dissolved solids (TDS) exceed 3,000 mg/L (5,000 uS/cm, electrical conductivity) and it is not reasonably expected by Regional Boards to supply a public water system, or

- b. There is contamination, either by natural processes or by human activity (unrelated to a specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices, or
- c. The water source does not provide sufficient water to supply a single well capable of producing an average, sustained yield of 200 gallons per day.

2. Surface waters where:

- a. The water is in systems designed or modified to collect or treat municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards; or,
- b. The water is in systems designed or modified for the primary purpose of conveying or holding agricultural drainage waters, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards.

3. Ground water where:

The aquifer is regulated as a geothermal energy producing source or has been exempted administratively pursuant to 40 Code of Federal Regulations, Section 146.4 for the purpose of underground injection of fluids associated with the production of hydrocarbon or geothermal energy, provided that these fluids do not constitute a hazardous waste under 40 CFR, Section 261.3.

4. Regional Board Authority to Amend Use Designations:

Any body of water which has a current specific designation previously assigned to it by a Regional Board in Water Quality Control Plans may retain that designation at the Regional Board's discretion. Where a body of water is not currently designated as MUN but, in the opinion of a Regional Board, is presently or potentially suitable for MUN, the Regional Board shall include MUN in the beneficial use designation.

The Regional Boards shall also assure that the beneficial uses of municipal and domestic supply are designated for protection wherever those uses are presently being attained, and assure that any changes in beneficial use designations for waters of the State are consistent with all applicable regulations adopted by the Environmental Protection Agency.

The Regional Boards shall review and revise the Water Quality Control Plans to incorporate this policy.

-
- 1 This policy does not affect any determination of what is a potential source of drinking water for the limited purposes of maintaining a surface impoundment after June 30, 1988, pursuant to Section 25208.4 of the Health and Safety Code.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 19, 1988.

Maureen Marche'

Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 87- 36

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN TO: (1) REVISE NUMERICAL RADIOACTIVITY STANDARDS AND ADOPT RADIOACTIVITY STANDARDS FOR ALL WATERS, (2) DESIGNATE SURFACE WATERS AS COLD OR WARM HABITATS WITH CONSEQUENT PROTECTION FOR AQUATIC LIFE, (3) REVISE PHENOL, PHTHALATE ESTERS, AND POLYCHLORINATED BIPHENYLS OBJECTIVES, AND (4) ADD AN EXCEPTION PROVISION

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. The Central Coast Regional Board's staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act.
4. On February 14, 1986, following a public hearing, the Central Coast Regional Board adopted Resolution No. 86-01 (attached) amending the Basin Plan to: (a) revise numerical radioactivity standards and adopt radioactivity standards for all waters; (b) designate surface waters as cold or warm habitats with consequent protection for aquatic life; (c) revise phenol, phthalate esters, and polychlorinated biphenyls objectives; and (d) add an exception provision.
5. The State Board, after review of the proposed Basin Plan amendment, finds that the revision of numerical radioactivity standards and adoption of radioactivity standards for all waters as well as designation of surface waters as cold or warm habitats with consequent protection for aquatic life are appropriate.
6. The State Board finds that the proposed revised objectives for phenol, phthalate esters, and polychlorinated biphenyls will not protect beneficial uses. The State Board will provide recommended criteria for phenols, phthalate esters, and polychlorinated biphenyls. The State Board will provide substantiation for the criteria and provide a time line when substantiation can be provided.
7. The State Board also finds that the addition of an exception provision is approvable. Exceptions to the Basin Plan may be adopted only if the same procedures established for Basin Plan amendments are followed, including EPA standards regulation and public participation requirements. As an exception will not be effective until approved by the State Board and EPA (if necessary), any Waste Discharge Requirement or NPDES permit implementing such an exception shall not be adopted until after such needed approval.

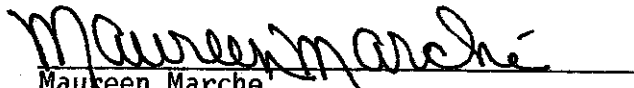

8. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That revision of numerical radioactivity standards and adoption of radioactivity standards for all waters, and designation of surface waters as cold or warm habitats with consequent protection for aquatic life as described in Central Coast Regional Board Resolution No. 86-01 adopted on February 14, 1986, be approved.
2. That the revision of phenol, phthalate esters, and polychlorinated biphenyls objectives be remanded to the Central Coast Regional Board for further consideration.
3. That the exception provision be approved, and that any exception adopted by the Regional Board shall be adopted according to the same procedures established for Basin Plan amendments. These procedures are set forth in the memorandum and attachments from the Office of Chief Counsel to the Regional Board Executive Officers dated July 15, 1983 regarding "Basin Plan Amendment Procedures", EPA standards regulation, and EPA public participation regulations. That such exception will not be effective until approval by the State Board and EPA (if necessary), and that any Waste Discharge Requirement or NPDES permit implementing such an exception shall not be adopted until after such needed approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 16, 1987.

Maureen Marche
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 87-26

AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL
COASTAL BASIN TO REVISE GROUND WATER QUALITY OBJECTIVES AND
MANAGEMENT WITHIN THE LOMPOC SUB-BASIN

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. The State Board, after review of the Central Coast Regional Board Waste Discharge Requirements for the City of Lompoc, recommended a review of the Basin Plan for possible revision of the ground water quality objectives for the Lompoc ground water basin and further study to ascertain the continuity between the upper and lower aquifers in the area of the City of Lompoc's discharge.
4. In 1976, the U. S. Geological Survey (USGS) in cooperation with the Central Coast Regional Board prepared a report which describes the existing and historic changes in ground water quality and evaluates management alternatives to maintain and improve Lompoc's ground water basin quality.
5. The USGS report served as the basis for the revisions to the Basin Plan and for a Central Coast Regional Board staff report entitled "Water Quality Objectives and Management Plan for the Lompoc Ground Water Basin" (August 1984).
6. The August 1984 staff report evaluated data to justify median ground water objectives for the plain and upland portions of the Lompoc subarea.
7. On October 12, 1984, after satisfying public notice requirements in accordance with the California Water Code and after a public hearing, the Central Coast Regional Board adopted Resolution No. 84-05 (Attachment A) revising Table 4-9, "Median Ground Water Objectives", and the Lompoc Valley Region subsection in the "Municipal Wastewater Management Implementation Plan", Chapter 5.
8. Central Coast Regional Board Resolution No. 84-05 omitted median water quality objectives applicable to the terrace portion of the Lompoc subarea pending consideration of well data not available at the time Resolution No. 84-05 was adopted.
9. On April 11, 1986, the Central Coast Regional Board adopted, after due public notice and public hearing process in accordance with the California Water Code, Resolution No. 86-04 (Attachment B) establishing median ground water quality for the Lompoc terrace.

10. Central Coast Regional Board Resolution No. 86-04 restated the ground water objectives previously adopted for the plain and upland portions of the Lompoc subarea.
11. In order to be consistent with other nitrate objectives in Table 4-9, the nitrate median ground water objectives originally adopted in Resolution No. 84-05 for the plain and upland portions of the Lompoc subarea were changed in Resolution No. 86-04 from 10 milligrams per liter (mg/l) measured as nitrate to 2 mg/l measured as nitrogen.
12. Central Coast Regional Board Resolution No. 86-04 supersedes Central Coast Regional Board Resolution No. 84-05 as it pertains to the proposed numerical median ground water and amends Table 4-9 to read as follows:

	TDS	CL	SO ₄	B	Na	NO ₃ ^b
Lompoc Plain	1250	250	500	.75	270	2
Lompoc Upland	600	150	100	.75	100	2
Lompoc Terrace	750	210	100	.3	130	1

^b measured as Nitrogen

13. Central Coast Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements of both the California Environmental Quality Act under Public Resources Code, Section 21080.5 (functional equivalent), and the federal Clean Water Act.
14. Basin plan amendments do not become effective until approved by the State Board.
15. The State Board, after review of the proposed Basin Plan amendment and the Central Coast Regional Board's records, finds that the revision to the first paragraph of the "Lompoc Valley Region" subsection of the "Municipal Wastewater Management Implementation Plan" section in Chapter 5 of the Basin Plan to read as stated in Central Coast Regional Board Resolution No. 84-05 adopted on October 12, 1984 is appropriate. The State Board also finds that the median ground water objective for nitrate is also acceptable. The objectives proposed for boron and sodium as it pertains to the plain region as well as the boron median objective as it pertains to the upland portions of the Lompoc subarea may not be sufficiently justified and may encourage further degradation of the ground water system.

THEREFORE BE IT RESOLVED:

1. That revision of the first paragraph of the "Lompoc Valley Region" subsection of the "Municipal Wastewater Management Implementation Plan" section in Chapter 5 of the Basin Plan as stated in Central Coast Regional Board Resolution No. 84-05 adopted on October 12, 1984 be approved.

2. That the median ground water objectives for the plain, upland, and terrace regions of the Lompoc subarea be approved as adopted in Central Coast Regional Board Resolution No. 86-04 adopted on April 11, 1986.
3. That the median ground water quality objectives for sodium and boron for the plain region as well as the boron objective for the upland region of the Lompoc subarea in the Basin Plan amendment as adopted in Central Coast Regional Board Resolution No. 86-04 be remanded to the Central Coast Regional Board.
4. That the Central Coast Regional Board develop a map to be incorporated into the Basin Plan delineating the plain, upland, and terrace regions of the Lompoc subarea.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 16, 1987.

Maureen Marche
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 87- 25

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE
CENTRAL COASTAL BASIN TO REVISE GROUND WATER QUALITY OBJECTIVES FOR
THE SANTA MARIA GROUND WATER BASIN

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. The Central Coast Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act.
4. On February 14, 1986, following a public hearing, the Central Coast Regional Board adopted Resolution No. 86-03 amending the Basin Plan by revising the ground water quality objectives for the Santa Maria Ground Water Basin.
5. Regional Board staff indicates that the proposed long-term values for the constituents represent existing water quality. With this understanding of the proposed objectives, it is recommended to approve only the long-term objectives. This presents a uniform approach recognizing existing water quality where the long-term objective would be applicable with the exception of five values set at Maximum Contaminant Level (MCL) which conflicts with criteria set in the California Administrative Code Title 22. This conflict results from the inclusion of MCLs into a median ground water objective table, which would lead to violations of secondary drinking water standards. For these five cases, the MCL would be the highest value set, and no values set at short-term MCLs (three proposed). A footnote to clarify this case would be added to the ground water objective table.

Santa Maria ground water objectives would be as follows:

		<u>TDS</u>	<u>Cl</u>	<u>SO₄</u>	<u>B</u>	<u>Na</u>	<u>NO₃</u>
I	Upper Guadalupe	1000	165	500	0.5	230	6
II	Lower Guadalupe	1000	85	500	0.2	90	9
III	Lower Nipomo Mesa	710	95	250	0.15	90	25
IV	Orcutt	740	65	300	0.1	65	10
V	Santa Maria	1000	90	510	0.2	105	35

6. The increase in the number of sub-basins (from two to five) to accurately describe local ground water quality requires the incorporation of a map into the Basin Plan depicting the newly defined sub-basins.

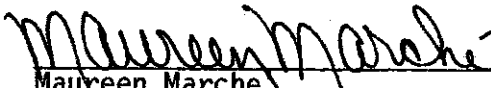

7. Basin Plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the amendment of the Basin Plan, as described in Central Coast Regional Board Resolution No. 86-03 adopted on February 14, 1986, be approved with the exception of the short-term objectives. The long-term objectives, which represent existing water quality, are approved as water quality objectives. In five cases where an upper MCL is indicated (three TDS values set at 1,000 mg/l and two sulfate values set at 500 mg/l), a footnote explaining that these values are maximums is added to the ground water objective table.
2. That the Regional Board shall include a map in the Basin Plan to accurately describe the newly defined ground water sub-basins.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 16, 1987.

Maureen Marche
Administrative Assistant to the Board

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 85-88

APPROVAL OF REVISIONS AND AMENDMENTS TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COASTAL BASIN CONCERNING
BENEFICIAL USES OF CERTAIN WATERS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Central Coast Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975.
2. The Central Coast Regional Board amended Chapter 2, Table 2-1, Existing and Anticipated Uses of Inland Surface Waters of the Basin Plan on July 9, 1982. The amendment omitted the correction of municipal uses for San Antonio Reservoir from anticipated to existing use and for Nacimiento Reservoir from existing to anticipated use.
3. The Central Coast Regional Board amended Chapter 2, Table 2-2, Existing and Anticipated Future Uses of Coastal Waters, of the Basin Plan on January 20, 1984. The amendment omitted shellfish harvesting as an existing beneficial use for Moss Landing Harbor.
4. The Central Coast Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act.
5. On March 8, 1985, following a public hearing, the Central Coast Regional Board adopted Resolution No. 85-04 amending their Basin Plan concerning the beneficial uses of certain waters within the Central Coastal Basin.
6. The State Board has reviewed the revisions and amendment adopted by the Central Coast Regional Board Resolution No. 85-04.

THEREFORE, BE IT RESOLVED THAT:

Amendment of the Water Quality Control Plan for the Central Coastal Basin as described in Central Coast Regional Board Resolution No. 85-04 adopted by the Central Coast Regional Board on March 8, 1985 be approved.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 19, 1985.

Raymond Walsh

Raymond Walsh

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 85-11

CONSIDERATION OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN TO INCORPORATE NUTRIENT OBJECTIVES
FOR THE PAJARO RIVER AND LLAGAS CREEK

WHEREAS:

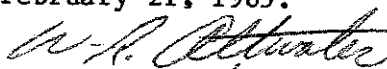

1. The California Regional Water Quality Control Board, Central Coast Region, (Central Coast Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water code specifies that basin plans be periodically reviewed and, if appropriate, revised.
3. In 1977, the Central Coast Regional Board deleted Table 4-3, "Water Quality Objectives for Biostimulants", from the basin plan.
4. The U. S. Environmental Protection Agency, Region 9, (EPA) approved the deletion of Table 4-3 provided the Central Coast Regional Board established specific nutrient objectives for several surface waters within the Central Coast region.
5. Central Coast Regional Board staff prepared a report which recommends nutrient objectives for the Pajaro River and Llagas Creek.
6. Central Coast Regional Board staff prepared documents and followed procedures satisfying environmental documentation requirements of both the California Environmental Quality Act under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act.
7. On January 20, 1984, after a public hearing, the Central Coast Regional Board adopted Resolution No. 84-02, "Concerning Revisions and Amendment of the Water Quality Control Plan, Central Coastal Basin--Nutrient Objectives for the Pajaro River and Llagas Creek".
8. Basin plan amendments do not become effective until approved by the State Board.
9. The State Board, after review of the basin plan amendments and the Central Coast Regional Board's record, finds that the proposed nitrogen and phosphorus objectives for the Pajaro River and Llagas Creek are based on an insufficient data base.

THEREFORE BE IT RESOLVED:

That the water quality objectives for nitrogen and phosphorus in the basin plan amendment as adopted in Central Coast Regional Board Resolution No. 84-02 be remanded to the Central Coast Regional Board for further data collection and consideration.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on February 21, 1985.

Michael A. Campos

Basin Planning

STATE WATER RESOURCES CONTROL BOARD
WORKSHOP--DIVISION OF TECHNICAL SERVICES
JANUARY 4 AND 5, 1984

ITEM: 21

SUBJECT: CONSIDERATION OF AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE DISPOSAL SYSTEMS WITHIN THE LOS OSOS/BAYWOOD PARK AREA, SAN LUIS OBISPO COUNTY

DIS- In March 1975, the California Regional Water Quality Control Board, CUSSION: Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan). It was approved by the State Board in April 1975.

On September 16, 1983, the Regional Board adopted an amendment to Chapter 5 of the basin plan in Resolution No. 83-13 (attached) calling for a prohibition of individual and community waste disposal systems in the Los Osos/Baywood Park area effective November 1, 1988.

The Regional Board staff report and Resolution No. 83-13 provides a thorough dissertation of the facts justifying the prohibition action. Following is a summary of information from that report and Regional Board Resolution No. 83-13:

- o The prohibition area is an unincorporated area south of the City of Morro Bay, with current population at less than one-half its projected residential zoning, which would accommodate in excess of 27,000 people. The area's growth rate between 1970 and 1980 was 212 percent of the 1970 population. This population increase has led to a problem of increasing degradation of the upper ground water aquifer from wastewater discharged from private disposal systems. Housing units numbered 4,749 in 1980, all of which utilize some form of private waste disposal system. Water supply is entirely from ground water within the Los Osos ground water basin.
- o The prohibition area's ground water is being contaminated by septic tank/leachfield wastewater disposal systems. These systems contribute an estimated 91 percent of the nitrogen going to ground water, leading to nitrate concentrations which exceed safe drinking water standards, causing a hazard to public health. In 1978, County Service Area #9's municipal well was abandoned due to nitrate concentrations exceeding 45 mg/l. Since then, ground water degradation has been increasing in the upper reaches of the basin. There are preliminary indications that ground water is also being contaminated by fecal coliform; 50 percent of the

wells tested showed total coliform counts exceeding the safe drinking water standards. It is the opinion of the Regional Board staff that with population growth, the lower, purer aquifer may become contaminated.

- o Surface water sampling also indicates total coliform in violation of the basin plan limits for contact recreation. Numerous complaints of surfacing effluent, foul odors, slime buildup, and system failures have been documented.
- o The Regional Board requests the State Board to recognize the problem as qualifying for an "A" priority on the Clean Water Grant Project Priority list.
- o The Regional Board staff assessed proposed alternative measures to prevent further degradation of the ground water and the environmental ramifications of each. The alternatives included (a) regional treatment at Morro Bay, (b) community treatment with ocean disposal, (c) community treatment with land disposal, and (d) no action.
- o Resolution No. 83-13 calls for continued ground water monitoring within the prohibition area by San Luis Obispo County.

Consideration of the Regional Board's draft resolution at the September 16, 1983 public hearing resulted in the adopted version (Resolution No. 83-13). The changes were due largely to public comment and a consensus of the nine Regional Board Members. The most notable adopted changes were:

- a. Resolution No. 83-13 prohibits discharges of waste from all on-site and community sewage disposal systems effective November 1, 1988; the draft version prohibited additional systems immediately and existing systems after July 1, 1987.
- b. Resolution No. 83-13 allows the addition of 1,150 housing units to the prohibition area until full prohibition commences on November 1, 1988. This figure is based on a population projection representing a 20 percent allowable community growth over the next five years. Although the additional systems would result in an increase in nitrogen loading to the ground water, it was the conclusion of the Regional Board that the increase would not result in the degradation of the quality of the lower ground water aquifer.

In reviewing the records and evidence presented by the Regional Board in its staff report, the Brown and Caldwell Phase I Report, the Department of Water Resources' Los Osos/ Baywood Groundwater Protection Study, data and geologic/geohydrologic analysis prepared by the State Board staff, and San Luis Obispo County Environmental Health Department files, the State Board staff concludes that the Regional Board action

of establishing a waste discharge prohibition in the Los Osos/Baywood Park area is justified. The record cites conditions which constitute contamination and pollution as defined in Section 13050 of the Water Code.

The State Board staff further concludes that the Regional Board prepared documents and followed appropriate procedures to satisfy the California Environmental Quality Act and the federal Clean Water Act requirements.

POLICY Should the State Board approve the Regional Board's amendment to
ISSUE: Chapter 5 of the basin plan?

FISCAL This activity is budgeted within existing programs, and no additional
IMPACT: fiscal requirements will occur as a result of approving this item.

STAFF That the State Board approve the prohibition as set forth in Regional
RECOMMEN- Board Resolution No. 83-13 amending the basin plan.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO.

CONSIDERATION OF AMENDMENT TO THE WATER QUALITY CONTROL
PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A
PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE
DISPOSAL SYSTEMS WITHIN THE LOS OSOS/BAYWOOD PARK AREA,
SAN LUIS OBISPO COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) in March 1975. The basin plan was approved by the State Board in April 1975.
2. Division 7, Section 13240 et seq., of the California Water Code, specifies that basin plans shall be periodically reviewed and may be revised; and on September 16, 1983, after a public hearing, the Regional Board adopted Resolution No. 83-13 amending the basin plan.
3. The amendment revises Chapter 5 to add a prohibition of individual and community waste disposal systems in the Los Osos/Baywood Park area of San Luis Obispo County, effective November 1, 1988 and specifying an acceptable 1,150 additional on-site systems in the interim.
4. Water supply to the prohibition area is entirely from the Los Osos ground water basin. The Los Osos ground water basin appears to consist of a single, saturated, unconfined aquifer system with a few isolated confined areas.
5. Recent population growth (212 percent from 1970 to 1980) has resulted in a population of 10,993 persons (1980). Current zoning will accommodate a population of excess of 27,000 persons.
6. On-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal.
7. Chemical analysis of shallow wells indicated that 38 percent of the wells tested contained nitrate concentrations which exceed State Drinking Water Standards.
8. Bacterial analyses of 42 wells disclosed that coliform concentrations exceeded State drinking water standards in 26 of the wells tested.
9. Surfacing effluent, foul odors, and disposal system failures have been documented and inspected by the San Luis Obispo County Health Agency and the California Department of Health Services.
10. The Los Osos basin ground waters have been designated as suitable for agricultural, municipal, industrial, and domestic water supply. The Regional

Board has concluded that beneficial uses of the ground water and surface waters are adversely affected by the continued use of individual sewage disposal systems and that there appears to be a trend of increasing degradation of the upper ground water aquifer and a threat to the lower, purer aquifer.

11. The Regional Board concluded that although an additional 1,150 septic systems would increase nitrogen loading to the ground water, the increase would not result in the degradation of the quality of the lower ground water aquifer.
12. The Regional Board requests the State Board to recognize the problem as qualifying for an "A" priority on the Clean Water Grant Project Priority list.
13. Regional Board staff prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act (Public Resources Code, Section 21080.5) and the federal Clean Water Act; the Regional Board found that adoption of this prohibition will not have a significant adverse affect on the environment.
14. The Regional Board satisfied the public notice requirements of the California Water Code, Section 13244, and has responded to comments received.
15. The State Board finds, consistent with the California Water Code, Section 13280, that there is substantial evidence in the record that the continued discharge of waste from individual on-site sewage disposal systems will unreasonably degrade water quality.
16. In satisfaction of the requirements of the California Water Code, Section 13283, the State Board finds that the record includes a review of possible alternatives to prohibiting discharges from individual on-site disposal systems.
17. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the basin plan amendment be approved as adopted by Regional Board Resolution No. 83-13 and the basin plan be amended as follows:
 - "8. Discharges of waste from individual and community sewage disposal systems are prohibited effective November 1, 1988, in the Los Osos/Baywood Park area, and more particularly described as:

'Groundwater Prohibition Zone'
(Legal description to be provided for area prescribed by Regional Board)

009295

"Failure to comply with any of the compliance dates established by Resolution No. 83-13 will prompt a Regional Board hearing at the earliest possible date to consider adoption of an immediate prohibition of discharge from additional individual and community seware (SIC) disposal systems.

"Discharges from individual or community systems within the prohibition area in excess of an additional 1150 housing units (or equivalent) are prohibited, commencing with the date of State Water Resources Control Board approval."

2. State Board approval of the prohibition does not constitute a commitment to amend the Clean Water Grant Project Priority list, nor does it ensure federal and/or state funding of any project construction.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 19, 1983.

Michael A. Campos

009296

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-13

Revision and Amendment of Water Quality Control
Plan by the Addition of a Prohibition of Waste
Discharge from Individual Sewage Disposal
Systems Within the Los Osos/Baywood Park Area,
San Luis Obispo County

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,
- WHEREAS, Los Osos/Baywood Park is an unincorporated community, with a 1980 population of 10,933 persons located south of the City of Morro Bay, in San Luis Obispo County; and,
- WHEREAS, current zoning will accommodate a population in excess of 27,000 people and an average residential lot size of about 6600 ft²; and,
- WHEREAS, on-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal in the Los Osos/Baywood Park area; and,
- WHEREAS, the Los Osos/Baywood Park area soil permeability is rapid and there are substantial areas with high groundwater; and,
- WHEREAS, the majority of lots are too small to provide adequate dispersion of individual sewage disposal system effluent; and,

- WHEREAS, the San Luis Obispo County Environmental Health Department has provided documentation concerning the problem of liquid waste disposal in the Los Osos/Baywood Park area; and,
- WHEREAS, the County of San Luis Obispo is preparing an environmental impact report (EIR) in accordance with the California Environmental Quality Act and a project report that identifies adverse environmental impacts from continued use of septic tanks in the Los Osos/Baywood Park area and discusses alternatives to existing wastewater management practices; and,
- WHEREAS, "Los Osos-Baywood Park/Phase I Water Quality Management Study" cites conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code; and,
- WHEREAS, chemical analyses of wells in Los Osos/Baywood Park indicates 38% of the shallow wells tested in the Phase I study, taking water from the Old Dune Sands deposits portion of the aquifer, contain nitrate concentrations which exceed State Health Department Drinking Water Standards of 45 milligrams per liter; and,
- WHEREAS, bacterial analyses of 42 wells tested in the Phase I study resulted in 26 wells indicating total coliform in violation of State Health Drinking Water Standards, and 2 wells indicating fecal coliform in violation of Basin Plan limits for groundwater; and,
- WHEREAS, surface water bacterial analyses tested in the Phase I study indicated total and fecal coliform levels exceeding Basin Plan recommended limits for water contact recreation (REC-1); and,
- WHEREAS, a letter from the California Health and Welfare Agency, Department of Health Services, states their concerns regarding the high nitrate levels in the waters of Los Osos/Baywood Park area, and recommends adequate measures be taken to correct the nitrate problems to bring the waters into compliance with California Drinking Water Standards; and,
- WHEREAS, a letter from the San Luis Obispo County Health Agency Director cites violation of the public health limit for nitrates and recommends elimination of shallow groundwater usage and adoption of a discharge prohibition; and,
- WHEREAS, the Regional Board is obligated to include a program of implementation for achieving water quality objectives in its Basin Plan; and,
- WHEREAS, present and anticipated future beneficial uses of Los Osos/Baywood Park creeks include recreation and aquatic habitat; and,

009296

- WHEREAS, Los Osos Basin groundwaters are suitable for agricultural, municipal, domestic, and industrial water supply; and,
- WHEREAS, a Regional Board staff report finds beneficial uses of Los Osos ground and surface waters are adversely affected by individual sewage disposal system discharges, there appears to be a trend of increasing degradation, and public health is jeopardized by occurrences of surfacing effluent; and,
- WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Los Osos/Baywood Park individual sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,
- WHEREAS, on September 16, 1983, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,
- WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State; and,
- WHEREAS, the Regional Board finds the aforestated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.
- NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 5-66, after Item 7, following the legal description for Pasatiempo Pines (added by Resolution 83-09), insert the following prohibitions:

"8. Discharges of waste from individual and community sewage disposal systems are prohibited effective November 1, 1988, in the Los Osos/ Baywood Park area, and more particularly described as:

"Groundwater Prohibition Zone

(Legal description to be provided for area prescribed by Regional Board).

"Failure to comply with any of the compliance dates established by Resolution 83-13 will prompt a Regional Board hearing at the earliest possible date to consider adoption of an immediate prohibition of discharge from additional individual and community sewage disposal systems."

Discharges from individual or community systems within the prohibition area in excess of an additional 1150 housing units (or equivalent) are prohibited, commencing with the date of State Water Resources Control Board approval.

BE IT FURTHER RESOLVED, that the above area is consistent with the recommendations of the staff report as shown on "Attachment A."

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or community sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Begin Design	November 1, 1984
Complete Design	November 1, 1985
Obtain Construction Funding	December 1, 1985
Begin Construction	April 1, 1986
Complete Construction	November 1, 1988

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

009300

BE IT FURTHER RESOLVED, the County will continue a monitoring program, approved by the Regional Board staff, that will monitor ground water quality within the prohibition boundaries as set forth in this resolution, and also a monitoring program which covers areas outside the prohibition boundaries but within the urban reserve line as shown in Attachment A.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith the Clean Water Grant Project Priority List to recognize the necessary structural solution for Los Osos/Baywood Park as a Priority "A" project.

BE IT FURTHER RESOLVED, that if the Board holds a hearing and adopts an immediate prohibition as described above, the prohibition is effective as of the date the Regional Water Quality Control Board adopts a prohibition of discharge from additional individual and community sewage disposal systems.

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 16, 1983.

Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84- 83

REMANDING RESOLUTION NO. 84-10 OF THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, CENTRAL COAST REGION, AMENDING THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN REVISING BOUNDARIES FOR PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE DISPOSAL SYSTEMS IN THE SAN LORENZO VALLEY

WHEREAS :

1. The California Regional Water Quality Control Board, Central Coast Region, (Central Coast Regional Board) adopted its Water Quality Control Plan for the Central Coastal Basin (basin plan) which was approved by the State Board in April 1975.
2. On January 20, 1983, the State Board approved Central Coast Regional Board Resolution No. 82-10 adopting a prohibition of individual sewage disposal systems within identified boundaries in the San Lorenzo Valley area specifying tasks to be performed in conjunction with the prohibition and establishing a prohibition of waste discharge date of July 1, 1986.
3. On September 21, 1984, the Central Coast Regional Board adopted Resolution No. 84-10 (attached) which supersedes the Central Coast Regional Board's prior action by further amending the prohibition criteria for San Lorenzo Valley and adding a wastewater treatment project completion date of April 1, 1986.
4. The Central Coast Regional Board's action was supported by documentation of property inspections, written requests from affected citizens, and an assumption that a pending application for federal funding for treatment plant construction would be approved.
5. On September 30, 1984, the federal fiscal year ended without approval having been given for a construction grant. The State Board realizes that Resolution No. 84-10 was adopted prior to denial of the project grant application.
6. The citizens within the San Lorenzo Valley Water District, Santa Cruz County, are required to comply with the discharge prohibition without federal or State assistance.
7. The State Board finds, consistent with the California Water Code, Section 13280, et seq., that there is substantial evidence in the record that the continued discharge of waste from on-site sewage disposal systems will unreasonably degrade water quality.
8. The Central Coast Regional Board satisfied the public notice requirements of Section 113244 of the California Water Code and did not receive adverse testimony during the public hearing. Central Coast Regional Board staff responded to all written comments received prior to the hearing.

9. Central Coast Regional Board staff prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the Environmental Quality Act (California Public Resources Code) and the Federal Clean Water Act; the Central Coast Regional Board found that adoption of this prohibition will not have a significant adverse effect on the environment.
10. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

That the State Board remand Resolution No. 84-10 to the Central Coast Regional Board for the following actions:

1. Provide rationale and justification for the revision of the boundaries between Class I and Class II as adopted by the Central Coast Regional Board in Resolution No. 84-10.
2. Consider and address alternatives to the July 1, 1986 discharge prohibition date within the Class I area to achieve water quality standards.
3. Reconsider the April 1, 1986 compliance date for completion of plant construction as adopted by the Central Coast Regional Board in Resolution No. 84-10.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 20, 1984.

for *Walter Pettit*
Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84-52

CONSIDERATION OF AN AMENDMENT BY THE CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, CENTRAL COAST REGION, TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN REGARDING BENEFICIAL USE DESIGNATIONS FOR ELKHORN SLOUGH

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Central Coast Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) in March 1975 which was approved by the State Board on March 20, 1975.
2. Division 7, Section 13240, et. seq., of the California Water Code specifies that basin plans shall be periodically reviewed and may be revised.
3. On January 20, 1984, the Central Coast Regional Board, after a public hearing, adopted the proposed amendment in its Resolution No. 84-01 (attached).
4. The Central Coast Regional Board staff satisfied the public notice requirements in accordance with California Water Code Section 13244 and has responded to comments received.
5. Resolution No. 84-01, adopted by the Central Coast Regional Board, has separated Moss Landing Harbor and Elkhorn Slough into two separate beneficial use designations.
6. The above amendment revises Table 2-2 by establishing beneficial uses for Moss Landing Harbor, but does not identify shellfishing as an existing beneficial use.
7. The Department of Fish and Game's Marine Resources Administrative Report No. 82-11 (J. D. Spratt, 1982) states that Elkhorn Slough is one of the more popular recreational clamming areas in Central California, especially the area on the north bank west of the Highway One bridge; and that from a biological viewpoint, Moss Landing Harbor and Elkhorn Slough are considered one continuous community sharing the same waters and habitat.
8. Separation of the waters into two distinct communities has resulted in the absence of shellfishing as a beneficial use in Moss Landing Harbor. The Central Coast Regional Board administrative records submitted to the State Board do not contain the factor(s) considered by the Central Coast Regional Board to support their decision not to include the shellfishing beneficial use designation in Moss Landing Harbor in the basin plan.
9. Central Coast Regional Board staff prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, Public Resources Code, Section 21080.5,

and the federal Clean Water Act. The Central Coast Regional Board found that adoption of this amendment will not have a significant adverse affect on the environment.

10. The State Board may approve the amendment or remand it to the Regional Board for reconsideration. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the amendment to the Water Quality Control Plan for the Central Coastal Basin as adopted by Central Coast Regional Board Resolution No. 84-01 be approved with the exception of the absence of shellfishing as a beneficial use in Moss Landing Harbor.
2. That the portion of Table 2-2 in the amendment which addresses designated beneficial uses in Moss Landing Harbor be remanded to the Central Coast Regional Board for review and reconsideration of the absence of shellfishing as a beneficial use.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on July 19, 1984.

for *Walter G. Pettit*
Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84-36

APPROVAL OF AN AMENDMENT OF THE WATER QUALITY CONTROL PLAN FOR
THE CENTRAL COASTAL BASIN BY THE ADDITION OF A PROHIBITION OF WASTE
DISCHARGE FROM INDIVIDUAL AND COMMUNITY SEWAGE DISPOSAL SYSTEMS
WITHIN THE FRUITLAND AREA, MONTEREY COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Central Coast Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans will be periodically reviewed and may be revised.
3. Fruitland is a subdivision of 68 homes located in the Pajaro Valley (near the City of Watsonville) in Monterey County.
4. On-site soil absorption systems are the sole means of wastewater disposal in the Fruitland area.
5. The Monterey County Health Department, at the request of the Monterey County Board of Supervisors, has conducted a septic tank survey of the Fruitland subdivision.
6. The results of this survey indicate that 65-percent of the property owners in Fruitland have attested to on-site waste disposal system problems.
7. The Monterey County Health Department has submitted documentation of conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code.
8. Over 67-percent of the lots in the Fruitland subdivision are one-half acre or less in size.
9. The U. S. Soil Conservation Service has designated the soils of the Fruitland subdivision as poor (due to slow percolation) for septic tank filter fields.
10. On February 24, 1984, based on the above facts and findings, after a public hearing, the Central Coast Regional Board adopted Resolution No. 84-03 revising Chapter 5 of the basin plan to include a discharge prohibition of the Fruitland subdivision.
11. On March 7, 1984, the Central Coast Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.

12. In satisfaction of the requirements of California Water Code Section 13283, the State Board finds that the record includes a review of possible alternatives to prohibiting discharges from on-site sewage disposal systems.
13. Central Coast Regional Board staff has prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act.
14. The Central Coast Regional Board has followed appropriate procedures to satisfy all relevant State statutes.
15. The State Board finds, consistent with the California Water Code, Section 13280, that there is substantial evidence in the record that the continued discharge of waste from individual or community on-site sewage disposal systems will unreasonably degrade water quality.
16. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the basin plan be amended as follows:

Page 5-66, after Item 9, following the discussion of discharge limitation (added by Resolution No. 83-16), insert the following prohibition:

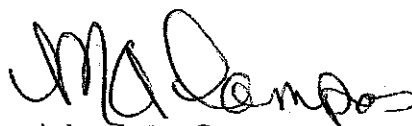

"10. Discharge of waste from additional individual and community sewage disposal systems is prohibited and the discharge of waste from existing individual and community sewage disposal systems is prohibited after July 1, 1987, in the Fruitland Subdivision, Monterey County, and more particularly described as:

'Within the boundaries of the Fruitland Subdivision excluding Assessors Parcel Numbers 117-131-22 and 117-131-23.'"

2. State Board approval of the prohibition does not constitute a commitment to change the Clean Water Grant Project Priority List or provide other assistance.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 17, 1984.

Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84-13

CONSIDERATION OF AMENDMENT TO THE WATER QUALITY CONTROL
PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A
PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE
DISPOSAL SYSTEMS WITHIN THE LOS OSOS/BAYWOOD PARK AREA,
SAN LUIS OBISPO COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) in March 1975. The basin plan was approved by the State Board in April 1975.
2. Division 7, Section 13240 *et seq.*, of the California Water Code, specifies that basin plans shall be periodically reviewed and may be revised; and on September 16, 1983, after a public hearing, the Regional Board adopted Resolution No. 83-13 amending the basin plan.
3. The amendment revises Chapter 5 to add a prohibition of individual and community waste disposal systems in the Los Osos/Baywood Park area of San Luis Obispo County, effective November 1, 1988 and specifying an acceptable 1,150 additional on-site systems in the interim.
4. Water supply to the prohibition area is entirely from the Los Osos ground water basin. The Los Osos ground water basin appears to consist of a single, saturated, unconfined aquifer system with a few isolated confined areas.
5. Recent population growth (212 percent from 1970 to 1980) has resulted in a population of 10,993 persons (1980). Current zoning will accommodate a population of excess of 27,000 persons.
6. On-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal.
7. Chemical analysis of shallow wells indicated that 38 percent of the wells tested contained nitrate concentrations which exceed State Drinking Water Standards.
8. Bacterial analyses of 42 wells disclosed that coliform concentrations exceeded State drinking water standards in 26 of the wells tested.
9. Surfacing effluent, foul odors, and disposal system failures have been documented and inspected by the San Luis Obispo County Health Agency and the California Department of Health Services.
10. The Los Osos basin ground waters have been designated as suitable for agricultural, municipal, industrial, and domestic water supply. The Regional

Board has concluded that beneficial uses of the ground water and surface waters are adversely affected by the continued use of individual sewage disposal systems and that there appears to be a trend of increasing degradation of the upper ground water aquifer and a threat to the lower, purer aquifer.

11. The Regional Board concluded that although an additional 1,150 septic systems would increase nitrogen loading to the ground water, the increase would not result in the degradation of the quality of the lower ground water aquifer.
12. The Regional Board requests the State Board to recognize the problem as qualifying for an "A" priority on the Clean Water Grant Project Priority list.
13. Regional Board staff prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act (Public Resources Code, Section 21080.5) and the federal Clean Water Act; the Regional Board found that adoption of this prohibition will not have a significant adverse affect on the environment.
14. The Regional Board satisfied the public notice requirements of the California Water Code, Section 13244, and has responded to comments received.
15. The State Board finds, consistent with the California Water Code, Section 13280, that there is substantial evidence in the record that the continued discharge of waste from individual or community on-site sewage disposal systems will unreasonably degrade water quality.
16. In satisfaction of the requirements of the California Water Code, Section 13283, the State Board finds that the record includes a preliminary review of possible alternatives to prohibiting discharges from individual on-site disposal systems.
17. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the basin plan amendment be approved as adopted by Regional Board Resolution No. 83-13 and the basin plan be amended as follows:
 - "8. Discharges of waste from individual and community sewage disposal systems are prohibited effective November 1, 1988, in the Los Osos/Baywood Park area, and more particularly described as:

'Groundwater Prohibition Zone'
(Legal description to be provided for area prescribed
by Regional Board)

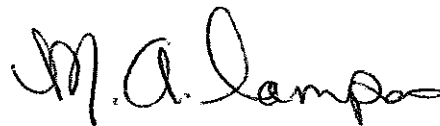

"Failure to comply with any of the compliance dates established by Resolution No. 83-13 will prompt a Regional Board hearing at the earliest possible date to consider adoption of an immediate prohibition of discharge from additional individual and community seware (SIC) disposal systems.

"Discharges from individual or community systems within the prohibition area in excess of an additional 1150 housing units (or equivalent) are prohibited, commencing with the date of State Water Resources Control Board approval."

2. State Board approval of the prohibition does not constitute a commitment to amend the Clean Water Grant Project Priority list, nor does it ensure federal and/or state funding of any project construction.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 19, 1984.

Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84-12

CONSIDERATION OF AN AMENDMENT OF THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL AND COMMUNITY SEWAGE DISPOSAL SYSTEMS WITHIN THE LOS ALAMOS AREA, SANTA BARBARA COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans will be periodically reviewed and may be revised.
3. Los Alamos is an unincorporated community of 734 persons located south of the City of Santa Maria in Santa Barbara County.
4. On-site soil adsorption or evapotranspiration systems are the sole means of wastewater disposal in the Los Alamos area.
5. The predominate lot size in Los Alamos of 5,000 to 10,000 square-feet is too small to accommodate individual sewage disposal systems.
6. Many property owners in Los Alamos have attested to on-site system problems.
7. Ground water sampling has indicated human waste contamination of shallow ground water in the Los Alamos area.
8. The U. S. Soil Conservation Service has designated the soils of Los Alamos as severe (due to slow percolation) for septic tank filter fields.
9. On May 14, 1974, the Santa Barbara County Board of Supervisors designated, by ordinance, the Los Alamos area as a Special Problems Area due to a concern for ground water degradation from septic systems on small lots and shallow ground water; and a committee was established to review building permit applications.
10. The Santa Barbara County Health Care Services Department took surface water samples from San Antonio Creek in January 1983, which showed fecal coliform in excess of 200/100 milliliters at four different locations within the Los Alamos area.
11. Los Alamos Community Services District has submitted documentation of conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code.
12. A Regional Board staff report indicates beneficial uses of Los Alamos ground and surface waters are adversely affected by individual sewage disposal

system discharges, and public health is potentially threatened by the presence of fecal coliform in ground and surface waters, with high nitrates also detected in ground water sampling wells.

13. On November 18, 1983, based on the above facts and findings, after a public hearing, the Regional Board adopted Resolution No. 83-16 revising Chapter 5 of the basin plan to include a discharge prohibition of the Los Alamos area.
14. On November 22, 1983, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
15. In satisfaction of the requirements of California Water Code Section 13283, the State Board finds that the record includes a review of possible alternatives to prohibiting discharges from on-site sewage disposal systems.
16. The Regional Board has followed appropriate procedures to satisfy all relevant State statutes.
17. The State Board finds, consistent with the California Water Code, Section 13280, that there is substantial evidence in the record that the continued discharge of waste from individual or community on-site sewage disposal systems will unreasonably degrade water quality.
18. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

1. That the basin plan be amended as follows:

Page 5-66, after Item 8, following the discussion of discharge limitations (added by Resolution No. 83-13), insert the following prohibition:

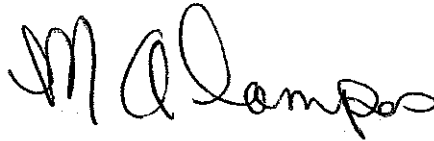

- "9. Discharge of waste from additional individual and community sewage disposal systems is prohibited and the discharge of waste from existing individual and community sewage disposal systems is prohibited after July 1, 1987, in Los Alamos, Santa Barbara County, and more particularly described as:

"Within the boundaries of the Los Alamos Community Services District extant on December 26, 1978."

2. State Board approval of the prohibition does not constitute a commitment to change the Clean Water Grant Project Priority List or provide other assistance.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 19, 1984.

Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 84- 11

CONSIDERATION OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN (REVISION AND AMENDMENT OF TABLE 2-1,
"EXISTING AND ANTICIPATED USES OF INLAND SURFACE WATERS")

WHEREAS:

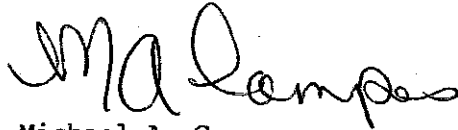

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (basin plan) on March 14, 1975.
2. Chapter 2, Present and Potential Beneficial Uses, of the basin plan includes Table 2-1, Existing and Anticipated Uses of Inland Surface Waters.
3. In 1975, the U. S. Environmental Protection Agency (EPA) approved the basin plan upon the condition that a water contact recreation (REC-1) designation be added to those waters without a REC-1 designation in Table 2-1.
4. Many waters in the Central Coastal Basin are not accessible because of physical or legal reasons.
5. EPA deemed it appropriate to identify, by footnotes to Table 2-1, the physical or legal reasons that water contact recreation cannot take place.
6. The Regional Board conducted a survey of some of the waters listed in Table 2-1 to update REC-1 designations as part of the continuing planning process.
7. On September 16, 1983, the Regional Board adopted Resolution No. 83-14, Concerning Revisions and Amendment of the Water Quality Control Plan, Central Coastal Basin, (Revision and Amendment of Table 2-1, "Existing and Anticipated Uses of Inland Surface Waters").
8. Basin plan amendments do not become effective until approved by the State Board.
9. The State Board, after a thorough review of the Regional Board record, concludes that Resolution No. 83-14 is well documented, will protect water quality, and complies with EPA's conditions for approval.

THEREFORE BE IT RESOLVED:

That Table 2-1 of the basin plan be revised and amended as shown on Attachment A to Regional Board Resolution No. 83-14.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 19, 1984.

A handwritten signature in cursive script that reads "Michael A. Campos".

Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-94

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN FOR THE
CENTRAL COASTAL BASIN CONCERNING CHAPTER 5, IMPLEMENTATION PLAN FOR
INDIVIDUAL, ALTERNATIVE, AND COMMUNITY DISPOSAL SYSTEMS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. The basin plan contains a policy regarding non-point source wastewater disposal practices.
4. The Regional Board recognizes that properly planned and installed individual on-site sewage disposal systems can provide satisfactory wastewater treatment and disposal at minimal costs.
5. The Regional Board completed a study entitled "Individual/Community On-Site Sewage Disposal Systems".
6. The aforesaid report identifies water quality, public health, and related problems resulting from on-site disposal system failures and concludes that provisions relating to on-site systems in the basin plan need updating.
7. After three public hearings, the Regional Board adopted Resolution No. 82-09 amending Chapter 5, Implementation Plan for Individual, Alternative, and Community Disposal Systems, on December 10, 1982.
8. The State Board remanded Resolution No. 82-09 back to the Regional Board for reconsideration and further public input.
9. The Regional Board conducted a public workshop on August 3, 1983; and following a public hearing, the Regional Board adopted Resolution No. 83-12 on September 16, 1983.
10. Resolution No. 83-12 applies to Chapter 5, Implementation Plan for Individual, Alternative, and Community Disposal Systems, and specifically to non-point source controls by the Regional Board and other authorities.
11. The Regional Board submitted a request for State Board consideration of approval for Resolution No. 83-12 in accordance with Section 13245 of the California Water Code.

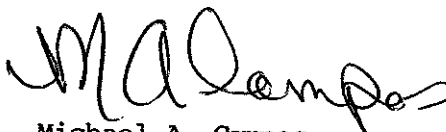

12. The State Board has analyzed the procedures for public review followed by the Regional Board to determine compliance with Federal and State regulations governing the basin planning process.
13. The State Board has determined said procedures are in compliance with the Federal and State regulations.
14. The basin plan process has been certified as a "functional equivalent" to the California Environmental Quality Act (Division 13, Public Resources Code) for preparing environmental documents and is, therefore, exempt from those requirements under regulations contained in Section 15108, Title 14, of the California Administrative Code.
15. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

That the State Board approve the basin plan amendment as revised in Regional Board Resolution No. 83-12.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 15, 1983.

Michael A. Campos
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-79

CONSIDERATION OF REVISION AND AMENDMENT OF THE WATER QUALITY CONTROL PLAN, CENTRAL COASTAL BASIN, BY THE ADDITION OF A PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE DISPOSAL SYSTEMS WITHIN THE PASATIEMPO AREA, SANTA CRUZ COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans shall be periodically reviewed and may be revised.
3. Pasatiempo Pines is an area of the City of Scotts Valley, and Lockwood Lane is an adjacent unincorporated area in Santa Cruz County.
4. Ground water is the sole source of water, and domestic water supply is designated beneficial use.
5. On-site subsurface disposal systems are the exclusive means of wastewater disposal in Pasatiempo Pines/Lockwood Lane.
6. High population density and unfavorable hydrogeology have resulted in ground water contamination.
7. The San Lorenzo Valley County Water District has discontinued using two wells because nitrate levels exceed public drinking standards.
8. The City of Scotts Valley, in conjunction with the Clean Water Grant Program, has prepared a report entitled "Pasatiempo Pines Wastewater Facilities Planning Study" which documents these effluent disposal and ground water problems.
9. Regional Board staff prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (P. L. 92-500 and P. L. 95-217); the Regional Board found that adoption of this prohibition area will not have a significant adverse effect on the environment.
10. Based on the above facts and findings, on July 15, 1983 after a public hearing, the Regional Board revised Chapter 5 of the basin plan to include a discharge prohibition in Pasatiempo Pines and Lockwood Lane.

11. The State Board finds, consistent with Water Code Section 13280, there is substantial evidence in the record that the continued discharge of waste from individual or on-site sewage disposal systems will unreasonably degrade water quality.
12. The State Board finds, in satisfaction of the requirements of Water Code Section 13283, that the record includes a review of possible alternatives to prohibiting discharges from individual or on-site sewage disposal systems.
13. The State Board concurs that effluent disposal and ground water conditions are in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.
14. Basin plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

That the basin plan be amended as follows:

1. Insert the following prohibition on Page 5-66 (retyped version of Chapter 5), bottom of page, after paragraph ending with "...Tornoe Road to the Point of Beginning," (added by Resolution No. 83-04):

"6. Discharges from additional individual or on-site sewage disposal systems are prohibited, and discharges from existing individual sewage disposal systems are prohibited effective July 1, 1986, in the areas in the Pasatiempo Pines and Lockwood Lane portion of Santa Cruz County and more particularly described as follows:

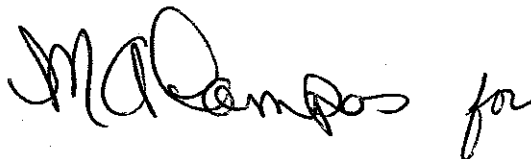

(Legal Description)"

2. That the above area is consistent with the recommendations of the staff report as shown in Attachment A.

3. That the Regional Board does intend standard exemption criteria, contained in the basin plan, to apply to this action.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Board held on October 20, 1983.

A handwritten signature in cursive script that reads "M. Campos for". The signature is written in black ink and is positioned above the printed title.

Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83- 48

CONSIDERATION FOR APPROVAL OF CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD, CENTRAL COAST REGION, RESOLUTION NO. 83-07, CONCERNING REVISIONS AND AMENDMENT OF THE WATER QUALITY CONTROL PLAN, CENTRAL COASTAL BASIN, CHAPTER 5, RECOMMENDED PLAN

WHEREAS:

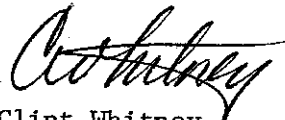

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (basin plan) on March 14, 1975.
2. The State Board approved Part I of the basin plan on March 20, 1975, with the understanding that the stipulated control actions set forth in Chapter 5 are to be implemented, but that identified actions set forth in Chapter 5 other than control actions are recommendations to be taken under consideration by the State Board, Regional Board, and other appropriate agencies.
3. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
4. On July 9, 1982, the Regional Board adopted Resolution No. 82-06 amending portions of Chapter 5, Recommended Plan, of the basin plan, which was approved by the State Board on December 16, 1982 (Resolution No. 82-65).
5. On April 15, 1983, after a public hearing, the Regional Board adopted Resolution No. 83-07 amending those portions of Chapter 5, Recommended Plan, which address municipal wastewater management related to the Salinas River, Carmel River, and Monterey Coastal Sub-Basins.
6. On April 25, 1983, the Regional Board submitted a request for State Board consideration of approval for said basin plan amendment in accordance with Section 13245 of the California Water Code.
7. A review of the record by State Board staff resulted in general agreement with the amendment.
8. In regard to Footnote 3, Table 5-3, Institutional Arrangements, it is the engineering judgment of Division of Water Quality staff there will not be excess capacity in most of the Monterey Regional Water Pollution Control Agency (MRWPCA) Regional Plant system; however, there may be excess capacity in parts of the interceptor system and in the outfall pipeline which discharges into central Monterey Bay outside the zone of prohibition.
9. The basin plan amendment is consistent with all federal and state statutes.

THEREFORE BE IT RESOLVED:

1. That those portions of Chapter 5, Recommended Plan, which address municipal wastewater management as shown in Attachment A to Regional Board Resolution No. 83-07 are approved.
2. That if excess capacity is found to be available in the MRWPCA's outfall and parts of the interceptor system, Footnote 3, Table 5-3, Institutional Arrangements, should not serve to limit the ability of MRWPCA to utilize that capacity.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on July 21, 1983.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-41

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN CONCERNING CHAPTER 5, IMPLEMENTATION
PLAN FOR INDIVIDUAL, ALTERNATIVE, AND COMMUNITY DISPOSAL SYSTEMS

WHEREAS:

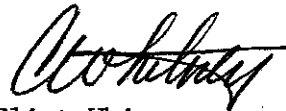

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. The Regional Board recognizes that properly planned and installed individual on-site sewage disposal systems can provide satisfactory wastewater treatment and disposal at minimal costs.
4. The Regional Board completed a study entitled "Individual/Community On-Site Sewage Disposal Systems".
5. The aforesaid report identifies water quality, public health, and related problems resulting from on-site disposal system failures and concludes that provisions relating to on-site systems in the basin plan need updating.
6. After two public hearings, the Regional Board adopted Resolution No. 82-09, "Concerning Revisions and Amendment of Water Quality Control Plan, Central Coastal Basin", on December 10, 1982.
7. Resolution No. 82-09 applies to Chapter 5, Implementation Plan, and specifically to non-point source controls by the Regional Board and other authorities.
8. The Regional Board submitted a request for State Board consideration of approval for Resolution No. 82-09 in accordance with Section 13245 of the California Water Code.
9. The State Board has analyzed the procedures for public review followed by the Regional Board to determine compliance with State and Federal regulations governing the basin planning process.
10. The State Board has determined said procedures were not in compliance with the State and Federal regulations and finds that due process is best served by remanding Resolution No. 82-09 to the Regional Board.

THEREFORE BE IT RESOLVED:

That Resolution No. 82-09 be remanded to the Regional Board for additional public input and consideration of comments directed to and provided by the State Board during the review process.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on June 1, 1983.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-34

CONSIDERATION OF AN AMENDMENT OF THE WATER QUALITY CONTROL
PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A
PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE DIS-
POSAL SYSTEMS WITHIN THE MISSION CANYON AREA, SANTA BARBARA
COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans will be periodically reviewed and may be revised.
3. Most of Mission Canyon is an unincorporated community of 2,400 persons located adjacent to the City of Santa Barbara in Santa Barbara County.
4. On-site soil absorption or evapotranspiration systems are the sole means of wastewater disposal in the Mission Canyon area.
5. The Mission Canyon area has soils with low percolation capacity, steep slopes, and shallow depth to bedrock.
6. The predominate lot size in Mission Canyon of 6,000 to 10,000 square-feet is too small to accommodate individual sewage disposal systems under such adverse geologic conditions.
7. In 1978, the Santa Barbara County Department of Health Care Services completed a report which included a 1958 survey of 294 residences. On-site investigations revealed 32 problem disposal systems. Of those interviewed, 174 residents alluded to the potential of having problems if they were not water-conservation minded.
8. In updating of the County Department of Health Care Services' records in 1982, 172 separate well-documented system failures were counted from 1955 to 1982. Of the 200 documented complaints for the period 1955 to 1982, 44 percent (9 percent of the total parcels developed) dealt with surfacing effluent.
9. The Santa Barbara County Department of Health Care Services conducted surface water sampling which indicated human waste contamination of Mission Creek.
10. The Regional Board has evaluated a draft project report that identifies adverse environmental impacts from continued use of septic tanks in the Mission Canyon area and discusses alternative wastewater management plans. Alternatives evaluated include individual and community subsurface disposal systems, establishing an on-site maintenance district, and conventional sewerage systems.

12. Mission Canyon's Phase I report cites conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code.
13. Based on the above facts and findings, on February 25, 1983, after a public hearing, the Regional Board adopted Resolution No. 83-04 revising Chapter 5 of the basin plan to include a discharge prohibition of the Mission Canyon area.
14. On March 14, 1983, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
15. The Regional Board has followed appropriate procedures to satisfy all relevant State statutes.
16. The State Board concurs that effluent disposal and ground water conditions are in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance problems.
17. Basin plan amendments do not become effective until approved by the State Board. The State Board may approve the amendments or remand them to the Regional Board for reconsideration.

THEREFORE BE IT RESOLVED:

That the basin plan be amended as follows:

- o Under "Local Governing Jurisdiction Recommendation" section, add "Mission Canyon" to the discussion pertaining to on-site wastewater management plans as follows:

"On-site wastewater management plans should be prepared and implemented by local governing jurisdictions (e.g., County Planning Departments) for applicable portions of San Martin, San Lorenzo Valley, Carmel Valley, Carmel Highlands, Prunedale, El Torro/Canyon Del Rey, Santa Margarita/Garden Farms, Los Osos/Baywood Park, Arroyo Grande, Nipomo, Los Alamos, upper Santa Ynez Valley, Los Olivos/Ballard, and Mission Canyon." *

- o Insert the following prohibition:

"Discharge of waste from additional individual sewage disposal systems is prohibited and the discharge of waste from existing individual sewage disposal systems is prohibited after July 1, 1986, in portions of Mission Canyon, Santa Barbara County, and more particularly described as:

* The language contained in this paragraph was proposed in Regional Board Resolution No. 82-09 dated December 10, 1982. This resolution has not yet been approved by the State Board. Therefore, approval of the language pertaining to on-site wastewater management plans is contingent upon further State Board action.

Surface Water Prohibition Zone

This zone is 200 (horizontal) feet wide and extends 100 feet either side of Mission Canyon, Rattlesnake Canyon and Lauro (Diablo) Canyon Creeks' surface water flow line. The Mission Canyon Creek 200 foot zone begins at the southwest corner of the county boundary and terminates at the northernmost boundary of Township 4 North, Range 27 West, Section 4 San Bernardino Base and Meridian. The Rattlesnake Canyon Creek 200 foot zone begins at the point of confluence with Mission Canyon Creek and Terminates upstream at the city/county boundary. The Lauro (Diablo) Canyon Creek 200 foot zone applies to the portion of the creek upstream from Lauro Reservoir.

Prohibition Area Description

Prohibition area description is included as Attachment A.

Those parcels with existing systems within the surface water prohibition zone are subject to the conditions of the prohibition. The property owner must relocate the discharge outside the designated zone by July 1, 1986 to a site compatible with the basin plan siting criteria."

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 24, 1983.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-33

CONSIDERATION OF REVISION TO AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COASTAL BASIN CONCERNING WATER
QUALITY STANDARDS FOR ENDRIN AND RADIOACTIVITY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) by Resolution No. 82-07, adopted "Amendments to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for the San Lorenzo River, Santa Cruz County".
2. On July 21, 1982, in compliance with California Water Code Section 13245, the Regional Board submitted a request to the State Board for approval of the Water Quality Control Plan for the Central Coast Basin (basin plan), and the State Board took the Regional Board's basin plan amendment under consideration at its October 21, 1982 regular Board meeting.
3. The State Board adopted Resolution No. 82-44 which approved, in part, the basin plan amendment and remanded a portion back to the Regional Board for reconsideration.
4. Specifically, the exceptions to the approval requested the Regional Board to do the following:
 - a. Correct an error which would have set the maximum contaminant level for endrin at 0.002 mg/l which is above the Federal standard of 0.0002 mg/l;
 - b. Correct a mis-citing of Title 22, California Administrative Code, of the section dealing with radioactivity; and
 - c. Revise the gross alpha particle activity of 15 picocuries per liter (pCi/l) to exclude radon and uranium and include in accordance with Title 22.
5. On February 25, 1983, the Regional Board complied with all State Board recommendations in its Resolution No. 83-03 and requested State Board reconsideration and approval.
6. Regional Board Resolution No. 83-03 further amends the basin plan (page 4-9) by inserting a supplemental paragraph under "Radioactivity" which specifies a standard for uranium-derived alpha particles, as follows:

"Until a radionuclide standard for uranium-derived alpha particles in domestic or municipal water supply is promulgated by the U. S. Environmental Protection Agency, waters designated for use as domestic or municipal supply (MUN) should not exhibit uranium-derived gross alpha particle activity in excess of 10 pCi/l, the U. S. Environmental Protection Agency's current advisory limit."

7. EPA staff advises 10 pCi/l as a safe limit for uranium in drinking water and that field tests of methods of removing excessive uranium are currently being conducted.
8. In adopting a numerical limit, the Regional Board stated its opinion that a limit would provide some guidance for public health and safety.
9. The State Board is desirous of recognizing the above addendum to the basin plan as an expression of the Regional Board's concern for public health and safety. The State Board recognizes that 10 pCi/l is an advisory limit for uranium and not an enforceable safe drinking water quality standard.

THEREFORE BE IT RESOLVED:

1. That the State Board approve the basin plan amendment as revised in Regional Board Resolution No. 83-03 for pages 4-8 and 4-9, Pesticides, and page 4-9, Radioactivity (excluding radon and uranium and including radium-226 in the gross alpha particle activity contaminant level).
2. That the addendum specifying a numerical contribution from uranium to the gross alpha particle activity be accepted as an advisory limit, but not as an enforceable standard.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 24, 1983.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-16

CONSIDERATION OF AN AMENDMENT OF THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COASTAL BASIN BY THE ADDITION OF A PROHIBITION OF WASTE DISCHARGE FROM INDIVIDUAL SEWAGE DISPOSAL SYSTEMS WITHIN THE BORONDA COUNTY WATER DISTRICT AND VIRGINIA ACRES AREA, MONTEREY COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code specifies that basin plans shall be periodically reviewed and may be revised.
3. Boronda (including Virginia Acres) is an unincorporated community located adjacent to the City of Salinas, Monterey County.
4. Local ground water is the sole source of water; and beneficial uses include agricultural, municipal, industrial, and domestic water supplies.
5. On-site soil absorption systems are the exclusive means of wastewater disposal in Boronda.
6. The soils in the Boronda area have a low percolation rate, and the majority of land parcels are too small to accommodate individual disposal systems.
7. The Monterey County Health Department has concluded that the Boronda and Virginia Acres area is a health problem due to failure of on-site disposal systems and nitrate contamination of domestic water supply.
8. The Boronda County Water District (BCWD) has prepared a waste management study and an Environmental Impact Report which effectively document the aforesaid effluent disposal and ground water problems. BCWD's waste management study also evaluates alternative solutions to the problem.
9. Based on the above facts and findings, on January 14, 1983, after a public hearing, the Regional Board revised Chapter 5 of the basin plan to include a discharge prohibition in Boronda and Virginia Acres.
10. The Regional Board has followed appropriate procedures to satisfy all relevant state and federal statutes.
11. The State Board concurs that effluent disposal and ground water conditions are in need of remedy to protect present and potential beneficial uses of water to prevent pollution and nuisance.
12. Water Quality Control Plan amendments do not become effective until approved by the State Board.

THEREFORE BE IT RESOLVED:

That the basin plan be amended as follows:

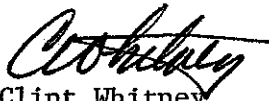

1. Insert the following prohibitions in Chapter 5:

"Discharges from additional individual or on-site sewage disposal systems are prohibited, and discharges from existing individual sewage disposal systems are prohibited effective July 1, 1986, in the areas in Monterey County described as follows:

- a. Boronda County Water District.
 - b. Virginia Acres (area bounded by Boronda County Water District and Boronda Road).
 - c. Parcels bounded by Boronda County Water District and Brooks Road (approximately 250 feet east of intersection with Boronda Road)."
2. Areas a, b, and c are consistent with the recommendations of the staff report as shown on Attachment A.
 3. The Regional Board does intend standard exemption criteria, first paragraph of page 5-67 of the basin to apply to this section.*

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on March 17, 1983.

Clint Whitney
Executive Director

* The criteria referenced are contained in a basin plan amendment that has not yet been approved by the State Board. Until amended criteria are approved by the State Board, existing basin plan exemption criteria shall apply.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-6

CONSIDERATION OF AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR
THE CENTRAL COASTAL BASIN CONCERNING THE PROHIBITION OF INDIVIDUAL
SEWAGE DISPOSAL SYSTEMS IN THE SAN LORENZO VALLEY OF SANTA CRUZ
COUNTY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. The Regional Board staff prepared a report entitled "San Lorenzo Valley Basin Plan Amendment".
4. The aforesaid report identifies beneficial uses and water quality objectives for the San Lorenzo River and documents the need to prohibit discharges from new and existing individual sewage disposal systems within certain chronic problem areas (Class I) of San Lorenzo Valley.
5. In addition, that report also documents the need to prohibit discharges from new systems within certain other specified communities (Class II) unless a public agency assumes responsibility and initiates a program to assure adequate design, location, sizing, spacing, and construction of all systems and proper maintenance of existing and new systems.
6. Based on the findings of the aforesaid report, the Regional Board has determined that Chapter 5, Recommended Water Quality Management Plan, of the basin plan requires revision.
7. The Regional Board, after a public hearing, adopted Resolution No. 82-10, Consideration of Amendments to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for the San Lorenzo River, Santa Cruz County, on November 5, 1982.
8. On November 16, 1982, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
9. A review of the record finds reasonable justification of the basin plan amendment.
10. The basin plan amendment is consistent with Section 13000 of the California Water Code which mandates that waters of the State shall be regulated to attain the highest quality water which is reasonable.

THEREFORE BE IT RESOLVED:

That the State Board approve the following amendment to the basin plan.

Page 5-66 (of retyped version of Chapter 5), bottom of page, after paragraph ending with "...POINT OF BEGINNING...", insert the following prohibitions:

"4. Discharges from individual sewage disposal systems within the San Lorenzo Valley north of Henry Cowell State Park shall be managed as follows:

a. Additional discharges within five major communities are prohibited where the affected area (Class I Area) is defined by the following Santa Cruz County Assessor's Parcel Numbers:

--Ben Lomond

Book 77, Pages*04 (Block 1, Lots 15, 16, 17, 20, 21, 27, 28, 29, 30, 31, 36, 37, 40, 41, 42, 47, 48, 50, 51, 52), 05, 06, 07, 08, 09, 10, 11, 12, 13, 14, 15, 16, 17, 18, 20, 21, 22, 23, 24 (Block 1 only), 25, 26, 27, 28

--San Lorenzo Park	Book 87, Pages*7, 8, 9, 10, 11, 12
--Zayante	Book 74, Pages*2, 3, 4, 5, 7, 9, 10, 12, 13, 14, 15, 16
--Lompico	Book 75, Pages*1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30

o Systems within the Class II Area are regularly inspected and maintained in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.

- d. In fulfilling the responsibility identified in subparagraph 4.c, the County of Santa Cruz shall submit a written report before January 1, 1984, identifying actions which have been taken and which must be taken to achieve objectives, including recommendations for appropriate action by any entity, identification of sources of funding, a time schedule for actions to be taken, and a description of surveillance to be undertaken to determine compliance with objectives.

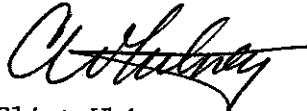

* Parcel numbers are indicated by complete pages, unless otherwise noted.

BE IT FURTHER RESOLVED, that the State Board approve the following exemption provision from Regional Board Resolution No. 82-10:

"Parcels within the Class I Area and with a Finding of Compliance and/or building permit allocation issued before November 6, 1982, are exempted from the prohibition of additional discharges (subparagraph '4.a.' of the amendment), but not the prohibition of discharges that becomes effective July 1, 1986 (subparagraph '4.b.' of the amendment)."

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 20, 1983.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 82-65

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN,
CENTRAL COASTAL BASIN, POLICY FOR MUNICIPAL WASTEWATER
MANAGEMENT

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin, (basin plan) on March 14, 1975.
2. The Regional Board has determined the basin plan requires further revision and amendment.
3. Proposed revisions and amendments apply to Chapter 5, Recommended Plan, of said basin plan.
4. The State Board approved Part I of the basin plan on March 20, 1975, with the understanding that the stipulated control actions set forth in Chapter 5 are to be implemented, but that identified actions set forth in Chapter 5 other than control actions are recommendations to be taken under consideration by the State Board, Regional Board, and other appropriate agencies.
5. The Regional Board, on July 9, 1982, adopted Resolution No. 82-06 delineating revisions and amendments to pages 5-1 through 5-27 of the basin plan.
6. The amendments contained in Regional Board Resolution No. 82-06 pertain to identified actions other than control actions and are, therefore, recommendations to be taken under consideration by the State Board, Regional Board, and other appropriate agencies.
7. Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

THEREFORE BE IT RESOLVED:

That the State Water Resources Control Board approves the amendment to the Water Quality Control Plan for the Central Coastal Basin contained in Regional Board Resolution No. 82-06 acknowledging that the recommended plans specify stringent discharge requirements for municipal dischargers. Timing of implementation may be dependent upon evaluations of the effectiveness of each project in solving documented water quality problems.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 16, 1982.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 82- 64

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN CONCERNING WATER QUALITY STANDARDS
FOR THE SALINAS RIVER

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. In 1981, the Regional Board prepared and published a report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers".
4. The aforesaid report identifies beneficial uses and water quality objectives for the two rivers and cites some general water quality objectives for all inland surface waters in the Central Coast region where references and data have been updated.
5. Based on the findings of the aforesaid report, the Regional Board has determined that Chapter 2, Present and Potential Beneficial Uses, and Chapter 4, Water Quality Objectives, of the basin plan require revision.
6. The Regional Board after a public hearing adopted Resolution No. 82-08, Consideration of Amendments to the Water Quality Control Plan for the Salinas River, on July 9, 1982.
7. On July 21, 1982, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
8. The basin plan amendment revises beneficial use designations and adds two footnotes to Table 2-1, Existing and Anticipated Uses of Inland Surface Waters.
9. The basin plan amendment also revises the water quality objective for sulfate in the reach of the Salinas River above Spreckels to 125 mg/l.
10. The aforementioned 1981 Water Quality Standards Report is the basis for a number of these revisions.
11. A review of the record finds that the Regional Board agenda item attached to Resolution No. 82-08 provides reasonable discussion and justification for the remaining revisions.

12. The basin plan amendment is consistent with all federal and state statutes including State Board Water Quality Control Plans.

THEREFORE BE IT RESOLVED:

That pages 2-4 and 4-14 of the basin plan be revised and amended as shown on Attachment A of Regional Board Resolution No. 82-08.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 16, 1982.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION No. 82- 63

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN FOR
THE CENTRAL COASTAL BASIN (BASIN PLAN) POLICY ON WASTE DISCHARGES
FROM MUSHROOM FARM OPERATIONS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the basin plan on March 14, 1975.
2. The Regional Board has determined the basin plan required further revision and amendment.
3. The Regional Board staff completed a study entitled "Special Investigation--Mushroom Farms" (Mushroom Farm Study).
4. The Mushroom Farm Study identifies existing and potential water quality problems resulting from improper management of mushroom farm waste discharges and recommends guidelines to control water quality problems.
5. On March 19, 1982, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the basin plan.
6. The Regional Board, on July 9, 1982, adopted a basin plan amendment (Order No. 82-04) establishing policy on waste discharges from mushroom farm operations.
7. On August 11, 1982, the Regional Board submitted a request for State Water Resources Control Board (State Board) consideration for approval of the above titled basin plan amendment in accordance with Section 13245 of the California Water Code.
8. A review of the record shows that a basin plan amendment is justified.

THEREFORE BE IT RESOLVED:

That the State Board approves the amendment to the basin plan contained in Regional Board Resolution No. 82-04.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 16, 1982.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 82-44

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN FOR THE CENTRAL COAST BASIN CONCERNING WATER QUALITY STANDARDS FOR THE SAN LORENZO RIVER AND UPDATING SOME GENERAL OBJECTIVES WHICH APPLY TO ALL INLAND AND SURFACE WATERS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the "Water Quality Control Plan, Central Coastal Basin" (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. The Regional Board staff prepared a report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers".
4. The aforesaid report identifies beneficial uses and water quality objectives for the two rivers and cites some general water quality objectives for all inland surface waters in the Central Coast region where references and data have been updated.
5. Based on the findings of the aforesaid report, the Regional Board has determined that Chapter 4, Water Quality Objectives, of the basin plan requires revision.
6. The Regional Board, after a public hearing, adopted Resolution No. 82-07, Consideration of Amendments to the Water Quality Control Plan for the Central Coast Basin Concerning Water Quality Standards for the San Lorenzo River, Santa Cruz County, on July 9, 1982.
7. On July 21, 1982, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
8. The basin plan amendment updates certain general water quality objectives to reflect revisions and recodification of the California Administrative Code, revises Table 4-8 of Chapter 4, Water Quality Objectives, to present specific water quality objectives in terms of mean values rather than median values, and revises allowable chloride and sodium concentrations to reflect current water quality conditions of the San Lorenzo River.
9. The basin plan amendment proposes a new specific water quality objective for nitrate of .25 mg/l because of a documented problem of algal growth in the San Lorenzo River.
10. The report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers" is the basis for a number of the aforementioned revisions.

11. A review of the record finds reasonable justification of the basin plan amendment with the following two exceptions:
 - a. The Regional Board replicated an error in Title 22, Chapter 15, Article 4, Section 64435, Table 3, of the California Administrative Code. The concentration for endrin listed in Title 22 is 0.002 mg/l; the federal standard is 0.0002 mg/l.
 - b. The Regional Board mis-cited the proper section in Title 22 concerning radioactivity. Sections 64441 and 64442 should be cited instead of Section 64435. The inclusion of uranium and radon as a contributor to alpha particle activity is not consistent with Title 22, Chapter 15, Table 5.
12. The basin plan amendment, with these two exceptions, is consistent with Section 13000 of the California Water Code which mandates that waters of the State shall be regulated to attain the highest quality water which is reasonable.

THEREFORE BE IT RESOLVED THAT:

The following pages of the Central Coastal Basin Plan be revised and amended as shown in Attachment A to Regional Board Resolution No. 82-07:

1. Page 4-2, Thermal Plan and Ocean Plan
2. Page 4-4, Table 4-1, Selected Comparisons of Existing Surface Water Quality with Water Quality Planning Criteria.
3. Pages 4-8 and 4-9, Pesticides (excluding limiting concentration for endrin).
4. Page 4-9, Chemical Constituents, including Table 4-4, Inorganic, Organic, and Fluoride Concentrations not to be Exceeded in Domestic or Municipal Supply.
5. Page 4-13, Water Quality Objectives for Specific Inland Waters, Enclosed Bays, and Estuaries.
6. Page 4-14, Table 4-8, Median Surface Water Quality Objectives.

That the following pages of said basin plan as described in Attachment A to Regional Board Resolution No. 82-07 not be revised and those portions of Resolution No. 82-07 be returned to the Regional Board for reconsideration:

1. Pages 4-8 and 4-9, Pesticides--the limiting concentration for endrin.
2. Page 4-9, Radioactivity.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 21, 1982.

A handwritten signature in cursive script, appearing to read "Clint Whitney".

Executive Director

TE WATER RESOURCES CONTROL BOA
RESOLUTION NO. 80-29

APPROVAL OF WATER QUALITY CONTROL PLAN AMENDMENTS FOR THE
CENTRAL COASTAL AND LAHONTAN BASINS AND CERTIFICATION OF A
PORTION OF THE STATE'S WATER QUALITY MANAGEMENT PLAN

WHEREAS:

1. The State Board is responsible for approving water quality control plans promulgated by the Regional Water Quality Control Boards pursuant to the State Porter-Cologne Act.
2. Caltrans has prepared a document which sets forth its current practices and procedures to ensure that water quality is not adversely affected by State highway construction and maintenance activities.
3. The Central Coast and Lahontan Regional Boards have prepared basin plan amendments based on the document prepared by Caltrans which reference these practices and procedures for State transportation system activities.
4. Public hearings on the basin plan amendments were held by the Central Coast Regional Board on November 9, 1979, and by the Lahontan Regional Board on March 13, 1980.
5. The basin plan amendments, as modified by the public comments, were adopted by the Central Coast and Lahontan Regional Boards on November 9, 1979, and March 13, 1980, respectively.

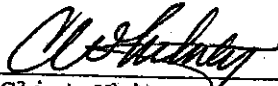

THEREFORE BE IT RESOLVED:

That the Board:

1. Finds the practices and procedures set forth in the Caltrans document are a positive and beneficial step in water quality control.
2. Approves the amendments to the Water Quality Control Plans for the Central Coastal and Lahontan Basins adopted by the Central Coast and Lahontan Regional Boards in Resolution Nos. 79-12 and 80-1.
3. Directs the Executive Director to inform the Central Coast and Lahontan Regional Boards of the Board's action.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 15, 1980.

Clint Whitney
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 80- 6

APPROVAL OF BASIN PLAN AMENDMENT FOR THE CENTRAL COAST REGION
AND PARTIAL CERTIFICATION OF THE NONDESIGNATED AREA 208 PLAN

WHEREAS:

1. The State Board is the responsible agency for conducting water quality management planning in the State's nondesignated area pursuant to Section 208 of PL 92-500 and subsequent amendments.
2. A nondesignated area 208 workplan, approved by the State Board in March 1978, identified planning issues to be addressed which included development of an erosion/sediment control program in the Central Coast Region.
3. Based on 208 planning activities, the Central Coast Regional Board has adopted a basin plan amendment which addresses water quality protection from erosion/sediment causing activities. This basin plan amendment has been submitted to the State Board for approval and certification as partial completion of the Nondesignated Area 208 Plan.
4. A public hearing on the proposed basin plan amendment was held by the Regional Board on September 14, 1979, October 12, 1979, and November 9, 1979.
5. A CEQA functional equivalent document has been prepared and adopted by the Regional Board pursuant to Public Resources Code Section 21080.5 and the Federal Clean Water Act (PL 92-500 and 95-217) and the State Board concurs that the basin plan amendment will not have a significant adverse effect on the environment.

THEREFORE BE IT RESOLVED:

That the Board:

1. Approves Resolution No. 79-9, amending the Basin Water Quality Control Plan for the Central Coast Region with respect to erosion/sediment control.
2. Certifies, pursuant to 40 CFR, Part 35.1523-2 and 35.1523-3, the basin plan amendments as representing partial completion of the State Nondesignated Area 208 Plan.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on January 24, 1980.

Executive Director

Marian

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 79- 69

APPROVAL OF AMENDMENTS TO BASIN WATER QUALITY CONTROL PLANS
FOR REGIONS 1, 3, 5, 6, AND 7 AND FINAL CERTIFICATION OF
PORTIONS OF THE STATE NONDESIGNATED AREA 208 PLAN

WHEREAS:

1. The State Board is the responsible agency for conducting water quality management planning in the State's nondesignated area pursuant to Section 208 of PL 92-500 and subsequent amendments.
2. A workplan was prepared which set forth regional and interregional issues to be addressed in the nondesignated area and a grant was received from EPA (\$3,175,316) for conduct of the program.
3. Basin plan amendments have been adopted by each of the nondesignated area Regional Boards based on information developed from a portion of the issues addressed in the 208 planning program.
4. These basin plan amendments and other supporting information have been submitted to the State Board for consideration of approval and final certification as partial completion of the Nondesignated Area 208 Plan.
5. The State Board held public workshops on June 21 and July 9, 1979, to consider the basin plan amendments/208 plan issues and the Regional Boards held public hearings prior to the adoption of each basin plan amendment. Public comments and responses are contained in the attached public response summary.
6. The State Board, in Resolution No. 79-59 (June 26, 1979), conditionally certified certain issues as representing partial completion of the State 208 Nondesignated Area Plan and indicated its intent to (a) determine the appropriateness of adopting individual 208 plan elements or portions thereof into existing basin water quality control plans and (b) determine the need to further condition the planning issues being considered.

THEREFORE BE IT RESOLVED:

That the Board:

1. Approves Resolution Nos. 79-3, 79-4, and 79-5 (North Coast Region); 79-05 (Central Coast Region); 79-149 and 79-180 (Central Valley Region); 79-6 and 79-7 (Lahontan Region); and 79-59 and 79-82 (Colorado River Basin Region), amending Water Quality Control Plans for those Regions with respect to the following issues:

All Regions

- o Water Quality Management on U. S. Forest Service Lands
- o Water Quality Management on U. S. Bureau of Land Management Lands

Region 1

- o Individual Waste Disposal Systems Policy

Region 5

- o Erosion/Sediment Control Policy
- o Disposal Guidelines for Pesticide Rinsewaters
- o Abandoned Mines
- o Amador County Sewage Disposal Needs

Region 6

- o Pollution Abatement from Leviathan Mines

Region 7

- o Agricultural Drains
- o Coachella Valley Groundwater Management
- o Pollution of New and Alamo Rivers
- o Colorado River Salinity Control
- o Disposal of Class II-1 Wastes

2. Conditionally certifies, pursuant to 40 CFR, Part 35.1523-2 and 35.1523-3, basin plan amendments as representing partial completion of the State 208 Nondesignated Area Plan and directs the following actions with respect to that conditional certification:

A. Water Quality Management - U. S. Forest Service (USFS) Lands

- (1) Directs the State Board Executive Director to negotiate and execute a Management Agency Agreement (MAA) with the USFS which reflects the concerns and recommendations set forth in Regional Board adoption resolutions.
- (2) Withholds approval of BMPs for pesticide application (Forest Service management practices 5.8 through 5.14) pending completion of related studies by the Board of Forestry for State and private forest lands.
- (3) Designates the Forest Service as the management agency for all activities on National Forest System lands effective upon execution of the MAA.

B. Water Quality Management - Bureau of Land Management (BLM) Lands

- (1) Directs the State Board Executive Director to negotiate and execute a Management Agency Agreement (MAA) with BLM which reflects the concerns and recommendations set forth in Regional Board adoption resolutions.
- (2) Designates BLM as the management agency for all activities on BLM lands effective upon execution of the MAA.

- C. Individual Waste Disposal Systems Policy - North Coast Region
 - (1) Directs staff to submit the policy to other Regional Boards for consideration of adoption.
 - (2) Directs staff to consider addition of a water conservation element to this policy.
 - D. Disposal Guidelines for Pesticide Rinsewaters - Central Valley Region
 - (1) Directs staff to submit the guidelines to other Regional Boards for consideration of adoption.
 - E. Leviathan Mine (Lahontan Region) and Abandoned Mines (Central Valley Region)
 - (1) To encourage implementation of needed corrective actions in these problem areas, directs staff to give high priority to Leviathan Mine and selected mines in the Central Valley in the allocation of State Clean Water and Water Conservation Bond Funds.
 - F. Agricultural Drains (Colorado River Basin Region)
 - (1) Directs staff to prepare, for Board consideration, policy guidelines regarding water quality control and beneficial use protection in agricultural drains, sloughs, and canals.
3. Directs staff to prepare, by February 1, 1980, a comprehensive statewide policy on nonpoint source control which addresses, at a minimum, State/Regional Board regulatory approach, criteria for defining water quality problems, BMP implementation strategy (sanctions/incentives), and State/local agency relationships.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 16, 1979.

Larry F. Walker
Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 78-27

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN,
CENTRAL COAST BASIN (NIPOMO AREA, SAN LUIS OBISPO COUNTY)

WHEREAS:

1. At its March 17, 1978, meeting, the Central Coast Regional Water Quality Control Board, by Resolution No. 78-02, adopted an amendment to the Water Quality Control Plan, Central Coast Basin which (a) prohibits the discharge of waste from new individual waste disposal systems in part of the Nipomo area of San Luis Obispo County, (b) prohibits the discharge of waste from existing individual disposal systems in the prohibition area after July 1, 1982, and (c) requires a one-acre minimum lot size for new individual disposal systems in less densely populated sections of the Nipomo community and allows for exemption to demonstrated functional individual waste disposal systems.
2. With respect to the prohibition of discharge from new and existing individual disposal systems, adoption of Resolution No. 78-02 by the Regional Board meets the criteria set forth in Water Code Section 13280, et seq.
3. There is insufficient hydrogeologic evidence provided in the Regional Board Staff Report on the Nipomo Prohibition to warrant establishing a one-acre minimum lot size requirement in designated areas of Nipomo.

THEREFORE BE IT RESOLVED:

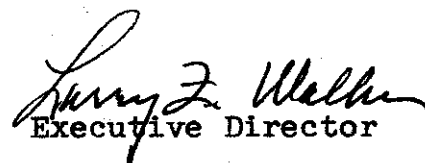

That the State Board:

1. Approves those portions of Resolution No. 78-02 of the Central Coast Regional Water Quality Control Board which revises the Water Quality Control Plan to (a) prohibit the discharge from new leaching or percolation systems within designated areas of the Nipomo community, (b) prohibit discharge of waste from existing leaching or percolation systems in the prohibition area after July 1, 1982, and (c) grants exemptions which meet the criteria described under Section 13282 of the Water Code.
2. Remands, to the Central Coast Regional Board for reconsideration, those portions of Resolution No. 78-02 which would prohibit the discharge from new leaching or percolation systems on lots less than one acre in designated areas of the Nipomo community.

3. Recommends the Central Coast Regional Board conduct, with the assistance of staff of the State Board Hydrogeologic/Geotechnical Section, a more detailed study of the western Nipomo hydrogeologic characteristics affecting water quality in order to determine appropriate lot size criteria.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 18, 1978.

Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 77-73

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN, CENTRAL COASTAL BASIN (3)

WHEREAS:

1. At its June 10, 1977, meeting, and after noticing a proposed resolution in its agenda for that meeting, the Central Coast Regional Water Quality Control Board adopted Resolution No. 77-04 which amends the Water Quality Control Plan, Central Coastal Basin.
2. Amended portions of the plan include deletion of numerical water quality objectives for nitrogen and phosphorus, a prohibition of discharge of toxic substances to community waste treatment systems, and revisions to prohibitions pertaining to solid waste from logging and construction practices and discharges to portions of Monterey Bay.
3. The prohibition pertaining to solid wastes from logging, construction, and similar activities is inappropriate in that language relating to prohibition to deleterious impacts on beneficial uses has been deleted and that use of a 25-year, 24-hour rainfall event criterion is difficult to define for the broad range of activities subject to the prohibition.
4. The State Board finds that the proposed basin plan revisions are appropriate with the exception of the two aforementioned prohibitions.

THEREFORE BE IT RESOLVED:

That the State Board:

1. Remands to the Central Coast Regional Board, for further consideration, those portions of its Resolution No. 77-04 which pertain to the prohibition pertaining to solid waste from logging construction and similar activities, and
2. Approves, with exception above, Resolution No. 77-04 of the Central Coast Regional Board which amends the Water Quality Control Plan, Central Coastal Basin.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 18, 1977.

Executive Director

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 77-37

PROPOSED APPROVAL OF A RESOLUTION REGARDING
AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN,
CENTRAL COASTAL BASIN (3), AND AN AMENDMENT TO
THE CLEAN WATER GRANTS PRIORITY LIST FOR F.Y.
1976-77

WHEREAS:

1. At its December 10, 1976, meeting, the Central Coast Regional Water Quality Control Board adopted Amended Resolution No. 76-08, which partially revised the Discharge Prohibitions Section, Chapter 5, of the Water Quality Control Plan for Basin 3 by prohibiting discharge of waste from new individual leaching and percolation systems subsequent to State Board approval of the amendment and prohibits the discharge of waste from existing systems after July 1, 1979, in and near the community of Moss Landing, Monterey County.
2. These prohibitions are reasonable and necessary in light of the evidence of a serious health hazard and the high incidence of failures from the use of individual disposal systems in this area.
3. A Step I project for the community of Moss Landing was placed on the Clean Water Grants Priority List for F.Y. 1976-77.
4. The facilities plan for the community of Moss Landing has shown that a community collection system, with treatment at the Dolan Road site and disposal through the Kaiser outfall, is the most appropriate method of controlling wastes to protect water quality and public health.
5. Construction of the proposed collection system without Clean Water Grant funding would place a severe financial hardship on the community.

THEREFORE BE IT RESOLVED:

1. That the State Board approves Amended Resolution No. 76-08 of the Central Coast Regional Water Quality Control Board amending the Water Quality Control Plan, Central Coastal Basin (3).
2. That the State Board waives Section 2108(f) of the Clean Water Grant Regulations.

3. That the State Board approves the amendment of the F.Y. 1976-77 Clean Water Grant Priority List to add the community of Moss Landing, Monterey County, wastewater collection project to the Class B priority.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on April 21, 1977.

Bill B. Dendy
Bill B. Dendy
Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 77- 17

APPROVING AMENDMENT OF THE WATER QUALITY
CONTROL PLAN, CENTRAL COASTAL BASIN (3)

WHEREAS:

1. On January 14, 1977, the California Regional Water Quality Control Board, Central Coast Region, adopted Resolution No. 77-01, which amends Chapter 4 of the Water Quality Control Plan for the Central Coastal Basin.
2. The amendments contained in Resolution No. 77-01 are intended to revise the water quality objectives of the Water Quality Control Plan for the Central Coastal Basin such that:
 - a. The objective for fecal coliform bacteria in waters designated for noncontact recreation (REC-2) will be consistent in format and method for determining compliance with the objective for waters designated for water contact recreation (REC-1).
 - b. Applicability of numerical objectives for biostimulatory substances (nitrogen and phosphorus) as receiving water limitations in waste discharge requirements and National Pollutant Discharge Elimination System permits will be considered on a case-by-case basis. Less restrictive limitations will be allowed in requirements and permits where the beneficial uses will not be unreasonably impaired.
3. The amendment described in Item 2b above does not comply with Water Code Section 13263(a), because the amendment would not properly implement the basin water quality control plan or water quality objectives contained therein.

THEREFORE BE IT RESOLVED:

1. That the State Board approves the amendment to the objective for fecal coliform bacteria in the Water Quality Control Plan, Central Coastal Basin (3), as prescribed in Resolution No. 77-01 of the Central Coast Regional Water Quality Control Board.
2. That the State Board does not approve the amendment to the objective for biostimulatory substances in the Water Quality Control Plan, Central Coastal Basin (3), as prescribed in Resolution No. 77-01 of the Central Coast Regional Water Quality Control Board.
3. That the State Board authorizes and directs its Executive Officer to apprise the Central Coast Regional Water Quality Control Board regarding the legal question of the amendment to the objective for

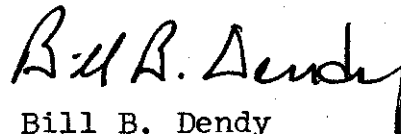

Resolution No. 77-17

biostimulatory substances. In this response, the Executive Officer shall recommend alternative measures to alleviate the problems that prompted adoption of this amendment.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on March 17, 1977.

Dated: MAR 17 1977

Bill B. Dendy
Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 76-105

REGARDING RESOLUTION NO. 76-08 OF THE REGIONAL WATER
QUALITY CONTROL BOARD, CENTRAL COAST REGION,
THAT AMENDED THE WATER QUALITY CONTROL PLAN,
CENTRAL COAST BASIN (3)

WHEREAS:

1. On July 9, 1976, the California Regional Water Quality Control Board, Central Coast Region, adopted Resolution No. 76-08 which partially revised Chapter 5 of the Basin Water Quality Control Plan for Basin 3 by prohibiting installation of individual disposal systems in and near Moss Landing, Monterey County.
2. The California Regional Water Quality Control Board, Central Coast Region, in cooperation with the Monterey County Department of Environmental Health, found that a public health hazard exists because of failing septic tank and leach field systems in the area covered by the adopted prohibition.
3. The prohibition contained in Resolution No. 76-08 is overly restrictive in that it prohibits individual disposal systems rather than discharges therefrom and thereby limits consideration of alternative individual disposal systems as a means of correcting the problem.

THEREFORE BE IT RESOLVED:

1. That the State Board concurs in the Central Coast Regional Board's finding that a public health hazard exists as a result of failure of existing individual disposal systems.
2. That the State Board remands Resolution No. 76-08 to the Regional Board for consideration of revision of the prohibition to permit utilization of any appropriate disposal alternative including, but not limited to, traditional community wastewater collection and treatment facilities.
3. That the State Board authorizes and directs its Executive Officer to forward suggested language that accomplishes Resolved No. 2 above to the Regional Board Executive Officers for Regional Board guidance in adopting uniform future prohibitions to permit consideration of alternative systems.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on September 16, 1976.

RESOLUTION NO. 76-101

APPROVING RESOLUTION NO. 76-05 OF THE CALIFORNIA REGIONAL
WATER QUALITY CONTROL BOARD, CENTRAL COAST REGION, AMENDING
THE WATER QUALITY CONTROL PLAN, CENTRAL COASTAL BASIN (3)

WHEREAS:

1. On June 11, 1976, the California Regional Water Quality Control Board, Central Coast Region, adopted Resolution No. 76-05, which partially revised Chapter 2 of the Water Quality Control Plan for Basin 3.
2. The amendments contained in Resolution No. 76-05:
 - a. Utilize the letter symbols E, I, and A to indicate whether the designated beneficial uses are Existing, Intermittent, or Anticipated, respectively.
 - b. List significant water bodies within subbasins in order from north to south.
 - c. List the Region's seven Areas of Special Biological Significance individually.
 - d. Designate beneficial uses for water bodies which were omitted inadvertently during development of the Water Quality Control Plan (3).
 - e. Divide the Salinas River, the Region's most diverse water course, into four reaches in order to describe more accurately its beneficial uses.

THEREFORE BE IT RESOLVED:

That the State Board approves Resolution No. 76-05 of the California Regional Water Quality Control Board, Central Coast Region, amending the Water Quality Control Plan, Central Coastal Basin (3).

Bill B. Dendy

Bill B. Dendy
Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 75-21

APPROVAL OF WATER QUALITY CONTROL PLANS FOR THE CENTRAL
COASTAL BASIN (3), SANTA CLARA RIVER BASIN (4A), LOS
ANGELES RIVER BASIN (4B), AND SAN DIEGO BASIN (9)

WHEREAS:

1. It is the responsibility of the State Board and the California Regional Water Quality Control Boards to regulate the activities and factors which affect or may affect the quality of the waters of the State in order to attain the highest water quality which is reasonable considering all demands being made and to be made on those waters and the beneficial uses involved.
2. Regulation 40 CFR 131.202, pursuant to the Federal Water Pollution Control Act Amendments of 1972 (PL 92-500), requires each state to submit water quality control plans for all basin planning areas within the state by July 1, 1975.
3. The respective California Regional Water Quality Control Boards have conducted public hearings after notice to all interested persons in accordance with PL 92-500 and the California Water Code, and have considered the evidence introduced at those hearings. Those Boards subsequently adopted the water quality control plans for the Central Coastal Basin (3), Santa Clara River Basin (4A), Los Angeles River Basin (4B), and San Diego Basin (9).
4. Section 13245 of the Water Code provides that the State Board must approve all water quality control plans and revisions thereof before they become effective.
5. The water quality control plans are a part of the State's continuing planning process and will be updated annually to reflect changing conditions.
6. Issues, particularly those noted in the water quality control plans and identified in public hearings, which are not fully resolved in the plans at this time will be considered during the scheduled revisions of the plans.
7. Part I of the water quality control plans includes all necessary elements of a water quality control plan in accordance with Sections 13241 and 13242 of the Water Code and federal requirements, and Part II consists of supportive planning information.

8. The approval of water quality control plans is categorically exempt from the requirements of the California Environmental Quality Act (Public Resources Code Section 21000, et seq.) in accordance with Section 21084 of the Public Resources Code, Section 15108 of the State EIR Guidelines (California Administrative Code, Title 14, Division 6, Chapter 3), and Section 2714(d), Subchapter 17, Chapter 3, Title 23, California Administrative Code.

THEREFORE BE IT RESOLVED:

1. That the State Board approves Part I of the water quality control plans for the Central Coastal Basin (3), Santa Clara River Basin (4A), Los Angeles River Basin (4B), and San Diego Basin (9) in accordance with Section 13245 of the Water Code with the understanding that the stipulated control actions set forth in Chapter V are to be implemented, but that identified actions set forth in Chapter V other than control actions are recommendations to be taken under consideration by the State Board, Regional Boards, and other appropriate agencies.
2. That approval of Part I of the plans does not mandate the construction of facilities or mandate activities outside of the State Board's jurisdiction.
3. That the State Board shall file a notice of exemption in accordance with Section 15074 of the State EIR Guidelines.
4. That the Executive Officer is directed to forward copies of the water quality control plans for the Central Coastal Basin (3), Santa Clara River Basin (4A), Los Angeles River Basin (4B), and San Diego Basin (9) to the Environmental Protection Agency in fulfillment of the requirements of PL 92-500.

CERTIFICATION

The State Water Resources Control Board has determined that there is no state mandate for a new program or increased level of service on any unit of local government as a result of the foregoing resolution because such resolution is not an executive regulation pursuant to Revenue and Taxation Code, Section 2209.

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on March 20, 1975.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 74- 23

APPROVING RESOLUTION NO. 74-1 OF THE CALIFORNIA
REGIONAL WATER QUALITY CONTROL BOARD, CENTRAL
COAST REGION, REVISING THE INTERIM WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COASTAL BASIN

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, did on June 10, 1971, adopt a Water Quality Control Plan (Interim) for the Central Coastal Basin, which plan has been heretofore amended; and
2. The California Regional Water Quality Control Board did on January 11, 1974, adopt Resolution No. 74-1 revising said plan, subject to approval of the State Water Resources Control Board as required by Water Code Section 13245; and
3. Resolution No. 74-1 and the revision of the Water Quality Control Plan (Interim) for the Central Coastal Basin contained therein has been reviewed by the State Board and found to be appropriate and proper and necessary for the protection of water quality and beneficial uses.

THEREFORE BE IT RESOLVED:

That the State Board hereby approves Resolution No. 74-1 adopted by the California Regional Water Quality Control Board on January 11, 1974.

CERTIFICATIONS

The State Water Resources Control Board has determined that there is no mandate for a new program or increased level of service on any unit of local government as a result of the foregoing resolution, and that there will be no cost to any unit of local government as a result of any new program or increased level of service of an existing program mandated by state executive regulation.

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on March 7, 1974.

Bill B. Dendy
Bill B. Dendy
Executive Officer

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 71-20

APPROVAL OF INTERIM WATER QUALITY
CONTROL PLANS FOR THE
STATE OF CALIFORNIA

WHEREAS, the Environmental Protection Agency has required that basin plans be developed to evaluate projects which may be eligible for financial assistance and that said plans must be adopted by July 1, 1971, by the State, or financial assistance will not be available; and

WHEREAS, the nine California Regional Water Quality Control Boards conducted public hearings during May 1971 after notice to all interested persons in accordance with the Water Code, have considered evidence introduced at those hearings and subsequently adopted sixteen water quality control plans encompassing the entire state; and

WHEREAS, the State Water Resources Control Board at its regular meeting of June 17, 1971, heard comments concerning the Water Quality Control Plans; and

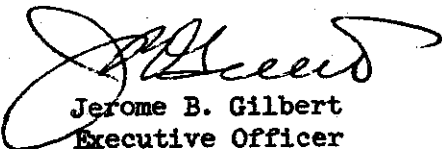

WHEREAS, the time for development, adoption and review of these sixteen plans was limited, considering the scope and nature of the subjects considered in the plans and as a result the title "Interim" indicates that these plans will be subject to modification as a result of new information from local, regional or statewide studies at any time; and

WHEREAS, certain changes or modifications of the plans are being submitted to the regional boards for consideration and action;

NOW, THEREFORE, BE IT RESOLVED, (1) that sixteen Interim Water Quality Control Plans for the State of California are hereby approved by the State Water Resources Control Board for the above purposes and in the above context, including the purposes of Article 3 of Chapter 4 of Division 7 of the Water Code; (2) that the Executive Officer is directed to immediately forward copies of all sixteen interim plans to the Environmental Protection Agency.

CERTIFICATION

The undersigned, Executive Officer of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on June 30, 1971.

Jerome B. Gilbert
Executive Officer

Appendix 3. Basin Plan amendments approved by the United States Environmental Protection Agency

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

OCT 06 2016

John M. Robertson
Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Mr. Robertson:

The U.S. Environmental Protection Agency (EPA) has reviewed the Central Coast Regional Water Quality Control Board's (Regional Board's) Basin Plan Amendment (BPA) for nitrogen compounds and orthophosphate Total Maximum Daily Loads (TMDLs) in the Pajaro River basin, submitted on May 31, 2016. EPA received the State's complete TMDL submittal on July 25, 2016 and finds that all the federally required elements are adequately addressed, and approves the TMDLs pursuant to CWA Section 303(d)(2). Upon complete implementation, the TMDLs will result in attainment of the applicable water quality standards for nitrate, toxicity associated with un-ionized ammonia, and the biostimulatory substances nitrate, total nitrogen, and orthophosphate, for all waterbodies in the Pajaro River basin. These TMDLs will also address listings for low dissolved oxygen.

The Regional Board, State Water Resources Control Board (State Board), and Office of Administrative Law (OAL) took action on the BPA on the following dates:

- Regional Board adoption on July 30, 2015 (Resolution No. R3-2015-0004)
- State Board adoption on April 5, 2016 (Resolution No. 2016-0018)
- Regional Board signed submittal letter to EPA, dated May 31, 2016, requesting approval of the TMDLs
- OAL approval on July 12, 2016 (2016-0527-04 S)

The State has provided adequate opportunities for public review and comment, and demonstrated how public comments were considered for the final TMDLs. By including TMDLs for waterbodies that are not currently impaired as well as for those that are impaired, the TMDLs, numeric targets, load allocations, and waste load allocations appropriately employ an antidegradation approach to protecting beneficial uses in the identified waters. The TMDLs appropriately consider seasonal variation and critical conditions, and provide an adequate margin of safety.

The TMDL submittal contains the State's implementation strategy and schedule, which is a critical next step to realize improvements in water quality in the watershed. While EPA is not taking action on the implementation strategy, as EPA is not required by CWA Section 303(d) or its implementing regulations to approve or disapprove implementation plans submitted with TMDLs, EPA supports the State's proposed implementation approaches to protect and restore water quality. EPA encourages the Regional Board to continue its work with stakeholders to implement these strategies, when appropriate, consistent with California's Nonpoint Source Management Plan, as approved by EPA under the Clean Water Act Section 319. EPA is available to provide support where possible to assist both the regulated community and the Regional Board in fostering ongoing watershed stewardship to achieve the TMDLs.

If you have any questions concerning this approval, please call me at (415) 972-3337, or have your staff contact Matthew Mitchell at (415) 972-3508.

Sincerely,

A handwritten signature in blue ink, consisting of a stylized 'T' followed by a horizontal line that extends to the right and then curves back up.

MAR 08 2016

Lisa Horowitz McCann
Interim Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Ms. McCann:

The U.S. Environmental Protection Agency (EPA) has reviewed the Central Coast Regional Water Quality Control Board's (Regional Board's) Basin Plan Amendment (BPA) for nitrogen compounds and orthophosphate Total Maximum Daily Loads (TMDLs) in the Lower Santa Maria River watershed and tributaries to Oso Flaco Lake in Santa Barbara and San Luis Obispo Counties, submitted on June 9, 2014. EPA finds that all the federal required elements are adequately addressed and approve the TMDLs pursuant to CWA section 303(d)(2). Upon complete implementation, the TMDLs will result in attainment of the applicable water quality standards for nitrate, toxicity associated with unionized ammonia, and the biostimulatory substances nitrate and orthophosphate for all waterbodies in the Lower Santa Maria River watershed and tributaries to Oso Flaco Lake. These TMDLs will also address listings for low dissolved oxygen.

The Regional Board, State Water Resources Control Board (State Board), and Office of Administrative Law (OAL) took action on the BPA on the following dates:

- Regional Board adoption on May 30, 2013 (Resolution No. R3-2013-0013)
- State Board adoption on February 4, 2014 (Resolution No. 2014-0009)
- OAL approval on May 22, 2014 (2014-04010-01S)
- Regional Board signed submittal letter to EPA, dated June 9, 2014, requesting approval of the TMDLs

The State has provided adequate opportunities for public review and comment, and demonstrated how public comments were considered for the final TMDLs. By including TMDLs for waterbodies that are not currently impaired as well as for those that are impaired, the TMDLs, numeric targets, load allocations, and waste load allocations appropriately employ an antidegradation approach to protecting beneficial uses in the identified waters. The TMDLs appropriately consider seasonal variation and critical conditions, and provide an adequate margin of safety.

The TMDL submittal contains the State's implementation strategy and schedule, which is a critical next step to realize improvements in water quality in the watershed. While EPA is not taking action on the implementation strategy, as EPA is not required by section 303(d) or its implementing regulations to approve or disapprove implementation plans submitted with TMDLs, EPA supports the State's proposed implementation approaches to protect and restore water quality. EPA encourages the Regional Board to continue its work with stakeholders to implement these strategies, consistent with California's Nonpoint Source Management Plan as approved by EPA under the Clean Water Act Section 319, when appropriate. EPA is available to provide support where possible to assist both the regulated community and the Regional Board in fostering ongoing watershed stewardship to achieve the TMDLs.

If you have any questions concerning this approval, please call me at (415) 972-3337, or Janet Hashimoto at (415) 972-3452.

Sincerely,

Tomás Torres
Director, Water Division

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IX

75 Hawthorne Street
San Francisco, CA 94105-3901

OCT 13 2015

RECEIVED

OCT 13 2015

State of California
Central Coast Water Board

Kenneth A. Harris, Jr.
Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Mr. Harris:

Thank you for submitting the complete Central Coast Regional Water Quality Control Board (Regional Board) Basin Plan Amendment (BPA) for the Total Maximum Daily Loads (TMDLs) for nitrogen compounds and orthophosphate compounds in the Lower Salinas River watershed, Reclamation Canal Basin, and Moro Cojo Slough subwatershed, on June 9, 2014, for approval by the U.S. Environmental Protection Agency (EPA). We find that all the federal required elements are adequately addressed, and we approve the TMDLs pursuant to CWA section 303(d)(2). The TMDLs, upon complete implementation, will result in attainment of the applicable water quality standards for nitrate, unionized ammonia, total nitrogen and orthophosphate for all waterbodies in the Lower Salinas River watershed, Reclamation Canal Basin, and Moro Cojo Slough subwatershed. These TMDLs will also address impairments for low dissolved oxygen, biostimulatory substances, microcystins, and chlorophyll-*a*.

The Regional Board, State Water Resources Control Board (State Board), and Office of Administrative Law (OAL) took action on the BPA on the following dates:

- Regional Board adoption on March 14, 2013 (Resolution No. R3-2013-0008)
- State Board adoption on February 4, 2014 (Resolution No. 2014-0008)
- OAL approval on May 7, 2014 (2014-0325-01S)
- Regional Board signed submittal letter, dated June 9, 2014, to EPA requesting approval of the TMDLs

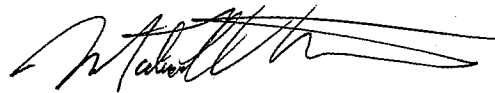

The State has provided adequate opportunities for public review and comment on the TMDLs and demonstrated how public comments were considered in the final TMDL. By including TMDLs for waterbodies that are not currently impaired as well as for those that are impaired, the TMDLs and allocations appropriately use an antidegradation approach to develop numeric targets, load allocations and waste load allocations to protect beneficial uses in the waters identified. The TMDLs appropriately consider seasonal variation and critical conditions, and provide an adequate margin of safety.

The TMDL submittal contains the State's implementation strategy and schedule. Implementation of the TMDLs is a critical next step to realize improvements in water quality in the watershed. While EPA is not taking action on the implementation strategy specifically, as we are not required by section 303(d) or its implementing regulations to approve or disapprove implementation plans submitted with TMDLs, we support the State's proposed implementation approaches to protect and restore water quality, including use of regulatory authorities. We encourage the Regional Board to continue its work with stakeholders

to implement these strategies consistent with California's Nonpoint Source Management Plan as approved by EPA under the Clean Water Act Section 319, when appropriate. We remain available to provide support where possible to assist both the regulated community and the Regional Board in fostering ongoing watershed stewardship to achieve the TMDLs.

If you have any questions concerning this approval, please call me at (415) 972-3438, or Terry Fleming at (415) 972-3462.

Sincerely,

A handwritten signature in black ink, appearing to read "Michael Montgomery", with a long horizontal flourish extending to the right.

Michael Montgomery

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IX

75 Hawthorne Street
San Francisco, CA 94105-3901

AUG 31 2015

Kenneth A. Harris, Jr.
Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Mr. Harris:

Thank you for submitting the complete Central Coast Regional Water Quality Control Board (Regional Board) Basin Plan Amendment (BPA) for pesticides Total Maximum Daily Loads (TMDLs) in the Santa Maria River watershed on November 4, 2014, for approval by the U.S. Environmental Protection Agency (EPA). We find that all the federal required elements are adequately addressed, and we approve the pesticides TMDLs pursuant to CWA section 303(d)(2). The TMDLs, upon complete implementation, will result in attainment of the applicable water quality standards in the Santa Maria River watershed.

The Regional Board, State Water Resources Control Board (State Board), and Office of Administrative Law (OAL) took action on the BPA on the following dates:

- Regional Board adoption on January 30, 2014 (Resolution No. R3-2014-0009)
- State Board adoption on July 2, 2014 (Resolution No. 2014-0033)
- OAL approval on October 29, 2014 (2014-0017-02S)
- Regional Board signed submittal letter on November 4, 2014, to EPA requesting approval of the TMDLs

The State has provided adequate opportunities for public review and comment on the TMDLs and demonstrated how public comments were considered in the final TMDL. By including TMDLs for waterbodies that are not currently impaired, as well as for those that are impaired, the TMDLs appropriately used an antidegradation approach to develop numeric targets and load and wasteload allocations to protect beneficial uses in the waters identified. The TMDLs appropriately considered seasonal variation and critical conditions, and provided an adequate margin of safety.

The TMDL submittal contains the State's implementation strategy and schedule. Implementation of the TMDLs is a critical next step to realize improvements in water quality in the watershed. While EPA is not taking action on the implementation strategy specifically, as we are not required by section 303(d) or its implementing regulations to approve or disapprove implementation plans submitted with TMDLs, we support the State's proposed implementation approaches to protect and restore water quality, including use of regulatory authorities. We encourage the Regional Board to continue its work with stakeholders to implement these strategies consistent with California's Nonpoint Source Management Plan as approved by EPA under the Clean Water Act Section 319, when appropriate. We remain available to

provide support where possible to assist both the regulated community and the Regional Board in fostering ongoing watershed stewardship to achieve the TMDLs.

If you have any questions concerning this approval, please call me at (415) 972-3438, or Janet Hashimoto at (415) 972-3452.

Sincerely,

A handwritten signature in blue ink, appearing to read "Michael Montgomery", with a long horizontal flourish extending to the right.

April, 24, 2013

Kenneth A. Harris, Jr.
Interim Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Mr. Harris:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for fecal indicator bacteria impairments for the Santa Maria River watershed, which includes Alamo Creek, Blosser Channel, Bradley Canyon Creek, Bradley Channel, Cuyama River (upstream of Twitchell Reservoir to Highway 33), La Brea Creek, Little Oso Flaco Creek, Main Street Canal, Nipomo Creek, Orcutt Creek, Oso Flaco Creek, Oso Flaco Lake, Santa Maria River Estuary, and the Santa Maria River. Based on the U.S. Environmental Protection Agency's review of the TMDL submittal under Clean Water Act (CWA) section 303(d), I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of the applicable water quality standards for fecal coliform, *E. coli*, and total coliform for all waterbodies in the Santa Maria River watershed. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA section 303(d)(2).

EPA received the State Water Resources Control Board's complete TMDL package for approval on March 21, 2013. The TMDLs include waste load and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with these TMDLs. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (213) 244-1832 or Janet Parrish at (415) 972-3456.

Sincerely yours,

A handwritten signature in black ink, appearing to read "John Kemmerer", with a long horizontal flourish extending to the right.

Roger Briggs
Executive Officer
California Regional Water Quality Control Board
Central Coast Region
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

Dear Mr. Briggs:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for fecal coliform impairments for the Lower Salinas River watershed, including Lower Salinas River, Old Salinas River, Tembladero Slough, Salinas Reclamation Canal, Alisal Creek, Gabilan Creek, Natividad Creek, Salinas River Lagoon (North), Santa Rita Creek, Quail Creek, Chualar Creek, and Towne Creek. Based on the U.S. Environmental Protection Agency's review of the TMDL submittal under Clean Water Act (CWA) section 303(d), I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of the applicable water quality standards for fecal coliform for Lower Salinas River. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA section 303(d)(2).

EPA received the State Water Resources Control Board's complete TMDL package for approval on January 5, 2012. The TMDLs include waste load and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with these TMDLs. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Thomas Howard
Executive Director
California State Water Resources Control Board
P.O. Box 100
Sacramento, California 95812-0100

Dear Mr. Howard:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for fecal coliform impairments for the Corralitos and Salsipuedes watersheds, including Corralitos and Salsipuedes Creeks. Based on the U.S. Environmental Protection Agency's review of the TMDL submittal under Clean Water Act (CWA) section 303(d), I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of the applicable water quality standards for fecal coliform for Corralitos and Salsipuedes Creeks. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA section 303(d)(2).

EPA received the State Water Resources Control Board's complete TMDL package for approval on October 11, 2011. The TMDLs include waste load and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with these TMDLs. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Sincerely,

Alexis Strauss
Director, Water Division

JUL 20 2011

Thomas Howard
Executive Director
California State Water Resources Control Board
P.O. Box 100
Sacramento, California 95812-0100

Dear Mr. Howard:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for pathogens impairments in the San Lorenzo River watershed, including San Lorenzo River Estuary, San Lorenzo River, Branciforte Creek, Camp Evers Creek, Carbonera Creek and Lompico Creek. Based on the U.S. Environmental Protection Agency's review of the TMDL submittal under Clean Water Act (CWA) section 303(d), I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of the applicable water quality standards for the San Lorenzo River watershed. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA section 303(d)(2).

EPA received the State Water Resources Control Board's complete TMDL package for approval on June 9, 2011. The TMDLs include waste load and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The submittal includes information on the State's intention to remove the shellfish harvesting (SHELL) beneficial use, as well as waste discharge prohibitions for human fecal material and animal waste. EPA is not taking action on these items. We encourage the State to continue to expedite its statewide review of the shellfish harvesting beneficial use, and to determine the appropriate applicability of this use along the California coastline.

The TMDL submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with these TMDLs. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Sincerely,

 20 July 2011

Tom Howard
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Mr. Howard:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for pathogen impairments in the Aptos Creek watershed, including Aptos Creek, Valencia Creek, and Trout Gulch. Based on EPA's review of the TMDL submittal under Clean Water Act (CWA) Section 303(d), I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of the applicable water quality standards for the Aptos Creek watershed. The required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA Section 303(d)(2).

EPA received the State Water Resources Control Board's complete TMDL package for approval on November 8, 2010. The TMDLs include waste load and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with this TMDL. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

TMDL Review Checklist

State: California, Central Coast Region

Water Bodies: Aptos Creek, Valencia Creek, and Trout Gulch

Pollutant(s): Pathogens

Date of Letter Requesting EPA Approval: October 19, 2010

Date EPA Received Complete Submission: November 8, 2010

EPA Reviewer: Janet Parrish

1. Submittal Letter: *Letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by the State and submitted to EPA for approval under 303(d).*

The State Water Resources Control Board's (State Board) submittal letter, dated October 19, 2010 from Elizabeth Haven to Alexis Strauss, describes an amendment to the Central Coast Regional Water Quality Control Board's (Regional Board) Basin Plan to: (1) add the Aptos Creek watershed to the human fecal material discharge prohibition and the domestic animal waste discharge prohibition; and (2) adopt TMDLs for pathogens in Aptos Creek, Valencia Creek, and Trout Gulch in the Aptos Creek watershed.

The Basin Plan Amendment was adopted by the Regional Board on May 8, 2009. The Amendment was approved by the State Board on August 3, 2010. On November 8, 2010, EPA received a copy of California's OAL approval document OAL File No. 2010-0921-03 S, dated October 29, 2010. EPA considers the State's submittal complete as of the date of receipt of the OAL approval document, November 8, 2010.

The submittal letter requests EPA to approve the TMDLs under Clean Water Act (CWA) section 303(d)(2). This 303(d)(2) approval applies only to the pathogens TMDLs. EPA is taking no action regarding the two discharge prohibitions included in the Regional Board Resolution, which are permitted under State law.

The States submittal package includes: (1) the Aptos Creek Watershed Pathogens Total Maximum Daily Load (TMDL) Final Project Report (Project Report) dated May 8, 2009; (2) the Proposed Basin Plan Amendment and Final Regional Board Resolution No. R3-2009-0025, dated May 8, 2009, adopting the Proposed Basin Plan Amendment; (3) State Board Resolution No. 2010-0038, dated August 3, 2010, approving the Regional Board Basin Plan Amendment; and (4) OAL approval document, File No. 2010-0921-03 S, dated October 29, 2010.

The TMDLs were originally adopted on March 21, 2008, under Regional Board Resolution No. R3-2008-0003. These were forwarded to the State Board for adoption. On November 6, 2008, the Central Coast Regional Board's Executive Officer withdrew the TMDLs for Pathogens in

Aptos Creek, Valencia Creek, and Trout Gulch from consideration for adoption by the State Board, due to State Board staff recommendation to clarify language in the TMDLs and corresponding amendments before submittal to the State Board for approval. The clarifications included changing the allocations to human sources to zero, simplifying the prohibition language, and changing some classifications from nonpoint to point sources. The submitted TMDLs include the recommended clarifications, and were adopted, following an additional public comment period on May 8, 2009, under Regional Board Resolution No. R3-2009-0025.

2. TMDLs Included: *The submittal clearly identifies the water segments and pollutants or stressors for which TMDLs were developed. The submittal should distinguish TMDLs adopted for listed water/pollutant combinations from TMDLs adopted for water/pollutant combinations not identified on the current Section 303(d) list.*

The State submittal includes TMDLs for pathogens in the Aptos Creek Watershed, including Aptos Creek, Valencia Creek, and Trout Gulch. Aptos Creek and Valencia Creek are listed as impaired for pathogens on California's 2006 303(d) list. They were originally listed in 1994. TMDLs were also included for the following new impairments identified as part of the TMDL analysis: Trout Gulch, which is not included on California's 2006 303(d) List (Project Report, p. 1).

EPA concurs with the State's finding of new impairments for the additional waterbody, and concludes that it is appropriate for the State to include TMDLs for all these waters within the Aptos Creek watershed.

3. Water Quality Standards Attainment: *TMDL(s) and associated allocations are set at levels adequate to result in attainment of applicable standards.*

The TMDL submittal addresses the applicable water contact recreation (REC-1) beneficial use in the Aptos Creek watershed. Applicable water quality objectives for REC-1 for pathogens are as follows: fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean (geomean) of 200 MPN/100 ml, nor shall more than ten percent of single samples collected during any 30-day period exceed 400 MPN/100 ml. The uses and objectives are contained in the current Regional Board Basin Plan (Project Report, p. 4).

EPA concurs with the State's analysis, and concludes that the numeric targets, TMDLs and associated allocations are set at levels necessary to attain applicable water quality standards.

4. Numeric Target(s): *Submittal describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.*

The TMDL numeric targets are set at the water quality objectives for water contact recreation (see values above). (Project Report, p. 4, p. 32).

EPA concludes the State's use of these numeric targets in the TMDL analyses to be reasonable and appropriate, and finds there is an adequate basis for the targets.

5. Source Analysis: *Point, non-point, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all sources have been considered.*

The source analysis was based on existing water quality data, wastewater spill data, microbial source data, land use, flow estimates, ribotyping analysis, and discussions with staff at various public health agencies in Santa Cruz County (Project Report, pp. 21-30). Ribotyping analysis indicated a significant contribution of fecal indicator bacteria from natural sources such as birds, rodents and other wildlife. A portion of fecal indicator bacteria loading from natural sources was determined to be uncontrollable.

Controllable, non-natural sources of concern in the Aptos Creek watershed include (in relative order of contribution): storm drain discharges to MS4s; pet waste in areas that do not drain to MS4s; County of Santa Cruz sanitary sewer collection system spills and leaks; private sewer laterals; and farm animals and livestock discharges (Project Report, p. 28).

There are no waste water treatment plants (WWTPs) in the watershed, but there is a collection system that conveys wastewater from Santa Cruz County within the watershed's boundaries to the City of Santa Cruz's WWTP. The Santa Cruz County Sanitation District's (SCCSD's) Waste Discharge Requirements (WDR No. R3-2005-0043) addresses the County's collection system. Areas of the Aptos Creek watershed not connected to the SCCSD collection system have on-site (septic) wastewater disposal systems. Homeless persons and encampments were not suspected to contribute to the pathogens in the Aptos Creek watershed. Likewise, staff did not consider on-site wastewater disposal systems to be a contributing source, as the ribotyping analysis did not indicate any human contribution at any of the source tracking sites, except for Aptos Creek at the mouth. Staff concluded that if the pathogen contribution from these systems were contributing to the impairment, the ribotyping data would likely have shown some human contribution at any of the four upstream sites (Project Report, p. 28).

EPA finds the State's source analysis to be complete, reasonable and appropriate.

6. Linkage Analysis: *Submittal describes relationship between numeric target(s) and identified pollutant sources.*

The loading capacity is equal to the numeric target for pathogens, which is also set equal to the water quality standard for pathogen indicator organisms (Project Report, p. 33).

Since water contact recreation is the applicable beneficial use for these TMDLs, setting the loading capacity to achieve this use is appropriate, and will ensure that other, less stringent uses (such as REC-2) are attained. The submittal sufficiently describes the relationship between numeric targets, pollutant sources, and loading capacities.

EPA finds the State's analysis reasonable and appropriate.

7. TMDL and Allocations: *Submittal identifies the total allowable load, waste load allocations for all point sources and load allocations for non-point sources. The TMDL must be set equal to or less than the loading capacity. If no point sources are present, waste load allocations are zero. If no non-point sources are present, load allocations are zero. TMDLs and allocations should be expressed in terms of daily time steps. If the TMDL and/or allocations are also expressed in terms other than mass loads per day, the submittal explains why it is reasonable and appropriate to express the TMDL in those terms.*

TMDLs: The TMDLs are set equal to the loading capacity, which is the numeric target and water quality objective for fecal coliform concentration, to meet the water contact recreation (REC-1) use. The TMDLs are set at a fecal coliform concentration geomean of ≤ 200 MPN/100 ml (minimum of 5 samples over a 30 day period), and 90th percentile ≤ 400 MPN/100 ml (over any 30 day period). For all sources containing human fecal material, the TMDLs are set at pathogens concentration of 0 MPN per 100 ml (Project Report, p. 33).

EPA concurs with the State's analysis and concludes the TMDLs are set at levels necessary to attain applicable water quality standards.

Waste Load and Load Allocations

All waste load allocations and load allocations are concentration-based and are set equal to or less than the loading capacity, which is the fecal coliform water quality objective for water contact recreation. TMDLs are established for all waters of Aptos Creek, Aptos Creek from the mouth and upstream to the bridge at Porter Street, and all reaches of Noble Gulch (Project Report, p. 33-36).

For all sources not containing human fecal material, waste load allocations and load allocations are set at a geomean of ≤ 200 MPN/100 ml (minimum of 5 samples over a 30 day period), and 90th percentile ≤ 400 MPN/100 ml (over any 30 day period). In the submittal, this is also referred to as "Allocation 1." For all sources containing human fecal material, the waste load and load allocations are: fecal coliform concentration shall not exceed zero MPN per 100 ml. This is referred to as "Allocation 2."

Waste Load Allocation 1 applies to discharges to MS4s, required to be covered by an NPDES permit, as well as Storm Water General Permit NPDES No. CAS000004 for Santa Cruz County (Project Report, p. 35).

Waste load allocations of zero ("Allocation 2" in the Project Report) are set for the Santa Cruz County Sanitation District and for sanitary sewer collection and treatment systems (WDR Order R3-2003-0043).

Load allocations for (nonpoint source) runoff from owners and operators of land used for/containing pets (pet waste not draining to MS4s), for owners and operators of land used for/containing farm animals and livestock (farm animals and domestic livestock discharges), and discharges from natural sources, are set at Allocation 1.

Should all control measures be in place, pathogen indicator organism concentrations remain high, and allocations are not met, staff may investigate options, such as genetic studies to isolate sources, or other appropriate monitoring, to determine if the high level of indicator organisms is due to uncontrollable sources. Responsible parties may demonstrate that controllable sources of pathogen indicator organisms are not contributing to exceedences of water quality objectives in receiving waters, and Regional Board staff may consider re-evaluating the numeric targets and allocations, including such options as a site-specific objective to be approved by the Regional Board (Project Report, pp. 35-36).

EPA concludes the TMDL analysis includes load allocations and waste load allocations that are consistent with the provisions of the CWA and federal regulations.

8. Margin of Safety (MOS): *Submittal describes explicit and/or implicit margin of safety for each pollutant.*

The State's submittal includes an implicit margin of safety "through the use of protective numeric targets, which are the water quality objectives" for the Aptos Creek watershed's REC-1 beneficial uses. The ability to distinguish controlled (man-made) versus natural sources is the main uncertainty in these TMDLs. Ribotyping is one of the best analytic methods currently available to determine the distinction between man-made versus natural sources. (Project Report, p. 36.)

EPA finds the State's analysis to be reasonable.

9. Seasonal Variations and Critical Conditions: *Submittal describes method for accounting for seasonal variations and critical conditions in the TMDL(s).*

The submittal states that monitoring data did not show significant seasonal variations, and critical conditions are related to uncertainties inherent in identifying the relative contributions of the identified sources. There are no definitive critical conditions. (Project Report, page 44)

EPA finds the State's analysis to be reasonable.

10. Public Participation: *Submittal documents provision of public notice and public comment opportunity; and explains how public comments were considered in the final TMDL(s).*

The Regional Board and State Board held several public workshops and hearings, beginning in 2005, and adequately responded to written and oral public comment.

The Regional Board held stakeholder meetings beginning on November 16, 2005 and June 26, 2006. On May 8, 2009, the Regional Board held its final public hearing on the TMDLs following a 45-day comment period, and considered all public comments and evidence in the record.

The State's submittal includes the State's Notice of Opportunity for Public Comment, dated June 8, 2010. There were no comments submitted for that action. The Regional Board's record

includes Notices of Opportunity for Public Comment, as well as Scientific Peer Review Comments, and staff responses to comments.

EPA finds the State provided sufficient opportunities for public comment and adequately responded to public comments.

11. Technical Analysis: *Submittal provides appropriate level of technical analysis supporting TMDL elements.*

The TMDL submittal provides an appropriate level of technical analysis supporting all TMDL elements.

12. Reasonable Assurances: *If waste load allocations are made less stringent based on the inclusion of load allocations that reflect non-point source reductions, submittal describes how there are reasonable assurances that necessary non-point source reductions will occur.*

N/A

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY
REGION IX
75 Hawthorne Street
San Francisco, CA 94105-3901

NOV 17 2010

Tom Howard
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Mr. Howard:

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for fecal coliform impairments in the Soquel Lagoon watershed, including Soquel Lagoon, Soquel Creek, and Noble Gulch. Based on EPA's review of the TMDL submittal under Clean Water Act (CWA) Section 303(d), I have concluded the TMDLs adequately address the pollutant of concern and, upon implementation, will result in attainment of the applicable water quality standards for the Soquel Lagoon watershed. The required elements are adequately addressed; therefore, the TMDLs are hereby approved for the REC-1 beneficial use (human contact recreation) pursuant to CWA Section 303(d)(2).

The State Water Resources Control Board's Request for Approval is dated September 2, 2010. The State Office of Administrative Law approval memo is dated September 15, 2010, and EPA received it on September 27, 2010. The TMDLs include wasteload and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with this TMDL. However, EPA concurs with the State's proposed implementation approaches.

The submittal includes information on the State's intention to remove the shellfish harvesting (SHELL) beneficial use, as well as waste discharge prohibitions for human fecal material and animal waste. EPA is not taking action on these items. We encourage the State to continue to expedite its statewide review of the shellfish harvesting beneficial use, and to determine the appropriate applicability of this use along the California coastline.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Sincerely yours,

Laura Bore

San Francisco, CA 94105-3901

AUG 3 2010

Dorothy Rice
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Ms. Rice:

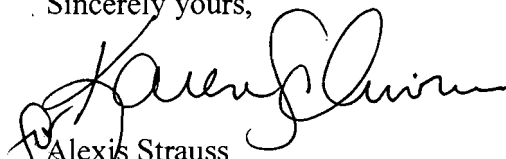

Thank you for submitting the Basin Plan Amendment containing the Total Maximum Daily Loads (TMDLs) for fecal coliform impairments in the Pajaro River watershed. The submittal contains allocations for fecal coliform in 12 waterbodies which are identified in the enclosure. Based on EPA's review of the TMDL submittal under Clean Water Act (CWA) Section 303(d), I have concluded the TMDLs adequately address the pollutant of concern and, upon implementation, will result in attainment of the applicable water quality standards for the Pajaro River watershed. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to CWA Section 303(d)(2).

The TMDL submittal is dated June 16, 2010. Additional information clarifying the submittal was provided to EPA on July 29, 2010. The TMDLs include wasteload and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State has provided adequate opportunities for public review and comment on the TMDLs, and demonstrated how public comments were considered in the final TMDLs.

The TMDL submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan provided with this TMDL. However, EPA concurs with the State's proposed implementation approaches.

If you have any questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Sincerely yours,

Alexis Strauss
Director, Water Division

July 16, 2007

Roger Briggs
Executive Officer
Central Coast Regional Water Quality Control Board
895 Aerovista Place, Suite 101
San Luis Obispo, CA 93401

Dear Mr. Briggs:

Thank you for submitting total maximum daily loads (TMDLs) to address nutrients and dissolved oxygen in Chorro Creek. The TMDLs were submitted and received by EPA on September, 15 2006, supplemental information was provided on July 16, 2007. The State of California adopted the TMDLs to address nutrients and dissolved oxygen in Chorro Creek as identified on the State's 2004-06 Clean Water Act (CWA) Section 303(d) list.

Based on EPA's review, I have concluded the TMDLs adequately address the pollutants of concern and, upon implementation, will result in attainment of applicable water quality standards. The TMDLs include waste load allocations and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State provided adequate opportunities for the public to review and comment on the TMDLs. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to Clean Water Act Section 303(d)(2).

The State's submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plans or compliance schedules provided with the TMDLs. EPA generally concurs with the State's proposed implementation approaches. If the Regional Board contemplates including schedules of compliance in NPDES permits, it can only do so if they are consistent with a compliance schedule-authorizing provision that has been submitted to EPA under CWA Section 303(c) and approved by EPA.

The enclosed review discusses the basis for this approval decision. We appreciate the State and Regional Boards' work to complete and adopt the TMDLs and we look forward to our continuing partnership in TMDL development. If you have questions concerning this approval, please call me at (415) 972-3572 or Lynn Suer at (415) 972-3148.

Sincerely yours,

Alexis Strauss 18 July 2007

Alexis Strauss

TMDL Review Checklist

State: California

Waterbodies: Chorro Creek

Pollutant(s): Nutrients, Dissolved Oxygen

Date of Initial Submission: September 25, 2006

Date Received By EPA: September 25, 2006

Dates of Supplemental Submission(s) and Receipt by EPA: July 16, 2007

EPA Reviewer: Peter Kozelka

1. Submittal Letter:

State submittal letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by state and submitted to EPA for approval under 303(d). Acknowledge if any supplemental material was provided and receipt date.

TMDL Submittal letter dated September 25, 2006. The Central Coast Regional Water Quality Control Board (Regional Board) adopted the TMDLs on July 7, 2006 under Resolution No. RB3-2006-0044. (Approval by SWRCB and OAL was not required as part of state approval process.) The TMDL submittal addresses impairments in Chorro Creek due to elevated nutrients and low dissolved oxygen as identified on the State's 2006 303(d) List. The submittal contained the Central Coast Regional Board resolution and Final Project Report (TMDL Report) which described the TMDL elements. Supplemental information was provided by Regional Board to EPA to clarify certain aspects of the TMDL submittal (email from Chris Rose dated July 16, 2007).

EPA finds the State's analysis concerning water body impairment associated with nutrients and factors causing low dissolved oxygen in Chorro Creek watershed is reasonable and consistent with the requirements of Section 303(d).

2. TMDLs Included:

The submittal clearly identifies the water segments and pollutants or stressors for which TMDLs were developed. The submittal should include the water segment identifier (e.g., NHD code) for each segment addressed. The submittal should clearly identify the TMDLs adopted for currently 303(d) listed waterbody-pollutant combinations. It should also clarify if TMDLs were adopted for new impairment findings (by waterbody-pollutant combinations) that do not exist on the current 303(d) list. If appropriate, the submittal should describe any assessment decisions that may have resulted in non-impairment status for water/pollutant combinations that exist on State's most current 303(d) list.

(Resolution, p. 1)

These TMDLs address nutrients and dissolved oxygen and are set at levels necessary to attain and maintain the applicable water quality standards. TMDLs were adopted for the following impaired segments identified on the State's 2006 303d list: Chorro Creek –nutrients and dissolved oxygen.

3. Water Quality Standards Attainment: *TMDL and associated allocations are set at levels adequate to result in attainment of applicable water quality standards.*

(Resolution, p. 1)

The TMDLs are designed to implement existing water quality objectives that are identified in the Basin Plan. There is a numeric objective for dissolved oxygen, whereas for nutrients there are numeric objectives for nitrate to protect freshwaters designated for municipal drinking water supplies. There is also a narrative objective for biostimulatory substances (i.e., nutrients) to address excess aquatic plant growth that "cause nuisance or adversely affects beneficial uses." These objectives will protect the applicable beneficial uses, including municipal and domestic water supply (MUN) and warm water habitat (WARM) and cold water habitat (COLD) in the Chorro Creek watershed. The submittal describes the impairment of the biostimulatory objective occurs in the lower reaches of Chorro Creek, downstream from Canet Road.

The State reasonably concluded that implementation of the TMDLs, load allocations, and waste load allocations will result in elimination of the adverse effects associated with elevated nutrients and low dissolved oxygen and bring about attainment of the applicable water quality standards.

4. Numeric Target(s): *Submission describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.*

(Resolution, p. 1; Staff Report pp. 8-20)

The TMDLs establish multi-part numeric water quality targets, which are specific to the impairments and applicable beneficial uses described in item 3 above. The dissolved oxygen numeric target is consistent with the Basin Plan water quality objectives for COLD beneficial use, since these are more stringent than WARM. This includes a minimum objective (7 mg/L) and daily median value (>85% saturation). The numeric targets for biostimulatory substances is the combination of a numeric target for dissolved oxygen and a numeric value for benthic algae expressed as aerial cover of less than 40%, as a monthly median from May through September, measured at mid-channel stream with continuous flow.

EPA concludes the State's approach to developing these TMDLs upon the existing numeric water quality objectives and interpretation of narrative water quality objectives for beneficial uses in these waters is reasonable, environmentally protective, and consistent with existing standards.

5. Source Analysis: *Point, non-point, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all significant sources have been considered. Point, nonpoint, and background sources of pollutants of concern are described, including the magnitude and location of sources. The submittal demonstrates all significant sources have been considered.*

(Resolution, p. 1; Staff Report pp. 12-32)

The TMDL submittal conducted an assessment of all readily available data and information concerning the sources of nutrients and oxygen. The primary point source is discharge from the California Men's Colony, wastewater treatment plant. Non-point sources include run-off from agricultural and undeveloped lands in the surrounding watershed.

The TMDL submittal adequately considered all significant sources of nutrients and related causative agents of low dissolved oxygen in the Chorro Creek watershed.

6. Loading Capacity Linkage Analysis: *Submittal describes relationship between numeric target(s) and identified pollutant sources. Submittal clearly identifies loading capacity. For each pollutant, describes analytical basis for conclusion that sum of allocations and margin of safety does not exceed the loading capacity of the receiving water(s).*

(Staff Report, pp. 31-33)

The TMDL submittal describes a clear linkage between pollutant sources (both point and non-point sources) and ambient stream water quality in Chorro Creek. Low dissolved oxygen is related to the imbalance of oxygen input as well as oxygen demand based on presence of other parameters. Causes of low dissolved oxygen are: lack of turbulent flow thereby minimizing oxygen re-aeration, reduced oxygen solubility due to elevated total salts (TDS and sodium), elevated stream temperatures and lack of riparian shading, and presence of benthic algae. Causes of excessive algae are: elevated nutrient levels, lack of scouring due to elevated stream flow during algal growing season, increased stream temperatures, and excessive light availability due to lack of riparian canopy (shading) in lower reaches of the creek. When shading is less than 70%, the in-stream algal cover exceeds 40%.

The State's analysis sufficiently describes the link between the numeric targets and the pollutant sources in the Chorro Creek watershed.

7. TMDL and Allocations:

TMDL—Submittal identifies the total allowable load, which is set equal to or less than the loading capacity. TMDL is expressed in terms of mass-based, concentration-based or other equivalent approaches that are consistent with federal requirements. If TMDL has seasonal features then please describe. TMDLs and allocations should be expressed in terms of daily time steps. If the TMDL and/or allocations are also expressed in terms other than mass loads per day, the submittal explains why it is reasonable and appropriate to express the TMDL in those terms.

Allocations—Submittal identifies appropriate waste load allocations for all point sources and load allocations for all non-point sources. Allocations are expressed in terms of mass-based, concentration-based or other equivalent approaches, the submittal explains why it is reasonable and appropriate to express in those terms. If point sources are present, submittal identifies existing NPDES permits by name and number. More discussion of point sources in watershed. If no point sources are present, waste load allocations are zero. More discussion of non-point sources. If no non-point sources are present, then load allocations are zero.

(Basin Plan Amendment Resolution, p. 2; Staff Report pp. 31-36)

The TMDL or loading capacity for these waters is defined as concentration-based criteria, which are equivalent to the numeric targets for dissolved oxygen, sodium, TDS and water temperature.

The biostimulatory substances TMDLs are defined for nutrients (rolling median value for N and P from May through September) and related constituents: Nitrate-nitrogen shall not exceed 1.5 mg/L; ortho-phosphorus shall not exceed 0.4 mg/L; no increase in receiving water temperatures by more than 5 degrees Fahrenheit, median shading shall not fall below 70% along Chorro Creek downstream from Canet Road. Also, the benthic algae shall not exceed median aerial cover of 40% from the months of May through September downstream from Canet Road.

The nutrients and dissolved oxygen TMDLs are defined on daily basis, although monitoring and implementation may occur at different durations.

Waste Load Allocations (WLAs)

TMDL submittal identifies one point source in the watershed, California Men's Colony Wastewater Treatment Plant (NPDES # CA 0047856). Waste load allocations for this point source are expressed as concentration-based values. The dissolved oxygen related WLAs are equivalent to the TMDL values described for sodium, total dissolved solids, and receiving water temperature as described above. The

biostimulatory related WLAs are: median ortho-phosphorus concentrations shall not exceed current levels (approx. 0.4 mg/L as measured by comparison to effluent levels in 2005 and 2005) and monthly maximum nitrate-nitrogen concentrations shall not exceed 10 mg/L. (Note: The submittal acknowledges the CMC facility is scheduled for an upgrade/improvement in nutrient removal processes and this is expected to result in single digit nitrate-nitrogen conc. and ten-fold lower conc. of phosphorus discharges. The Regional Board confirmed the CMC upgrade installation occurred on May 30, 2007. See supplemental information.)

Load Allocations (LAs)

TMDL submittal identifies load allocations for land owners along Chorro Creek downstream of Canet Road: median stream shading shall not fall below 70%. The submittal does not explicitly define load allocations for nitrogen and phosphorus discharges from other non-point sources; e.g., agricultural runoff and natural sources (open space and undeveloped forest land); however it does summarize existing monitoring results (approx. 300 data points) for upstream watersheds and implies the existing nitrogen and phosphorus loads are minimal and likely to decline upon additional agricultural activities regulated through the State's Ag Waiver program. See discussion in supplemental information.

Based on the information in the Basin Plan Amendment and the attachment, EPA concludes the State's approach of setting TMDLs and allocations on a concentration basis is appropriate for the water and pollutants of concern and consistent with the provisions of CWA and federal regulations. See 40 CFR 130.2(i). These allocations are suitable for daily load evaluations.

8. Margin of Safety: *Submission describes explicit and/or implicit margin of safety for each pollutant.*

(Basin Plan Amendment Resolution, p.2; Staff Report, p. 36)

The TMDL submittal utilizes the existing water quality standards and an implicit margin of safety. The TMDLs for nitrate-nitrogen and shade are based on local information and thus also presumed to be more conservative and therefore provide an implicit margin of safety.

EPA considers this a permissible and appropriate way of dealing with uncertainties in addressing water quality in Chorro Creek.

9. Seasonal Variations and Critical Conditions: *Submission describes method for accounting for seasonal variations and critical conditions in the TMDL(s).*

(Basin Plan Amendment Resolution, p. 2; Staff Report, p. 33)

The submittal identifies that the TMDLs and allocations apply year round to the CMC plant discharge, although the critical condition is late summer when little or no natural flow is present in waters upstream of the CMC discharge point. The critical season is established as May through September when shading should be equal to or more than 70%.

The State's analysis adequately accounts for the seasonal variations and critical conditions by establishing TMDLs and allocations that vary in response to differences in flow conditions.

10. Public Participation: *Submittal documents include provision of public notice and public comment opportunity; and explain how public comments were considered in the final TMDL(s).*

The Regional Board provided adequate opportunities for public comment on the TMDLs through direct mailings, public meetings, and formal hearings. Public comments were received in writing and in oral testimony. The State demonstrated how it considered these comments in its final decision by providing reasonably detailed responsiveness summaries.

The Regional Board held three public meetings in 2000 and 2001. Another meeting (March 2006) was held with CMC representatives. In April 2006, the Regional Board sent notification of public hearing to stakeholder; the hearing was held on July 7, 2006.

The State demonstrated how it provided sufficient opportunities for public comment.

11. Technical Analysis: *Submission provides appropriate level of technical analysis supporting TMDL elements.*

The TMDL analysis provides a thorough review and summary of available information concerning nutrient and dissolved oxygen impairments in the Chorro Creek watershed.

EPA concludes the State was reasonably diligent and appropriate in its technical analysis of nutrients and related constituents contributing to impairments in Chorro Creek.

12. Reasonable Assurances: *[may require EPA review] If wasteload allocations are made less stringent based on inclusion of load allocations that reflect nonpoint source reductions, submission describes how there are reasonable assurances necessary nonpoint source reductions will occur.*

NOT APPLICABLE

13. Other: *Table for clarifying submittal for TMDL waterbody-combinations for corresponding 303(d) listing, new impairment findings or non-impairment findings.*

TMDLS for 303d list	Listed Year
Chorro Creek - nutrient	2002
Chorro Creek – dissolved oxygen	2006
TMDLS for new impairments	N/A

JUL 19 2007

Dorothy Rice
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Ms. Rice:

Thank you for submitting total maximum daily loads (TMDLs) to address pathogens in Watsonville Slough. The TMDLs were submitted on December 28, 2006 and received by EPA on ~~January 4, 2007~~. Concurrent with the submitted TMDLs, the State included a Use Attainability Analysis (UAA) to amend the water quality standards for Watsonville Slough and its tributaries by removing shellfish harvesting as a designated use. EPA approved the UAA on March 28, 2007.

Watsonville Slough is included on California's 2004-2006 Clean Water Act Section 303(d) list for impairment due to pathogens. During the TMDL development process, the State identified four tributaries: Harkins Slough, Gallighan Slough, Struve Slough and Hanson Slough that also exceeded the State's fecal coliform standards associated with recreational contact. Pursuant to the requirements of Section 303(d)(1), the State adopted TMDLs to address fecal coliform, an indicator of potentially harmful pathogens, in Watsonville Slough and four tributaries.

During the decision-making process, the State clearly identified these additional water body-pollutant combinations as water quality limited waters for which TMDLs are required. The State provided sufficient documentation to support its determination of pathogen impairment and provided opportunities for public review and comment on the additional water body-pollutant identifications. The State's decision to concurrently identify additional water quality limited segments and adopt TMDLs for those segments is consistent with the provisions of the Clean Water Act and federal regulations. As the State's decision to identify the additional water body-pollutant combinations is consistent with the requirements of Section 303(d) and federal regulations at 40 CFR 130.7, EPA hereby approves the identification of these additional combinations pursuant to Section 303(d)(2).

Based on EPA's review, I have concluded the TMDLs adequately address the pollutant of concern and, upon implementation, will result in attainment of applicable water quality standards. The TMDLs include waste load allocations and load allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State provided adequate opportunities for the public to review and comment on the TMDLs. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to Clean Water Act Section 303(d)(2).

The State's submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan or compliance schedule provided with the TMDLs. EPA generally concurs with the State's proposed implementation approaches. If the Regional Board contemplates including schedules of compliance in NPDES permits, it can only do so if they are consistent with a compliance schedule-authorizing provision that has been submitted to EPA under CWA Section 303(c) and approved by EPA.

The enclosed review discusses the basis for this approval decision. We appreciate the State and Regional Boards' work to complete and adopt the TMDLs and we look forward to our continuing partnership in TMDL development. If you have questions concerning this approval, please call me at (415) 972-3572 or Lynn Suer at (415) 972-3148.

Sincerely yours,

Alexis Strauss
Director, Water Division

Enclosure

cc: Roger Briggs, Central Coast RWQCB

TMDL Review Checklist

State: California

Water bodies: Watsonville Slough and tributaries

Pollutant(s): Pathogens

Date of Initial Submission: December 28, 2006

Date Received by EPA: January 4, 2007

Dates of Supplemental Submission(s) and Receipt by EPA: March 28, 2007 (UAA approval by EPA), June 30, 2007 (email from Central Coast RWQCB)

EPA Reviewer: Karen Irwin

1. Submittal Letter:

State submittal letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by state and submitted to EPA for approval under 303(d). Acknowledge if any supplemental material was provided and receipt date.

The TMDLs were submitted on December 28, 2006 and received on January 4, 2007. As supplemental material concurrently submitted with the TMDLs, the State provided a Use Attainability Analysis (UAA) to amend the water quality standards for the Watsonville Slough and its tributaries by removing Shellfish Harvesting as a designated use. (Note: EPA separately approved the UAA under Clean Water Act Section 303(c) on March 28, 2007.) On June 30, 2007, we received supplemental clarification of the TMDLs from Lisa McCann, Central Coast Regional Water Quality Control Board (Regional Board).

The Regional Board adopted TMDLs for the Watsonville Slough and tributaries on March 24, 2006 (Regional Board Resolution R3-2006-0025). The Resolution contains the Basin Plan amendment and describes elements of the TMDLs. The California State Board (SWRCB) approved the TMDLs on September 21, 2006 (SWRCB Resolution 2006-0067) and the State Office of Administrative Law approved them on November 20, 2006 (OAL file # 06-1102-02 S).

EPA finds the State's analysis concerning water body impairment associated with pathogens in the Watsonville Slough and tributaries to be reasonable and consistent with the requirements of Section 303(d).

2. TMDLs Included:

The submittal clearly identifies the water segments and pollutants or stressors for which TMDLs were developed. The submittal should include the water segment identifier (e.g., NHD code) for each segment addressed. The submittal should clearly identify the TMDLs adopted for currently 303(d) listed waterbody-pollutant combinations. It should also clarify if TMDLs were adopted for new impairment findings (by waterbody-pollutant combinations) that do not exist on the current 303(d) list. If appropriate, the submittal should describe any assessment decisions that may have resulted in non-impairment status for water/pollutant combinations that exist on State's most current 303(d) list.

Watsonville Slough was included on the State's 1998 and 2002 Section 303(d) lists as impaired due to

pathogens, as well as on the current 2004-2006 Section 303(d) list. (The current list describes Watsonville Slough as a Water Quality Limited Segment Being Addressed by a USEPA-approved TMDL, however, EPA has requested the State to re-categorize it as a Water Quality Limited Segment Still Needing a TMDL since EPA has not yet approved the Watsonville Slough TMDLs. EPA 2004-06 303(d) List decision letter to SWRCB, June 28, 2007, pg. 18.)

The State's submittal addresses pathogens in the Watsonville Slough Watershed, which includes four tributaries to the Watsonville Slough: Harkins Slough, Gallighan Slough, Struve Slough and Hanson Slough. The submittal demonstrates that these four tributary sloughs exceed Basin Plan numeric water quality objectives for fecal coliform, which are pathogen-indicator organisms, thus documenting the State's finding of impairment. [Basin Plan Amendment Resolution ("Resolution"), Attachment 1, p. 6] The Regional Board confirms that the public had opportunity to comment on the data that supported the Regional Board's decision to consider these water bodies impaired, therefore, TMDLs were required. (June 30, 2007 email from Lisa McCann.)

EPA concurs with the State's finding of impairment for the four water body-pollutant combinations not included on the State's 2004-2006 Section 303(d) list. The State's adoption of pathogen TMDLs for these water bodies as part of the Watsonville Slough watershed is appropriate.

3. Water Quality Standards Attainment: *TMDL and associated allocations are set at levels adequate to result in attainment of applicable water quality standards.*

The TMDLs identify water contact recreational use (REC-1) and non-contact recreational use (REC-2) as beneficial uses related to fecal coliform in the Watsonville Slough Watershed. [Final Project Report, p. 3] The numeric TMDLs for the five sloughs are concentration-based and equal to the REC-1 fecal coliform standards contained in the Basin Plan: 200 most probable number (MPN)/100ml (geometric mean) and 400MPN/100ml (maximum). The waste load allocations and load allocations for each responsible discharger or group of dischargers cannot exceed 200 MPN/100ml and 400 MPN/100ml. [Resolution, Attachment 1, p. 75 ("the allocation to each responsible party is the receiving water fecal coliform concentration equal to the TMDL").] Protecting to the level of the REC-1 standards will also result in attainment of the less stringent fecal coliform REC-2 standards.

The State reasonably concluded that attainment of the numeric targets and associated TMDLs, waste load allocations, and load allocations will result in attainment of the applicable numeric water quality objectives [Resolution, Attachment 2, pp. 56-57]. This finding is supported by monitoring requirements in the TMDLs for responsible parties to provide data representing their respective fecal coliform loadings. [Resolution, Attachment 1, pp. 7-9 and Attachment 2, p. 69] While genetic analysis suggests that some exceedences could be due to natural background sources (bird feces), the CCRWCQB does not believe the analysis supports a conclusion that the sloughs will not achieve the REC-1 standards if controllable sources are removed. Furthermore, future hydrological improvements resulting from implementing elements of the proposed Watershed Conservation Plan could improve circulation and reduce natural background bacteria loads. (June 30, 2007 email from Lisa McCann.)

4. Numeric Target(s): *Submission describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.*

The numeric TMDL targets are equal to the applicable fecal coliform water quality standards in the REC-1 designation. Fecal coliform are pathogen-indicator organisms. The applicable water quality standards are:

- 1) Water Contact Recreation (REC-1): Fecal coliform concentration, based on a minimum of not less

than five samples for any 30-day period, shall not exceed a log mean of 200 per 100ml, nor shall more than 10% of total samples during any 30-day period exceed 400 per 100ml.

2) Non-Contact Water Recreation (REC-2): Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 2000 per 100ml, nor shall more than 10% of samples collected during any 30-day period exceed 4000 per 100ml.

[Resolution, Attachment 2, p. 3]

EPA concludes that the State's approach to apply the existing numeric water quality objectives for recreational uses as the allocations in these waters is reasonable, environmentally protective, and consistent with existing standards.

5. Source Analysis: *Point, non-point, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all significant sources have been considered. Point, nonpoint, and background sources of pollutants of concern are described, including the magnitude and location of sources. The submittal demonstrates all significant sources have been considered.*

The submittal contains an assessment of all readily available data and information concerning sources of pathogens in the Watsonville Slough watershed. Point sources include the Santa Cruz County urban and landfill stormwater systems and sanitary sewer collection system; the City of Watsonville urban stormwater and sanitary sewer collection systems, and; other miscellaneous facilities with industrial stormwater permits which are "not expected to be sources of pathogens" in the Watsonville Slough watershed. [Resolution, Attachment 2, pp. 47-49 and 56] Nonpoint sources include humans, pets, livestock, land-applied manure in irrigation agriculture, and uncontrollable (natural background) bird sources. [Resolution, Attachment 2, p. 52]

The submittal adequately considered all significant sources of pathogens in Watsonville Slough and tributaries.

6. Loading Capacity Linkage Analysis: *Submittal describes relationship between numeric target(s) and identified pollutant sources. Submittal clearly identifies loading capacity. For each pollutant, describes analytical basis for conclusion that sum of allocations and margin of safety does not exceed the loading capacity of the receiving water(s).*

The TMDLs do not apply load-based limits based on the reasoning that 1) they are not practical to establish in this watershed system due to both the natural hydrologic functioning of the sloughs and their extensive alteration; and 2) defining and controlling bacteria levels on a mass basis is impractical due to the potential for bacteria re-growth and die-off. [Resolution, Attachment 2, p. 52]

The link between pollutant loads and water quality objectives is established because the numeric WLAs and LAs are the REC-1 fecal coliform water quality objectives. Fecal coliform are pathogen-indicator organisms.

7. TMDL and Allocations:

TMDL—Submittal identifies the total allowable load, which is set equal to or less than the loading capacity. TMDL is expressed in terms of mass-based, concentration-based or other equivalent approaches that are consistent with federal requirements. If TMDL has seasonal features then please describe. TMDLs and allocations should be expressed in terms of daily time steps. If the TMDL and/or allocations are also expressed in terms other than mass loads per day, the submittal explains why it is reasonable and appropriate to express the TMDL in those terms.

Allocations—Submittal identifies appropriate waste load allocations for all point sources and load allocations for all non-point sources. Allocations are expressed in terms of mass-based, concentration-based or other equivalent approaches, the submittal explains why it is reasonable and appropriate to express in those terms. If point sources are present, submittal identifies existing NPDES permits by name and number. More discussion of point sources in watershed. If no point sources are present, waste load allocations are zero. More discussion of non-point sources. If no non-point sources are present, then load allocations are zero.

TMDLs for Watsonville Sloughs:

The concentration-based TMDL numeric targets for pathogens are set at the same level as the REC-1 water quality objectives in the Basin Plan; these concentration based values apply to the TMDLs, the wasteload allocations for point sources and load allocations for nonpoint sources:

Fecal Coliform:

Geometric Mean: ≤ 200 MPN/100ml (not less than 5 samples over a 30-day period)

Maximum: 400 MPN/100ml (not more than 10% of total samples during a 30-day period)

The natural background allocation equals the TMDL numeric targets. [Resolution, Attachment 1, p. 6]

Receiving water fecal coliform is set to the level of the REC-1 fecal coliform standards for the following sources and water bodies. [Resolution, Attachment 2, p. 56]

Waste Load Allocations for Point sources:

Santa Cruz County (urban stormwater) - Watsonville, Struve and Harkins Sloughs. (NPDES General Permit No. CAS000004)

City of Watsonville (urban stormwater) - Watsonville, Struve and Harkins, Gallighan, and Hanson Sloughs. (NPDES General Permit No. CAS000004)

Santa Cruz County Freedom Sanitation District (Sanitary Sewer Collection System) - Harkins Slough.

City of Watsonville (Sanitary Sewer Collection System) - Watsonville and Struve Sloughs.

Santa Cruz County (landfill stormwater) - Gallighan Slough.

Load Allocations for Nonpoint sources:

Operators or owners of irrigated lands who land-apply manure - Watsonville and Harkins Sloughs.

Operators or owners of livestock facilities and animals - Watsonville and Harkins Sloughs.

Based on the information in the Basin Plan Amendment and the attachment, EPA concludes that the State's approach of setting TMDLs and allocations on a concentration basis is appropriate for the water bodies and pollutants of concern and is consistent with the provisions of CWA and federal regulations. See 40 CFR 130.2(i). These allocations are suitable for daily load evaluations.

8. Margin of Safety: *Submission describes explicit and/or implicit margin of safety for each pollutant.*

The TMDL submittal states: "A margin of safety has been established implicitly through the use of the protective numeric targets, which are in this case the water quality objectives for the beneficial uses of the Sloughs. The pathogen TMDL for Watsonville Sloughs is the water quality objective for REC-1. The Central Coast Regional Water Quality Control Plan states that 'Controllable water quality shall conform to the water quality objectives... When other conditions cause degradation of water quality beyond the levels or limits established as water quality objectives, controllable conditions shall not cause further degradation of water quality.' Because the allocation for controllable sources is set at the water quality objective, if achieved these allocations will by definition achieve the water quality objectives. Thus, in

this TMDL there is no uncertainty relative to the effect of loads from controlled sources on water quality.” [Resolution, Attachment 2, p. 57]

EPA considers this an appropriate approach for dealing with uncertainty concerning the relationship between TMDL, waste load allocations, load allocations, and water quality conditions.

9. Seasonal Variations and Critical Conditions: *Submission describes method for accounting for seasonal variations and critical conditions in the TMDL(s).*

These TMDLs and allocations apply year-round. The submittal compared data from the summer and winter sampling periods; while genetic analysis supports a preliminary conclusion that impairment is more likely during winter, exceedence data provide no clear pattern of seasonal variation. The submittal identifies critical conditions in the Watsonville Slough and tributaries necessary for pathogen impairment. [Resolution, Attachment 2, pp. 53-54]

The State’s analysis adequately accounts for seasonal variations and critical conditions.

10. Public Participation: *Submission documents provision of public notice and public comment opportunity; and explains how public comments were considered in the final TMDL(s).*

The Regional Board held a public hearing on March 24, 2006 and received and responded to public comments. [Resolution, Attachment 7] The SWRCB also held a public hearing on September 21, 2006 and received and responded to public comments.

The State demonstrated that it provided sufficient opportunities for public comments and considered public comments in its final decision by providing reasonably detailed responsiveness summaries.

11. Technical Analysis: *Submission provides appropriate level of technical analysis supporting TMDL elements.*

The technical analysis provides a thorough review and summary of available information concerning pathogen impairments in the Watsonville Slough watershed. EPA concludes that the State was reasonably diligent and appropriate in its technical analysis.

12. Reasonable Assurances: *If waste load allocations are made less stringent based on inclusion of load allocations that reflect nonpoint source reductions, submission describes how there are reasonable assurances that necessary nonpoint source reductions will occur.*

Not Applicable.

13. Other: *table for clarifying submittal for TMDL waterbody-combinations for corresponding 303(d) listing, new impairment findings or non-impairment findings.*

TMDLS for 303d list	Listed Year
Watsonville Slough – pathogens	2002
TMDLS for new impairments	N/A

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION IX

75 Hawthorne Street
San Francisco, CA 94105-3901

MAY 03 2007

Ms. Dorothy Rice
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Ms. Rice:

Thank you for submitting the total maximum daily loads (TMDLs) to address sediment in the Pajaro River. The submission was dated December 28, 2006 and was received on January 4, 2007. The State of California adopted the TMDLs to address suspended sediment in the following water quality limited segments as identified on the State's 2002 Clean Water Act Section 303(d) list: Pajaro River, Llagas Creek, Rider Creek Gulch and San Benito River.

Based on EPA's review, I have concluded the TMDLs adequately address the pollutant of concern, and will, upon implementation, result in attainment of applicable water quality standards. The TMDLs include allocations as needed, take into consideration seasonal variations and critical conditions, and provide an adequate margin of safety. The State provided adequate opportunities for the public to review and comment on these TMDLs. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to Clean Water Act Section 303(d)(2).

The State's submittal also contains a detailed plan for implementing the TMDLs. Current federal regulations do not define TMDLs as containing implementation plans; therefore, EPA is not taking action on the implementation plan or compliance schedules provided with the TMDLs. EPA generally concurs with the State's proposed implementation approaches. If the Regional Board contemplates including schedules of compliance in NPDES permits, it can only do so if they are consistent with a compliance schedule-authorizing provision that has been submitted to EPA under Clean Water Act Section 303(c) and approved by EPA.

The enclosed review discusses the basis for this approval decision. We appreciate the State and Regional Boards' work to complete and adopt the TMDLs and we look forward to our continuing partnership in TMDL development. If you have questions concerning this approval, please call me at (415) 972-3572 or Janet Parrish at (415) 972-3456.

Sincerely yours,

Janet Hashimoto
for Alexis Strauss, Director
Water Division

cc: Robert Briggs, Central Coast RWQCB

TMDL Review Checklist

State: California

Waterbodies: Pajaro River, Llagas Creek, Rider Creek, and San Benito River

Pollutant(s): Sediment/Siltation

Date of Initial Submission: December 28, 2006

Date Received By EPA: January 4, 2007

Dates of Supplemental Submission(s) and Receipt by EPA: N/A

EPA Reviewer: Janet Parrish

1. Submittal Letter:

State submittal letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by state and submitted to EPA for approval under 303(d). Acknowledge if any supplemental material was provided and receipt date.

Submittal letter dated December 28, 2006 and received January 4, 2007.

The Central Coast RWQCB adopted the sediment TMDL for Pajaro River on December 2, 2005 (RWQCB Resolution # R3-2005-0132). The California State Board (SWRCB) approved the sediment TMDL on November 16, 2005 (SWRCB Resolution # 2005-0086). The Basin Plan amendment was approved by the SWRCB on September 21, 2006 under Resolution No. 2006-0068. The State Office of Administrative Law approved the TMDL on November 27, 2006 (OAL file # 06-1102-01 S). The submittal addresses four waterbodies: the Pajaro River, including Llagas Creek, Rider Creek and the San Benito River (TMDL Final Project Report, p. 1), all of which were identified on the State's 2002 CWA Section 303(d) list for sedimentation/siltation (TMDL Final Project Report, p. 3)

The submittal contained the TMDL Final Project Report (TMDL Report) dated November 2005, and the Central Coast RWQCB Resolution, including the Basin Plan Amendment dated September 8, 2006.

2. TMDLs Included:

The submittal clearly identifies the water segments and pollutants or stressors for which TMDLs were developed. The submittal should include the water segment identifier (e.g., NHD code) for each segment addressed. The submittal should clearly identify the TMDLs adopted for currently 303(d) listed waterbody-pollutant combinations. It should also clarify if TMDLs were adopted for new impairment findings (by waterbody-pollutant combinations) that do not exist on the current 303(d) list. If appropriate, the submittal should describe any assessment decisions that may have resulted in non-impairment status for water/pollutant combinations that exist on State's most current 303(d) list.

The submittal addresses the Pajaro River (32 mi), including Llagas Creek (15 mi), Rider Creek (1.8 mi) and the San Benito River (86 mi) (TMDL Final Project Report, pp. 1,3).

3. Water Quality Standards Attainment: *TMDL and associated allocations are set at levels adequate to result in attainment of applicable water quality standards.*

(TMDL report, pp. 6-21)

Narrative water quality objectives exist for sediment in the Central Coast RWQCB Basin Plan. Two

categories of numeric targets have been developed for the Pajaro River TMDLs: suspended sediment concentration/durations and streambed characteristics. Together, these are designed to protect the most sensitive beneficial uses of the watershed, which are those related to cold and warm water habitat. The State relied on well-known literature sources to supporting the values selected; those values are protective of the most sensitive beneficial uses.

The State reasonably concluded that attainment of the numeric targets and associated TMDLs, waste load allocations, and load allocations will result in attainment of the applicable numeric water-quality objective.

4. Numeric Target(s): *Submission describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.*

(TMDL report, pp.8-13)

The numeric targets were developed from narrative water quality objectives to protect the most sensitive beneficial uses in the Pajaro River watershed, which are those related to cold and warm water habitat, including spawning, migration, and rearing. Data on steelhead trout and local warm water fish communities (e.g., threespine stickleback, pikeminnow, prickly sculpin, sucker, California roach, speckled dace, carp, and Sacramento blackfish) in the Pajaro River were assembled to identify sediment characteristics protective of those species.

The suspended sediment targets were based on a "Severity of Ill Effects" (SEV) framework (Newcombe & Jensen, 1996, in TMDL Report p. 9) combined with a watershed model developed to evaluate current suspended sediment loading a scenario of sediment reductions (based on a model run from 1986-2000). The sediment reduction scenario, identified as the TMDL conditions, evaluated reductions of 100% in road erosion in three subbasins; an 80% decrease of sediment from cropland, fallow fields and mines; a 60 % decrease from orchards and pastureland; and a 20% decrease from rangeland. The results of the model under these conditions were used as the numeric targets for suspended sediment concentration. Targets for each of seven subwatersheds were developed (TMDL report, p. 16).

Streambed characteristic targets for residual pool volume, median diameter of spawning gravels, and distribution of sediments in spawning gravels from two size fractions were identified based on targets established for other Central Coast sediment TMDLs. These characteristics were identified to ensure that sediment accumulation in streambed habitat does not degrade the spectrum of beneficial uses.

This TMDL submittal adequately defines the beneficial uses and the numeric water quality objectives to be achieved.

5. Source Analysis: *Point, non-point, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all significant sources have been considered. Point, nonpoint, and background sources of pollutants of concern are described, including the magnitude and location of sources. The submittal demonstrates all significant sources have been considered.*

(TMDL report, pp. 22-25)

The TMDL report summarizes the sediment sources contributing to the impairment. They are primarily nonpoint, and include agricultural operations, silviculture, urban land use, rangeland and grazing activities, sand and gravel mining operations, streambank erosion, roads, and natural erosion processes. There are no large MS4s (Municipal Separate Storm Sewer Systems) covered by Phase I of the NPDES stormwater program, but the cities of Watsonville, Hollister, Gilroy and Morgan Hill are designated as small MS4s, and are required to develop and implement stormwater management plans.

6. Loading Capacity Linkage Analysis: *Submittal describes relationship between numeric target(s) and identified pollutant sources. Submittal clearly identifies loading capacity. For each pollutant, describes analytical basis for conclusion that sum of allocations and margin of safety does not exceed the loading capacity of the receiving water(s).*

(TMDL report, pp. 26-36)

The TMDL is the sediment loading that would be expected if all the land uses were similar to more natural conditions as a result of optimal reductions in anthropogenic sources (TMDL report, p. 34). The load analysis was used to determine time-variable nonpoint source contributions from subwatersheds using the Soil and Water Assessment Tool (SWAT) model. Establishing the relationship between the in-stream water quality targets and source loading is a critical component of the TMDL development. The SWAT model was applied to the Pajaro River watershed to determine existing sediment loads and evaluate optimal TMDL load reductions. The targets and loading capacity are closely linked, as the numeric targets for suspended sediment concentration were developed by running the watershed model using existing conditions, and sediment reduction conditions as follows (TMDL report p. 14): 100% reductions in road erosion in three subbasins where roads are known to contribute significantly to sediment loading (TMDL Report p. 26); an 80% decrease of sediment from cropland, fallow fields and mines; a 60 % decrease from orchards and pastureland; and a 20% decrease from rangeland. This was considered to be the "controllable anthropogenic sources." This determined the loading capacity. After these reductions, loading rates from the anthropogenic sources are comparable to loading rates from shrubland and grassland areas (TMDL report pp. 14, 33). These reductions translated to numeric targets for suspended sediment concentration in each of seven watersheds (TMDL report, p. 16).

The linkage analysis for this TMDL (TMDL report, p. 38-39) is intended to demonstrate that waste load allocations and load allocations will result in attainment of the water quality objectives. The SWAT model was used to analyze the total and land use specific sediment loads. Available monitoring data was used to calibrate the model, and then used to estimate existing conditions and conditions following sediment reductions; conditions under reductions were set as targets. A direct, numeric linkage between sediment loadings and streambed characteristics targets cannot be established, but previous studies of northern California streams has demonstrated that a linkage exists.

The submittal adequately describes the relationship between the numeric targets, pollutant sources and the total assimilative capacity (loading capacity) of the waterbody.

7. TMDL and Allocations:

TMDL—Submittal identifies the total allowable load, which is set equal to or less than the loading capacity. TMDL is expressed in terms of mass-based, concentration-based or other equivalent approaches that are consistent with federal requirements. If TMDL has seasonal features then please describe. TMDLs and allocations should be expressed in terms of daily time steps. If the TMDL and/or allocations are also expressed in terms other than mass loads per day, the submittal explains why it is reasonable and appropriate to express the TMDL in those terms.

Allocations—Submittal identifies appropriate waste load allocations for all point sources and load allocations for all non-point sources. Allocations are expressed in terms of mass-based, concentration-based or other equivalent approaches, the submittal explains why it is reasonable and appropriate to express in those terms. If point sources are present, submittal identifies existing NPDES permits by name and number. More discussion of point sources in watershed. If no point sources are present, waste load allocations are zero. More discussion of non-point sources. If no non-point sources are present, then load allocations are zero.

Loading Capacity

By setting the TMDL to the sediment load that would be expected if all the land uses were similar to more natural conditions as a result of optimal reductions in anthropogenic sources (TMDL report, p. 34), the TMDL is set equal to loading capacity.

Waste Load Allocations for Point Sources and Load Allocations for Nonpoint Sources

Load allocations and waste load allocations are identified by land use for each of seven subwatersheds, and they are expressed in metric tonnes (TMDL report, p. 36). Land use categories are crop, fallow and orchard; forest; pasture and range; urban lands; roads; barren; and sand and gravel mining. The time period is expressed on an annual basis (TMDL report, p. 36). It is implied that the expression of allocations on an annual basis is appropriate based on the statements about the natural fluctuations of sediment loading throughout the year and from year-to-year.

The TMDLs were set by determining sediment source and load reduction categories based on land use. Urban/residential areas are included as both point source (NPDES stormwater) and nonpoint source (TMDL report, p. 34). For urban lands, the allocations are waste load allocations if the area falls within NPDES Phase 2 urban boundaries (TMDL report, p. 36). There are small MS4s that fall within these boundaries in Watsonville, Hollister, Gilroy and Morgan Hill (TMDL report, pp. 24-25). These cities are required to develop an implement stormwater management plans that address water quality related issues.

For every other land use category not within the NPDES Phase 2 urban boundaries, the allocations are load allocations. These land use categories include crop, fallow, orchard, forest, pasture, range, roads, barren land, sand and gravel mining, and urban lands outside of NPDES Phase 2 boundaries.

EPA concludes that the State's approach of defining the TMDLs and allocations in terms of tonnes of sediment per day and allocating by land use type is appropriate for the pollutant of concern and is consistent with the provisions of CWA and federal regulations. See 40 CFR 130.2(j)

8. Margin of Safety: *Submission describes explicit and/or implicit margin of safety for each pollutant.*

(TMDL report, p.37)

The submittal incorporates an implicit margin of safety by: 1) using a multiple-year simulation period to consider varied hydrologic conditions, seasonality and critical conditions; 2) exposure category methodology incorporating a range of suspended sediment concentrations and durations of exposure associated with a given response level; applying the exposure category methodology separately to each subwatershed, incorporating differences among them; calibrating the model to minimize the uncertainty of loading relationships; and applying more protective numeric targets to the San Benito River to account for the uncertainty of whether suspended sediment from the San Benito River is transported directly to the Pajaro River

EPA considers this an appropriate approach for dealing with uncertainty concerning the relationship between TMDL, wasteload allocations, load allocations, and water quality conditions.

9. Seasonal Variations and Critical Conditions: *Submission describes method for accounting for seasonal variations and critical conditions in the TMDL(s).*

(TMDL report, p. 40)

Sediment concentration data for the Pajaro River watershed show that the largest loading of sediment to the watershed typically occurs during the winter months at high-flow periods. Sediment loading generally can also be sporadic over long periods; for example, 80 percent of the total loading over a 10-year period could be delivered in one wet year. This TMDLs account for seasonal variations and critical

conditions by modeling a long-term simulation period covering a variety of hydrologic and rainfall conditions, and calibrating the model to observations over long periods to capture the variability.

10. Public Participation: *Submission documents provision of public notice and public comment opportunity; and explains how public comments were considered in the final TMDL(s).*

(TMDL report, p. 53, RWQCB Administrative Record pp. 00734 ff., pp. 1342 ff.)

During the course of TMDL development, staff from the Central Coast RWQCB initiated a public participation process that included forming, in 2001, a Pajaro River TDL Advisory Committee comprised of staff and watershed stakeholders. The committee met several times in 2003 and 2004. Staff presented highlights of the sediment TMDL report in August 2004. A public comment period on the draft TMDL was open from August 26, 2005 to October 10, 2005, and the public notice was published August 26, 2005. A public hearing was held December 2, 2005, and the notification of that meeting was published on August 27, 2005. An additional public comment period occurred from October 15, 2005 to December 1, 2005; Notice was published on October 15, 18, and 19, 2005. Staff adequately responded to comments (RWQCB Administrative Record pp. 1342 ff.). The SWRCB also provided an opportunity for public comment (notice dated August 4, 2006, according to SWRCB Administrative Record).

The State demonstrated how it provided sufficient opportunities for public comment and adequately responded to public comments.

11. Technical Analysis: *Submission provides appropriate level of technical analysis supporting TMDL elements.*

The TMDL analysis provides an acceptable review and summary of available information about sediment in the watershed, and a sufficiently clear discussion of analytical methods used to calculate this TMDL.

EPA concludes the State was reasonably diligent in its technical analysis of the sediment loading in the watershed to set the TMDL at a level that will achieve water quality standards.

12. Reasonable Assurances: *If waste load allocations are made less stringent based on inclusion of load allocations that reflect nonpoint source reductions, submission describes how there are reasonable assurances that necessary nonpoint source reductions will occur.*

Ms. Celeste Cantú
Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Ms. Cantú:

Thank you for submitting the total maximum daily load (TMDL) for pathogens in San Luis Obispo Creek, California. The submission letter to EPA was dated August 18, 2005. Based on our review, EPA concludes the TMDL adequately addresses the pollutant of concern and upon implementation will result in attainment of applicable water quality standards. The TMDL includes allocations as needed, takes into consideration seasonal variations and critical conditions, and provides an adequate margin of safety. The State has provided adequate opportunities for public review of the TMDL. All required elements are adequately addressed; therefore, the TMDL is hereby approved pursuant to Clean Water Act Section 303(d)(2).

The attached review discusses the basis for this approval decision in greater detail. I appreciate the State and Regional Boards' work to complete and adopt the TMDL and look forward to our continuing partnership in TMDL development. If you have questions concerning this approval, please call me at (415) 972-3572 or Cheryl McGovern at (415) 972-3415.

Sincerely yours,

Alexis Strauss
Alexis Strauss

**Staff Report Supporting Approval of TMDL:
Pathogens for Contact Recreation – San Luis Obispo Creek
September, 2005**

Background

This TMDL and implementation plan were adopted by the Central Coast Regional Water Quality Control Board on December 3, 2004 (Resolution No. R3-2004-0142) and by the State Water Resources Control Board on May 19, 2005 (Resolution No. 2005-0037). The TMDL addresses bacterial contamination of San Luis Obispo Creek due to discharges from point and nonpoint sources.

TMDL Review

On August 18, 2005, the State Water Resources Control Board submitted the final TMDL to EPA for approval. EPA received the package on August 23, 2005. Pursuant to Clean Water Act Section 303(d) and 40 CFR 130.2 and 130.7, EPA reviewed the TMDL submittal package to ensure that all required TMDL elements have been adequately addressed. EPA is taking no action with respect to the implementation plan as federal regulations do not provide for federal approval or disapproval of state TMDL implementation plans.

EPA's review is presented in the attached checklist, which documents EPA's findings that all required elements and an adequate level of technical justification for each element are included in the TMDL submission. Therefore, the TMDL should be approved.

TMDL Checklist

State: California

Waterbodies: San Luis Obispo Creek

Pollutant(s): Pathogens

Date of State Submission: August 18, 2005

Date Received: August 23, 2005

EPA Reviewer: Cheryl McGovern

Review Criteria	Comments
<p>1. Submittal Letter: State submittal letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by state and submitted to EPA for approval under 303(d).</p>	<p>The State submittal letter of August 18, 2005 indicates the TMDL for pathogens in San Luis Obispo Creek was approved by the Regional Board on December 3, 2004 and by the SWRCB on May 19, 2005. The submittal letter requests EPA approval pursuant to Section 303(d) (2) of the Clean Water Act.</p>
<p>2. Water Quality Standards Attainment: TMDL and associated allocations are set at levels adequate to result in attainment of applicable water quality standards.</p>	<p>The TMDL and associated allocations are set equal to the applicable concentration based water quality standards for fecal coliform bacteria and will therefore result in attainment of those standards. (Administrative Record, pages 729-804; basin plan amendment, pp. 4-7).</p>
<p>3. Numeric Target(s): Submission describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.</p>	<p>The applicable concentration based water quality objectives for fecal coliform bacteria were selected as the numeric targets appropriate to ensure protection of water contact recreation (REC-1) as the primary beneficial use of concern. (Basin Plan Amendment, p. 4). Although the water quality standard for protection of shellfish harvesting for human consumption is more stringent than for REC-1, the most downstream reaches of the creek at the confluence of the ocean where shellfish harvesting occurs consistently meet this more restrictive standard. Therefore, a more stringent target was unnecessary to ensure attainment of water quality standards.</p>
<p>4. Source Analysis: Point, nonpoint, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all significant sources have been considered.</p>	<p>The source analysis is described in the final TMDL staff report (p. 18 et seq.). Sources were characterized through evaluation of available water quality data, flow data, biological source tracking analysis, land-use information, and GIS coverages. The TMDL includes estimates of bacteria loadings associated with point sources (wastewater treatment discharges and regulated municipal stormwater sources) and nonpoint sources (humans, livestock, birds, and other animal sources).</p>
<p>5. Allocations: Submittal identifies appropriate wasteload allocations for point sources and load allocations for nonpoint sources. If no point sources are present, wasteload allocations are zero. If no nonpoint sources are</p>	<p>Wasteload and Load Allocations are described in Table 8.1 on page 38 of the Final TMDL Staff Report along with Table 1 in the basin plan amendment. Specific wasteload allocations are assigned to wastewater and stormwater sources. Specific load</p>

<p>present, load allocations are zero.</p>	<p>allocations are provided to address livestock managed by Cal Poly and to background sources. A general load allocation is also made to address all stream reaches and sources not covered by the specific individual wasteload and load allocations.</p>
<p>6. Link Between Numeric Target(s) and Pollutant(s) of Concern: Submittal describes relationship between numeric target(s) and identified pollutant sources. For each pollutant, describes analytical basis for conclusion that sum of wasteload allocations, load allocations, and margin of safety does not exceed the loading capacity of the receiving water(s).</p>	<p>Page 40 of the Final TMDL Staff Report describes the relationship between the sources and the numeric target. Because the numeric targets, TMDL, and allocations are identical, it was unnecessary to provide a sophisticated linkage analysis in this case.</p>
<p>7. Margin of Safety: Submission describes explicit and/or implicit margin of safety for each pollutant.</p>	<p>As described on p. 44 of the Final TMDL Staff Report, the TMDL provides an implicit margin of safety by incorporating concentration based allocations equal to the numeric targets, careful analysis of worst case scenarios during low flow conditions, and by taking a very conservative approach to considering pathogen die-off (i.e., the TMDLs assumed no pathogen die-off, which results in an environmentally conservative set of allocations).</p>
<p>8. Seasonal Variations and Critical Conditions: Submission describes method for accounting for seasonal variations and critical conditions in the TMDL(s)</p>	<p>Since the TMDL and wasteload/load allocations are equal to the water quality standard they must be met regardless of season or flow conditions. As discussed on p. 41 of the Final TMDL Staff Report, this approach ensures attainment of water quality standards in all seasons and under all flow conditions.</p>
<p>9. Public Participation: Submission documents provision of public notice and public comment opportunity; and explains how public comments were considered in the final TMDL(s).</p>	<p>The Regional Board provided public notice of the proposed TMDL decision through newspaper advertisements and web site postings. Public meetings and hearings were held at both the Regional Board and State Board levels. The Regional Board provided written responses to public comments demonstrating how public input was considered (See Administrative Record, pages 721-728.)</p>

Dear Ms. Cantú:

Thank you for submitting the total maximum daily load (TMDL) to address sediment impairment of San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek, California. The submission letter to EPA was dated January 29, 2004. Based on our review, EPA concludes that the TMDL adequately addresses the pollutant of concern and that upon implementation will result in attainment of applicable water quality standards. The TMDL includes allocations as needed, takes into consideration seasonal variations and critical conditions, and provides an adequate margin of safety. The State has provided adequate opportunities for public review of the Basin Plan Amendments that include all of the components of the TMDL. All required elements are adequately addressed; therefore, the TMDL is hereby approved pursuant to Clean Water Act Section 303(d)(2).

The attached review discusses the basis for this approval decision in greater detail. I appreciate the State and Regional Boards' work to complete and adopt the TMDL and look forward to our continuing partnership in TMDL development. Dear Ms. Cantú:

Thank you for submitting the total maximum daily loads (TMDLs) for pathogens and sediments in Morro Bay, Los Osos Creek, and Chorro Creek, California. The pathogen TMDLs were submitted for EPA review in a letter dated December 10, 2003, and the sediment TMDLs were submitted in a letter dated December 20, 2003. Based on our review, EPA concludes that the TMDLs adequately address the pollutants of concern and that upon implementation will result in attainment of applicable water quality standards. The TMDLs include allocations as needed, take into consideration seasonal variations and critical conditions, and provide adequate margins of safety. The State has provided adequate opportunities for public review of the Basin Plan Amendments that include all of the components of the TMDLs. All required elements are adequately addressed; therefore, the TMDLs are hereby approved pursuant to Clean Water Act Section 303(d)(2).

The attached review checklists discuss the basis for this approval decision in greater detail. I appreciate the State and Regional Boards' work to complete and adopt the TMDLs and look forward to our continuing partnership in TMDL development. If you have questions concerning this approval, please call me at (415) 972-3572 or Cheryl McGovern at (415) 972-3415.

Sincerely,

Alexis Strauss 20 Jan. 2004

TMDL Checklist

State: California

Waterbodies: Morro Bay, Los Osos and Chorro Creeks

Pollutant(s): Pathogens

Date of State Submission: December 10, 2003

EPA Reviewer: Cheryl McGovern

Review Criteria	Comments
<p>1. Submittal Letter: State submittal letter indicates final TMDL(s) for specific water(s)/pollutant(s) were adopted by state and submitted to EPA for approval under 303(d).</p>	<p>Submittal letter, p. 1: TMDL is for pathogens in Morro Bay, Los Osos Creek and Chorro Creek.</p> <p>Submittal letter enclosure, p. 17: Morro Bay and Chorro and Los Osos Creeks were listed on the State's 1998 303(d) list for impairment due to pathogens.</p>
<p>2. Water Quality Standards Attainment: TMDL and associated allocations are set at levels adequate to result in attainment of applicable water quality standards.</p>	<p>1. Submittal letter enclosure, p. 7: " This TMDL is expressed as concentrations that are equal to the numeric targets. For Bay waters, a geometric mean of 14 MPN/100mL must be achieved and no more than 10% of the samples may be over 43 MPN/100mL for fecal coliform. For tributaries (Chorro and Los Osos Creeks and fresh water seeps) to the Bay, the geometric mean shall not exceed 200 MPN/100mL over a 30-day period nor shall 10% the samples exceed 400 MPN/100nL over any 30-day period for fecal coliform. Point and nonpoint sources cannot exceed the concentrations specified above. Therefore, the wasteload allocations and load allocations, which include background levels, are also equal to the numeric targets.</p> <p>2. Submittal letter enclosure, p. 17: The applicable basin plan standard for the protection of Water Contact Recreation which was previously approved by EPA is "Fecal coliform concentration, based on a minimum of not less than five samples for any 30-day period, shall not exceed a log mean of 200/100 ml, nor shall more than ten percent of total samples during any 30-day period exceed 400/100 ml." Morro Bay is also listed for impairment of Shellfish Harvesting from pathogens but the Regional Board does not have a standard established for fecal coliform for the protection of Shellfish Harvesting.</p> <p>3. Submittal letter enclosure, p. 25. Targets for protection of Shellfish Harvesting in Morro Bay are based on regulations that Department of Health Services follows. Numeric water quality objectives for fecal coliform bacteria are set by the US Department of Health Services Food and Drug Administration's National Shellfish Sanitation Program.</p>

3. Numeric Target(s): Submission describes applicable water quality standards, including beneficial uses, applicable numeric and/or narrative criteria. Numeric water quality target(s) for TMDL identified, and adequate basis for target(s) as interpretation of water quality standards is provided.

See above under #2.

	waste management, septic system maintenance and improved central treatment facilities, and feral dog/cat reductions are included in the Implementation Plan. (p.1285)
7. Margin of Safety: Submission describes explicit and/or implicit margin of safety for each pollutant.	TMDL Report, located in the Administrative Record, on p. 1282 states: "A margin of safety has been established implicitly through the use of protective numeric targets." The level of uncertainty is minimized through the approach of setting the TMDLs equal to the concentration based water quality standards.
8. Seasonal Variations and Critical Conditions: Submission describes method for accounting for seasonal variations and critical conditions in the TMDL(s)	TMDL Report , located in the Administrative Record, on p. 1282 provides an assessment of wet weather bacteria concentrations and dry weather bacteria concentrations and the sources for each of these seasonal variations. Although Chorro Creek has the highest concentrations of bacteria during dry weather, during wet weather conditions Los Osos Creek and ground water contributions increase and percentage of bacteria from Chorro Creek decreases.
9. Public Participation: Submission documents provision of public notice and public comment opportunity; and explains how public comments were considered in the final TMDL(s).	The Regional Board held public workshops and hearings for a 2002 and 2003 Basin Plan Amendment to incorporate a TMDL and implementation plan for Morro Bay, Los Osos Creek, and Chorro Creek. The State Board also held approval hearings. The State provided ample opportunities for public review of and comment on the TMDL provisions as contained in the Administrative Record. Public comments were adequately addressed in staff reports prepared by Regional Board in preparation for numerous public hearings
10. Technical Analysis: Submission provides appropriate level of technical analysis supporting TMDL elements.	Staff report and responsiveness summaries provided detailed technical justifications for each TMDL element.
Note: The following criteria do not apply to all TMDLs, but must be applied in the situations noted.	
11. Monitoring Plan for TMDLs Under Phased Approach (where phased approach is used): TMDLs developed under phased approach identify implementation actions, monitoring plan and schedule for considering revisions to TMDL.	The monitoring plan is identified on p. 1296-1301 of the Administrative Record, with follow-up actions described if lack of compliance is not achieve.
12. Reasonable Assurances (for waters affected by both point and nonpoint sources): Where point source(s) receive less stringent wasteload allocations because nonpoint source reductions are expected and reflected in load allocations, implementation plan provides reasonable assurances that nonpoint implementation actions are	The Basin Plan Amendment adopted by the Regional Board contains an implementation plan for attainment of the numeric targets, wasteload and load allocations with a concentration target that meets the appropriate water quality standard for protection of each beneficial use impacted by fecal coliform..

<p>4. Source Analysis: Point, nonpoint, and background sources of pollutants of concern are described, including the magnitude and location of sources. Submittal demonstrates all significant sources have been considered.</p>	<p>The Source Analysis is described in the staff report. The TMDL Administrative Record, Volume 1, p. 1-82 describes the study, report, technical advisory committee meeting notes, conclusions, recommendations, and staff report that used DNA fingerprinting to identify sources of pathogens to the impaired waterbodies. Funding of \$260,000 was directed to this effort and Regional Board resources of 1.5 person years, in addition to participation by US EPA staff. The TMDL identifies all sources of pathogens as nonpoint and point source. The study matched samples of DNA from local samples to the site-specific library which was developed for this purpose. Although "false positives" and "no match" findings cluttered the background of readings, the number of samples taken and QA resulted in the findings being accepted by the TAC and peer reviewers.</p>
<p>5. Allocations: Submittal identifies appropriate wasteload allocations for point sources and load allocations for nonpoint sources. If no point sources are present, wasteload allocations are zero. If no nonpoint sources are present, load allocations are zero.</p>	<p>As stated above, wasteload allocations and load allocations are expressed as concentrations which is consistent with other pathogen TMDL's developed for California waterbodies. This approach is appropriate for bacteria because bacterial concentrations are a more discriminating indicator of human health risks associated with bacterial exposure than mass loads. This approach is also consistent with the requirements of 40 CFR130.2(i), which provides that TMDLs may be expressed in terms of "other appropriate measures." The Morro Bay National Estuary Program's volunteer monitoring program and the CA Department of Health Services monitoring program will be used to measure compliance with TMDL targets.</p>
<p>6. Link Between Numeric Target(s) and Pollutant(s) of Concern: Submittal describes relationship between numeric target(s) and identified pollutant sources. For each pollutant, describes analytical basis for conclusion that sum of wasteload allocations, load allocations, and margin of safety does not exceed the loading capacity of the receiving water(s).</p>	<p>TMDL as provided in the Administrative Record enclosed with the submittal letter, p. 1256 reports that concentration based targets are more logical because public health risks related to recreating in waters, or eating shellfish from contaminated waters are greater with organism concentrations and that the sources of this contamination are not easily controlled on a mass basis. Volume three of the Administrative Record includes historical studies that implicate pathogens with human illness from consumption of shellfish from Morro Bay. The Administrative Record, p. 1281 states a model was developed to understand the relative change in bacteria concentrations, rather than absolute percentages due limited data set information. Reductions in all non-natural sources is required. Targets will be included in the one NPDES permit in the Chorro Creek subwatershed basin. Voluntary grazing management measures, boat management, pet</p>

sufficient to result in attainment of load allocations in a reasonable period of time. Reasonable assurances may be provided through use of regulatory, non-regulatory, or incentive based implementation mechanisms as appropriate.

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

AUG 22 2003

CENTRAL REGIONAL
WATER QUALITY CONTROL BOARD
SAN FRANCISCO, CA 94105-3901

AUG 20 PM 1:52

REPLY TO: 93401

WTR-5

Celeste Cantú
Executive Director
California State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Ms. Cantú:

The U.S. Environmental Protection Agency (EPA) has reviewed an amendment to the *Water Quality Control Plan, Central Coast Region (Basin Plan)*. In today's action we approve the amendment to remove the nitrate objective for the San Lorenzo River from Chapter 3, *Water Quality Objectives*, of the Basin Plan, in association with the November 4, 2002 request for EPA approval of the Total Maximum Daily Load (TMDL) for nitrate in the San Lorenzo River which EPA has already approved.

This amendment was adopted by the Central Coast Regional Water Quality Control Board (Regional Board Resolution No. 00-001) on June 2, 2000 and approved by the State Water Resources Control Board and State Office of Administrative Law on November 15, 2001 and February 13, 2002, respectively. Section 303(c) of the Clean Water Act (CWA) requires EPA to approve or disapprove new or revised state-adopted water quality standards. EPA's action on the amendment to the Basin Plan is further detailed below.

ESA Consultation with the Services on EPA's Action

We have determined that our approval of this amendment will have no effect on federally listed threatened or endangered species, and is not likely to result in the adverse modification of critical habitat.

Scope of EPA's Approval

Section 303(c) requires EPA to review and approve or disapprove new or revised water quality standards submitted by a state. For purposes of section 303(c), water quality standards generally include designated uses, water quality criteria (or "beneficial uses" and "water quality objectives," respectively under California law), an antidegradation policy, and associated implementation policies.

In a previous action EPA concluded that the Total Maximum Daily Load (TMDL) for San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek adequately addresses the pollutant of concern, and upon implementation, will result in attainment of the water quality standard for nitrate in the listed water bodies. EPA approved the TMDL pursuant to Clean Water Act Section 303(d)(2).

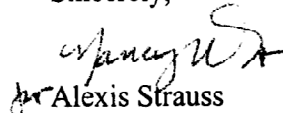

Printed on Recycled Paper

We have concluded that the removal of the nitrate objective for the San Lorenzo River will protect the respective beneficial uses for the River. Our conclusion is based on our review of the Complete Administrative Record for this action, the presence of general objectives in the Basin Plan (including provisions related to taste and odors, biostimulatory substances, and dissolved oxygen) and the existence of an adopted TMDL and implementation plan.

The record also indicates that the State provided adequate opportunity for public review and comment and demonstrated how public comments were considered in the final decision to remove the nitrate objective for the San Lorenzo River and replace it with a numeric target contained in the TMDL. All required elements have been adequately addressed; therefore the amendment of the Basin Plan to remove the nitrate objective for the San Lorenzo River is hereby approved.

If there are any questions regarding our action on the Basin Plan amendment, please contact Gary Sheth, of my staff, at (415) 972-3516. As always, we look forward to continued cooperation with the State in achieving our mutual environmental goals.

Sincerely,

Alexis Strauss

**UNITED STATES ENVIRONMENTAL PROTECTION AGENCY**

REGION IX

75 Hawthorne Street

San Francisco, CA 94105-3901

MAY 30 2000

Edward C. Anton
Acting Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, CA 95812-0100

Dear Mr. Anton:

The Environmental Protection Agency (EPA) has reviewed the Water Quality Control Plan for the Central Coast Region (Basin Plan), September 8, 1994, including the amendments adopted since EPA's previous action on June 27, 1988. EPA has reviewed the portions of the amendments related to water quality standards, consisting of antidegradation, beneficial uses, water quality criteria and implementation of those standards in surface waters. EPA's action here is therefore related to two amendments as well as chapters 2 and 3 and the relevant sections of chapter 4 of the Basin Plan. This review is being conducted pursuant to section 303 (c) of the Clean Water Act (CWA) and the implementing federal regulations at 40 CFR 131.

EPA is hereby approving the water quality standards adopted by the State of California and by the Central Coast Regional Water Quality Control Board (Regional Board 3) Resolutions Numbers 94-01, 94-06 and 95-04 pursuant to Section 303(c) of the CWA and the implementing federal regulations at 40 CFR 131. These Regional Board 3 Resolutions, which have been approved by the State Water Resources Control board (SWRCB) as Resolution Number 94-44, on May 19, 1994, SWRCB Resolution Number 94-115, on November 17, 1994, and SWRCB Resolution Number 95-53, on August 17, 1995, are currently in force.

EPA apologizes for the delay in taking action on these amendments. As you know, we have been immersed in developing the California Toxics Rule (CTR) since 1994. The CTR provides the basis for addressing the critical issues relating to toxic pollutants and also facilitates our ability to conduct endangered species consultation on the Basin Plans. We have now completed that effort and are now concluding our review of the pending Basin Plans. The CTR was published in the Federal Register on May 18, 2000.

EPA compliments the State on its efforts to include the public in the development and review of new and revised water quality standards. Such involvement on the part of the public is an integral component of a successful water quality program. EPA finds that the public participation procedures followed by the State in the development and adoption of Regional Board 3 Resolutions Numbers 94-01, 94-06 and 95-04 are consistent with the procedural requirements of 40 CFR 131.20(b).

Please note that EPA found, pursuant to Section 7 of the Endangered Species Act and 50 CFR Part 402, that EPA's approval of this amendment will have no effect on threatened or endangered species or their designated critical habitat.

I. Regional Board 3 Resolutions Nos. 94-01 and 94-06: Regional Board 3 Resolutions Nos. 94-01 and 94-06 are considered together, below. The detailed basis for EPA's approval follows.

Regional Board Resolution Number 94-01: This amendment was adopted by the Regional Board 3 as Resolution Number 94-01, February 11, 1994, and approved by the SWRCB on May 19, 1994 as SWRCB Resolution Number 94-44. It includes the results of a California Polytechnic University contract investigation that assigned beneficial uses to approximately 300 water bodies and revised beneficial uses for approximately 150 water bodies. Modifications in this amendment are listed as follows:

1. Revise Beneficial Use definitions to statewide consistent format.
2. Assign Beneficial Uses to approximately 300 water bodies and revise Beneficial Uses for approximately 150 water bodies.
3. Updated organic chemicals objectives.
4. Add groundwater objectives for the Paso Robles ground water basin.
5. Update Regional Board program descriptions.
6. Update State/Regional Board Plans and Policies.
7. Add description of Quality Control and Data Management.
8. Add description of Water Quality Assessment.

Regional Board Resolution Number 94-06: This amendment was adopted by Regional Board 3 as Resolution Number 94-06, September 8, 1994, and approved by the SWRCB on November 17, 1994 as SWRCB Resolution Number 94-115. This amendment was created in response to a SWRCB revision of Beneficial Uses that was completed too late to be considered by the Cal Poly investigators as a part of Regional Board 3 Resolution Number 94-01.

Changes to Chapter 2, Beneficial Uses: These amendments consist of revisions to Table 2.1 to:

1. Add eight beneficial use categories not previously listed.
2. Add 29 water bodies not previously listed.
3. Correct errors previously noted in the Struve Slough designations.
4. Replace existing "E" and intermittent "I" listings with "X" to note that a beneficial use is present in the water body.

The beneficial use definitions were revised to be consistent with State-wide. As a result, ten new beneficial use categories were added to the existing 12 so that there are now 22 beneficial use categories that are commonly used throughout the state. Minor language revisions were included although no appreciable change resulted from these revisions. No previous categories were dropped. These beneficial use changes do not affect any of the underlying water quality criteria.

Relevant beneficial use categories have been added to Table 2-1. The changes include adding: "Estuarine Habitat" (EST), "Preservation of Biological Habitats of Special Significance" (BIOL), "Rare, Threatened or Endangered Species" (RARE), "Freshwater Replenishment" (FRESH), "Hydropower Generation" (POW) and "Aquaculture" (AQUA) beneficial use categories which were not previously listed in the Basin Plan. The "Navigation" (NAV), "Commercial and Sportfishing" (COMM) and "Shellfish Harvesting" (SHELL) beneficial uses, which were previously included in Table 2-2 (Uses of Coastal Waters), were expanded to include freshwater bodies and are now included in Table 2-1. Although a "Saline Habitat" definition was previously listed in the Basin Plan, it was not listed in either Table 2-1 or 2-2 because Soda Lake is the only water body identified for this beneficial use. It is now included in Table 2-1.

All waters listed in Table 2-1 are designated as fishable/swimmable, based on the beneficial use designations of Water Contact Recreation (REC1) and either Inland Saline Water Habitat (SAL), Spawning, Reproduction or Early Development (SPWN), EST, Marine Habitat (MAR), Wildlife Habitat (WILD), Warm Fresh Water Habitat (WARM) or Cold Fresh Water Habitat (COLD), as required by the CWA with the exceptions of Warner Lake in the Pajaro River Hydrologic Unit (HU), Big Pocket Lake in the Estero Bay HU, Soda Lake in the Carrizo Plain HU, and the Twitchell Reservoir in the Santa Maria HU. REC1 use designations for the above listed waters are not included in the 1994 current standards. An explanation or some basis for these omissions should be supplied in the staff report.

Modifications to Chapter 3, Water Quality Criteria: Revisions to existing water quality criteria (referred to as "objectives" in the basin plan) are limited to human health criteria for certain organic constituents contained in Table 3-1 (page III-6): Organic Concentrations Not to be Exceeded in Domestic or Municipal Supply. The Region added thirteen new constituents without changing any other previously listed constituents or concentrations. The following list of 13 new constituents was added and is consistent with EPA's Maximum Contaminant Levels (MCLs) at CFR 40, Part 141: Bentazon, Carbofuran, Chlordane, 1,1-Dichloroethane, cis-1,2-Dichloroethylene, trans-1,2-Dichloroethylene, 1,2-Dichloropropane, Di(2-ethylhexyl) phthalate, Glyphosate, Heptachlor, Heptachlor epoxide, Trichlorofluoromethane and 1,1,2-Trichloro-1,2,2-Trifluoroethane.

Pursuant to Section 303(c) of the CWA, and the implementing federal regulations at 40 CFR 131, EPA hereby approves the water quality standards amendments to the Basin Plan that were approved by the SWRCB in Resolutions Numbers 94-44 and 94-115.

II. Regional Board Resolution Number 95-04: Entitled: Adopting Amendments to the Water Quality Control Plan and Requesting Approval from the State Water Resources Control Board to Rescind On-site System Prohibition and add Waste Water Management Plan for the San Lorenzo

River Watershed, Santa Cruz County.

This amendment was adopted by Regional Board 3 as Resolution Number 95-04, April 14, 1995. This amendment requests approval from the SWRCB to rescind on-site system prohibition and add a waste water management plan (including a nitrate management plan component) for the San Lorenzo River watershed in Santa Cruz County, California. The SWRCB approved the amendment as SWRCB Resolution Number 95-53 on August 17, 1995, after amending Regional Board 3's language as follows (disapproved portions are in << >>):

A. Attachment A, item 1, middle of paragraph

"Alternatives have been evaluated and solutions proposed to reduce septic system problems <<to respond to this Plan's discharge prohibition>> in certain areas of the valley."

B. Attachment A, item 1, final sentence

<< "Implementation of the Wastewater management Plan precludes the Regional Board from reestablishing the discharge prohibition." >>

These modifications by the SWRCB effectively return the option to the Regional Board of prohibiting discharge in the area.

The Nitrate Management Plan for the San Lorenzo River implementation plan section of this amendment includes, in general:

- A. One acre minimum parcel size for new development served by septic systems.
- B. Implement the *Wastewater Management Plan for the San Lorenzo Wastewater*.
- C. Improve treatment at Boulder Creek Country Club Treatment Plant to reduce nitrate discharge by using wastewater reclamation on the golf course.
- D. Shallow leachfield requirements for new and repaired septic systems.
- E. Implement enhanced technology for ~50% nitrogen removal for septic systems in sandy soils.

Regional Board 3 Resolution Number 95-04 partially satisfies Total Daily Maximum Load (TMDL) requirements with the Nitrate Management Plan. The Nitrate Management Plan identifies the nitrate problem, some sources and adds implementation measures.

Pursuant to Section 303(c) of the CWA, and the implementing federal regulations at 40 CFR 131, EPA hereby approves this water quality standards amendment to the Basin Plan that was approved by SWRCB as Resolution Number 95-53.

III. Federally-Approved Water Quality Standards

The federally-approved Water Quality Standards applicable to Regional Board 3 presently include:

1. The "Water Quality Control Plan for Central Coastal California", Chapters 2 and 3, and pertinent sections of Chapter 4, September 8, 1994.

2. The "Water Quality Control Plan for Ocean Waters of California", July 23, 1997.
3. The "Water Quality Control Plan for Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California", September 18, 1975, as amended.
4. The "Water Quality Control Policy for the Enclosed Bays and Estuaries of California", May, 1974.
5. Resolution 68-16, "Statement of Policy with Respect to Maintaining High Quality of Waters in California", as supplemented by State Water Resources Control Board Order No. WQ 86-17.
6. Memorandum to Regional Board Executive Officers from State Water Resources Control Board, Subject: Federal Antidegradation Policy, Oct. 7, 1987.

The federally promulgated National Toxics Rule (NTR) and California Toxics Rule (CTR) are also applicable to these waters.

IV. Issues to be addressed in the next Triennial Review

EPA notes that the standing Basin Plan, which is not a part of the amendments discussed above and therefore is not subject to today's action, contains several aspects that should be addressed in the upcoming triennial review. EPA recognizes that many of these issues have already been discussed by Regional Board 3 as priorities in the Regional Board 3 work plan, and EPA supports the Regional Board's efforts and shares those priorities. These issues are itemized below.

A. General Criteria for Toxic Substances in the Basin Plan

We have reviewed the standing basin Plan and have identified water quality criteria for certain toxic priority pollutants that are less stringent than EPA's recommended criteria and CA Title 22 recommendations. These are as follows:

Municipal and Domestic Supply, contained in Table 3-1: The criteria listed for lindane, methoxychlor, toxaphene, simazine and 1,1,2-trichloroethane are inconsistent with California Title 22, which is included in the water quality standards by reference. These numbers are also less stringent than EPA's MCLs.

Inorganic and Fluoride Concentrations not to be Exceeded in the Domestic or Municipal Supply, Table 3.2: Criteria are listed for 10 inorganic chemicals. Eight of the listed criteria

meet EPA's MCLs: arsenic, barium, chromium, lead, mercury, nitrate (as NO₃), selenium and silver. The MCLs for aluminum and cadmium, however, are less stringent than EPA's recommended criteria.

Toxic Metal Concentrations not to be Exceeded in Aquatic Life Habitats, mg/l, Table 3.5: The criteria for the seven constituents (cadmium, chromium, copper, lead, mercury, nickel and zinc (for hard waters) listed for the protection of Cold Freshwater Habitat (COLD), Warm Freshwater Habitat (WARM) and Shellfish Harvesting (SHELL) are less protective than EPA's criteria to protect aquatic life.

The criteria for the constituents identified above as less stringent than EPA's recommended criteria or CA's Title 22 recommendations should be updated during the next triennial review. It should also be noted that the California Toxics Rule (CTR) is currently in effect so the more stringent criteria will apply for CWA purposes, such as 401(c) certifications and NPDES permits. It may also be necessary to apply the more stringent California Title 22 requirements or the National Toxics Rule criteria in situations where the Basin Plan narrative criteria are not being met with the application of the less stringent criteria discussed above.

B. Beneficial Use designations needing clarification or other modifications

Municipal and Domestic Supply (MUN): According to SWRCB Resolution Number 88-63: Sources of Drinking Water, all surface and ground waters of California are considered MUN unless exempted due to (in brief) pollution, insufficient water, high salinity, treatment/process water, or agricultural drainage waters. EPA notes that some waters are not designated as MUN, with no apparent basis documented. Such documentation should be provided to EPA.

C. Water Quality Criteria Issues

Temperature: These objectives should be evaluated in light of recent advances in optimal temperatures for salmonids in California. EPA's present guidance is geared towards protecting the most sensitive species in the water body by season. Optimal temperature values are available in technical and scientific literature for various species for growth and survival of all life stages.

Bacteria: These objectives should be updated. The present Basin Plan water quality standards include only total and fecal coliform bacteria as indicators. In 1986, EPA published its 304(a) water quality criteria for bacteria which recommends the use of *Escherichia coli* and Enterococci rather than fecal coliforms for the protection of primary contact recreation. The epidemiological data upon which the national criteria are based suggest that these bacterial indicators are better correlated to water contact-exposure related health effects. In addition, EPA's Action Plan for Beaches and Recreational Waters (EPA/600/R-98/079, March 1999) calls for all states to adopt bacterial standards that are consistent with current EPA guidance by 2003. Regional Board 1 may continue the use of total and fecal coliform in addition to *E. coli* and Enterococci. The Basin Plan should be revised to include these criteria.

Dissolved oxygen: These objectives should be updated in the Basin Plan. The optimal levels of

DO at various life stages of salmonids need to be taken into account. Criteria recommended by EPA in 1986 include DO values for warm and cold water for embryo, larval and other life stages of salmonids. Values are available for salmonid waters with criteria ranging from "no production impairment" to "limit to avoid acute mortality". EPA recommends that attention to salmonids be incorporated into the Basin Plan DO objectives.

Antidegradation: At present the Basin Plan includes, by reference, SWRCB Resolution Number 68-16 (Statement of Policy with Respect to Maintaining High Quality of Water in California) as the Antidegradation policy. The discussion of implementation of the State's antidegradation policy should be expanded to clarify that the State has, in SWRCB Order 86-17, interpreted Resolution 68-16 to be fully consistent with federal antidegradation policy. An October 7, 1987 guidance memorandum provides procedures for implementing the antidegradation policy. This discussion also needs to be expanded to more fully address how the antidegradation policy will be applied to non-point sources. EPA will work with the State and Regional Boards to ensure that the State's procedures are consistent with federal antidegradation requirements.

Ammonia and Total Residual Chlorine: Objectives for these two pollutants should be developed for the next triennial review. An announcement in the Federal Register of the availability of EPA's latest revised national criteria guidance for ammonia was published on December 22, 1999, with a time-frame for expected state adoption of numeric ammonia criteria that will be applicable to all state waters. As noted in the announcement, EPA will likely promulgate criteria for any state that does not adopt such criteria into its water quality standards, in order to ensure that ammonia criteria are in effect in all states by 2004. EPA's water quality criteria guidance for chlorine is titled *Ambient Water Quality Criteria for Chlorine - 1984* (EPA 440/5-84-030), and was published in January 1985.

Priority toxic pollutant numeric criteria: The Basin Plan currently lacks adequate priority toxic pollutant numeric objectives. EPA recognizes that this issue is considerably resolved with the completion of the California Toxics Rule (CTR). However, as you are likely aware, EPA is committed to a schedule for re-evaluating the criteria included in the CTR for selenium, mercury, PCP and some metals over the next two years. Once that process has been completed, EPA is committed to propose criteria to amend those in the CTR within a year after completion of revised criteria guidance for these pollutants. EPA will have to amend the CTR unless the state and/or the Regional Board adopts new objectives based on the new criteria. In the meantime, the information and/or the revised criteria guidance, used with State narrative standards, would provide the Regional Boards a basis to develop more current water-quality based effluent limitations.

Toxicity standards: The Basin Plan currently includes a narrative toxicity standard. When the State Water Resources Control Board completes its action on the proposed Policy for Implementation of Toxics Standards for Inland Surface Waters, Enclosed Bays and Estuaries of California, statewide implementation procedures for chronic toxicity will be available to the regions. As part of subsequent triennial reviews, the Board should evaluate the combined requirements for acute and chronic toxicity, along with EPA's *Technical Support Document* (1991) and the *EPA Regions 9 and 10 Guidance for Implementing Whole Effluent Toxicity*

Testing Programs, to determine whether further actions are needed to update or supplement basin plan standards to ensure that beneficial uses are fully protected.

Biocriteria: We strongly encourage the Regional Board to develop and adopt biological criteria for inclusion in the Basin Plan. Development of biocriteria is identified in EPA's May 1998 "Water Quality Criteria and Standards Plan" as one of six priority objectives for the water quality standards program over the next decade. EPA Region IX's biocriteria plan, consistent with these priorities, seeks to work with states and tribes through grants and technical assistance to ensure progress to realize the full potential of bioassessments and biocriteria for managing water quality and protecting aquatic life in all water bodies.

Nutrients: Regional Board 3 should be aware that EPA is currently undertaking development of numeric nutrient criteria guidance applicable to lakes, streams and rivers, wetlands, and estuaries and near coastal waters as protection against eutrophication. The Agency's plan is to complete development of these criteria guidance by the end of the year 2000. Once water body-specific guidance and criteria are established, EPA anticipates that States will adopt nutrient criteria for waters that are not already covered by nutrient standards for over-enrichment into water quality standards no later than the end of the year 2003. We look forward to working with the Regional Board to accomplish this goal in the next triennial review of the Basin Plan.

EPA intends to continue to work closely with Regional Board 3 during the next triennial review process. Our aim is to take prompt action on any further Basin Plan amendments as well as to provide whatever assistance the Regional Board needs. Once again, EPA commends Regional Board 3 for its diligent efforts in revising the Basin Plan. If there are any questions regarding this action, please call me at (415) 744-1860, or have your staff contact Suesan Saucerman at (415) 744-1911 at EPA Region IX. As always, EPA looks forward to continued cooperation with the State in achieving our mutual environmental goals.

Sincerely,

Alexis Strauss
Director, Water Division

September 10, 1991

OFFICE OF THE
REGIONAL ADMINISTRATOR

Mr. W. Don Maughan, Chairman
State Water Resources Control Board
Paul R. Bonderson Building
901 P. Street, Box 100
Sacramento, CA 95801

Dear Mr. Maughan,

The Environmental Protection Agency (EPA) has reviewed the amendment to the Water Quality Control Plan (Basin Plan) for the California Regional Water Quality Control Board, Central Coast Region, as adopted by the State Water Resources Control Board (State Board) under Resolution No. 91-9 on January 24, 1991. It is my pleasure to approve this amendment, based on the finding that it is consistent with the protection of the public health and welfare, the protection of water quality, and the intent and purposes of the Clean Water Act (CWA). EPA's authority for approval is derived from §303(c) of the CWA and its implementing provisions in 40 CFR Part 131.

State Board Resolution No. 91-9 amends the Basin Plan for the Central Coast Region to allow discharges from desalination and circulating seawater systems into the Monterey Prohibition Zone.

EPA looks forward to continued partnership and cooperation with the State on these issues so that our mutual water quality goals are achieved.

Sincerely,

for Daniel W. McGovern
Regional Administrator

Ms. Angela Carpenter
California Regional Water Quality
Control Board - Central Coast Region
1102-A Laurel Lane
San Luis Obispo, CA 93401

Dear Ms. *Angela* Carpenter:

I have completed my review of the proposed new edition of the Central Coastal Water Quality Control Plan as submitted by your office to EPA, July 25, 1989.

My comments are presented in the following enclosure. These comments address those chapters in the basin plan pertinent to beneficial uses, water quality objectives, and implementation (Chapters 2, 3, and 4, respectively).

Please keep in mind that these comments are preliminary and should be the basis for discussion at the staff level. Some comments are meant to be simple, or naive inquiries about the Basin's water quality and, as I am not as well acquainted with your basin plan as I would like to be, your responses may be as plain and simple. On the other hand, some comments are intended to raise issues that should be addressed State-wide and should involve the State Water Resources Control Board. After your review and responses, we should be able to identify what the real issues are.

Therefore, please review the comments as enclosed and let me know if you feel a meeting is warranted. Please call me at 415/974-0895.

Sincerely,
Jovita
Jovita Pajarillo

08/15/89	ENCLOSURE	Page: 1
Comments on CENTRAL COASTAL WATER QUALITY CONTROL PLAN		

I. CHAPTER 2, PRESENT AND POTENTIAL BENEFICIAL USES

Discussion:

The State Water Resources Control Board recognizes Areas of Special Biological Significance (ASBS) as a designated beneficial use and those areas so designated require protection of unique species or biological communities. The Basin Plan lists seven ASBSs in the Central Coastal Basin and describes what an ASBS designation implies with regard to the Regional Board's policy on allowable discharges.

Comment:

Will the Regional Board designate a beneficial use much like the ASBS to those coastal waters recognized by the Federal Government as a National Marine Sanctuary? The Basin Plan identifies Elkhorn Slough as a Federally recognized National Estuary Sanctuary designee and EPA is aware that Monterey Bay is a candidate for National Marine Sanctuary designation by the end of this year. The criteria used by the National Oceans and Atmospheric Administration in considering special and unique waters for such a designation is very similar to those for the ASBSs. Will the Regional Board recognize these waters in the Basin Plan and assign special protection via a new beneficial use category or combine it with the ASBS use designation?

II. CHAPTER 3, WATER QUALITY OBJECTIVES

Discussion:

In reviewing the section titled "Objectives for all Inland Surface Waters, Enclosed Bays and Estuaries" (page III-3), I compared the Central Coastal Basin Plan with the recently adopted and approved revised basin plans for the North Coastal Region and the San Francisco Bay Region. Specifically in reviewing the general objectives, I noted a few omissions of basic objectives not included in the Central Coastal Basin Plan that were contained in these others. I will mention them and other comments here.

08/15/89	ENCLOSURE	Page: 2
Comments on CENTRAL COASTAL WATER QUALITY CONTROL PLAN		

Comment:

1. The Central Coastal Basin Plan lacks a general objective for salinity as follows:

"Controllable water quality factors shall not increase the total dissolved solids or salinity of waters of the State so as to adversely affect beneficial uses, particularly fish migration and estuarine habitat."

2. The Central Coastal Basin does not include a general objective for bacteria. However, the Basin Plan does provide fecal coliform objectives for specific beneficial uses (e.g., REC-1, REC-2 and SHELL) but lacks objectives for total coliform. The Regional Board may want to consider a total coliform objective as well as identifying the sources of objectives (i.e., National Shellfish Sanitation Program, Department of Health Services, or EPA criteria).

EPA bacteriological criteria for water contact recreation should also be considered for freshwater (enterococci and E. coli) and salt water (enterococci only).

Lastly, the municipal supply beneficial use does not have an objective for coliform bacteria. For surface water, DOHS recommends for fecal coliform (MPN/100 ml) a log mean ≤ 20 and for total coliform (MPN/100 ml) a log mean < 100 .

3. In the Basin Plan, waters designated for use as domestic or municipal supply have a water quality objective for radioactivity (page III-6). The objective includes the following statement:

"Waters shall not contain concentrations of radionuclides in excess of limits specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Sections 64441 and 64443, Table 5."

Is it possible to include the actual limits in the Basin Plan and cite its source, rather than citing a

08/15/89	ENCLOSURE	Page: 3
Comments on CENTRAL COASTAL WATER QUALITY CONTROL PLAN		

source and not providing what the limits are? I, for one, am not familiar with the source or know what the limits include. Also, consider for example, that the San Francisco Bay Basin Plan cites in its radioactivity objective:

"All other inland surface waters shall not exceed the limits specified in Section 30269 of the California Administrative Code."

Are the two "Codes" related? Consistent? One and the same? This is confusing to me.

Consider also that the North Coast and San Francisco Bay Basin Plans have included objectives for radioactivity for municipal supply waters as follows:

MUN

Radioactivity:

Combined Radium -226 and Radium -228 (pCi/l).....	5
Gross Alpha Particle Activity (pCi/l).....	15 (includes Radium -226 but excludes Radon and Uranium)
Tritium (pCi/l).....	20,000
Strontium -90 (pCi/l).....	8
Gross Beta Particle Activity (pCi/l).....	50

What is the Regional Board's rationale for not including these limits for radioactivity? Or more importantly, what is the State Board's position for requiring some consistency among the Regional Boards? Would the Regional Board consider updating its radioactivity objective?

08/15/89	ENCLOSURE	Page: 4
Comments on CENTRAL COASTAL WATER QUALITY CONTROL PLAN		

4. It may be a matter of concern for reasons of overall consistency to the State Water Resources Control Board to know that the general water quality objective for turbidity is quite diverse among the various water quality control plans. Based on my review of the Central Coast, North Coast and San Francisco Bay Basin Plans, each contains quite different objectives. EPA criteria for suspended solids or turbidity is contained in the Gold Book.
5. With regard to the general objective for toxicity, and I am conscious that this may be somewhat premature, but it is expected that the States will comply with section 303(c)(2)(B) of the Clean Water Act. Should the Regional Board insert some boilerplate language in Chapter 3 with regards to complying with the requirements of the Act? Perhaps, this question should rather be directed to the State Board for general guidance to the Regional Boards on how to address this in the Basin Plan.
6. The revised Basin Plan contains a table which represents the median surface water quality objectives (mg/l) for specific sub-basins/sub-areas (page III-14, Table 3-6). It is not clear whether the median values reflect the 50 percentile values of the monthly means for a calendar year.
7. The Basin plan should be updated to reflect changes in the 1987 Clean Water Act, specifically section 319 - the nonpoint source management program. Furthermore, the State Board has completed, and EPA has acted on, the State Nonpoint Source Assessment Report (SAR) and State Management Program (SMP). The basin plans should reflect the goals, findings and content of the SAR and SMP as appropriate. Again, the State Board should consider providing guidance to all the Regional Boards for updating basin plans to reflect the latest in nonpoint source assessment, controls and management.

June 27, 1988

Mr. W. Don Maughan
Chairman
State Water Resources Control Board
P.O. Box 100
901 P Street
Sacramento, CA 95801

Dear Mr. Maughan:

The U.S. Environmental Protection Agency has reviewed the water quality standards amendments contained in the revisions to the Water Quality Control Plan for the Central Coastal Basin as submitted by your office in a letter dated December 15, 1987 from James L. Easton, Executive Director. It is my pleasure to approve these amendments, based on the finding that they are consistent with the protection of the public health and welfare, the protection of water quality and the intent and purposes of the Clean Water Act. EPA's authority for approval is derived from Section 303(c) of the Clean Water Act and its implementing regulations embodied in 40 CFR Part 131.

These amendments:

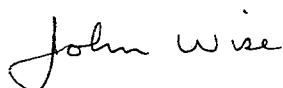

- 1) Revise numerical radioactivity standards and adopt radioactivity standards for all waters; and
- 2) Designate surface waters as COLD or WARM habitats with consequent protection for aquatic life.

In addition to these water quality standards amendments, the basin plan is amended by adding an exception provision to Chapter 5. These amendments are approvable under 40 CFR Part 130.

The State Water Resources Control Board approved these amendments in Resolution No. 87-36 on April 16, 1987.

EPA looks forward to working with the State to achieve this very important goal of protecting the environment. I commend the State for its cooperation in working with EPA to protect and enhance the quality of California's waters.

Sincerely,

for Daniel W. McGovern
Regional Administrator

Raymond Walsh
Interim Executive Director
State Water Resources Control Board
P.O. Box 100
Sacramento, California 95801

Dear Mr. Walsh:

I am pleased to inform you that the Environmental Protection Agency (EPA) has reviewed and approved the State Water Resources Control Board Resolution 85-88 as an amendment to the Water Quality Control Plan for the Central Coast Basin. The Resolution is titled as follows:

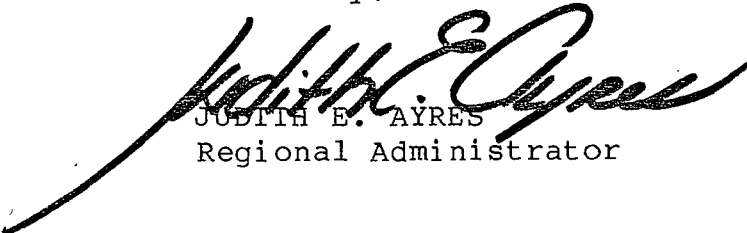

Resolution 85-88 - Approval of Revisions and Amendments to the Water Quality Control Plan for the Central Coast Basin Concerning Beneficial Uses of Certain Waters

This approval is based upon my determination that the water quality standards/beneficial uses are consistent with the protection of public health and welfare, the protection of the quality of the water, and the purposes of Section 303 (c) of the Clean Water Act.

I would like to commend the State Water Resources Control Board and the Central Coast Regional Board for their efforts in the preparation of these revisions and amendments to the basin plan regarding beneficial uses. The efforts of the California Department of Fish and Game are also greatly appreciated.

It is our pleasure to work with the State to protect and enhance the quality of California's waters.

Sincerely,

JUDITH E. AYRES

FILE
Basin Planning

April 17, 1984

Carole Onorato, Chairwoman
State Water Resources Control Board
P. O. Box 100
Sacramento, CA 95801

Dear Ms. Onorato:

I am pleased to inform you that the Environmental Protection Agency (EPA) has reviewed and approved State Water Resources Control Board (SWRCB) Resolution 84-11 as an amendment to the Water Quality Standards for waters of the Central Coast Region. This Resolution is titled as follows:

Resolution Number 84-11 - Consideration of an Amendment to the Water Quality Control Plan for the Central Coastal Basin (Revision and Amendment of Table 2-1, "Existing and Anticipated Uses of Inland Surface Waters").

This approval is based on my determination that the Water Quality Standards are consistent with the protection of public health and welfare, the protection of the quality of the water and the purposes of the Clean Water Act as provided by Section 303(c) of the Act.

The Water Quality Standards regulations require that a State conduct a use attainability analysis for those waters that have designated uses that do not include the uses specified in Section 101(a)(2) of the Clean Water Act (40 CFR 131.10(j)(1)). It is our understanding that as part of the next triennial review, the Central Coast Regional Water Quality Control Board will review the use attainability of its waters to reaffirm or update its currently designated beneficial uses.

I would like to commend the State Water Resources Control Board and the Regional Water Quality Control Board for their efforts in the preparation of this amendment. With this approval, the current Federally approved water quality standards for the Central Coast Region (3), along with those approved today, are the standards approved by our letters of October 24, 1975, January 9, 1980, December 10, 1981, and August 4, 1983.

-2-

In continuing toward refinement of these standards, it will be our pleasure to work with the State to protect the quality of California's waters.

Sincerely,

John Wise

for Judith E. Ayres
Regional Administrator

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

DATE: APR 12 1984

SUBJECT: Amendment to the Water Quality Standards for the Central Coast Basin (3), SWRCB Resolution Number 84-11

FROM: Brian McKeown *Brian McKeown*
California Branch

TO: Files EXR 5-3-3 Basin 3

We have reviewed the amendment to the water quality standards adopted by the California Water Quality Control Board, Central Coast Region, as Resolution Number 83-14 (Attachment 1). The State Water Resources Control Board approved the amendment as Resolution Number 84-11 (Attachment 2). EPA finds that this Amendment is approvable pursuant to Section 303(c) of the Clean Water Act. This action is based on the determination that this Amendment is consistent with the protection of public health and welfare, the protection of the quality of the water and the purposes of the Clean Water Act.

History

On March 20, 1975, the State Board approved the Water Quality Control Plan (Basin Plan) for the Central Coast Region. The Basin Plan was approved with conditions and interpretations by the Environmental Protection Agency on October 24, 1975. One approval condition gave the State the choice of: 1) revising the REC-2 (non-contact water recreation) coliform objective to be at least as stringent as that recommended in the Green Book, or 2) adding the designation of REC-1 (water contact recreation) to those waters now without a REC-1 designation. In addition, Section 101(a)(2) of the Clean Water Act states:

"...it is the national goal that wherever attainable, an interim goal of water quality which provides for the protection and propagation of fish, shellfish, and wildlife and provides for recreation in and on the water be achieved by July 1, 1983."

As part of the continuing planning process, the staff of the Central Coast Regional Water Quality Board (CCRWQCB) agreed to re-evaluate those water bodies which were not designated for water contact recreation (REC-1). A survey was conducted where local agencies and the public were asked to provide input about the current and anticipated uses of each water body. From the information obtained, the Regional Board is proposing that additional water bodies be designated for REC-1. This provides a greater degree of protection, since the REC-1 numerical bacteria objective is more stringent than that for REC-2. Those that did not receive a REC-1 designation were waters where:

PCW
16 Apr 84

- 1) "There is no public access";
- 2) "Water contact is prohibited by law and water quality protection is otherwise assumed by being designated for municipal water use";
- 3) "Flow only occurs during intense storms or storms of long duration that make water contact unlikely or unwise"; or
- 4) "Natural turbidity and mineral content preclude the use".

Approval

It has been EPA's position that any water body that can support REC-1 should be designated as such. If the use is prohibited, we recommended that the water body be designated anyway, or as an alternative, with footnotes explaining the restriction. This would protect the ability of the waterway to support the use without condoning or promoting the activity.

The Regional Board did not feel that it was appropriate to designate water bodies for water contact recreation if the use was prohibited. However, in lieu of REC-1 designation in Table 2-1, they did footnote the reasons why a REC-1 designation was not made. At this time we consider that the adopted amendment sufficiently protects the waters of the Central Coast Region and is approvable. In making this determination, it is our understanding that 3) above refers solely to true ephemeral streams and 4) refers to marshy or muddy areas that are physically unsuitable for REC-1.

On December 8, 1983, the new Water Quality Standards Regulations (40 CFR Part 131, dated November 8, 1983) became effective. These new regulations require the State to conduct a use attainability analysis when it has designated uses which do not comply with Section 101(a)(2) of the Act. ~~Therefore, as part of the next Triennial Review, the Central Coast Regional Board must re-examine the beneficial use designations where REC-1 or an aquatic life designation is not indicated and update them as appropriate by means of use attainability analyses.~~

EPA Headquarters has reviewed the amendment and found it to be approvable provided that it is based on all currently existing uses (Attachment 3). This condition has been met and the amendment is considered approvable. Public hearings were held as part of the regular Board meetings that were routinely noticed. The public was afforded the opportunity to comment, and responses were provided for all concerns.

Economic Considerations

There are no dischargers on any of the surface waters which were just designated for water contact recreation. These revisions were made merely to reflect existing uses. Therefore, no economic impact should occur due to the adoption of this amendment.

Recommendation

State Board Resolution Number 84-11 should be approved as an amendment to the water quality standards of the Central Coast Region as contained in the Water Quality Control Plan, Central Coast Region.

Basin Planning

August 4, 1983

Mrs. Carole Onorato, Chairwoman
State Water Resources Control Board
P. O. Box 100
Sacramento, CA 95801

Dear Mrs. Onorato:

I am pleased to inform you that the Environmental Protection Agency (EPA) has reviewed and approved State Water Resources Control Board (SWRCB) Resolutions 82-44, 82-64 and 83-33 as amendments to the Water Quality Standards for waters of the Central Coast Region. These Resolutions are as follows:

Resolution 82-44 - Amendments to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for the San Lorenzo River and Updating Some General Objectives Which Apply to All Inland and Surface Waters.

Resolution 82-64 - Amendments to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for the Salinas River.

Resolution 83-33 - Revision to Amendment to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for Endrin and Radioactivity.

This approval is based on my determination that the Water Quality Standards are consistent with the protection of public health and welfare, the protection of the quality of the water and the purposes of the Clean Water Act.

I would like to commend the State Water Resources Control Board and the Regional Water Quality Control Board for their efforts in the preparation of these amendments. With this approval, the current Federally approved water quality standards for the Central Coast Region (3), along with those approved today, are the standards approved by our letters of October 24, 1975, January 9, 1980 and December 10, 1981. The current amendments satisfy in part our 1975 approval conditions.

In continuing toward refinement of these standards, it will be our pleasure to continue to work together with the State to protect the quality of California's waters.

Sincerely,

John Wise

John Wise
Acting Regional Administrator

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

DATE: JUL 28 1983

SUBJECT: Amendments to the Water Quality Standards for the Central Coast Basin (3), SWRCB Resolution Numbers 82-44, 82-64, and 83-33

FROM: Brian McKeown *Brian McKeown*
Water Quality Standards
California Branch

Phil Woods *P. Woods*
Water Quality Standards Coordinator
Region 9

TO:

Files EXR 5-3-3 Basin 3

We have reviewed the amendments to the water quality standards adopted by the California Water Quality Control Board, Central Coast Region, as Resolution Numbers 82-07, 82-08 and 83-03. The State Water Resources Control Board approved these amendments as Resolution Numbers 82-44, 82-64, and 83-33, respectively. EPA finds that these water quality standards are approvable pursuant to Section 303(c) of the Clean Water Act. This action is based on the determination that these water quality standards are consistent with the protection of public health and welfare, the protection of the quality of the water and the purposes of the Clean Water Act.

These standards amendments apply to the Central Coast Region of California (Basin 3). They revise beneficial uses and water quality objectives in the San Lorenzo and Salinas Rivers in addition to updating general water quality objectives to reflect revisions and recodifications of the California Administrative Code.

History

On March 20, 1975, the State Board approved the Water Quality Control Plan (Basin Plan) for the Central Coast Region. The Basin Plan was approved with conditions and interpretations by the Environmental Protection Agency on October 24, 1975. One approval condition gave the State the choice of 1) revising the REC-2 objective for fecal coliform to be at least as stringent as that recommended in the Green Book, or 2) adding the designation of REC-1 to those waters now without a REC-1 designation. This condition of the approval has not yet been fully met. However, the Regional Board has been gradually updating beneficial use designations. (It is EPA's opinion that all water bodies that can support REC-1 should be designated as such. Even if these activities are prohibited (e.g., domestic water supply) or the area is inaccessible, the water bodies should be designated as REC-1, with footnotes explaining the restrictions.) This would protect the ability of the waterway to support the use without condoning or promoting the activity. If a waterway is not designated as REC-1,

it should be footnoted to explain why it is not possible to have contact recreation there (e.g., ephemeral stream, marsh etc.). Regional Board 3 (RB3) has been reviewing its beneficial use designations gradually (See Resolutions and RB3 letter of July 7, 1983).

Another 1975 approval condition required that numerical radioactivity objectives be established for all waters. Since all ocean waters and fresh waters designated as domestic water supplies (MUN) were and are protected by numeric radioactivity objectives, our 1975 condition applied to very few waters in Basin 3. These waters which do not have numerical limits established are covered by existing narrative objectives for radioactivity. EPA staff feels that these objectives provide adequate protection for beneficial uses, and considers this approval condition satisfied.

The last approval condition required that waters not designated to provide protection for Aquatic Life (cold, warm, marine, etc.) shall be designated COLD, WARM or MAR as a minimum, unless an individual detailed justification for an exception is included in the Basin Plan for each water segment. The Regional Board has been gradually updating Beneficial Uses and complying with this condition.

In addition to these conditions, the 1975 Approval Letter contained EPA's interpretations of the revisions to assure that they were consistent with the State's views (Attachment A). Since a generally positive reply was received from the State, these interpretations conform to the State and EPA policy.

While the current amendments do not directly address the conditional approval, RB3 has updated some beneficial use designations for the Salinas River and several basinwide water quality objectives. Other changes are also included in these amendments and are discussed in the subsequent sections.

Approval

The SWRCB conditionally approved Resolution 82-44 on October 21, 1982, [RB3 Resolution Number 82-08-approved 7/9/82 (Attachment B)]. This resolution includes changes to the Basin Plan which incorporate some revisions and

recodifications of the California Administrative Code. The State has also revised their thermal plan (9/18/75) and ocean plan (1/19/78) and these changes are included in the Basin Plan Amendments. For the San Lorenzo River, a new water quality objective for nitrate has been established to control algal growth. In addition, the allowable sodium and chloride concentrations have been revised to reflect current water quality conditions. The resolution also changes water quality objectives from median to mean values since most of the current data is reported in this manner. The State conditions on the approval required the regional board to revise some specific items: 1) the concentration of endrin as listed in Title 22 should be set at .0002 mg/l to be consistent with the Federal guidelines, and 2) correct the Radioactivity Objectives to be consistent with Title 22 of the California Administrative Code.

The SWRCB approved Resolution Number 82-64 on December 16, 1982 [RB3 Resolution Number 82-08-approved 7/9/82 (Attachment C)]. This resolution revises beneficial use designations for the Salinas River, including a REC-1 designation as an intermittent beneficial use in certain reaches. In addition, it revises (increases) the water quality objective for sulfate in the reach of the Salinas River above Spreckles.

The SWRCB approved Resolution Number 83-33 on May 24, 1983. [RB3 Resolution Number 83-03-approved 2/25/83 (Attachment D)]. This resolution incorporates the conditions required by the SWRCB for their approval of Resolution Number 82-44. In addition, the Regional Board further amended the Basin Plan by inserting a supplemental paragraph under "Radioactivity" which specifies an advisory standard for uranium-derived alpha particles.

While the Regional Board has not yet fully complied with EPA's 1975 conditional approval of the Basin Plan, it has been slowly meeting EPA's request that the Regional Board add REC-1 and aquatic life designations to all appropriate waters. In addition to updating beneficial use designations, work is being done to limit biostimulants and set toxic limits. The recent amendments are consistent with these goals. [See RB3 letter of July 7, 1983 outlining their current program for review and revision of WQS. (Attachment E)].

Headquarters has reviewed the amendments and has found them to be consistent with EPA guidance. Also, a special public hearing was held on June 11, 1982 in Watsonville,

California to discuss the amendments to the Basin Plan. Public hearings on these amendments were also held as part of the regular board meetings that were routinely noticed. The public was afforded the opportunity to comment, and responses were provided for all concerns.

Economic Considerations

The Regional Board's environmental document reviews the alternatives to the project and concludes that there are three areas which may be environmentally impacted: sewer or septic tanks, storm water drainage, and solid waste disposal. The new nitrate limit for the San Lorenzo River is consistent with basin plan requirements to improve management of septic tank discharges and/or possibly provide wastewater treatment in addition to controlling storm water discharges. The REC-1 designation for the lower Salinas River recognizes an existing beneficial use there and is consistent with the discharge prohibition that currently exists for that reach. Leachate from landfills reaching these two rivers has not yet been documented; however, after the more obvious point sources are controlled, landfills may be required to incorporate design and/or operational changes. Therefore, it appears that the current changes will not require water pollution control expenditures in addition to those already required by the basin plan.

Recommendation

State Board Resolution Numbers 82-44, 82-64, and 83-33 should be approved as amendments to the water quality standards for the waters of the Central Coast Region as contained in the Water Quality Control Plan, Central Coast Region.

Attachments

APPENDIX A

ENVIRONMENTAL PROTECTION AGENCY
October 10, 1975

EPA INTERPRETATIONS OF WATER QUALITY STANDARDS
Central Coastal Basin 3

1. If two numerical values in the water quality objectives conflict, the more stringent value will prevail.
2. The last paragraph of the submitted pesticide objective for Inland Surface Waters, Enclosed Bays and Estuaries applies to all of these waters where beneficial uses include MUN or a use involving aquatic habitat.
3. With respect to the turbidity objective, zones of dilution will only be permitted for dredging operations as suggested by the preface to the minimum criteria set forth on page 4, Attachment B of the State Board's January 22, 1975 memorandum on Revisions in Water Quality Objectives.
4. Until explicitly clarified otherwise, it is assumed that all waters in Basin 3 are protected by beneficial uses and objectives. It is assumed that, on the basis of a footnote to Table 2-1, all minor streams and tributaries not specifically named in the Table are presently designated to protect both recreation and aquatic life.
5. Notwithstanding the wording used in the last two paragraphs on page 2-6, it is our understanding that Areas of Special Biological Significance will be fully protected from all controllable water quality factors in accordance with the Ocean Plan and Thermal Plan as indicated in Chapter 4 of this Basin Plan.
6. Consistent with the Thermal Plan objectives for cold interstate waters and based on paragraph 1, page 4-11 and Appendix C responses to Fish and Game comment, it is our understanding that the natural receiving water temperature of intrastate waters supporting COLD, MIGRATION, and SPAWNING shall not be altered.

APPENDIX B

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 82-44

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN CONCERNING WATER QUALITY STANDARDS
FOR THE SAN LORENZO RIVER AND UPDATING SOME GENERAL OBJECTIVES
WHICH APPLY TO ALL INLAND AND SURFACE WATERS

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the "Water Quality Control Plan, Central Coastal Basin" (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. The Regional Board staff prepared a report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers".
4. The aforesaid report identifies beneficial uses and water quality objectives for the two rivers and cites some general water quality objectives for all inland surface waters in the Central Coast region where references and data have been updated.
5. Based on the findings of the aforesaid report, the Regional Board has determined that Chapter 4, Water Quality Objectives, of the basin plan requires revision.
6. The Regional Board, after a public hearing, adopted Resolution No. 82-07, Consideration of Amendments to the Water Quality Control Plan for the Central Coast Basin Concerning Water Quality Standards for the San Lorenzo River, Santa Cruz County, on July 9, 1982.
7. On July 21, 1982, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
8. The basin plan amendment updates certain general water quality objectives to reflect revisions and recodification of the California Administrative Code, revises Table 4-8 of Chapter 4, Water Quality Objectives, to present specific water quality objectives in terms of mean values rather than median values, and revises allowable chloride and sodium concentrations to reflect current water quality conditions of the San Lorenzo River.
9. The basin plan amendment proposes a new specific water quality objective for nitrate of .25 mg/l because of a documented problem of algal growth in the San Lorenzo River.
10. The report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers" is the basis for a number of the aforementioned revisions.

11. A review of the record finds reasonable justification of the basin plan amendment with the following two exceptions:
 - a. The Regional Board replicated an error in Title 22, Chapter 15, Article 4, Section 64435, Table 3, of the California Administrative Code. The concentration for endrin listed in Title 22 is 0.002 mg/l; the federal standard is 0.0002 mg/l.
 - b. The Regional Board mis-cited the proper section in Title 22 concerning radioactivity. Sections 64441 and 64442 should be cited instead of Section 64435. The inclusion of uranium and radon as a contributor to alpha particle activity is not consistent with Title 22, Chapter 15, Table 5.
12. The basin plan amendment, with these two exceptions, is consistent with Section 13000 of the California Water Code which mandates that waters of the State shall be regulated to attain the highest quality water which is reasonable.

THEREFORE BE IT RESOLVED THAT:

The following pages of the Central Coastal Basin Plan be revised and amended as shown in Attachment A to Regional Board Resolution No. 82-07:

1. Page 4-2, Thermal Plan and Ocean Plan
2. Page 4-4, Table 4-1, Selected Comparisons of Existing Surface Water Quality with Water Quality Planning Criteria.
3. Pages 4-8 and 4-9, Pesticides (excluding limiting concentration for endrin).
4. Page 4-9, Chemical Constituents, including Table 4-4, Inorganic, Organic, and Fluoride Concentrations not to be Exceeded in Domestic or Municipal Supply.
5. Page 4-13, Water Quality Objectives for Specific Inland Waters, Enclosed Bays, and Estuaries.
6. Page 4-14, Table 4-8, Median Surface Water Quality Objectives.

That the following pages of said basin plan as described in Attachment A to Regional Board Resolution No. 82-07 not be revised and those portions of Resolution No. 82-07 be returned to the Regional Board for reconsideration:

1. Pages 4-8 and 4-9, Pesticides--the limiting concentration for endrin.
2. Page 4-9, Radioactivity.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on October 21, 1982.

A handwritten signature in cursive script, appearing to read "Clint Whitney".

Clint Whitney
Executive Director

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RECEIVED

RESOLUTION NO. 82-07

SEP 10 1982

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin.DIVISION OF
TECHNICAL SERVICES

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,

WHEREAS, Regional Board staff prepared a study entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers"; and,

WHEREAS, the aforesaid study identified beneficial uses and water quality objectives for each of the two rivers and cited several water quality objectives of general application where references and data had been updated; and,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,

WHEREAS, proposed revisions and amendments apply to Chapter 2, Beneficial Uses (specifically for the San Lorenzo River) and Chapter 4, Water Quality Objectives (some specific to the San Lorenzo River and some that apply to all inland surface waters), of said Basin Plan; and,

WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,

WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been provided to interested persons and agencies for review and comment; and,

WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,

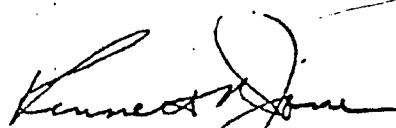

WHEREAS, on July 9, 1982, in the Watsonville City Council Chambers, 250 Main Street, Watsonville, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that pages 4-2, 4-4, 4-8, 4-9, 4-13, and 4-14 of the Basin Plan be revised and amended as shown on Attachment A, consisting of five pages and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

Page 4-2, second column, amend to read:

Thermal Plan

The "Water Quality Control Plan for the Control of Temperature in the Coastal and Interstate Waters and Enclosed Bays and Estuaries of California", adopted by the State Water Resources Control Board on May 18, 1972, and amended September 18, 1975, specifies water quality objectives, effluent quality limits and discharge prohibitions related to thermal characteristics of enclosed bay and estuary waters and waste discharges.

Ocean Plan

The "Water Quality Control Plan for Ocean Waters of California", Resolution No. ~~72-45~~ 78-2, was adopted by the State Water Resources Control Board on ~~7/17/66/1972~~ January 19, 1978. (This 1978 plan is a major revision of the original plan adopted by State Water Resources Control Board Resolution 72-45 on July 6, 1972.) This 1978 plan establishes beneficial uses and water quality objectives for waters of the Pacific Ocean adjacent to the California Coast outside of enclosed bays, estuaries, and coastal lagoons. Also, the Ocean Plan prescribes effluent quality requirements and management principles for waste discharges and specifies certain waste discharge prohibitions.

The Ocean Plan also provides that the State Water Resources Control Board shall designate Areas of Special Biological Significance (ASBS) and requires wastes to be discharged a sufficient distance from these areas to assure maintenance of natural water quality conditions.

The State Water Resources Control Board declared its intent to periodically revise the Plan to reflect water quality objectives that are necessary to protect beneficial uses of ocean waters and to be consistent with current technology.

RESOLUTION NO. 82-C7
ATTACHMENT A
(5 pages)

Page 4-8, second column,
and page 4-9, first column, amend to read:

Waters designated for use as domestic or municipal supply (MUI) shall not contain concentrations of pesticides or herbicides in excess of the limiting concentrations set forth in California Administrative Code, Title 22, Chapter 15, Article 4, Section 64435, Table 3, and listed below:

Pesticides	mg/l
Aldrin	0.017
Chlordane	0.003
DDT	0.017
Dieldrin	0.017
Endrin	0.001
Heptachlor	0.013
Heptachlor epoxide	0.013
Lindane	0.053
Methoxychlor	1.0
Organophosphorus/Carbamate compounds	0.7
As/parathion/in prolinesterase/inhibition	
Toxaphene	0.003
Herbicides

APPENDIX C

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 82-64

CONSIDERATION OF AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COASTAL BASIN CONCERNING WATER QUALITY STANDARDS
FOR THE SALINAS RIVER

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (basin plan) on March 14, 1975.
2. Division 7 of the California Water Code mandates that basin plans shall be periodically reviewed and may be revised.
3. In 1981, the Regional Board prepared and published a report entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers".
4. The aforesaid report identifies beneficial uses and water quality objectives for the two rivers and cites some general water quality objectives for all inland surface waters in the Central Coast region where references and data have been updated.
5. Based on the findings of the aforesaid report, the Regional Board has determined that Chapter 2, Present and Potential Beneficial Uses, and Chapter 4, Water Quality Objectives, of the basin plan require revision.
6. The Regional Board after a public hearing adopted Resolution No. 82-08, Consideration of Amendments to the Water Quality Control Plan for the Salinas River, on July 9, 1982.
7. On July 21, 1982, the Regional Board submitted a request for State Board consideration of approval for the above-titled basin plan amendment in accordance with Section 13245 of the California Water Code.
8. The basin plan amendment revises beneficial use designations and adds two footnotes to Table 2-1, Existing and Anticipated Uses of Inland Surface Waters.
9. The basin plan amendment also revises the water quality objective for sulfate in the reach of the Salinas River above Spreckels to 125 mg/l.
10. The aforementioned 1981 Water Quality Standards Report is the basis for a number of these revisions.
11. A review of the record finds that the Regional Board agenda item attached to Resolution No. 82-08 provides reasonable discussion and justification for the remaining revisions.

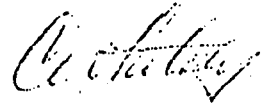

12. The basin plan amendment is consistent with all federal and state statutes including State Board Water Quality Control Plans.

THEREFORE BE IT RESOLVED:

That pages 2-4 and 4-14 of the basin plan be revised and amended as shown on Attachment A of Regional Board Resolution No. 82-08.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on December 16, 1982.

Clint Whitney
Executive Director

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 82-08

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coastal Basin

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, Regional Board staff prepared a study entitled "A Review of Water Quality Standards for the San Lorenzo and Salinas Rivers"; and,
- WHEREAS, the aforesaid study identified beneficial uses and water quality objectives for each of the two rivers and cited several water quality objectives of general application where references and data had been updated; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, proposed revisions and amendments are specifically for the Salinas River and are to be made to Chapter 2, Beneficial Uses and Chapter 4, Water Quality Objectives of said Basin Plan; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,
- WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,
- WHEREAS, on July 9, 1982, in the Watsonville City Council Chambers, 250 Main Street, Watsonville, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan; and,

WHEREAS, the Regional Board recognizes Monterey County Flood Control and Water Conservation District has completed the Arroyo Seco Dam Feasibility Study Report and the District has reason to expect future uses of MUN, AGR, PROC, and IND for the lower Salinas River;

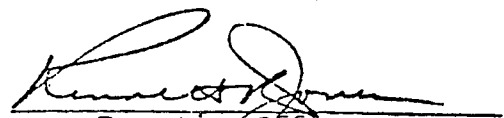

NOW, THEREFORE, BE IT RESOLVED, that pages 2-4 and 4-14 of the Basin Plan be revised and amended as shown on Attachment A, consisting of two pages and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board will revise the Basin Plan to reflect and protect uses that are part of the Arroyo Seco Dam Project when Monterey County determines the project is feasible and commits itself to project implementation.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan, to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 9, 1982.

Executive Officer

ATTACHMENT 1A

APPENDIX D

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 83-33

CONSIDERATION OF REVISION TO AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COASTAL BASIN CONCERNING WATER
QUALITY STANDARDS FOR ENDRIN AND RADIOACTIVITY

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region, (Regional Board) by Resolution No. 82-07, adopted "Amendments to the Water Quality Control Plan for the Central Coastal Basin Concerning Water Quality Standards for the San Lorenzo River, Santa Cruz County".
2. On July 21, 1982, in compliance with California Water Code Section 13245, the Regional Board submitted a request to the State Board for approval of the Water Quality Control Plan for the Central Coast Basin (basin plan), and the State Board took the Regional Board's basin plan amendment under consideration at its October 21, 1982 regular Board meeting.
3. The State Board adopted Resolution No. 82-44 which approved, in part, the basin plan amendment and remanded a portion back to the Regional Board for reconsideration.
4. Specifically, the exceptions to the approval requested the Regional Board to do the following:
 - a. Correct an error which would have set the maximum contaminant level for endrin at 0.002 mg/l which is above the Federal standard of 0.0002 mg/l;
 - b. Correct a mis-citing of Title 22, California Administrative Code, of the section dealing with radioactivity; and
 - c. Revise the gross alpha particle activity of 15 picocuries per liter (pCi/l) to exclude radon and uranium and include in accordance with Title 22.
5. On February 25, 1983, the Regional Board complied with all State Board recommendations in its Resolution No. 83-03 and requested State Board reconsideration and approval.
6. Regional Board Resolution No. 83-03 further amends the basin plan (page 4-9) by inserting a supplemental paragraph under "Radioactivity" which specifies a standard for uranium-derived alpha particles, as follows:

"Until a radionuclide standard for uranium-derived alpha particles in domestic or municipal water supply is promulgated by the U. S. Environmental Protection Agency, waters designated for use as domestic or municipal supply (MUN) should not exhibit uranium-derived gross alpha particle activity in excess of 10 pCi/l, the U. S. Environmental Protection Agency's current advisory limit."

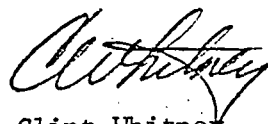

7. EPA staff advises 10 pCi/l as a safe limit for uranium in drinking water and that field tests of methods of removing excessive uranium are currently being conducted.
8. In adopting a numerical limit, the Regional Board stated its opinion that a limit would provide some guidance for public health and safety.
9. The State Board is desirous of recognizing the above addendum to the basin plan as an expression of the Regional Board's concern for public health and safety. The State Board recognizes that 10 pCi/l is an advisory limit for uranium and not an enforceable safe drinking water quality standard.

THEREFORE BE IT RESOLVED:

1. That the State Board approve the basin plan amendment as revised in Regional Board Resolution No. 83-03 for pages 4-8 and 4-9, Pesticides, and page 4-9, Radioactivity (excluding radon and uranium and including radium-226 in the gross alpha particle activity contaminant level).
2. That the addendum specifying a numerical contribution from uranium to the gross alpha particle activity be accepted as an advisory limit, but not as an enforceable standard.

CERTIFICATION

The undersigned, Executive Director of the State Water Resources Control Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 24, 1983.

Clint Whitney
Executive Director

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-03

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coastal Basin
(Water Quality Objectives for Endrin and Radioactivity)

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, the Regional Board through adoption of Resolution No. 82-07 on July 9, 1982, and revised several water quality objectives of general application where references and data had been updated, including the standards for endrin and radioactivity; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the federal Clean Water Act; and,
- WHEREAS, the State Water Resources Control Board did not approve the revisions concerning endrin and radioactivity, but returned them to the Regional Board for reconsideration based on reasons stated in State Board Resolution No. 82-44; and,
- WHEREAS, the Regional Board is concerned that health of Central Coast residents is not adequately protected by Title 22 from adverse impacts from uranium-derived radionuclide concentrations in domestic water supplies and wishes to establish a numerical criteria equivalent to the U.S. Environmental Protection Agency's current advisory limit; and,
- WHEREAS, drafts of proposed revisions and amendments and environmental documents were provided to interested persons and agencies for review and comment; and,
- WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within Monterey and Santa Cruz County; and,
- WHEREAS, on February 25, 1983, in Santa Barbara, California, the Regional Board reviewed staff documents pertaining to the amendment, including written comments and written staff responses, as well as additional evidence and testimony concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that the Basin Plan be revised and amended as follows:

Pages 4-8 and 4-9, Pesticides—amend the limiting concentration for endrin from 0.001 mg/l to 0.0002 mg/l.

Page 4-9, second column, under Radioactivity, amend to read:

Waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of radionuclides in excess of the limits specified in California Administrative Code, Title 22, Chapter 15, Article 5, Sections 64441 and 64443, Table 5, as listed below:

Constituent	Maximum Contaminant Level, pCi/l
Combined Radium-226 and Radium-228	5
Gross Alpha particle activity	15
(including Radium-226 but excluding Radon and Uranium)	
Tritium	20,000
Strontium-90	8
Gross Beta particle activity50

Until a radionuclide standard for uranium-derived alpha particles in domestic or municipal water supply is promulgated by the U.S. Environmental Protection Agency, waters designated for use as domestic or municipal supply (MUN) should not exhibit uranium-derived gross alpha particle activity in excess of 10 pCi/l, the U.S. Environmental Protection Agency's current advisory limit.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 25, 1983.

Executive Officer

APPENDIX E

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD—
CENTRAL COAST REGION1102 A LAUREL LANE
SAN LUIS OBISPO, CALIFORNIA 93401
(805) 549-3147

July 7, 1983

Mr. Phillip Woods
United States Environmental
Protection Agency
215 Fremont Street
San Francisco, CA 94105

Dear Mr. Woods:

SUBJECT: BASIN PLAN WATER QUALITY OBJECTIVES

In November of 1981, we began our triennial review of our Water Quality Control Plan for the Central Coastal Basin (Basin Plan). By April, 1982, the Regional Board agreed on a list of Basin Plan topics which should be investigated for possible plan amendment. Since that time, the Board has adopted several amendments from our triennial review list.

We are now beginning work on biostimulant objectives for specific surface waters. We note that you wrote to the State Water Resources Control Board on December 10, 1981, and approved their Resolutions 77-17 and 77-73, concerning amendments of our Basin Plan, based on an understanding that your interpretations (enclosed with your letter) were correct. Consistent with your interpretations, we will proceed as summarized in the following paragraphs.

Fecal Coliform Bacteria Objective

(1) Add a REC-1 designation for waters where water contact recreation currently can take place; (2) identify, by means of footnotes to Table 2-1, the physical reasons that water contact recreation cannot take place (e.g., ephemeral stream or marsh) for waters or reaches of waters not covered by (1); and, (3) identify by means of footnotes to Table 2-1, those water bodies where water contact recreation could physically take place but is prohibited.

Biostimulants Objectives

Nutrient objectives for the San Lorenzo River have been approved by the Regional Board. Nutrient objectives for other surface waters will be developed as well.

For the short-term, we plan to develop nutrient objectives for the Pajaro River, Llagas Creek, Uvas Creek, and San Luis Obispo Creek. We hope to have nutrient objectives adopted for Pajaro River, Llagas Creek, and Uvas Creek by December, 1983.

Mr. Phillip Woods
Page 2
July 7, 1983

For the long-term, we plan to develop nutrient objectives for the lower Salinas River, Perfumo Creek/Laguna Lake, Franklin Creek, Santa Monica Creek, Waddell Creek, Soquel Creek/Lagoon, and Lopez Lake. If discharge from the Salinas treatment plant ceases, no nutrient objective will be developed. Nutrient objectives will be developed once enough monitoring data is available.

If you have any comments or questions concerning this matter, please contact Angela Charpentier of this office.

Very truly yours,

KENNETH R. JONES
Executive Officer

EPA INTERPRETATIONS OF WATER QUALITY STANDARDS
Central Coastal Basin 3

1. If two numerical values in the water quality objectives conflict, the more stringent value will prevail.
2. The last paragraph of the submitted pesticide objective for Inland Surface Waters, Enclosed Bays and Estuaries applies to all of these waters where beneficial uses include MUN or a use involving aquatic habitat.
3. With respect to the turbidity objective, zones of dilution will only be permitted for dredging operations as suggested by the preface to the minimum criteria set forth on page 4, Attachment B of the State Board's January 22, 1975 memorandum on Revisions in Water Quality Objectives.
4. Until explicitly clarified otherwise, it is assumed that all waters in Basin 3 are protected by beneficial uses and objectives. It is assumed that, on the basis of a footnote to Table 2-1, all minor streams and tributaries not specifically named in the Table are presently designated to protect both recreation and aquatic life.
5. Notwithstanding the wording used in the last two paragraphs on page 2-6, it is our understanding that Areas of Special Biological Significance will be fully protected from all controllable water quality factors in accordance with the Ocean Plan and Thermal Plan as indicated in Chapter 4 of this Basin Plan.
6. Consistent with the Thermal Plan objectives for cold interstate waters and based on paragraph 1, page 4-11 and Appendix C responses to Fish and Game comment, it is our understanding that the natural receiving water temperature of intrastate waters supporting COLD, MIGRATION, and SPAWNING shall not be altered.

Central Coast Basin
Plan Files:
March '73 - April '74

Comments of the
Environmental Protection Agency, Region IX
on the
Comprehensive Water Quality Control Plan for the Central Coast Basin

(Only Part I and the Abstract were available to us for review. Experience with review of other proposed basin plans suggests that many planning elements required by Federal regulations will probably be included in Part II and the Appendices of this plan. Accordingly, upon receipt of the remaining portions of this plan, we will conduct a review that concentrates on the following planning elements: inventory of sources; analysis of significant discharges; segment priority ranking; total maximum daily loads; individual point source load allocations; and identification of relationship to other plans. The comments below pertain to Part I.)

I. Schedules of Compliance

The applicable regulation, 40 CFR 131.302, calls for inclusion in the plan of schedules of compliance or target dates of abatement for significant dischargers. Presently, the plan is only partially complete in this regard. Accordingly, at the time the plan is submitted for EPA approval, it must contain the schedules of compliance for dischargers that have been issued NPDES permits, including the major interim and final completion dates necessary to assure an adequate tracking of progress towards compliance. Where dischargers are required to obtain an NPDES permit, but no permit has been issued as of the date that the plan is submitted, the plan must contain target dates when the dischargers must obtain a permit, as well as other target abatement dates that will enable an adequate tracking of progress.

II. Facility Requirements: Recommended Wastewater Management Plans for Municipal Systems

Since the plan goes into considerable detail in terms of municipal facility requirements, particular attention should be given to the fact that any proposed facilities to be funded by a Federal construction grant must conform to the plan. Attention to this requires two considerations:

(1) The development of a proposed construction grant project must not be restricted solely to the facility as recommended in the plan; all feasible alternatives must be evaluated;

(2) If a proposed construction grant project does not conform with the facility recommended in the plan, a revision of the plan may be considered. However, the proposed project must

bear the burden of proof for the need to amend the plan. While we recognize that the basin plan, as an output of the State's continuous planning process, should not be considered a static end-product, it nonetheless is the State's water quality management guide for the region, and should lead the way to specific actions, including municipal facilities construction.

On another matter, the recommended plan for ocean disposal indicates that, where treatment plant upgrading to secondary treatment is not presently underway, it should be deferred. This approach is inconsistent with the 1972 Amendments of the Federal Water Pollution Control Act. Plans prepared, adopted and approved pursuant to the Act must express attainment of the Congressionally mandated secondary treatment requirement. However, recognizing the plethora of needs compared to available resources, the lower priority (suggested in the plan) for plant upgrading to secondary treatment for ocean discharges would not be inappropriate. Therefore, we suggest that the plan's discussion of priorities be retained, but the discussion of deferring the secondary treatment requirement should be revised to express the present goal of attainment of the requirement. If or when the Act's requirement in this regard is amended, the plan may be revised accordingly.

III. Animal Confinement Operations

On page 5-32, the goal for animal confinement facilities is expressed as containment of process wastes and run-off from a once-in-ten-year storm. Final EPA effluent guidelines set this goal as the 1977 target for Best Practicable Control Technology Currently Available. However, the effluent guidelines also set a 1983 goal for Best Available Treatment Economically Attainable, which is based on a once-in-twenty-five-year storm. The plan should include recognition of the 1983 goal.

IV. Establishment of Residual Waste Control Process

Our review did not uncover any identification, as such, of necessary controls to be established over the disposition of residual wastes from municipal, industrial, or other water or waste water treatment processing, as required by 40 CFR 131.307 whenever the processing or disposal occurs within the basin. The plan to be submitted for EPA approval should include such identification. It is conceivable that various parts, in aggregate, of the present plan fulfill this requirement. If so, a short discussion that pulls together such parts of the plan should be included.

V. Water Quality Standards

The following comments pertain to Chapter 2, "Present and Potential Beneficial Uses."

1. It should be clearly shown that all waters of the Basin have designated beneficial uses; Table 2-1 should give reference to minor streams and tributaries not specifically named. Unless justification to the contrary can be given, all surface waters should have beneficial use designations such that both recreation and aquatic life are protected. In many cases there is a notable absence of COLD, WARM, WILD, or REC designations. In several instances beneficial uses which appear in the Interim Plan do not appear here; no justification is given for such omissions. Cachaqua Creek (Carmel River Sub-Basin), which appears in the Interim Plan, is missing from the Table.

2. In Table 2-2 Pt. Sur lacks REC and MAR designations. Areas of Special Biological Significance which are shown in the Table as being located within stretches of coast (such as Soquel Pt. to Salinas River) should be more clearly specified.

3. One of the major deficiencies of this submission is the absence of beneficial use designations for ground waters of the Basin.

4. Many streams have been divided into segments for the purpose of designating beneficial uses. Often times a beneficial use which appears in the Interim Plan as applying to an entire stream has been omitted for a particular segment in this report. Justification for such omissions should be given.

The following comments pertain to Chapter 4, "Recommended Water Quality Objectives."

1. Objectives for biostimulants, water temperature, toxicity, and radioactivity should be included under general additional objectives. The Thermal Plan objectives should be clearly shown to apply to all waters of the Basin (not just interstate waters). Objectives for biostimulants should be stated relative to particular beneficial use designations - WARM, COLD, MAR. Reservoirs should be included with lakes in recommending biostimulants objectives.

2. Tables 4-1, 4-2, 4-3 and 4-7 are inappropriate in this chapter unless they are being recommended as objectives.

3. Objectives for REC-1:

a. Bacteria: Numerical objectives consistent with guidelines should be specified for REC-1 waters.

b. An objective for pH should be included.

4. Objectives for WARM, MAR, BIOL, RARE, SHELL, SPWN, and SAL:

- a. The beneficial use COLD should be included as having these objectives.
- b. Numerical bacteria objectives should be recommended consistent with these beneficial uses. Special attention should be given to waters designated SHELL.
- c. Dissolved Oxygen: Waters designated SPWN, COLD, and MAR should be clearly shown to have a minimum D.O. objective of 7.0 mg/l.
- d. pH: Minimum and maximum pH values should also be recommended.
- e. Metals: Units should be specified in Table 4-4. Objectives for several other significant metals should be included. Several of the footnotes to Table 4-4 recommend objectives which differ according to the aquatic habitat to which they apply. Such differences should be clearly shown, preferably in the Table, as applying to waters according to the beneficial use designations WARM, COLD, and MAR.
- f. Other Organics: The recommended objective for pcb's is high. Units for the phthalate esters objective should be ug/l rather than mg/l.

5. Objectives for AGR:

- a. Since in classifying the waters of the Basin the beneficial use AGR has not been broken down into irrigation supply and livestock watering, Table 4-6 presents a potential problem of objectives being inadequate to protect the actual use. Either the more stringent objective for a particular constituent should be recommended for all AGR waters or all such waters should be further designated as irrigation supply and/or livestock watering.
- b. Objectives for nitrate + nitrite and nitrite in Table 4-6 should be shown as being given in terms of N.
- c. Specific dissolved solids and sodium objectives should be included for all AGR waters based on guidelines and the non-degradation policy.

6. Objectives for MUN: Objectives for MUN are inadequate. Objectives should be recommended for raw water used for public water supplies.

7. A bacteria objective should be included for REC-2 waters.

8. Morro Bay and Estuary Waters:

- a. Objectives should be specifically included here. Reference to a previous chapter is inappropriate. Many of the referenced objectives in Chapter 3 needlessly duplicate those given in Chapter 4.
- b. It is unclear whether Morro Bay is the only enclosed bay covered by these objectives. Also, those estuarine waters covered by additional objectives should be clearly specified.

9. Specific Inland Waters:

- a. Since these objectives "...are intended to serve as a water quality baseline for evaluating water quality management....", their status as objectives for water quality is unclear.
- b. A clear statement should be made as to the applicability of these "objectives" to all waters of the indicated sub-basins.
- c. Several objectives given in Tables 4-8 and 4-9, where they can be compared to Tables 4-2 and 4-3, do not conform to the non-degradation policy. Many specific objectives (Lorenzo River Sub-Basin and Upper Salinas River and Salinas River Sub-Basins) which were adopted in the Interim Plan have been omitted here without justification. Ninety percentile objectives for these parameters should also be included.

Chloride, boron, and nitrogen objectives in Tables 4-9 should be more clearly defined (units, median/maximum, time period).

- d. Phosphorus objectives in Table 4-8 exceed guidelines in several cases. Many units in Table 4-9 lack nitrogen objectives.

10. Objectives for groundwaters are inadequate. Ostensible beneficial uses (none appear in Chapter 2) of the Basin's groundwaters are not adequately protected by the minimal objectives of Table 4-9.

VI. Monitoring and Surveillance

Various aspects of the discussion in Chapter 7 require comments, which follow:

(1) The plan recommends the 1973-74 surveillance and monitoring program to be in operation within one year after the adoption of the plan. The primary monitoring network element of this program is based entirely on existing stations being sampled by the Department of Water Resources. It does not reflect the requirements of Appendix A of the regulations for Section 106. Because of this, the State Water Resources Control Board staff is reworking the primary monitoring network to more closely approximate the requirements, and consequently, we will not comment on the primary monitoring network as outlined in the plan. The plan should incorporate the reworked network.

(2) The plan indicates that the estuarine and marine portions of the primary monitoring network will rely heavily on monitoring as required by the State's Ocean Plan. However, the description of ocean waters in the Ocean Plan does not include the waters of enclosed bays and estuaries, and the Ocean Plan delineates only what the water quality shall be -- it does not contain a requirement for monitoring. Clarification is required.

(3) In regard to discharger self-monitoring, the plan states that self-monitoring information will be collected, screened, and then entered into the data bank. The State has previously indicated that a computerized program would be used for screening. This apparent conflict should be clarified. Also, the plan does not specify with what frequency the Regional Board will check the self-monitoring data; a notation of the frequency should be made in the plan.

(4) EPA's revised water quality management basin planning regulations, published June 3, 1974, indicate that the water quality segment intensive surveys shall be repeated at appropriate intervals, depending on the variability of conditions in the segment. The plan indicates that the interval is to be at five years, which is apparently based on the previous regulations. A re-evaluation of the interval may be warranted.

(5) The due date for the submission of the material required under "Classification of Inland Lakes" (page 7-7) should be changed to April 15, 1975.

(5) The due date for the 305(b) report has been revised from January 1, 1975, to April 15, 1975. Also, the plan indicates that the report will be prepared from data collected only through the surveillance and monitoring program. While this program will address the problems of the quality of the region's waters and provide a description of non-point source pollution along with a recommended control strategy, it will only provide a portion of the information to project the water quality to 1983. The 305(b) report also must analyze the extent to which "no discharge" technology is being employed or will be needed, as well as assess the economic and environmental costs and benefits of achieving the objectives of the FWPCA Amendments of 1972. These latter objectives will require information from NPDES, municipal facilities planning and water quality control planning, at a minimum. The plan should be revised to reflect these additional information requirements.

(7) In terms of data storage, retrieval and reports, the plan does not deal with the immediate requirement of inputting water quality data to STORET. The plan should give recognition to the requirement that the data should be submitted to EPA in a STORET-compatible format within the following time limits: data from the intensive monitoring surveys are due within six months of the completion of the survey; data from the primary monitoring network are due within ninety days of collection; data from the groundwater monitoring network are also due within ninety days of collection.

(8) Beginning on page 7-2, Appendix D and Chapter 7 are presented as an approach to the optimum surveillance system for the basin, and will be implemented over a five-year period. This schedule would have the monitoring networks finalized in 1979, two years after the January 1, 1977 date set forth in Appendix A. Therefore, some priorities will have to be established within the plan to indicate how much of the surveillance and monitoring system will be implemented by January 1, 1977.
