Load allocations for NPS and/or natural background may range from reasonably accurate estimates to gross allotments, depending on the availability of data and the techniques used for predicting the loading. As such, a phased approach to TMDL development is often used where estimates are based on limited information. Using the phased approach provides a TMDL that includes monitoring requirements and a schedule for reassessing TMDL allocations to ensure attainment of water quality standards.

Part 2 – Developing the TMDL Implementation Plan

Once a TMDL or phased TMDL has been established, an implementation plan must be developed. The State (acting through the RWQCB) must implement the TMDL and must incorporate the TMDL into the appropriate basin plan. Section 13242 of the Porter-Cologne Act requires that a plan of implementation be incorporated into the basin plan. The implementation plan must include: (1) a description of the nature of the actions necessary to achieve the water quality objectives, including recommendations for appropriate action by any entity, public or private; (2) a time schedule for the actions to be taken; and (3) a description of the monitoring and surveillance to be undertaken to determine compliance with the objectives. Incorporating the TMDL into the basin plan requires approval by the SWRCB and approval of any regulatory provisions by OAL.

The RWQCBs make use of the NPDES permitting process to limit effluent from point source discharges consistent with the wasteload allocations. In the case of NPSs, the RWQCBs rely on the implementation of NPS controls, such as the MMs and associated MPs, and the application of a wide range of State programs and enforcement authorities.

During the Strategy, the RWQCBs have committed to the development of 500 to 800 TMDLs and their associated implementation plans. Appendix C provides a detailed summary of the TMDLs which the RWQCBs have identified for initial development or completion within the first five years of the Strategy. The commitment of financial and staff resources to this effort will be influential in addressing the State's effectiveness in controlling NPS problems.

In summary, TMDLs are planning tools that will enhance the State's ability to foster implementation of appropriate NPS MMs. By providing watershed-specific information, TMDLs will help target specific sources and corresponding corrective measures and will provide a framework for using more stringent approaches that may be necessary to achieve water quality goals and maintain beneficial uses.

Watershed Management Initiative

The watershed Management Initiative (WMI) was approved in 1995 by the SWRCB as part of its Strategic Plan. It was developed to help the SWRCB meet its goal to provide water resource protection, enhancement, and restoration while balancing economic and environmental impacts. The WMI uses an integrated planning approach to create and implement unique solutions for each watershed that consider all local conditions and pollution sources and rely on the input and involvement of local stakeholders. It is not a regulatory program and has no statutory mandate.

Watersheds are identified and prioritized primarily on the basis of water quality. Watershed management strategies have been developed for over 40 watersheds at the nine RWQCBs. These strategies are contained in the Integrated Plan for implementation of the WMI. This Integrated Plan is updated annually in November to reflect changing priorities and conditions in the State's watersheds. The 1998-99 State budget bill included funding for ten WMI coordinators to carry out the WMI. There is one coordinator at each of the nine RWQCBs and one at the SWRCB. The WMI relies on the existing authority of the SWRCB and RWQCBs, including the Porter-Cologne Act and the Federal CWA.

The WMI is consistent with the overall scheme of the Program Plan. Similar to the CWA section 303(d) list described above, prioritization of the watersheds helps the Program Plan in targeting areas with serious water quality issues. Moreover, the watershed management strategies were developed with considerations for local environmental and economic conditions. Consequently, in accordance with the NPS Plan's emphasis on self-determination and the voluntary approach, stakeholder involvement in the implementation of the management strategies is not only critical but feasible. Future annual updating of the management strategies will incorporate RWQCBs' activities identified in the five year implementation plans to support implementation of the Program Plan and make use of the MMs contained in the CAMMPR document of this Program Plan. Implementation of these strategies in targeted watershed will complement the NPS work being performed under other parts of the Program Plan and ensure the full implementation of all MMs in 15 years.

Community-Based Watershed Plans

Community-based watershed plans refer to a wide range of plans and activities that are being undertaken throughout California. These plans and activities are focused on specific geographic areas and involve strong local leadership and diverse stakeholders. Community-based watershed plans have as their premise that many water quality and ecosystem problems are best solved at the watershed level rather than at a statewide or individual discharger level.

Community-based watershed plans are a key component to implementing the MMs. Many of the community-based watershed plans and activities that are underway address NPS pollution. The SWRCB and RWQCBs have supported these plans through financial and technical assistance. Currently, several State agencies, in conjunction with the California Biodiversity Council (CBC) and the Cal/RA, are considering how to

establish a statewide framework to more fully support community-based watershed plans and activities.

The SWRCB and the RWQCBs will continue to support watershed plans to foster implementation of the MMs: This is consistent with the federal CWAP that directs new CWA section 319(h) funding to supporting watershed restoration action strategies (WRASs). The intent of this requirement is to ensure that the activities supported by these funds are part of a comprehensive effort that has the community and technical support necessary to achieve significant environmental results. A wide range of community-based watershed plans will be considered to qualify as WRASs. For example, a local watershed stewardship plan, a Coordinated Resource Management and Planning Program (CRMP), or a Comprehensive Conservation and Management Plan prepared under section 320 of the CWA will all be considered to qualify as a WRAS.

Coastal CPR Plan

The CCC's *Plan for Controlling Polluted Runoff* (Coastal CPR Plan) outlines the CCC's authorities to address polluted runoff and identifies actions with timelines and milestones to achieve the CCC's objective to reduce polluted runoff. The Coastal CPR Plan specifies the CCC's role in addressing polluted runoff within the confines of existing budgets, staffing, and statutory authority. The four program enhancements that comprise the Coastal CPR Plan are developed from the CCC's existing and newly developed tools and programs related to the management of polluted runoff. They include: (1) implementation of MMs through planning, regulation, and technical assistance; (2) administrative coordination; (3) public participation and education; and (4) funding. Implementation of the Coastal CPR Plan helps to direct CCC staff efforts to prevent and control polluted runoff, thus leading to improved coastal water quality and enhanced coastal resources and uses.

Many of the actions identified in the Coastal CPR Plan are incorporated into the Program Plan. These actions are expected to help facilitate implementation of the NPS Program, as well as to improve the coastal program's overall treatment of water quality-related issues.

General Plans

The general plan is a local government's basic planning document. Under State planning law, each city or county must adopt a comprehensive, long-term general plan for the physical development of the city or county and any land outside its jurisdiction that bears relation to its planning. General plans must contain seven elements: (1) land use, (2) circulation, (3) housing, (4) conservation, (5) open space, (6) noise, and (7) safety. The following elements are the most relevant to NPS pollution prevention and control:

1. Land Use--Designates categories such as housing, industry, and natural resources, including density and intensity of use.
2. Conservation--Applies to conservation, development, and use of natural resources (e.g., soils, forests, rivers and other water bodies, and harbors). May also cover watershed protection, land or water reclamation, prevention or control of the

pollution of streams and other coastal waters, regulation of land uses along stream channels and in other areas required to implement the conservation plan (e.g., buffer areas), control or correction of soil erosion, and flood control.

3. Open Space--Applies to preservation of natural resources, including fish and wildlife habitat, rivers, streams, bays and estuaries, and open space.
4. Circulation--Plans infrastructure, including water, sewage, and storm drainage.

Local Coastal Programs

In carrying out its objectives and policies, the Coastal Act (PRC §§30000 et seq.) delegates to local governments specified authority to regulate coastal development.⁹ The Coastal Act directs each of the 73 cities and counties lying wholly or partly within the coastal zone to prepare for review and certification by the CCC an LCP for the local government's portion of the coastal zone. Through LCP development, the Coastal Act provides a means to manage coastal resources of State, regional, and national significance in ways that respect special circumstances in each locality. The CCC works with local governments to tailor LCPs to reflect local issues and concerns while simultaneously meeting the statewide goals and policies of the Coastal Act.

An LCP consists of a local government's land use plans (LUPs), zoning ordinances, zoning district maps, and, within sensitive coastal resource areas, other implementing actions which, when taken together, meet the requirements of and implement the provisions and policies of the Coastal Act at the local level (PRC §30108.6). The LUP is the relevant portion of a local government's general plan or local coastal element which is sufficiently detailed to indicate the kinds, location, and intensity of land uses, the applicable resource protection and development policies, and, where necessary, a listing of implementing actions (PRC §30108.5). Most key land use and policy decisions are made in the LUP stage. The standard of review of the LCP Implementation Plan is that it conforms with and is adequate to carry out the certified LUP.

Upon LCP certification, a local government can issue permits for such development in the coastal zone as is consistent with LCP policies; alternatively, a local government conditionally approves or denies a coastal development permit application if the proposed development is inconsistent with the LCP. However, certain actions taken by a local government on a CDP application may be appealed to the CCC. The CCC hears appeals, and the standard of review is the certified LCP and the public access policies of the Coastal Act. And, because a CDP is either approved or denied depending on its conformity to a certified LCP, it is imperative that all appropriate NPS MMs are identified and included in the certification process.

The CCC water quality staff will update the in-house *Procedural Guidance Manual: Addressing Polluted Runoff in the California Coastal Zone* to reflect the newest development in NPS MMs. This manual is extensively utilized by the CCC staff in

⁹ The Coastal Act declares that "to achieve maximum responsiveness to local conditions, accountability, and public accessibility, it is necessary to rely heavily on local government and local land use planning procedures and enforcement" (PRC §30004).

reviewing LCPs and CDP applications. The CCC's water quality staff will also conduct training of its planners in use of the manual and in screening for NPS components in LCPs, Local Coastal Program Amendments (LCPAs), and CDPs. The initial training will be conducted by December 2000, with a refresher training every year thereafter. Currently, the CCC staff are routinely requesting applicants of development permits not already subject to NPDES permit requirements to submit Erosion & Sediment and Chemical Control Plans for the construction phase when appropriate. In addition, a polluted runoff control plan with regular BMP maintenance and inspection is required of most development proposals as well. These efforts will achieve tangible water quality benefits in the field.

Coastal Act section 30519.5 requires the CCC to conduct periodic reviews of certified LCPs to evaluate whether or not the LCPs are being implemented by the local governments in a manner that conforms to the Coastal Act. The periodic reviews also provide a means to ensure that the LCPs reflect new information (such as new MMs) and changing conditions regarding NPS pollution prevention and control and help local governments respond to post-certification NPS issues that develop over time in targeted areas.

Lastly, the CCC can also effect implementation of the NPS Program through either:
(1) the regular LCP amendment process initiated by the local governments or
(2) providing grant incentives to encourage appropriate NPS-related amendments to LCPs.

In short, the CCC will review all new LCPs, LCPAs, and CDP applications brought before it for appropriate NPS pollution prevention and control activities.

Annual Workplans

Each year since 1990, the SWRCB and RWQCBs have developed detailed annual workplans as part of the grant application to USEPA for CWA section 319(h) funding. In addition to satisfying federal funding requirements, the plans served as short-term planning and budgeting tools for the SWRCB and RWQCBs. Annual workplans are detailed, tasked-oriented documents. This Program Plan is not intended to replace annual workplans. In fact, good annual workplans are more important than ever if California is to achieve the goals and objectives set forth in the Program Plan. Annual workplans will continue to be used to plan, coordinate, budget, track, and report on each year's NPS-related work.

Beginning with Fiscal Year 2000 (July 1, 2000), the SWRCB, RWQCBs, and CCC will begin jointly developing a single annual workplan that focuses on implementing MMs. The workplan will detail all major tasks proposed for the coming year including those that support activities outlined in the State NPS Plan. Annual workplans will cover all federal and State (including bond funds) funding sources, fees, and any other sources including private commitments. Other State agencies and private entities will be encouraged to join in the process. This widespread participation is crucial if the State is

to accurately evaluate and report the large number of efforts underway dealing with NPS pollution.

The State is faced with mounting annual, biennial, and five-year State and federal reporting requirements. To simplify reporting efforts, the SWRCB and CCC will develop a single, standardized report format (Figure 3) for use by all participants. The form will need to satisfy federal grant program requirements, be consistent with the five-year plans, and provide sufficient information so that information is usable in a program tracking database such as the one currently under development at UCD ICE. Another consideration is that it has an Internet-compatible file format to ensure electronic sharing over and posting on the Internet. One of the most important functions of the standardized report format is to simplify the task and thereby improve the State's ability to document and report its yearly progress in managing NPS pollution.

Regulatory Plans (National Pollution Discharge Elimination System)

While different legal authorities may apply to different situations, the goals of the NPS Program are complementary to the goals of the storm water regulatory programs that address urban runoff.¹⁰ The two-phased program under CWA section 402(p) requires NPDES permits for storm water discharges. In California, the federal NPDES Program is administered by the SWRCB and the RWQCBs. Since 1990, Phase I regulations have required NPDES permits for storm water discharges from:

1. Municipal separate storm sewer systems serving populations greater than 100,000,
2. Specific industrial activities, and
3. Construction activities disturbing land of five or more acres.

Phase I requires that individual NPDES permits be issued for municipalities greater than 100,000. In practice, the RWQCBs include many municipalities in urbanized areas with populations less than 100,000 in the Phase I programs. Individual municipal NPDES permits require implementation of structural and nonstructural control measures to reduce pollutant loads from industrial, commercial, and residential areas. The SWRCB elected to adopt a statewide NPDES General Permit requiring the development and implementation of a Storm Water Pollution Prevention Plan (SWPPP) for all construction and certain industry-related discharges.

Implementation of the NPDES Phase II Program will expand the existing program to include all municipalities within urbanized areas and small municipalities outside of urbanized areas with a population of at least 10,000 and a population density of at least 1,000 persons per square mile. The program will also expand to include construction sites that disturb between one and five acres. All activities under Phase I and II of the NPDES permit regulations will be required to prepare a SWPPP to demonstrate how MMs will be used to protect water quality degradation.

¹⁰ The 1987 CWA Amendments, which added section 319 related to NPS programs, also expanded the application of regulatory authority under CWA section 402 to prevent and control NPS pollution from certain urban areas and industrial activities. CZARA section 6217 also requires states to implement MMs to control NPS pollution, including urban runoff, to coastal waters.

FIGURE 3. STANDARDIZED REPORT FORM

DRAFT SAMPLE

**California Nonpoint Source Pollution Control Program
Annual Workplan for FY 1999**

Agency: *Cal/EPA*

Department/Board: *SWRCB*

Division/Program: *DWQ/NPS*

Contact:

Management Measure Category: *3.5 Transportation Development*

Management Measure Title: *3.5A Planning, Siting, and Developing Roads
and Highways*

Process Element: *Assess Problem*

Actions/Statements: *Conduct a consistency analysis of Cal/Trans'
statewide storm water permit.*

Geographic Area: *Statewide*

Funding Sources and Amount: *CWA 319(h) and General Fund*

Performance Measures: *Upgrade NPDES permit.*

Annual Progress Report: *The SWRCB approved a statewide storm water
permit for CalTrans in August 1999 that includes management
measures consistent with the Program Plan.*

Involve Stakeholders in Planning Process (Public Participation)

The Program Plan identifies numerous mechanisms for stakeholder participation in the planning and implementation of Tier 1 activities. To ensure that stakeholders have both the representation and buy-in necessary for Tier 1 to truly be effective, the State recognizes the need for public participation in every step of the planning and implementation process. Public input will be included in plan development, targeting resources, planning five-year activities, coordinating partnerships, implementing MMs, and monitoring success. This coordination will be achieved from direct comments provided by the public during the decision making and planning process. The most effective first step will be to establish the IACC and include a public representative on the Assessment TAC to participate in problem solving activities. In addition, the Program Plan has to establish a role for public participation in, among others, the State WQA (statewide citizen monitoring network), CCAs designation and implementation, specific work groups (e.g., CRMP), tracking MM implementation and effectiveness, and in developing additional MMs.

The first five-year review period will be a critical point for stakeholder involvement and public comments. The public will be invited to participate in the review of the first five-year plan assessment and in the development of future priorities and objectives. This process will be obtained best through the establishment of review committees (identified by the TACs) to review the Program Plan's effectiveness as outlined in the five-year report. From these comments, the State hopes to increase MM implementation and streamline Tier 1 activities.

E. Coordinating with Agencies and Key Stakeholders

Building cooperative partnerships among agencies at every institutional level, as well as with stakeholders, is essential to the success of a sustainable effort to protect and restore the quality and environment of the State's waters. In order for the NPS Program to be successful, we need to ensure that the roles and responsibilities of stakeholders and agencies with authorities to implement the MMs are clarified and executed. Specific objectives include:

- Establishing coordination mechanisms to enhance implementation of the five-year implementation plans,
- Fostering effective partnerships and collaboration among State, regional, and local agencies and non-governmental organizations (NGOs)—including CRMPs, officials responsible for habitat protection, land use programs and permitting, water quality permitting and enforcement, and public health and safety—to implement all appropriate MMs, and
- Making available for public review and comment by January 1, 2001, a draft of the enforcement guidance required pursuant to Porter-Cologne Act section 13369.

We will use the example of marina and boating activities to illustrate the complex partnerships required in implementing the appropriate MMs. In addition to the CCC and SWRCB, numerous agencies have regulatory jurisdiction and non-regulatory oversight of California's water quality management efforts related to marina and boating activities (Table 9). Although agency jurisdiction overlaps in many cases, the goal of these agencies is to prevent NPS pollution before it happens. (For a more complete list of

agency authorities related to the various NPS categories, the reader is referred to Volume II-CAMMPR of the Program Plan.)

For example, the RWQCBs, DFG, DHS, DTSC, and USCG all play an important role in regulating both the amount and type of wastes that enter California's waterways. The RWQCBs are the primary State agencies with water quality authority, which ranges from water quality planning to issuing permits for discharges of pollutants to State waters. Most RWQCBs use voluntary/cooperative management efforts for marina and boater NPS pollution control, although boat yards are regulated under a permit system. The DFG also has broad water quality authority and in addition to the USCG is the

TABLE 9 AGENCY PARTICIPATION IN MARINA AND BOATING ACTIVITIES

	Sewage	Bottom Paints/ Cleaning Material	Hazardous Waste	Oil/Fuel	Debris/ Solid Waste	Storm Water Runoff	Education

DBW	X						X
DFG	X	X	X	X	X		
DHS	X		X	X	X	X	
DTSC		X	X	X			
UCCE		X	X	X			X
MBNMS (NOAA)	X	X	X	X	X	X	X
NEPs (USEPA)	X	X	X	X	X	X	X
USCG	X		X	X	X		X

agency most likely to be on site at a marina. Its focus is on preventing pollution that harms fish and wildlife resources, especially discharges of oil and petroleum products. The DFG Office of Spill Prevention and Response (OSPR) is charged with oil spill prevention and response. The DHS also regulates the discharge of sewage, other waste, or effluent, while the DTSC regulates the storage, transport, and disposal of all hazardous wastes. The USCG implements federal laws related to garbage and sewage disposal.

In addition to the agencies listed above, DPR, SLC, SFBCDC, and CCC have leasing or permitting authority over many marinas. CCC, DBW, CIWMB, UCCE, MBNMS, and San Francisco Bay and Santa Monica Bay NEPs provide various levels of technical, financial, and/or educational assistance.

Many efforts related to marinas and recreational boating are coordinated through interagency and public committees, such as the California Clean Boating Network (CCBN) for Northern and Southern California (except San Diego County) and the Boating Safety and Environment Education Committee in San Diego. In 1995, a number

of pollution educators, including agency, industry, and environmental representatives, came together to create the CCBN as a result of a recommendation by the Marina and Recreational Boating TAC (SWRCB, 1994e) and to assist boaters and marina managers. The purpose of the CCBN is to promote environmentally sound boating education efforts and to improve communication and coordination between marina and boating pollution educators in California. Examples of CCBN activities to support this purpose include, but are not limited to:

- Sharing information and developing expertise on current environmentally sound boating issues;
- Identifying funding sources for marina and boater pollution education projects;
- Providing a forum to allow cooperation on funding source proposals;
- Assisting in the dissemination of materials;
- Providing feedback on draft materials;
- Providing a forum for feedback on the impact that education is having on the identified audience;
- Sharing methodology for education, outreach, and the evaluation of materials;
- Reviewing existing programs and identifying where additional effort is needed; and
- Developing a strategy to implement the additional efforts.

While the CCBN supports the efforts of its member organizations by sharing information, networking, and providing expertise, the CCBN has lost its program funding to conduct education regarding environmentally sound boating practices. In fact, educational efforts in the State regarding environmentally sound boating are largely funded by short-term grants. No State agency has assumed programmatic responsibility for a permanent education and outreach effort akin to the boating safety education program of the DBW.

As the CCC is now completing a three-year statewide grant, funded by the CIWMB, to promote environmentally sound boating, the CCC acknowledges the need for a permanent boater education program to be implemented by an appropriate State agency. The CCC will work with the DBW, SWRCB, and RWQCBs to identify the appropriate agency for implementing a permanent education program as outlined in the Implementation Plan. Once an appropriate agency is identified, the State will work to develop a long-term funding structure and implementation strategies.

Formal Coordination through Memoranda of Understanding and Management Agency Agreements¹¹

The State will formalize connections between the lead and enforcing agencies through the letter from Cal/EPA and Cal/RA, asking each agency, department, State boards, and RWQCBs to prepare a five-year implementation plan (see Appendix D). The State will

¹¹ Under the CWA and the State's Porter-Cologne Act, the SWRCB is given the authority and responsibility to develop and certify water quality management plans (including BMPs, implementation procedures, and management agency implementation responsibilities), to designate management agencies for plan implementation, and to execute MAAs setting forth management agency commitments to its implementation responsibilities. SWRCB encourages this management agency approach where it offers a viable alternative to direct SWRCB/RWQCB regulation in controlling NPS pollution and achieving compliance with the State's water quality standards. Where reasonably implemented by the management agency, the SWRCB will typically waive direct regulation under its own authority.

also enhance coordination by developing a formal agreement (MOU) between the lead agencies (SWRCB and CCC) responsible for the Program Plan's implementation. While the key elements of the NPS Program have been developed through a cooperative partnership without a formal agreement, an MOU would serve to clarify roles and responsibilities of each agency over the next 15 years. This MOU will be submitted with the Program Plan for approval by the SWRCB and CCC (see Appendix E).

The State will ensure that agencies with the ability to implement aspects of the Program Plan are effectively linked with the lead agencies by developing (or revising) MOUs or MAAs. MOUs and MAAs between the lead agencies and several implementing agencies already exist (Table 10). Additional MOUs/MAAs will be encouraged as a mechanism for officially designating other agencies with the responsibility and authority to implement aspects of the Program Plan. The State will revise existing or add additional MOUs/MAAs that support the implementation of MMs in accordance with the MMs' priorities. This approach is consistent with the Program Plan's phased approach and recognizes resource limitations.

TABLE 10. SUMMARY OF EXISTING MAAs AND MOUs

TYPE OF DOCUMENT	SIGNATORY AGENCY	GENERAL PURPOSE	DATE SIGNED
MOU	California Association of Resource Conservation Districts (CARCD)	Coordination of erosion control and water quality protection	1984
	Soil Conservation Service (SCS) (renamed NRCS)	Planning/technical assistance for water quality policies and activities	1990
	U.S. Bureau of Reclamation (USBR), USFWS, SCS (renamed NRCS), USGS, DWR, DFG, DFA	Implementation of San Joaquin Valley Drain Program	1991
	NOAA, USEPA, Association of Monterey Bay Area Governments (AMBAG), Cal/EPA, SWRCB, CCC, RWQCB 2 and 3	Develop and implement the MBNMS WQPP	1992
	BLM	Coordination of NPS policies and activities	1993
	DFA	Regulation of fertilizer and soil amendments	1998
Water Quality Management Plan (WQMP)/MAA	USFS	Control of NPS activities and pollution on National Forest System Lands	1981
	BOF, CDF	Control of NPS pollution from timber operations on nonfederal lands	1988
	CDPR	Control of pesticide pollution	1997
WQMP	None; cooperative program with technical assistance by UCCE and NRCS, support by CARCD, industry/professional associations	NPS control on private rangeland	1995
"Partnership Agreement" of CA Dairy Quality Assurance Program	14 dairy industry organizations, and state and federal agencies	Coordinated environmental stewardship for dairy waste management	1998

The SWRCB and CCC are committed to formalizing interagency agreements. In 2000-2001, the SWRCB and CCC will initiate reviews of existing MOUs/MAAs and will work with other agencies to identify opportunities for new agreements. The review will address such issues as existing limitations related to Program implementation and will determine the appropriate mechanisms for correcting concerns. The SWRCB and CCC will subsequently develop those MOUs/MAAs that are identified as being feasible and necessary to ensure the implementation of the priority measures identified in the first five-year plan. Specifically, the SWRCB and CCC will update existing or develop new MOUs/MAAs with the BLM, CDPR, and NRCS by December 31, 2001. In addition, by December 31, 2001, the SWRCB and CCC will develop a schedule for updating or developing additional MOUs/MAAs that are necessary to fulfill the goals and objectives of the Program Plan.

For example, beginning in 2000, the SWRCB will work with the USFS to revise the USFS WQMP called for under the MAA between the SWRCB and the USFS¹². The USFS has recently undertaken a significant review of its BMPs. These new BMPs adequately implement the MMs of the Program Plan. The USFS has initiated a collaborative effort to incorporate new information into national forest management of the Sierra Nevada National Forests. This effort, known as the Sierra Nevada Framework for Conservation and Collaboration, includes updates to forest plans to address problems in aquatic, riparian, and meadow systems, among other ecosystems. An Aquatic Conservation Strategy has been proposed to maintain and restore the ecological integrity of these systems. The WQMP for National Forest System Lands and the MAA between the USFS and the SWRCB should be modified to: (1) include the Aquatic Conservation Strategy; (2) improve the coordination and collaboration of restoration projects in these systems; and (3) include performance measures that can be used to track project/program effectiveness.

The SWRCB and the CDPR will revise their MAA so that the WQMP includes commitments to implement MMs for which CDPR has regulatory authority.

The SWRCB and the BLM are working to finalize a WQMP and MAA. In 1992, the SWRCB and BLM entered into an MOU (SWRCB Resolution No. 92-26) and agreed to pursue development of an MAA for NPS pollution control program on BLM lands. While that MAA is not yet in place, during the last year, BLM has shown renewed interest in completing the work. This effort should be completed prior to the year 2003. The WQMP with BLM should focus on (1) implementation and adaptive management of the rangeland standards and guidelines; (2) development and certification of BMPs and implementation measures for other NPSs of pollution on BLM lands; (3) evaluation and review of rangeland MPs; and (4) an annual assessment process with environmental and operational measures of success.

¹² Currently, the only federal agency with management agency status in California is the USFS. In 1981, the SWRCB certified a WQMP for National Forest System Lands, designated USFS as management agency for plan implementation, and executed an MAA with USFS. The WQMP and MAA currently provide for: (1) development and implementation of SWRCB-certified BMPs; (2) early State involvement in review of USFS projects; (3) monitoring and adaptive management of BMP effectiveness and implementation; and (4) annual meetings to maintain coordination and communication.

BLM and the SWRCB have worked together to avoid and reduce NPS pollution from BLM-owned land. BLM controls domestic livestock grazing on public lands through designated grazing allotments. In 1998 BLM developed standards for rangeland health and guidelines for livestock management. SWRCB worked with BLM to ensure that these rangeland standards and guidelines would (1) comprise BMPs; (2) conform with the (g) guidance MMs and the BMPs set forth in the SWRCB's 1995 Rangeland WQMP for private rangelands; and (3) achieve compliance with California's water quality standards. Implementation of the BLM standards and guidelines began earlier in 1999.

Strong stewardship by landowners is a critical mechanism for implementing MMs, and the NRCS is a key agency providing financial and technical assistance to those landowners. The SWRCB and NRCS staffs have agreed that an MOU between the agencies would greatly improve the technical assistance aspects of the NPS Program. NRCS (formerly the Soil Conservation Service) and the SWRCB have an existing MOU dated July 31, 1990, outlining planning and technical assistance related to water quality policies and activities. This MOU will be updated to address NRCS's role in the Program Plan (e.g., assisting landowners in voluntarily implementing Resource Management Systems [RMS] or MMs) and to affirm the SWRCB's commitment to work through a self-determined approach (Tier 1) as a valuable step in achieving clean water goals. The new MOU will also address the use of NRCS technical guidance materials (e.g., Field Office Technical Guide[FOTG]) in planning and installing resource MMs.

The SWRCB and the CCC are leading an effort to develop MOUs/MAAs among the agencies in Cal/EPA and Cal/RA. The purpose of these formal agreements is to develop commitments to implement MMs (e.g., develop five-year implementation plans for their agencies or establish NPS pollution control elements to existing workplans). The SWRCB has contracted with the CCC to facilitate the completion of these agency-specific five-year implementation plans. The SWRCB has authority to require agencies to provide technical reports (Porter-Cologne Act §13165), and this authority could be used if cooperative approaches are ineffectual. The five-year implementation plans would contain components such as:

1. Implementation of all identified NPS MMs for which they have authorities and are targeted in the Program Plan by 2013;
2. Tracking of implementation and effectiveness by MM and source category and providing this information to the SWRCB as part of the monitoring and assessment strategy; and
3. Participation in regular program reviews as well as new goal-setting activities, including development of the five-year implementation plans and coordination of planning, assessment, and regulation activities with the SWRCB, CCC, and RWQCBs.

Coordination Through Interagency Forums

In addition to using formal agreements to establish coordination, the SWRCB and CCC will establish an IACC to provide a regular working forum to collaborate in implementation and problem solving. We currently envision several roles for the IACC. First, where programmatic or policy conditions present problems for watershed

management, the SWRCB and CCC, through the IACC, will act as a conduit for addressing and resolving those problems. The IACC will also be asked to evaluate agency functions and to recommend improvements that can benefit water quality on a statewide basis for various categories of activities. The IACC will be the primary forum for coordinating program activities of the lead and implementing agencies. Second, SWRCB and CCC staffs will work with the IACC to identify those agencies willing to become partners in interagency technical assistance teams. For these teams to function optimally, they must have broad-based support. Allowing agencies to assist with and utilize the functions of the teams will provide a powerful mechanism for improving coordination. Third, the SWRCB and CCC staffs will request the IACC to establish TACs in four major issue areas--assessment, technical assistance, education, and regulation. The role of these committees will be to identify opportunities for improved coordination and instances where impediments to effective management occur and to devise responses to move toward enhanced performance and management. Staff will work with the committees to ensure that the problems facing watershed groups are clearly understood and to provide a vehicle for implementing changes in State activities.

The lead agencies will work with the CBC to define the appropriate complementary roles of the CBC and the IACC. The CBC is comprised of 15 State agencies, the University of California (UC), CARCDs, and nine regional associations of county supervisors. The CBC was formed to improve coordination and cooperation among the various resource management and environmental protection agencies at federal, State, and local levels.

Interagency Initiatives and Public/Private Partnerships

Because stewardship is a fundamental principle upon which the NPS Program is based, we need to encourage collaborative relationships that include a broad range of groups. SWRCB, RWQCB, and CCC staffs will work with watershed groups and CRMPs to promote coordinated resource management and planning through the active participation of all stakeholders in a given watershed. The lead agencies encourage the participation of all relevant agencies and stakeholders in watershed management. There are a number of collaborative efforts in which the lead agencies are either currently active or will become active. As part of the effort to improve coordination, staff will work with the following efforts:

- Federal CWAP.
- CBC—Watersheds and Resource Assessment Initiatives.
- Implementation of Farm Bill Conservation Programs (including USDA, NRCS Locally-Led Conservation, Stream Corridor Restoration, Conservation Buffers, Salmon Restoration, and Air Quality Initiatives).
- The Environmental Stewardship component of the California Dairy Quality Assurance Program. This partnership among 14 entities including various State and federal agencies, UC, and representatives of the California dairy industry develops a voluntary, cooperative government and industry education and certification program. The program core components include: (1) education workshops for producers; (2) the creation of Environmental Stewardship Farm Management Plans specific to each dairy; and (3) on-site evaluation by a third party.
- The Range Management Advisory Committee of the BOF.

- Cal/RA's effort to inventory wetland and riparian areas statewide and to maintain data on projects subject to CWA section 401 certification.
- Cal/RA's efforts to establish a definition for riparian areas in consultation with other affected agencies.
- The California Aquatic Bioassessment Workgroup, chaired by staff from the DFG. SWRCB and RWQCB staffs have: (1) trained community members in bioassessment; (2) designed regional bioassessment monitoring programs; and (3) participated in the development and review of bioassessment methods and metrics.
- The California Watershed Project Inventory (Project Inventory) at UCD ICE. The SWRCB has provided significant financial support to this database of watershed projects. Currently, the SWRCB and UCD ICE are expanding the database to link MMs, agencies, and authorities to the Project Inventory.
- Certified Crop Advisor Program.
- CRMP groups throughout California.
- CALWATER watershed mapping initiative.
- CALFED Bay Delta Initiative/Program.
- Lake Tahoe Initiative.
- MBNMS WQPP.
- Southern California Beach Water Quality Workgroup.
- Southern California Coastal Water Research Project.

Review of Federal Projects and Programs

CWA section 319 authorizes and requires each state to review federal activities to ensure consistency with the state's NPS management program. The CWA also directs federal agencies to accommodate the concerns of each state.¹³ While the 1988 Plan noted that federal consistency¹⁴ would focus on the actions of three federal agencies (USACOE, USBR, and FERC), the SWRCB, and RWQCBs routinely review: (1) financial and technical assistance programs; (2) development activities; (3) environmental impact statements; and (4) monitoring programs from numerous federal agencies. The CCC has a similar federal consistency process under the CZMA (see Appendix B). The State Clearinghouse acts as the coordinating and notification agency for routing projects to appropriate State agencies. Many federal agencies directly notify State agencies of appropriate federal projects and programs through periodic NEPA reporting procedures or regional collaborative efforts.

The federal programs requiring review for NPS issues are listed in Table 11. The primary lead agency that reviews projects with statewide impact will be the SWRCB.

¹³ This requirement is spelled out in Executive Order 12372 of July 14, 1982 (Federal Register Vol. 47, No. 137).

¹⁴ The general process for review of federal projects, as outlined in this Executive Order, is: (1) State develops a list of federal assistance programs and development projects it will review; (2) State clearinghouse routes federal project information to appropriate State agency for review; (3) State agency reviews projects and provides timely comments to the federal agency; (4) federal agency reviews comments and accommodates concerns where possible; and (5) if concerns cannot be addressed, a timely explanation will be provided. Where the State cannot resolve federal consistency issues to its satisfaction, it requests USEPA assistance to help resolve the issues.

TABLE 11. LIST OF FEDERAL AGENCIES' PROGRAMS AND PROJECTS SUBJECT TO STATE REVIEW

U.S. BUREAU OF LAND MANAGEMENT
Watershed Projects
Mineral Exploration and Development
Oil and Gas Leasing
ORV Activities
Timber Activities
Grazing Allotment/Grazing Management/Permits Issuance
Chemicals/Pesticides
Area Analysis/Cumulative Impacts
Wetlands Protection
Riparian Management Plans
Hydrologic Modifications
Transportation Plans
U.S. DEPARTMENT OF DEFENSE
Natural Resource Management Plans and Projects
Military Construction Projects
Facilities Development Plans and Projects
Land and Water-Based Military Training Plans and Exercises
Environmental Restoration Projects
Spoil Disposal
Open Water Disposal Sites
FEDERAL ENERGY REGULATORY COMMISSION
Dam Relicensing
U.S. FOREST SERVICE
Forest Management Plans
Timber Sales
Grazing Allotments
NATIONAL MARINE FISHERIES SERVICE
Fisheries Management Plan
Habitat Conservation Plans
NATURAL RESOURCE CONSERVATION SERVICE
Environmental Quality Incentives Program (EQIP)
Wetland Reserves Program
Wetland Conservation
Forestry Incentives Program
NATIONAL PARK SERVICE
National Park Seashore Management and Proposed Acquisitions
Wildlife Management
Grazing Management
Abandoned Mines Management
NATIONAL OCEANIC AND ATMOSPHERIC ADMINISTRATION
Coastal Management Programs
U.S. BUREAU OF RECLAMATION
Irrigation Development
U.S. ARMY CORPS OF ENGINEERS
Permits for Dredged or Fill Material
U.S. FISH AND WILDLIFE SERVICE
Management of National Wildlife Refuges and Proposed Acquisitions
Habitat Conservation Plans

The appropriate RWQCBs will review local and regional projects. The CCC will also review programs in the coastal zone as defined in the Coastal Act. These State agencies will work with USEPA staffs who are liaisons with these federal agencies to ensure compliance with the CWA.

When project-by-project review and intervention by USEPA staff are insufficient to abate NPS pollution, the lead agencies will negotiate revisions to existing formal agreements or develop new agreements. If formal agreements are ineffectual, the SWRCB or RWQCBs can require federal agencies to provide NPS pollution prevention reports under their authority (Porter-Cologne Act §13267).

F. Implement Actions

The Three-Tiered Approach Overview

Originally adopted in the 1988 Plan, the "three-tiered approach" remains a cornerstone of the NPS Program. The "three-tiered approach" utilizes three different options of enforceable policies and mechanisms under the Porter-Cologne Act to ensure water quality objectives are achieved. The options are presented in order of increasing stringency. Through the "three-tiered approach," the NPS Program recognizes that many NPS problems are best addressed through the self-determined cooperation of stakeholders (Tier 1). However, persistent NPS water quality problems not effectively resolved through self-determined actions will be addressed through applicable regulatory programs and authorities (Tier 2 and Tier 3).

In general, which option is used depends on factors such as:

- Persistence of water quality impairments;
- Whether timely implementation of MMs and MPs is being achieved; or
- Whether the Tier 1 approach is being utilized effectively.

In practice, the RWQCBs will determine which or what combination of the three options will be used to address any given NPS problem. Sequential movement through the tiers (e.g., Tier 1 to Tier 2 to Tier 3) is not required of the RWQCBs. Depending on the water quality impacts and severity of the NPS problem, the RWQCBs may move directly to the enforcement actions specified in Tier 3. Pursuant to CWC section 13369(a)(2)(B), the SWRCB will develop, by February 1, 2001, guidance to be used by the SWRCB and RWQCBs for moving through the "three-tiered" process.

All three options implement BMPs. BMPs include, but are not limited to, structural and nonstructural controls and operation and maintenance procedures. BMPs can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters. BMPs are means of achieving certain MMs. For example, seeding and mulching of steep slopes at a construction site would be structural BMPs for achieving the MM of erosion control.

Tier One: Self-Determined Implementation of Management Practices

Since its inception in 1988, the “self-determined” or “voluntary approach” to the implementation of BMPs has been central to discussions of the NPS Program. The terms “voluntary” and the “voluntary approach” have been a popular concept grounded in the historic notions of autonomy and self-determination. The definition

of “autonomy” also refers to the concept of “moral independence,” implying that autonomy also carries with it responsibility and accountability. This is especially critical in situations where individual actions may conflict with the public good.

As a concept the term “voluntary approach” is as important for what it does not mean as for what it does. Compliance with the CWA, CZARA, CWC, and the Porter-Cologne Act is not a voluntary choice. It is the responsibility of the SWRCB and the RWQCBs to see that these laws are enforced. The concept of “self-determined implementation” of NPS control measures was developed to acknowledge the potential capability of landowners and resource managers to develop and implement workable solutions to NPS pollution control and to afford them the opportunity to solve their own problems before more stringent regulatory actions are taken.

Property owners and/or managers may implement BMPs through their own initiative or self-determination. Implementation could occur for economic reasons and/or through awareness of environmental benefits. Self-determined implementation can be encouraged through education, training, financial assistance, technical assistance, and demonstration projects. A self-determined approach would take advantage of the expertise and incentives offered by a variety of existing local, State, and federal programs that are geared to promoting private actions which could have water quality benefits. Lead agencies for these programs include the DOC NRCS, Farm Services Agency (FSA), RCDs, and the UCCE.

Tier Two: Regulatory-Based Encouragement of Management Practices

In general, the Porter-Cologne Act constrains RWQCBs from specifying the manner of compliance with water quality standards. However, RWQCBs have two ways to use their regulatory authorities to encourage implementation of BMPs.

First, RWQCBs may encourage the use of BMPs by waiving adoption of WDRs on condition that dischargers comply with this requirement. Alternatively, the SWRCB and the RWQCBs may enforce BMPs indirectly by entering into MAAs with other agencies that have the authority to enforce BMPs. Such authority derives either from the agency's regulatory authority or its management responsibility for publicly owned or controlled land. MAAs will include (or reference) specific, acceptable BMPs and their means of implementation. Both the SWRCB and the RWQCBs may enter into MAAs. The SWRCB will develop MAAs, where appropriate, with State and federal

agencies having statewide jurisdiction, such as the BLM or Cal/Trans. For example, the SWRCB has existing MAAs with the USFS and with the BOF and CDF. SWRCB MAAs will specify acceptable BMPs and how they will be implemented. Formal agreements between the SWRCB and other agencies pertaining to the prevention and abatement of NPS pollution will be referenced in RWQCB basin plans and will become the primary basis for RWQCB determination of compliance with State requirements. RWQCBs will seek agreements, where appropriate, with local agencies, such as cities and counties. For example, RWQCBs have existing MAAs with counties concerning regulation of on-site wastewater disposal systems. RWQCB MAAs may also reference BMPs that have been adopted into basin plans.

RWQCBs will generally refrain from imposing effluent requirements on dischargers who are implementing BMPs in accordance with a waiver of WDRs, an approved MAA, or other SWRCB or RWQCB formal action. Once the SWRCB or RWQCB has formally approved BMPs, they will become the primary mechanism for meeting water quality standards. While compliance with BMP requirements cannot excuse a violation of water quality standards, the RWQCBs may rely on their implementation of BMPs to demonstrate compliance with standards.

Implementation of BMPs will normally include: (1) specific site conditions; (2) monitoring to assure that practices are properly applied and are effective; (3) immediate mitigation of a problem where the practices are not effective (including regulatory action, if necessary); and (4) improvement of an approved BMP or implementation of additional BMPs when needed to resolve a deficiency.

RWQCBs have discretion in deciding what BMPs to encourage through conditional waiver of WDRs or inclusion in RWQCB MAAs. RWQCBs need not adopt BMPs into basin plans for these purposes but may do so to facilitate regionwide application. The SWRCB will encourage reasonable consistency among the RWQCBs in choosing BMPs by: (1) transferring information among RWQCBs on effective (or ineffective) practices; (2) reviewing amendments to basin plans; and (3) making determinations as the appeal agency for RWQCB decisions.

Tier Three: Effluent Limitations and Enforcement

RWQCBs can enforce requirements on any proposed or existing waste discharge, including NPS discharges. Although RWQCBs cannot specify the manner of compliance with waste discharge limitations (with certain exceptions), in appropriate cases the RWQCBs can set limitations at a level that, in practice, requires implementation of BMPs.

While many of the NPS Program activities support and promote self-determined implementation, the SWRCB and RWQCBs have a wide array of enforcement mechanisms at their disposal that also will be utilized. Enforcement actions may be considered to address many circumstances including, but not limited to, the following: (1) violation of an effluent limit, receiving water limit, or discharge prohibition contained in an order or basin plan adopted by the SWRCB or an RWQCB; (2) an

unauthorized spill, leak, fill, or other discharge; and (3) failure to perform an action required by the SWRCB or an RWQCB, such as submittal of a self-monitoring or technical report or completion of a clean-up task by a specified deadline.

It is important to note that enforcement of State water quality statutes is not solely the purview of the SWRCB and RWQCBs and their staffs. State law allows members of the public to petition the SWRCB to review permitting and enforcement actions or inactions by the RWQCB. In addition, the CWC provides for public participation in the issuance of orders, policies, and WQCPs.

The SWRCB and RWQCBs have a variety of enforcement tools to use in response to noncompliance by dischargers. An enforcement action is any formal or informal action taken to address an incidence of actual or threatened noncompliance with existing regulations or provisions designed to protect water quality.

Formal Enforcement: Formal enforcement actions fall into two basic categories: those that direct future actions by dischargers and those that address past violations. Actions that generally direct future action include notices to comply, imposition of time schedules, and issuance of cease and desist orders (CDOs) and cleanup and abatement orders (CAOs). Actions taken to address past violations can also include CAOs, rescission of WDRs, administrative civil liability (ACL), and referral to the attorney general (AG) or district attorney (DA). In some instances, both types are used concurrently to deal with a specific violation (e.g., discharger has had past violations but has not yet corrected the problem).

Any person adversely affected by an action or failure to act by an RWQCB may petition the SWRCB to review the decision. The petition must be received by the SWRCB within 30 days of the RWQCB action or refusal to act or 60 days after a request has been made to the RWQCB to act. In addition, the SWRCB may review, at any time and on its own motion, any action or failure to act by an RWQCB, including planning actions.

Informal Enforcement: For minor violations, the first step is usually informal enforcement action. The discharger is informed of the specific violations and is provided information as to how and why the violations occurred and how and when the discharge must come back into compliance. This step can be deleted for significant violations, such as repeated or intentional illegal discharges and falsified reports.

The notice of violation (NOV) letter is also an informal enforcement action. The purpose of a NOV letter is to bring a violation to the discharger's attention and to give the discharger an opportunity to correct the violation before formal enforcement actions are taken. Continued noncompliance should trigger formal enforcement action. An NOV letter is signed by the RWQCB Executive Officer and covers the following points: (1) description of specific violations; (2) summary of applicable

enforcement options (including maximum ACL); and (3) a request for a written response.

Time Schedule Order: Pursuant to CWC section 13300, actual or threatened discharges of waste in violation of requirements can result in imposition of a time schedule which sets forth the actions a discharger shall take to correct or prevent the violation.

Cease and Desist Orders: CDOs are adopted pursuant to CWC sections 13301-13303. They are normally issued to dischargers regulated by WDRs and often remain in force for years. CDOs are typically issued to regulate dischargers with chronic non-compliance problems. These problems are rarely amenable to a short-term solution. Often, compliance involves extensive capital improvements or operational changes. The CDO will usually set a compliance schedule, including interim deadlines (if appropriate), interim effluent limits (if appropriate), and a final compliance date. CDOs may also include restrictions on additional service connections (referred to as a "connection ban") to community sewer systems. These have been applied to sanitary sewer systems but can be applied to storm sewer systems as well. Violations of CDOs should trigger further enforcement in the form of an ACL or referral to the AG for injunctive relief or monetary remedies.

Cleanup and Abatement Orders (CAO): CAOs are adopted pursuant to CWC section 13304. They are generally issued to dischargers that are not being regulated by WDRs. With the exception of ground water cleanup, CAOs are typically short-lived enforcement orders. CAOs are issued through an RWQCB action or by the Executive Officer under delegation from the RWQCB Members pursuant to CWC section 13223. Executive Officer-issued CAOs should be used when speed is important, such as when a major spill or treatment plant upset has occurred and waiting until the RWQCB can meet to approve a CAO would be inappropriate. Violations of CAOs should trigger further enforcement in the form of an ACL or referral to the AG for injunctive relief or monetary remedies.

Prohibitions: Basin plans may set forth appropriate prohibitions for various categories of NPS pollution. In some cases, these prohibitions are written to allow application of the prohibition to be waived during planning and permitting of projects or activities covered by a water quality management plan. A prohibition allows an RWQCB to take direct and immediate enforcement action through issuance of CAOs, even in the absence of WDRs. Therefore, it allows RWQCBs to respond in a timely manner where NPS pollution generated by certain activities is creating an emergency or a problem which is not otherwise being remedied in an adequate or timely manner.

Modification or Rescission of Waste Discharge Requirements: In accordance with the provisions of the CWC, and in the case of NPDES permits, the RWQCB may modify or rescind WDRs in response to violations. Rescission of WDRs generally is not an appropriate enforcement response where the discharger is unable to prevent the discharge as in the case of a wastewater treatment plant.

Referrals to the Attorney General or District Attorney: The RWQCB can refer violations to the AG or ask the appropriate county DA to seek civil or criminal penalties. In either case, a Superior Court judge will be asked to impose civil or criminal penalties. In some cases, the RWQCB may find it appropriate to request the U.S. Attorney's Office to review potential violations of federal environmental statutes, including the CWA, Migratory Bird Treaty Act, or the Resource Conservation and Recovery Act (RCRA). Enforcement actions taken by the RWQCB are civil actions. In cases where there is reason to believe that specific individuals or entities have engaged in criminal conduct, the RWQCB or Executive Officer may request that the DA pursue criminal actions. Under criminal law, individual persons, as well as responsible parties in public agencies and business entities, may be subject to fines or imprisonment.

Administrative Civil Liability

ACL means monetary assessments imposed by an RWQCB. These actions are intended to address past violations. If the underlying problem has not been corrected, the ACL action should be accompanied by an RWQCB order to compel future work by the discharger (e.g., CAO or CDO). The CWC authorizes ACLs in several circumstances, summarized in Table 12:

TABLE 12. POTENTIAL MONETARY ASSESSMENTS IMPOSED BY AN RWQCB

CWC Section	Type of Violation
13261	Failure to furnish report of waste discharge or to pay required fees.
13265	Unauthorized discharge of waste.
13268	Failure to furnish technical report.
13308	Failure to comply with time schedule.
13350	Intentional or negligent violation of CDO or CAO; violation of WDRs; or RWQCB prohibition which results in pollution or unauthorized release of any petroleum product.
13385	Violation of NPDES Permit, Basin Plan Prohibition, etc.

A summary of the “three-tiered approach,” including practical examples of its application in California, is presented in Table 13.

Implement TMDLs

The development and implementation of TMDLs for NPS impaired water bodies are expected to enhance our ability to address NPS problems, consistent with the three-tiered approach described above. Along with the TMDL, the State will develop implementation plans that describe specific measures needed to achieve the point and nonpoint allocations established by the TMDL. For point sources, the allocations will be implemented through NPDES permits while NPS allocations are implemented through a wider range of authorities and programs, including the use of applicable State

enforcement authorities. Therefore, TMDLs are expected to promote the implementation of the appropriate MMs that will achieve timely water quality improvements that have not been achieved through the other approaches.

TMDLs will provide a more detailed approach to ensuring the implementation of the appropriate NPS MMs and will provide a better framework for "triggering" more stringent implementation. For example, TMDLs will (1) establish goals to judge the performance of management programs; (2) create the ability to better assess the effectiveness and appropriateness of MPs individually and collectively; (3) provide a basis for determining when to use more stringent management options (e.g., WDRs or other enforcement authorities); and (4) assist in prioritizing State's staff and financial resources when pursuing corrective actions.

Implement MMs in Regulation

NPDES – Storm Water

The two-phased program under CWA section 402(p) requires NPDES permits for storm water discharges. In California, the federal NPDES Program is administered by the SWRCB through the nine RWQCBs. Since 1990, Phase I regulations have required NPDES permits for storm water discharges for:

- Municipal separate storm sewer systems serving populations greater than 100,000,
- Specific industrial activities, and
- Construction activities disturbing land of five or more acres.

Phase I requires that individual NPDES permits be issued for municipalities greater than 100,000 (in practice, the RWQCBs include many municipalities in urbanized areas with populations less than 100,000 in the Phase I programs). Individual municipal NPDES permits require implementation of structural and nonstructural control measures to reduce pollutant loads from industrial, commercial, and residential areas. Implementation of the NPDES Phase II Program will expand the existing program to include all municipalities within urbanized areas and small municipalities outside of urbanized areas with a population of at least 10,000 and a population density of at least 1,000 persons per square mile. The program will also expand to include construction sites that disturb between one and five acres.

California's current and developing approaches to addressing urban runoff are and will be consistent with both the NPDES and NPS Programs. In the interest of consistency and comprehensiveness, the SWRCB and RWQCBs will ensure the implementation of urban MMs in areas and activities currently regulated by the NPDES Phase I Permit Program by incorporating the MMs into existing NPDES permits as the permits are renewed (at five-year intervals). Similarly, the SWRCB and RWQCBs will ensure that the NPDES Phase II permits will serve as the enforceable authorities to implement the urban MMs in areas and activities covered under Phase II. As lead agencies for the NPS Program, the SWRCB, RWQCBs, and CCC will ensure that all NPS MMs not covered by the NPDES Phase I or Phase II permits are implemented through other mechanisms identified within the NPS Program Plan.

TABLE 13. DESCRIPTION AND USE OF THE THREE-TIERED APPROACH

Tier	Description of Approach	Examples of the Three-Tiered Approach in Action
<p><u>Tier One:</u> Self-determined Implementation of Best Management Practices</p>	<p>Landowners and resource managers implement MMs/BMPs to achieve water quality standards. The RWQCBs may rely on implementation of MMs and BMPs to demonstrate compliance with, but cannot excuse violation of, water quality standards. Self-determined implementation is encouraged through incentives and technical assistance offered by State and federal programs that promote resource stewardship to achieve water quality benefits and to comply with statutory requirements. Agencies that provide such programs include the SWRCB, RWQCBs, DOC, NRCS, FSA, RCDs, and UCCE. Self-determined implementation is encouraged through the recognition by landowners and resource managers that this tier allows the discharger more “self-determination” in complying with statutory requirements than the more-stringent Tiers Two and Three.</p>	<ul style="list-style-type: none"> • Financial support for local watershed stewardship projects (CWA §319) • EQIP cost-share for implementation • Sacramento Watershed Program fostering stewardship • Urban pesticide committee education efforts • Workshops promoting the Rangeland WQMP
<p><u>Tier Two:</u> Regulatory- Based Encouragement of Management Practices</p>	<p>There are two ways that RWQCBs can use their regulatory authorities provided by the Porter-Cologne Act to encourage implementation of MMs/MPs. First, RWQCBs may work with landowners and resource managers to waive the adoption of WDRs or a waste discharge prohibition on the condition that MMs and BMPs will be implemented to correct or prevent NPS pollutant(s) of concern. Second, the SWRCB and RWQCBs may enforce MMs and BMPs by entering into MAAs with other agencies that have authority to enforce the implementation of appropriate MMs and BMPs.</p>	<ul style="list-style-type: none"> • MAAs with BOF/CDF, USFS, and CDFPR • Marin County Stormwater Program (RWQCB-2) • Channel Islands National Park – improved grazing practices (RWQCB-3) • Required submittal of agricultural drainage operation plans (RWQCB-5) • Agricultural Nutrient Management Plans-Newport Bay (RWQCB-8)
<p><u>Tier Three</u> Effluent Limitations and Enforcement</p>	<p>RWQCBs can adopt and enforce requirements on any proposed or existing waste discharge, including discharges from NPSs. Although RWQCBs are generally precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases limitations may be set at a level which, in practice, requires implementation of MMs and BMPs. In addition, the SWRCB and RWQCBs have a variety of enforcement tools—such as CDOs and ACLs—that can be used in response to noncompliance.</p>	<ul style="list-style-type: none"> • WDRs for commercial nurseries – Newport Bay (RWQCB-8) • WDR for selenium for San Joaquin River (RWQCB-5) • Permitted storm water programs • Erosion Control – Lake Tahoe (RWQCB-6) • WDRs for dairies

Provide Financial and Technical Assistance

Introduction

Strong stewardship by local stakeholders is critical to ensuring the successful implementation of the MMs identified in the five-year plans. Self-determined implementation can be encouraged through technical assistance provided by both State and local entities. A priority in the Implementation Plan is for the SWRCB and CCC to provide comprehensive technical assistance to local groups and landowners. The State will identify additional agencies and develop agreements (MOUs) to significantly increase the ease of acquiring and disseminating the most accurate and current information possible. A goal of the SWRCB and CCC is to provide each stakeholder with the information they require by coordinating efforts throughout the State.

Funding (Financial Assistance)

The Program will depend largely on funding received through the CWA section 319(h), State appropriations, and the contributions of other entities, including local governments, nongovernmental organizations, and private individuals. Unless additional funds are made available, it is possible that some of the activities contained within this Program Plan will not be completed as proposed. It is anticipated that implementation difficulties related to funding limitations will be identified and addressed as provided for through periodic program reviews.

Available Program funding will be directed at supporting activities that implement the MMs as identified in CAMMPR. Projects and staff positions at the SWRCB and RWQCBs funded under the CWA section 319(h) must support the implementation of MMs. This change will be included in the next CWA section 319(h) grant cycle (FFY 2000).

Federal Funding

USEPA provides annual funding to the SWRCB for implementation of the NPS program, pursuant to the CWA section 319. Since section 319 was established by the reauthorization of the CWA in 1987, California has received over \$40 million to support the State's NPS program. In 1999, the federal allocation to support State NPS programs under CWA section 319(h) was significantly increased in recognition that many of the most serious remaining water quality problems are associated with NPS pollution. California's CWA section 319(h) funding level was increased from \$5.7 million in 1998 to \$10.3 million in 1999.

In California, the CWA section 319(h) funds have generally been divided between supporting State staff activities at the RWQCBs and the SWRCB and funding NPS implementation projects. As the lead water quality agency in California, the SWRCB receives the CWA section 319(h) funding from USEPA through a cooperative agreement. The SWRCB and the RWQCBs

prepare annual workplans for USEPA approval to specify the activities that will be supported through these CWA section 319(h) funds. CWA section 319(h) funding is primarily for implementation activities; therefore, at least 80 percent of all CWA section 319(h) funds must be spent on implementation, while no more than 20 percent may be allocated to planning and program development activities.

NPS projects have been selected based on a competitive process administered by the SWRCB and RWQCBs. Generally, an annual Request for Proposals (RFP) is issued for projects that will reduce or prevent NPS pollution to ground and surface waters. Eligible projects include the implementation of MPs, TMDL implementation, technology transfer, demonstration projects, pollution prevention, technical assistance, volunteer monitoring, and public education. Nonprofit organizations, local government agencies, including special districts (e.g., RCDs or water districts), and educational institutions are the recipients of these funds.

Another important source of funding for NPS projects is the SRF. The SRF is a low interest loan program established by the CWA to fund a wide range of water quality projects, including the same types of projects that are eligible for section 319(h) funding. Traditionally, the SRF and its predecessor, the Clean Water Grant Program, have been used to fund publicly-owned treatment works (POTWs) for sanitary sewer systems. However, the amendments to the CWA that established the SRF allowed for expanded uses of the SRF beyond the traditional POTW project. Capitalization for the SRF comes from an annual federal appropriation, 20 percent of State matching funds and loan repayments that revolve back into the SRF. Current assets (loans and cash) in California exceed \$1 billion. The utilization of these assets offers one of the best avenues for funding the implementation of NPS MMs and related watershed implementation efforts.

To date, California has been a national leader in using the SRF to fund a wide variety of expanded use projects. Examples of types of expanded use projects that have been funded include:

- Stream restoration,
- Irrigated agricultural BMPs (improved methods of irrigation to reduce salt and selenium loads to the receiving water),
- Animal feeding operation BMPs (on-site improvements at small dairies that do not meet the USEPA definition of a point source),
- A vineyard to demonstrate BMPs and sustainable viticulture,
- Forestry BMPs (removal of dead and dying trees in the Lake Tahoe Basin),
- On-site septic system rehabilitation,
- Storm water treatment (including wetlands treatment),
- Wetlands preservation,

- Marina education and improvements,
- Water quality enhancements to flood control, and
- Estuary enhancement.

Using the fund to address all types of water quality issues regardless of whether it is a POTW, NPS, etc., is beneficial. In so doing, the SRF will help to foster the watershed approach. The SWRCB (who administers the SRF) is currently developing a formal policy regarding the funding of expanded use projects, including NPS projects. Once this policy is adopted, the expanded use projects will be given appropriate consideration in comparison to the traditional POTW projects.

State Funding

State funds have been earmarked for NPS Program development and implementation. These funds support SWRCB staff to develop MMs, the Strategy, and the Implementation Plan; develop and oversee formal agreements and informal partnerships; provide technical assistance; and provide public participation, education, and outreach. Additional funds are earmarked to develop and implement a program to track the effectiveness of MMs.

Currently, State monies fund NPS pollution prevention and reduction efforts at the SWRCB and RWQCBs in four of the six management categories: agriculture, forestry, hydromodification, and wetlands/riparian areas. Through State General Funds, the SWRCB and the RWQCBs update and revise basin plans regarding the effects of subsurface agricultural drainage on the State's waters. Staff also review forestry activities to ensure control of NPS pollution. Primary activities include: (1) the review of timber harvest plans, (2) consultation with federal agencies on silviculture, mining and grazing on forest lands, (3) evaluation of corrective actions, (4) development of water quality criteria and guidelines for treatment and disposal, (5) regulatory actions, (6) laboratory quality assurance, and (7) coordination of data management. The SWRCB and the RWQCBs administer the water quality certification program authorized through the CWA section 401. CWA section 401 requires that any applicant for a federal license or permit to conduct any activity which may result in a discharge to navigable waters obtain a certification from the State that the discharge will comply with the applicable provisions of CWA sections 1311, 1312, 1313, 1316, and 1317 (essentially State water quality standards). Generally speaking, CWA section 401 applies to dredge and/or fill permits issued by the USACOE, pursuant to CWA section 404 or hydropower generation facility licenses issued by the FERC.

Starting in 1999, the baseline allocation of the SWRCB has been augmented by \$3.9 million to develop TMDLs, a necessary first step in reducing NPS pollution in impaired watersheds. While these funds will not support

implementation of TMDLs, SWRCB and RWQCB staffs will participate in stewardship groups and assist community-based watershed monitoring programs.

Funds are also provided to on-the-ground pollution prevention and reduction activities through two funding sources: the Delta Tributary Watershed Program and the Agricultural Drainage Management Program (ADMP) authorized under Proposition 204. The Delta Tributary Watershed Program was awarded, on a one-time basis, \$14.5 million for rehabilitation projects in the watersheds tributary to the Sacramento-San Joaquin Rivers Delta or the Trinity River. Most of these projects will begin in 1999 or early 2000. Of the \$30 million set aside for the ADMP, \$27.5 million was for low interest loans and \$2.5 million was for the nonfederal share of a project specific to the Salton Sea. The loan fund can be used for the treatment, storage, conveyance, reduction, or disposal of agricultural drainage water that if discharged untreated would pollute California's waters.

Request for Proposals

Each year the SWRCB and USEPA release RFPs for watershed planning and implementation projects to reduce, eliminate, or prevent water pollution and to enhance water quality. The RFP contains information concerning project requirements, anticipated funding levels, the review process, and selection criteria, and an application form is included that serves as the proposal. Funds made available are typically offered under the authority of Federal CWA section 205(j) Water Quality Planning and Assessment or CWA section 319(h) NPS Implementation Programs. However, in 1997 and 1998, the SWRCB offered \$15 million made available through Proposition 204, the 1996 Bond Act.

The SWRCB and RWQCBs view the funding of projects consistent with priorities identified in the RFPs as an important tool in managing NPS pollution. Beginning with the calendar year 2000, RFP projects must implement actions that achieve NPS MMs goals and objectives to receive funding.

The funds contracted out under the RFPs represent half of the federal NPS funds California receives. The Program recognized several years ago the need to better track and evaluate the effectiveness of these projects. Working with UCD ICE, the State is working (1) to promote information exchange and coordination among watershed groups; (2) to geographically track the implementation of MMs; and (3) to determine the effectiveness of CWA section 205(j) and 319(h) projects in protecting beneficial uses and improving water quality. Effective with the 1999 RFP, all selected projects' contractors must complete a one page contract summary (format provided by SWRCB) within three months of the contract execution. The SWRCB will make the summaries available to the public, including posting them on the SWRCB's

NPS web site. At the completion of each funded project prior to final payment, all projects must complete a project survey form supplied by the SWRCB. At the same time, SWRCB and RWQCB staffs may survey project location and aerial extent using global position equipment. The information gathered will be entered into an internet-accessible geographic information system (GIS) and be provided as part of the required annual, biennial, and five-year cycle reports. In addition, information concerning each CWA section 319(h) funded project is being entered into a USEPA mandated tracking system known as the Grants Reporting and Tracking System (GRTS) to further aid in fiscal management, accountability, and the exchange of information.

Through these RFPs, the SWRCB, RWQCBs, and USEPA, Region 9, are encouraging watershed management as a means to ensure high quality waters, maximize the use of limited resources, and develop partnerships among all stakeholders of watersheds to address water quality issues. In this respect, grants offered through RFPs are being integrated under the SWRCB's and RWQCB's WMI to ensure the most efficient use of the funds. Local stewardship and partnerships among governmental agencies and private interests are vital parts of the type of watershed management envisioned. Involvement of stakeholders throughout a watershed is a critical feature of watershed management that will provide for sustained, long-term improvements in the beneficial uses of water and water quality. Implementation activities identified in a watershed management plan or similar comprehensive efforts to achieve sustained improvements in water quality and natural resources are a priority. CWA section 205(j) provides water quality planning funds, and CWA section 319(h) provides NPS implementation funds. The funds provided via RFPs are not intended to be used as the sole or principal source of support for local resource management.

Other Agencies Sources

Collaboration with the MBNMS

The CCC and MBNMS WQPP are working to develop coordinated grants among numerous nonprofit organizations improving water quality and restoration. This coordination of funding is intended to help nonprofit organizations obtain grant assistance, coordinate the expertise of the numerous groups working on NPS pollution, and identify a regional framework to guide future projects.

Technical Assistance

Introduction

The SWRCB, RWQCBs, and CCC recognize that individuals, watershed groups, and communities have varying levels of technical and financial capabilities related to water quality protection and restoration and the

protection of beneficial uses. In particular, the level of expertise available at the local and/or watershed level during project planning, design, and implementation can have a significant effect on the time and effort needed to implement practices to address NPS pollution. Technical and financial assistance is needed for those who plan and manage resources (e.g., planners, forest managers, public works staff, harbor masters, watershed groups) and those whose activities alter the landscape or affect the water column (e.g., farmers, road builders, boat hull cleaners).

Types of technical assistance include MP manuals, training, assistance in developing ordinances and regulations, modeling to predict and assess the effectiveness of any additional NPS MMs, and the development and management of databases to track implementation of MMs, monitoring data, and land use changes. Technical assistance also includes demonstration projects and other innovations to protect water quality and designated uses. Financial assistance includes both grants and low-interest loans.

Goals

A priority goal of the NPS Program is to provide technical and financial assistance to local governments and the public in assessing watershed conditions and implementing applicable MMs to address identified problems. The NPS management agencies will also work with other federal, State, and local agencies, as well as other private experts where feasible, and will encourage them to use their expertise. Specific objectives include:

- Conducting an ongoing assessment of training and technical and financial assistance needs;
- Providing for the transfer of information on technical and financial assistance including available tools, training courses, grant and loan opportunities, and contact information;
- Improving technical tools;
- Providing technical training for resource managers, landowners and land operators, and the public; and
- Providing financial assistance for on-the-ground implementation of MMs and MPs for each land use sector (i.e., agriculture, forestry, urban, marinas, hydromodification, and wetlands).

The NPS Program will also support technical and financial assistance efforts within other agencies. Examples of existing technical assistance efforts include:

- UCCE and NRCS currently provide technical assistance to the livestock industry and rangeland owners and managers through the California Rangeland Water Quality Management Program (CRWQMP);
- The California Stormwater Quality Task Force (SWQTF) provides assistance to municipal agencies and other dischargers subject to existing storm water permits, while the MURP has been developed to help smaller

municipalities (less than 100,000 in population) develop runoff control programs to protect water quality and prepare for pending storm water permits;

- The MURP has been developed to help smaller municipalities (less than 100,000 in population) develop runoff control programs to protect water quality and prepare for pending storm water permits;
- The CCBN and San Diego Safe Boating and Environment Coalition are devoted to identifying education and technical assistance needs regarding environmentally sound boating and to providing networking opportunities;
- The SWRCB TMDL Program is focusing technical assistance efforts on assessing water conditions and, to the maximum extent practicable, on working with local interests on the collaborative identification of: (1) watershed problems, (2) desired future conditions, (3) numeric targets, (4) allocations of allowable pollution, and (5) implementation.
- The CCC is committed to make available and provide training for use of its Watershed Analysis Tool for Environmental Review (WATER). WATER is a GIS-based analysis tool that connects land use information to water quality in watersheds of the Monterey Bay area, and thus enabling selection of the appropriate MMs for implementation in those particular watersheds. The CCC's permit tracking system also provides a valuable tool for tracking land use activities.
- The NPS Program's future efforts in identifying and mapping CCAs will allow the implementing agencies to direct their resources to coastal areas faced with water quality threats that accompany new and existing development.

Actions

The SWRCB, RWQCBs, and CCC are committed to providing technical and financial assistance through 2013. New and changing needs and opportunities will be identified annually and outlined in each five-year implementation plan. Beginning in State FY 1999-2000, the SWRCB and RWQCBs will provide CWA section 319(h) grants for projects that implement NPS MMs and/or provide for watershed restoration. In State FY 1999-2000, the CCC approved \$500,000 in local assistance grants to LCP work programs for eight coastal cities and counties, all of which include NPS requirements or guidelines.

In the short term, the SWRCB has identified the provision of technical assistance as a priority objective in the 1999 CWA section 319(h) RFP. The CCC identified technical and financial assistance as a priority for the State FY 1999-2000 CZMA grants workplan (the CCC is providing funding for projects that develop technical assistance tools, such as technical guidance and model ordinances). The SWRCB and USEPA are also investigating using the Clean Water SRF—a permanent source of low-interest funding for high-priority water quality projects—for addressing a variety of other NPS and

estuary water quality issues. Other actions are identified in the Implementation Plan.

G. Track, Monitor, Assess, and Report

The NPS Program must establish mechanisms to determine success in achieving short- and long-term goals. We must:

- Track MM implementation,
- Monitor the program's effectiveness in controlling pollution,
- Assess success in achieving our objectives and milestones, and
- Report on program effectiveness.

Our efforts to demonstrate program effectiveness are guided by existing federal and State requirements. Section 319(b) of the CWA specifies the minimum contents of State NPS management programs including "(viii) A description of the monitoring and other evaluation programs that the State will conduct to help determine short- and long-term program effectiveness." Federal guidance also requires the states to periodically review and evaluate NPS management programs using environmental and functional measures of success and to revise NPS assessment and management programs at least every five years¹⁵. Section 6217 of CZARA requires monitoring techniques to evaluate the success of the MMs in reducing pollution loads and improving water quality.¹⁶ A monitoring program will also help fulfill the legislative mandate of the Comprehensive Coastal Monitoring Strategy required by Assembly Bill (AB) 1429. It stated, in part: "Sound water quality management decisions require a solid base of information collected from a variety of sources ... improved monitoring, or in some cases improved coordination of existing programs, will be necessary for the State of California to achieve a systematic understanding of NPS pollution and to measure the effect of efforts to reduce this water pollution source."

A comprehensive monitoring strategy for the NPS program will soon be complete. This strategy will be designed to provide objective, quantified answers to broad management questions. These questions are then refined into more discrete monitoring objectives that will shape the design of specific monitoring programs. The monitoring strategy will focus primarily on answering the first two questions posed below while coordinating with other monitoring programs to effectively answer all questions.

¹⁵ In 1996, USEPA released a CWA section 319(h) guidance document requiring states to upgrade their NPS programs consistent with nine key elements in order to achieve "Enhanced Benefit Status." In a January 1999 memorandum, J. Charles Fox, USEPA Assistant Administrator, reiterated the requirement and outlined the process for approval of upgraded NPS Programs.

¹⁶ NOAA and USEPA in accordance with these statutory mandates provide additional specifics for the monitoring and tracking of MMs in their January 1993 Coastal Nonpoint Pollution Control Program - Program Development and Approval Guidance.

1. *Are MPs to reduce polluted runoff being implemented (Tracking or Implementation Monitoring¹⁷)?* Our efforts will focus on tracking MM implementation and determine whether practices are implemented in accordance with relevant standards and specifications.
2. *Are the MPs effective in avoiding or minimizing pollution generation (Effectiveness Monitoring¹⁸, Compliance Monitoring¹⁹)?* We will develop a monitoring strategy that measures the effectiveness of MPs for agriculture, forestry, urban sources, and marinas.
3. *Is water quality being protected and are narrative and numerical water quality criteria being achieved (Baseline Monitoring²⁰, Compliance Monitoring)?* We will coordinate with ongoing regional monitoring efforts and point-source compliance monitoring to identify impairments and determine the extent, causes, and sources of impairment.
4. *Is reasonable progress being made toward reducing NPS polluted runoff?* We will review tracking and monitoring information through external review committees and TACs and assess the state of the Program.

Implementation of the MMs through MPs can be considered a “technology-based” approach to NPS pollution control. Application of MPs will reduce NPS pollutant loadings and improve water quality. As such, tracking the extent of MM implementation (and the associated MPs) will provide the initial measure of NPS Program success. Due to the areal extent and scale of NPS problems, improvements in water quality will take time. Ultimately, however, the long-term success of the NPS Program must be measured by corresponding improvements in water quality. This water quality-based approach to assessing success will be accomplished through the SWRCB’s development of a comprehensive surface water quality program, to the extent that funds are available, by January 1, 2001, pursuant to section 13181(c)(1) of the Porter-Cologne Act. The comprehensive water quality program will address, among other issues, the following:

- To the extent possible, a determination regarding the extent to which existing water quality objectives are being met;
- To the extent possible, a determination regarding the sources of pollution in areas where objectives, standards, and guidelines are not being met; and
- Methods for determining the degree of improvement or degradation in coastal water quality over time.

¹⁷ Implementation monitoring assesses whether activities were carried out as planned. It does not necessarily include water quality measurements. Our efforts to track whether BMPs were performed follow under this type of monitoring.

¹⁸ Effective monitoring evaluates whether the specified activities (e.g., individual management practices, timber sale, construction project) had the desired effect. Monitoring definitions are described further in USEPA (1991).

¹⁹ Compliance monitoring evaluates whether a water quality standard is being met.

²⁰ Baseline monitoring characterizes existing water quality conditions and establishes a database for planning or future comparisons. Continued baseline monitoring may become trend monitoring.

Prior to development of the comprehensive monitoring program, the SWRCB will, pursuant to section 13192 of the Porter-Cologne Act, on or before November 30, 2000, assess and report on the SWRCB's and RWQCBs' current surface water quality monitoring programs. Important elements to be considered in this report include, but are not limited to, the following:

- The physical, chemical, biological, and other parameters that a comprehensive water quality monitoring program should collect and evaluate in order to determine ambient water quality; and
- A strategy for assessing and characterizing discharges from NPS pollution.

In addition, the SWRCB, pursuant to Porter-Cologne Act section 13181(b)(1), will prepare and complete an inventory of existing water quality and monitoring activities within State coastal watersheds, bays, estuaries, and coastal waters, by January 1, 2000, to the extent that funds are available for this purpose.

Tracking Management Measure Implementation

Tracking MM implementation is the simpler, more straightforward component of the monitoring strategy. The MMs are directly implemented on ground via MPs. MPs are implemented by the landowner or user because of their stewardship approach to land use; it makes business sense; or it is in response to regulatory pressures or requirements, such as to meet waste discharge or other permit requirements.

This tracking program will be broad-based and inclusive of all MM categories and water bodies in California. A tracking program is currently being designed to identify:

- What MMs are implemented,
- Where MMs are implemented,
- Who is implementing them,
- When they are implemented,
- Why they are being implemented (e.g., because of self-interest, regulatory-encouragement, or regulation), and
- Which agencies and programs are supporting implementation?

The tracking program will also include specific performance measures and goals that can be used at the end of the five-year period to determine the scope and extent of MM implementation. Combined with the effectiveness monitoring (described below), it will allow us to gauge the success of program implementation efforts. An example of a performance measure would be "the number of approved farm plans which implement relevant agricultural measures." Examples of performance goals would be (1) "to have in place approved farm plans for 80 percent of the farms in each watershed" or (2) "implement agricultural MMs or MPs on 80 percent of farm lands in each watershed." The five-year review will be comprehensive in scope, addressing all of the measures and broken out on a watershed basis, to the extent possible. The measures and

goals will be developed through an interagency effort which will include public involvement, such as the IACC and the Assessment TAC.

The State recognized several years ago the need to better track and evaluate the effectiveness of these projects. Through contracts with UCD ICE, the State is working to: (1) promote information exchange and coordination among watershed groups; (2) geographically track the implementation of MMs; and (3) determine the effectiveness of CWA sections 205(j) and 319(h) projects in protecting beneficial uses and improving water quality. All selected projects must complete a one-page contract summary which the SWRCB will make available to the public. At the completion of each funded project, all projects must complete a project survey form and agency staff may survey the project location and determine the aerial extent of MM implementation. The information gathered will be entered into an internet-accessible GIS and be provided as part of the required annual, biennial, and five-year cycle reports.

This MM information will augment information already collected for watershed projects in California. Data on the over 1,000 conservation, mitigation, and restoration projects being developed and implemented throughout California resides on-line in the Natural Resource Project Inventory (NRPI). NRPI is a cooperative data-collection effort of environmental scientists at the UCD-ICE and over 30 private, State, federal, and international organizations interested in environmental protection²¹. The goal of NRPI is to make project and group information accessible to anyone who wants to review current activities in their region or statewide.

NRPI is an expansion of previous inventories such as the California Watershed Projects Inventory (CWPI) supported by the USEPA, the SWRCB, and Cal/RA and the California Ecological Restoration Projects Inventory (CERPI) supported by the USEPA, the Society for Ecological Restoration, and DOC. NRPI also integrates newer efforts, such as the Biological Resource Division's Mendocino Coast Metadata Inventory and the California Interagency Noxious Weeds Coordinating Committee's Noxious Weeds Projects Inventory. Environmental planning activities and agreements such as Habitat Conservation Plans, Natural Community Conservation Plans, and other resource-based plans will also be candidates for the NRPI database²². Beginning with the 1998 CWA sections 205 (j) and 319 (h) grant projects, all project contractors are now required, prior to final payment, to complete a post-project survey form that the SWRCB will provide to ICE for inclusion in NRPI.

²¹ NRPI is supported by the CBC whose 37 members include nine regional associations of county supervisors, 15 State agencies, UC, and the CARCD. Each of these members has designated one expert to bring in data from his or her respective agency. This information is then entered into the NRPI database/web page designed and hosted by the ICE. Participation by the CBC signatories is augmented by a growing list of data contributors including UCCE, the CRMP Council, and the Klamath Watershed Coordination Group.

²² The NRPI structure will allow core searches of all underlying inventories at the same time. Each NRPI record points to the separate underlying inventory for more detailed information. The inventories also exist separately and can be searched independently. Each dataset will also be referenced spatially in a GIS, allowing the creation of dynamic maps of projects, groups, and datasets.

Because of ICE's long history of developing and applying natural resource science to environmental issues, computer resource infrastructure, and the synergistic effect of so many participating agencies, the SWRCB has committed to use NRPI as the primary means to track implementation of MMs. In the spring of 1999, the SWRCB executed a contract with ICE to modify NRPI's data structure and to redesign the reporting form used to inventory projects to capture information specific to the implementation of the MMs and to further populate the database. Information collected from all participating entities will include such items as implementing programs, authorities, MMs, and graphic coordinates. Modifications will also include a link to the SWRCB's GeoWBS which contains the CWA section 303(d) Impaired Water Body List.

Besides the NRPI, the CCC also has a system for tracking permitted land use activities. Currently, there is a wetland-specific component contained in the more general Permit Tracking System. The CCC is prepared to develop similar runoff-specific tracking elements to allow for the tracking of MM implementation for preventing and controlling NPS pollution.

Monitoring the Effectiveness of Management Practices

With the tracking system underway, the next component of the monitoring strategy is documenting and evaluating the effectiveness of the NPS pollution control practices. Establishing the effectiveness of the State's efforts to control NPS pollution will be a long-term, complicated, and expensive commitment for the following reasons:

- Nature of the NPSs of pollution are typically diffuse and difficult to define.
- NPS pollutants are varied and include sediment, nutrients, pathogens, salts, toxic substances, petroleum products, and pesticides.
- NPS pollution is extensive and spread over the entire State (155,000 square miles) and is not limited to specific outfalls. There are over 4,000 water bodies listed in the SWRCB's GeoWBS, of which 480 are listed as impaired.
- Watersheds are complex, and multiple sources within a watershed may contribute to the same pollutant.
- There is usually a substantial lag time between implementation of MPs and response in the watershed.
- The need for water quality monitoring, both qualitative and quantitative, is extensive.
- There are limited resources for water quality assessment.
- Regulatory authority is complex. Over 31 State agencies have NPS regulatory authorities and programs.

However, determining MM effectiveness is critical to understanding how MPs avoid pollution generation and improve water quality. The lead agencies are currently designing this component of the monitoring strategy. In the spring of 1999, the SWRCB executed a contract with UCD to develop a comprehensive monitoring program to assess the functioning of MPs. The comprehensive monitoring program will:

- Establish criteria to assess the functioning of MPs;
- Monitor practices in each major pollution source category (i.e., agriculture, forestry, urban sources, marinas, and hydromodification);
- Monitor long-term at least one watershed within the jurisdiction of each of the nine RWQCBs;
- Integrate NPS monitoring with other monitoring programs, including citizen monitoring programs; and
- Report monitoring information to all interested parties.

The Program Plan's monitoring will focus primarily on the on-site evaluation of MP effectiveness and their ability to avoid pollution generation. Pollution control success criteria will be developed for each major pollution source category (i.e., agriculture, forestry, urban sources, marinas, and hydromodification). These criteria will be grounded in simple, empirical observations of the effectiveness of MMs performed by landowners or community members. UCD will review potential indicators and develop a preliminary list of criteria. These criteria will be reviewed by panels of agency, industry, and community members. A suite of candidate measures will be tested in the field during the pilot phase of the monitoring program (year 2000). This pilot phase, called the Functioning Assessment Criteria Test (FACT), will be implemented by UCD with the support of community volunteers, landowners, and qualified monitoring experts. From FACT's success we will develop a broader effectiveness-monitoring program that will evaluate all MM sectors by the year 2013.

The RWQCBs are currently targeting two impaired water bodies per year in each region for developing TMDLs. Following TMDL development and adoption into the basin plan, the RWQCBs will begin TMDL implementation. We will target our NPS monitoring in those watersheds where NPS pollution is a significant contributor to water quality impairment. Monitoring will need to continue in these watersheds over many years to accurately document changes in pollutant loads and the effectiveness of MPs. The lead agencies will work with other agencies, key stakeholders, and citizen monitoring programs to craft a long-term monitoring strategy. At a minimum, the strategy should be designed to implement base-line monitoring one watershed per region per year for ten years.

Various effectiveness-monitoring programs are ongoing and will be evaluated during the pilot phase (FACT) so that the most beneficial comprehensive strategy can be developed. Furthermore, these monitoring programs will be augmented rather than replaced. This is particularly true in the forestry arena where the proper implementation and effectiveness of forestry MPs is being evaluated by the Monitoring Study Group (MSG). This MSG was created by the California BOF to determine how effective the Forest Practice Rules (FPR) are in protecting water quality. The CDF implemented hillslope monitoring in 1996 on 50 randomly selected Timber Harvesting Plans (THPs) in Humboldt and Mendocino Counties to provide information on forest practices within the range of Coho salmon. The program expanded in 1997 and 1998 to evaluate THPs throughout the State. Evaluation of 150 THPs occurred in areas with the greatest risk to water quality—roads, skid trails, landings, watercourse crossings, and watercourse and

lake protection zones (WLPZs). In total, approximately 150 FPR requirements were evaluated. From this monitoring study, forestry regulators will determine whether erosion problems on hillslopes were due to improperly implemented FPRs or the inadequacy of the FPRs.

In the agricultural arena, the Dairy Quality Assurance Project has developed a method for measuring the effectiveness of dairy nutrient MPs. The crux of the method is dairy inspections by certified third party inspectors. The method of inspections is under development and will be assessed for possible use in evaluating other MMs.

Since our effectiveness monitoring will focus primarily on the on-site evaluation of MPs, we must coordinate with other monitoring programs to ensure an accurate assessment of the effects of NPS pollution on aquatic resources. A blend of monitoring programs to achieve multiple objectives will be the most effective long-term monitoring strategy. This blending of objectives can only occur through active program coordination. First, a subcommittee of the IACC will focus on assessment to improve interagency coordination of monitoring programs. Second, the SWRCB and RWQCB staffs will continue intra-agency coordination through the Monitoring and Assessment Team. Third, SWRCB and RWQCB staffs will continue to work on existing monitoring programs such as: (1) the Comprehensive Coastal Monitoring Strategy; (2) CALFED's Comprehensive Monitoring, Assessment, and Research program on the San Francisco Bay-Delta; (3) the Regional Monitoring Program of the San Francisco Bay; (4) the Central Coast Regional Monitoring Program; (5) the Sacramento River Toxic Pollutant Control Program; (6) the Southern California Bight Program; (7) U.S. Geological Survey's (USGS) National Water Quality Assessment Program (NAWQA); and (8) USGS's National Irrigation Water Quality Program.

An example of specific questions being posed for State monitoring include measuring the effectiveness of MPs to reduce contamination of surface and ground waters by synthetic pesticides and fertilizers. The State will work with CDPR, U.S. Department of Agriculture (USDA) (NRCS, USFS, FSA, and RCD), the agricultural community, agricultural producers, researchers, and other public interests to design a set of trials to compare movement of nutrients and pesticides both before and after implementation.

Because of the emphasis in the NPS Program on self-determined pollution prevention, landowners, farmers, ranchers, boat owners, and community members will often monitor the effectiveness of their own practices, interpret the results, and, if necessary, modify their practices. In the next 15 years, SWRCB and RWQCB staffs will improve community-based watershed monitoring efforts by: (1) developing and reviewing new methods for monitoring MM implementation and effectiveness; (2) disseminating quality assurance requirements; and (3) increasing training opportunities. Technical resources will be developed and distributed statewide. These include standard monitoring protocols, quality assurance plans, guidance on how to start a community-based monitoring program, and data storage and retrieval mechanisms. Monitoring protocols will be designed to evaluate MP effectiveness and optimize data comparability between watersheds. However, efforts will be made to tailor protocols to stakeholder needs and geographical diversity. Guidance on quality assurance will identify the data

quality needs of important programs such as TMDLs. Training in monitoring design, monitoring techniques, data interpretation, quality assurance, and database management will continue. The SWRCB and RWQCB staffs will continue to support regional steering committees that foster partnerships among local, State, and federal governments and business, industry, and volunteer groups. If funding permits, the SWRCB will develop a statewide small grants program to support volunteer monitoring efforts.

The SWRCB and RWQCBs will work to resolve concerns about confidentiality of data collected voluntarily by landowners on their own practices. Sharing data will be beneficial in transferring knowledge about the success of certain practices. However, landowners may fear that regulators may use data to require additional monitoring or permit MPs. These concerns should be aired and addressed through discussions with agency staff, landowners, and appropriate industry representatives. Hopefully, successful solutions, such as the third party inspections developed in the Dairy Quality Assurance Project, can be achieved.

Resource needs identified by this work will form the basis for future resource requests to the State. SWRCB and RWQCB resources are inadequate for statewide comprehensive water quality monitoring. SWRCB is working to procure funding for those currently unfunded monitoring and assessment activities that are of central importance to the SWRCB's programs. The funding strategy will seek to fund key activities that meet multiple program mandates. This selection of the activities to be funded is based on overlapping needs for data that can best be addressed by an integrated monitoring and assessment effort. One of the key activities identified by management is to develop a compliance-monitoring program for NPS pollutants. We will seek a broad base of funding support from federal, State, and local government sources.

Assessing Internal Program

Evaluating the success of the NPS Program will include the elements of tracking and monitoring noted above. However, it will also include a systematic evaluation of whether we have achieved the short- and long-term goals of the program. To do this, staffs from the SWRCB, CCC, and other agencies will participate in the Assessment TAC to conduct biennial reviews and report on issues such as:

1. Completion of the activities identified in the five-year implementation plans and the attainment of their associated performance measures;
2. Performance of the system(s) (e.g., NRPI and the CCC's permit tracking system) used to track the implementation of MMs;
3. Effectiveness of the implemented MMs;
4. Involvement of the appropriate federal and State agencies in implementing the Program Plan and the mechanisms of agency participation (e.g., MOUs/MAAs [see Table 10]);
5. Public participation;
6. Coordination of agency and public activities via the IACC;
7. Identification of additional needs for public education and technical assistance;

8. Evaluation of the overall program performance and the program's ability to stay on schedule for full implementation of all identified MMs by 2013; and
9. Recommendations for program improvement.

In addition, the biennial review/workshop will discuss funding for implementation of the Program Plan. Issues to be discussed will include, but are not limited to, the following: (1) significant funding needs integral to the success of the Program Plan; (2) an analysis of funding mechanisms that can be used to continue needed MM development and research; (3) monitoring activities; and (4) long-term funding such as CWA section 319(h) grants, the State budget process, and statewide initiatives.

Reporting Program Effectiveness

The monitoring data will need to be routinely interpreted, assessed, and reported to the community of resource managers, landowners, farmers, ranchers, industry, and environmentalists who are interested in NPS pollution prevention. In this way, the reviewing audience can use the information on effectiveness of MMs to redesign and retest those practices.

Three separate reporting efforts are integral to the NPS Program. First, SWRCB and the CCC will provide biennial reports of its progress in meeting its objectives and performance measures. These reports will assess program success and recommend modifications to MMs and their implementation. These reports will be available to the public, implementing agencies, the Legislature, USEPA, and NOAA. Second, the SWRCB and RWQCBs provide a performance report semi-annually to USEPA. This performance report covers NPS activities funded by CWA section 319(h) funds. The report lists major accomplishments, describes progress towards future accomplishments, and accounts for tasks that are behind schedule. The third report is the annual progress report on NPS programs and projects funded by CWA section 319(h). This report, authored by SWRCB and RWQCBs, focuses on the progress made in meeting milestones identified in the annual CWA section 319(h) workplan.

The State will improve the on-line inventories of watershed projects (e.g., NRPI, CWPI) and monitoring programs. Efforts will ensure that the NPS monitoring program data are integrated into the comprehensive, user-friendly water quality database system called "System for Water Information Management" (SWIM) that is being developed by the SWRCB. The ultimate goal of SWIM is an on-line accessible database of real monitoring results. These data will be accessible for public and agency use and will enable participants to have equal use of data in developing comments and revising strategies.

H. Overall Program Assessment - Refining the Program

Making the Program information available for external review not only bestows a certain degree of credibility to the Program, it also enables public participation in the periodic assessment and refinement processes. Public involvement is encouraged through the Assessment TAC created by the IACC. The Assessment TAC will then cooperate with

the other TACs (Technical Assistance, Education, and Regulation) to propose modifications to the NPS Program which may include:

- Shifts in Program efforts (e.g., additional target watersheds and additional MMs),
- Strengthening individual NPS-related programs (e.g., expediting MM implementation and increasing enforcement, when appropriate),
- Improving agency coordination,
- Increasing public education and participation, and
- Increasing funding.

Modifying and Adding Additional Management Measures

One of the biggest challenges facing the NPS Program is providing for the implementation of "additional MMs" where water quality is impaired or threatened even after the implementation of California's MM goals. It is important for California to identify waters that are not attaining or maintaining applicable water quality standards and to identify and develop additional MMs to address persistent water quality problems.

Goals

Our overall goal is to develop a continuing process for identifying and implementing additional MMs that include milestones for implementation, evaluation, and, as necessary, revision. These additional MMs will be developed when needed to attain and maintain water quality standards.

New Management Measures

In developing the Program Plan, California identified the following additional MMs:

- Education MMs for Agriculture, Forestry, Hydromodification, and Wetlands. California added Education/Outreach MMs to reflect the State's intention to promote public awareness and involvement in controlling NPS pollution (the g-Guidance included education MMs for the urban and marinas sectors only). Nearly all of the TACs recommended that California enhance public education so that individuals can take responsibility and make the cooperative approach work.
- Post-Harvest Evaluation for Forestry. The post-harvest evaluation for forestry will help evaluate the successful implementation of the State's forest practice requirements. From this evaluation, appropriate changes to or oversight of the requirements can be developed. This evaluation of the forest practice requirements has been initiated and is described in the Monitoring Section.
- Marina Solid Waste Facilities. In addition to operating and maintaining these facilities, there is a need to support the installation of waste management facilities.

Process for Developing Additional Management Measures

California will conduct the following activities related to additional MMs:

- Ensure agency and public participation in developing and implementing the additional MMs.

- Coordinate review of CZARA section 6217(g) MMs and identify an initial set of additional MMs that are applicable for implementation in California.
- Involve the Assessment and/or Technical Assistance TACs, created by the IACC, to identify and recommend additional MMs.
- Develop a process for identifying and implementing additional MMs to address "additional" pollutant sources (e.g., resource extraction and abandoned mines, pitch canker [forestry], water conservation, and aerial deposition).
- Implement additional MMs in next five-year implementation plan.
- Track MM and MP implementation and review and assess effectiveness.
- Implement a long-term strategy for addressing pollution from active and inactive mines. (Active and abandoned mines are a significant source of NPS pollution as shown in Table 3 and discussed below.)

Abandoned Mines

Introduction

The SWRCB is the lead agency for control of water pollution by any source, including abandoned mines. However, there is no specific, comprehensive program at either a State or federal level for cleaning up abandoned and inactive non-coal mines. Rather, abandoned and inactive mine cleanup is carried out under a variety of State, federal, and local programs.

Over a century of mining since 1849 has left California with literally tens of thousands of small abandoned "hardrock" mines. Although not significant polluters individually, they often contribute cumulatively to chronic toxicity in affected watersheds via metals loading. Similarly, abandoned hydraulic placer gold mines and abandoned aggregate mines degrade aquatic habitat via excessive sediment loading. Again, the most serious sites are usually handled directly (e.g., Malakoff Diggings State Park, a historic hydraulic mining site, is under WDRs for sediment discharge), but the cumulative effects of smaller sites are not even addressed.

A few mine cleanups have been carried out under the Federal Superfund Program pursuant to California's Title 27 Program, which regulates waste discharges to land, and California's Surface Mining and Reclamation Program. For the most part, the worst abandoned mines are being cleaned up under the Federal Superfund Program. USEPA is also considering listing additional abandoned mines on the National Priority List in the future, but these would be sites that cause serious environmental problems or pose a substantial threat to human health. In a few instances, RWQCBs have tried to affect cleanup of abandoned mines by placing them under WDRs pursuant to Title 27.

The main barrier to a comprehensive program for abandoned mines is liability. Under the federal CWA, a third party can sue an agency or private party that

performs abatement work at an abandoned mine if the discharge from the mine continues to violate the CWA (refer to the Penn Mine lawsuit). California recently passed legislation that provides protection for "Good Samaritan" cleanup under State law. Efforts over the last few years to amend federal law to provide similar protection have failed (although these efforts continue). Thus, liability is the main barrier to a comprehensive program for cleaning up abandoned mines.

Goals

- Continue to regulate the most prodigiously polluting abandoned mines under the appropriate programs.
- Support efforts to resolve the liability issue, the main impediment to a coordinated effort to clean up abandoned mines.
- Develop strategies and measures for abating chronic toxicity and habitat degradation from the cumulative effects of numerous small sites.

Actions – Characterization and Cleanup

The SWRCB and RWQCBs have identified approximately 40 mines that cause serious water quality problems resulting from acid mine drainage and acute mercury loading. Additionally, within the last year, State and federal agencies have realized that drainage structures and sluices associated with abandoned hydraulic gold mines are a potential source of mercury to waters of the State. Mercury from these abandoned mines poses a serious potential threat to coastal waters because mercury transported from these sites may bioaccumulate in fish. To that end, State and federal agencies are collaborating with local entities to investigate mercury loading from abandoned hydraulic mine sites in the Bear and South Fork Yuba watersheds. This effort is being supported by State funds (Proposition 204 Grant, bond money) as well as by federal and local matching funds. The investigation could serve as a model for additional investigations of watersheds affected by hydraulic mining.

The DOC is inventorying abandoned mines statewide and is anticipating that there will be at least 20,000 sites. To manage this inventory, DOC developed a relational database that records the salient features found at abandoned mines. Because the SWRCB participated in developing the database, features that contribute to water quality degradation are incorporated into the database. DOC is incorporating existing inventory information and is coordinating data gathering efforts with other State and federal agencies. DOC intends to distribute the database and supporting software to State and federal agencies that are responsible for regulating abandoned mines. When that distribution occurs, the SWRCB and RWQCBs will have a powerful new tool for tracking work performed at abandoned mines, evaluating regional clean-up efforts in affected watersheds, and evaluating the impact abandoned mines have on watersheds.

As a land-managing agency, the USFS also has a rigorous abandoned mine reclamation program. The program includes: (1) a regionwide inventory of abandoned mines; (2) documentation of location; (3) types of environmental and/or resource problems evident; (4) rehabilitation measures required; and (5) potential sources of funding. The USFS has worked with various RWQCBs on numerous occasions in the rehabilitation of old mine sites. Restoration funding has come from appropriated USFS funds, the Comprehensive Environmental Response and Compensation Liability Act (CERCLA), and RCRA sources. In addition, BLM has begun formulating an abandoned mine reclamation program.

Actions - Water Quality Standards for Abandoned Mine Cleanup

The SWRCB has undertaken various efforts to manage the quality of the State's waters. The goal of CWC section 13000 is " ... to attain the highest water quality that is reasonable, considering all demands being made and to be made ... and the total values involved" Similarly, the Federal Water Pollution Control Act, United States Code (USC) Title A3, section 1251, aims, among other goals, to restore and maintain chemical, physical, and biological integrity of the Nation's waters by eliminating the discharge of pollutants. Such goals are fairly general and pragmatic.

Assuming that the liability issues are resolved soon, applying these general goals to both prodigiously polluting abandoned and inactive mines (which tend to be large sites) and watersheds affected by numerous small abandoned and inactive mines would be a major challenge for the following reasons. First, agreement must be reached on what is the highest water quality that is reasonable. This requires a statement on what natural conditions may have existed before mining to serve as a general guide in restoring the chemical, physical, and biological integrity of the affected waters. Second, the total values involved must be determined, recognizing that large abandoned mines are inherently costly to clean up and that the State's fiscal resources are limited.

Projects for restoring grossly polluting sites should have specific clean-up objectives and water quality goals. These site-specific goals for each site will differ depending on the magnitude of the pollution problem, clean-up technology, and cost of abatement.

Efforts for restoring watersheds affected by numerous small sites must take a different tack because it is unlikely that small sites would ever be evaluated individually by regulating agencies. Agreement on water quality and beneficial uses of an affected watershed would have to be reached first. Next, the contribution of similar pollutants from other sources would have to be considered in the context of how much benefit would be gained by cleaning up small abandoned mines. Last, it would be unrealistic to expect restoration

efforts at small sites to meet specific water quality goals because most efforts would likely be limited to "low-tech" earth moving and revegetation projects.

The measure of success for such efforts would necessarily be an overall improvement of the targeted watershed. That would necessitate a carefully thought out watershed monitoring program.

It is important to keep in mind that reclamation goals for both individual abandoned mines and watersheds affected by numerous abandoned mines must be established pragmatically to ensure that the best possible improvement in overall basin water quality is achieved for a given expenditure. All interested parties must be willing to accept that this may not necessarily achieve background conditions.

Resource Extraction

Introduction

Resource extraction (i.e., aggregate and metal mining) operations are regulated locally by State administered programs and by State and federal programs when they occur on federal land (although State programs have primacy). Extraction operations become water quality concerns when they:

- Have discharges that could impair water quality (e.g., cyanide heap leach gold mines); or
- Could impair beneficial uses (e.g., water quality, habitat) resulting from extracting resources (usually aggregate) from within or nearby stream channels.

All active mining projects must comply with the Surface Mining and Reclamation Act (SMARA). The goal of SMARA is to have mined lands "reclaimed" to a beneficial end use. Local Enforcement Agencies (LEAs), usually counties, implement SMARA. The DOC's Office of Mine Reclamation provides technical support to LEAs and has limited enforcement authority.

Mining projects that could impair water quality and/or beneficial uses of waters of the State may also be subject to regulations administered by RWQCBs (Title 27 of the California Code of Regulations [CCR], NPDES and Stormwater) or subject to conditions under the CWA section 401 Water Quality Certification Program (WQCrP) administered by the RWQCBs and initiated when there is a federal permit or license required (such as the USACOE's section 404 Program).

On the federal level, both the BLM and USFS have reclamation programs. The objectives of the federal programs are to minimize the environmental impacts resulting from mining activities and to ensure that disturbed lands are returned to uses consistent with long-term forest land and resource

management plans. Reclamation is an integral part of Plans of Operation submitted by proponents of mining on public domain lands that propose surface disturbances. The reclamation requirements included in the Plans of Operation include measurable performance standards. Reclamation bonds, sureties, or other financial guarantees are commonly required for all mineral activity requiring a Plan of Operation. All lands disturbed by mineral activities must be reclaimed to a condition consistent with resource management plans, including State air and water quality requirements.

Traditionally, each State regulatory program functions independently of one another even though some have overlapping regulatory authority. State agencies are beginning to recognize, however, that conflicts often arise when resource extraction operations are regulated by independently functioning programs with overlapping authority. Moreover, agencies are beginning to realize that the cumulative effects of multiple resource extraction operations within a given area cannot be anticipated when regulatory programs address each project individually. For example, the cumulative effects on beneficial uses of four or five instream aggregate operations in the same stream might be detrimental even though each individual operation is complying with conditions of their permit. Clearly, as society's demand for resources such as aggregate grows, the cumulative effects of these operations must be taken into account.

Goals

- Continue to regulate extraction operations for active resources under current programs.
- Work toward coordinating better among local, State, and federal entities that implement regulatory programs so that the regulatory goals of each applicable program are met.
- Begin evaluating extraction operations that occur within or near active stream courses in the context of their cumulative effect on their watershed.
- Develop MPs for alleviating cumulative detrimental effects of multiple resource extraction operations.

Actions

Agencies are making greater efforts to avoid conflicts stemming from overlapping regulatory programs. For example, DOC acted on a recommendation from the SWRCB that SWRCB and RWQCB staffs be invited to SMARA workshops. These workshops provide an opportunity for DOC, SWRCB, and RWQCB staffs to learn where areas of conflict are likely to arise. SWRCB and RWQCB staffs regularly meet with USFS staff to ensure that resource extraction operations comply with State programs.

Cumulative effects of resource extraction operations are also beginning to be addressed on a watershed basis. Although the reason for these efforts vary (e.g., a concern that threatened species listing will force onerous regulations on landowners, efforts to preserve fragile or unique habitats), the result is that extraction activities are beginning to be evaluated within the larger context of their watershed effects.

As the cumulative effects of multiple resource extraction operations are determined, SWRCB and RWQCB will work with local, private, and federal interests to formulate MPs for protecting the overall health of a watershed. Projecting into the future, we can anticipate that these MPs likely will be based on site-specific studies sponsored by State and federal agencies via grants.

Critical Coastal Areas Management Measures

The primary goal of CCA designation is to channel program resources to protect special coastal habitats from NPS pollution degradation through the implementation of additional MMs. CCAs will be designated in areas of the California coastal zone (1) in which new or substantially expanding land uses may cause or contribute to the impairment of coastal water quality and (2) that contain or are adjacent to threatened or impaired coastal waters.²³

Where appropriate, additional MMs will be developed that address these site-specific concerns and which protect and restore the habitats for which the CCA designation was established.

The CCA Committee will first identify MMs within CAMMPR for immediate implementation in the CCAs. This will be accomplished through utilizing lessons learned, the existing monitoring programs, and the understanding of site-specific concerns and the threat of new development. For example, the CCA Committee could use the CCC's Permit Tracking System (PTS) for analyzing the cause-and-effect relationship between land use MPs and water quality. This would allow for the identification of the most effective MMs for immediate implementation in the CCAs. The anticipated development of runoff-specific tracking elements for the CCC's PTS would further accelerate and facilitate the MM identification process. Moreover, the statewide NPS Program's efforts in developing an effectiveness monitoring program will also assist in identifying and channeling appropriate resources to the implementation of appropriate MMs in the CCAs.

New and innovative MMs will be developed when needed to provide additional protection for the CCAs from NPS pollution degradation. The CCA Committee will work with appropriate agencies and researchers to develop these additional MMs with special considerations for the physical and biological characteristics of the CCAs and the nature of contamination in the adjacent threatened or impaired coastal waters.

²³ For federal approval of its NPS Program, California must identify and map CCAs to protect against current and anticipated NPS pollution problems (CZARA section 6217[b][2]).

Determining Need for Additional Regulations

During program assessment, it may be determined that current efforts to prevent and control NPS pollution are not sufficient to protect water quality and safeguard beneficial uses. Additional regulations may therefore be necessary to reinforce the implementing agencies' abilities in fully implementing NPS MMs and enforcing against NPS violations. In considering additional regulations, the Regulation TAC, in cooperation with the Assessment and Technical TACs, will perform the following activities:

- Invite the involvement of experts and all agencies with jurisdictions over NPS issues;
- Encourage public participation and input;
- Review all existing applicable regulations of the agencies to avoid duplicative regulations;
- Conduct research on lessons learned and other states' experiences;
- Create technologically-defensible and economically-feasible regulations that will accomplish the objective of preventing and controlling NPS pollution; and
- Ensure regulation adoption by the lead agencies and approval by OAL.

III. FIVE-YEAR IMPLEMENTATION PLAN

A. Introduction/Structure

The Implementation Plan describes in detail the actions to be taken for the period of 1998 to 2003. Specific MMs within the six identified NPS categories (Agriculture, Forestry, Urban Areas, Marinas and Recreational Boating Activities, Hydromodification, and Wetlands/Riparian Areas/Vegetated Treatment Systems), CCAs, and Program monitoring are identified.

Based on past agency experiences, the CWA section 303(d) and TMDL priority lists, a survey of the stakeholders, and recommendations from the previous NPS TACs, the lead agencies have targeted specific geographic areas and NPS MMs for implementation in this first five-year cycle. The areas selected either have the most impaired water bodies or face immediate water quality threats from new and/or expanding development. Depending on their relative priority, the MMs were targeted as either primary, secondary, or tertiary. The Implementation Plan only addresses those MMs targeted at the primary and secondary level for the first five-year cycle. The MMs chosen are those determined to be the most effective and appropriate for California. The CCAs will be addressed based on a year to year review of potential environmental degradation of sensitive coastal resources such as those previously identified as ESHAs and special areas including California's NERRs, NEPs, and National Marine Sanctuaries (NMSs).

Seven process elements are prescribed for each of the MM categories. They are to: (1) assess problems; (2) target resources; (3) plan activities; (4) coordinate with agencies and the public; (5) implement MMs; (6) track and monitor actions; and (7) report on the effectiveness of the Program Plan. These steps are essential to ensuring effective and efficient implementation of the MMs which will enable the Strategy to achieve the defined goals of preventing and controlling NPS pollution. The Implementation Plan also identifies parties/agencies responsible for performing the activities. Funding sources and milestones to be achieved by the end of the five-year period are identified as well. The implementation timelines are realistic estimates but may change due to changes in agency coordination, funding, new information, and public cooperation.

Certain process elements for some of the targeted MM categories have not been completed due to the lack of information at this time. All relevant information for each process element for each primary and secondary MM will be established and entered into the first five-year plan by July 1, 2000, with the exception of numeric program performance measures. Numeric program performance measures will be established for each primary and secondary MM in the first five-year plan by October 1, 2000. If more data, another agency commitment, or some other piece of information is needed in order to fill in a particular piece of the matrix, the steps that will be taken to fill in that missing information will be described. The revised five-year plan will be distributed to the public (as an addendum to the Program Plan) by November 1, 2000.

Beginning in 2001, biennial reports will be completed for evaluation by the USEPA and NOAA, as well as other agencies and the public regarding the State's progress in

implementing the NPS Program. The reports to be produced in 2001 and 2003 will provide details to address questions such as:

1. Have the activities identified in the five-year plans been completed and have the associated performance measures been achieved?
2. Has an MM implementation tracking system been established? Based on that system, what is the extent of MM implementation for all source categories throughout the State?
3. Has the IACC become active and successful in fostering implementation?
4. Has the SWRCB/RWQCBs published NPS enforcement guidance in 2001 as per CWC section 13369(a)(2)(B)?
5. Has the technical assistance to landowners and managers been improved through the issuance of technical guides, information sharing, "field-level" assistance and/or other activities?
6. Have other State and federal agencies and non-governmental entities become involved in implementing the NPS Program? Where necessary, have formal agreements been established to enhance the effectiveness of these partnerships?
7. Has the planning process for the next five-year plan (2003-2008) been established to achieve more specific plans that include measurable objectives and that involve a wide range of key stakeholders?
8. Have adequate efforts been made to identify funding needs and mechanisms to ensure continuing MM implementation and Program Plan success?

In 2001, the SWRCB, RWQCBs, and CCC, in coordination with the new TACs to be established by the IACC, will begin developing the next five-year implementation plan. The five-year implementation plan for 2003 to 2008 will outline: (1) strategies to complete the unfinished tasks from the first five years; (2) rectify the NPS program's shortfalls identified in the assessment process; (3) implement an additional set of MMs; and (4) expand the geographic coverage of the NPS Program.

B. Agriculture

The SWRCB, CCC, and other State agencies have identified seven MMs to address agricultural NPSs of pollution that affect State waters. The agricultural MMs include practices and plans installed under various NPS programs in California, including systems of practices commonly used and recommended by the USDA as components of RMS, WQMPs, and Agricultural Waste Management Systems. These RMSs are planned by individual farmers and ranchers using an objective-driven planning process outlined in the NRCS National Planning Procedures Handbook. The RMSs are designed to achieve sustainable use of the different natural resource areas—soil, water, air, plants, animals, and human considerations.

According to USEPA (1993), agriculture contributes more than half of the pollution entering the Nation's water bodies; recent studies have identified it as the greatest source of water pollution in the United States. The primary agricultural NPS pollutants are nutrients, sediment, animal wastes, pesticides, and salts. Agricultural activities may also affect habitat through physical disturbances caused by livestock or equipment or through the management of water.

Management Measures:

Erosion and Sediment Control. MM 1A addresses NPS problems associated with soil erosion and sedimentation. Where erosion and sedimentation from agricultural lands affect coastal waters and/or State's inland water bodies, landowners shall design and install or shall apply a combination of practices to reduce solids and associated pollutants in runoff during all but the larger storms. Alternatively, landowners may apply the erosion component of an RMS as defined in the NRCS FOTG. The NRCS FOTG contains standards and specifications for installing these practices.

Facility Wastewater and Runoff from Confined Animal Facilities. Pursuant to MM 1B, facility wastewater and contaminated runoff from confined animal facilities must be contained at all times. Storage facilities should be of adequate capacity to allow for proper wastewater use and should be constructed so they prevent seepage to ground water, and stored runoff and accumulated solids from the facility shall be managed through a waste use system that is consistent with MM 1C or shall be removed from the site.

Nutrient Management. MM 1C addresses the development and implementation of comprehensive nutrient management plans for areas where nutrient runoff is a problem affecting coastal waters and/or water bodies listed as impaired by nutrients. Such plans would include: (1) a plant tissue analysis to determine crop nutrient needs; (2) crop nutrient budget; (3) identification of the types, amounts, and timing of nutrients necessary to produce a crop based on realistic crop yield expectations; (4) identification of hazards to the site and adjacent environment; (5) soil sampling and tests to determine crop nutrient needs; and (6) proper calibration of nutrient equipment. When manure from confined animal facilities is to be used as a soil amendment and/or is disposed of on land, the plan shall discuss steps to assure that subsequent irrigation of that land does not leach excess nutrients to surface or ground water.

Pesticide Management. Implementation of MM 1D is intended to reduce contamination of surface water and ground water from pesticides. Implementation of this measure will primarily occur through cooperation with the CDPR as provided in a MAA with the SWRCB. Elements of this measure include: (1) development and adoption of reduced risk pest management strategies (including reductions in pesticide use); (2) evaluation of pest, crop, and field factors; (3) use of Integrated Pest Management (IPM); (4) consideration of environmental impacts in choice of pesticides; (5) calibration of equipment; and (6) use of anti-backflow devices. IPM is a key component of pest control. IPM strategies include evaluating pest problems in relation to cropping history and previous pest control measures and applying pesticides only when an economic benefit will be achieved. When used, pesticides should be selected based on their effectiveness to control target pests and environmental impacts such as their persistence, toxicity, and leaching potential.

California's MMs to address agricultural sources of NPS pollution in California:

- 1A. Erosion and Sediment Control
- 1B. Facility Wastewater and Runoff from Confined Animal Facilities
- 1C. Nutrient Management
- 1D. Pesticide Management
- 1E. Grazing Management
- 1F. Irrigation Water Management
- 1G. Education/Outreach

Grazing Management. MM 1E is intended to protect sensitive areas (including streambanks, lakes, wetlands, estuaries, and riparian zones) by reducing direct loadings of animal wastes and sediment. This may include restricting or rotationally grazing livestock in sensitive areas by providing fencing, livestock stream crossings, and locating salt, shade, and alternative drinking sources away from sensitive areas. Upland erosion can be reduced by, among other methods: (1) maintaining the land consistent with the California Rangeland WQMP or BLM and Forest Service activity plans or (2) applying the range and pasture components of an RMS (NRCS FOTG). This may include prescribed grazing, seeding, gully erosion control, such as grade stabilization structures and ponds, and other critical area treatment.

Irrigation Water Management. MM 1F promotes effective irrigation while reducing pollutant delivery to surface and ground waters. Pursuant to this measure, irrigation water would be applied uniformly based on an accurate measurement of crop water needs and the volume of irrigation water applied, considering limitations raised by such issues as water rights, pollutant concentrations, water delivery restrictions, salt control, wetland, water supply, and frost/freeze temperature management. Additional precautions would apply when chemicals are applied through irrigation.

Education/Outreach. The goals of MM 1G are to implement pollution prevention and education programs to reduce NPS pollutants generated from the following activities where applicable:

1. Activities that cause erosion and loss of sediment on agricultural land and land that is converted from other land uses to agricultural land;
2. Activities that cause discharge from confined animal facilities to surface waters;
3. Activities that cause excess delivery of nutrients and/or leaching of nutrients;
4. Activities that cause contamination of surface water and ground water from pesticides;
5. Grazing activities that cause physical disturbance to sensitive areas and the discharge of sediment, animal waste, nutrients, and chemicals to surface waters;
6. Irrigation activities that cause NPS pollution of surface and ground waters.

Management Measure Category: Agriculture

Management Measure Title: 1A - Erosion and Sediment Control

Management Measures Targeting Level: Primary

Objectives:

1. By the year 2002, develop MAA and WQMP with BLM.
2. By the year 2003, sediment/erosion control guidelines for six watersheds. Begin implementation of those guidelines.
3. By the year 2003, implement interagency streamlined permit process in 50 watersheds.

	Prepare education and outreach material for erosion control techniques	RWQCB 5, local agency	Cache Creek	Prop. 204	Preparation and distribution booklet; field tours	x	x	x	
	Implement model, interagency streamlined permit process piloted in Elkhorn Slough in other watersheds Statewide.	NRCS, DFG, RWQCBs, CCC, Sustainable Conservation, MBNMS WQPP	Elkhorn Slough, Morro Bay, Salinas River watersheds	Various sources	50 projects in five years	x	x	x	In 1998, 20 projects were implemented in Elkhorn Slough, Morro Bay, and Salinas River. Projects are scheduled to begin in FY 99-00.
Track and Monitor	Implement management measures/practices to reduce sedimentation.	RWQCB 5, local agency	Panoche and Silver Creek, Arroyo Passajero	CWA §319		x	x	x	
Report Biennially	Monitor long-term sediment management strategies	RWQCB 5, local agency	Union School Slough	CWA §319, CALFED		x	x	x	
To be completed as specified in Part III.A. - Introduction /Structure.									

Management Measure Category: Agriculture
Management Measure Title: 1B - Facility Wastewater and Runoff from Confined Animal Facilities (all units)
Management Measure Targeting Level: Primary

Objectives:

1. By the year 2000, develop statewide strategy for Animal Feeding Operations (AFO).
2. By the year 2002, complete dairy waste management training for 50 percent of dairy producers in RWQCBs 1 and 5.
3. By the year 2003, inspect all AFO facilities in the RWQCB 5-Central Valley and RWQCB 8-Chino Basin.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years				Notes
						98	99	00	01	
Assess	Conduct surface and ground water quality monitoring to assess current and historic dairy waste impacts.	RWQCB 8	Chino Basin, Lake Elsinore/San Jacinto watershed		Database	x	x	x	x	
Target	To be completed as specified in Part III.A. - Introduction /Structure.									
Plan	Quantify nutrient load and propose reductions.	USEPA, SWRCB, RWQCB 4	RWQCB 4	Basin Planning, CWA §104 and §106 TMDL funds	Technical TMDLs		x	x	x	TMDLs for nutrients are scheduled for different watersheds each year
	Update nutrient reduction goals of RWQCB 4 Basin Plan.	RWQCB 4	RWQCB 4		Update plan by 7/2001		x			Triennial review and TMDL implementation, as required
	Foster grant program for NPS control on dairies.	RWQCB 1	Humboldt WMA	CWA §319	Number of projects		x	x	x	
	Develop manure removal strategies.	Local dairy agencies, RWQCB 8, Orange County Sanitation District (OCWD)	Chino Basin, San Jacinto Watershed		Reduction in manure remaining in Chino Basin	x				

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years				Notes		
						98	99	00	01		02	
Plan	Work with USEPA and NRCS on development of the joint unified AFO National Strategy. Target EQIP funding to needed projects through participation on the State Technical Committee. Develop statewide strategy for AFO.	NRCS SWRCB USEPA RWQCBs	Statewide	Current staff, EQIP	Annual list of priority areas, number of plans produced	x	x	x	x	x	Ongoing activity	
						Statewide	Baseline	Statewide strategy	x			
Coordinate	Coordinate statewide and regional dairy waste management activities to develop more cohesive regulatory framework through monthly Interagency Confined Animal Coordination Group meetings and quarterly RWQCB roundtable meetings.	SWRCB	Statewide	CWA §319 Current staff	Monthly meeting summaries	x	x	x	x	x	Ongoing activity -most significant impacts are in the San Joaquin Valley and Chino Basin	
						Statewide with emphasis on Regions 1 and 5	TSCA grant CWA §319 Current staff	Under the Partnership Agreement, complete dairy waste management training for 50 percent of producers in two years. Perform 1,000 independent evaluations in four years.	x	x	x	x
Implement	Work with USEPA and NRCS on implementation of the joint unified AFOs National Strategy. Target EQIP funding to needed projects through participation on the State Technical Committee.	NRCS SWRCB EPA RWQCBs	Statewide	Current staff, EQIP	Annual list of priority areas, number of plans developed	x	x	x	x	x	Ongoing activity Also supports process element of implementation	
						RWQCB 8	Implement updated dairy general NPDES permit.	Implement updated permit	x	x	x	x
	Educate dairy industry on NPS impacts and control, foster stewardship ethic, develop self-regulatory body Address known dischargers in violation of water quality standards through increased use of regulatory authorities: - more inspections - increase number of inspections - consider issuing a general WDR in Central Valley.	RWQCB 1	Humboldt WMA	CWA §319	No. of participants, No. of projects, strategy with corrective actions	Inspect 25 percent of all facilities annually	x	x	x	x	x	Ongoing activity
							Central Valley, Chino Basin, San Jacinto Watershed	General Fund, NPDES/WDR permit funds

Management Measure Category: Agriculture
Management Measure Title: 1C - Nutrient Management
Management Measure Targeting Level: Primary

Objectives:

1. By the year 2003, develop regional numeric nutrient criteria and incorporate into Basin Plans.
2. By the year 2003, develop and implement standards for heavy metals in organic and inorganic fertilizers.
3. By the year 2003, develop nutrient management guidelines in nine watersheds. Begin implementation of those guidelines.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years				Notes
						98	99	00	01 02	
Assess	Thirty-five (35) water bodies listed for nutrients with agricultural sources of sediment on CWA §303(d) list.	RWQCBs	Statewide	Current staff	CWA §303(d) list	x				
	For watersheds with limited information, inspect irrigated agriculture and grazing areas for nutrient discharges.	RWQCB 3	Lands with irrigated agriculture or grazing uses	New	Number of watersheds inspected per year	x	x	x	x	
Target	Thirty-three (33) water bodies targeted for nutrient TMDLs by year 2003.	SWRCB	Statewide	Current staff	TMDL schedule					
	Identify additional high quality water bodies in need of protection.									
Plan	Develop regional numeric nutrient criteria in cooperation with USEPA, RWQCBs, and Nutrient Criteria Team.	USEPA, SWRCB, RWQCBs	Statewide	CWA §319(h) grant	Develop regional criteria by 2000. Incorporate into basin plans by 2003	x	x	x	x	x
	Evaluate and modify as appropriate for incorporation into basin plans.									
	Develop standards for heavy metals in organic and inorganic fertilizers.	DFA and SWRCB	Statewide		Standards	x	x	x	x

Report Biennially	To be completed as specified in Part III.A. - Introduction /Structure.								

C. Forestry

There are 12 MMs to address various phases of forestry operations relevant to controlling NPSs of pollution that affect State waters. The forestry MMs are for the most part a system of practices used and recommended by the BOF and CDF in rules or guidance.

Silviculture contributes pollution to 17 percent of the polluted rivers and 21 percent of the polluted lakes in California (SWRCB, 1996). Without adequate controls, forestry operations may degrade the characteristics of waters that receive drainage from forest lands. For example (1) sediment concentrations can increase due to accelerated erosion, (2) water temperatures can increase due to removal of over-story riparian shade, (3) dissolved oxygen can be depleted due to the accumulation of slash and other organic debris, and (4) concentrations of organic and inorganic chemicals can increase due to harvesting and fertilizers and pesticides.

Management Measures:

Preharvest Planning. Silvicultural activities shall be planned to reduce potential delivery of pollutants to surface waters. Components of MM 2A address aspects of forestry operations, including: the timing, location, and design of harvesting and road construction; site preparation; identification of sensitive or high-erosion risk areas; and the potential for cumulative water quality impacts.

Streamside Management Areas (SMAs). SMAs protect against soil disturbance and reduce sediment and nutrient delivery to waters from upland activities. MM 2B is intended to safeguard vegetated buffer areas along surface waters to protect the water quality of adjacent streams.

Road Construction/Reconstruction. MM 2C requires that road construction/reconstruction shall be conducted so as to reduce sediment generation and delivery. This can be accomplished by following, among other means, preharvest plan layouts and designs for road systems, incorporating adequate drainage structures, properly installing stream crossings, avoiding road construction in SMAs, removing debris from streams, and stabilizing areas of disturbed soil such as road fills.

Road Management. MM 2D describes how to manage roads to prevent sedimentation, minimize erosion, maintain stability, and reduce the risk that drainage structures and stream crossings will fail or become less effective. Components of this measure include inspections and maintenance actions to prevent erosion of road surfaces and to ensure the effectiveness of stream-crossing structures. The measure also addresses appropriate methods for closing roads that are no longer in use.

Timber Harvesting. MM 2E addresses skid trail location and drainage, management of debris and petroleum, and proper harvesting in SMAs. Timber harvesting practices that protect water quality and soil productivity also have economic benefits by reducing the length of roads and skid trails, reducing equipment and road maintenance costs, and providing better road protection.

Site Preparation and Forest Regeneration. Impacts of mechanical site preparation and regeneration operations—particularly in areas that have steep slopes or highly erodible soils or where the site is located in close proximity to a water body—can be reduced by confining runoff on site. MM 2F addresses keeping slash material out of drainageways, operating machinery on contours, timing of activities, and protecting ground cover in ephemeral drainage areas and SMAs. Careful regeneration of harvested forest lands is important in protecting water quality from disturbed soils.

Fire Management. MM 2G requires that prescribed fire practices for site preparation and methods to suppress wildfires should be conducted as feasible in a manner that limits loss of soil organic matter and litter and that reduces the potential for runoff and erosion. Prescribed fires on steep slopes or adjacent to streams and that remove forest litter down to mineral soil are most likely to impact water quality.

California's MMs to address silvicultural sources of nonpoint pollution:

- 2A. Preharvest Planning
- 2B. Streamside Management Areas
- 2C. Road Construction/Reconstruction
- 2D. Road Management
- 2E. Timber Harvesting
- 2F. Site Preparation/Forest Regeneration
- 2G. Fire Management
- 2H. Revegetation of Disturbed Areas
- 2I. Forest Chemical Management
- 2J. Wetlands Forest
- 2K. Postharvest Evaluation
- 2L. Education/Outreach

Revegetation of Disturbed Areas. MM 2H addresses the rapid revegetation of areas disturbed during timber harvesting and road construction—particularly areas within harvest units or road systems where mineral soil is exposed or agitated (e.g., road cuts, fill slopes, landing surfaces, cable corridors, or skid trails) with special priority for SMAs and steep slopes near drainageways.

Forest Chemical Management. Application of pesticides, fertilizers, and other chemicals used in forest management should not lead to surface water contamination. Pesticides must be properly mixed, transported, loaded, and applied; and their containers must be disposed of properly. Fertilizers must also be properly handled and applied since they also may be toxic depending on concentration and exposure. Components of MM 2I include applications by skilled workers according to label instructions, careful prescription of the type and amount of chemical to be applied, use of buffer areas for surface waters to prevent direct application or deposition, and spill contingency planning.

Wetland Forest Management. Forested wetlands provide many beneficial water quality functions and provide habitat for aquatic life. Under MM 2J, activities in wetland forests shall be conducted to protect the aquatic functions of forested wetlands.

Postharvest Evaluation. The goals of MM 2K are to incorporate postharvest monitoring, including: (a) implementation monitoring to determine if the operation was conducted according to specifications and (b) effectiveness monitoring after at least one winter period to determine if the specified operation prevented or minimized discharges.

Education/Outreach. The goals of MM 2L are to implement pollution prevention and education programs to reduce NPS pollutants generated from applicable silvicultural activities.

Management Measure Category: Forestry

Management Measure Title: Applicable to all MMs

Management Measure Targeting Level: All MMs are designated at the primary level, except for 2G-Fire Management and 2J-Forest Chemical Management which are at the secondary level and 2J-Wetlands Forest which is at the tertiary level.

Objectives:

1. By year 2001, adopt FPR to address watercourse and lake protection zones, roads and landings, exempt and emergency timber operations, mass wasting, and cumulative watershed effects.
2. By year 2003, increase agency staffing, broaden enforcement authority, increase review of THPs, and monitor effectiveness of MPs.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years			Notes
						98	99	00 01 02	
Assess	A number of water bodies are identified on the CWA §303(d) list as having silvicultural activities that contribute to water quality impairments.	RWQCBs (excluding RWQCB 8)	Statewide	Current Staff	CWA §303(d) list	x	x	x

To be completed as specified in Part III.A. - Introduction /Structure									

D. Urban Areas

The SWRCB, CCC, and other State agencies have identified 15 MMs to address urban NPSs of pollution that affect State waters. With approximately 80 percent of the nation's population living in coastal areas, controlling polluted runoff in urban areas is a challenge. Negative impacts of urbanization on coastal and estuarine waters are well documented in a number of sources, including California's CWA section 305(b) and section 319 reports and the Nationwide Urban Runoff Program.

Major pollutants found in runoff from urban areas include sediment, nutrients, oxygen-demanding substances, road salts, heavy metals, petroleum hydrocarbons, pathogenic bacteria, and viruses. Suspended sediments constitute the largest mass of pollutant loadings to receiving waters from urban areas. Construction is a major source of sediment erosion. Petroleum hydrocarbons result mostly from automobile sources. Nutrient and bacterial sources include garden fertilizers, leaves, grass clippings, pet wastes, and faulty septic tanks. As population densities increase, a corresponding increase occurs in pollutant loadings generated from human activities. Many of these pollutants enter surface waters via runoff without undergoing treatment.

Urban runoff management requires that several objectives be pursued simultaneously. These objectives include the following (American Public Works Association, 1981):

- Protection and restoration of surface waters by the minimization of pollutant loadings and negative impacts resulting from urbanization;
- Protection of environmental quality and social well-being;
- Protection of natural resources, e.g., wetlands and other important aquatic and terrestrial ecosystems;
- Minimization of soil erosion and sedimentation problems;
- Maintenance of the predevelopment hydrologic conditions;
- Protection of ground water resources;
- Control and management of runoff to reduce or prevent flooding; and
- Management of aquatic and riparian resources for active and passive.

Management Measures:

The control of urban NPS pollution requires the use of two primary strategies: (1) the prevention of pollutant loadings and (2) the treatment of unavoidable loadings. California's urban MMs are organized to parallel the land use development process in order to address the prevention and treatment of NPS pollution loadings during all phases of urbanization. This strategy relies primarily on the watershed approach, which focuses on pollution prevention and source reduction practices. Emphasizing pollution prevention and source reduction practices over treatment practices is favored because conducting education practices and incorporating pollution prevention practices into project planning and design activities are generally more effective, require less maintenance, and are more cost-effective in the long term than treatment strategies. Treatment strategies should only be used to address unavoidable loadings or where they are truly cost-effective.

California's MMs to address urban sources of nonpoint pollution:

- 3.1 Runoff from Developing Areas
 - A. Watershed Protection
 - B. Site Development
 - C. New Development
- 3.2 Runoff from Construction Sites
 - A. Construction Site Erosion and Sediment Control
 - B. Construction Site Chemical Control
- 3.3 Runoff from Existing Development
 - A. Existing Development
- 3.4 On-site Disposal Systems (OSDSs)
 - A. New OSDSs
 - B. Operating OSDSs
- 3.5 Transportation Development (Roads, Highways, and Bridges)
 - A. Planning, Siting, and Developing Roads and Highways
 - B. Bridges
 - C. Construction Projects
 - D. Chemical Control
 - E. Operation and Maintenance
 - F. Road, Highway, and Bridge Runoff Systems
- 3.6 Education/Outreach
 - A. Pollution Prevention/Education: General Sources

The major opportunities to control NPS loadings occur during the following three stages of development: (1) the siting and design phase, (2) the construction phase, and (3) the post-development phase. Before development occurs, land in a watershed is available for a number of pollution prevention and treatment options, such as setbacks, buffers, or open space requirements, as well as wet ponds or constructed urban runoff wetlands that can provide treatment of the inevitable runoff and associated pollutants. In addition, siting requirements and restrictions and other land use ordinances, which can be highly effective, are more easily implemented during this period. After development occurs, these options may no longer be practicable or cost-effective. MMs 3.1A through 3.1C address the strategies and practices that can be used during the initial phase of the urbanization process.

The control of construction-related sediment loadings is critical to maintaining water quality. The implementation of proper erosion and sediment control practices during the construction stage can significantly reduce sediment loadings to surface waters. MMs 3.2A and 3.2B address construction-related practices.

After development has occurred, lack of available land severely limits the implementation of cost-effective treatment options. MM 3.6A focuses on improving controls for existing surface water runoff through pollution prevention to mitigate NPSs of pollution generated from on-going domestic and commercial activities.

Management Measure Category: 3.1 – Urban Areas

Management Measure Title: 3.1 – Runoff from Developing Areas; 3.1A – Watershed Protection; 3.1B – Site Development; and 3.1C – New Development

Management Measure Targeting Level: Secondary

Objectives:

1. Provide general goals for State and local agencies to use in developing comprehensive watershed protection programs for guiding future development and land use activities in a manner that will prevent and mitigate the effects of NPS pollution.
2. Reduce the generation of NPS pollutants and mitigate the impacts of urban runoff and associated pollutants that result from new development or redevelopment.

Management Measure Category: Urban Areas

Management Measure Title: 3.4 – On-site Disposal Systems; 3.4A – New On-site Disposal Systems; and 3.4B – Operating On-site Disposal Systems

Management Measure Targeting Level: Secondary

Objectives:

1. Improve coordination among State agencies and between State and local agencies in all matters dealing with OSDS.
2. Develop a consistent statewide and/or regional approach to policy interpretation, regulation, implementation, and development of standards for OSDS to support regional and/or local regulation.
3. Provide financial, technical, and educational assistance to help ensure that OSDSs are located, designed, installed, operated, inspected, and maintained to prevent the discharge of pollutants onto surface water and into ground water.
4. Provide financial and technical assistance for and educational information on “alternative” OSDS technologies (i.e., other than conventional gravity septic tank-leachfield systems).

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	To be completed as specified in Part III.A. – Introduction /Structure						
Target	Provide loans or grants to counties for upgrades to individual systems.	SWRCB, local municipalities	Statewide	SRF loans	Loans provided and individual systems upgraded	x	x OSDS TAC Recommendation
Plan	Establish uniform statewide standards for minimum criteria for OSDS siting and design (appropriate additional criteria will depend on local geographical and topographical conditions and level of protection required for regional beneficial uses). Review local OSDS-related policies and ordinances of local governments within one or more regions (e.g., within the MBNMS) and evaluate these planning and implementation mechanisms for regional consistency and effectiveness.	SWRCB CCC in coordination with SWRCB, RWQCBs, and others (excluding RWQCB 8)	Statewide Identified CCAs (e.g., the MBNMS)	Proposed BCP CZMA or CWA grants	Minimum criteria Matrix and analysis of ordinances, policies, criteria, etc.	 x	OSDS TAC Recommendation Modeled after similar recommended action in MBNMS (WQPP) Urban Action Plan

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Coordinate	Assign or redirect SWRCB and/or RWQCB staffs to support OSDS activities.	SWRCB, RWQCBs in coordination with other agencies that have related/ overlapping authority	Statewide	BCPs or redirection of staff, MOUs with other agencies	New OSDS Unit at the SWRCB	98	Recommendation in NPS Initiatives Report and OSDS TAC Report
						99	
						00	
	Develop a Memorandum of Agreement (MOA) between public agencies that operate facilities that use OSDS (e.g., Cal/TTrans, DPR, Dept. of Corrections) and the SWRCB, RWQCBs, and local health departments to ensure that the public facilities meet the same technical standards and achieve the same level of scrutiny as other OSDSs.	SWRCB	Statewide	General Funds	MOA	x	Pointed out as a problem in the OSDS TAC report
	Establish a State and/or regional center for the coordination and advancement of OSDS research and development to provide education and training to educators, designers, installers, and regulators of OSDS.	Sea Grant or NEP	Statewide; begin in pilot project area (e.g., CCA or NEP such as SMB NEP)	General Fund appropriated through new legislation	Facility with training materials and website	x	Model after Buzzards Bay Project National Estuary Program See also OSDS TAC Report Stakeholder recommendation (Heal the Bay [HTB])
	Develop a program to provide homeowner education and to encourage or require appropriate system operation and maintenance.	Nonprofit in coordination with SWRCB, RWQCBs, (excluding RWQCB 8) local municipalities	Statewide	CWA §319	HomeASyst program developed and used in a reported number of homes.	x	OSDS TAC Recommendation (Can model after the "HomeASyst" program for OSDSs that is implemented in North Carolina and other states)

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Implement	Provide assistance to local developers in achieving the stated OSDS MM objectives. Prepare clear and formal guidance concerning the application of existing SWRCB policies as they relate to OSDS. Provide technical assistance and oversight on siting and proper application of alternative technology. Adopt statewide performance standards for all OSDS within the coastal zone by January 2001. Achieve compliance with above standards within 3 years after adoption of OSDS performance standards. Provide technical assistance for assessing cumulative impacts of OSDS and aid local agencies in the development of procedures for addressing cumulative impacts.	SWRCB, RWQCBs (excluding RWQCB 8) in coordination with other agencies that have related/ overlapping authority	Statewide	BCPs or redirection of staff; MOUs with other agencies	New OSDS Unit at the SWRCB	x x x x	Recommendation in NPS Initiatives Report and OSDS TAC Report
		SWRCB	Statewide	General Funds BCP	Guidance memorandum Update the Minimum Guidelines for the Control of Individual Wastewater Treatment and Disposal Systems by including non-standard systems	x	Recommendation in NPS Initiatives Report and OSDS TAC Report Refers to SWRCB Resolutions No. 68-16 and 88-63 RWQCB 2 suggestion

E. Marinas and Recreational Boating Management Measures²⁴

Recreational boating and marinas are increasingly popular uses of coastal areas and inland surface water bodies (e.g., lakes and delta). And, they are an important means of public access, and California must balance the need for protecting the environment and the need to provide adequate public access (USEPA, 1993). Because marinas and boats are located at the water's edge, pollutants generated from these sources are less likely to be buffered or filtered by natural processes. When boating and adjunct activities (e.g., marinas and boat maintenance areas) are poorly planned or managed, they may pose a threat to water quality and the health of aquatic systems and may pose other environmental hazards. Sources of pollution associated with marinas and boating include:

- Poorly flushed waterways;
- Pollutants discharged from boats (recreational boats, commercial boats, and "live-aboards");
- Pollutants carried in storm water runoff;
- Physical alteration of wetlands and of shellfish/ other benthic communities during construction of marinas, ramps, and related facilities;
- Pollutants generated from boat maintenance activities on land and in the water.

There are 16 MMs to address marina and boating sources of nonpoint pollution. Effective implementation of these MMs can (1) avoid impacts associated with siting marinas and boat maintenance areas, (2) ensure the best available design and construction practices (for new and expanding facilities), (3) ensure appropriate operation and maintenance practices to prevent and/or reduce the delivery of NPS pollutants to State waters, and (4) encourage the development and use of effective pollution control and education efforts. The MMs cover the following operations and facilities:

- Any facility that contains ten or more slips, piers where ten or more boats may tie up, or any facility where a boat for hire is docked;
- Any residential or planned community marina with ten or more slips;
- Any mooring field where ten or more boats are moored;
- Public or commercial boat ramps;
- Boat maintenance or repair yards that are adjacent to the water and any federal, State, or local facility that involves recreational boat maintenance or repair on or adjacent to the water.

The Implementation Plan involves targeting implementation of six of the 16 marina and boating MMs, specifically those measures for water quality assessment, sewage facilities, boat cleaning and maintenance, hazardous waste

²⁴ Commercial and military ports are not targeted in this Program Plan because they are subject to the storm water NPDES permits regulating industrial and construction activities. Commercial ports are also required to submit a port master plan (PMP) for certification by the CCC. The PMP must include the conditions contained in Coastal Act section 30711. An NPS-related condition is "an estimate of the effect of development on habitat areas and the marine environment, a review of existing water quality, habitat areas, and quantitative and qualitative biological inventories, and proposals to minimize and mitigate any substantial adverse impact." Section 30711 further states that, "each city, county, or city and county which has a port within its jurisdiction shall incorporate the certified [PMP] in its [LCP]." In addition, activities in military ports are subject to federal consistency review by the CCC, affording the State an opportunity to ensure that appropriate NPS pollution prevention and control measures are in place. Ports located in the San Francisco Bay are under the jurisdiction of SFBCDC and subject to regulations of the MPA.

California's marina and recreational boating MMs:

- 4.1 Assessment, Siting and Design
 - A. Water Quality Assessment
 - B. Marina Flushing
 - C. Habitat Assessment
 - D. Shoreline Stabilization
 - E. Storm Water Runoff
 - F. Fueling Station Design
 - G. Sewage Facilities
 - H. Waste Management Facilities
- 4.2 Operation and Maintenance
 - A. Solid Waste Control
 - B. Fish Waste Control
 - C. Liquid Material Control
 - D. Petroleum Control
 - E. Boat Cleaning and Maintenance
 - F. Maintenance of Sewage Facilities
 - G. Boat Operation
- 4.3 Education/Outreach
 - A. Public Education

management, and public education. These MMs and related actions were identified by representatives of the marina and boating community at four meetings held between December 1998 and April 1999 and by the SWRCB, RWQCBs, and CCC. The 1994 Marina TAC Report provided additional recommendations. The 16 MMs are summarized below.

Assessment, Siting, And Design Management Measures:

- 41.A **Water Quality Assessment.** Consider impacts to water quality in siting and designing new and expanding marinas.
- 41.B **Marina Flushing.** Site and design marinas to provide for maximum flushing and circulation of surface waters, which can reduce the potential for water stagnation, maintain biological productivity, and reduce the potential for toxic accumulation in bottom sediment.
- 41.C **Habitat Assessment.** Site and design marinas to protect against adverse impacts on fish and shellfish, aquatic vegetation, and important locally, State, or federally designated habitat areas.
- 41.D **Shoreline Stabilization.** Stabilize shorelines where shoreline erosion is a pollution problem.
- 41.E **Storm Water Runoff.** Implement runoff control strategies to remove at least 80 percent of suspended solids from storm water runoff coming from boat maintenance areas (some boatyards may conform to this provision through NPDES permits).
- 41.F **Fueling Station Design.** Locate and design fueling stations to contain accidental fuel spills in a limited area; and provide fuel containment equipment and spill contingency plans to ensure quick spill response.
- 41.G **Sewage Facilities.** Install pump out, pump station, and restroom facilities at new and expanding marinas where needed to prevent sewage discharges directly to State waters.
- 41.H **Waste Management Facilities.** Install facilities at new and expanding marinas where needed for the proper recycling or disposal of solid wastes (e.g., oil filters, lead acid batteries, used absorbent pads, spent zinc anodes, and fish waste as applicable) and liquid materials (e.g., fuel, oil, solvents, antifreeze, and paints).

Operation And Maintenance Management Measures:

- 4.2A **Solid Waste Control.** Properly dispose of solid wastes produced by the operation, cleaning, maintenance, and repair of boats to limit entry of these wastes to surface waters.
- 4.2B **Fish Waste Control.** Promote sound fish waste management where fish waste is an NPS problem through a combination of fish cleaning restrictions, education, and proper disposal.
- 4.2C **Liquid Material Control.** Provide and maintain the appropriate storage, transfer, containment, and disposal facilities for liquid materials commonly used in boat maintenance; and encourage recycling of these materials.
- 4.2D **Petroleum Control.** Reduce the amount of fuel and oil that leaks from fuel tanks and tank air vents during the refueling and operation of boats.
- 4.2E **Boat Cleaning and Maintenance.** Minimize the use of potentially harmful hull cleaners and bottom paints and prohibit discharges of these substances to State waters.
- 4.2F **Maintenance of Sewage Facilities.** Maintain pumpout facilities in operational condition and encourage their use so as to prevent and control untreated sewage discharges to surface waters.
- 4.2G **Boat Operation.** Prevent turbidity and physical destruction of shallow-water habitat resulting from boat wakes and prop wash.

Education and Outreach Management Measures:

- 4.3A **Public Education.** Institute public education, outreach, and training programs to prevent and control improper disposal of pollutants into State waters.

Management Measure Category: Marinas and Recreational Boating

Management Measure Title: 4.1.A--Water Quality Assessment

Management Measure Targeting Level: Primary

Objectives:

1. By the year 2003, determine baseline water quality conditions in at least 50 percent of California's marinas in targeted geographical regions.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	Inventory existing data on water quality conditions at marinas to identify levels and potential sources of priority pollutants/stressors such as metals (e.g., copper, lead, tributyltin [TBT]), pathogens/high coliform counts, and other pollutants associated with boat discharges/vessel wastes and other recreational boating-related operations).	CCC, RWQCBs	Statewide	CWA §319 or CZMA §6217	Compilation of data from 1998 CWA §303(d) list, §305(b) report, and other sources.	98 99 00 01 02 x	Marina TAC and attendees of 1998-1999 stakeholder meetings identified the need for State to provide baseline data to aid in assessing the effectiveness of implementing MPs.
Target	To be completed as specified in Part III.A. -- Introduction /Structure						
Plan	To be completed as specified in Part III.A. -- Introduction /Structure						

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Coordinate	Provide water quality data to marinas (port captains, harbor masters, lessors, marina owners, etc.) and the public to help identify baseline conditions.	RWQCBs, SWRCB	MBNMS and San Francisco, Tomales, Morro, Santa Monica, and San Diego Bays, Anaheim Bay and Huntington Harbor Marin County (as pilot project in RWQCB 2).	To be determined. BCP	Water quality assessment reports developed and provided to marina operators and for the boating community	98 99 00 01 02	Sources of data may include NPDES permits, CWA §401 certifications, CEQA reports, State Mussel Watch Program, and regional surveys (e.g., Coordinated Monitoring Program of the Comprehensive Management Plan for San Diego Bay)
Implement	Establish baseline water quality data at marinas.	RWQCBs, SWRCB	MBNMS and San Francisco, Tomales, Morro, Santa Monica, and San Diego Bays	To be determined.	See above Plans to establish baseline data at marinas	x x	
		RWQCB 8 with SWRCB, SCCWRP, DFG (Mussel Watch data), and other entities	Lower Newport Bay and Anaheim/Huntington Harbor	SWRCB BCP for additional funding SWRCB grant to SCC Wetlands Restoration Project (WRP) Current funds	On-line searchable water quality database	x x x	Limited data are available from BPTCP program; need to update and conduct additional monitoring
Track and Monitor	To be completed as specified in Part III.A. -- Introduction /Structure						
Report Biennially	To be completed as specified in Part III.A. -- Introduction /Structure						

Management Measure Category: Marinas and Recreational Boating

Management Measure Title: 4.1G and 4.2F--Sewage Facilities Siting, Design, and Maintenance

Management Measure Targeting Level: Primary

Objectives:

1. By the year 2003, establish regional standards for the minimum number of sewage facilities (e.g., fixed, mobile, and/or floating pump outs, dump stations, and restrooms) per recreational vessel in the MBNMS, San Francisco, Tomales, Morro, Santa Monica, and San Diego Bays, and SFB Delta.
2. Provide for the installation and maintenance of an adequate number of sewage facilities in the above-listed regions, and increase accessibility to and use of all facilities.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	Identify water bodies on CWA §303(d) list that are listed for bacteria (or other indicators related to vessel sewage) and that are potentially affected by discharges at marinas.	SWRCB	Statewide assessment		Data provided to marina operators (port captains, harbormasters, lessors, marina owners, etc.) and public	98 99 00 01 02 x	See also actions for water quality assessment (MM 4.1A)
	Assess effectiveness of current vessel sewage waste programs in selected regions.	MBNMS WQPP	MBNMS		Assessment and recommendations for changes to current program		
		San Francisco Estuary Project (SFEP)	SFB				
		Morro Bay NEP	Morro Bay				
		SMB NEP	Santa Monica Bay				
		Orange County, City of Newport Beach, RWQCB 8	Lower Newport Bay			x	Requirement of Newport Bay fecal coliform TMDL
	Assess whether or not adequate enforcement powers exist for and are being implemented by federal, State, and/or local enforcement personnel.	SWRCB, RWQCBs, DBW	Statewide by region	CWA §319	Assessment and recommendations for new laws if needed	x	Recommendation from 2/99 CCBN meeting

Process Element	Actions/Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years				Notes
						98	99	00	01	
Target	Expand educational programs aimed at marina operators to (a) promote a better understanding of the need to construct and maintain vessel sewage pump out facilities, (b) get commitment to construct new pump outs; and (c) provide assistance in applying for Clean Vessel Act (CVA) grant funds.	DBW	Statewide by region	CVA	Workshops and education materials	x	x	x	x	Recommendation in SFEP letter (1/99)
	Identify future sources of funding for installation of sewage pump out facilities pending reauthorization of CVA.	DBW	Statewide	Current staff	Support for funding in CVA reauthorization	x				
Plan	Establish minimum standards defining what constitutes an "adequate" number of pump outs, dump stations, and/or restroom facilities.	RWQCBs (excluding RWQCB 8) and DBW (coordinate with permit and leasing agencies and regional entities [e.g., MBNMS and NEPs])	Statewide by region (e.g., MBNMS, Santa Monica Bay, Morro Bay, and SFB NEPs, San Diego Bay)	CVA, CWA §319	MOA among SWRCB, RWQCBs, and DBW establishing minimum standards for regions	x	x			Recommendation in 1/19/99 letter from SFEP DBW guidelines are one station per 300 boats—California currently has 125 stations for 85,000+ boats (or less than one station per 680 boats)
Coordinate	Establish agreements regarding the lead or shared responsibility for inspection of pump out facilities.	RWQCBs (excluding RWQCB 8) and local health departments	Statewide by region	Agency General Funds	MAAs or MOUs with appropriate agencies	x	x	x		Recommendation in Marina TAC and Initiatives in NPS Mgmt.
	Establish clear lines of authority for enforcement of violations	RWQCBs and local governments	Statewide by region	Agency General Funds	MAAs by region		x			Recommendation in SFEP letter (1/99)

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years				Notes
						98	99	00	01	
Coordinate	Develop and regularly maintain a vessel sewage information clearinghouse to include: <ul style="list-style-type: none"> BMPs; Guidance on how to comply with federal, State, and local laws and regulations; Examples of effective pump out operations currently used around the State; Referrals to sources of reliable information. Management Measure Category: Marinas and Recreational Boating

Management Measure Title: 4.2E--Boat Cleaning and Maintenance

Management Measure Targeting Level: Primary

Objectives:

1. By the year 2003, develop and establish programs to implement BMPs for underwater hull cleaning and maintenance in 50 percent of marinas in the MBNMS and San Francisco, Morro, Santa Monica, and San Diego Bays.
2. Increase the availability and promote the use of financially feasible hull paints and cleaning materials whose contents are less toxic or that break down to non-toxic levels quickly within the marine environment, and decrease the use and release to State waters of toxic recreational boating hull paints (e.g., TBT and copper-based paints).

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	Identify water bodies on CWA §303(d) list that are listed for copper, tributyltin, detergents (or other indicators related to boat cleaning and maintenance) and that are potentially affected by discharges at marinas.	SWRCB	Statewide assessment		Data provided to marina operators (port captains, harbormasters, lessors, marina owners, etc.) and public	98 99 00 01 02	See also actions for water quality assessment (MM 4.1A)
Target	Develop education program where divers who clean boats inform boat owners that they work in the water so please do not pollute, and divers provide information about less toxic bottom paints.	Dive groups	Statewide	CWA §319	Educational materials	x x x x	Recommendations from Marina TAC and 12/98 marina stakeholder meeting
Plan	To be completed as specified in Part III.A. – Introduction /Structure						
Coordinate	Develop model ordinances and provide training for local enforcement personnel.	CCC	Statewide by region	To be determined	Training component for local enforcement personnel	x x x	Recommendation from 2/99 CCBN meeting
	Develop and regularly maintain a "clearinghouse" of boat cleaning and maintenance information such as: <ul style="list-style-type: none"> • Boat cleaning and maintenance BMPs; • A shopping guide for non-toxic paints, cleaners, solvents, etc.; • Guidance on how to comply with local, State, and federal laws and regulations; • Referrals to other sources of reliable information. 	CCC (coordinate with CCBN)	Statewide	CCC general funds; CWA §319 and other grants as applicable	Internet web site with information and links to other sites (DBW, UC Sea Grant, USCG Auxiliary, etc.)	x	Marina TAC recommendation (The CCBN web page provides information at http://ceres.ca.gov/coastalcomm/ccbn/ccbndx.html)

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years			Notes
						98	99	00 01 02	
Implement	<p>Implement short-course hull-cleaning training and certification programs and policies using a 2-tier program based on:</p> <p>Tier 1: Self-certification program approved by SWRCB and CCC with specific targets (e.g., 75 percent of boat cleanings in region done by certified divers after four years);</p> <p>Tier 2: Regional certification (trigger to develop regional certification would be if self-certification program fails to meet identified targets).</p> <p>Promote the use of non-toxic products and target toxic products:</p> <p>(a) Hold a conference addressing recreational boating hull paints;</p> <p>(b) Work with manufacturers, distributors and USEPA to increase research and development and speed up the review and release to market of financially-feasible, non-toxic marine products;</p> <p>(c) Compile a list of options for less toxic products and distribute them through marinas, boatyards, and marine products stores;</p> <p>(d) Phase out of the use of toxic hull paints on State and local agency- owned vessels regardless of size;</p> <p>(e) Recommend measures to reduce the transport of toxics into State waters from boats that have TBT or other toxic hull paints applied out-of-State;</p>	<p>RWQCBs (excluding RWQCB 8) or regional entity such as the MBNMS WQPP (coordinate with diver trade associations)</p> <p>UC San Diego Cooperative Extension Sea Grant</p> <p>SWRCB and DTSC (coordinate with NMMA)</p> <p>CCBN</p> <p>Cal/RA and Cal/EPA</p> <p>SWRCB USEPA</p>	<p>Regionally in State, beginning in San Diego, MBNMS, and SFB NEP</p> <p>Statewide</p> <p>Statewide</p> <p>Statewide</p> <p>Statewide</p> <p>Statewide</p> <p>California-Mexico border issue</p>	<p>CWA §319 Federal dollars passed through NMSs or NEPs</p> <p>CWA §319, Sea Grant</p> <p>To be determined.</p> <p>CWA §319, Sea Grant</p> <p>General funds</p> <p>To be determined</p>	<p>Training and certification program initiated in 1+ regions</p> <p>95 percent of marinas in above regions certify divers</p> <p>75 percent of boat cleanings in region done by certified divers</p> <p>Conference, with recommendations added to five-year plan</p> <p>50 percent increase in alternative products in stores</p> <p>List of options</p> <p>Certifications by agencies</p> <p>Recommendations added to five-year plan</p>	<p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p>	<p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p> <p>x</p>	<p>Recommended by Marina TAC, 12/98 marina stakeholder meeting, and MBNMS WQPP. To be completed as specified in Part III.A. – Introduction /Structure

Management Measure Category: Marinas and Recreational Boating

Management Measure Title: 4.1H, 4.2A, and 4.2C--Hazardous and Toxic Materials Management

Management Measure Targeting Level: Primary for 4.1H-Waste Management Facilities and 4.2A-Solid Waste Control

Secondary for 4.2C-Liquid Material Control

Objectives:

1. Resolve potential regulatory and liability issues that currently discourage many harbor districts and marinas from taking a more active role in hazardous waste management.
2. Develop convenient disposal options for boaters that allow for the drop off and collection of hazardous wastes in marinas and harbors.
3. By the year 2003, develop and implement one or more pilot Temporary Waste Collection Program(s) where 100 percent of marinas in the pilot region(s) are included as collection points during the regular recruitment of common household hazardous wastes by municipalities and counties.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	Assess existing hazardous waste disposal and used oil recycling services available to California boaters in order to identify gaps in service.	CCC, SFEP, and Santa Monica Bay Restoration Project	Statewide by region	CIWMB	Report to CIWMB and public	98 x 99 x 00 x 01 x 02 x	A survey of marinas in Northern and Southern California has been conducted by the CCC's BCGC.
Target	To be completed as specified in Part III.A. - Introduction /Structure						
Plan	To be completed as specified in Part III.A. - Introduction /Structure						
Coordinate	To be completed as specified in Part III.A. - Introduction /Structure						
Implement	Resolve issues discouraging harbors and marinas from temporarily storing hazardous and toxic materials generated by boaters (such as waste oil, batteries, paints, solvents, antifreeze, detergents, and contaminated fuels) until pickup and/or recycling by local waste management agencies. (For example, investigate the possibility of obtaining categorical exemptions for harbors for periodic-collection and/or transport of small quantities of hazardous materials.)	DTSC, City and County Household Hazardous Waste (HHW) agencies	MBNMS pilot project and Statewide	CWA §319	MOA (e.g., between DTSC, HHW agencies, RWQCBs, SWRCB, and Port Captains and Harbor Masters Association) or new legislation	x	Recommendations from Marina TAC, 12/98 and 1/99 marina stakeholder meetings, and MBNMS WQPP Action Plan III (Marinas & Boating)

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Implement	<p>Coordinate waste disposal and recycling programs to include marinas as a collection point during the regular recruitment of common household hazardous wastes. Key steps may include:</p> <ul style="list-style-type: none"> • Plan development of temporary waste collection program that includes recycling programs for waste oil and batteries; • Obtain funding; • Develop sites; • Establish procedures to handle materials at collection points within designated harbors and marinas; • Implement pickup services program; and • Implement education programs. 	<p>City and County Environmental Health and HHW Departments (coordinate with waste management districts and port captains and harbor masters; in MBNMS coordinate with WQPP)</p>	<p>MBNMS pilot project and Statewide</p>	<p>SWRCB, DTSC, and/or CIWMB grants</p>		<p>98 x 99 x 00 x 01 x 02 x</p>	<p>Marina TAC recommendation (Marina TAC identified waste oil and batteries as the two most voluminous hazardous wastes) See also Strategy M.4 in MBNMS WQPP Action Plan III (Marinas & Boating)</p>
Track and Monitor	To be completed as specified in Part III.A. – Introduction /Structure						
Report Biennially	To be completed as specified in Part III.A. – Introduction /Structure						

Management Measure Category: Marinas and Recreational Boating

Management Measure Title: 4.3--Education/Outreach

Management Measure Targeting Level: Primary

Objectives:

1. Communicate to boaters and owners/operators of marinas and boatyards the environmental and economic impacts of pollution; identify and increase the awareness and use of MMs and BMPs where needed to prevent and control adverse impacts associated with marinas and boats.
2. Enhance and coordinate State educational, technical and financial assistance, and enforcement programs to assist the boating community's efforts to implement MMs to prevent and control polluted runoff from marinas, boat yards, and boating activities.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years	Notes
Assess	Assess existing pollution prevention and control programs regionally and/or statewide. Assess existing efforts to develop coordinated regional or watershed-based public education and outreach programs related to marina and boat-related activities; identify educational/outreach program needs statewide and expand and build upon effective efforts.	DBW CCC	Statewide			98 99 00 01 02	
Target	To be completed as specified in Part III.A. - Introduction /Structure						
Plan	To be completed as specified in Part III.A. - Introduction /Structure						
Coordinate	Continue implementation of the CCC's BCGC, which includes the facilitation of the California CCBN as a forum to conduct public outreach, manage marina and boating impacts, and participate in the development and implementation of NPS MMs and NPS Program strategies and action plans.	CCC	Statewide	CIWMB	Conduct BCGC; develop action plan for the future	x x	The CCC's BCGC is currently funded through April 2000 only.

Process Element	Actions/ Statements	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years		Notes
						98	99 00 01 02	
Implement		CCC	Southern California	CIWMB	Research of target groups in Southern California	x		
	Conduct education workshop.	SFEP, RWQCB 2	Marin County	BCP	Education brochure and workshop	x		
	Post-educational information at boat ramps and other areas.	DPR, DBW, CCC, Santa Monica Bay Restoration Project	Statewide	CIWMB, SCC, CCC license plate	Posting of information in existing displays; installation of new displays	x		To date, CCC has installed more than 250 signs around the State to date.
Track and Monitor	To be completed as specified in Part III.A. – Introduction /Structure							
Report Biennially	To be completed as specified in Part III.A. – Introduction /Structure							

F. Hydromodification Management Measures

The SWRCB, CCC, and other State agencies have identified seven MMs to address hydromodification sources of nonpoint pollution affecting State waters. Hydromodification includes modification of stream and river channels, dams and water impoundments, and streambank/shoreline erosion.

Channel modification activities are undertaken in rivers or streams to straighten, enlarge, deepen, or relocate the channel. These activities can affect water temperature, change the natural supply of fresh water to a water body, and alter rates and paths of sediment erosion, transport, and deposition. Hardening the banks of waterways with shoreline protection or armor also accelerates the movement of surface water and pollutants from the upper reaches of watersheds into coastal waters. Channelization can also reduce the suitability of instream and streamside habitat for fish and wildlife by depriving wetlands and estuarine shorelines of enriching sediments, affecting the ability of natural systems to filter pollutants, and interrupting the life stages of aquatic organisms (USEPA, 1993).

Dams can adversely impact hydrology and the quality of surface waters and riparian habitat in the waterways where the dams are located. A variety of impacts can result from the siting, construction, and operation of these facilities. For example, improper siting of dams can inundate both upstream and downstream areas of a waterway. Dams reduce downstream flows, thus depriving wetlands and riparian areas of water. During dam construction, removal of vegetation and disturbance of underlying sediments can increase turbidity and cause excessive sedimentation in the waterway.

The erosion of shorelines and streambanks is a natural process that can have either beneficial or adverse impacts on riparian habitat. Excessively high sediment loads resulting from erosion can smother submerged aquatic vegetation, cover shellfish beds and tidal flats, fill in riffle pools, and contribute to increased levels of turbidity and nutrients.

Management Measures:

Channelization/Channel Modification. California's MMs for channelization and channel modification promote the evaluation of channelization and channel modification projects. Channels should be evaluated as a part of the watershed planning and design processes, including watershed changes from new development in urban areas, agricultural drainage, or forest clearing. The purpose of the evaluation is to determine whether resulting NPS changes to surface water quality or instream and riparian habitat can be expected and whether these changes will have a detrimental (or negative) impact. Existing channelization and channel modification projects can be evaluated to determine the NPS impacts and benefits associated with the projects. Modifications to existing projects, including operation and maintenance or management, can also be evaluated to determine the possibility of improving some or all of the impacts without changing the existing benefits or creating additional problems. In both new and existing channelization and channel modification projects, evaluation of benefits and/or problems will be site specific.

Dams. The second category of MMs addresses NPS pollution associated with dams. Dams are defined as constructed impoundments that are either: (1) 25 feet or more in height *and* greater than 15 acre-feet in capacity or (2) six feet or more in height *and* greater than 50 acre-feet in capacity. MMs 5.2A and 5.2B address two problems associated with dam construction: (1) increases in sediment delivery downstream resulting from construction and operation activities and (2) spillage of chemicals and other pollutants to the waterway during construction and operation. MM 5.2C addresses the impacts of reservoir releases on the quality of surface waters and instream and riparian habitat downstream.

California's MMs to address sources of nonpoint pollution related to hydromodification activities:

- 5.1 Channelization/Channel Modification
 - A. Physical and Chemical Characteristics of Surface Waters
 - B. Instream and Riparian Habitat Restoration
- 5.2 Dams
 - A. Erosion and Sediment Control
 - B. Chemical and Pollutant Control
 - C. Protection of Surface Water Quality & Instream and Riparian Habitat
- 5.3 Streambank and Shoreline Erosion
 - A. Eroding Streambanks & Shorelines
- 5.4 Education/Outreach
 - A. Educational Programs

Streambank and Shoreline Erosion. The third category of hydromodification measures addresses the stabilization of eroding streambanks and shorelines in areas where streambank and shoreline erosion creates a polluted runoff problem. Bioengineering methods such as marsh creation and vegetative bank stabilization are preferred. Streambank and shoreline features that have the potential to reduce polluted runoff shall be protected from impacts, including erosion and sedimentation resulting from uses of uplands or adjacent surface waters. This MM does not imply that all shoreline and streambank erosion must be controlled; the measure applies to eroding shorelines and streambanks that constitute an NPS problem in surface waters.

Education/Outreach. MMs 5.4A focuses on the development and implementation of pollution prevention and education programs for agency staffs and the public, as well as the promotion of assistance tools that emphasize restoration and low-impact development. Education, technical assistance, incentives, and other means can be used to promote projects that: (1) reduce NPS pollutants, (2) retain or reestablish natural hydrologic functions (e.g., channel restoration projects and low-impact development projects), and/or (3) prevent and restore adverse effects of hydromodification activities.

Management Measure Category: Hydromodification

Management Measure Titles: 5.1 – Channelization/Channel Modification; 5.3 – Streambank and Shoreline Erosion; and 5.4-Education/Outreach (Hydromodification)

Management Measure Targeting Level: Primary for MM 5.4-Education/Outreach and secondary for all others.

Objectives:

1. By the year 2001, implement CWA §401 certification program regulations to delegate program authority to the RWQCBs.
2. By the year 2002, develop a technical assistance manual that will assist local governments and small businesses with guidelines for designing projects to avoid wetlands and riparian areas.
3. By the year 2001, adopt general WDRs that prescribe channel maintenance activities with minimal threat to water quality.

G. Wetlands, Riparian Areas, and Vegetated Treatment Systems

The SWRCB, CCC, and other State agencies have identified four MMs to promote the protection and restoration of wetlands and riparian areas and the use of vegetated treatment systems as means to control NPSs of pollution.

Wetlands and riparian areas reduce polluted runoff by filtering out runoff-related contaminants, such as

sediment, nitrogen, and phosphorus, thus maintaining the water quality benefits of these areas is important. These areas also help to attenuate flows from higher-than-average storm events. This protects downstream areas from adverse impacts, such as channel scour, erosion, temperature and chemical fluctuations. Changes in hydrology, substrate, geochemistry, or species composition can impair the ability of wetland or riparian areas to filter out excess sediment and nutrients and therefore can result in deteriorated water quality. The following activities can cause such impairment: drainage of wetlands for cropland, overgrazing, hydromodification, highway construction, deposition of dredged material, and excavation for ports and marinas.

California's MMs to protect and restore wetlands and riparian areas and use vegetated treatment systems as means to control pollution from nonpoint sources:

- 6A. Protection of Wetlands & Riparian Areas
- 6B. Restoration of Wetlands & Riparian Areas
- 6C. Vegetated Treatment Systems
- 6D. Education/Outreach

Management Measures:

6A Protection of Wetlands/Riparian Areas. Implementation of MM 6A is intended to protect the existing water quality improvement functions of wetlands and riparian areas as a component of NPS Programs.

6B Restoration of Wetlands/Riparian Areas. Restoration of wetlands and riparian areas (MM 6B) refers to the recovery of a range of functions that existed previously by reestablishing hydrology, vegetation, and structure characteristics. Damaged or destroyed wetland and riparian areas should be restored where restoration of such systems will significantly abate polluted runoff.

6C Vegetated Treatment Systems. MM 6C promotes the installation of vegetated treatment systems (e.g., artificial or constructed wetlands) in areas where these systems will serve a polluted runoff-abatement function. Vegetated filter strips and engineered wetlands remove sediment and other pollutants from runoff and wastewater and prevent pollutants from entering adjacent water bodies. Removal typically occurs through filtration, deposition, infiltration, absorption, adsorption, decomposition, and volatilization.

6D Education/Outreach. MM 6D promotes the establishment of programs to develop and disseminate scientific information on wetlands and riparian areas and to develop greater public and agency staff understanding of natural hydrologic systems—including their functions and values, how they are lost, and the choices associated with their protection and restoration.

Wetlands, Riparian Areas, and Vegetated Treatment Systems

Management Measure Titles: 6A - Protection of Wetlands and Riparian Areas; 6B - Restoration of Wetlands and Riparian Areas; and 6D - Education/Outreach (Wetlands)

Management Measure Target Level: Primary for MM 6D and secondary for all others.

Objectives:

1. By the year 2001, implement CWA §401 certification program regulations to delegate program authority to the RWQCBs.
2. By the year 2002, develop a technical assistance manual that will assist local governments and small business with guidelines for designing projects to avoid wetlands and riparian areas.

Report Biennially	To be completed as specified in Part III.A. - Introduction /Structure									

H. Critical Coastal Area

Actions

An initial task in the Strategy and the Implementation Plan is to create the CCA Interagency Committee to complete a list of criteria and methods for CCA designation. The Committee will consider the factors listed in the Strategy, as well as other criteria used by other programs to identify sensitive coastal areas. While CCA delineation will be based on special water quality concerns and may deviate from other classifications, the final CCA recommendation to be used by the CCC and SWRCB will fully consider other existing programs. Other programs that will be used to help designate CCAs include the ASBS, NERRs, the MBNMS WQPP, university research programs, TMDLs, and regional monitoring efforts. CCA designation will provide resources to special coastal areas which do not achieve priority ranking within other sections of this plan and will therefore provide solutions to program deficits.

In addition to creating a committee to identify CCA criteria, the Implementation Plan will include these specific actions:

1. Identify and map CCAs using newly developed criteria.
2. Dedicate funding and other resources to areas in which new or substantially expanding land uses may cause or contribute to the impairment of water quality within CCAs.
3. Increase public interest in protecting special coastal habitats by implementing additional MMs, supporting public education and outreach, and continuing local watershed restoration and research efforts within the CCAs.

CCA Coordination

The renewed emphasis by local governments and stakeholders on watershed-scale resource management (including the offshore marine component of watersheds) has provided California with initial information to help identify CCAs and apply additional MMs to these areas. Related programs from which to gain information include:

- The SWRCB has designated CWA section 319(h) funds for restoration efforts in watersheds with impaired water quality or impaired aquatic communities.
- The SWRCB, through the WQCP for the Ocean Plan, designates ASBS in State tidelands and submerged lands and can limit or prohibit discharges in their general proximity.
- The SWRCB BPTCP (CWC §§13390-13396) has identified numerous toxic coastal sediment deposits from urban and agricultural runoff.
- The CCC, RWQCB 4, and other entities are developing a long-term MP for the dredging and disposal of contaminated sediments for coastal waters adjacent to Los Angeles County. This plan must include components for watershed management and source reduction.
- The Cal/RA is leading a statewide work group to identify and coordinate offshore Marine Management Areas, which may be linked to adjacent CCAs.
- The MBNMS WQPP is developing a water quality plan that, when completed, may provide a mechanism to apply additional MMs to CCAs within watersheds draining to Monterey Bay.
- If a TMDL is completed within a designated CCA, the TMDL and CCA activities will be coordinated to help determine if additional MMs are needed.

Critical Coastal Areas

Objectives:

1. Identify and map initial list of CCAs.
2. Develop an ongoing process to identify CCAs and additional NPS MMs to implement as necessary in CCAs.
3. Provide information on CCAs (areas adjacent to impaired, threatened, and/or pristine coastal waters, including ocean waters that fail to attain or maintain Ocean Plan water quality standards) to local, State, and regional decision makers and the public.
4. Review water quality and land use data every two years as part of the CWA §305(b) WQAP.
5. Review the effectiveness of existing MM implementation in CCAs and identify and implement additional MMs as needed to protect and restore CCAs.
6. Update CCA list, maps, and watershed information at least every two years and report on implementation efforts at public hearings every two years.

I. Monitoring

Objectives

- A. Evaluate the effectiveness of specific MMs or BMPs in improving water quality or achieving water quality standards.
- B. Maximize usefulness of monitoring by coordinating effectiveness monitoring with other monitoring programs.
- C. Improve usefulness of community-based watershed monitoring efforts by developing and reviewing new methods for ambient and effectiveness monitoring, disseminating quality assurance requirements, and increasing training opportunities.
- D. Improve data acquisition, evaluation, and access.

Objective	Actions	Lead Agency	Geographic Area	Potential Funding	Performance Measures	Years:	Notes
MONITORING EFFECTIVENESS OF BEST MANAGEMENT PRACTICES							
A	1. Design and implement a monitoring strategy to evaluate effectiveness of BMPs statewide that will:						
	a. Create criteria to assess functioning of BMPs used to reduce pollution from agriculture, forestry, urban practices, and marinas.	SWRCB UCD	Statewide	State	Functioning assessment criteria	x	
	b. Develop protocols and quality assurance methods for BMP functioning assessment criteria.	SWRCB UCD	Statewide	State	Written protocols, QA Plan	x	
	c. Monitor functioning of one BMP per sector (agriculture, forestry, urban practices, and marinas) in at least two watersheds.	SWRCB UCD	Statewide	State	Monitoring data	x	
	d. Develop database on BMP effectiveness.	SWRCB UCD	Statewide	State	Database	x	
	e. Develop and implement a monitoring strategy to monitor effectiveness of BMPs in reducing NPS pollution. Design a strategy that links to regional/local ambient or project monitoring.	SWRCB, RWQCBs, UCD	Statewide	State	Monitoring strategy, Monitor 9 key watersheds statewide, Report on effectiveness of BMPs	x	
	f. Evaluate and report effectiveness of rangeland BMPs.	RWQCB 3	Morro Bay	CWA §319 National Monitoring Program	Report		
	g. Disseminate statewide knowledge of BMP effectiveness.	RWQCB 3	Morro Bay	CWA §319 National Monitoring Program	National Conference		x

COORDINATION OF MONITORING PROGRAMS

B	2.	SWRCB, RWQCBs (Monitoring Team) UC Davis	Statewide	Current Staff	Regional or watershed-based monitoring strategies	x	x	x	Initiatives recommendation
	Coordinate BMP effectiveness monitoring with existing monitoring programs (e.g. Mussel Watch, Toxic Substances Monitoring Program, TMDL monitoring, CALFED, USGS, DWR, MBNMS) to better assess reductions in NPS pollution. a. Pilot monitoring strategy in nine key watersheds statewide.	SWRCB, RWQCBs	Statewide	Current Staff CWA §319	Nine monitoring programs		x	x	
	3. Design and implement ambient monitoring and data evaluation efforts:								
	a. Implement coastal monitoring plan in Central Coast Region.	RWQCB 3	Central Coast Region	Current Staff, State	Monitoring report	x	x	x	
	b. Coordinate and assist SCC WRP coastal monitoring activities.	Local agencies, RWQCB 4, RWQCB 8, RWQCB 9, USEPA	Southern Coastal areas	To be determined	Coastal monitoring data	x	x	x	
	c. Develop and implement watershed-monitoring programs for support of CWA §§305(b) and 303(d) assessments using community partnerships.	RWQCBs	Statewide	To be determined	Monitoring programs, water quality data	x	x	x	Selected watersheds every two years
	d. Monitor pathogens weekly at popular beaches with summertime urban runoff inputs.	DHS, County Health Departments	Beaches with flowing storm drains and high visitor use	State General Fund	All beaches with flowing storm drains and high visitor use monitored	x	x	x	Funding secure for FY 98-99 only
	4. Improve knowledge of NPS contributions to impaired water bodies:								
	a. Monitor pathogens in shellfish areas and upland watersheds to determine sources of contamination.	RWQCBs	Humboldt Bay, Morro Bay, Tomales Bay, North San Diego County	State	Monitoring reports	x	x	x	Funding secure for FY 98-99, FY 99-00 only
	b. Implement monitoring program for TMDL development.	RWQCB 8	Lake Elsinore, Big Bear Lake	To be determined	TMDLs	x	x	x	
	c. Review TMDL compliance monitoring data.	RWQCB 8	Newport Bay	CWA §104/106	Evaluation of TMDL compliance	x	x	x	Nutrient TMDL, sediment TMDL and fecal coliform TMDL

APPENDICES

APPENDIX A. MEETING FEDERAL REQUIREMENTS

Federal Requirements Under Section 319 Of CWA Check List on Nine Key Elements

Index for the Nine Key Elements of an Effective NPS Program as described in the USEPA NPS Program and Grants Guidance for Fiscal Years 1997 and Future Years (May 1996)

1. *The State program contains explicit short- and long-term goals, objectives, and strategies to protect surface and ground water.*

a. The California program includes a Vision Statement.	1
b. California has specified MMs as long-term goals to be implemented by 2013 directed toward the expeditious achievement and maintenance of beneficial uses of water.	CAMMPR, 1
c. Short-term (e.g., 1-5 year) objectives and activities have been specified for implementing the MMs that are linked to the vision statement.	86
d. The California program addresses both surface and ground water.	1
e. California has identified performance measures that will be used to assess the State's success in achieving its goals and objectives.	86
f. Implementation strategies have been prepared that identify activities and the expected effects of those activities on water resources.	86, WMI Chapters

2. *The State strengthens its working partnerships and linkages with appropriate State, Tribal, regional, and local entities (including conservation flood control districts), private sector groups, citizens groups, industry groups, and Federal agencies.*

a. The State relies on several statewide partnerships to provide for input and recommendations from representatives of federal, State, Tribal, and local agencies, private sector groups, and citizens groups, regarding NPS program direction, project selection, and other similar aspects of program administration.	45
b. These partnerships meet regularly and promote collaborative and inclusive decision making.	50
c. The State program specifies procedures to provide for periodic public input into the program.	45
d. California's program actively supports broad-based local watershed efforts that incorporate a variety of organizations and interests into the implementation of NPS activities.	39
e. The State uses its partnerships effectively to promote comprehensive solutions that avoid the transfer of problems among environmental media.	51

3. *The State uses a balanced approach that emphasizes both statewide NPS programs and on-the-ground management of individual watersheds where waters are impaired and threatened.*

a. The SWRCB and RWQCBs' WMI document is a multi-year work plan that contains NPS implementation actions directed at both specific priority watersheds and activities of a statewide nature.	39
b. The SWRCB/RWQCBs prepare annual work plans for CWA Section 319 funding, consistent with the WMI document that contains NPS implementation actions directed at both specific priority watersheds and activities of a statewide nature.	42
c. The CCC has prepared a Polluted Run-off Strategy that is a multi-year work plan that contains NPS implementation actions directed at both specific priority watersheds and activities of a wider scope, consistent with its jurisdiction.	40
d. State tracks both statewide activities and watershed projects.	71
e. State has institutionalized its program beyond the annual implementation of CWA section 319 funded activities and projects.	Vol. I
f. State uses an integrated watershed approach for assessment, protection, and remediation that is well integrated with other water or natural resource programs.	24
g. Each of the nine RWQCBs adopt Basin Plans that identify existing and potential beneficial uses, establish basin specific water quality objectives, contain implementation, surveillance and monitoring plans, and include enforceable prohibitions against certain types of discharges.	33

4. *The State program (a) abates known water quality impairments from NPS pollution and (b) prevents significant threats to water quality from present and future activities.*

a. State has comprehensively characterized water quality impairments and threats throughout the State which are caused or significantly contributed to by NPSs.	25
b. State program addresses all significant NPS categories and subcategories and promotes pollution prevention through the implementation of appropriate MMs.	CAMMPR
c. State program has identified specific programs to abate pollution from categories of NPSs which cause or substantially contribute to the impairments identified in its assessments.	CAMMPR
d. State has identified specific programs to prevent future water quality impairments and threats that are likely to be caused by NPS pollution.	19 CAMMPR

5. *The State program identifies waters and their watersheds impaired by NPS pollution and identifies important unimpaired waters that are threatened or otherwise at risk. Further, the State establishes a process to progressively address these identified waters by conducting more detailed watershed assessments and developing watershed implementation plans, and then by implementing the plans.*

a. State water quality assessments (including those performed under CWA sections 305[b], 319[a], 303[d], 314, and others), along with the California Unified Watershed Assessment, form the basis for the identification of the State's planned NPS activities and projects.	25
b. State activities focus on remediating the identified impairments and threats and on protecting the identified at-risk waters.	25
c. State has provided for public participation in the overall identification of problems to be addressed in the State program and in the establishment of a process to progressively address these problems.	19, 26
d. State NPS priorities are communicated to, consistent with, and reflected in program planning and implementation activities by other water resource management agencies operating within the State.	45
e. State revises its identification of waters and revisits its process for progressively addressing these problems periodically (e.g., once every five years).	9

6. *The State reviews, upgrades, and implements all program components required by section 319(b) of the CWA, and establishes flexible, targeted, and iterative approaches to achieve and maintain beneficial uses of water as expeditiously as practicable. The State programs include:*
- *A mix of water quality-based and/or technology-based programs designed to achieve and maintain beneficial uses of water; and*
 - *A mix of regulatory, nonregulatory, financial, and technical assistance as needed to achieve and maintain beneficial uses of water as expeditiously as practicable.*

a. The State program identifies MMs to control NPSs of pollution focusing on measures which will be effective to address the most prevalent types of NPS pollution.	CAMMPR
b. Identification of regulatory and nonregulatory programs to achieve implementation of the measures.	24
c. Processes used to coordinate and, where appropriate, integrate various programs used to implement NPS controls in the State.	45
d. Five-year implementation plans with goals, objectives, and milestones for program implementation and a process to revise these implementation plans twice by 2013.	86
e. A legal opinion describing the State authorities available for implementing the MMs.	Appendix: Legal opinion
f. Sources of funding from federal (other than CWA section 319), State, local, and private sources.	62
g. Monitoring and other evaluation programs to help determine short- and long-term program effectiveness.	69
h. The State program also incorporates/coordinates with existing baseline requirements established by other applicable federal or State laws to the extent that they are relevant.	30, 45 CAMMPR

7. *The State identifies federal lands and activities which are not managed consistently with State NPS program objectives. Where appropriate, the State seeks USEPA assistance to help resolve issues.*

a. The State works with federal agencies to resolve potential inconsistencies among federal programs and activities and the State programs.	52
b. Where the State cannot resolve federal consistency issues to its satisfaction, it requests USEPA assistance to help resolve the issues.	52
c. The State coordinates with federal agencies to promote consistent activities and programs and to develop and implement joint or complementary activities and programs.	47

8. *The State manages and implements its NPS Program efficiently and effectively, including necessary financial management.*

a. The State fosters plans for watershed projects and statewide activities that are well-designed with sufficient detail to assure effective implementation.	65
b. The State's watershed projects focus on the critical areas and critical sources within those areas that are contributing to NPS problems.	65
c. State implements its activities and projects, including all tasks and outputs, in a timely manner.	69
d. State has established systems to assure that the State meets its reporting obligations.	77
e. State utilizes the GRTS effectively.	65
f. State has developed and uses a fiscal accounting system capable of tracking expenditures of both CWA section 319 funds and nonfederal matching funds.	42
g. NPS projects include appropriate monitoring and/or environmental indicators to gauge effectiveness.	65

9. *The State periodically reviews and evaluates its NPS management program using environmental and functional measures of success and revises its NPS assessment and its management program at least every five years.*

	Page #
a. The State has and uses a process to periodically assess both improvements in water quality and new impairments or threats.	69
b. The State uses a feedback loop based on monitoring and other evaluative information to assess the effectiveness of the program in meeting its goals and objectives, revises its activities, and tailors its annual workplans, as appropriate, in light of its review.	9
c. The State's annual report successfully portrays the State's progress in meeting milestones, implementing BMPs, and achieving water quality goals.	77

Federal Requirements Under Section 6217 Of CZARA Check List On Conditions

Index for the section 6217 CZARA Conditions for Program Approval for the California Coastal NPS Program as described in the Program Findings and Conditions issued by USEPA/NOAA, July 1998.

1. *Include NPS MMs in conformity with the Guidance Specifying MMs for Sources of Nonpoint Pollution in Coastal Waters (EPA, January 1993), issued under the authority of Section 6217(g) of the Coastal Zone Act Reauthorization Amendments of 1990.*

	Page #
a. MMs have been adopted by the SWRCB and CCC for agriculture, forestry, urban areas, marinas and recreational boating, hydromodification, and wetlands and riparian areas.	CAMMPR
b. The State Porter-Cologne Act provides authorities that will be used, as necessary, to implement the MMs, in conformity with CZARA requirements for enforceable policies and mechanisms (see #2 below).	CAMMPR
c. The State and local authorities and programs being used to implement the MMs are clearly described.	CAMMPR, 24
d. Implementation strategies have been developed to implement the MMs statewide by 2013.	24

2. *Identify authorities that can be used to prevent nonpoint pollution and require management measure implementation, as necessary.*

	Page #
a. The Chief Counsels of the SWRCB and the CCC have prepared legal opinions concerning their respective authorities to implement the MMs for each of the appropriate source categories.	Appendix: Legal Opinions
b. For each of the source categories, the NPS Plan provides a description of the voluntary or incentive-based programs, including the methods for tracking implementation of MMs and evaluating those programs that the State will use to encourage implementation of the MMs.	CAMMPR CZARA Submittal (1995)
c. A description of the mechanisms or processes that link the implementing agencies for each of the source categories with the enforcement agencies and a commitment to use the existing enforcement authorities, where necessary, is included in the State program.	Appendix

3. *Prepare a fifteen-year program strategy that briefly describes the State's overall approach and schedule to ensure implementation of the MMs and improve water quality within 15 years of the date of conditional approval.*

	Page #
a. California's NPS Program Plan has been "upgraded" to include a Strategy.	24
b. The goal of the NPS Program is to implement the MMs by 2013 (within 15 years of the date of federal conditional approval pursuant to CZARA).	1
c. The program has a process whereby the State will determine the need to use a backup authority and/or to adopt additional enforceable policies and mechanisms to ensure implementation of the MMs within 15 years.	54, 85

4. Nested within the longer-term Strategy, prepare a five-year implementation plan that provides more specifics for achieving full implementation of the MMs.

	Page #
a. The Implementation Plan is more specific than and nested within the longer term Strategy for achieving full implementation of the MMs.	86
b. The Implementation Plan describes when, where, and how program implementation will occur, including mechanisms for tracking and monitoring implementation.	159
c. The Implementation Plan contains interim milestones and benchmarks, including a time frame; and will be updated, as necessary, but at least every five years. Achieving the milestones and benchmarks of these plans will serve as a basis for evaluating progress in achieving program implementation goals.	86
d. The Implementation Plan is designed to ensure adequate progress in achieving the Strategy and is integrated and consolidated with other federal and State water quality programs.	86

5. Common program elements required by CZARA (technical assistance, critical coastal areas, additional MMs, administrative coordination, and monitoring) should be included in the 15-Year Program Strategy and Implementation Plan.

	Page #
a. The program includes mechanisms for ensuring <u>coordination</u> among State agencies and between State and local officials with a role in the implementation of the MMs.	45
b. The program includes activities to provide <u>technical assistance</u> to local governments and the public for implementing MMs.	62
c. A process has been developed to provide for the identification of <u>critical coastal areas</u> .	28
d. The program includes an <u>additional management measure</u> process for developing and revising MMs to be applied in critical coastal areas and in areas where necessary to attain and maintain water quality standards. In addition, the State has described a process to identify additional MMs for forestry necessary to attain and maintain water quality standards.	78, 111
e. California includes in its program a <u>monitoring</u> element to enable the State to assess over time the extent to which implementation of MMs is reducing pollution loads and improving water quality.	69

APPENDIX B. LEGAL OPINIONS

**STATE WATER RESOURCES CONTROL BOARD
CHIEF COUNSEL'S STATEMENT
FOR THE
CALIFORNIA'S NONPOINT SOURCE POLLUTION CONTROL PROGRAM**

NOVEMBER 1999

**CHIEF COUNSEL'S STATEMENT
FOR THE
CALIFORNIA'S NONPOINT SOURCE POLLUTION CONTROL PROGRAM**

**STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD
OFFICE OF CHIEF COUNSEL
NOVEMBER 1999**

CHIEF COUNSEL'S STATEMENT

I hereby certify that in my opinion the State of California can use the Porter-Cologne Water Quality Control Act¹ as a backup authority in the California's Nonpoint Source Pollution Control Program to prevent nonpoint source pollution and to ensure management measure implementation. This authority can be used to address nonpoint source pollution due to agricultural operations, urban sources, marinas, hydromodification activities and wetlands. This authority is described below.

I. INTRODUCTION

In 1990 Congress enacted legislation requiring states with approved coastal zone management programs to prepare and submit a coastal nonpoint pollution control program to the United States Environmental Protection Agency (EPA) and the National Oceanic and Atmospheric Administration (NOAA) for approval.² The program's purpose was to restore and protect coastal waters through the implementation of management measures for nonpoint pollution sources. To further this effort, EPA was directed to develop management measure guidance.³ State programs had to provide for implementation of management measures in conformity with this guidance, referred to as the (g) guidance.⁴

In September 1995, California submitted its program, a joint effort of the California Coastal Commission and the State Water Resources Control Board (State Water Board), to EPA and NOAA. For five nonpoint pollution sources, agricultural operations, urban sources, marinas, hydromodification activities and wetlands, the state proposed voluntary or incentive-based programs to implement the (g) guidance management measures. The state identified the Porter-Cologne Water Quality Control Act (Porter-Cologne) as a backup enforcement authority to ensure management measure implementation.⁵

In 1998 EPA and NOAA conditionally approved California's program.⁶ For final program approval, EPA and NOAA require a legal opinion from the State Water Board's

¹ Wat. Code § 13000 et seq.

² Section 6217 of the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA), 16 U.S.C. § 1455b.

³ *Id.* § 6217(g), 16 U.S.C. § 1455b(g).

⁴ *Id.* § 6217(b), 16 U.S.C. § 1455b(b). See Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters, EPA, 840-B-92-002 (January 1993) (Management Measure Guidance).

⁵ The state also identified Porter-Cologne as a backup authority to implement the forestry management measures. EPA and NOAA found that California's program includes management measures for forestry activities in conformity with the (g) guidance and enforceable policies and mechanisms for implementation. However, the state program needs more management measures. See *infra*, fn. 6.

⁶ Letter, dated June 30, 1998, to Rusty Areias, Chairman, California Coastal Commission, and John Caffrey, former Chairman, State Water Board, from Jeffrey R. Benoit, Director, Office of Ocean and

Chief Counsel that Porter-Cologne can be used as a backup authority to prevent nonpoint pollution and to ensure management measure implementation⁷ for these five sources.⁸

The following discussion addresses this issue. The discussion begins with an overview of Porter-Cologne. It then addresses three specific questions raised by EPA and NOAA regarding Porter-Cologne's use as a backup authority.

II. OVERVIEW OF PORTER-COLOGNE

Porter-Cologne is the primary water quality control law for California. In addition, the act authorizes the state to implement the federal Clean Water Act.⁹ Porter-Cologne applies broadly to all state waters, including surface waters, wetlands, and groundwater.¹⁰ Its provisions reflect the legislative intent that activities and factors that could affect the quality of state waters "be regulated to attain the highest water quality that is reasonable"¹¹ Porter-Cologne applies to both point and nonpoint sources.¹²

Porter-Cologne is administered regionally, within a framework of statewide coordination and policy.¹³ The state is divided into nine regions, each governed by a regional water quality control board (Regional Water Board).¹⁴ The State Water Board oversees and guides the Regional Water Boards through several activities. The State Water Board adopts state policy for water quality control, statewide water quality control plans, and regulations that are binding on the Regional Water Boards.¹⁵ In

Coastal Resource Management, NOAA, and Felicia Marcus, Regional Administrator, EPA Region 9, transmitting Findings for the California Coastal Nonpoint Program.

⁷ The state program has identified 61 management measures for six categories, including agriculture, forestry, urban areas, marinas, hydromodification, and wetlands. These measures are nearly identical to the (g) guidance management measures. The state measures are included in a draft document, dated June 3, 1999, entitled California's Nonpoint Source Pollution Control Program, Vol. II: California Management Measures for Polluted Runoff.

⁸ See Final Administrative Changes to the Coastal Nonpoint Pollution Control Program Guidance for section 6217 of [CZARA] (Oct. 1998). This document states that NOAA and EPA will approve those program elements for which the states have proposed voluntary or incentive-based programs, backed by existing state enforcement authority, if the states provide a legal opinion that such authorities can be used to prevent nonpoint pollution and require management measure implementation. The states must also describe the voluntary or incentive-based programs, including the methods for tracking those programs, and the processes that link the implementing agency with the enforcement agency.

¹⁵ See *id.* §§ 1058, 13140-13147, 13170.

addition, the State Water Board must approve regional water quality control plans before they become effective.¹⁶ The State Water Board also adopts statewide general permits.¹⁷ They review Regional Water Board decisions on petitions for review.¹⁸ Finally, the State Water Board exercises budgetary control over the Regional Water Boards and provides centralized legal services to the Regional Water Boards.¹⁹

A. Planning

Porter-Cologne addresses two primary functions - planning and waste discharge regulation. Porter-Cologne's planning authority extends to any activity or factor which may affect water quality.²⁰ These factors include, for example, not only waste discharges, but also saline intrusion, reduction of waste assimilative capacity caused by reduction in water quantity, hydrogeologic modifications, and watershed management projects.²¹

Both the State and the Regional Water Boards plan for water quality control. The State Water Board is charged with adopting state policy for water quality control.²² These policies contain principles and guidelines for long range resource planning, including ground and surface water management.²³ They also contain water quality objectives at key locations for planning and operation of water resource development projects and for water quality control activities.²⁴ Since 1968 the State Water Board has adopted 13 policies.²⁵

In addition to the State Water Board-adopted policies, Porter-Cologne establishes state policy for the coastal marine environment.²⁶ This policy states that wastewater discharges must be treated to protect present and future beneficial uses, and, where

²² Wat. Code §§ 13140-13142.

²³ *Id.* § 13142.

²⁴ *Ibid.*

²⁵ These policies cover enclosed bays and estuaries, the use and disposal of inland waters used for powerplant cooling, water quality control, maintaining high quality waters, water reclamation, shredder waste disposal, the underground storage tank pilot program, sources of drinking water, enforcement, investigation and cleanup and abatement of discharges under Water Code section 13304, municipal solid waste, guidance on development of regional toxic hot spot cleanup plans, and pollutant policy for the San Francisco Bay-Delta.

²⁶ Wat. Code § 13142.5.

feasible, to restore past beneficial uses of the receiving waters.²⁷ Highest priority must be given to improving or eliminating discharges that adversely affect wetlands, estuaries, and other biologically sensitive areas, important water contact areas, shellfish areas, and ocean areas subject to massive waste discharge.²⁸

The State Water Board can also adopt water quality control plans for waters requiring water quality standards under the Clean Water Act (essentially surface waters)²⁹ and must adopt a water quality control plan for ocean waters and for enclosed bays and estuaries.³⁰ Water quality control plans designate beneficial uses of water, establish water quality objectives to protect those uses, and contain a program to implement the objectives.³¹ The beneficial use designations and water quality objectives together constitute water quality standards for purposes of the Clean Water Act.³² The program of implementation must describe the nature of actions that are necessary to meet the objectives, including recommendations for action by both private and public entities.³³ The program also includes a time schedule and describes proposed surveillance activities to assess compliance with objectives.³⁴

Water quality control plans can prohibit the discharge of waste, or certain types of waste, in specified areas or under certain conditions.³⁵ The Ocean Plan,³⁶ for example, prohibits the discharge of waste to 34 coastal "areas of special biological significance".³⁷

In addition to the Ocean Plan, current State Water Board-adopted plans include the Thermal Plan,³⁸ which addresses temperature control in coastal, interstate, estuarine and bay waters, and the Delta Plan,³⁹ covering San Francisco Bay and the

²⁷ *Ibid.*

²⁸ *Ibid.*

²⁹ See 33 U.S.C. §§ 1313, 1362.

³⁰ Wat. Code §§ 13170, 13170.2, 13391. The State Water Board has adopted an ocean plan, entitled Water Quality Control Plan, Ocean Waters of California (1997) (Ocean Plan). The State Water Board adopted a plan for enclosed bays and estuaries in 1991. This plan was rescinded in 1991 in response to an adverse ruling in litigation filed to invalidate the plan. See State Water Board Res. No. 94-87.

³⁹ Water Quality Control Plan for the San Francisco Bay/Sacramento-San Joaquin Delta Estuary (May 22, 1995).

Sacramento-San Joaquin Delta. Plans adopted by the State Water Board supersede any Regional Water Board-adopted plans to the extent of any conflict.⁴⁰

Each Regional Water Board must adopt a water quality control plan for waters within the region.⁴¹ The regional plans must conform with state policy for water quality control,⁴² and they must be approved by the State Water Board.⁴³

Both state policy for water quality control and state and regional water quality control plans are binding on other state agencies, departments, and boards, unless they are otherwise directed or authorized by statute.⁴⁴ In the latter case, they must notify the State or Regional Water Board of their authority for not complying.⁴⁵

B. Waste Discharge Control

1. Permitting

Porter-Cologne also establishes a program to regulate waste discharges that could affect water quality.⁴⁶ This program is the principal way that state water quality control policies and plans are implemented. The program covers waste discharges to land as well as to surface and groundwaters.⁴⁷ Any person discharging or proposing to discharge waste that could affect water quality must file a report of waste discharge with the Regional Water Board, unless the Regional Water Board waives the filing.⁴⁸ A report is also required if the discharger proposes a material change in the character, volume, or location of a discharge.⁴⁹ The Regional Water Board must then issue waste discharge requirements to the discharger, unless requirements are waived.⁵⁰ The requirements must implement applicable state policies and state and regional water quality control plans.⁵¹ The requirements can also prohibit the discharge of waste or certain types of waste, either under certain conditions or in specified areas.⁵²

⁴⁶ See *id.* §§ 13260-13274; 13376-13384.

⁴⁷ See *id.*, §§ 13050(e), 13260(a), 13263(a).

⁴⁸ See *id.* §§ 13260, 13269, 13376. Persons discharging into a community sewer system are excepted from this requirement.

⁴⁹ See *id.* § 13264.

⁵⁰ See *id.* §§ 13263, 13269, 13377.

⁵¹ *Id.* §§ 13263, 13377; see *id.* § 13240.

⁵² *Id.* § 13243.

The activities subject to regulation under waste discharge requirements include both point and nonpoint source discharges. Under the Clean Water Act, the point source discharge of pollutants to surface waters must be regulated under a National Pollutant Discharge Elimination System (NPDES) permit.⁵³ A point source is a discernible, confined and discrete conveyance, such as a pipe, ditch, or channel, but excluding irrigated agricultural return flows and agricultural stormwater discharges.⁵⁴ Waste discharge requirements for point source pollutant discharges to surface waters serve as NPDES permits for purposes of the Clean Water Act.⁵⁵

Nonpoint pollution sources generally are sources that don't meet the definition of a point source. Nonpoint source pollution typically results from land runoff, precipitation, atmospheric deposition, drainage, seepage, or hydrologic modification.⁵⁶ The term "discharge of waste" in Porter-Cologne covers nonpoint, as well as point, sources of pollution.⁵⁷

"Waste" is broadly defined in Porter-Cologne to include sewage and "any and all other waste substances, liquid, solid, gaseous, or radioactive, associated with human habitation, or of human or animal origin, or from any producing, manufacturing, or processing operation" This definition includes all Attorney General interpretations of the terms "sewage", "industrial waste", and "other wastes" under Porter-Cologne's predecessor legislation.⁵⁸ The Attorney General had interpreted the latter terms to include wastes from a variety of activities typically considered nonpoint, such as:

- drainage, flow, or seepage containing debris or eroded earth from logging operations;⁵⁹
- garbage disposal;⁶⁰
- drainage, flow or seepage containing garbage, ashes, mixed refuse, or solid industrial waste from inactive or closed dumps;⁶¹
- return irrigation or drainage water from agricultural operations;⁶²

⁵³ See 33 U.S.C. §§ 1311, 1342.

⁵⁴ *Id.* § 1362(14).

⁵⁹ 27 Ops.Cal.Atty.Gen. 182, 184 (1956).

⁶⁰ 16 Ops.Cal.Atty.Gen. 125, 126-30 (1950).

⁶¹ 27 Ops.Cal.Atty.Gen. 182, 184 (1956).

⁶² *Ibid.*

° pesticides improperly applied to waters of the state, or which find their way into waters of the state after application;⁶³

° changes in the physical or chemical characteristics of receiving waters caused by extraction of minerals from a streambed;⁶⁴ and

° dumping of earth moved from construction operations, or drainage of wastewater from construction sites.⁶⁵

These examples indicate that discharges of waste are not limited to waste disposal but also include releases of pollutants as part of other activities.⁶⁶ Hydrological or hydrogeological modifications; for example, that cause the release of wastes into state waters may be regulated under waste discharge requirements.

On the other hand, the Attorney General has concluded that salt water intrusion and reductions in waste assimilative capacity caused by diversions which reduce water quantity are not discharges of waste.⁶⁷ These activities may, however, be addressed in state policy for water quality control and state or regional water quality control plans, which are binding on other state agencies.⁶⁸

The Regional Water Boards are primarily responsible for issuing waste discharge requirements and NPDES permits. Waste discharge requirements may be either individual or general, for a category of discharges.⁶⁹ The Regional Water Boards may, likewise, adopt either individual or general NPDES permits.⁷⁰

The State Water Board can issue or modify Regional Water Board-adopted waste discharge requirements in response to a petition for review of the requirements.⁷¹ The State Water Board can also issue general waste discharge requirements.⁷² The State Water Board has used this authority, for example, to adopt general requirements for small

⁷¹ See Wat. Code § 13320(c).

⁷² See Wat. Code § 13263(i). See also section 13274, which requires the State Water Board or a Regional Water Board to adopt general waste discharge requirements for sewage sludge and other biological solids.

domestic wastewater systems.⁷³ Like the Regional Water Boards, the State Water Board has independent authority to issue individual and general NPDES permits. The State Water Board has issued several general NPDES permits, including two covering stormwater discharges from industrial sources⁷⁴ and construction sites,⁷⁵ respectively.

2. Investigations

Both the State and Regional Water Boards have broad powers to investigate water quality.⁷⁶ They can investigate water quality in connection with any action authorized or required under Porter-Cologne, including the development or review of water quality control plans or waste discharge requirements.⁷⁷ Their investigative powers include the authority to conduct sampling; inspect facilities, records, and monitoring equipment; and issue subpoenas for the production of evidence.⁷⁸

The State and Regional Water Boards can require state and local agencies to investigate and report on any technical factors involved in water quality control.⁷⁹ In addition, they can require any person who has discharged, discharges, proposes to discharge or is suspected of discharging waste, whether from a point or a nonpoint source, to monitor and report information.⁸⁰

The Regional Water Boards are primarily responsible for inspecting regulated facilities.⁸¹ The State Water Board can enter and inspect a non-NPDES facility in response to a petition for review.⁸² The State Water Board also has independent authority to enter and inspect facilities covered under the NPDES permit program.⁸³

Recent amendments to Porter-Cologne impose specific responsibilities on the State Water Board with respect to investigating coastal water quality.⁸⁴ Subject to the availability of funds, the State Water Board must prepare a report for the Legislature that

⁷³ See General Waste Discharge Requirements for Discharges to Land by Small Domestic Wastewater Treatment Systems, Water Quality Order No. 97-10 DWQ.

⁸⁴ *Id.* § 13181, added by Stats. 1997, c. 899, § 2.

proposes implementing a comprehensive program to monitor the quality of coastal watersheds, bays, estuaries, and their marine resources. The pollutants targeted for monitoring include, at a minimum, bacteria and viruses, petroleum hydrocarbons, heavy metals, and pesticides.⁸⁵ The program must include an identification of pollution sources and estimates of total pollutant discharges, to the extent possible, recommended actions that should be undertaken to maintain and improve coastal water quality, and other information.⁸⁶

3. Enforcement

The Regional Water Boards also have primary authority for enforcement. They may choose from a variety of enforcement options.⁸⁷ These include notices to comply for minor violations,⁸⁸ time schedule orders,⁸⁹ cleanup and abatement orders,⁹⁰ cease and desist orders,⁹¹ administrative civil liability orders,⁹² and referrals to the Attorney General for injunctive relief and civil and criminal penalties.⁹³ The Regional Water Boards can use their enforcement authority to respond to unauthorized discharges, discharges in violation of waste discharge requirements or prohibitions, discharges that cause or threaten to cause pollution or nuisance, and violations of monitoring or reporting requirements.⁹⁴

The State Water Board is authorized to take enforcement action in certain instances, although the State Water Board normally defers to the appropriate Regional Water Board. The State Water Board can take enforcement action in the first instance for NPDES-related violations.⁹⁵ For non-NPDES violations, the State Water Board can use the same enforcement tools as the Regional Water Boards in response to a petition for review of a Regional Water Board action.⁹⁶ The State Water Board can also issue notices to comply for minor violations.⁹⁷

⁸⁵ *Ibid.*

⁸⁶ *Ibid.* The State Water Board is in the process of contracting with the Southern California Coastal Water Research Project to prepare the report.

⁹⁶ See *id.* § 13320(c).

⁹⁷ See *id.* § 13399.2.

C. Other Programs

In addition to the specific planning and waste discharge control provisions discussed above, Porter-Cologne contains other water quality control programs. Chapter 5.6 establishes a program to identify and cleanup toxic hot spots in the state's bays, estuaries, and coastal waters.⁹⁸ Toxic hot spots include sites impaired by nonpoint, as well as point, sources of toxic pollution.⁹⁹ Plans to remediate these sites can include, in addition to remedial actions, measures to prevent toxic pollution, such as best management practices to address nonpoint pollution sources.

Porter-Cologne addresses a variety of other subjects, including: onsite, subsurface disposal systems;¹⁰⁰ drainage from abandoned mines;¹⁰¹ storm water enforcement;¹⁰² discharges of methyl tertiary-butyl ether (MTBE) to drinking water sources;¹⁰³ regulation of the use of recycled water;¹⁰⁴ waste discharges from houseboats;¹⁰⁵ and the construction and abandonment of water wells, cathodic protection wells and groundwater monitoring wells.¹⁰⁶ Porter-Cologne also contains several programs to provide grants or loans for water quality facilities and programs.¹⁰⁷

D. Clean Water Act Authority

The State Water Board is "the state water pollution control agency" for all purposes stated in the Clean Water Act.¹⁰⁸ Thus, the State Water Board is authorized to fulfill the state's responsibilities to adopt water quality standards for surface waters, to develop a nonpoint source management program, and to establish total maximum daily loads (TMDLs) for impaired waterbodies.¹⁰⁹

While the Regional Water Boards typically adopt water quality control plans for waters within their regions, Porter-Cologne specifically authorizes the State Water Board to adopt plans for surface waters that supersede any conflicting regional plans. In

⁹⁸ See *id.* §§ 13390-13396.5.

⁹⁹ See *id.* § 13391.5(e); State Water Board's Water Quality Control Policy for Guidance on the Development of Regional Toxic Hot Spot Cleanup Plans (1998).

¹⁰⁰ See Wat. Code §§ 13280-13284.

¹⁰¹ See *id.* §§ 13397-13398.9.

¹⁰² See *id.* §§ 13399.25-13399.43.

¹⁰³ See *id.* § 13285.

¹⁰⁴ See *id.* §§ 13500-13554.3.

¹⁰⁵ See *id.* §§ 13800-13806.

¹⁰⁶ See *id.* §§ 13900-13908.

¹⁰⁷ See *id.* §§ 13400-13433, 13475-13485.

¹⁰⁸ *Id.* § 13160.

¹⁰⁹ See 33 U.S.C. §§ 1313, 1329; Wat. Code §§ 13170, 13170.2, 13240-13247.

addition, the State Water Board can issue water quality certifications under section 401¹¹⁰ of the act.¹¹¹ The State Water Board can accept federal capitalization grants for a state/federal revolving fund loan program to finance construction of publicly owned sewage treatment works,¹¹² implement the state's nonpoint source management program under section 319,¹¹³ and develop and implement the national estuary program under section 320¹¹⁴ of the Clean Water Act.¹¹⁵

Chapter 5.5 of Porter-Cologne authorizes the State and Regional Water Boards to carry out the NPDES permit program.¹¹⁶ Chapter 5.5 applies to point source discharges to surface waters, introduction of pollutants into publicly owned treatment works, use and disposal of sewage sludge, and disposal of pollutants into wells.¹¹⁷

III. QUESTIONS

A. Question: Can Porter-Cologne be used to (1) prevent nonpoint source pollution and (2) require the implementation of management measures?

Response: Yes, Porter-Cologne can be used to generally prevent nonpoint source pollution and to specifically implement, either directly or indirectly, the (g) guidance management measures. The following discussion describes the State and Regional Water Boards' authority to prevent pollution, methods that they can use to both prevent pollution and require management measure implementation, and the potential impacts of Water Code section 13360.

1. Authority to Prevent Pollution

Porter-Cologne can unquestionably be used to prevent nonpoint source pollution. Under the Dickey Act,¹¹⁸ the predecessor to Porter-Cologne, the Regional Water Boards' jurisdiction to regulate waste discharges, depended, in part, on whether the discharge created or threatened to create a "condition of pollution".¹¹⁹ "Pollution" meant a water quality impairment that "does not create an actual hazard to the public health" but that does "adversely and unreasonably affect such waters" for beneficial use, or that

¹¹² See 33 U.S.C. §§ 1381-1387.

¹¹³ *Id.* § 1329.

¹¹⁴ *Id.* § 1330.

¹¹⁵ See Wat. Code §§ 13475-13485.

¹¹⁶ See *id.* §§ 13370-13388.

¹¹⁷ See *id.* §§ 13370, 13370.5, 13373, 13376, 13377, 13382, 13383.

¹¹⁸ Stats. 1949, ch. 1549, as amended. The Dickey Act, originally called the "Water Pollution Control Act", became the "Water Quality Control Act" in 1965. Stats. 1965, ch. 1657.

¹¹⁹ See 48 Ops.Cal.Atty.Gen. 30, 33-34 (1966), construing former Water Code § 13053.

“adversely and unreasonably affect[s] the ocean waters and bays of the state devoted to public recreation.”¹²⁰

The Regional Water Boards’¹²¹ jurisdiction to regulate waste discharges under Porter-Cologne is much broader. The Regional Water Boards do not have to find that a discharge, if unregulated, would create or threaten to create pollution. They can regulate any actual or proposed waste discharge that “could affect” the quality of state waters.¹²² Further, they do not have to authorize use of the full waste assimilation capacities of the receiving waters.¹²³ Rather, they can maintain a margin of safety in waste discharge requirements to assure protection of all beneficial uses.¹²⁴

2. Methods

The State and Regional Water Boards can use Porter-Cologne to generally prevent nonpoint source pollution and to specifically require management measure implementation. There are several ways that this can be done.

(a) Nonpoint Source Management Plan

Under its Porter-Cologne authority, the State Water Board has adopted a Nonpoint Source Management Plan (1988) (NPS Plan). The plan describes a three-tiered management approach to address nonpoint source pollution. The plan focuses on implementation of best management practices as the primary way to meet water quality standards.

The first management tier relies on the dischargers’ voluntary implementation of best management practices. The second tier is regulatory encouragement of best management practices. “Encouragement” is through two mechanisms. The State and Regional Water Boards can waive waste discharge requirements on condition that dischargers comply with best management practices. Alternatively, where other agencies can require implementation of best management practices, the boards can enter into agreements with those agencies in which the agencies agree to exercise their authority. In the third tier, the State and Regional Water Boards adopt waste discharge requirements.

The NPS Plan’s intent is to prevent nonpoint source pollution through the three-tiered approach. The plan can be used to directly implement the (g) guidance

¹²⁰ Former Wat. Code § 13005, Stats. 1919, ch. 1549, as amended.

¹²¹ References to the Regional Water Boards in Part III of this statement include the State Water Board, where appropriate. See Part II of this statement for a discussion of the respective authorities of the State and Regional Water Boards.

¹²² See Wat. Code §§ 13260, 13263.

¹²³ See *id.* § 13263(b).

¹²⁴ Final Report, *supra*, fn. 58, App. A, p. 59.

management measures in the first and second tiers. The third tier, likewise, can be used to directly or indirectly implement the measures.

To the extent authorized by Water Code section 13360, as discussed below, waste discharge requirements can directly require implementation of the management measures if the management measures implement applicable water quality standards. Waste discharge requirements can also indirectly implement the measures by prohibiting or regulating a nonpoint source activity in such a manner that the discharger must implement the management measures in order to comply. Additionally, waste discharge requirements can, in lieu of establishing effluent limitations, require a discharger to develop and implement a plan, such as a stormwater pollution prevention plan, containing best management practices or other measures, to ensure compliance with applicable water quality standards. The requirements can mandate that the discharger consider the (g) guidance management measures, along with other relevant material, in developing the plan.

(b) Waste Discharge Requirements

Waste discharge requirements issued under Porter-Cologne prevent pollution by implementing applicable water quality control plans and policies. Under Porter-Cologne, "pollution" is an alteration of water quality by waste that unreasonably affects the waters for beneficial uses.¹²⁵ Waste discharge requirements must implement the applicable water quality control plan, including the designated beneficial uses and the water quality objectives required to protect those uses.¹²⁶ Thus, a discharge that complies with waste discharge requirements should not alter water quality in a manner that causes pollution.

Nonpoint source discharges can be regulated under waste discharge requirements, either individually or as a group. The requirements can directly or indirectly implement the (g) guidance management measures, as described in the above discussion on the NPS Plan.

(c) Waivers

The Regional Water Boards can also use their waiver authority to prevent pollution and implement the management measures. The Regional Water Boards can waive regulation of nonpoint source discharges, either on an individual basis or for a category of discharges.¹²⁷ A waiver must be in the public interest, and it is conditional and may be terminated at any time.¹²⁸ The Regional Water Boards can waive waste discharge requirements for nonpoint source discharges, either individually or as a group,

¹²⁵ See Wat. Code § 13050(1)(1). "Pollution" also includes water quality alterations that unreasonably affect facilities that serve beneficial uses.

¹²⁶ *Id* § 13263(a).

¹²⁷ *Id.* § 13269(a).

¹²⁸ *Ibid.*

on condition that the dischargers comply with specified best management practices designed to achieve water quality standards. In particular, a waiver for a nonpoint source category could be conditioned on compliance with the applicable (g) guidance management measures, provided that the management measures implemented applicable water quality standards.

(d) Water Quality Certification

The State Water Board certifies activities requiring a water quality certification under section 401 of the Clean Water Act. This section requires applicants for federal licenses or permits to obtain state certification that any discharge of pollutants to surface waters from a proposed activity will comply with the Clean Water Act, including applicable water quality standards. As long as an activity will result in a discharge to surface waters, the State Water Board can use its certification authority to prevent nonpoint source pollution associated with the activity. The State Water Board can include conditions on the entire activity to protect water quality standards, including beneficial uses.¹²⁹ In particular, in appropriate cases the State Water Board can condition a section 401 certification on compliance with management measures implementing water quality standards.

(e) Plans and Policies

In addition, the State Water Board and Regional Water Boards can use their planning authority to prevent nonpoint source pollution and to implement the management measures. The State Water Board can adopt state policy for water quality control, and both the State and Regional Water Boards can adopt water quality control plans that address this type of pollution. Both policies and plans are binding on other state agencies.

Water quality control plans must include an implementation program to achieve water quality objectives. Implementation programs can prevent nonpoint source pollution and implement the management measures through several approaches. The programs can recommend that nonpoint source dischargers carry out specific best management practices, including the management measures, in order to achieve water quality standards. The programs can also waive regulation of categories of nonpoint source discharges on condition that the dischargers implement specific best management practices, such as the measures. Alternatively, an implementation program can prohibit nonpoint source discharges, either entirely or partially, in certain areas or under certain conditions. The conditions can include compliance with appropriate best management practices, including the applicable management measures.

¹²⁹ See *PUD No. 1 of Jefferson County v. Washington Dept. of Ecology* (1994) 511 U.S. 700, 114 S. Ct. 1900.

(f) Investigatory Powers

The State and Regional Water Boards can use their broad investigatory authority to foster nonpoint source pollution prevention. Both the State and Regional Water Boards can investigate the scope, causes, and sources of nonpoint source pollution, and potential practices or control measures to prevent it. They can also require that state or local agencies or dischargers conduct this type of investigation. The State and Regional Water Boards can use information obtained from these investigations to, for example, encourage voluntary implementation of best management practices by dischargers, to encourage state or local agencies that regulate nonpoint source activities to require best management practices, or to develop appropriate planning or regulatory programs addressing nonpoint source pollution.

In addition, the State and Regional Water Boards can use their investigatory powers to directly require implementation of several of the management measures. As discussed below, some management measures requires plans, such as erosion control plans.

(g) Enforcement Authority

The Regional Water Boards can use their enforcement authority to require cleanup, abatement, and remediation of sites adversely impacted by nonpoint source pollution, including wetlands and riparian areas.¹³⁰ They can also impose administrative civil liability on this basis.¹³¹ The Regional Water Boards can encourage dischargers to consider, as environmental credit projects reducing an administrative civil liability assessment, projects that protect and restore sensitive areas, such as wetlands and riparian areas.¹³²

(h) Regulations

As an additional tool, the State Water Board can adopt regulations covering categories of nonpoint source discharges. The State Water Board, for example, has adopted regulations covering waste discharges from confined animal facilities¹³³ and mining activities.¹³⁴ To the extent authorized by Water Code section 13360, as discussed below, the State Water Board can adopt regulations for categories of nonpoint source dischargers, requiring implementation of measures that are appropriate to implement applicable water quality standards.

¹³⁰ See *id.* § 13304.

¹³¹ See *id.* §§ 13350, 13385.

¹³² See Guidance to Implement the Water Quality Enforcement Policy, State Water Board (April 1996), pp. 22-23.

¹³³ See Cal. Code Regs., tit. 27, §§ 22560 - 22565.

¹³⁴ See *id.*, §§ 22470-22510.

(i) Other programs

Finally, Porter-Cologne is currently being used to prevent or to remediate nonpoint source pollution in two specific programs. The Regional Water Boards are developing TMDLs for impaired waterbodies within their regions. Many of the TMDLs address ongoing nonpoint source pollution, and these TMDLs include implementation programs to bring the nonpoint source dischargers into compliance with water quality standards. The North Coast Regional Water Board, for example, adopted a sediment TMDL that prohibits the discharge of controllable sources of sediment unless the discharger agrees to implement certain best management practices, to monitor, and to comply with other requirements. In appropriate cases, a TMDL could require that affected nonpoint source dischargers implement applicable management measures in order to achieve water quality standards.

The Bay Protection and Toxic Cleanup Program also addresses nonpoint, as well as point, source pollution. Some of the Regional Water Boards have proposed best management practices as the recommended action to remediate ongoing nonpoint source pollution. The Regional Water Boards could implement the (g) guidance management measures in appropriate cases under this program.

3. Water Code section 13360

(1) Section 13360

Under certain circumstances, Porter-Cologne restricts the State and Regional Water Boards' ability to require dischargers to implement specific practices. Under Water Code section 13360, the boards may not "specify the design, location, type of construction, or particular manner" of compliance with waste discharge requirements or other orders, and dischargers can comply "in any lawful manner."¹³⁵ This restriction "is a shield against unwarranted interference with the ingenuity of the party subject to waste discharge requirements", who can "elect between available strategies to comply with the standard."¹³⁶

On the other hand, section 13360 is not violated if, under present technology and the laws of nature, there is only one way to comply with the standard.¹³⁷ Thus, for example, a water quality control plan could legally prohibit surface runoff from new development in amounts exceeding the runoff that would occur if certain impervious

¹³⁵ Wat. Code § 13360.

¹³⁶ *Tahoe-Sierra*, *supra*, fn. 11, 210 Cal.App.3d at 1438-1439, 259 Cal.Rptr. 132.

¹³⁷ *Ibid.*; see *Pacific Water Conditioning assn., Inc. v. City Council* (1977) 73 Cal.App.3d 546, 554, 140 Cal.Rptr. 812, 816-17.

coverage limitations were met.¹³⁸ It did not matter that the only practical way to comply with the prohibition was to comply with the coverage limitations.¹³⁹

Water Code section 13360 also contains several exceptions. It does not apply to discharges of waste to injection wells.¹⁴⁰ Likewise, the restrictions do not apply to the discharge of solid waste to disposal sites. Waste discharge requirements for these sites can require the construction of dikes, installation of drainage facilities, and other similar measures.¹⁴¹

(2) Application to Management Measures

Water Code section 13360 does not restrict management measure implementation. The extent of its applicability depends on the type of measure in question. The management measures fall into several categories. They range from measures requiring plans on how to control nonpoint source pollution to measures that are more prescriptive.

Some management measures require plans. For example, nutrient management plans are required for agricultural activities and erosion and sediment control plans and chemical control plans for construction sites less than 5 acres.¹⁴² Water Code section 13360's restrictions do not apply to this type of management measure. The measures do not dictate the manner of compliance with waste discharge requirements or other board orders, but rather require dischargers to submit plans addressing specific pollution problems. The Regional Water Boards can directly implement this type of management measure under their investigative authority. As discussed previously,¹⁴³ they can require anyone who has discharged, discharges, proposes to discharge, or is suspected of discharging waste to file technical or monitoring program reports. They can also require state and local agencies to submit technical reports on water quality control, even though those entities are not waste dischargers. The only restriction is that the burden of preparing the reports bear a reasonable relationship to the need for and the benefits to be obtained from the reports.¹⁴⁴

Some management measures specify an end result to be achieved. To illustrate, an urban management measure for new development requires that, after construction is completed and a site is permanently stabilized, average annual total suspended solids (TSS) loadings be reduced by 80 percent or to a level no greater than predevelopment

¹³⁸ *Tahoe-Sierra, supra*, fn. 11.

¹³⁹ *Ibid.*

¹⁴¹ *Id.* § 13360(a)(1).

¹⁴² Management Measure Guidance, *supra*, fn. 4, pp. 2-52, 4-63, 4-83.

¹⁴³ See Part II, B.2 of this Statement.

¹⁴⁴ Wat. Code §§ 13165, 13225(c), 13267(b).

loadings.¹⁴⁵ This can be accomplished by either design or performance. The Regional Water Boards can ensure that this type of management measure is implemented without violating Water Code section 13360 because the measure dictates the end result but leaves the method of compliance up to the site developer.

Other management measures prescribe both the end result and the means of achieving it. This is typified by the agricultural management measure for grazing.¹⁴⁶ Part of this measure seeks to protect sensitive areas, such as streambanks and wetlands, from physical disturbance and direct loading of animal wastes and sediment, by one or more of five options. These include excluding livestock, providing stream crossings or hardened watering access for drinking, and others. The Regional Water Boards can require implementation of this measure, by adding a sixth option allowing a discharger to demonstrate that some other alternative would achieve the same end result, i.e. protection of sensitive areas from adverse, water quality-related, grazing impacts. Alternatively, the Regional Water Boards could indirectly ensure implementation of the management measure by adopting a prohibition against waste discharge in sensitive areas.

Still other management measures require development of watershed protection programs. For example, an urban management measure requires development of a watershed protection program for new development.¹⁴⁷ The program aims at avoiding the conversion, to the extent practicable, of areas particularly susceptible to erosion and sediment loss, preserving areas that provide important water quality benefits, and siting development to protect, to the extent practicable, the natural integrity of waterbodies and natural drainage systems. This type of management measure does not violate Water Code section 13360. It dictates only the end result, e.g., a watershed protection program that achieves several goals. Also, the State and Regional Water Boards would likely implement this management measure by promoting local or regional watershed efforts. Alternatively, the State Water Board could adopt state policy or the State and Regional Water Board could adopt water quality control plan provisions implementing this management measure. Water Code section 13360, on the other hand, only applies to waste discharge requirements or orders issued to waste dischargers.¹⁴⁸

B. Question: Please describe any other aspect of state law, either contained in Porter-Cologne or in other authorities, that would limit or preclude the use of Porter-Cologne to regulate nonpoint source pollution. Is Porter-Cologne limited in its application to particular sources or geographic areas? Is it otherwise limited?

Response: The nonpoint sources for which California seeks to use Porter-Cologne as a backup authority are subject to Porter-Cologne. Porter-Cologne is not

¹⁴⁵ Management Measure Guidance, *supra*, fn. 4, p. 4-12.

¹⁴⁶ *Id.* at p. 2-73.

¹⁴⁷ *Id.* at p. 4-36.

¹⁴⁸ See *People v. Barry* (1987), 194 Cal.App.3d 158, 180-181, 239 Cal.Rptr. 349, 363-364.

limited in its application, geographically or otherwise, to these sources. Under Porter-Cologne, the State and Regional Water Boards can regulate any activity that results in a waste discharge that can affect water quality. Activities that affect water quality, but that do not involve a waste discharge, can be addressed under the State and Regional Water Board's broad planning authority. The five nonpoint sources for which the state intends to use Porter-Cologne as a backup authority are discussed below.

(1) Agricultural Activities

The (g) guidance lists pollutants that cause agricultural nonpoint source pollution. These include: nutrients, sediments, animal wastes, salts, pesticides, and habitat impacts due to grazing.¹⁴⁹ The Regional Water Boards can clearly regulate the discharge of pollutants from agricultural activities, including those listed, that can affect water quality. Likewise, the Regional Water Boards can regulate grazing or other agricultural activities that directly or indirectly cause the release of pollutants, such as sediments or animal wastes, that can affect water quality.

Porter-Cologne's legislative history indicates that the act was not meant to limit the Regional Water Boards' preexisting authority under the Dickey Act to regulate the discharge of agricultural wastes.¹⁵⁰ Further, "waste" for purposes of regulation under Porter-Cologne was meant to include all materials that the Attorney General had concluded were "waste" under the Dickey Act.¹⁵¹ These materials included irrigation return flows and drainage water from agricultural activities, pesticides, herbicides, and other agricultural chemicals. The legislative history also indicates that, while these wastes are clearly subject to regulation, the Regional Water Boards can choose to waive waste discharge requirements, either with or without conditions, for agricultural operations where a waiver is not against the public interest.¹⁵²

In addition to regulating waste discharges, the State and Regional Water Boards can address any activity or factor affecting water quality in their planning capacities.¹⁵³ They are not restricted to addressing only the impacts of waste discharge. State agencies, departments, and boards must comply with state policy for water quality control and statewide and regional water quality control plans, unless otherwise directed by statute. In addition, water quality control plans can contain recommendations for action by any entity, public or private. Before implementing any agricultural water quality control plan, however, the Regional Water Boards have to indicate an estimate of the total cost of the program and identify potential sources of financing.¹⁵⁴

¹⁵⁰ Journal of the California Assembly 2679 (Reg. Sess. 1969).

¹⁵¹ See discussion in Section II. B. 1. of this statement.

¹⁵² See fn. 150, *supra*.

¹⁵³ See discussion in Section II.A. of this statement.

¹⁵⁴ Wat. Code § 13141.

(2) Urban Sources

The (g) guidance addresses six major categories of urban nonpoint pollution.¹⁵⁵ These include runoff from developing areas, construction sites, and existing development. Onsite disposal systems; general sources, such as households, commercial sites and landscaping; and roads, highways and bridges are also included. The principal pollutants found in urban runoff are sediments, nutrients, oxygen-demanding substances, pathogens, salts, hydrocarbons, heavy metals, and toxic substances.¹⁵⁶

Urban runoff containing wastes, such as those listed, is clearly subject to regulation under Porter-Cologne. "Waste" is broadly defined in Porter-Cologne, and the term has specifically been construed to include these types of waste.¹⁵⁷ The State and Regional Water Boards have already adopted NPDES permits for some types of urban runoff; and the State Water Board has adopted general waste discharge requirements for small domestic wastewater systems.

In addition, the State and Regional Water Boards can use their planning authority to address urban runoff on a watershed basis. This authority has been used, for example, to regulate activities causing erosion that add silt to Lake Tahoe and its tributaries.¹⁵⁸

(3) Marinas

The (g) guidance also contains management measures for nonpoint source pollution from marinas and recreational boating.¹⁵⁹ Nonpoint source pollution identified with this category includes water column toxicity, low dissolved oxygen, metals and petroleum hydrocarbons, as well as disruption of sediment and habitat, and shoaling and shoreline erosion.¹⁶⁰

As stated previously, the Porter-Cologne definition of "waste" is broad. It would include any pollutants from marinas that enter surface waters through boat discharges, spills, or storm water runoff.¹⁶¹ Shoreline erosion caused by the construction or

¹⁵⁸ See *Tahoe-Sierra*, *supra*, fn. 11.

¹⁵⁹ Porter-Cologne is not listed as a backup authority for the boat operation management measure.

¹⁶⁰ Management Measure Guidance, *supra*, fn. 4, pp. 5-3 through 5-7.

¹⁶¹ See discussion in Section II.B.1 of this Statement.

expansion of a marina is also subject to regulation as a waste discharge because the activity causes the release of sediments. Additionally, if marina construction requires a federal permit, such as a dredge and fill permit under section 404 of the Clean Water Act,¹⁶² the applicant will have to obtain a section 401 certificate from the state. The State Water Board can condition a certification, if appropriate, to address both the point and nonpoint source impacts of the project.

In addition, state law specifically authorizes the Regional Water Boards to require marinas to install vessel pumpout facilities.¹⁶³ State law also requires that vessel pumpout facilities be operated and maintained to prevent sewage discharges to state waters.¹⁶⁴ They must be maintained in good working order and regularly cleaned.¹⁶⁵

In addition to regulating waste discharges, the State and Regional Water Boards can address any marina or boating activities that affect water quality but that do not involve a waste discharge under their planning authority.¹⁶⁶ For example, they could address the marina flushing management measure in a water quality control plan and include recommendations for appropriate action by affected agencies.

(4) Hydromodification

The hydromodification management measure addresses nonpoint source pollution from channelization and channel modifications, dams, and streambank and shoreline erosion.¹⁶⁷ The state has identified Porter-Cologne as a backup authority for channelization and channel modification and streambank and shoreline erosion.

In general, channelization and channel modifications can change sediment supply, reduce freshwater availability, accelerate the delivery of pollutants, cause a loss of contact with overbank areas, and adversely impact instream and riparian habitat.¹⁶⁸ Streambank and shoreline erosion can likewise adversely impact instream and riparian habitat and contribute to increased levels of turbidity and nutrients.¹⁶⁹

Under Porter-Cologne, the Regional Water Boards can regulate any channelization or channel modification projects that cause a waste discharge, either as a result of construction or operation.¹⁷⁰ Similarly, they can regulate any activities that

¹⁶⁹ *Id.*, pp. 6-57 through 6-58.

¹⁷⁰ See discussion in Section II.B.1 of this Statement.

cause streambank or shoreline erosion, resulting in the release of sediments or other wastes to state waters. The State Water Board can condition a section 401 water quality certificate for a federally-permitted activity involving a surface water discharge to address both the activity's point and nonpoint source impacts. The State and Regional Water Boards can address any other activities that affect water quality, but that do not entail a waste discharge, under their broad planning authority.¹⁷¹

(5) Wetlands

The (g) guidance contains management measures for categories of nonpoint sources. The management measures for wetlands promote protecting and restoring wetlands and riparian areas and using vegetated treatment systems to control nonpoint source pollution from these sources. The Regional Water Boards can use their Porter-Cologne authority to regulate any activities that result in a waste discharge to wetlands or riparian areas.¹⁷² Where past waste discharges have adversely impacted wetland areas, they can issue enforcement orders requiring restoration.¹⁷³ The Regional Water Boards can also promote the protection and restoration of wetlands and the use of engineered vegetated treatment systems as supplemental environmental credit projects mitigating administrative civil liability assessments.¹⁷⁴ Finally, the State and Regional Water Boards can use their broad planning authority to address the protection and restoration of wetlands and to promote the use of vegetated treatment systems.¹⁷⁵

C. Question: Will it be necessary for the state to issue regulations prior to using its Porter-Cologne authority to ensure implementation of the management measures?

Response: No, regulations are not necessary. The (g) guidance management measures vary from requirements for reports and watershed management plans to more prescriptive requirements. The appropriate Porter-Cologne response will also vary. If the State or Regional Water Boards choose to implement one or more of the management measures through their planning authority or regulations, they will have to comply with the state Administrative Procedure Act (APA).¹⁷⁶ Unlike the adoption of formal regulations, however, the APA contains special, abbreviated procedures for the adoption or amendment of plans, policies and guidelines.¹⁷⁷ If the State or Regional Water Boards choose other implementation alternatives, they will not have to comply with the APA.

¹⁷¹ See discussion in Section II.A. of this Statement.

¹⁷² See discussion in Section II.B.1 of this Statement.

¹⁷³ See, e.g., Wat. Code § 13304. See also State Water Board Order WQ 90-5, upholding a San Francisco Bay Regional Water Board order requiring a discharger to mitigate for losses of wetland habitat.

¹⁷⁴ See discussion in Guidance to Implement the Water Quality Enforcement Policy, State Water Board (April 1996), pp. 22-23.

¹⁷⁵ See discussion in Section II.A. of this Statement.

¹⁷⁶ See Gov. Code § 111340 et seq.

¹⁷⁷ Compare Gov. Code § 11353 with § 11346 et seq.

As explained previously, the State Water Board's Nonpoint Source Management Plan lays out a three-tiered management approach to nonpoint pollution regulation.¹⁷⁸ In the first tier, the State and Regional Water Boards will encourage affected discharger groups to voluntarily implement applicable management measures. This can be done through, for example, funding and education. These activities are voluntary and can be accomplished without formal rulemaking.

The second tier is regulatory encouragement - through adoption of conditional waivers or management agency agreements with other enforcement agencies. Waivers may be either individual or general. The Regional Water Boards can waive waste discharge requirements for an individual discharger, on condition that the discharger comply with appropriate management measures; and this does not require a water quality control plan amendment.¹⁷⁹ Typically, the Regional Water Boards adopt waivers for classes of dischargers, and these waivers are included in the applicable water quality control plans. As stated previously, the adoption or amendment of water quality control plans, policies, or guidelines is subject to abbreviated, APA rulemaking procedures.¹⁸⁰ Alternatively, the State and Regional Water Boards can enter into management agency agreements with agencies with enforcement authority over the nonpoint sources. These agreements can ensure management measure implementation, and they do not require a water quality control plan amendment.

In the third tier, the State and Regional Water Boards adopt waste discharge requirements. The adoption of waste discharge requirements, either individual or general, is not subject to the APA's rulemaking requirements.¹⁸¹ Waste discharge requirements can directly or indirectly require compliance with applicable management measures in appropriate cases.¹⁸² If appropriate, general waste discharge requirements can be adopted to ensure management measure implementation on a regionwide or statewide basis.

Some management measures require submission of plans, such as erosion and sediment control plans. The Regional Water Boards can implement these measures under their existing Porter-Cologne investigative powers, without undertaking a rulemaking.¹⁸³ Likewise, if the Regional Water Boards choose to adopt enforcement orders to address, for example, wetland or riparian areas degraded by waste discharges, the Regional Water Boards will not have to undertake formal rulemaking.

¹⁷⁸ See discussion in Section III.A.2.(a) of this Statement.

¹⁷⁹ See Gov. Code § 11352.

¹⁸⁰ See *id.* § 11353, which contain special procedures for State and Regional Water Board plans, policies, and guidelines.

¹⁸¹ See *id.* § 11352(b).

¹⁸² See discussion in Section III.A.2.(a) & (b).

¹⁸³ See Wat. Code §§ 13165, 13225(c), 13267, 13383. See also Gov. Code § 11342(g), defining "regulation" as a rule, regulation, order, or standard of general application.

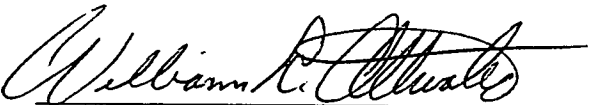

On the other hand, the Regional Water Boards are currently engaged in developing TMDLs for impaired waterbodies, many of which are impaired by nonpoint sources. These TMDLs can be used as a vehicle to implement appropriate management measures. The TMDLs have to be included in the state's water quality management plan under the Clean Water Act; they will, therefore, necessarily result in water quality control plan amendments.¹⁸⁴

IV. CONCLUSION

In sum, the State and Regional Water Boards have broad-reaching power under Porter-Cologne to prevent nonpoint source pollution. In their planning capacity, they can address all activities and factors that may affect water quality, including nonpoint source activities. They can also directly regulate all waste discharges, both point and nonpoint source, that may affect the quality of state waters. In addition to preventing nonpoint source pollution, the State and Regional Water Boards can ensure implementation of the management measures through several mechanisms. Finally, the State and Regional Water Boards are not required to undertake rulemaking before implementing the measures.

**CALIFORNIA COASTAL COMMISSION
CHIEF COUNSEL'S STATEMENT
FOR THE
CALIFORNIA'S NONPOINT SOURCE POLLUTION CONTROL PROGRAM**

NOVEMBER 1999

000306

CALIFORNIA COASTAL COMMISSION45 FREMONT STREET, SUITE 2000
SAN FRANCISCO, CA 94105-2219
VOICE AND TDD (415) 904-5200**MEMORANDUM**

October 21, 1999

TO: Peter Douglas, Executive Director
Jaime Kooser, Deputy Director

FROM: Ralph Faust, Chief Counsel
Dorothy Dickey, Deputy Chief Counsel *D. Dickey*

SUBJECT: **Enforceability of Nonpoint Source Pollution Control Program**

We are writing to address the scope of the Coastal Commission's authority to enforce the nonpoint source pollution control provisions of the Coastal Zone Management Act. (16 U.S.C. § 1451 *et seq.*) Section 6217 of that Act provides that each state "for which a management program has been approved pursuant to section 306 of the Coastal Zone Management Act ... shall prepare and submit to the Secretary and the Administrator a Coastal Nonpoint Pollution Control Program for approval pursuant to this section." (16 U.S.C. § 1455b.) The Coastal Zone Management Act explains that the "purpose of the program shall be to develop and implement management measures for nonpoint source pollution to restore and protect coastal waters, working in conjunction with other State and local authorities." (16 U.S.C. § 1455b(a)(1).) You have asked whether the Commission can enforce those nonpoint pollution control provisions.

The Coastal Commission implements the policies of California's Coastal Act. (Public Resources Code § 30000 *et seq.*) A central focus of the Coastal Act is the protection and, where feasible, restoration, of coastal water quality. The Act includes numerous enforceable policies that are directed toward that objective. For example, section 30230 provides that:

Marine resources shall be maintained, enhanced, and where feasible, restored. Special protection shall be given to areas and species of special biological or economic significance. Uses of the marine environment shall be carried out in a manner that will sustain the biological productivity of coastal waters and that will maintain healthy populations of all species of marine organisms adequate for long-term commercial, recreational, scientific, and educational purposes.

The Commission is required specifically to control runoff in section 30231:

The biological productivity and the quality of coastal waters, streams, wetlands, estuaries, and lakes appropriate to maintain optimum

populations of marine organisms and for the protection of human health shall be maintained and, where feasible, restored through, among other means, minimizing adverse effects of waste water discharges and entrainment, controlling runoff, preventing depletion of ground water supplies and substantial interference with surface water flow, encouraging waste water reclamation, maintaining natural vegetation buffer areas that protect riparian habitats, and minimizing alteration of natural streams.

In addition, Coastal Act policies limit development in numerous other ways to protect water quality. (See Attachment 1.)

The Commission implements these protective policies as it undertakes its three major regulatory tasks. Its first regulatory responsibility is to review and certify plans that address how development will occur along the California coast. Most of those plans are developed by local governments and are called "local coastal programs". (Public Resources Code § 30500 *et seq.*) Plans are also prepared by port districts (Public Resources Code § 30711 *et seq.*), colleges and universities (Public Resources Code § 30605) and proponents of public works projects (*id.*).

The Commission reviews those plans to determine whether they are consistent with applicable policies of the Coastal Act, including those related to water quality. If the Commission determines that a plan is not consistent with the policies of the Coastal Act, it is required to deny certification of the plan. In that event the Commission generally suggests modifications to the plan that the local government or other plan proponent could adopt.¹ Once the plan has been modified to incorporate the changes identified by the Commission, it can be resubmitted to the Commission for certification. Following certification by the Commission of a plan, any amendments to the plan must be submitted to the Commission. Until the Commission certifies an amendment, the measure has no legal effect for purposes of the Coastal Act.

The Commission has the authority to enforce Coastal Act provisions relating to water quality, including nonpoint source pollution. As described above, the Commission is required to refuse to certify plans and amendments which it determines do not meet the Coastal Act's water quality requirements. The Commission is additionally authorized to identify appropriate changes to those plans and amendments to bring them into conformity with the Coastal Act's water quality provisions. Such changes may include nonpoint source pollution management measures necessary to bring a plan or amendment into conformity with Coastal Act provisions relating to water quality.

The Commission's second regulatory task is to review applications for coastal development permits. The Coastal Act provides that any person who wishes to pursue

¹ The procedures for processing those modifications differ depending on the type of plan reviewed by the Commission. A discussion of the specific procedural mechanisms involved is beyond the scope of this memo.

“development” in the coastal zone must obtain a coastal development permit. (Public Resources Code § 30600.) “Development” is broadly defined in Public Resources Code § 30106 to mean:

“... on land, in or under water, the placement or erection of any solid material or structure; discharge or disposal of any dredged material or of any gaseous, liquid, solid, or thermal waste; grading, removing, dredging, mining, or extraction of any materials; change in the density or intensity of use of land, including, but not limited to, subdivision pursuant to the Subdivision Map Act (commencing with Section 66410 of the Government Code), and any other division of land, including lot splits, except where the land division is brought about in connection with the purchase of such land by a public agency for public recreational use; change in the intensity of use of water, or of access thereto; construction, reconstruction, demolition, or alteration of the size of any structure, including any facility of any private, public, or municipal utility; and the removal or harvesting of major vegetation other than for agricultural purposes, kelp harvesting, and timber operations which are in accordance with a timber harvesting plan submitted pursuant to the provisions of the Z'berg-Nejedly Forest Practice Act of 1973 (commencing with Section 4511).

As used in this section, "structure" includes, but is not limited to, any building, road, pipe, flume, conduit, siphon, aqueduct, telephone line, and electrical power transmission and distribution line.”

The Commission performs its permit review function with respect to development within the coastal zone until the Commission has certified a local coastal program for each coastal city and county or a port master plan for that jurisdiction. (Public Resources Code §§ 30600(c), 30715(a).) In determining whether or not to approve a particular coastal development permit application, the Commission applies the Coastal Act's policies concerning coastal protection, which include the policies to protect coastal water quality that are cited above. (Public Resources Code §§ 30604, 30715(a).) As a condition of approving coastal development permit applications, the Commission may impose conditions to prevent and mitigate nonpoint source pollution in order to implement those water quality requirements.²

After the Commission has certified a local coastal program, it delegates coastal development permitting authority to the local government. (Public Resources Code § 30519(a).) The Commission retains permitting jurisdiction over development proposed on tidelands,

² The Coastal Act does not authorize the Commission to require a coastal development permit for the “removal or harvesting of major vegetation ... for agricultural purposes, kelp harvesting and timber operations which are in accordance with a timber harvesting plan submitted pursuant to the provisions of the Z'berg-Nejedly Forest Practice Act of 1973....” (Public Resources Code § 30106.) Nevertheless, the Commission is authorized to regulate other development activities related to agriculture and forestry. As a condition of approval of such development, the Commission may require that nonpoint source pollution control measures be undertaken in order to find that the development meets Coastal Act water quality standards.

submerged lands and public trust lands. (Public Resources Code § 30519(b).) Similarly, the Commission delegates coastal development authority to a port once the Commission has certified the port's master plan. (Public Resources Code § 30519(b).)

Local governments' and ports' decisions concerning applications for coastal development permits may be appealed to the Coastal Commission in certain instances. (Public Resources Code §§ 30603, 30715.) The standard of review for permit decisions after the Commission has certified a local coastal program or a port master plan is the certified program or plan. (Public Resources Code §§ 30604(b), 30715.5.) The Commission's actions on appeals are also governed by the certified program or plan. (*Id.*) As noted above, those planning documents must meet the Coastal Act's standards concerning water quality, including nonpoint source pollution. Thus, when the Commission, a local government or a port makes a decision on whether to issue a coastal development permit after the Commission has certified such a plan or program, the permitting agency must determine whether the proposed development will comply with the policies and standards set forth in its plan or program, including those related to water quality. If the Commission or other permitting agency determines that the proposed development will not comply with those standards, it may impose conditions on the project to bring it into compliance with the standards in the plan or program, including any management measures to prevent or mitigate nonpoint source pollution. Alternatively, the Commission or other permitting agency may deny the development.

The applicable requirements concerning water quality are found in the Coastal Act. Thus, a coastal development permit application may not be approved unless it complies with the water quality requirements contained in the Coastal Act or in certified plans and programs.

The Coastal Commission's third major regulatory responsibility is federal consistency review under the Coastal Zone Management Act. (16 U.S.C. § 1451 *et seq.*) The Commission reviews activities conducted by the federal government, federally issued licenses and permits, plans for exploration and production of the outer continental shelf, and federally funded activities. (16 U.S.C. § 1456.) The Commission reviews each proposed activity to determine whether it is consistent with the California Coastal Management Program. The Program includes the Coastal Act and those local coastal programs that have been formally approved by the Office of Ocean and Coastal Resource Management for incorporation into the State's program. The Commission must determine that the proposed activity is consistent with those policies and standards, including any required nonpoint source pollution control measures.

As noted above, the Coastal Act includes policies to protect coastal water quality. Therefore, in performing federal consistency review, the Commission is authorized to apply those water quality standards and to "disagree" or "object" as appropriate to those activities and projects that do not comply with those standards. (*Id.*, 15 C.F.R. §§ 930.32(a), 930.39, 930.42, 930.79.)

Peter Douglas/Jaime Kooser
October 21, 1999
Page -5-

For the reasons set forth above, we conclude that the Coastal Commission has adequate legal authority under the Coastal Act to enforce water quality requirements related to nonpoint source pollution.

Resources Agency

DATE: February 2, 2000

SUBJECT: CALIFORNIA'S NONPOINT SOURCE POLLUTION CONTROL
PROGRAM

By this memorandum, we are requesting your assistance in addressing nonpoint source (NPS) pollution by implementing the attached Plan for California's Nonpoint Source Pollution Control Program (Program Plan). NPS pollution, also known as polluted runoff, is the leading cause of water quality impairments in California and nationally. Nonpoint sources are the major contributor of pollution to impacted water bodies including surface, ground, and coastal waters in California. Your participation is needed if we are going to protect and restore the myriad of beneficial uses our water resources support and the economic benefit derived from these uses.

This memorandum underscores the commitment of both the California Environmental Protection Agency (Cal/EPA) and Resources Agency to protect the beneficial uses and restore the quality of California's waters. In order to achieve measurable improvements, we are requesting your agencies to use your respective authorities to implement the Program Plan to prevent and control NPS pollution affecting State surface, ground, and coastal waters.

William Lyons, Jr.
Diana Bontá
José Medina
February 2, 2000
Page 2

We commend those agencies that have worked with the State Water Resources Control Board (SWRCB) and California Coastal Commission (CCC) in the development of the Program Plan's Fifteen-Year Program Strategy and Five-Year Implementation Plan (Volume I) and the California Management Measures for Polluted Runoff (Volume II). Effective implementation of the Program Plan requires continued collaboration among all responsible State agencies as well as coordination among federal and local agencies and public groups.

The SWRCB and CCC, in conjunction with the nine Regional Water Quality Control Boards, are the lead agencies in coordinating implementation of the Program Plan. To ensure success of the Program Plan, we are requesting your agencies to undertake several important program actions.

- Each agency is requested to designate a lead staff person to be responsible for coordinating with the SWRCB and CCC on NPS issues.
- Each agency is requested to identify through a five-year plan appropriate actions to implement management measures for which they have authorities and are targeted in the first Five-Year Implementation Plan.
- Each agency is requested to ensure that actions to implement its respective portions of the Program Plan are tracked, monitored, assessed, and reported to the SWRCB and CCC consistent with State law (Water Code sections 13165 and 13369 [AB 227]) and in accordance to the Program Plan.
- Each agency in consultation with the SWRCB and CCC shall consider the need to establish or revise existing formal agreements with the SWRCB and CCC to ensure successful implementation of the Program Plan.

In addition, we encourage each agency to adopt policies that support the Program Plan.

Please reply to William Vance, Ph.D., Assistant Secretary for Policy and Regulations, Cal/EPA or Maria Rea, Assistant Secretary for Watershed and Salmon Restoration, Resources Agency, by February 25, 2000 with the name, telephone number, and e-mail address of your designated lead staff person. If you have any questions, please call Dr. Vance, at (916) 324-7584 or Ms. Rea, at (916) 653-5656.

**APPENDIX E. MEMORANDUM OF UNDERSTANDING BETWEEN
THE STATE WATER RESOURCES CONTROL BOARD AND
THE CALIFORNIA COASTAL COMMISSION**

This Memorandum of Understanding (MOU) is between the State Water Resources Control Board (SWRCB) and the California Coastal Commission (CCC). The SWRCB is part of the California Environmental Protection Agency (Cal/EPA), and the CCC is part of the California Resources Agency.

AGENCIES AGREE AS FOLLOWS:

A. PURPOSE

The purpose of this MOU is to promote protection of (1) water quality and (2) the uses and resources dependent on clean water from the potential adverse effects of nonpoint source (NPS) pollution. The SWRCB and CCC concur that the State will benefit from a unified and cooperative program to protect and restore water quality.

B. AUTHORITY

The authority of the SWRCB and CCC are defined by federal and State law described as follows:

1. The SWRCB and CCC, in coordination with the nine Regional Water Quality Control Boards (RWQCBs), are the lead State agencies in California for the development and implementation of the *Plan for California's Nonpoint Source Pollution Control Program: 1998-2013* (Program Plan) which has been prepared pursuant to the Federal Clean Water Act section 319 (33 U.S.C. §1329) and Coastal Zone Management Act section 6217 (16 U.S.C. §1455b).
2. The SWRCB and the RWQCBs are the State agencies with primary responsibility for coordination and control of water quality throughout California. The SWRCB and RWQCBs are the State agencies authorized under the Clean Water Act and State law to designate beneficial uses of the State's waters and establish water quality objectives for protecting those uses. The SWRCB and RWQCBs have a variety of regulatory powers under which they investigate water quality issues; adopt water quality control plans, regulations, and policies; prohibit waste discharges in certain areas; and issue permits regulating waste discharges affecting water quality. The SWRCB is required to provide information to the public regarding water quality issues. The SWRCB also administers several loan and grant programs for the protection of water quality, including the NPS grant program under the Federal Clean Water Act section 319 (33 U.S.C. §1329). RWQCBs also have the authority to order cleanup of waste discharges and to take enforcement actions against waste dischargers, including imposing administrative civil liability.

3. The CCC has the primary responsibility for implementation of the California Coastal Act and has been designated the State coastal zone planning and management agency for any and all purposes and may exercise any and all powers set forth in the Federal Coastal Zone Management Act of 1972 (16 U.S.C. §1451, et seq.) and any amendments thereto or other federal laws that relate to the planning or management of the coastal zone. The California Coastal Act mandates the protection and restoration of coastal waters. The CCC certifies local coastal programs and approves coastal development permits, energy projects, and federal projects within the Coastal Zone in accordance with water quality policies in the California Coastal Act. The CCC protects water quality through the management of development that generates runoff, creates spills, or otherwise affects water quality. The CCC also implements educational and technical assistance programs and coordinates with other agencies to address land-use and development activities that may generate polluted runoff.
4. According to Public Resources Code section 30400, in the absence of specific authorization by law or by agreement with the CCC, no State agency shall exercise any powers or carry out any duties or responsibilities established by the California Coastal Act or by the Federal Coastal Zone Management Act of 1972 or any amendment thereto.
5. According to Public Resources Code section 30412, the CCC, subject to limited exceptions regarding wastewater treatment plants, shall not modify, adopt conditions, or take any action in conflict with any determination by the SWRCB or any RWQCB in matters relating to water quality or the administration of water rights.

C. IMPLEMENTATION

Effective implementation of the Program Plan requires continued collaboration between the SWRCB and CCC. The SWRCB and the CCC therefore agree to:

1. To continue to work cooperatively to implement the Program Plan;
2. To be partners in the administrative coordination of California's Nonpoint Source Pollution Control Program (NPS Program);
 - a. The SWRCB and CCC will be joint partners in developing, implementing, and participating in interagency coordinating committees;
 - b. The SWRCB will act as the lead coordinating agency with Cal/EPA members; the CCC will act as the lead coordinating agency with Resources Agency members;
 - c. The SWRCB will serve as the liaison with the U.S. Environmental Protection Agency (USEPA); the CCC will serve as the liaison with the National Oceanic and Atmospheric Administration (NOAA);

3. To implement and to track the implementation of applicable management measures and management practices related to NPS pollution prevention and control;
4. To modify or add to the Program Plan, including the actions identified in the Five-Year Implementation Plans (Volume 1) and the management measures in *California Management Measures for Polluted Runoff (CAMMPR)* (Volume 2), in a joint effort;
5. To meet on a regular basis (quarterly) to assess Program implementation, to discuss existing and proposed projects of mutual interest, and to consider changes to the Program Plan or MOU;
6. To have staff and management actively participate in regular updates on implementation of the Plan and identify concerns regarding the coordination and control of water quality due to changes in laws, regulations, policies, water quality control plans, or local coastal programs;
7. To work cooperatively through the legislative process to the extent permitted by law and Governor's Office procedures to further the NPS Program;
8. To work cooperatively in the budgetary process to support NPS Program activities;
9. To jointly convene public workshops to develop the next Five-Year Implementation Plan, no later than three years after the effective date of each Five-Year Implementation Plan;
10. To report biennially on program effectiveness;
11. To improve communication with the members of the CCC, SWRCB, and RWQCBs by:
 - a. SWRCB staff and CCC staff jointly presenting an annual status report to the CCC and the SWRCB Members regarding the NPS program;
 - b. SWRCB and RWQCB staffs consulting with CCC staff regarding NPS projects implemented or ordered by the SWRCB or a RWQCB requiring a coastal development permit issued or reviewed by the CCC. CCC staff will brief Commission Members in advance and take other actions needed to expedite a decision on the project. CCC staff will consult with SWRCB and RWQCB staffs regarding any of their projects that require SWRCB approval; and SWRCB and RWQCB staffs will brief SWRCB Members in advance and take other actions needed to expedite a SWRCB decision on the project.

D. RESERVATION OF AUTHORITY

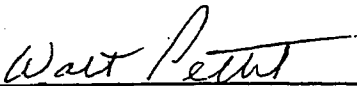

Nothing herein shall be construed in any way as limiting the authority of the SWRCB or CCC in carrying out their respective legal responsibilities for management, regulation, coordination, and control of water quality or land uses affecting water quality.

Nothing herein shall be construed to prohibit the establishment of MOUs/Management Agency Agreements/Memoranda of Agreements with State or other agencies by either the SWRCB or CCC.

E. MODIFICATION OR RECISION

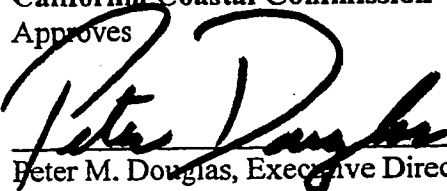

This MOU shall become effective upon the date of final signature and shall continue in effect until modified by the mutual written consent of both parties or until terminated by either party upon a 30-day advance written notice to the other party.

APPENDIX F. LIST OF ACRONYMS

- 1988 Plan – Nonpoint Source Management Plan, November 1988
- AB – Assembly Bill
- ACL – Administrative Civil Liability
- ADMP – Agriculture Drainage Management Plan
- AFO – Animal Feeding Operations
- AG – Attorney General
- AMBAG - Association of Monterey Bay Area Governments
- ARS – Agricultural Research Service
- ASBS – Areas of Special Biological Significance Basin Plan – Regional Water Quality Control Plans
- BASMAA – Bay Area Stormwater Management Agencies Association
- BAWPG – Bay Area Wetlands Planning Group
- BCGC – Boating and Clean Green Campaign
- BCP – Budget Change Proposal
- BIOS – Biologically Integrated Orchard Systems
- BLM – U.S. Bureau of Land Management
- BMP – Best Management Practices
- BOF – Board of Forestry
- BPTCP – Bay Protection and Toxic Cleanup Program
- Cal/EPA – California Environmental Protection Agency
- CALFED – CALFED Bay-Delta Program
- Cal/RA – California Resources Agency
- Cal/Trans – California Department of Transportation
- CAMMPR – Volume II: California Management Measures for Polluted Runoff
- CAO – Cleanup and Abatement Orders
- CARCD – California Association of Resource Conservation Districts
- CBC – California Biodiversity Council
- CCA – Critical Coastal Area
- CCBN – California Clean Boating Network
- CCC – California Coastal Commission
- CCR – California Code of Regulations
- CCMP – California Coastal Management Program
- CDF – California Department of Forestry and Fire Protection
- CDO – cease and desist orders
- CDP – Coastal Development Permit
- CDPR – Department of Pesticide Regulation
- CEEIN – California Environmental Education Interagency Network
- CEQA – California Environmental Quality Act
- CERCLA – Comprehensive Environmental Response and Compensation Liability Act
- CERPI – California Ecological Restoration Projects Inventory
- CESA – California Endangered Species Act
- CFB – California Farm Bureau
- CFR – Code of Federal Regulations
- CIWMB – California Integrated Waste Management Board
- CNCP – Coastal Nonpoint Source Pollution Control Program
- Coastal Act – California Coastal Act
- CPR Plan – *Plan for Controlling Polluted Runoff*
- CRMP – Coordinated Resource Management and Planning Program
- CRWQMP – California Rangeland Water Quality Management Plan
- CTR – California Toxics Rule
- CVA – Clean Vessel Act
- CWA – Clean Water Act
- CWAP – Clean Water Action Plan
- CWC – California Water Code
- CWPI – California Watershed Project Inventory
- CZARA Coastal Zone Act Reauthorization Amendments of 1990
- CZM – Coastal Zone Management
- CZMA – Coastal Zone Management Act
- CZTA – Coastal Zone Treatment Areas
- DA – District Attorney
- DBW – Department of Boating and Waterways
- DFA – Department of Food and Agriculture
- DFG – Department of Fish and Game
- DHS – Department of Health Services
- DOC – Department of Conservation
- DPR – Department of Parks and Recreation
- DTSC – Department of Toxic Substance Control
- DWR – Department of Water Resources
- DWSAP – Drinking Water Source Assessment and Protection
- EBEP – Enclosed Bays and Estuaries Plan
- EIR – Environmental Impact Report
- EQIP – Environmental Quality Incentives Program
- ESA – Endangered Species Act
- ESHA – Environmentally Sensitive Habitat Area
- FACT – Functioning Assessment Criteria Test
- FERC – Federal Energy Regulatory Commission
- FOTG – Field Office Technical Guide

FPR – Forest Practice Rules
 FSA – Farm Services Agency
 FY – Fiscal Year
 g-Guidance – Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters (CZARA §6217[g])
 GeoWBS – Geographically-based Water Body System
 GIS – Geographic Information System
 GRTS – Grants Reporting and Tracking System
 HHW – Household Hazardous Waste
 HTB – Heal the Bay
 IACC – Interagency Coordinating Committee
 Implementation Plan – Five-Year Implementation Plan (1998-2003)
 IPM – Integrated Pest Management
 ISWP – Inland Surface Waters Plan
 LCP – Local Coastal Program
 LCPA – Local Coastal Program Amendment
 LEA – local enforcement agency
 LUP – land use plan
 MAA – Management Agency Agreement
 MBNMS - Monterey Bay National Marine Sanctuary
 MM – management measure
 MOA - Memorandum of Agreement
 MOU – Memorandum of Understanding
 MP – management practices
 MPA – MacAteer-Petris Act
 MSG – Monitoring Study Group
 MURP – Model Urban Runoff Program
 NAWQA – National Water Quality Assessment Program
 NEP - National Estuary Program
 NEPA – National Environmental Policy Act
 NERR - National Estuarine Research Reserve
 NGO – non-governmental organization
 NMS - National Marine Sanctuary
 NOAA – National Oceanic and Atmospheric Administration
 NOV – Notice of violation
 NPDES – National Pollutant Discharge Elimination System
 NPS – nonpoint source
 NPS MIS – NPS Management Information System
 NRCS – Natural Resources Conservation Service
 NRDC – Natural Resources Defense Council
 NRPI – Natural Resources Project Inventory
 OAL – State Office of Administrative Law
 Ocean Plan – California Ocean Plan
 OCWD – Orange County Water District
 OSDS – On-site Disposal System
 OSPR – DFG/Oil Spill Prevention and Response
 PCA – Program Cost Account
 PIPP – Public Information Public Participation Committee of the SWQTF
 PMP – portmaster plan
 PMZ – Pesticide Management Zone
 Policy – Policy for Implementation of Toxics Standards for Inland Surface Water, Enclosed Bays, and Estuaries of California
 Porter-Cologne Act - Porter Cologne Water Quality Control Act
 POTWs – publicly owned treatment works
 PRC – Public Resources Code
 Program – NPS Pollution Control Program
 Program Plan – *Plan for California's Nonpoint Source Pollution Control Program 1998-2013*
 PROSIP – Volume I: Nonpoint Source Program Strategy and Implementation Plan, 1998-2013
 PTS – Permit Tracking System
 QA/QC – Quality Assessment/Quality Control
 RCDs –Resource Conservation Districts
 RCRA – Resource Conservation and Recovery Act
 ReCAP – CCC's Regional Cumulative Assessment Program
 RFP – Request for Proposal
 RIFA – red imported fire ants
 RMS – Resource Management Systems
 RWQCB – Regional Water Quality Control Board
 SbMA – Subdivision Map Act
 SCC – State Coastal Conservancy
 SFB – San Francisco Bay
 SFB/CDC - San Francisco Bay Conservation and Development Commission
 SFEP – San Francisco Estuary Project
 SJVDIP – San Joaquin Valley Drainage Implementation Program
 SLC – State Lands Commission
 SMA – Streamside Management Areas
 SMARA – Surface Mining and Reclamation Act
 SMB – Santa Monica Bay
 SRF – State Revolving Fund
 Strategy – Fifteen-Year Program Strategy
 SWIM – System for Water Information Management
 SWPPP – Storm Water Pollution Prevention Program
 SWQTF – Stormwater Quality Task Force

SWRCB – State Water Resources Control Board
TAC – Technical Advisory Committee
TBT - tributyltin
THP – Timber Harvesting Plan
TMDL – Total Maximum Daily Load
TSCA Toxic Substances Control Act
TSS – Total Suspended Solids

UC – University of California
UCCE University of California Cooperative
Extension
UCD ICE – University of California, Davis,
Information Center for the Environment
USBR – U. S. Bureau of Reclamation
USC – United States Code
USCG – U.S. Coast Guard
USACOE – U.S. Army Corps of Engineers
USDA – U. S. Department of Agriculture
USEPA – U. S. Environmental Protection Agency
USFS – U.S. Forest Service
USFWS - U.S. Fish and Wildlife Service
USGS – U. S. Geological Survey
WATER – Watershed Analysis Tool for
Environmental Review
WCB – Wildlife Conservation Board
WCL – Wildlife Conservation Law of 1947
WDR – Waste Discharge Requirement
WLPZ – Watercourse and Lake Protection Zone
WMA – Watershed Management Areas
WMI – Watershed Management Initiative
WQA – Water Quality Assessment
WQCP – Water Quality Control Plans
WQCrP – Water Quality Certification Program
WQMP – Water Quality Management Plan
WQPP - Water Quality Protection Program
WRAS – Watershed Restoration Action Strategy
WRP – Wetlands Research Project

CALIFORNIA'S MANAGEMENT MEASURES FOR POLLUTED RUNOFF (CAMMPR)

I. INTRODUCTION

A. Background

California's Management Measures for Polluted Runoff (CAMMPR) is designed to assist California in improving implementation of the California's Nonpoint Source (NPS) Pollution Control Program (Program). Management measures (MMs) form the core of the State's Plan for California's Nonpoint Source Pollution Control Program 1998-2013 (Program Plan) and provide goals for the management of NPS pollution to which various management practices are applied.¹ The measures are organized into six categories or sectors, all of which are present in California:

1. Agriculture;
2. Forestry (Silviculture);
3. Urban Areas;
4. Marinas and Recreational Boating;
5. Hydromodification Activities; and
6. Wetlands, Riparian Areas, and Vegetated Treatment Systems.

To help states develop sound and effective NPS programs, the U.S. Environmental Protection Agency (USEPA) developed a guidance document pursuant to the Coastal Zone Act Reauthorization Amendments of 1990 (CZARA) section 6217(g) titled the *Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters (g-Guidance)* (USEPA[1993]). USEPA and the National Oceanic and Atmospheric Administration (NOAA) expect state programs to implement MMs "in conformity" with the *g-Guidance*.² This MM approach is technology-based rather than water-quality based. Because NPSs of pollution are so diverse and since each individual source may contribute only a small quantity of contaminants, identifying the exact sources of NPS pollution can be very expensive and time-consuming. Implementation of technology-based MMs allows states to concentrate their resources initially on implementing measures that are proven to be effective in preventing and controlling NPS pollution.

¹ MMs are defined in CZARA section 6217(g)(5) as "economically achievable measures for the control of the addition of pollutants from existing and new categories and classes of nonpoint sources of pollution, which reflect the greatest degree of pollutant reduction achievable through the application of the best available nonpoint pollution control practices, technologies, processes, siting criteria, operating methods, or other alternatives."

² USEPA's *g-Guidance* identifies 56 MMs to control or prevent NPS pollution. The management measures and related practices can be viewed on the Internet at <http://www.epa.gov/OWOW/NPS/MMGI>.

Pursuant to the Clean Water Act (CWA) and CZARA, the Program Plan addresses two types of MMs:

1. Minimum Management Measures

These measures are based on the federal guidance and will apply to the land use activities known to be major causes of NPS pollution. For example, keeping grazing animals out of streams is a minimum MM for agricultural sources of NPS pollution. State programs will ensure that people and organizations conducting these specified land use activities implement the appropriate MMs. The goal of implementing these measures is to protect water quality and habitat.

2. Additional Management Measures

Where NPS pollution continues to prevent critical areas from meeting CWA requirements, even when minimal MMs are used, additional MMs may be necessary. These measures will be targeted directly at reducing the NPS pollution activities that prevent State waters from meeting appropriate water quality standards, such as ensuring the water is safe for drinking, fishing, or swimming.

Implementation of MMs can be achieved through the implementation of management practices (MPs). MPs are structural and nonstructural solutions, used singularly or in combination, that are aimed at reducing the input of particular NPS contaminants into surface waters. An example of a structural MP is an infiltration basin (a structure that is built to hold runoff and filter contaminants from that runoff before the water is absorbed into the ground). Nonstructural MPs include buffer strips (areas of natural vegetation) that are left as protection between streams or other surface water bodies and farmlands or construction sites.

B. Development and Use of CAMMPR

CAMMPR is divided into sections for each of the major categories of NPS pollution: (1) agriculture; (2) forestry; (3) urban areas; (4) marinas and recreational boating; (5) hydromodification; and (6) wetlands, riparian areas, and vegetated treatment systems. Each section identifies:

- Individual MMs appropriate for implementation in California;
- The various State and local agencies with authorities and programs to implement and/or enforce each MM;
- State and local backup authorities that can be used to assure implementation when self-determined programs are not followed;
- Program implementation locations; and
- Notes to clarify how the programs operate.

In developing CAMMPR, the Program has emphasized consensus building and flexibility to the extent feasible while also ensuring that California's MMs remain in conformity with federal guidance.

In January 1998, staffs of the State Water Resources Control Board (SWRCB), Regional Water Quality Control Boards (RWQCB), and California Coastal Commission (CCC) began preparing CAMMPR by evaluating the *g-Guidance* MMs for their appropriateness for implementation in California. To assist in this evaluation, the agencies reviewed recommendations made in 1995 by the ten Technical Advisory Committees (TACs) established by the SWRCB to assist in the upgrade of the Program. In March 1998, the staffs completed their initial review and submitted a preliminary draft to USEPA and NOAA for comment. Revisions were subsequently made based on the federal review, and in July 1998, the revised draft of CAMMPR was circulated for review by each State agency that was designated in the document.

CAMMPR retains the original *g-Guidance* MM language for nearly all of California's NPS MMs. Language in the MM has been modified only slightly, and in most cases the modifications have made the MMs more protective of the environment. Other specific changes to the federal guidance were made to reach a total of 61 NPS MMs that will be implemented in California.

- Two agriculture MMs for small and large confined animal facilities were combined into a single MM because California law does not differentiate between small and large animal facilities.
- Additional MMs were added for Forestry (Post-Harvest Evaluation) and Marinas and Recreational Boating (Waste Facilities Management) to address perceived needs.
- Education/Outreach MMs were added to the agriculture, forestry, hydromodification, and wetlands NPS categories to reflect the State's intention to promote public awareness and involvement in controlling NPS pollution. The *g-Guidance* included education MMs for the urban and marinas sectors only. Nearly all of the TACs recommended that public education be enhanced so that individuals can take responsibility and make the cooperative approach to problem solving work.

Not all of the identified MMs may be needed to address the NPSs at a specific site. For example, forestry and construction operations that do not use chemicals would not need to implement chemical-control MMs. Similarly, farms or other agriculture enterprises that do not have animals as part of the enterprise would not need to implement the MMs that address confined animal facilities or grazing. Other operations that have more than one source to address may need to employ two or more measures to address the multiple sources. Application of the measures should be coordinated to produce an overall system that adequately addresses all sources for the site in a cost-effective manner.

000353

In addition, many operations may already be in compliance with the MMs needed to address the associated NPSs. Existing NPS pollution control activities will be recognized and appropriate credit given for practices that are in existence and operational. Existing practices, plans, and systems should be viewed as building blocks for the MMs and may need no additional improvement. For cases where existing source control is inadequate to achieve conformity with the needed MMs, only one or two more practices may need to be added to achieve conformity.

Finding solutions to NPS pollution poses unique challenges. While increased use of regulatory authorities can help to address certain categories of NPS pollution (such as the relatively recent effort to issue permits for the most significant municipal storm water discharges), California will need to rely on a wide range of tools, activities, and authorities to address NPS pollution statewide. In particular, these efforts need to focus on better integration and coordination at the State level and collaborative approaches to establish ongoing community-based stewardship.

Agriculture Management Measures

The SWRCB, CCC, and other State agencies have identified seven management measures (MMs) to address agricultural nonpoint sources of pollution that affect State waters. The agricultural MMs include practices and plans installed under various NPS programs in California, including systems of practices commonly used and recommended by the U.S. Department of Agriculture (USDA) as components of Resource Management Systems (RMS), Water Quality Management Plans and Agricultural Waste Management Systems. These RMSs are planned by individual farmers and ranchers using an objective-driven planning process outlined in the NRCS National Planning Procedures Handbook. The RMSs are designed to achieve sustainable use of the different natural resource areas—Soil, Water, Air, Plants, Animals, and Human considerations.

California's MMs to address agricultural sources of NPS pollution in California:

- 1A. Erosion and Sediment Control
- 1B. Facility Wastewater and Runoff from Confined Animal Facilities
- 1C. Nutrient Management
- 1D. Pesticide Management
- 1E. Grazing Management
- 1F. Irrigation Water Management
- 1G. Education/Outreach

According to the USEPA (1993), agriculture contributes more than half of the pollution entering the Nation's water bodies; recent studies have identified it as the greatest source of water pollution in the United States. The primary agricultural NPS pollutants are nutrients, sediment, animal wastes, pesticides, and salts. Agricultural activities may also affect habitat through physical disturbances caused by livestock or equipment, or through the management of water.

Management Measures:

Erosion and Sediment Control. MM 1A addresses NPS problems associated with soil erosion and sedimentation. Where erosion and sedimentation from agricultural lands affects coastal waters and/or waterbodies listed as impaired by sediment, landowners shall design and install or apply a combination of practices to reduce solids and associated pollutants in runoff during all but the larger storms. Alternatively, landowners may apply the erosion component of an RMS as defined in the NRCS Field Office Technical Guide (FOTG). The NRCS FOTG contains standards and specifications for installing these practices.

Facility Wastewater and Runoff from Confined Animal Facilities. Pursuant to MM 1B, facility wastewater and contaminated runoff from confined animal facilities must be contained at all times. Storage facilities should be of adequate capacity to allow for proper waste water use and should be constructed so they prevent seepage to ground water, and stored runoff and accumulated solids from the facility shall be managed through a waste use system that is consistent with MM 1C or removed from the site.

Nutrient Management. MM 1C addresses the development and implementation of comprehensive nutrient management plans for areas where nutrient runoff is a problem affecting coastal waters and/or water bodies listed as impaired by nutrients. Such plans would include a plant tissue analysis to

determine crop nutrient needs; crop nutrient budget; identification of the types, amounts, and timing of nutrients necessary to produce a crop based on realistic crop yield expectations; identification of hazards to the site and adjacent environment; soil sampling and tests to determine crop nutrient needs; and proper calibration of nutrient equipment. When manure from confined animal facilities is to be used as a soil amendment and/or is disposed of on land, the plan shall discuss steps to assure that subsequent irrigation of that land does not leach excess nutrients to surface or ground water.

Pesticide Management. Implementation of MM 1D is intended to reduce contamination of surface water and ground water from pesticides. Implementation of this measure will primarily occur through cooperation with the Department of Pesticide Regulation as provided in a Management Agency Agreement with the SWRCB. Elements of this measure include development and adoption of reduced risk pest management strategies (including reductions in pesticide use); evaluation of pest, crop, and field factors; use of Integrated Pest Management (IPM); consideration of environmental impacts in choice of pesticides; calibration of equipment; and use of anti-backflow devices. IPM is a key component of pest control. IPM strategies include evaluating pest problems in relation to cropping history and previous pest control measures, and applying pesticides only when an economic benefit will be achieved. When used, pesticides should be selected based on their effectiveness to control target pests and environmental impacts such as their persistence, toxicity, and leaching potential.

Grazing Management. MM 1E is intended to protect sensitive areas (including streambanks, lakes, wetlands, estuaries, and riparian zones) by reducing direct loadings of animal wastes and sediment. This may include restricting or rotationally grazing livestock in sensitive areas by providing fencing, livestock stream crossings, and by locating salt, shade, and alternative drinking sources away from sensitive areas. Upland erosion can be reduced by, among other methods: (1) maintaining the land consistent with the California Rangeland Water Quality Management Plan or Bureau of Land Management and Forest Service activity plans or (2) applying the range and pasture components of a Resource Management System (NRCS FOTG). This may include prescribed grazing, seeding, gully erosion control, such as grade stabilization structures and ponds, and other critical area treatment.

Irrigation Water Management. MM 1F promotes effective irrigation while reducing pollutant delivery to surface and ground waters. Pursuant to this measure, irrigation water would be applied uniformly based on an accurate measurement of cropwater needs and the volume of irrigation water applied, considering limitations raised by such issues as water rights, pollutant concentrations, water delivery restrictions, salt control, wetland, water supply and frost/freeze temperature management. Additional precautions would apply when chemicals are applied through irrigation.

Education/Outreach. The goals of MM 1G are to implement pollution prevention and education programs to reduce NPS pollutants generated from the following activities where applicable:

- a. Activities that cause erosion and loss of sediment on agricultural land and land that is converted from other land uses to agricultural land;
- b. Activities that cause discharge from confined animal facilities to surface waters;
- c. Activities that cause excess delivery of nutrients and/or leaching of nutrients;
- d. Activities that cause contamination of surface water and ground water from pesticides;
- e. Grazing activities that cause physical disturbance to sensitive areas and the discharge of sediment, animal waste, nutrients, and chemicals to surface and ground waters;
- f. Irrigation activities that cause NPS pollution of surface waters.

Management Measure 1A Erosion and Sediment Control Management Measure

Apply the erosion component of a CMS as defined in the Field Office Technical Guide of the U.S. Department of Agriculture – Natural Resources Conservation Service (NRCS) to minimize the delivery of sediment from agricultural lands to surface waters, or Design and install a combination of management and physical practices to settle the settleable solids and associated pollutants in runoff delivered from the contributing area for storms of up to a 25-year, 24-hour frequency.

Management Measure (MM) IC Nutrient Management Measure

Develop, implement, and periodically update a nutrient management plan to: (1) apply nutrients at rates necessary to achieve realistic crop yields, (2) improve the timing of nutrient application, and (3) use agronomic crop production technology to increase nutrient use efficiency. When the source of the nutrients is other than commercial fertilizer, determine the nutrient value and the rate of availability of the nutrients. Determine and credit the nitrogen contribution of any legume crop. Soil and plant tissue testing should be used routinely. Nutrient management plans contain the following core components:

- Management Measure Component (1): Farm and field maps showing acreage, crops, soils, and water bodies.
- Management Measure Component (2): Realistic yield expectations for the crop(s) to be grown, based primarily on the producer's actual yield history, State Land Grant University yield expectations for the soil series, or NRCS Soils-5 information for the soil series.
- Management Measure Component (3): A summary of the nutrient resources available to the producer, which at a minimum include: (a) soil test results for pH, phosphorus, nitrogen and potassium; (b) nutrient analysis of manure, sludge, mortality compost (birds, pigs, etc.), or effluent (if applicable); (c) nitrogen contribution to the soil from legumes grown in the rotation (if applicable); and (d) other significant nutrient sources (e.g., irrigation water).
- Management Measure Component (4): An evaluation of field limitations based on environmental hazards or concerns such as: (a) sinkholes, shallow soils over fractured bedrock, and soils with high leaching potential, (b) lands near surface water, (c) highly erodible soils, and (d) shallow aquifers.
- Management Measure Component (5): Use of the limiting nutrient concept to establish the mix of nutrient sources and requirements for the crop based on a realistic yield expectation.

Management Measure 1E Grazing Management Measure

Protect range, pasture and other grazing lands:

MM Component (1): By implementing one or more of the following to protect sensitive areas (such as streambanks, wetlands, estuaries, ponds, lake shores, and riparian zones): (a) exclude livestock, (b) provide stream crossings or hardened watering access for drinking, (c) provide alternative drinking water locations away from surface waters. (d) locate salt and additional shade, if needed, away from sensitive areas, or (e) use improved grazing management (e.g., herding) to reduce the physical disturbance and reduce direct loading of animal waste and sediment caused by livestock; and

MM Component (2): By achieving either of the following on all range, pasture, and other grazing lands not addressed under (1) above: (a) implement the range and pasture components of a CMS as defined in the Field Office Technical Guide of the USDA-NRCS by applying the progressive planning approach of the USDA-NRCS to reduce erosion, or (b) maintain range, pasture, and other grazing lands in accordance with activity plans established by either the Bureau of Land Management of the U.S. Department of the Interior or the Forest Service of USDA or the California Rangeland Water Quality Management Plan.

Management Measure 1F Irrigation Water Management

To reduce nonpoint source pollution of surface and ground waters caused by irrigation:

Management Measure Component (1): Operate the irrigation system so that the timing and amount of irrigation water applied match crop water needs. This will require, as a minimum: (a) the accurate measurement of soil-water depletion volume and the volume of irrigation water applied, and (b) uniform application of water. *

* The following limitations and special conditions apply:

- (1) In some locations, irrigation return flows are subject to other water rights or are required to maintain stream flows. In these special cases, on-site reuse could be precluded and would not be considered part of the management measure for such locations.
- (2) By increasing the water use efficiency, the discharge volume from the system will usually be reduced. While the total pollutant discharge load may be reduced somewhat, there is the potential for an increase in the concentration of pollutants in the discharge. In these special cases, where other management measures (nutrients and pesticides) do not reduce concentrations in the discharge, increasing water use efficiency would not be considered part of the management measure.
- (3) In some irrigation districts, the time interval between the order for the delivery of irrigation water to the farm may limit the irrigator's ability to achieve the maximum on-farm application efficiencies that are otherwise possible.
- (4) In some locations, leaching is necessary to control salt in the soil profile. Leaching for salt control should be limited to the leaching requirement for the root zone.
- (5) Where leakage from delivery systems or return flows supports wetlands or wildlife refuges, it may be preferable to modify the system to achieve a high level of efficiency and then divert the "saved water" to the wetland or wildlife refuge. This will improve the quality of water delivered to wetlands or wildlife refuges by preventing the introduction of pollutants from irrigated lands to such diverted water.
- (6) In some locations, sprinkler irrigation is used for frost or freeze protection, or for crop cooling. In these special cases, applications should be limited to the amount necessary for crop protection and applied water should remain on-site.

Management Measure 1G Education/Outreach

Implement educational programs to provide greater understanding of watersheds, and to raise awareness and increase the use of applicable agricultural management measures and practices where needed to control and prevent adverse impacts to surface and ground water. Public education, outreach, and training programs should involve applicable user groups and the community.

[Refer to the Agriculture Management Measures 1A – 1F listed in this document.]

Forestry (Silviculture) Management Measures

The SWRCB, CCC, and other State agencies have identified 12 MMs to address various phases of forestry operations relevant to controlling nonpoint sources of pollution that affect State waters. The forestry MMs are for the most part a system of practices used and

recommended by the Board of Forestry and Department of Forestry and Fire Protection in rules or guidance.

On a national level, silviculture contributes approximately 3 to 9% of NPS pollution to the Nation's waters (USEPA, 1992a). Without adequate controls, forestry operations may degrade the characteristics of waters that receive drainage from forest lands. For example (1) sediment concentrations can increase due to accelerated erosion, (2) water temperatures can increase due to removal of overstory riparian shade, (3) dissolved oxygen can be depleted due to the accumulation of slash and other organic debris, and (4) concentrations of organic and inorganic chemicals can increase due to harvesting and fertilizers and pesticides.

California's MMs to address silvicultural sources of nonpoint pollution:

- 2A. Preharvest Planning
- 2B. Streamside Management Areas
- 2C. Road Construction/Reconstruction
- 2D. Road Management
- 2E. Timber Harvesting
- 2F. Site Preparation/Forest Regeneration
- 2G. Fire Management
- 2H. Revegetation of Disturbed Areas
- 2I. Forest Chemical Management
- 2J. Wetlands Forest
- 2K. Postharvest Evaluation
- 2L. Education/Outreach

Management Measures:

Preharvest Planning. Pursuant to MM 2A, silvicultural activities shall be planned to reduce potential delivery of pollutants to surface waters. Components of MM 2A address aspects of forestry operations, including: the timing, location and design of harvesting and road construction; site preparation; identification of sensitive or high-erosion risk areas; and the potential for cumulative water quality impacts.

Streamside Management Areas (SMAs). SMAs protect against soil disturbance and reduce sediment and nutrient delivery to waters from upland activities. MM 2B is intended to safeguard vegetated buffer areas along surface waters to protect the water quality of adjacent streams.

Road Construction/Reconstruction. Pursuant to MM 2C, road construction/reconstruction shall be conducted so as to reduce sediment generation and delivery. This can be accomplished by, among other means, following preharvest plan layouts and designs for road systems, incorporating adequate drainage structures, properly installing stream crossings, avoiding road construction in SMAs, removing debris from streams, and stabilizing areas of disturbed soil such as road fills.

Road Management. MM 2D describes how to manage roads to prevent sedimentation, minimize erosion, maintain stability, and reduce the risk that drainage structures and stream crossings will fail or become less effective. Components of this measure include inspections and maintenance actions to prevent erosion of road surfaces and to ensure the effectiveness of stream-crossing structures. The also addresses appropriate methods for closing roads that are no longer in use.

Timber Harvesting. MM 2E addresses skidtrail location and drainage, management of debris and petroleum, and proper harvesting in SMAs. Timber harvesting practices that protect water quality and soil productivity also have economic benefits by reducing the length of roads and skidtrails, reducing equipment and road maintenance costs, and providing better road protection.

Site Preparation & Forest Regeneration. Impacts of mechanical site preparation and regeneration operations—particularly in areas that have steep slopes or highly erodible soils, or where the site is located in close proximity to a waterbody—can be reduced by confining runoff onsite. MM 2F addresses keeping slash material out of drainageways, operating machinery on contours, timing of activities, and protecting ground cover in ephemeral drainage areas and SMAs. Careful regeneration of harvested forest lands is important in protecting water quality from disturbed soils.

Fire Management. Prescribed fire practices for site preparation and methods to suppress wildfires should as feasible be conducted in a manner that limits loss of soil organic matter and litter and that reduces the potential for runoff and erosion. Prescribed fires on steep slopes or adjacent to streams and that remove forest litter down to mineral soil are most likely to impact water quality.

Revegetation of Disturbed Areas. MM 2H addresses the rapid revegetation of areas disturbed during timber harvesting and road construction—particularly areas within harvest units or road systems where mineral soil is exposed or agitated (e.g., road cuts, fill slopes, landing surfaces, cable corridors, or skidtrails) with special priority for SMAs and steep slopes near drainageways.

Forest Chemical Management. Application of pesticides, fertilizers, and other chemicals used in forest management should not lead to surface water contamination. Pesticides must be properly mixed, transported, loaded, and applied, and their containers disposed of properly. Fertilizers must also be properly handled and applied since they also may be toxic depending on concentration and exposure. Components of MM 2I include applications by skilled workers according to label instructions, careful prescription of the type and amount of chemical to be applied, use of buffer areas for surface waters to prevent direct application or deposition, and spill contingency planning.

Wetland Forest Management. Forested wetlands provide many beneficial water quality functions and provide habitat for aquatic life. Activities in wetland forests shall be conducted to protect the aquatic functions of forested wetlands.

Postharvest Evaluation. The goals of MM 2K are to incorporate postharvest monitoring, including: a) implementation monitoring to determine if the operation was conducted according to specifications, and b) effectiveness monitoring after at least one winter period to determine if the specified operation prevented or minimized discharges.

Education/Outreach. The goals of MM 2L are to implement pollution prevention and education programs to reduce NPS pollutants generated from applicable silvicultural activities.

2. FORESTRY

Management Measure 2A Preharvest Planning
Component I. Perform advance planning for forest harvesting that includes the following elements where appropriate:

Agency	Authority	Programs	Implementation Location	Notes
Board of Forestry (BOF)/ California Department of Forestry and Fire Protection (CDF)	Forest Practice Act (Z'Berg/Nejedly) (FPA) ¹ ; Forest Practice Rules (FPRs) ²	CDF Resource Management Program, Forest Practice Regulation	Statewide--Non-federal lands	¹ FPA is in PRC, Division 4, Chapter 8, § 4511 <i>et seq.</i> ² FPRs are in Title 14, CCR, § 895 <i>et seq.</i> The authorities set forth on this page are the general informational requirements for each program document. On subsequent pages, more specific informational requirement authorities are given. These general requirements are not repeated, even where they specify relevant information.
	FPA 4551.3; FPR 1091.4-1091.7	Sustained Yield Plan	Same as above	Tiered landscape-scale option available to industrial timberland owners; may reduce issues to be addressed in subordinate Timber Harvesting Plans (THPs).
	FPA 4581, 4582; FPR 898, 1034	THP	Same as above	Required for all commercial timber harvesting not otherwise exempt.
	FPA 4581, 4582; FPR 1051.1	Modified THP (MTHP)	Same as above	Option for small low-impact operations meeting specified criteria
	FPA 4581, 4582; FPR 1092.9	Program THP (PTHP)	Same as above	THP tiered to a Program Timberland Environmental Impact Report (EIR). FPR 1092 requires that PTHPs comply with most operational and some informational requirements for THPs.
	FPA 4593.3, 4594; FPR 1090.5, 1090.7	Nonindustrial Timber Management Plan (NTMP) and Notice	Same as above	Option for uneven-age silviculture on nonindustrial parcels smaller than 2,500 acres. FPR 1090 requires that NTMPs comply with most operational and some informational requirements for THPs.
	FPR 921.1 (b)	THP	Coastal Zone Special Treatment Areas (CZSTA)	THP requirements are somewhat different and more stringent in Special Treatment Areas designated by CCC
	FPA 4516.5; 4516.8; FPR 927.2 4584	THP Exemption	Marin Co.	These counties have slightly different planning requirements.

Agency	Authority	Programs	Implementation Location	Notes
	Element (1): Identify (a) the area to be harvested including location of waterbodies and sensitive areas such as wetlands, threatened or endangered aquatic species habitat areas, or high-erosion-hazard areas (landslide-prone areas) within the harvest unit, and (b) the hydrologic unit where the project is located and name the waterbodies the project is tributary to.

	Same as above, plus FPR 921.3(c); 921.5(c); 961.3(b); 961.5(f)	Same as above	Santa Clara, Santa Cruz, Monterey Co.	
	Same as above, plus FPR 921.3(c); 921.5(c); 961.3(b); 961.5(f)	Same as above	CZSTA	
	Element (3): Consider potential water quality impacts and erosion and sedimentation control in the selection of silviculture and regeneration systems, especially for harvesting and site preparation.			
BOF/CDF	FPA 4551.5, 4551.7, 4562.5; FPR 895.1; 912.9, Tech. Rule Addendum #2; 913.1(a); 913.4(a), (b); 913.6(b); 914; 914.7; 915; 915.3; 915.4; 917.3(d), (e)	THP, MTHP, PTHP, NTMP	Statewide	
	Same as above, plus FPR 954.4	Same as above	Southern District	
	Same as above, plus FPR 921.3(c)	Same as above	CZSTA	
	Same as above, plus FPR 913.8(b)	Same as above	Southern subdistrict of Coast District	
	Same as above, plus FPR 927.12(a)	Same as above	Marin Co.	

Agency	Authority	Programs	Implementation Location	Notes
BOF/CDF	Element (4): Reduce the risk of occurrence of landslides and severe erosion by identifying high-erosion-hazard areas and avoiding timber operations where they may exacerbate risk. Same as component I, plus FPR 912.5, Tech Rule Addendum #1; 912.9, Tech Rule Addendum #2; 913.1(a), 914.2(d), (f), 914.6(c), 914.7, 916.4(a) Same as above, plus FPR 921.1(a), 921.5(a), (b), 961.5(d) Same as above, plus FPR 913.8(b)	THP, MTHP, PTHP, NTMP Same as above Same as above	Statewide CZSTA Southern Subdistrict of Coast District	
BOF/CDF	Element (5): Consider cumulative effects from timber operations or roads to any known existing water quality impairments or problems in watersheds. Same as component; FPR 898; 912.9, Tech. Rule Addendum #2	THP	Statewide	

Management Measure 2A Preharvest Planning				
Component 2. Perform advance planning for forest road systems that includes the following elements where appropriate: Element (1): Locate and design road systems to minimize, potential sediment generation and delivery to surface waters. Key components are: (a) locate roads, and skid trails to avoid steep grades and steep or unstable hillslope areas, and to decrease the number of stream crossings; (b) avoid to the extent practicable locating new roads and landings in SMAs; and (c) determine road usage and select the appropriate road standard.				
BOF/CDF	FPA 4562.7; 4582; 4593.3(b) FPR 895.1; 914; 914.2; 914.8; 916.3(c); 916.4(a), (d); 923; 923.1; 923.2(v); 923.3; 923.5(a), (b), (d) Same as above, plus FPR 921.1(b); 921.5(a), (b), (c), (d); 961.5 Same as above, plus FPR 926.16 Same as above, plus 927.2(e); 965.1 FPR 1091.6(c)	THP, MTHP, PTHP, NTMP Same as above Same as above Same as above SYP	Statewide CZSTA Santa Cruz Co Marin, Monterey Co. Statewide	
BOF/CDF	FPA 4562.7(b), (f) FPR 895.1; 914.8; 916.3(c); 916.4(c), (d); 923.2(e); 923.3(a), (c), (e) FPR 926.16	THP, MTHP, PTHP, NTMP Same as above	Statewide Santa Cruz Co.	Element (2): Locate and design temporary and permanent stream crossings to prevent failure and control impacts from the road system. Key components are: (a) size, design and site crossing structures to prevent failure and minimize diversion potential; (b) for fish-bearing streams, design crossings to facilitate fish passage.
BOF/CDF	FPR 914.6(c); 923(c), (f); 923.1(d), (f), (g); 923.2	THP, MTHP, PTHP, NTMP Same as above Same as above	Statewide CZSTA Marin Co	Element (3): Ensure that the design of road prism and the road surface drainage is appropriate to the terrain and that road surface design is consistent with the road drainage structures.
BOF/CDF	FPR 895.1; 923.1(a), 923.2(f); 923.4(h)	THP, MTHP, PTHP, NTMP	Statewide	Element (4): Use suitable materials for surface roads planned for all-weather use to support truck traffic.

Element (5): Design road systems to avoid high erosion or landslide hazard areas. Identify these areas and consult a qualified specialist for design of any roads that must be constructed through these areas.

BOF/CDF	FPR 898.1(b); 912.5, Tech. Rule Addendum #1; 914.2(d); 923(c), (d), (f), (g); 923.1(c), (d)	THP, MTHP, PTHP, NTMP	Statewide

Management Measure 2D: Road Management				
Agency	Authority	Programs	Implementation Location	Notes
Component (1): Avoid using roads for timber hauling or heavy traffic during wet or thaw periods on roads not designed and constructed for these conditions.				
BOF/CDF	FPR 923.2(g); 923.4(o); 923.6	THP, MTHP, PTHP, NTMP	Statewide	
Component (2): Evaluate the future needs for a road and close roads that will not be needed. Leave closed roads and drainage channels in a stable condition to withstand storms.				
BOF/CDF	FPR 923; 923.4(a), (b), (g); 923.8	Same as above	Statewide	
	FPR 926.17	THP, MTHP, PTHP, NTMP	Santa Cruz Co	
Component (3): Remove drainage crossings and culverts if there is a reasonable risk of plugging or failure from lack of maintenance.				
BOF/CDF	FPR 923.2(i); 923.4(d), (f), (l), (m); 923.8(e)	Same as above	Same as above	
Component (4): Following completion of harvesting, close and stabilize temporary spur roads and seasonal roads to control and direct water away from the roadway. Remove all temporary stream crossings.				
BOF/CDF	FPR 923.3(d); 923.4(b), (f), (g); 923.8	THP, MTHP, PTHP, NTMP	Statewide	
	FPR 926.19; 965.9	Same as above	Santa Cruz/Monterey Co	
Component (5): Inspect roads to determine the need for structural maintenance. Conduct maintenance practices, when conditions warrant, including cleaning and replacement of deteriorated structures and erosion controls, grading or seeding of road surfaces, and, in extreme cases, slope stabilization or removal of road fills where necessary to maintain structural integrity.				
BOF/CDF	FPR 923; 923.4(all); 923.8 PRC 4562.9	Same as above	Same as above	
Component (6): Conduct maintenance activities, such as dust abatement, so that contaminants or pollutants are not introduced into surface waters.				
BOF/CDF	FPR 916.3; 923; 923.4(h)	Same as above	Same as above	
Component (7): Properly maintain permanent stream crossings and associated fills and approaches to reduce the likelihood (a) that stream overflow will divert onto roads, and (b) that fill erosion will occur if the drainage structures become obstructed.				
BOF/CDF	FPR 923.2(h); 923.3(e); 923.4(n)	Same as above	Same as above	
The following are BACKUP AUTHORITIES that pertain to the Road Management Measure.

Management Measure 2E Timber Harvesting				
The timber harvesting management measure consists of implementing the following:				
Agency	Authority	Programs	Implementation Location	Notes
Component 1. General				
Element (1): Timber harvesting operations with skid trails or cable yarding follow layouts determined under Management Measure 2A.				
BOF/CDF	FPA 4562.7; FPR 914.2(f); 914.3(e); 916.3(c); 916.4(d), (e)	THP, MTHP, PTHP, NTMP	Statewide	
	Same as above, plus FPR 921.1(a)	Same as above	CZSTA	
	FPA 4516.5(a); FPR 925.5; 926.16; 927.3; 928.3	Same as above	Santa Clara, Santa Cruz, Marin, San Mateo Co	
Element (2): Install landing drainage structures to minimize erosion and prevent sedimentation.				
BOF/CDF	FPR 923.1(d), (f); 923.5(f)	THP, MTHP, PTHP, NTMP	Statewide	
Element (3): Construct landings away from steep slopes and reduce the likelihood of fill slope failures. Protect landing surfaces used during wet periods. Locate landings outside SMAs.				
BOF/CDF	FPR 914.2(d), (f); 914.7; 916.3(c); 916.4(c), (d), (e); 923; 923.1(c), (d); 923.4(h), (i), 923.5(a), (b), (c), (f), (g); 923.6	THP, MTHP, PTHP, NTMP	Statewide	
Element (4): Protect stream channels and significant ephemeral drainages from logging debris and slash material.				
BOF/CDF	FPR 914.1(a), (c); 914.2(e); 916.3(a), (b) 916.4(c)	THP, MTHP, PTHP, NTMP	Statewide	
Element (5): Use appropriate areas for petroleum storage, equipment maintenance and service. Establish procedures to contain and treat spills. Recycle or properly dispose of all waste materials.				
BOF/CDF	FPR 914.5	THP, MTHP, PTHP, NTMP	Same as above	
Component 2. For cable yarding:				
Element (1): Limit yarding corridor gouge or soil plowing by properly locating cable yarding landings.				
BOF/CDF	FPR 914.3(a), (d); 923(c)	THP, MTHP, PTHP, NTMP	Statewide	
Element (2): Locate corridors for SMAs following Management Measure 2B.				
BOF/CDF	Same as above	THP, MTHP, PTHP, NTMP	Statewide	

Component 3. For groundskidding:
Element (1): Within SMAs, operate groundskidding equipment only at stream crossings. In SMAs, fell and endline trees to avoid sedimentation and damage to residual vegetation.

Agency	Authority	Program	Implementation Location	Notes
BOF/CDF	FPR 914; 914.1(a), (c); 914.2(a); 916.3(c), (e); 916.4(c), (d), (e), (f)	THP, MTHP, PTHP, NTMP	Statewide	
Element (2): Use improved stream crossings for skid trails which cross flowing drainages. Construct skid trails to disperse runoff and with adequate drainage structures.				
BOF/CDF	FPR 914; 914.2(a), (i); 914.6 (c), (e), (f); 914.8(b); 916.3(c); 916.4(d), (f)	THP, MTHP, PTHP, NTMP	Statewide	
Element (3): On steep slopes, use cable systems rather than groundskidding where groundskidding may cause excessive erosion.				
BOF/CDF	FPR 914.2(b), (f); 914.3(e)	THP, MTHP, PTHP, NTMP	Statewide	
	FPR 921.5(a)	Same as above	CZSTA	

The following are BACKUP AUTHORITIES that pertain to the Timber Harvesting Management Measure.

Agency	Authority	Programs	Implementation Location	Notes
Local governments	PZL (Gov. Code §§65000 et seq.) and CCA §30500	<ul style="list-style-type: none"> • General Plans/GP updates • LCPs/LCP amendments • Permits pursuant to above • Enforcement 	Statewide (LCP policies/ordinances apply in coastal zone)	Local governments adopt ordinances and rules and make land-use decisions consistent with State law.

DPR	Div. I, Chapter 1.25, Div. V, PRC §5000 et seq.		SPS	DPR operates and maintains units of the SPS in forested areas.

Management Measure 2F Site Preparation and Forest Regeneration				
Confine on-site potential NPS pollution and erosion resulting from site preparation and the regeneration of forest stands. The components of the management measure for site preparation and regeneration are:				
Agency	Authority	Programs	Implementation Location	Notes
Component (1): Select a method of site preparation and regeneration suitable for the site conditions.				
BOF/CDF	FPA 4551.5, 4551.7, 4562.5; FPR 895.1; 914, 914.2(d), (e), (f), (i), 915, 915.1(a); 915.2; 915.3.	THP, PTHP, NTMP	Statewide	Site preparation using fire is addressed in MM 2.0 G. CA has extensive restocking requirements not included in MMs.
BOF/CDF	Same as above, plus FPR 914.2(k), 954.4	Same as above	Southern District	
BOF/CDF	Same as above, plus FPR 921.3(b), (c)	Same as above	CZSTA	
BOF/CDF	Same as above, plus FPR 913.8(b)	Same as above	Southern subdistrict of Coast District	
BOF/CDF	Same as above, plus FPR 927.9	Same as above	Marin Co.	
Component (2): Conduct mechanical tree planting and ground-disturbing site preparation activities on the contour of sloping terrain.				
BOF/CDF				CA has no equivalent requirement
Component (3): Do not conduct mechanical site preparation and mechanical tree planting on streamside management areas.				
OF/CDF	FPR 915.3(a), 916.4(c), (d)	THP, PTHP, NTMP	Statewide	
Component (4): Protect surface waters from logging debris and slash material.				
BOF/CDF	FPR 914; 914.2(e), (f), (i); 915; 915.3(a); 916.3(a), (b)	THP, MTHP, PTHP, NTMP	Statewide	
Component (5): Suspend operations during wet periods.				
BOF/CDF	FPR 914.7; 915.1(b)	THP, PTHP, NTMP	Statewide	
Component (6): Locate windrows at a safe distance from drainages and SMAs to control movement of the material during high runoff conditions.				
BOF/CDF	FPR 914.2 (e); 915.3(a)	THP, MTHP, PTHP, NTMP	Statewide	
Component (7): Conduct bedding operations in high-water-table areas during dry periods of the year. Conduct bedding in sloping areas on the contour.				
BOF/CDF	FPR 915; 915.3(a), 916.3(d); 916.4(c), (d)	THP, PTHP, NTMP	Statewide	
Component (8): Protect small ephemeral drainages when conducting mechanical tree planting.				
BOF/CDF	FPR 915; 915.3(a); 916.4(c), (d)	THP, PTHP, NTMP	Statewide	

The following are BACKUP AUTHORITIES that pertain to the Site Preparation and Forest Regeneration Management Measure

DPR	Div. I, Chapter 1.25, Div. V, PRC §5000 et seq.		SPS	DPR operates and maintains units of the SPS in forested areas.

Management Measure 2G Fire Management

Prescribe fire for site preparation and control or suppress wildfire in a manner which reduces potential nonpoint source pollution of surface waters.
 Component (1): Intense prescribed fire should not cause excessive erosion due to the combined effect of removal of canopy species and the loss of soil-binding ability of subcanopy and herbaceous vegetation roots, especially in SMAs, in streamside vegetation for small ephemeral drainages, or on very steep slopes.

Agency	Authority	Programs	Implementation Location	Notes
BOF/CDF	FPA 4551.5, 4551.7; FPR 895.1; 915.2(a), (b); 915.3(a); 916.4(b); 916.5(e); 917.3(d); 937.3(c); 957.3(c)	THP, PTHP, NTMP	Statewide	CA has extensive logging-related fire hazard reduction requirements not in MMs.
	Same as above, plus FPR 921.6(b); 961.6	Same as above	CZSTA	
	Same as above, plus FPA, 4527, 4562; FPR 927.12(a)	Same as above	Marin Co.	
Component (2): Prescriptions for prescribed fire should protect against excessive erosion or prevent sedimentation.				
BOF/CDF	PRC 4423; FPR 915.2; 917.3; 937.3; 957.3	THP, MTHP, PTHP, NTMP	Statewide	
	FPR 917.4(d)	Same as above	Southern Subdistrict of Coast District	
	FPR 957.4(d)	Same as above	High Use Subdistrict of Southern District	
Component (3): All bladed firelines, for prescribed fire and wildfire, should be plowed on contour or stabilized with water bars and/or other appropriate techniques if needed to control excessive sedimentation or erosion of the fireline.				
BOF/CDF	FPR 914; 914.6(c), (e), (g), (h); 915.1	THP, MTHP, PTHP, NTMP	Statewide	
Component (4): Rehabilitation and salvage logging areas burned by wildfires should be managed to minimize erosion and prevent sedimentation.				
BOF/CDF		CDF Fire Protection Program	Statewide	CA has no BMPs for wildfire suppression as this is an emergency situation, not a land use.

The following are BACKUP AUTHORITIES that pertain to the Fire Management Measure.

Agency	Authority	Programs	Implementation Location	Notes

Management Measure 2L Education/Outreach

Implement educational programs to provide greater understanding of watersheds, and to raise awareness and increase the use of applicable forestry management measures and practices where needed to control and prevent adverse impacts to surface and ground water. Public education, outreach, and training programs should involve applicable user groups and the community.

[Refer to the Forestry Management Measures 2A – 2K listed in this document.]

Agency	Authority	Programs	Implementation Location	Notes

Urban Management Measures

The SWRCB, CCC, and other State agencies have identified 15 MMs to address urban nonpoint sources of pollution that affect State waters. With approximately 80% of the nation's population living in coastal areas, controlling polluted runoff in urban areas is a challenge. Negative impacts of urbanization on coastal and estuarine waters are well documented in a number of sources, including California's CWA §305(b) and §319 reports and the Nationwide Urban Runoff Program.

Major pollutants found in runoff from urban areas include sediment, nutrients, oxygen-demanding substances, road salts, heavy metals, petroleum hydrocarbons, pathogenic bacteria, and viruses. Suspended sediments constitute the largest mass of pollutant loadings to receiving waters from urban areas. Construction is a major source of sediment erosion. Petroleum hydrocarbons result mostly from automobile sources. Nutrient and bacterial sources include garden fertilizers, leaves, grass clippings, pet wastes, and faulty septic tanks. As population densities increase, a corresponding increase occurs in pollutant loadings generated from human activities. Many of these pollutants enter surface waters via runoff without undergoing treatment.

California's MMs to address urban sources of nonpoint pollution:

3.1 Runoff from Developing Areas

- A. Watershed Protection
- B. Site Development
- C. New Development

3.2 Runoff from Construction Sites

- A. Construction Site Erosion and Sediment Control

- E. Operation and Maintenance
- F. Road, Highway, and Bridge Runoff Systems

3.6 Education/Outreach

- A. Pollution Prevention/Education: General Sources

Urban runoff management requires that several objectives be pursued simultaneously. These objectives include the following (American Public Works Association, 1981):

- Protection and restoration of surface waters by the minimization of pollutant loadings and negative impacts resulting from urbanization;
- Protection of environmental quality and social well-being;
- Protection of natural resources, e.g., wetlands and other important aquatic and terrestrial ecosystems;
- Minimization of soil erosion and sedimentation problems;
- Maintenance of the predevelopment hydrologic conditions;

- Protection of ground-water resources;
- Control and management of runoff to reduce or prevent flooding; and
- Management of aquatic and riparian resources for active and passive pollution control.

Management Measures:

The control of urban NPS pollution requires the use of two primary strategies: the prevention of pollutant loadings and the treatment of unavoidable loadings. California's urban management measures are organized to parallel the land use development process in order to address the prevention and treatment of NPS pollution loadings during all phases of urbanization; this strategy relies primarily on the watershed approach, which focuses on pollution prevention or source reduction practices. Emphasizing pollution prevention and source reduction practices over treatment practices is favored because conducting education practices and incorporating pollution prevention practices into project planning and design activities are generally more effective, require less maintenance, and are more cost-effective in the long term than treatment strategies. Treatment strategies should only be used to address unavoidable loadings or where they are truly cost-effective.

The major opportunities to control NPS loadings occur during the following three stages of development: (1) the siting and design phase, (2) the construction phase, and (3) the post-development phase. Before development occurs, land in a watershed is available for a number of pollution prevention and treatment options, such as setbacks, buffers, or open space requirements, as well as wet ponds or constructed urban runoff wetlands that can provide treatment of the inevitable runoff and associated pollutants. In addition, siting requirements and restrictions and other land use ordinances, which can be highly effective, are more easily implemented during this period. After development occurs, these options may no longer be practicable or cost-effective. MMs 3.1A through 3.1C address the strategies and practices that can be used during the initial phase of the urbanization process.

The control of construction-related sediment loadings is critical to maintaining water quality. The implementation of proper erosion and sediment control practices during the construction stage can significantly reduce sediment loadings to surface waters. MMs 3.2A and 3.2B address construction-related practices.

After development has occurred, lack of available land severely limits the implementation of cost-effective treatment options. MM 3.6A focuses on improving controls for existing surface water runoff through pollution prevention to mitigate nonpoint sources of pollution generated from ongoing domestic and commercial activities.

3.6 Education/Outreach

- A. Pollution Prevention/Education: General Sources

Urban Management Measure 3.1A — Watershed Protection¹

Develop a watershed protection program to:

1. Avoid conversion, to the extent practicable, of areas that are particularly susceptible to erosion and sediment loss;
2. Preserve areas that provide important water quality benefits and/or are necessary to maintain riparian and aquatic biota;
3. —Protect to the extent practicable the natural integrity of water bodies and natural drainage systems associated with site development—including roads, highways, and bridges;
4. Limit increases of percent impervious surfaces; and
5. Provide education and outreach to address sources or nonpoint pollution.

¹ Sound watershed management requires that both structural and nonstructural measures be employed to mitigate the adverse impacts of storm water. Nonstructural Management Measures 3.1A (Watershed Protection) and 3.1B (Site Development) can be effectively used in conjunction with Management Measure 3.1C (New Development) to reduce both the short- and long-term costs of meeting the treatment goals of this management measure.

Regional Authorities (e.g., ABAG, AMBAG, SCAG, SANDAG)	CWA § 208	Areawide water quality control plans	Regionally	Regional authorities conduct areawide water quality control efforts. Though dated, § 208 plans can provide a starting point for identifying problems in specific watersheds.

Urban Management Measure 3.1B — Site Development

Plan, design, and develop sites to:

1. Protect areas that provide important water quality benefits, necessary to main riparian and aquatic biota, and/or are particularly susceptible to erosion and sediment loss;
2. Limit increases of impervious areas;
3. Limit land disturbance activities such as clearing and grading, and cut-and-fill to reduce erosion and sediment loss; and
4. Limit disturbance of natural drainage features and vegetation.

Urban Management Measure 3.1C — New Development

Part (1): By design or performance:

- (a) After construction has been completed and the site is permanently stabilized, reduce the average annual TSS loadings by 80% (for the purposes of this measure, an 80% TSS reduction is to be determined on an average annual basis); or
- (b) Reduce the post-development loadings of TSS so that the average annual TSS loadings are no greater than pre-development loadings.

Part (2): To the extent practicable, maintain post-development peak runoff rate and average volume at levels that are similar to pre-development levels.

Urban Management Measure 3.3A — Existing Development

Develop and implement watershed management programs to reduce runoff pollutant concentrations and volumes from existing development:

1. Identify priority local and/or regional watershed pollutant reduction opportunities (e.g., improve existing urban runoff control structures);
2. Specify a schedule for implementing appropriate controls;
3. Limit destruction of natural conveyance systems; and
4. Where appropriate, preserve, enhance, or establish buffers along surface water bodies and their tributaries.

Urban Management Measure 3.4A — New Onsite Disposal Systems (OSDSs)

- Part (1):** Ensure that new OSDS are located, designed, installed, operated, inspected, and maintained to prevent the discharge of pollutants to the surface of the ground and to the extent practicable reduce the discharge of pollutants into ground water. Where necessary to meet these objectives: (a) discourage the installation of garbage disposals to reduce hydraulic and nutrient loadings; (b) install low-volume plumbing fixtures in new developments or redevelopments as required by State law; and (c) encourage installation of low-volume plumbing fixtures in existing developments. Implement OSDS inspection schedules for pre-construction, construction, and post-construction.
- Part (2):** Direct placement of OSDS away from unsuitable areas. Where OSDS placement away from unsuitable areas is not practicable, ensure that the OSDS is designed or sited at a density so as not to adversely affect surface waters or ground water. Unsuitable sites include, but are not limited to, areas (a) with poorly or excessively drained soils; (b) with shallow water tables or high seasonal water tables; (c) within floodplains; or (d) where nutrient and/or pathogen concentrations in the effluent cannot be sufficiently treated or reduced before the effluent reaches sensitive water bodies.
- Part (3):** Establish protective setbacks from surface waters, wetlands, and floodplains for conventional as well as alternative OSDS. The lateral setbacks should be based on soil type, slope, hydrologic factors, and type of OSDS. Where uniform protective setbacks can not be achieved, site development with OSDS so as not to adversely affect water bodies and/or contribute to a public health nuisance.
- Part (4):** Establish protective separation distances between OSDS system components and groundwater. The separation distances should be based on soil type, distance to ground water, hydrologic factors, and type of OSDS.
- Part (5):** Where conditions indicate that nitrogen-limited surface waters may be adversely affected by excess nitrogen loadings from ground water, prohibit the installation of OSDSs or require the installation of OSDS that reduce total nitrogen loadings to meet water quality objectives.

Urban Management Measure 3.4B — Operating Onsite Disposal Systems (OSDSs)

Part (1): Establish and implement policies and systems to ensure that existing OSDSs are operated and maintained to prevent the discharge of pollutants to the surface of the ground and, to the extent practicable, reduce the discharge of pollutants into ground water. Where necessary to meet these objectives, encourage the reduced use of garbage disposals, encourage the use of low-volume plumbing fixtures, and reduce total phosphorus loadings to the OSDS by 15 % (if the use of low-level phosphate detergents has not been required or widely adopted by OSDS users). Establish and implement policies that require an OSDS to be repaired, replaced, or modified where the OSDS fails or threatens or impairs surface waters.

Part (2): Inspect OSDSs at a frequency adequate to ascertain whether the OSDSs are failing.

Part (3): Consider replacing or upgrading OSDS to treat influent so that total nitrogen loadings in the effluent are reduced to meet water quality objectives. This provision applies only where: (a) conditions indicate that nitrogen-limited surface waters may be adversely affected by significant ground water nitrogen loadings from an OSDS, and (b) nitrogen loadings from OSDS are delivered to ground water.

Urban Management Measure 3.4B (Operating OSDSs)

The following **BACKUP AUTHORITIES** pertain to Urban Management Measure 3.4B (Operating OSDSs). The backup authorities for this MM are the same as the backup authorities identified for MMs 3.4A (New OSDSs).

Urban Management Measure 3.5A — Planning, Siting, and Developing Roads and Highways

Plan, site, and develop roads and highways to:

1. Protect areas that provide important water quality benefits or are particularly susceptible to erosion or sediment loss;
2. Limit land disturbance such as clearing and grading and cut and fill to reduce erosion and sediment loss; and
3. Limit disturbance of natural drainage features and vegetation.

Urban Management Measure 3.5B — Bridges

Site, design, and maintain bridge structures so that sensitive and valuable aquatic ecosystems and areas providing important benefits are protected from adverse effects.

Urban Management Measure 3.5C — Construction Projects [Roads, Highways and Bridges]

- Part (1): Reduce erosion and, to the extent practicable, retain sediment on site during and after construction and
- Part (2): Prior to land disturbance, prepare and implement an approved erosion control plan or similar administrative document that contains erosion and sediment control provisions.

Urban Management Measure 3.6A — Pollution Prevention/Education: General Sources

Implement educational programs to provide greater understanding of watersheds, and to raise awareness and increase the use of applicable urban management measures and practices where needed to control and prevent adverse impacts to surface and ground water. Public education, outreach, and training programs should involve applicable user groups and the community. Implementation of urban pollution prevention and education programs includes the following activities, where applicable:

1. Households
 - Improper storage, use, and disposal of household hazardous chemicals, including automobile fluids, pesticides, paints, solvents, etc.;
 - Lawn and garden activities, including the application and disposal of lawn and garden care products, and improper disposal of leaves and yard trimmings;
 - Improper operation and maintenance of onsite disposal systems;
 - Improper disposal of pet excrement.
 2. Landscaping
 - Turf management on golf courses, parks and recreational areas.
 3. Commercial
 - Commercial activities, including parking lots, restaurants, vehicle service facilities, and other entities.
 4. Other General Sources
 - Discharge of pollutants into storm drains, including floatables, waste oil, and litter;
 - Roads, highways, and bridges.
- [Refer to the Urban Management Measures 3.1 – 3.5 listed in this document.]

Marinas & Recreational Boating Management Measures

The SWRCB, CCC, and other State agencies have identified 17 MMs to address marina and recreational boating sources of nonpoint pollution. Because marinas are located at the water's edge, pollutants generated from marinas and boats are less likely to be buffered or filtered by natural processes.

When boating and related activities (e.g., marinas and boat maintenance areas) are poorly planned or managed, they may threaten the health of aquatic systems and pose other environmental hazards. The USEPA (1993) identifies several sources of pollution associated with marinas and boating activities:

- Poorly flushed waterways;
- Pollutants discharged from boats (recreational boats, commercial boats, and "live-aboards");
- Pollutants carried in stormwater runoff;
- Physical alteration of wetlands and of shellfish/ other benthic communities during construction of marinas, ramps, and related facilities;
- Pollutants generated from boat maintenance activities on land and in the water.

California's management measures are intended to be applied to control impacts to water quality and habitat from marina siting and construction (new and expanding marinas), and marina and boat operation and maintenance. The measures are designed to reduce NPS pollution by requiring the best possible siting for marinas and maintenance areas, providing for the best available design and construction practices and appropriate operation and maintenance practices, and encouraging the development and use of effective pollution control and education efforts. The management measures cover the following operations and facilities (USEPA, 1993):

- Any facility that contains 10 or more slips, piers where 10 or more boats may tie up, or any facility where a boat for hire is docked;
- Any residential or planned community marina with 10 or more slips;
- Any mooring field where 10 or more boats are moored;
- Public or commercial boat ramps;
- Boat maintenance or repair yards that are adjacent to the water, and any Federal, State, or local facility that involves recreational boat maintenance or repair on or adjacent to the water.

California's marina and recreational boating MMs:

4.1 Assessment, Siting and Design

- A. Water Quality Assessment
- B. Marina Flushing
- C. Habitat Assessment
- D. Shoreline Stabilization
- E. Storm Water Runoff
- F. Fueling Station Design
- G. Sewage Facilities
- H. Waste Management Facilities

4.2 Operation and Maintenance

- A. Solid Waste Control
- B. Fish Waste Control
- C. Liquid Material Control
- D. Petroleum Control
- E. Boat Cleaning and Maintenance
- F. Maintenance of Sewage Facilities
- G. Boat Operation

4.3 Education/Outreach

- A. Public Education

The assessment, siting, and design MMs for marinas and recreational boating is summarized as follows:

- 4.1.A. Water Quality Assessment** — Consider impacts to water quality in siting and designing new and expanding marinas.
- 4.1.B. Marina Flushing** — Site and design marinas to provide for maximum flushing and circulation of surface waters, which can reduce the potential for water stagnation, maintain biological productivity, and reduce the potential for toxic accumulation in bottom sediment.
- 4.1.C. Habitat Assessment** — Site and design marinas to protect against adverse impacts on fish and shellfish, aquatic vegetation, and important local-, State-, or federal-designated habitat areas.
- 4.1.D. Shoreline Stabilization** — Stabilize shorelines where shoreline erosion is a pollution problem.
- 4.1.E. Storm Water Runoff** — Implement runoff control strategies to remove at least 80% of suspended solids from storm water runoff coming from boat maintenance areas (some boat yards may conform to this provision through NPDES permits).
- 4.1.F. Fueling Station Design** — Locate and design fueling stations to contain accidental fuel spills in a limited area; provide fuel containment equipment and spill contingency plans to ensure quick spill response.
- 4.1.G. Sewage Facilities** — Install pumpout, pump station, and restroom facilities at new and expanding marinas where needed to prevent sewage discharges directly to State waters.
- 4.1.H. Waste Management Facilities** — Install facilities at new and expanding marinas where needed for the proper recycling or disposal of solid wastes (e.g., oil filters, lead acid batteries, used absorbent pads, spent zinc anodes, and fish waste as applicable) and liquid materials (e.g., fuel, oil, solvents, antifreeze, and paints).

The operation and maintenance MMs for marinas and recreational boating are summarized as follows:

- 4.2.A. Solid Waste Control** — Properly dispose of solid wastes produced by the operation, cleaning, maintenance, and repair of boats to limit entry of these wastes to surface waters.
- 4.2.B. Fish Waste Control** — Promote sound fish waste management, where fish waste is a NPS problem, through a combination of fish cleaning restrictions, education, and proper disposal.
- 4.2.C. Liquid Material Control** — Provide and maintain the appropriate storage, transfer, containment, and disposal facilities for liquid materials commonly used in boat maintenance, and encourage recycling of these materials.
- 4.2.D. Petroleum Control** — Reduce the amount of fuel and oil that leaks from fuel tanks and tank air vents during the refueling and operation of boats.
- 4.2.E. Boat Cleaning and Maintenance** — Minimize the use of potentially harmful hull cleaners and bottom paints, and prohibit discharges of these substances to State waters.
- 4.2.F. Maintenance of Sewage Facilities** — Maintain pumpout facilities in operational condition, and encourage their use so as to prevent and control untreated sewage discharges to surface waters.
- 4.2.G. Boat Operation** — Prevent turbidity and physical destruction of shallow-water habitat resulting from boat wakes and propwash.

The education/outreach MM for marinas and recreational boating is summarized as follows:

- 4.3A Public Education** — Institute public education, outreach, and training programs to prevent and control improper disposal of pollutants into State waters.

-4.0 MARINAS AND RECREATIONAL BOATING

IMPLEMENTATION AUTHORITIES

Marina and Recreational Boating Management Measures

- 4.1. **Assessment, Siting and Design**
 - A. Water Quality Assessment
 - B. Marina Flushing
 - C. Habitat Assessment
 - D. Shoreline Stabilization
 - E. Storm Water Runoff
 - F. Fueling Station Design
 - G. Sewage Facilities
 - H. Waste Management Facilities
- 4.2. **Operation and Maintenance**
 - A. Solid Waste Control
 - B. Fish Waste Control
 - C. Liquid Material Control
 - D. Petroleum Control
 - E. Boat Cleaning and Maintenance
 - F. Maintenance of Sewage Facilities
 - G. Boat Operation
- 4.3. **Education/Outreach**
 - A. Public Education/Outreach

Marinas and Recreational Boating Management Measure 4.1A — Water Quality Assessment

- Part (1): Assess water quality as a part of the siting and design of new and expanding marinas to establish baseline water quality conditions or trends.
 Part (2): Assess water quality at existing marinas to establish baseline water quality conditions.

Marinas and Recreational Boating Management Measure 4.1B — Marina Flushing

Site and design new and expanding marinas such that tides and/or currents will aid in flushing of the site or renew its water regularly.

Marinas and Recreational Boating Management Measure 4.1C — Habitat Assessment

Site and design new and expanding marinas to protect against adverse effects on shellfish resources, wetlands, submerged aquatic vegetation, or other important riparian and aquatic habitat areas as designated by local, State, or federal governments.

Marinas and Recreational Boating Management Measure 4.1D — Shoreline Stabilization

Where streambank or shoreline erosion is a nonpoint source pollution problem, streambanks/shorelines should be stabilized (when determining whether streambank/shoreline erosion is a NPS problem, assess natural erosion rates and the dynamic equilibrium of the streambank/shoreline). The use of vegetative stabilization methods is preferred over the use of structural stabilization methods, if appropriate considering the climate, severity of erosion, offshore bathymetry, and/or the potential adverse impact on other streambanks or shorelines and offshore areas.

Marinas and Recreational Boating Management Measure 4.3A — Public Education/Outreach

Implement educational programs to provide greater understanding of watersheds, and to raise awareness and increase the use of applicable marina and boating management measures and practices where needed to control and prevent adverse impacts to ground and surface water. Public education, outreach, and training programs should involve applicable user groups and the community (e.g., boaters, boating groups, marina owners and operators, boat maintenance facility operators, waterfront agencies, service providers, live-aboards, environmental community and other related groups).

[Refer to the Marinas and Recreational Boating Management Measures 4.1 – 4.2 listed in this document.]

Hydromodification Management Measures

The SWRCB, CCC, and other State agencies have identified eight management measures (MMs) to address hydromodification sources of nonpoint pollution affecting State waters. Hydromodification includes modification of stream and river channels, dams and water impoundments, and streambank/shoreline erosion.

Channel modification activities are undertaken in rivers or streams to straighten, enlarge, deepen or relocate the channel. These activities can affect water temperature, change the natural supply of fresh water to a water body, and alter rates and paths of sediment erosion, transport, and deposition. Hardening the banks of waterways with shoreline protection or armor also accelerates the movement of surface water and pollutants from the upper reaches of watersheds into coastal waters. Channelization can also reduce the suitability of instream and streamside habitat for fish and wildlife by depriving wetlands and estuarine shorelines of enriching sediments, affecting the ability of natural systems to filter pollutants, and interrupting the life stages of aquatic organisms (USEPA, 1993).

Dams can adversely impact hydrology and the quality of surface waters and riparian habitat in the waterways where the dams are located. A variety of impacts can result from the siting, construction, and operation of these facilities. For example, improper siting of dams can inundate both upstream and downstream areas of a waterway. Dams reduce downstream flows, thus depriving wetlands and riparian areas of water. During dam construction, removal of vegetation and disturbance of underlying sediments can increase turbidity and cause excessive sedimentation in the waterway. The erosion of shorelines and streambanks is a natural process that can have either beneficial or adverse impacts on riparian habitat. Excessively high sediment loads resulting from erosion can smother submerged aquatic vegetation, cover shellfish beds and tidal flats, fill in riffle pools, and contribute to increased levels of turbidity and nutrients.

Management Measures:

Channelization/Channel Modification. California's management measures for channelization and channel modification promote the evaluation of channelization and channel modification projects. Channels should be evaluated as a part of the watershed planning and design processes, including watershed changes from new development in urban areas, agricultural drainage, or forest clearing. The purpose of the evaluation is to determine whether resulting NPS changes to surface water quality or instream and riparian habitat can be expected and whether these changes will be good or bad. Existing channelization and channel modification projects can be evaluated

California's MMs to address sources of nonpoint pollution related to hydromodification activities:

5.1 Channelization/Channel Modification

- A. Physical & Chemical Characteristics of Surface Waters
- B. Instream & Riparian Habitat Restoration

5.2 Dams

- A. Erosion & Sediment Control
- B. Chemical & Pollutant Control
- C. Protection of Surface Water Quality & Instream and Riparian Habitat

5.3 Streambank & Shoreline Erosion

- A. Eroding Streambanks & Shorelines

5.4 Education/Outreach

- A. Educational Programs

to determine the NPS impacts and benefits associated with the projects. Modifications to existing projects, including operation and maintenance or management, can also be evaluated to determine the possibility of improving some or all of the impacts without changing the existing benefits or creating additional problems. In both new and existing channelization and channel modification projects, evaluation of benefits and/or problems will be site-specific.

Dams. The second category of management measures address NPS pollution associated with dams. Dams are defined as constructed impoundments that are either (1) 25 feet or more in height *and* greater than 15 acre-feet in capacity, or (2) 6 feet or more in height *and* greater than 50 acre-feet in capacity. MMs 5.2A and 5.2B address two problems associated with dam construction: (1) increases in sediment delivery downstream resulting from construction and operation activities and (2) spillage of chemicals and other pollutants to the waterway during construction and operation. MM 5.2C addresses the impacts of reservoir releases on the quality of surface waters and instream and riparian habitat in downstream.

Streambank and Shoreline Erosion. The third category of hydromodification measures addresses the stabilization of eroding streambanks and shorelines in areas where streambank and shoreline erosion creates a polluted runoff problem. Bioengineering methods such as marsh creation and vegetative bank stabilization are preferred. Streambank and shoreline features that have the potential to reduce polluted runoff shall be protected from impacts, including erosion and sedimentation resulting from uses of uplands or adjacent surface waters. This MM does not imply that all shoreline and streambank erosion must be controlled; the measure applies to eroding shorelines and streambanks that constitute an NPS problem in surface waters.

Education/Outreach. MM 5.4A focuses on the development and implementation of pollution prevention and education programs for agency staffs and the public, as well as the promotion of assistance tools that emphasize restoration and low-impact development. Education, technical assistance, incentives, and other means can be used to promote projects that reduce NPS pollutants, which retain or re-establish natural hydrologic functions (e.g., channel restoration projects and low-impact development projects), and/or which prevent and restore adverse effects of hydromodification activities.

5. HYDROMODIFICATION

IMPLEMENTATION AUTHORITIES

- 5.1 **Channelization and Channel Modification**
 - A. Physical and Chemical Characteristics of Surface Waters
 - B. Instream and Riparian Habitat Restoration
- 5.2 **Dams**
 - A. Erosion and Sediment Control
 - B. Chemical and Pollutant Control
 - C. Protection of Surface Water Quality and Instream and Riparian Habitat
- 5.3 **Streambank and Shoreline Erosion**
 - A. Eroding Streambanks and Shorelines
- 5.4 **Education/Outreach**
 - A. Educational Programs

Hydromodification Management Measure 5.1A — Physical and Chemical Characteristics of Surface Waters

1. Evaluate the potential effects of proposed channelization and channel modification on the physical and chemical characteristics of surface waters;
2. Plan and design channelization and channel modification to reduce undesirable impacts;
3. Develop an operation and maintenance program for existing modified channels that includes identification and implementation of opportunities to improve physical and chemical characteristics of surface waters in those channels.

Hydromodification Management Measure 5.1B — Instream and Riparian Habitat Restoration

1. Evaluate the potential effects of proposed channelization and channel modification on instream and riparian habitat;
2. Plan and design channelization and channel modification to reduce undesirable impacts;
3. Develop an operation and maintenance program with specific timetables for existing modified channels that includes identification of opportunities to restore instream and riparian habitat in those channels.

Hydromodification Management Measure 5.3A — Eroding Streambanks and Shorelines

1. Where streambank or shoreline erosion is a NPS problem, streambanks and shorelines should be stabilized. The use of vegetative stabilization methods is strongly preferred over the use of structural stabilization methods, if appropriate considering the climate, severity of wave and wind erosion, offshore bathymetry, and the potential adverse impact on other streambanks, shorelines and offshore areas.
2. Protect streambank and shoreline features with the potential to reduce NPS pollution.
3. Protect streambanks and shorelines from erosion due to uses of either the shorelands or adjacent surface waters.

Hydromodification Management Measure 5.2A — Dams: Erosion and Sediment Control

1. Reduce erosion and, to the extent practicable, retain sediment onsite during and after construction, and
2. Prior to land disturbance, prepare and implement an approved erosion and sediment control plan or similar administrative document that contains erosion and sediment control provisions.

Hydromodification Management Measure 5.2B — Dams: Chemical and Pollutant Control

1. Limit application, generation, and migration of toxic substances;
2. Ensure the proper storage and disposal of toxic materials; and
3. Apply nutrients at rates necessary to establish and maintain vegetation without causing significant nutrient runoff to surface waters.

Hydromodification Management Measure 5.2C — Dams: Protection of Surface Water Quality and Instream and Riparian Habitat

Develop and implement a program to manage the operation of dams in coastal areas that includes an assessment of:

1. Surface water quality and instream and riparian habitat and potential for improvement and
2. Significant nonpoint source pollution problems that result from excessive surface water withdrawals.

Hydromodification Management Measure 5.4A. Educational Programs

Implement educational programs to provide greater understanding of watersheds, to raise awareness and increase the use of applicable hydromodification management measures and practices where needed to control and prevent adverse impacts to surface and ground water, and to promote projects which retain or re-establish natural hydrologic functions (e.g., channel restoration projects). Public education, outreach, and training programs should involve applicable user groups and the community.

Wetlands, Riparian Areas, & Vegetated Treatment Systems Management Measures

The SWRCB, CCC, and other State agencies have identified four management measures (MMs) to promote the protection and restoration of wetlands and riparian areas and the use of vegetated treatment systems as means to control nonpoint sources of pollution. Wetlands and riparian areas reduce polluted runoff by filtering out runoff-related contaminants such as sediment, nitrogen and phosphorus; thus maintaining the water quality benefits of these areas is important. These areas also help to attenuate flows from higher-than-average storm events. This protects downstream areas from adverse impacts such as channel scour, erosion and temperature and chemical fluctuations. Changes in hydrology, substrate, geochemistry, or species composition can impair the ability of wetland or riparian areas to filter out excess sediment and nutrients, and so can result in deteriorated water quality. The following activities can cause such impairment: drainage of wetlands for cropland, overgrazing, hydromodification, highway construction, deposition of dredged material, and excavation for ports and marinas.

California's MMs to protect and restore wetlands and riparian areas and use vegetated treatment systems as means to control pollution from nonpoint sources:

6A. Protection of Wetlands & Riparian Areas

6B. Restoration of Wetlands & Riparian Areas

6C. Vegetated Treatment Systems

6D. Education/Outreach

Management Measures:

Wetlands/Riparian Areas Protection. Implementation of MM 6A is intended to protect the existing water quality improvement functions of wetlands and riparian areas as a component of NPS programs.

Wetlands/Riparian Areas Restoration. Restoration of wetlands and riparian areas (MM 6B) refers to the recovery of a range of functions that existed previously by reestablishing hydrology, vegetation, and structure characteristics. Damaged or destroyed wetland and riparian areas should be restored where restoration of such systems will significantly abate polluted runoff.

Vegetated Treatment Systems. MM 6C promotes the installation of vegetated treatment systems (e.g., artificial or constructed wetlands) in areas where these systems will serve a polluted runoff-abatement function. Vegetated filter strips and engineered wetlands remove sediment and other pollutants from runoff and wastewater, and prevent pollutants from entering adjacent waterbodies. Removal typically occurs through filtration, deposition, infiltration, absorption, adsorption, decomposition and volatilization.

Education/Outreach. MM 6D promotes the establishment of programs to develop and disseminate scientific information on wetlands and riparian areas and to develop greater public and agency staff understanding of natural hydrologic systems—including their functions and values, how they are lost, and the choices associated with their protection and restoration.

- 6B. Restoration of Wetlands and Riparian Areas
- 6C. Vegetated Treatment Systems
- 6D. Education/Outreach

Management Measure 6A — Protection of Wetlands and Riparian Areas

Protect from adverse effects wetlands and riparian areas that serve to reduce NPS pollution; maintain this function while protecting the other existing functions of these wetlands and riparian areas as measured by characteristics such as vegetative species composition, diversity, and cover, hydrology and quality of surface water and ground water, geochemistry of the substrate, and fauna species composition, diversity, and abundance.

Management Measure 6B — Restoration of Wetlands and Riparian Areas

Promote the restoration of the pre-existing functions in damaged and destroyed wetlands and riparian systems in areas where the systems will serve to reduce NPS pollution.

Management Measure 6C — Vegetated Treatment Systems

Promote the use of engineered vegetated treatment systems such as constructed wetlands or vegetated filter strips where these systems will serve to reduce NPS pollution.

Agency	Authority	Programs	Implementing Area	Notes
Various State and Local	<ul style="list-style-type: none"> CEQA (PRC §§ 21000 et seq.) CEQA Guidelines (Title 14 CCR §§ 15000 et seq.) 	Environmental review of "projects" using Initial Study (Environmental Checklists), EIR, or Negative Declaration	Statewide	<ul style="list-style-type: none"> Environmental Checklists help to identify potential NPS impacts. EIR or Negative Declaration may identify mitigation measures to protect/restore wetlands or use vegetated treatment systems.
Cities/Countries (CA contains 58 counties and approximately 468 incorporated cities.)	<ul style="list-style-type: none"> PZL (Gov. Code §§ 65000 et seq.) SbMA (Gov. Code §§ 66410 et seq.) Management Measure 6D — Education/Outreach

Implement educational programs to provide greater understanding of watersheds, to raise awareness and increase the use of applicable management measures and practices for wetlands and riparian areas, and to promote projects which retain or re-establish natural hydrologic functions. Public education, outreach, and training programs should involve applicable user groups and the community.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

STAFF REPORT FOR REGULAR MEETING OF DECEMBER 7, 2001

Prepared on November 16, 2001

ITEM NUMBER: 25

SUBJECT: WATER QUALITY CONTROL PLAN - TRIENNIAL REVIEW PRIORITY LIST

SUMMARY

The Central Coast Water Quality Control Plan (Basin Plan) guides activities of the Central Coast Regional Water Quality Control Board and staff by identifying beneficial uses, setting water quality objectives and criteria, requiring implementation plans for the protection of beneficial uses, and monitoring to ensure protection of beneficial uses. The purpose of the Triennial Review Priority List process is to identify and prioritize Basin Plan issues in the Central Coast Region for use in updating and amending the Basin Plan. Staff have developed and prioritized a preliminary list of issues, considering Federal Environmental Protection Agency (USEPA) requests/directives/mandates, State Water Resources Control Board issues, Regional Board staff issues, Watershed Management Initiative issues, comments from other interested persons and organizations on previously identified issues, and availability of staff resources. This list is presented to the Board for review and consideration.

DISCUSSION

The federal Clean Water Act (Section 303 (c)) and the Porter-Cologne Water Quality Control Act require the Basin Plan to be reviewed and updated periodically (at a minimum every three years). The Regional Board review process includes identification of issues that may enhance water quality protection and presentation of a priority list of issues at a public hearing. The priority list of issues referred to as the Triennial Review Priority List includes:

- A brief description of each water quality issue;
- Identification of water quality issues that can be completed with existing resource allocations over a three-year period¹; and
- Identification of water quality issues requiring additional resources to complete.

Following public hearing and adoption of the Triennial Review Priority List, Regional Board staff investigate each priority issue, including development of a detailed work plan for each issue, to determine the need for a Basin Plan amendment². However, investigation of an issue on the Triennial Review Priority List does not necessarily mean a revision of the Basin Plan will be recommended to the Board. Additionally, priority issues that result in a Basin Plan amendment do not become effective until approved by the Regional Board, the State Board, and the Office of Administrative Law (OAL) [Administrative Procedures Act, Government Code ss11340 et seq.]. Surface water standards also require the approval of the USEPA to become effective.

The preliminary 2001 Triennial Review Priority List of issues to be presented for Board for review and consideration is shown in Attachment A. As

¹ Each issue is evaluated for an estimate of staff time needed to complete the item (actual staff hours and total project-item duration). For those items requiring contract funding, estimated contract needs are identified following the description of each item.

² Basin Plan amendments can also occur for issues not identified during the Triennial Review. For example, amendments can occur for urgent issues resulting from new legislation or other sources.

noted above, topics on the list were developed while considering USEPA requests/directives/mandates, State Water Resources Control Board issues, Regional Board staff issues, Watershed Management Initiative issues, input from other interested persons/organizations, and availability of staff resources.

Public input was requested in an August 24, 2001 letter (Attachment D) to individuals and organizations on the Basin Plan mailing list (There are approximately 350 addresses on the mailing list). A Notice of Public Hearing was also published in several newspapers throughout the Central Coast Region at approximately the same time.

1998-2001 Basin Planning Activities

Presented below is a status report of high priority Basin Plan tasks previously identified by the Regional Board during the 1998 Triennial Review process (1998 Triennial Review Priority List - Attachment B). Basin Planning activities performed over the last three years are discussed below:

1. Develop Region-Wide Nonpoint Source Management Measures (Priority One, 1998 Triennial Review Priority List)

Staff intends to prepare a draft resolution for Regional Board consideration in June 2002.

2. Basin planning staff were used extensively (through July 1, 2000) to perform high priority Total Maximum Daily Load (TMDL) tasks. The following 1998 Triennial Review Priority List priority tasks were conducted:

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME (Staff years and Duration)</u>	<u>STATUS</u>	<u>COMMENTS</u>
Priority				
2. Develop Carbonara Creek, Lompico Creek, and San Lorenzo River Nutrient TMDL		6 months	Adopted by RWQCB 9/15/2000	Pending review and consideration by State Board
3. Develop San Luis Obispo Creek Nutrient TMDL		6 months	Draft technical TMDL to EPA 6/2000	Revised TMDL to be completed 6/2002 Implementation Plan to be completed 6/03
7. Develop Chorro Creek, Los Osos Creek, and Morro Bay Siltation TMDL		3 months/ 2 years	Draft TMDL to EPA/Stakeholders 11/2000	Revisions completed 6/2001. Will be presented to the Regional Board 6/2002.
8. Develop Las Tablas Creek; Las Tablas Creek, North Fork; Las Tablas Creek, South Fork; and Nacimiento Reservoir for Mercury TMDL		4 months/ 2 years	Draft TMDL to EPA 6/2000	Revisions completed 6/2001. Presentation to the Regional Board delayed.
14. Develop Morro Bay Pathogen TMDL		3 months/ 2-years	Problem statement and numeric target to EPA 6/2000	DNA study to be completed 09/2001 Revisions to be completed 12/2001 and sent to Board 12/2002
24. Develop Salinas River and Salinas River Lagunita (Nacimiento) Siltation TMDL		1 year/ 6 years	Problem statement to EPA 6/2000	Technical support for TMDL contracted out on 09/2000 Preliminary results due 1/2001

3. Other Activities

Basin planning staff were used extensively to perform additional high priority tasks. Basin Plan resources were used to process on-site sewage disposal system Basin Plan exemption requests, fund Salinas watershed management activities, prepare the Central Coast Watershed Management Initiative (WMI) Chapter and further develop priority TMDL's identified on the 1998 Triennial Review List (TMDL work received dedicated funding July 1, 2000). Appendix E contains a summary of the current status of TMDL activities.

Future Staff Resources

The preliminary 2001 Triennial Review Priority List in Attachment A includes a column entitled "Estimated Time (Staff Years and Duration)." For some topics, two different time periods are provided. The first number provides the staff time required to perform the task. The second number provides the total time frame to accomplish the task. For example, lengthy time frames are necessary when there is significant involvement from other individuals/organizations (such as developing statewide nonpoint source implementation measures) or when monitoring efforts are needed to complete a task.

Unless staff resources are increased, staff estimates priority surface water tasks 1, 2, 3a-d, 4a (status reports), 5, 6a-b, 7a-b, 8, 9, 10, 11, 12, and 13 identified on the 2001 Triennial Review Priority List can be completed in the next three years (Task four will take longer than three years to complete). Similarly, staff estimates priority groundwater tasks 1, 2a-c, 3, 4a-b, 5, 6, 7a-b, and 8 can be completed in the next three years. Additional Basin Plan tasks, listed on pages 6 through 9 of Attachment A, cannot be completed unless additional staff resources become available.

The above estimates are consistent with the 2001 WMI Chapter, which states that Region 3 has limited resources available for region-wide Basin Planning activities. Dedicated Basin Planning funds have been used to hire staff to focus on surface and groundwater planning issues. However, to address additional high priority activities, more funding is needed than currently exists in the baseline budget or will exist through

additional anticipated resources. The WMI Chapter identifies 4.2 Project Years (PY's) of unfunded Basin Planning work in fiscal year 2001/2002.

ENVIRONMENTAL SUMMARY

A Notice of Public Hearing has been circulated. A Notice of Filing, Written Report, and Environmental Checklist will be prepared and circulated to interested agencies and persons prior to consideration of any Basin Plan amendment. This will satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

COMMENTS

Santa Barbara County Public Health Department, Environmental Health Services

1. **Comment:** We recommend that issues related to beneficial use designations of local Santa Barbara County watersheds be reviewed within the next 3 years.

Response: Beneficial use designations for all waters in the Central Coast Region were reviewed in 1992. Revised beneficial use designations were incorporated into the September 8, 1994 update of the Central Coast Region Water Quality Control Plan, resulting in a large number of new waters and beneficial use designations. Significant resources were utilized for this task under a one-time contract allocation. Current funding limitations will not allow for further review and revision of beneficial use designations for waters in Santa Barbara County during the 2001 Triennial Review

Process.

Although there is no task on the 2001 Triennial Review List for review of surface water beneficial use designations, if the County of Santa Barbara is aware of more detailed data that would allow for a revised designation for a particular water body, please provide this information to

the Regional Board. Staff is willing to evaluate new data and recommend amendment of the Basin Plan as necessary within staffing constraints.

2. **Comment:** Board staff is predicting that revision of the beneficial use designations will not occur in the next three years due to limited resources. To accomplish the revision of the "beneficial use designations," we recommend the Regional Board provide additional staff for this effort or elevate "the review beneficial use designations" on the priority list to ensure this task is completed with existing resources in the next three years.

Response: Staff concurs with the prediction that revision of beneficial use designations will likely not occur during the next three years due to limited resources. Currently, there are no additional resources or staff budgeted for review and revision of beneficial use designations for waters in Santa Barbara County. Additionally, because beneficial use designations were addressed during the 1994 update of the Central Coast Region Water Quality Control Plan, staff does not agree that further review and revision of beneficial use designations for waters in Santa Barbara County should be elevated above other high priority issues on the 2001 Triennial Review Priority List.

3. **Comment:** Under current Total Maximum Daily Load listing methodology (303 (d) list), there is no way to distinguish between impaired river segments and unimpaired river segments.

Response: The "size affected" column on the 303 (d) list provides an estimate of the "segment" impaired. Developing the TMDL Problem Statement for a listed water body assesses and clarifies the impairment and its extent, not the listing.

A description of the process and approach for 303 (d) listing for the current update of

the 303 (d) List of Impaired Waters may be viewed on our web page at <http://www.swrcb.ca.gov/~rwqcb3/>. On the web page click on programs, TMDL, 2001 303 D List Staff Report. A statewide effort to develop guidelines for 303(d) listing is underway. State Water Resources Control Board and Regional Board staff will provide input to this process.

4. **Comment:** We recommend that Surface Water Task - Develop a Greenhouse Policy be elevated on the priority list to be completed within the next 3 years or that additional staff resources be provided to accomplish this task.

Response: Board staff agrees that a Greenhouse Policy is important. However, without additional staff, funding limitations will not allow Board staff to address this task under the 2001 Triennial Review List.

5. **Comment:** Santa Barbara County supports the Board's development of new surface water bacteria standards (Task #5 and Task #9).

Response: Board staff appreciates Santa Barbara County support for these efforts.

Ocean Conservancy

6. **Comment:** We ask that the Regional Board direct staff to develop detailed guidance for the implementation of the anti-degradation policy for both point and nonpoint discharges. Additionally, we request that the guidance be incorporated in to the Basin Plan.

Response: Staff agrees. However, additional funding is required to complete this task within the next 3 years. Board staff will place this task on the list of issues requiring additional funding.

Nipomo Community Services District

7. **Comment:** In reviewing the 1998 Triennial Review Priority List, item # 1

Develop a Nitrogen Management Plan for the Santa Maria Groundwater Basin and also Item #55 - Develop a Nitrogen Management Plan for the Arroyo Grande Groundwater Basin, the question arises, does either of these plans include the Nipomo Mesa or should a separate Nitrogen Management Plan be developed for the Nipomo Mesa.

Response: Development of a region-wide Nitrogen Management Plan for all groundwater basins of the region is ranked as groundwater issue item #4 on the 2001 Triennial Review List (TRL) Attachment A). This general plan developed from the need for nitrogen management plans for at least 13 individual groundwater basins identified during the 1998 Triennial Review process (1998 TRL items #9, 16, 17, 31, 32, 54, 55, 65, 66, 67, 68, 70, 71, and 75). Following development of a general plan applicable to all groundwater basins of the region, including the Nipomo Mesa area, basin-specific nitrogen management measures may be considered for some groundwater basins.

8. Comment: Since there is a large concentration of greenhouses and auto wrecking operations on the Mesa, (1998) priority items #128 and #129 should be set higher, with respect to developing a management plan for the Nipomo Mesa.

Response: Board staff agrees that a Greenhouse Policy and Auto-wrecking yard Policy are important. However, funding limitations will not allow Board staff to address these tasks under the 2001 Triennial Review List.

City of San Luis Obispo

9. Comment: The Basin Plan needs to be updated more frequently.

Response: Board staff agrees. The intent of the 2001 Triennial Review List is to establish a list of tasks to be reviewed and incorporated as Basin Plan changes over the next three years.

10. Comment: MUN beneficial use designation should be reconsidered for some waters of the region as this designation leads to overly stringent regulation and requirements for a use that does not and will never exist for these waters.

Response: Beneficial use designations were reviewed, revised, and incorporated into the September 8, 1994 update of the Central Coast Region Water Quality Control Plan, resulting in a large number of new waters and beneficial use designations. Significant resources were utilized for this task under a one-time contract allocation. Current funding limitations will not allow for comprehensive review and revision of beneficial use designations during the 2001 Triennial Review Process. Additionally, SWRCB Resolution No. 88-63 "Sources of Drinking Water Policy" states that all surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards.

Although there is no task on the 2001 Triennial Review List for review of beneficial use designations, if the City of San Luis Obispo is aware of more detailed data that would allow for a revised designation for a particular water body, please provide this information to the Regional Board. Staff is willing to evaluate new data and recommend amendment of the Basin Plan as necessary within staffing constraints.

11. Comment: The City is requesting a RWQCB policy that calls for consistent application of Basin Plan requirements for permitted dischargers.

Response: Staff agrees that application of Basin Plan requirements for discharger permits should be consistent. There is a statewide policy on consistency. There are statewide efforts focusing on consistency and Regional Board staff are working on several efforts to ensure

consistent implementation of Basin Plan standards.

- 12. **Comment:** The RWQCB should consider drafting a policy that allows the assignment of interim discharge limits for dischargers when compliance with a new law or more stringent requirement becomes law.

Response: Establishment of limits, fixed or interim, requires Board action. All limits, fixed or interim, are applied with consideration of discharge specific conditions. A policy for interim discharge limits could be developed, however implementation of the policy for an individual permit would still require Board action.

- 13. **Comment:** The City is requesting the RWQCB ensure more stakeholder and interested party involvement in the development of TMDL's.

Response: Board staff agrees. We will take action to ensure stakeholder and interested party involvement in the development of TMDL's.

- 14. **Comment:** The City is requesting the total chlorine residual objective task be given high priority.

Response: Board staff agrees that a chlorine residual objective is important. However, funding limitations will not allow Board staff to address this task under the 2001 Triennial Review List.

Santa Barbara ChannelKeeper

- 15. **Comment:** Chapter 3, recommend the following changes to Section I. Considerations in Selecting Water Quality Objectives. The language in paragraph four should be revised. The discussion regarding point sources and nonpoint sources is inaccurate. It states that nonpoint sources include urban drainage, agricultural runoff, road construction activities, mining, and other activities. Each of the quoted sources is, or can be a

point source. The Basin Plan's focus should be on the means by which the water is conveyed, not on the source of that water. Discrete conveyances are point sources. Section 502(14) of the Clean Water Act defines "point source" as "any discernible, confined and discrete conveyance, including, but not limited to any pipe, ditch, channel . . . from which pollutants are or may be discharged."

Response: Board staff disagrees. Chapter 3, Section I. Considerations in Selecting Water Quality Objectives, paragraph four, states, "Nonpoint sources are waste loads resulting from land use practices where wastes are not collected and disposed of in any readily identifiable manner. Examples include: urban drainage, agricultural runoff, road construction activities, mining, grassland management, logging and other harvest activities, and natural sources such as effects of fire, flood, and landslide. The distinction between point sources and diffuse sources is not always clear but generally applies to the practicality of waste load control."

This paragraph provides a general description of point and nonpoint water pollution sources. The paragraph distinguishes between point and nonpoint water pollution sources by stating that nonpoint water pollution sources "are not collected and disposed of in any readily identifiable manner", which is a reference to conveyance. There are instances where urban drainage, agricultural runoff, road construction activities, mining, and other activities are not collected and disposed of in any readily identifiable manner.

- 16. **Comment:** Chapter 3, Section II.A. Anti-Degradation Policy - Both EPA and State guidance documents should be referenced in this section. For example, staff should be directed to refer to the Water Quality Standards Handbook and Permit Writers Handbook. Moreover, while the language of Section II.A.10.5 refer to Board Resolution No. 68-16, it should articulate how staff should apply the policies articulated in the Resolution.

Response: Board staff agrees. On the 2001 Triennial Review List there is no proposed task to develop detailed guidance for the implementation of the anti-degradation policy or reference both the EPA and State guidance documents. However, Board staff will place this task on the list of issues requiring additional funding for future work to be completed.

x 17. **Comment:** Chapter 3, Section II.A.2. Objectives for all Inland Surface Waters, Enclosed Bays, and Estuaries. A numeric effluent limit should be assigned for each of the objectives as applied to each beneficial use. The most stringent water quality criteria available (CTR, NTR, ocean plan, or basin plan) should apply for each beneficial use. It is not sufficient, for example, to state that "waters shall not contain biostimulatory substances in concentrations that promote aquatic growths to the extent that such growths cause nuisance or adversely affect beneficial uses." This language for biostimulatory substances is useful, but must be accompanied by a specific numeric effluent limit for each beneficial use.

Response: Board staff agrees that numeric values should be developed for water quality objectives. On the 2001 Triennial Review list, Surface Water Issues, items 4a-d, 5, 8, 9, and 10 are focused on the development of numeric values for nutrients, bacteria, turbidity, taste, and odor. These values will be linked to appropriate beneficial uses in the form of water quality objectives.

The intent of the general objectives is to provide protection of beneficial uses where there is not a specific numeric target.

18. **Comment:** The Board should establish protections and new areas for Areas of Special Biological Significance, Outstanding National Resource Waters, Outstanding State Resources Water, and zones of zero discharge (for both point and nonpoint sources of pollution).

Response: Board staff has added Task No. 11 to Clarify Chapter 5, page V-9, Section IV.C.1., Areas of Special Biological Significance. The Basin Plan will clarify that all discharges to Areas of Special Biological Significance are prohibited. The Areas of Special Biological Significance section shall also include an explanation of the special circumstances permitting Carmel to discharge to an Area of Special Biological Significance.

On the proposed 2001 Triennial Review list, there are no resources or staff budgeted for review and revision of new areas for Areas of Special Biological Significance, Outstanding National Resource Waters, Outstanding State Resources Water, and zones of zero discharge.

19. **Comment:** The Board should establish a prohibition on mixing zones for discharges to waterways identified on the 303(d) List ("impaired waterways").

Response: There is a prohibition on mixing zones for discharges to inland surface waters. The Basin Plan allows a "mixing zone" for discharges under specific circumstances. For example, the Basin Plan states, "allowable zones of dilution within which higher (turbidity) concentrations will be tolerated will be defined for each discharge in discharge permits." No other types of mixing zones are allowed for inland surface waters. Board staff proposes to revise the turbidity objective December 2002.

20. **Comment:** The Board should establish, in the absence of a TMDL, a prohibition on the discharge of persistent or bioaccumulative pollutants to impaired waterways.

Response: Chapter three of the Basin Plan contains numerous prohibitions for the discharge of persistent or bioaccumulative pollutants that impair or threaten to impair beneficial uses.

21. **Comment:** The Board should establish a prohibition on toxic discharges to drinking water sources pursuant to the restriction contained in the Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65, Cal. Health & Safety Code Sections 25249.5 et seq.).

Response: Chapter three of the Basin Plan contains numerous prohibitions for the discharge of toxic pollutants that impair or threaten to impair beneficial uses. Additionally, Chapter 4, Section VII, describes the Regional Board's role and responsibility regarding Proposition 65.

22. **Comment:** The Board should establish water quality criteria for contaminated sediments.

Response: Board staff agrees. On the 2001 Triennial Review List there is no proposed task to develop water quality criteria for contaminated sediments. However, Board staff will place this task on the list of issues requiring additional funding for future work to be completed.

23. **Comment:** The Board should establish Standard provisions for the 303(d) listing process and for TMDL implementation.

Response: A description of the process and approach for 303(d) listing for the current update of the 303 (d) List of Impaired Waters may be viewed on our web page at <http://www.swrcb.ca.gov/~rwqcb3/>. On the web page click on programs, TMDL, 2001 303 D List Staff Report. A statewide effort to develop guidelines for 303(d) listing is underway. State Water Resources Control Board and Regional Board staff will provide input to this process.

TMDL implementation will be done on a case by case basis relying on existing ordinances and authorities.

24. **Comment:** The Board should establish a process for re-evaluation of all waivers issued under Water Code Section 13269.

Response: A process for re-evaluation of all waivers exists. In response to Senate Bill 390 (effective 10/10/99) the Regional Board has prepared a "baseline needs analysis" for waiver review. All waivers are to be reviewed by January 1, 2003 and every five years after 2003. A statewide effort is now underway to assist Regional Boards in complying with SB 390.

25. **Comment:** The Board should establish water quality criteria for fecal contamination, including for indicators such as total coliform, fecal coliform and enterococci, consistent with federal and state standards, including those established by the State Department of Health Services pursuant to AB 411.

Response: Board staff agrees. On the 2001 Triennial Review List Task No. 5 and No. 9 shall result in the development of water quality standards for *enterococcus* and *E. coli* in surface/ocean waters. The new standards will be consistent with federal and state standards, including those established by the State Department of Health Services pursuant to AB 411.

26. **Comment:** The Board should establish standard provisions for Section 401 water quality certification.

Response: The Board reviews all applications for Section 401 water quality certification in terms of protection of water quality and beneficial uses. All Section 401 water quality certifications must comply with the Basin Plan.

27. **Comment:** The Board should establish a process for re-evaluating all general permits.

Response: The Board has a process for re-evaluating all orders issued under the general permit. The general permit (NPD) orders are re-evaluated every five

years. The general permit WDR Orders are re-evaluated every five, ten, or fifteen years depending on the discharge (Note: the Board is considering two general NPDES permits on this agenda).

United States Environmental Protection Agency, Region IX

28. **Comment:** The following item is confusing: Staff Report, page 2, Basin Planning staff activities performed for the last three years, Develop Region-Wide Nonpoint Source Management Measures (Priority One, 1998 Triennial Review Priority List) states "No action has been taken on this item pending completion of the State "Nonpoint Source Program and Strategy and Implementation Plan, 1998-2013" adopted January 2000. Staff intends to prepare a draft resolution for Regional Board consideration in June 2002.

Since the State adopted the Plan January 2000 and the public hearing for the Triennial Review Priority List is scheduled for December 2001, it would appear appropriate to report on work completed to date rather than state no action has been taken.

Response: The task being discussed was the Development of Region-Wide Nonpoint Source Management Measures, not the development of site-specific nonpoint source management measures across the region. The intent of the task discussed was to incorporate the State Nonpoint Source Program and Strategy and Implementation Plan, 1998-2013 by reference. This would create a "suite" of best management practices that could be applied region-wide.

29. **Comment:** Staff Report, page 2, Task 2, revised water quality objective needs to be added to this list.

Response: Board staff disagrees. The task information listed on page 2 pertains to the 1998 Triennial Review Priority List. No new task will be added to the 1998

Triennial Review Priority List. The 2001 Triennial Review Priority List will take the place of this list if adopted by the Regional Board in December 2001.

30. **Comment:** Staff Report, page 2, Task 7, use consistent TMDL expression instead of spelling it out.

Response: Board staff agrees.

31. **Comment:** Staff Report, page 2, Tasks 7 and 8, "revisions to be completed 6/2001" needs to be updated.

Response: Board staff agrees.

32. **Comment:** Staff Report, page 2-3, Tasks 14 and 15, Comments need to be revised with new due dates.

Response: Board staff agrees for Task 14, the dates have been revised. There is no Task 15 on page 3 of the Staff Report.

33. **Comment:** Staff Report, Page 3, Item 3 - Other Activities, it would be useful to clarify that as of July 1, Basin Planning work was performed by the new TMDL Unit and that the CCAMP Regional Monitoring Program was established using Basin Planning funds. The picture is unclear for Basin Planning regarding the resources identified and work accomplished.

Response: The staff report has been revised to state "TMDL work received dedicated funding July 1, 2000." Minimal Basin Plan funds were used to establish the CCAMP Regional Monitoring Program.

34. **Comment:** Is the amount of existing resources that will be used to complete Tasks 1, 2, 3a-d, 4a, 5, 6a-b, 7a-b, 8, 9, and 10, about 14 staff as reflected in Attachment A?

Response: No, the staff requirements shown in Attachment A are estimates. We only have 3 staff budgeted for FY 01/02 - 03/04 (one PY for three years) to address

Tasks 1, 2, 3a-d, 4a, 5, 6a-b, 7a-b, 8, 9, 10, 11, 12, and 13 listed in Attachment A.

Once the Triennial Review Priority List is reviewed and adopted by the Regional Board, Board staff will prepare a work plan. The work plan shall detail the work to be completed and the associated staff budgeted to accomplish the work.

35. **Comment:** Since many of these tasks are dependent on other entities completing work, are there other tasks that can be completed that aren't dependent on other entities?

Response: Tasks 1, 2, 4a (status reports), 5, 6a-b, 7a-b, 8, 9, and 10 will be done independent of other entities. A portion of Task 3b may be done independently. Only Tasks 3a, c, d and 4a-d are dependent on other entities.

36. **Comment:** The Staff Report refers to 2.6 staff to complete the triennial review process and watershed assessment and needs 4.2 additional staff to accomplish Basin Plan priority tasks identified in Attachment A.

Response: The Staff Report, page 3, Future Staff Resources, has been revised to clarify the relationship between the 2001 Triennial Review Priority List and funding information discussed.

37. **Comment:** Attachment B, comment 5, Many of the items on the list are "in progress" but are missing this designation. Please identify the items in progress.

Response: Page 2 of the Staff report identifies 1998 Triennial Review Priority List priority tasks conducted using Basin Planning funding through July 1, 2000. The items left off the list were TMDL tasks conducted after July 1, 2000 and are being tracked by the TMDL unit. Please refer to Attachment B and www.swrcb.ca.gov Programs, TMDL Status of Total Maximum Daily Loads for additional information.

38. **Comment:** Attachment B, comments 6, 7, 8, and 10.

Response: Attachment B is the 1998 Triennial Review Priority List. Board staff does not plan to create a revised 1998 Triennial Review Priority List. The 2001 Triennial Review Priority List will take the place of the 1998 Triennial Review Priority List if adopted by the Regional Board in December 2001.

39. **Comment:** Attachment B, comment 9, EPA requests the total chlorine residual objective task be given high priority.

Response: Board staff agrees that a chlorine residual objective is important. However, funding limitations will not allow Board staff to address this task under the 2001 Triennial Review List.

40. **Comment:** Attachment B, comment 11, EPA requests the "evaluation of the need for Bacteria Objective for Ocean Waters Used for Desalination Water Supply/Consider Appropriateness of MUN designation" task be given high priority.

Response: Board staff have proposed two specific tasks related to bacteria objectives 1) Incorporate an *enterococcus* standard for water contact recreation in ocean waters and 2) Incorporate an *E. Coli* standard for water contact recreation in surface waters. Funding limitations will not allow Board staff to address additional bacteria objectives under the 2001 Triennial Review List.

41. **Comment:** Attachment B, comment 12, Region Three standards have not been revised to reflect the EPA 1986 revised pathogen criteria recommendations for *enterococcus* and *E. Coli*.

Response: Board staff recognize this oversight and have proposed two specific tasks related to bacteria objectives 1) incorporate an *enterococcus* standard for water contact recreation in ocean waters and 2) incorporate an *E. Coli* standard for

water contact recreation in surface waters. The objectives proposed for adoption shall comply with EPA 1986 revised pathogen criteria recommendations for *enterococcus* and *E. Coli*.

42. **Comment:** Attachment B, comment 13, Santa Margarita ground water basin in Monterey County is not shown in the Basin Plan.

Response: Board staff recognizes that current ground water basins listed in the Basin Plan may be incomplete. Task 6 of the Ground Water section of the 2001 Triennial Review List proposes to update groundwater basin configurations. This includes identification of basins not presently included in the Basin Plan.

43. **Comment:** Attachment B, comment 14, MUN beneficial use designation default language in the Basin Plan should address reasons for non-designation of MUN for certain waters. Also note that exception to MUN designation is allowed for waters with elevated TDS or which are effluent dominated.

Response: The MUN beneficial use designation default language in the Basin Plan does address reasons for non-designation of MUN (please see Chapter 2, page II-13, Municipal and Domestic Supply (MUN) definition).

City of Santa Cruz, Department of Public Works, Water Department

44. **Comment:** We recommend the beneficial use designations for Loch Lomond reservoir be reviewed within the next 3 years.

Response: Beneficial use designations for all waters in the Central Coast Region were reviewed in 1992 and revised beneficial use designations were incorporated into the September 8, 1994 update of the Central Coast Region Water Quality Control Plan. Significant resources were utilized for this task under a one time contract allocation. Current

funding limitations will not allow for further review and revision of beneficial use designations during the 2001 Triennial Review Process.

Although there is no task on the 2001 Triennial Review List for comprehensive review of beneficial use designations, if Santa Cruz County is aware of additional data that would allow for a revised designation for Loch Lomond reservoir, please provide this information to the Regional Board. Staff is willing to evaluate new data and recommend amendment of the Basin Plan as necessary within staffing constraints.

45. **Comment:** The City of Santa Cruz cannot unconditionally support Task 14, Proposed 2001 Triennial Review Priority List issues requiring additional funds, Develop Water Diversion Policy (to address water quality impacts).

Response: Funding limitations will not allow Board staff to address issues on the "Proposed 2001 Triennial Review Priority List issues requiring additional funds." However, in the future when this issue is considered, Board staff shall solicit input from all interested parties.

Save Our Agriculture Land – Letter received, no formal comments.

Department of Pesticide Regulation – Letter received, no formal comments.

RECOMMENDATION

The Regional Board should adopt the attached Resolution (Attachment C) completing the 2001 Triennial Review process. The Resolution approves the Triennial Review priority list for potential revision of the Basin Plan, affirms the general adequacy of the present Basin Plan in areas not under revision, and states that the entire Basin Plan is effective until subsequent amendments are adopted.

ATTACHMENT A

2001 TRIENNIAL REVIEW PRIORITY LIST

(Highest Priority Issues are Ranked First)

Revised 11/16/2001

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Surface Water Issues				
1. Develop Region-Wide Nonpoint Source Management Measures	Policy/BMP	4 months/ 1 year	Policy to the Board 06/02	1998 TRL #1, Use State NPS Plan Revision of 1998 TRL #13, #20, #28, and #29
2. Develop Riparian Corridor Protection Policy	Policy	4 months/ 2 years	Policy to the Board 12/02	1998 TRL #5, Region 2 is developing a document that links beneficial uses to protecting the Riparian corridor. Region 2 will have a final technical document for review before the end of April. Region 3 staff shall begin with that document.
3a. Develop a regional onsite wastewater management policy consistent with AB 885. Shall include at a minimum: maintenance guidelines, repair standards, and monitoring requirements.	Policy	6 months/ 3 years	Status Report's to the Board 12/02 and 12/03 Basin Plan Amendment to the Board 6/04	Revision of 1998 TRL #19, #29, and #117 Board staff are participating in a State AB 885 Technical Advisory Committee
3b. Update On-Site Septic Tank Policy/Update MOUs	Policy	9 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #72, Contingent on AB 885 process
3c. Develop Septage Disposal Policy	Policy	3 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #78, Contingent on AB 885 process
3d. Update Mound System Guidelines	Policy	4 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #118, Contingent on AB 885 process

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
4a. Develop region wide nutrient criteria consistent with federal Regional Technical Advisory Group (RTAG) and a State Regional Technical Advisory Group (STRTAG). Include nutrient water quality objectives for Franklin Creek, Santa Monica Creek, Lopez Lake, and Perfumo Creek.	Criteria	12 months/ 4 years	Status Report's to the Board 12/02 and 12/03 Basin Plan Amendment to the Board 12/04	Revision of 1998 TRL #29, #106, #107, #109, and #113. TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives. Board staff are participating in federal and state RTAG/STRTAG efforts.
4b. Develop Ammonia Objective	Objective	9 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL =112, Contingent on RTAG/STRTAG efforts
4c. Develop Narrative Biological Objective (Nitrogen) to Protect from Dominance of Nuisance Species	Objective	6 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL =51, Contingent on RTAG/STRTAG efforts
4d. Develop Nitrogen Water Quality Objectives to Protect Rare, Threatened, or Endangered Species Beneficial Use	Objective	6 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL =18, Contingent on RTAG/STRTAG efforts TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives Will be addresses in part through Riparian Corridor Protection Policy, which will protect habitat species need to survive and reproduce.
5. Incorporate an Enterococcus standard for water contact recreation in ocean waters	Objective	3 months/ 2 years	Draft language developed 6/01 Status Report to the Board 6/03	Revision of 1998 TRL #29 and #131, Will result in revision of the Ocean Plan. No formal action required by the Regional Board.
6a. Create a Basin Plan Index	Basin Plan Revision	2 months/ 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116 and #126
6b. Create a Basin Plan Glossary	Basin Plan Revision	2 months 1 year	Basin Plan Amendment to the Board 6/02	Regional Board Staff request

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
7a. Revise Chapter 6 of Basin Plan to add a Central Coast Ambient Monitoring Program description and monitoring schedule	Basin Plan Revision	3 months/ 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116
7b. Revise Chapter 6 of Basin Plan	Basin Plan Revision	3 months/ 3 year	Basin Plan Amendment to the Board 6/03	1998 TRL #116
8. Revise Turbidity Objective	Objective	3 months/ 2 years	Basin Plan Amendment to the Board 12/02	1998 TRL #53 - A modified turbidity objective has been reviewed and adopted by the Board in numerous NPDES Orders discharging to inland surface waters
9. Incorporate an E. Coli standard for water contact recreation in surface waters	Objective	6 months/ 3 years	Basin Plan Amendment to the Board 12/03	Revision of 1998 TRL #131, Will result in revision of the Basin Plan surface water objective.
10. Clarify Narrative Objective for Taste/Odors <i>(need to address petroleum)</i>	Objective	4 months/ 3 year	Basin Plan Amendment to the Board 6/04	Revision of 1998 TRL #29, TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
11. Clarify Chapter 5, page V-9, Section IV.C.1., Areas of Special Biological Significance. <i>Ask Jay's group for language</i>	Basin Plan Revision	3 months/ 3 year	Basin Plan Amendment to the Board 6/04	The section contains prohibitions that should apply to the ocean generally in addition to Areas of Special Biological Significance. The Basin Plan will be clear that discharges to Areas of Special Biological Significance are prohibited. The Areas of Special Biological Significance section shall include an explanation of the special circumstances permitting Carmel to discharge to an Area of Special Biological Significance.
12. Consider TMDLs per the priorities and schedules established on the most recent 303(d) List of Impaired Waters	Basin Plan amendment (per TMDL)	15 years (to complete current list)/ 15 years	In progress-some TMDL's to the Board 6/02	Separate TMDL staff and resources are available specifically for this task; ranking of this item is not indicative of task priority.
13. Develop 2004 Triennial Review Priority List (2004 TRPL)	Triennial Review	6 months	preliminary 2004 TRPL to the Board 12/04	Clean Water Act and Porter Cologne Water Quality Control Act requirements

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Ground Water Issues				
1a. Revise Chapter 6 of the Basin Plan to include a groundwater monitoring and assessment component consistent with participation in the statewide Groundwater Quality Monitoring Act of 2001 (AB 599).	Basin Plan Revision	3 months 1 yr	Basin Plan amendment to the Board 6/02	Revision of 1998 TRL item #4-Determine Objective Compliance for Ground Water Basins/Propose Monitoring Plan and Remedial Measures.
1b. Revise Chapter 6 of the Basin Plan to include assessment of Pajaro Hydrologic Unit	Basin Plan Revision	3 months 1 yr	Basin Plan amendment to the Board 6/02	Expansion of 1998 TRL #116
1c. Revise Chapter 6 of the Basin Plan to include assessment of Salinas Hydrologic Unit	Basin Plan Revision	3 months 2 yrs	Basin Plan amendment to the Board 6/03	Expansion of 1998 TRL #116
2a. Revision and/or clarification of Basin Plan narrative groundwater objectives; clarification of related tables.	Objectives	3 months 1.5 yrs	Basin Plan amendment to the Board 12/02	Revision of 1998 TRL #4, #69, and #80 – expanded to all groundwater basins
2b. Review and/or develop groundwater objectives for groundwater basins of the Region.	Objectives	6 months 3 yrs	Basin Plan amendments to the Board 12/02 12/03 6/04	Revision of 1998 TRL #4, #69, and #80 – expanded to all groundwater basins will consider development of objectives for additional groundwater quality constituents
2c. Salts objectives - investigate the need for a region-wide salts policy	Objectives/ Policy	6 months 3 yrs	Policy to the Board 6/04	Expansion of 1998 TRL #12 – water softener use policy
3. Identify existing beneficial uses (BU's) for groundwaters of the Region/determine appropriate BU's for shallow groundwater	Beneficial Use	3 months 2 yrs	Basin Plan amendment to the Board 6/03	Revision of 1998 TRL #48 and #124 May only require revision of language in the Basin Plan/ development of BU table.

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
4a. Develop Region-wide Nitrogen Management measures for GW basins May ultimately need to consider development of basin-specific management measures for some groundwater basins.	Policy/BMP	3 months 1.5 yrs	Policy to the Board 12/02	This general plan developed from the need for nitrogen management plans for 13 individual groundwater basins (1998 TRL items #9, 16, 17, 31, 32, 54, 55, 65, 66, 67, 68, 70, 71, and 75). Initial Plan will incorporate much of NPSMM policy (surface water 2001 TRL item #1).
4b. Fertilizer/pesticide backflow prevention measures	part of 4a above	same as 4a above	same as 4a above	1998 TRL #52 will be part of the region-wide Nitrogen Management Plan
5. Develop wellhead protection policy (a protective measure for sensitive groundwater resources)	Policy	3 months 2.5 yrs	Policy to the Board 12/03	Revision of 1998 TRL#20.
6. Update Groundwater Basin configurations	Basin Plan Revision	1 month 1.5 yrs	Basin Plan Amendment to the Board 12/02	Contingent upon completion of DWR 2002 update (due June 2002)
7a. Create a Basin Plan Index	Basin Plan Revision	1 month 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116 and #126
7b. Create a Basin Plan Glossary	Basin Plan Revision	1 month 1 year	Basin Plan Amendment to the Board 6/02	Regional Board Staff request
8. Develop 2004 Triennial Review Priority List (2004 TRPL)	Triennial Review	6 months	preliminary 2004 TRPL to the Board 12/04	Clean Water Act and Porter Cologne Water Quality Control Act requirements

PROPOSED 2001 TRL ISSUES REQUIRING ADDITIONAL FUNDS

(Note: unfunded 2001 TRL issues have not been prioritized)

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Surface Water Issues				
Clarify Narrative Objective for Toxics	Objective	4 months		TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Develop Water Diversion Policy (to address water quality impacts)	Policy	4 months		
Determine Beneficial Uses for Arguello Hydrologic Area		4 months		
Evaluate and Revise "Inorganic" Water Quality Objectives	Objective	6 months		TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Update Waiver Policy/Add Waiver for Green Waste used in Composting	Policy	4 months		
Update "Rare" Beneficial Use		5 months		
Reevaluate Water Quality Objectives for Irrigation Water	Objective	6 months		
Develop Management Plan for Devereaux Slough	Plan	6 months		
Develop Total Chlorine Residual Objective	Objective	3 month		
Evaluate Cadmium and pH Objective for Fish Spawning	Objective	4 months		
Update Table 2-2, "Existing and Anticipated Uses of Coastal Waters"	Beneficial Uses	3 months		

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Develop Abandoned Mine Policy	Policy	4 months		Morro Bay, Las Tablas Creek, Pajaro River, and Clear Creek TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Reevaluate Llagas Creek Water Quality Objectives	Objective	6 months		In progress-- numeric target is a component of the Pajaro River (includes Llagas Creek) TMDL and management measures will be in the TMDL implementation plan.
Update Rare, Threatened, or Endangered Species Beneficial Use	Beneficial Uses	4 months		Review USFW, DFG and NMFS policies.
Update Beneficial Uses	Beneficial Uses	9 months		Potential new BU: Water Fowl Hunting (Elkhorn Slough)
Update State Board Policies	Policy		Ongoing	
Update Municipal Facilities Plans	Plan	4 months		
Develop Auto Wrecking Yard Policy	Policy	4 months		The State Storm Water Permit requires certain industries to create a site specific Storm Water Pollution Prevention Plan (SWPPP). The SWPPP only accounts for impacts to surface water bodies. Impacts to ground water such as leaking oil sumps are not accounted for in the Storm Water Program. Policy may need to be drafted for impacts to groundwater.
Develop Greenhouse Policy	Policy	4 months		
Develop Low Threat to Water Quality Policy for Surface Water	Policy	2 months		
Evaluate Need for Bacteria Objective for Ocean Waters Used for Desalination Water Supply/Consider Appropriateness or MUN designation	Objective	6 months		

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Assess Problems at Shooting Ranges and Develop Management Measures	Assessment/ Plan	3 months/ 2 years		
Develop Aquaculture Management Plan	Plan	3 months		
Develop detailed guidance for the implementation of the anti-degradation policy.				Reference both the EPA and State guidance documents.
Establish water quality criteria for contaminated sediments.				
Basin Plan Waiver Policy Revision (SB 390)	Basin Plan Revision

1998 TRIENNIAL REVIEW PRIORITY LIST

(Highest Priority Issues are Ranked First)

<u>TASK</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)
1. Develop Region-Wide Nonpoint Source Management Measures (in progress)	3 months/2 years
2. Develop Carbonara Creek, Lompico Creek, and San Lorenzo River Nutrient TMDL (in progress)	6 months
3. Develop San Luis Obispo Creek Nutrient TMDL (in progress)	6 months
4. Determine Objective Compliance for Ground Water Basins/Propose Monitoring Plan and Remedial Measures	5 years
5. Develop Riparian Corridor Protection Policy	2 months
6. Develop Monterey County Aquifer Storage and Recovery Policy	4 months
7. Develop Chorro Creek, Los Osos Creek, and Morro Bay Siltation Total Maximum Daily Load (TMDL)	3 months/2 years
8. Develop Las Tablas Creek; Las Tablas Creek, North Fork; Las Tablas Creek, South Fork; and Nacimiento Reservoir for Mercury TMDL	4 months/2 years
9. Develop Nitrogen Management Plan for Salinas Ground Water Basin	9 months/2 years
10. Develop Chorro Creek and Morro Bay Metals TMDL	3 months/2 years
11. Develop Chorro Creek and Los Osos Creek Nutrient TMDL	3 months/2 years
12. Develop Water Softener Use Policy -- Region-Wide	6 months
13. Develop Los Osos Creek Priority Organics TMDL	3 months/2 years
14. Develop Morro Bay Pathogen TMDL	3 months/2 years
15. Develop Carbonara Creek, Lompico Creek, San Lorenzo River, and San Lorenzo River Estuary Siltation TMDL	4 months/2 years
16. Develop Nitrogen Management Plan for Llagas/Hollister Ground Water Basin	9 months/2 years
17. Develop Nitrogen Management Plan for Prunedale Ground Water Basin	6 months/2 years
18. Develop Water Quality Objectives to Protect Rare, Threatened, or Endangered Species Beneficial Use	6 months/1 years
19. Develop Monitoring Plan for Communities without Sewer Service	8 months
20. Determine Ground Water Protective Measures for Sensitive Ground Water Resources	6 months
21. Develop San Luis Obispo Creek Pathogen TMDL	6 months/2 years
22. Develop Aptos Creek and Valencia Creek Siltation TMDL	6 months/5 years
23. Develop Soquel Lagoon Siltation TMDL	4 months/5 years
24. Develop Salinas River and Salinas River Lagoon (North) Siltation TMDL	1 year/3 years
25. Develop Carbonara Creek, Lompico Creek, and San Lorenzo River Estuary Pathogen TMDL	4 months/3 years
26. Develop Llagas Creek, Pajaro River, and Shingle Mill Creek Nutrient TMDL	1 year/3 years
27. Develop Llagas Creek Pajaro River, Rider Gulch Creek, San Benito River, and Shingle Mill Creek Siltation TMDL	1 year/3 years
28. Develop Water Diversion Policy (to address water quality impacts)	2 months
29. Clarify Narrative Objective for Taste/Odors and Toxics	4 months
30. Develop Watsonville Slough Siltation TMDL	3 months/3 years
31. Develop Nitrogen Management Plan for Santa Maria Ground Water Basin	6 months/2 years
32. Develop Nitrogen Management Plan for Pajaro Ground Water Basin	6 months/2 years
33. Develop San Luis Obispo Creek Priority Pollutant TMDL	6 months/3 years
34. Develop Old Salinas River Estuary, Salinas River, Salinas River Lagoon (North), and Salinas River Lagoon (South) Nutrient TMDL	1 year/5 years
35. Develop Espinosa Slough and Tembladero Slough Nutrient TMDL	4 months/5 years
36. Develop Old Salinas River Estuary, Salinas River, Salinas River Lagoon (North), and Salinas River Lagoon (South) Pesticides/Priority Organics TMDL	4 months/5 years

TASK	ESTIMATED TIME (Staff years and Duration)
37. Develop Espinosa Slough, Moro Cojo Slough, and Tembladero Slough Pesticides/Priority Organics TMDL	4 months/7 years
38. Develop Salinas River and Salinas River Lagoon (South) Salinity/TDS/Chlorides TMDL	1 year/7 years
39. Develop Clear Creek and Hernandez Reservoir Mercury TMDL	1 year/7 years
40. Develop Watsonville Slough Metals TMDL(10/06-04/07)	3 months/7 years
41. Develop Watsonville Slough Oil and Grease TMDL	3 months/7 years
42. Develop Watsonville Slough Pathogens TMDL	3 months/7 years
43. Develop Watsonville Slough Pesticide TMDL	3 months/7 years
44. Develop Monterey Harbor and Monterey Bay South Metals TMDL	9 months/7 years
45. Develop Blanco Drain and Salinas Reclamation Canal Pesticide/Priority Organics TMDL	4 months/8 years
46. Develop Ground Water Cleanup Policy	6 months
47. Develop Soil Cleanup and Disposal Policy/Develop Area -Wide Objectives	6 months
48. Develop Shallow Ground Water Policy/Determine Appropriate Beneficial Uses	1 year
50. Develop Oilfield Waste Policy	3 months
51. Develop Narrative Biological Objective/Protect from Dominance of Nuisance Species	2 months
52. Develop Backflow Prevention Policy	3 months
53. Revise Turbidity Objective	3 months
54. Develop Nitrogen Management Plan for Paso Robles Ground Water Basin	6 months/2 years
55. Develop Nitrogen Management Plan for Arroyo Grande Ground Water Basin	6 months/2 years
56. Develop Santa Ynez River Nutrient TMDL	1 year/7 years
57. Develop Santa Ynez River Salinity/TDS/Chlorides TMDL	1 year/7 years
58. Develop Santa Ynez River Siltation TMDL	1 year/7 years
59. Develop Elkhorn Slough and Moss Landing Harbor Pesticides TMDL	4 months/8 years
60. Develop Elkhorn Slough and Moss Landing Harbor Siltation TMDL	4 months/8 years
61. Develop Moro Cojo Slough Siltation TMDL	6 months/5 years
62. Develop Aptos Creek and Valencia Creek Pathogen TMDL	6 months/8 years
63. Develop Biomedical Rangeland Policy	9 months
64. Determine Beneficial Uses for Arguello Hydrologic Area	2 months
65. Develop Nitrogen Management Plan for San Luis Obispo Ground Water Basin	6 months/2 years
66. Develop Nitrogen Management Plan for Cuyama Ground Water Basin	6 months/2 years
67. Develop Nitrogen Management Plan for Carrizo Ground Water basin	6 months/2 years
68. Develop Nitrogen Management Plan for Santa Ynez Ground Water Basin	6 months/2 years
69. Develop Ground Water Objectives for Llagas/Hollister Ground Water Basin	4 months/2 years
70. Develop Nitrogen Management Plan for Chorro Ground Water Basin	4 months/2 years
71. Develop Nitrogen Management Plan for Seaside Ground Water Basin	4 months/2 years
72. Update On-Site Septic Tank Policy/Update MOUs	9 months
73. Develop Septic Tank Prohibition for Santa Margarita Area	7 months/1 year
74. Develop Paso Robles Ground Water Basin Management Plan	3 months
75. Develop Nitrogen Management Plan for Scotts Valley Ground Water Basin	4 months/2 years
76. Evaluate and Revise "Inorganic" Water Quality Objectives	3 months
77. Develop Well Abandonment Policy	1 month
78. Develop Septage Disposal Policy	3 months
79. Update Waiver Policy/Add Waiver for Green Waste used in Composting	2 months
80. Develop Ground Water Objectives for Los Osos Ground Water Basin	4 months/1.5 year
81. Update "Rare" Beneficial Use	3 months
82. Develop Nutrient Water Quality Objectives and Management Measures for Lower Salinas	6 months/2 years

<u>TASK</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)
83. Reevaluate Water Quality Objectives for Irrigation Water	3 months
84. Develop Schwan Lake Pathogen TMDL	6 months/8 years
85. Develop Soquel Lagoon Pathogen TMDL	4 months/8 years
86. Develop Schwan Lake Nutrient TMDL	6 months/8 years
87. Develop Soquel Lagoon Nutrient TMDL	4 months/8 years
88. Develop Waddell Creek, East Branch Nutrient TMDL	1 year/8 years
89. Develop Arroyo Burro Creek Pathogen TMDL	1 year/8 years
90. Develop Carpinteria Creek Pathogen TMDL	1 year/8 years
91. Develop Goleta Slough/Estuary Pathogen TMDL	3 months/8 years
92. Develop Mission Creek Pathogen TMDL	6 months/8 years
93. Develop Pacific Ocean at Rincon Creek Pathogen TMDL	1 year/8 years
94. Develop Carpinteria Marsh Nutrient TMDL	3 months/8 years
95. Develop Carpinteria Marsh Organic Enrichment/Low Dissolved Oxygen TMDL	3 months/8 years
96. Develop Carpinteria Marsh Priority Organics TMDL	3 months/8 years
97. Develop Carpinteria Marsh Siltation TMDL	3 months/8 years
98. Develop Goleta Slough/Estuary Metals TMDL	3 months/8 years
99. Develop Goleta Slough/Estuary Priority Organics TMDL	3 months/8 years
100. Develop Goleta Slough/Estuary Siltation TMDL	3 months/8 years
101. Develop San Antonio Creek Siltation TMDL	1 year/8 years
102. Develop Mission Creek Toxicity TMDL	6 months/8 years
103. Develop Elkhorn Slough and Moss Landing Harbor Pathogen TMDL	4 months/8 years
104. Develop Monterey Harbor Toxicity TMDL	1 year/8 years
105. Develop Monterey Bay South Pesticide TMDL	1 year/8 years
106. Develop Nutrient Water Quality Objectives and Management Measures for Franklin Creek	6 months/2 years
107. Develop Nutrient Water Quality Objectives and Management Measures for Santa Monica Creek	6 months/2 years
108. Develop Management Plan for Devereaux Slough	6 months
109. Develop Nutrient Objectives and Management Measures for Lopez Lake	6 months/2 years
110. Develop Boatyard Best Management Practices	2 months
111. Develop Total Chlorine Residual Objective	1 month
112. Develop Ammonia Objective	9 months
113. Develop Nutrient Objective and Management Measures for Perfumo Creek	6 months/2 years
114. Evaluate Cadmium and pH Objective for Fish Spawning	4 months
115. Update Table 2-2, "Existing and Anticipated Uses of Coastal Waters"	3 months/2 years
116. Update Monitoring Table in Chapter Six	2 months/6 months
117. Develop Maintenance/Repair Standards for On-Site Systems	3 months
118. Update Mound System Guidelines	3 months
119. Develop Abandoned Mine Policy	4 months
120. Reevaluate Llagas Creek Water Quality Objectives	3 months/1 year
121. Update Rare, Threatened, or Endangered Species Beneficial Use	1 months/8 months
122. Update Beneficial Uses	1 month/8 months
123. Develop Horse Coral Best Management Practices	2 months
124. Determine Appropriate Beneficial Uses for Carizzo Plain Ground Water Basin	6 months/1 year
125. Add "Ground Water Recharge" Beneficial Use to Watsonville/Harkins Slough	1 month
126. Update State Board Policies	2 months
127. Update Municipal Facilities Plans	4 months

<u>TASK</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)
128. Develop Auto Wrecking Yard Policy	4 months
129. Develop Greenhouse Policy	4 months
130. Develop Low Threat to Water Quality Policy for Surface Water	2 months
131. Evaluate Need for Bacteria Objective for Ocean Waters Used for Desalination Water Supply/Consider Appropriateness or MUN designation	6 months
132. Assess Problems at Shooting Ranges and Develop Management Measures	3 months/2 years
133. Develop Aquaculture Management Plan	3 months

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
81 HIGUERA STREET, SUITE 200
SAN LUIS OBISPO, CALIFORNIA

RESOLUTION 01-121

Triennial Review and Affirmation of Water Quality Control Plan,
Central Coast Basin (Basin Plan)

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

1. The California Regional Water Quality Control Board, Central Coast Region, adopted the *Water Quality Control Plan, Central Coastal Basin* (hereafter Basin Plan), on September 8, 1994.
2. State and Federal laws require a triennial review of the Basin Plan.
3. The Regional Board is responsible for reviewing water quality standards and implementation plans as appropriate and for modifying and adopting standards contained in the Plans under provisions set forth in section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code.
4. The Regional Board and its staff implemented the triennial review by performing the following:
 - a. Sending a letter dated August 24, 2001 soliciting comments to the Basin Plan
 - b. Circulating a list of present and potential water quality issues in the Central Coastal Basin for public comment
 - c. Noticing and conducting a public hearing on December 7, 2001, to receive testimony on water quality standards and implementation plans
 - d. Responding to all public comments received during the designated period
5. As a result of the triennial review process, the Regional Board formulated the priority issues list shown in Attachment A.

THEREFORE, BE IT RESOLVED:

1. That the California Regional Water Quality Control Board, Central Coast Region, in fulfillment of the requirements of Section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code, has performed the following:
 - a. Concluded the 2001 triennial review of the Central Coastal Basin Plan
 - b. Approved the priority list for revision of the Central Coastal Basin Plan

- c. Affirmed the general adequacy of the present Basin Plan in the triennial review process
 - d. Declared that the entire Basin Plan is effective until subsequent amendments are adopted
2. Adoption of this triennial review does not preclude other Basin Plan revisions, which may become necessary before the next triennial review in 2004.
 3. Board staff may present items for the Board's consideration prior to higher priority issues in the event a lower priority issue is completed.

I, ROGER W. BRIGGS, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 7, 2001.

Executive Officer

December 7, 2001

To: Interested Persons

REVIEW OF "WATER QUALITY CONTROL PLAN - CENTRAL COASTAL BASIN" (BASIN PLAN)

The Regional Water Quality Control Board (Regional Board) is beginning the process of reviewing its *Water Quality Control Plan - Central Coastal Basin* (Basin Plan). This Basin Plan serves as the cornerstone water quality protection policy for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

Tentative water quality issues have been identified. These items are included in the attached "Preliminary 2001 Triennial Review Priority List."

The Regional Board will hold a hearing to identify and prioritize water quality issues. The public hearing is scheduled as follows:

Date: December 7, 2001
Time: 8:30 A.M.
Place: Conference Room
Regional Water Quality Control Board
81 Higuera Street
Suite 200
San Luis Obispo, CA 93401-5427

Please review the attached list of water quality issues and provide additions and/or comments by **October 9, 2001**. Water quality issues raised may or may not result in an amendment to the Basin Plan. The need for a Basin Plan amendment will be determined by staff investigation following Regional Board placement on the Triennial Review Priority List. In general, the issues identified will be addressed as staff resources become available.

Comments or questions regarding this matter should be directed to Angus Lewis at 805-549-3691 or Howard Kolb at 805-549-3332.

Sincerely,

Roger W. Briggs
Executive Officer

SUBJECT: STATUS OF TOTAL MAXIMUM DAILY LOAD ACTIVITIES

Regional Board staff in the Watershed Assessment Unit have been working since September 1999 on development and establishment of Total Maximum Daily Loads (TMDLs) for waterbodies in high priority watersheds (priorities are based on the existing "303(d) List" of impaired waters and the Watershed Management Initiative). In general, a TMDL is developed and established by a phased process which includes assessing point and nonpoint sources of the pollutant, determining the contribution from each source, determining appropriate load reductions for each source, implementing a program to achieve load reductions, adoption of a basin plan amendment, and monitoring to determine attainment of water quality standards. Federal Law requires a TMDL to include a problem statement, numeric targets, source analysis, and load allocations. Federal and State Law require the Basin Plan be amended to include the TMDL, the implementation plan and monitoring plans. Public participation is critical during development of the TMDL, development of the implementation plan, adoption of the basin plan amendment, implementation of control actions, and monitoring for effectiveness. Region 3's approach is to simultaneously develop TMDLs for all waters in a given watershed, listed for the same pollutant, as a "TMDL Unit." For example, the Morro Bay Watershed Siltation TMDL refers to TMDLs for Chorro Creek, Los Osos Creek and Morro Bay, all on the 303(d) list for siltation. Occasionally a "TMDL Unit" is defined as a subwatershed because only one or two waterbodies are on the 303(d) list for a particular pollutant (e.g., Chorro Creek Metals).

Current activities are described briefly below.

San Luis Obispo Creek Watershed Nutrients - The Draft TMDL was submitted to USEPA on June 30, 2000. USEPA plans to establish this TMDL through the federal process within a year of June 30, 2000. Staff has developed a monitoring program to refine the allocations in the draft document and is developing an implementation plan.

Morro Bay Watershed Nutrients and Siltation - The Draft TMDL Reports were submitted to USEPA by June 30, 2000. The Siltation TMDL was modified in response to comments submitted by USEPA and members of the public in January 2001. The Nutrient TMDL will be modified in response to comments from USEPA and members of the general public in March 2001. They will both be finalized and presented to the Board for adoption as Basin Plan amendments in winter of 2002.

Morro Bay Watershed Pathogens - The TMDL Report is currently being developed and the first draft is scheduled for completion by December, 2001.

Las Tablas Creek- Nacimiento Reservoir Metals - The Draft TMDL Report was submitted to USEPA on June 30, 2000, and is scheduled to be revised in July 2001. This TMDL is scheduled to be presented to the Board for adoption as a Basin Plan amendment in winter 2002.

Chorro Creek Metals - The Draft TMDL Report was submitted to USEPA on June 30, 2000, and revised in April 2001. This TMDL is scheduled to be presented to the Board for adoption as a Basin Plan amendment in winter 2002.

Salinas River Watershed Siltation - A problem statement was completed for this TMDL

on June 30, 2000. A contract for additional monitoring, assessment and analysis was established in May 2000. Development of the TMDL will proceed throughout this fiscal year. The Draft TMDL Report is scheduled to be submitted to USEPA by June 30, 2002.

Pajaro River Watershed Nutrients - Development of this TMDL was initiated last fiscal year and will continue through this fiscal year. A first draft of the TMDL Report was scheduled to be submitted to USEPA by June 30, 2001. A preliminary draft will be prepared by June 30, 2001 but additional effort will be needed through June 2002.

Pajaro River Watershed Siltation - Development of this TMDL was initiated last fiscal year. Regional Board staff attempted to establish a contract for additional monitoring, assessment and analysis in June 2000. This contract was not executed (due to watershed coordination issues and administrative delays) as planned. Therefore, development of this TMDL will proceed throughout this fiscal year and into next year. A preliminary draft TMDL Report is scheduled to be prepared by June 30, 2002.

Valencia and Aptos Creek Siltation, San Luis Obispo Creek Watershed Pathogens and Priority Pollutants, Morro Bay Watershed Priority Pollutants, and Morro Bay Metals - A review of existing information and sampling plans to collect additional information was recently or will soon be completed for these TMDLs. Sample collection and preliminary analysis of data collected will proceed throughout this fiscal year and into next year. Draft TMDL reports will be completed at the end of fiscal year 2001-2002 and into fiscal year 2002-2003.

Salinas River Watershed Pesticides, Nutrients and Salinity, Pajaro River Watershed Metals (Clear Creek and Hernandez Reservoir), Pesticides and Oil and Grease (Watsonville Slough) - Preliminary literature review and identification of existing data has been initiated for these TMDLs and development of the TMDLs will proceed throughout the next couple of years.

FINAL 2001 TRIENNIAL REVIEW PRIORITY LIST

Revised 12/12/01

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Surface Water Issues				
1. Develop Region-Wide Nonpoint Source Management Measures	Policy/BMP	4 months/ 1 year	Policy to the Board 06/02	1998 TRL #1, Use State NPS Plan Revision of 1998 TRL #13, #20, #28, and #29
2. Develop Riparian Corridor Protection Policy	Policy	4 months/ 2 years	Policy to the Board 12/02	1998 TRL #5, Region 2 is developing a document that links beneficial uses to protecting the Riparian corridor. Region 2 will have a final technical document for review before the end of April. Region 3 staff shall begin with that document.
3a. Develop a regional onsite wastewater management policy consistent with AB 885. Shall include at a minimum: maintenance guidelines, repair standards, and monitoring requirements.	Policy	6 months/ 3 years	Status Report's to the Board 12/02 and 12/03 Basin Plan Amendment to the Board 6/04	Revision of 1998 TRL #19, #29, and #117 Board staff are participating in a State AB 885 Technical Advisory Committee
3b. Update On-Site Septic Tank Policy/Update MOUs	Policy	9 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #72, Contingent on AB 885 process
3c. Develop Septage Disposal Policy	Policy	3 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #78, Contingent on AB 885 process
3d. Update Mound System Guidelines	Policy	4 months/ 3 years	Basin Plan Amendment to the Board 6/04	1998 TRL #118, Contingent on AB 885 process

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
4a. Develop region wide nutrient criteria consistent with federal Regional Technical Advisory Group (RTAG) and a State Regional Technical Advisory Group (STRTAG). Include nutrient water quality objectives for Franklin Creek, Santa Monica Creek, Lopez Lake, and Perfumo Creek.	Criteria	12 months/ 4 years	Status Report's to the Board 12/02 and 12/03 Basin Plan Amendment to the Board 12/04	Revision of 1998 TRL #29, #106, #107, #109, and #113. TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives. Board staff are participating in federal and state RTAG/STRTAG efforts.
4b. Develop Ammonia Objective	Objective	9 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL #112, Contingent on RTAG/STRTAG efforts
4c. Develop Narrative Biological Objective (Nitrogen) to Protect from Dominance of Nuisance Species	Objective	6 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL #51, Contingent on RTAG/STRTAG efforts
4d. Develop Nitrogen Water Quality Objectives to Protect Rare, Threatened, or Endangered Species Beneficial Use	Objective	6 months/ 4 years	Basin Plan Amendment to the Board 12/04	1998 TRL #18, Contingent on RTAG/STRTAG efforts TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives Will be addresses in part through Riparian Corridor Protection Policy, which will protect habitat species need to survive and reproduce.
5. Incorporate an Enterococcus standard for water contact recreation in ocean waters	Objective	3 months/ 2 years	Draft language developed 6/01 Status Report to the Board 6/03	Revision of 1998 TRL #29 and #131, Will result in revision of the Ocean Plan. No formal action required by the Regional Board.
6a. Create a Basin Plan Index	Basin Plan Revision	2 months/ 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116 and #126
6b. Create a Basin Plan Glossary	Basin Plan Revision	2 months 1 year	Basin Plan Amendment to the Board 6/02	Regional Board Staff request

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u>	<u>STATUS</u>	<u>COMMENTS</u>
7a. Revise Chapter 6 of Basin Plan to add a Central Coast Ambient Monitoring Program description and monitoring schedule	Basin Plan Revision	3 months/ 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116
7b. Revise Chapter 6 of Basin Plan	Basin Plan Revision	3 months/ 3 year	Basin Plan Amendment to the Board 6/03	1998 TRL #116
8. Revise Turbidity Objective	Objective	3 months/ 2 years	Basin Plan Amendment to the Board 12/02	1998 TRL #53 - A modified turbidity objective has been reviewed and adopted by the Board in numerous NPDES Orders discharging to inland surface waters
9. Incorporate an E. Coli standard for water contact recreation in surface waters	Objective	6 months/ 3 years	Basin Plan Amendment to the Board 12/03	Revision of 1998 TRL #131, Will result in revision of the Basin Plan surface water objective.
10. Clarify Narrative Objective for Taste/Odors	Objective	4 months/ 3 year	Basin Plan Amendment to the Board 6/04	Revision of 1998 TRL #29, TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
11. Clarify Chapter 5, page V-9, Section IV.C.1., Areas of Special Biological Significance.	Basin Plan Revision	3 months/ 3 year	Basin Plan Amendment to the Board 6/04	<p>The section contains prohibitions that should apply to the ocean generally in addition to Areas of Special Biological Significance.</p> <p>The Basin Plan will be clear that discharges to Areas of Special Biological Significance are prohibited.</p> <p>The Areas of Special Biological Significance section shall include an explanation of the special circumstances permitting Carmel to discharge to an Area of Special Biological Significance.</p>
12. Consider TMDLs per the priorities and schedules established on the most recent 303(d) List of Impaired Waters	Basin Plan amendment (per TMDL)	15 years (to complete current list)/ 15 years	In progress-some TMDL's to the Board 6/02	Separate TMDL staff and resources are available specifically for this task; ranking of this item is not indicative of task priority.
13. Develop 2004 Triennial Review Priority List (2004 TRPL)	Triennial Review	6 months	preliminary 2004 TRPL to the Board 12/04	Clean Water Act and Porter Cologne Water Quality Control Act requirements
14. Basin Plan Waiver Policy Revision (SB 390)	Basin Plan Revision			

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Ground Water Issues				
1a. Revise Chapter 6 of the Basin Plan to include a groundwater monitoring and assessment component consistent with participation in the statewide Groundwater Quality Monitoring Act of 2001 (AB 599).	Basin Plan Revision	3 months 1 yr	Basin Plan amendment to the Board 6/02	Revision of 1998 TRL item #4-Determine Objective Compliance for Ground Water Basins/Propose Monitoring Plan and Remedial Measures.
1b. Revise Chapter 6 of the Basin Plan to include assessment of Pajaro Hydrologic Unit	Basin Plan Revision	3 months 1 yr	Basin Plan amendment to the Board 6/02	Expansion of 1998 TRL #116
1c. Revise Chapter 6 of the Basin Plan to include assessment of Salinas Hydrologic Unit	Basin Plan Revision	3 months 2 yrs	Basin Plan amendment to the Board 6/03	Expansion of 1998 TRL #116
2a. Revision and/or clarification of Basin Plan narrative groundwater objectives; clarification of related tables.	Objectives	3 months 1.5 yrs	Basin Plan amendment to the Board 12/02	Revision of 1998 TRL #4, #69, and #80 – expanded to all groundwater basins
2b. Review and/or develop groundwater objectives for groundwater basins of the Region.	Objectives	6 months 3 yrs	Basin Plan amendments to the Board 12/02 12/03 6/04	Revision of 1998 TRL #4, #69, and #80 – expanded to all groundwater basins will consider development of objectives for additional groundwater quality constituents
2c. Salts objectives - investigate the need for a region-wide salts policy	Objectives/ Policy	6 months 3 yrs	Policy to the Board 6/04	Expansion of 1998 TRL #12 – water softener use policy
3. Identify existing beneficial uses (BU's) for groundwaters of the Region/determine appropriate BU's for shallow groundwater	Beneficial Use	3 months 2 yrs	Basin Plan amendment to the Board 6/03	Revision of 1998 TRL #48 and #124 May only require revision of language in the Basin Plan/ development of BU table.

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
4a. Develop Region-wide Nitrogen Management measures for GW basins May ultimately need to consider development of basin-specific management measures for some groundwater basins.	Policy/BMP	3 months 1.5 yrs	Policy to the Board 12/02	This general plan developed from the need for nitrogen management plans for 13 individual groundwater basins (1998 TRL items #9, 16, 17, 31, 32, 54, 55, 65, 66, 67, 68, 70, 71, and 75). Initial Plan will incorporate much of NPSMM policy (surface water 2001 TRL item #1).
4b. Fertilizer/pesticide backflow prevention measures	part of 4a above	same as 4a above	same as 4a above	1998 TRL #52 will be part of the region-wide Nitrogen Management Plan
5. Develop wellhead protection policy (a protective measure for sensitive groundwater resources)	Policy	3 months 2.5 yrs	Policy to the Board 12/03	Revision of 1998 TRL#20.
6. Update Groundwater Basin configurations	Basin Plan Revision	1 month 1.5 yrs	Basin Plan Amendment to the Board 12/02	Contingent upon completion of DWR 2002 update (due June 2002)
7a. Create a Basin Plan Index	Basin Plan Revision	1 month 1 year	Basin Plan Amendment to the Board 6/02	Revision of 1998 TRL #116 and #126
7b. Create a Basin Plan Glossary	Basin Plan Revision	1 month 1 year	Basin Plan Amendment to the Board 6/02	Regional Board Staff request
8. Develop 2004 Triennial Review Priority List (2004 TRPL)	Triennial Review	6 months	preliminary 2004 TRPL to the Board 12/04	Clean Water Act and Porter Cologne Water Quality Control Act requirements

PROPOSED 2001 TRL ISSUES REQUIRING ADDITIONAL FUNDS

(Note: unfunded 2001 TRL issues have not been prioritized)

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Surface Water Issues				
Clarify Narrative Objective for Toxics	Objective	4 months		TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Develop Water Diversion Policy (to address water quality impacts)	Policy	4 months		
Determine Beneficial Uses for Arguello Hydrologic Area		4 months		
Evaluate and Revise "Inorganic" Water Quality Objectives	Objective	6 months		TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Update Waiver Policy/Add Waiver for Green Waste used in Composting	Policy	4 months		
Update "Rare" Beneficial Use		5 months		
Reevaluate Water Quality Objectives for Irrigation Water	Objective	6 months		
Develop Management Plan for Devereaux Slough	Plan	6 months		
Develop Total Chlorine Residual Objective	Objective	3 month		
Evaluate Cadmium and pH Objective for Fish Spawning	Objective	4 months		Work with DFG, NMFS, and USFW.
Update Table 2-2, "Existing and Anticipated Uses of Coastal Waters"	Beneficial Uses	3 months		

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Develop Abandoned Mine Policy	Policy	4 months		Morro Bay, Las Tablas Creek, Pajaro River, and Clear Creek TMDL's may identify specific numeric targets, these may be useful as starting points for Water Quality Objectives
Reevaluate Llagas Creek Water Quality Objectives	Objective	6 months		In progress-- numeric target is a component of the Pajaro River (includes Llagas Creek) TMDL and management measures will be in the TMDL implementation plan.
Update Rare, Threatened, or Endangered Species Beneficial Use	Beneficial Uses	4 months		Review USFW, DFG and NMFS policies.
Update Beneficial Uses	Beneficial Uses	9 months		Potential new BU: Water Fowl Hunting (Elkhorn Slough)
Update State Board Policies	Policy		Ongoing	
Update Municipal Facilities Plans	Plan	4 months		
Develop Auto Wrecking Yard Policy	Policy	4 months		The State Storm Water Permit requires certain industries to create a site specific Storm Water Pollution Prevention Plan (SWPPP). The SWPPP only accounts for impacts to surface water bodies. Impacts to ground water such as leaking oil sumps are not accounted for in the Storm Water Program. Policy may need to be drafted for impacts to groundwater.
Develop Greenhouse Policy	Policy	4 months		
Develop Low Threat to Water Quality Policy for Surface Water	Policy	2 months		
Evaluate Need for Bacteria Objective for Ocean Waters Used for Desalination Water Supply/Consider Appropriateness or MUN designation	Objective	6 months		

<u>TASK</u>	<u>Type of Action</u>	<u>ESTIMATED TIME</u> (Staff years and Duration)	<u>STATUS</u>	<u>COMMENTS</u>
Assess Problems at Shooting Ranges and Develop Management Measures	Assessment/ Plan	3 months/ 2 years		
Develop Aquaculture Management Plan	Plan	3 months		
Develop detailed guidance for the implementation of the anti-degradation policy.				Reference both the EPA and State guidance documents.
Establish water quality criteria for contaminated sediments.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

STAFF REPORT FOR REGULAR MEETING OF DECEMBER 6, 2002

Prepared on August 7, 2002

ITEM NUMBER:

SUBJECT: PROPOSED AMENDMENT OF "WATER QUALITY CONTROL PLAN - CENTRAL COASTAL BASIN" (BASIN PLAN) REGARDING REFERENCE OF THE STATE WATER RESOURCES CONTROL BOARD "NONPOINT SOURCE POLLUTION CONTROL PROGRAM" AND RESTRUCTURING THE BASIN PLAN NONPOINT SOURCE INFORMATION, FINDINGS, AND REQUIREMENTS.

SUMMARY

The Central Coast Regional Water Quality Control Board (Regional Board) Staff is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin, 1994 (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy and legal standards for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

The purpose of this amendment is to:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to move appropriate nonpoint source information, requirements, and prohibitions into one designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

This amendment is presented to the Board for review and consideration.

DISCUSSION

In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to the Nonpoint Source Pollution Control Program (January 2000) in December 1999. Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted by the State Water Resources Control Board on December 14, 1999 pursuant to Section 319 of the Clean Water Act.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

Staff is proposing revision of the Basin Plan because the State Water Resources Control Board, through Resolution 99-114, adopted a revised

Nonpoint Source Pollution Control Program (January 2000) in December 1999.

Resolution No. 99-114 directs regional boards to implement the state Nonpoint Source Pollution Control Program. The Basin Plan for the Regional Water Quality Control Board, Central Coast Region includes the state November 1988, Nonpoint Source Management Plan. This amendment updates the Basin Plan to comply with Resolution No. 99-114.

The information utilized in the proposed revision comes from the Nonpoint Source Pollution Control Program (January 2000) and the Water Quality Control Plan - Central Coastal Basin, (September 1994). The revision proposes to reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program, emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas, and restructure sections of the Basin Plan to move appropriate nonpoint source information, requirements, and prohibitions into one designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Below is a summary of all edits, additions, and changes in Chapter Four (4), Chapter Five (5), and Appendices of the Basin Plan. Chapter 4 edits, additions, and changes are shown in Attachment B. Chapter 5 edits, additions, and changes are shown in Attachment C. Appendices edits are shown in Attachment D.

Chapter 4

1. Page IV-1, edited Table of Contents.
2. Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES, Moved to page IV-45, Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS. Once Section moved, made minor clerical edits, then deleted Section V.A.7. BEST MANAGEMENT PRACTICES, on Pages IV-5 and IV-6 of Chapter 4.
3. Pages IV-7 and IV-8, Section V.B. NONPOINT SOURCE PROGRAM, Moved to page IV-44, Section VIII. Once Section

moved, major edits using language from "Nonpoint Source Pollution Control Program (January 2000)", then deleted Section V.B. NONPOINT SOURCE PROGRAM, on Pages IV-7 and IV-8 of Chapter 4.

4. Pages IV-44 and IV-45, Section VIII. NONPOINT SOURCE MEASURES - Title of Section VIII. changed to CONTROL OF NONPOINT SOURCE POLLUTANTS. Major edits to Section VIII. using language from "Nonpoint Source Pollution Control Program (January 2000)".

Added section titled BEST MANAGEMENT PRACTICES, using information from Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES. Minor clerical edits made to the new Section.

5. Pages IV-45 and IV-46, Section VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS, delete information contained in the Coastal Zone Act Reauthorization Amendment section. The Coastal Zone Act Reauthorization Amendments are addressed in the "Nonpoint Source Pollution Control Program (January 2000)".
6. Pages IV-45 and IV-46, Rename Section VIII.A. Wetlands, Riparian Areas, and Vegetated Treatment Systems, using information from "Nonpoint Source Pollution Control Program (January 2000)", Page 152, Section G Wetlands, Riparian Areas, and Vegetated Treatment Systems. Minor clerical edits made to the new Section.

Three headings added "Recommended Actions", "Control Actions", and "Prohibitions". Under "Recommended Actions" repeated four management measures from Page 152, Section G Wetlands, Riparian Areas, and Vegetated Treatment Systems. Under "Control Actions", repeated three items found in Chapter V, Management Principles, Section III.A. GENERAL, three items found in Chapter V, Management Principles, Section III.C. DISCHARGE TO SURFACE WATERS, and one item found in Chapter V, Section V.G. EROSION AND SEDIMENTATION.

7. Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, added header "Recommended Actions". Under "Recommended Actions" added sub-headers "Erosion Study Recommendations" and "Actions By Other Authorities".

Under "Recommended Actions" repeated three items found in Chapter V, Management Principles, Section III.A. General.

8. Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, added header "Control Actions" and repeated three items found in Chapter V, Management Principles, Section III.C. Discharge to Surface Waters, moved items 1 through 7 from Section V.G. EROSION AND SEDIMENTATION, and moved items 3 through 7 from Section III.G. EROSION AND SEDIMENTATION CONTROL.
9. Page IV-70, Section VIII.E.1. LAND DISTURBANCE PROHIBITIONS, minor edits. Added reference, "For additional prohibitions see Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS."

Chapter 5

1. Page V-1, Section I. STATE WATER RESOURCES CONTROL BOARD PLANS AND POLICIES - Updated section to reflect "Nonpoint Source Pollution Control Program (January 2000)".
2. Page V-3, Section I.J. NONPOINT SOURCE MANAGEMENT PLAN - Updated section adding additional language to reflect "Nonpoint Source Pollution Control Program (January 2000)".
3. Page V-7, Section III.G. EROSION AND SEDIMENTATION CONTROL - Delete Item 1, move Item 2 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations", move Items 3 through 7 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Control Actions", and delete last

paragraph. Once the appropriate Items were moved to Chapter 4, made minor edits to Items 2 through 7, then deleted Section III.G. EROSION AND SEDIMENTATION CONTROL on Page V-7 of Chapter 5.

4. Pages V-13 and 14, Section V.G. EROSION AND SEDIMENTATION -, move Items 1 through 7 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Control Actions" and move Item 8 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations", and delete last paragraph of Section V.G. Page V-14. Once the appropriate Items were moved to Chapter 4, made minor edits to Items 1 through 7, then deleted Section V.G. EROSION AND SEDIMENTATION on Pages V-13 and 14 of Chapter 5.
5. Pages V-15 and V-16, Section V.H.10. EROSION AND SEDIMENTATION CONTROL- Move Items 1 through 8 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations" (ACTIONS BY OTHER AUTHORITIES). Once the appropriate Items were moved to Chapter 4, deleted Section V.H.10. EROSION AND SEDIMENTATION CONTROL on Pages V-15 and V-16 of Chapter 5.

Appendices

1. Revise Plans and Policies Appendix "Table of Contents" to show deletion of Appendix A-10, Nonpoint Source Management Plan.
2. Delete Appendix A-10, Nonpoint Source Management Plan (November 1988). This appendix references an outdated version of the State Nonpoint Source Pollution Control Program.

ENVIRONMENTAL SUMMARY

A Notice of Public Hearing has been circulated. A Notice of Filing, Written Report, and Environmental Checklist (Attachment E) will be prepared and circulated to interested agencies and persons prior to consideration of any Basin Plan

amendment. This will satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

COMMENTS

RESOLUTION R3-2002-0093

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 AEROVISTA PLACE, SUITE 101
SAN LUIS OBISPO, CALIFORNIA**

**RESOLUTION R3-2002-0093
(Drafted August 8, 2002)**

**Adopting Revised State Water Resources Control Board
Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source
Plans, Policies, and Management Practices
Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)
And Requesting Approval from State Water Resources Control Board**

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

1. The California Regional Water Quality Control Board, Central Coast Region, adopted the *Water Quality Control Plan, Central Coastal Basin* (hereafter Basin Plan), on September 8, 1994.
2. The Regional Board periodically revises and amends the Basin Plan. The most recently finalized amendment to the Basin Plan was in April 1995.
3. The Regional Board is responsible for reviewing water quality standards and implementation plans as appropriate and for modifying and adopting standards contained in the Plans under provisions set forth in section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code.
4. The State Water Resources Control Board revised the State Nonpoint Source Management Plan to the "Nonpoint Source Pollution Control Program" (January 2002).
5. State Water Resources Control Board Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted on December 14, 1999 pursuant to Section 319 of the Clean Water Act.
6. The Nonpoint Source Pollution Control Program (dated January 2000) includes a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

7. The Nonpoint Source Pollution Control Program process includes: Assessing Program activities, targeting efforts, planning activities based on Program goals and objectives, coordinating the efforts of federal, State, and local agencies and stakeholders, implementing coordinated actions, tracking and monitoring the results of implemented actions, and reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.
8. The Basin Plan contains existing nonpoint source information distributed throughout the document.
9. The Basin Plan requires restructuring in order to have appropriate nonpoint source information, findings, and requirements in a designated section of the Basin Plan (Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS).
10. Regional Board consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and threatened and endangered plants and animal species. The Department of Fish and Game has made a determination of "no jeopardy" pursuant to the California Endangered Species Act.
11. A draft notice of filing, staff report, the proposed amendment, and environmental checklist have been prepared and distributed to interested persons and agencies for review and comment in accordance with state and federal environmental regulations (23 CCR § 3775, 40 CFR 25 and 40 CFR 131).
12. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act of 1977 (PL 92-500 and PL 95-217).
13. The Regional Board finds adoption of these amendments will have no potential for adverse effect, either individually or cumulatively, on wildlife. The Regional Board finds adoption of these amendments not have a significant adverse effect on the environment.
14. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
15. On December 6, 2002 in San Luis Obispo California, the Regional Board held a public hearing and considered all public testimony.

THEREFORE, BE IT RESOLVED:

1. Pursuant to section 13240 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment **Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source Plans, Policies, and Management Practices Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)** as shown in Attachments B "Revised Chapter 4. Implementation Plan", C "Revised Chapter 5. Plans and Policies", and D

- “Revised Basin Plan Appendix”. The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency.
2. The Board’s Executive Officer is authorized to submit the amendment to the State Water Resources Control Board in accordance with the requirements of section 13245 of the California Water Code.
 3. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
 4. That the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the State Board shall file a Notice of Decision with the State Clearinghouse.
 5. That the Board’s Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results in a “*De Minimus*” impact finding.
 6. That if during approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, ROGER W. BRIGGS, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 6, 2002.

REVISED CHAPTER 4. IMPLEMENTATION PLAN

CHAPTER 4. IMPLEMENTATION PLAN

A program of implementation to protect beneficial uses and to achieve water quality objectives is an integral component of this Basin Plan. The program of implementation is required to include, but is not limited to:

- A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private.
- A time schedule for the actions to be taken.
- A description of surveillance to be undertaken to determine compliance with objectives.

Additional surveillance activities to determine compliance with objectives are described in Chapter Six, "Surveillance and Monitoring".

This chapter includes discussions of:

- Regional Water Quality Control Board Goals;
- General Control Actions and Related Issues;
- Waste Discharge Regulation;
- Hazardous Waste Compliance Issues; and
- Nonpoint Source Measures.

~~Detailed descriptions of waterbodies with their specific water quality problems and recommended control actions are included in the Region's Water Quality Assessment database and Fact Sheets.~~

This chapter is organized in the following manner:

- I. Regional Water Quality Control Board Goals
- II. General Control Actions and Related Issues
- III. Control Actions under State Board Authority
- IV. Control Actions to be Implemented by Other Agencies with Water Quality or Related Authority
- V. Control Actions under Regional Board Authority
 - A. ~~Waste Discharge Restrictions~~ Control of Point Source Pollutants
 1. Water Quality Certification
 2. National Pollutant Discharge Elimination System
 3. Waste Discharge Requirements
 4. Waivers

5. Prohibitions and Prohibition Exemptions
 6. Enforcement Actions
 7. ~~Best Management Practices~~
 8. Compliance Schedules
- ~~B. Nonpoint Source Program~~
- VI. Waste Discharge Program Implementation
 - A. Effluent Limits
 1. Stream Disposal
 2. Estuarine Disposal
 3. Ocean Disposal
 4. Land Disposal
 5. Reclamation and Reuse
 6. Pretreatment Programs
 7. Sludge Treatment
 - B. Municipal Wastewater Management Plans (arranged by hydrologic subarea)
 - C. Industrial Wastewater Management
 - D. Solid Waste Management
 - E. Storm Water Management
 - F. Bay Protection and Toxic Cleanup Program
 - G. Military Installations
 - H. Spills, Leaks, Investigations, and Cleanup Program
 - I. Underground Tank Storage Tank Program
 - J. Aboveground Petroleum Storage Tanks
 - K. California Code of Regulations, Title 23, Chapter 15
 1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)
 2. Wastewater Sludge (Septage Management)
 3. Mining Activities (Nonfuel Commodities)
 4. Other Industrial Activities
 - L. Resource Conservation and Recovery Act (Subtitle D)
 - M. Solid Waste Water Quality Assessment Test Hazardous Waste Compliance Issues
 - A. Reportable Quantities of Hazardous Waste and Sewage Discharges
 - B. Proposition 65
 - VIII. ~~Control of Nonpoint Source Measures~~ Pollutants
 - A. ~~Coastal Zone Act Reauthorization Amendments~~ Wetlands, Riparian Areas, and Vegetated Treatment Systems
 - B. Urban Runoff Management
 - C. Agricultural Water and Wastewater Management
 - D. Individual, Alternative, and Community Disposal Systems
 - E. Land Disturbance Activities

Revise the September 8, 1994 Basin Plan,

POLLUTANTS

Revise the September 8, 1994 Basin Plan, Chapter 4, Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES as follows (Moved to page IV-45, Section VIII.A.):

V.A.7. BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. (Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter). The term "Best Management Practices" is used in reference to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations Section 103.2[m]) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6[b][4][i]) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment controls which remove pollutants from a discharge before it reaches surface or ground waters.

Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized:

Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.

The use of Best Management Practices does not necessarily ensure compliance with effluent limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970's, the long term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.

To be effective, most Best Management Practices must be implemented on a long term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.

- The "state of the art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on recommended nonpoint source management practices is provided under different water quality problem categories throughout this chapter. For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate Best Management Practices Handbook for the project type or location.

Revise the September 8, 1994 Basin Plan, Chapter 4, Pages IV-7 and IV-8, Section V.B., NONPOINT SOURCE PROGRAM as follows (Moved to page IV-44, Section VIII.):

V.B. NONPOINT SOURCE PROGRAM

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

In order to address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By amending the Clean Water Act, Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which outlined steps to initiate the systematic management of nonpoint sources in California. For effective management of nonpoint sources the Management Plan required:

□ An explicit long term commitment by the State Board and Regional Boards;

□ More effective coordination of existing State Board and Regional Board nonpoint source related programs;

□ Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;

□ Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and

□ Development of new funding sources.

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1. Voluntary implementation of Best Management Practices

Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.

2. Enforcement of Best Management Practices

Although the California Porter Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use their regulatory authorities to encourage implementation of Best Management Practices.

First, the Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements, and approved Management Agency Agreements, or other State or Regional Board formal action.

3. Adoption of Effluent Limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations

~~may be set at a level which, in practice, requires implementation of Best Management Practices.~~

~~Not all of the categories of nonpoint source pollution follow this three-tiered approach. For example, silviculture activities on non-federal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with California Department of Forestry which allows the Regional Boards to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.~~

~~The Regional Board approach to addressing or regulating categories of nonpoint source pollution is discussed in various sections throughout this chapter.~~

~~Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-44 and Page IV-45, Section VIII. NONPOINT SOURCE MEASURES as follows:~~

VIII. NONPOINT SOURCE PROGRAM CONTROL OF NONPOINT SOURCE MEASURES POLLUTANTS

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as diffuse discharges of waste without a single point of origin sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is typically caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

~~In order to~~To address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. ~~By a~~Amendments to the Clean Water Act (www.swrcb.ca.gov/rwqcb3/), Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan ~~which~~ that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to become the "Nonpoint Source Pollution Control Program (January 2000)" in December 1999 (www.swrcb.ca.gov/rwqcb3/). The State Water Resources Control Board adopted Resolution 99-114, revising the Nonpoint Source Pollution Control Program on December 14, 1999 pursuant to Section 319 of the

~~Clean Water Act. For effective management of nonpoint sources the Management Plan required:~~

~~1. An explicit long term commitment by the State Board and Regional Boards;~~

~~2. More effective coordination of existing State Board and Regional Board nonpoint source related programs;~~

~~3. Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;~~

~~4. Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and~~

- Development of new funding sources.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process. The program process includes:

- (1) Assessing Program activities
- (2) Targeting efforts
- (3) Planning activities based on Program goals and objectives
- (4) Coordinating the efforts of federal, State, and local agencies and stakeholders
- (5) Implementing coordinated actions
- (6) Tracking and monitoring the results of implemented actions
- (7) Reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.

Specifically, the 2000 Nonpoint Source Pollution Control Program:

1. Adopts 61 management measures as goals for six nonpoint source categories (agriculture, forestry, urban areas, marinas and recreational boating, hydromodification, and wetlands/riparian areas/vegetated treatment systems)

2. Provides a fifteen-year strategy for implementing Management Measures
3. Continues use of the "Three-Tiered Approach" for addressing NPS pollution problems
 - a) Tier 1: Self-Determined Implementation of Management Practices (formerly referred to as "voluntary" implementation)
 - b) Tier 2: Regulatory Based Encouragement of Management Practices
 - c) Tier 3: Effluent Limitations and Enforcement Actions
4. Provides the first of three five-year implementation plans targeting activities for specific management measures consistent with state and regional priorities in specific watersheds and also establishes mechanisms for: (a) coordination among agencies; (b) participation by the public; (c) assistance technically and financially; (d) adoption of additional management measures as goals, if needed; and; (e) monitoring and reporting of program effectiveness
5. Promotes long-term interagency coordination among State agencies of the California Environmental Protection Agency and Resources Agency as well as other local, State, and federal agencies
6. Identifies back-up authorities and enforceable policies and mechanisms for the 61 management measures adopted by the State
7. Relies on the use of existing authorities and regulatory processes to achieve implementation but allows for the adoption of the management measures as regulation after each five-year cycle if adequate progress in NPS pollution control has not been demonstrated

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1. Voluntary implementation of Best Management Practices

Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.

2. Enforcement of Best Management Practices

Although the California Porter Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use

their regulatory authorities to encourage implementation of Best Management Practices.

First, the Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements, and approved Management Agency Agreements, or other State or Regional Board formal action.

3. Adoption of Effluent Limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations may be set at a level which, in practice, requires implementation of Best Management Practices.

Not all of the categories of nonpoint source pollution follow this three tiered approach. For example, silviculture activities on non federal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with California Department of Forestry which allows the Regional Boards to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.

The Regional Board approach to addressing or regulating categories of nonpoint source pollution is discussed in various sections throughout this chapter, the Basin Plan and the Central Coast Region Watershed Management Initiative Chapter (www.swrcb.ca.gov/rwqcb3/).

The Nonpoint Source Pollution Control Program has State Nonpoint Source Management Plan initiated development implements of specific program objectives to be implemented at the State and Regional level. Currently, Regional Board staff are implementing the following State Board program objectives:

A. Control of Nonpoint Source pollution (urban runoff; agriculture; land disturbance activities such as road construction/maintenance, land construction, timber harvesting, and mining; hydrologic modification; and individual disposal systems). These activities include outreach, education, public participation, technical assistance, financial assistance, interagency coordination, demonstration projects, and regulatory activities such as imposing septic tank area prohibitions.

B. Preparation of contracts for projects selected for grant funding. Regional Board staff also participate in these projects by providing technical assistance and publicizing their results.

C. Implementation of the 1990 Coastal Zone Act Reauthorization Amendments, as developed by the State Board and the California Coastal Commission. This shall be an enforceable Nonpoint Source Management Program to control land use and anthropomorphic activities impacts that have a significant affect on coastal waters. (Further discussion of the Amendments is provided later.)

D. Initiation of nonpoint source watershed pilot programs.

Using State program objectives, Regional Board staff annually developed task-specific workplans work plans to address nonpoint sources of pollution. For the Central Coastal Region, the following Nonpoint Source Program tasks are managed and implemented by the Nonpoint Source Program staff are documented in the Central Coast Region Watershed Management Initiative Chapter (January 2002 WMI at www.swrcb.ca.gov/rwqcb3/).

Task 1: Water Quality Assessment

Regional Board staff reviewed and updated the nonpoint source portion of the Water Quality Assessment and prepared water body fact sheets. (The Water Quality Assessment and water body fact sheets are discussed in Chapter Six.)

Task 2: Watershed Studies/Planning

Three impaired watersheds (Morro Bay Watershed, San Luis Obispo Creek Watershed, and San Lorenzo River Watershed) have been targeted for intensive activity. Major activities for San Luis Obispo Creek watershed include:

1. Develop a Demonstration "Total Maximum Daily Load" model.
2. Create a "San Luis Obispo Creek Riparian Task Force".
3. Implement a riparian corridor restoration project.
4. Identify major nonpoint pollutants and sources.
5. Develop a watershed management program.

For Morro Bay watershed, the activities include:

1. Develop a long term monitoring program to assess water quality improvements associated with the implementation of nonpoint source pollution control measures.
2. Develop funding for the long term monitoring program.
3. Implement a sediment reduction program using best management practices.
4. Participate in the Morro Bay Task Force.

For San Lorenzo River watershed, the activities include:

1. Develop a detailed assessment of Nonpoint Source impacts in the watershed.
2. Develop a wastewater management plan for on/off-site wastewater disposal.
3. Develop of a nutrient objective for the river.
4. Conduct experimental on-site wastewater treatment to reduce nitrogen discharge into the environment.

Task 3: Outreach Program

Staff meets regularly with individuals and local government agencies to promote education and solutions on Nonpoint Source problems. Additionally, the use of grant and loan resources to correct Nonpoint Source problems is emphasized during outreach activities.

Specific outreach activities include participation on the San Luis Obispo Creek Riparian Task Force, Morro Bay Task Force, and various 319(h)/205(j)/Basin Planning

~~Technical Advisory Committees, and development of grant applications with local agencies.~~

Task 4: Project Tracking and Participation

~~Regional Board staff prepare contracts, coordinate with project proponents, track project progress, review and approve invoices, and provide technical support for Nonpoint Source grant funded projects.~~

Additional management actions are documented in the following:

California Rangeland Water Quality Management Plan

Salinas River Watershed Management Action Plan

Water Quality Protection Program for Monterey Bay National Marine Sanctuary, Action Plan IV: Agriculture and Rural Lands

These documents are located on the Regional Board website at (www.swrcb.ca.gov/rwqcb3/).

BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. ~~(Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter).~~ The term "Best Management Practices" ~~is used in~~ references ~~to~~ control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations Section 103.2[m]) (www.swrcb.ca.gov/rwqcb3/) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6[b][4][i]) (www.swrcb.ca.gov/rwqcb3/) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls ~~which that~~ prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment controls which remove pollutants from a discharge before it reaches surface or ground waters.

Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized:

- Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.
- The use of Best Management Practices does not necessarily ensure compliance with effluent limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970's, the long-term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly.

Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

- The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.
- To be effective, most Best Management Practices must be implemented on a ~~long-term~~ long-term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.
- The "state-of-the-art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on recommended nonpoint source management practices ~~is provided under different water quality problem categories throughout this chapter~~ for urban, agriculture, onsite wastewater disposal, and other land disturbance activities are described in the following sections (also see "Nonpoint Source Pollution Control Program (January 2000)"). For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate Best Management Practices Handbook for the project type or location.

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-45 and Page IV-46, Section VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS as follows:

VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS Wetlands, Riparian Areas, and Vegetated Treatment Systems

The State has identified four Management Measures (MMs) to promote the protection and restoration of wetlands and riparian areas and the use of vegetated treatment systems as means to control nonpoint sources of pollution. Wetlands and riparian areas reduce polluted runoff by filtering out runoff-related contaminants, such as sediment, nitrogen, and phosphorus, thus maintaining the water quality benefits of these areas is important. These areas also help to attenuate flows from higher-than-average storm events. This protects downstream areas from adverse impacts, such as channel scour, erosion, and temperature and chemical fluctuations. Changes in hydrology, substrate, geochemistry, or species composition can impair the ability of wetland or riparian areas to filter out excess sediment and nutrients and therefore can result in deteriorated water quality. The following activities can cause such impairment: drainage of wetlands for cropland, overgrazing, hydromodification, highway construction, deposition of dredged material, and excavation for ports and marinas.

RECOMMENDED ACTIONS

- 6A Protection of Wetlands/Riparian Areas. Implementation of MM 6A is intended to protect the existing water quality improvement functions of wetlands and riparian areas as a component of NPS Programs.
- 6B Restoration of Wetlands/Riparian Areas. Restoration of wetlands and riparian areas (MM 6B) refers to the recovery of a range of functions that existed previously by reestablishing hydrology, vegetation, and structure characteristics. Damaged

or destroyed wetland and riparian areas should be restored where restoration of such systems will significantly abate polluted runoff.

- 6C Vegetated Treatment Systems. MM 6C promotes the installation of vegetated treatment systems (e.g., artificial or constructed wetlands) in areas where these systems will serve a polluted runoff-abatement function. Vegetated filter strips and engineered wetlands remove sediment and other pollutants from runoff and wastewater and prevent pollutants from entering adjacent water bodies. Removal typically occurs through filtration, deposition, infiltration, absorption, adsorption, decomposition, and volatilization.
- 6D Education/Outreach. MM 6D promotes the establishment of programs to develop and disseminate scientific information on wetlands and riparian areas and to develop greater public and agency staff understanding of natural hydrologic systems—including their functions and values, how they are lost, and the choices associated with their protection and restoration.

CONTROL ACTIONS

1. All discharges to the aquatic environment shall be considered temporary unless it is demonstrated that no undesirable change will occur in the natural receiving water quality.
2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface fresh waters shall be discontinued.
4. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.
5. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November/ October 15 each year.
6. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
7. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, wherever possible.

between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.

PROHIBITIONS

1. The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.
2. As specified in Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS.

In November 1990, Congress enacted Section 6217 of the Coastal Zone Act Reauthorization Amendments to help address the problem of nonpoint source pollution in coastal waters. Section 6217 requires that coastal states with federally approved coastal management programs develop Coastal Nonpoint Pollution Control Programs. The legislative history indicates that the central purpose of section 6217 is to strengthen the links between federal and State coastal zone management and water quality programs in order to enhance efforts to manage land use activities that degrade coastal beneficial uses. The State coastal zone management agency designated under Section 306 of the Amendments and nonpoint source management agency designated under section 319 of the Clean Water Act will have a dual and co-equal role and responsibility in developing and implementing the coastal nonpoint program.

The program gives the U.S. Environmental Protection Agency (U.S. EPA) and the National Oceanic and Atmospheric Administration joint authority to approve programs developed by the State to address 6217 requirements.

The State agencies chosen to develop California's Coastal Nonpoint Pollution Control Program are the State Board and the Coastal Commission. The statute requires that the State program be "coordinated closely with State and local water quality plans and programs." This means that the State's nonpoint source programs under Sections 208 and 319 of the Clean Water Act and the coastal program must be examined to determine if

they comprehensively address land use activities and anthropomorphic effects that have a significant effect on coastal waters. In addition, the State agencies are charged with developing a coordinated program that:

identifies categories of nonpoint sources that adversely impact coastal waters;

describes management measures to be implemented;

identifies the land uses and critical coastal areas that will require more stringent or additional management measures;

describes the State developed additional management measures to be implemented in critical areas;

documents the authorities the State will use to implement both the guidance and additional management measures, including designation of a lead agency for each source category and/or subcategory; and

sets forth a schedule to achieve full implementation of the guidance management measures within three years of program approval by U.S. EPA and National Oceanic and Atmospheric Administration, and full implementation of additional management measures within six years of program approval.

The Coastal Commission and the State Board staff have been working on a strategy to develop the required Coastal Nonpoint Pollution Control Program plan. Recently, the State Board directed staff to review and revise the statewide Nonpoint Source Management Plan to include a strong coastal component. Revision of the Plan is intended to satisfy the requirements of Section 6217 within the existing framework of current nonpoint source activities.

On a Regional Board level, staff has been involved with the statewide program since 1991. A pilot project, "The New Coastal Nonpoint Pollution Control Program using the Morro Bay Watershed as a Model" was performed to assess the feasibility of establishing the Coastal Nonpoint Pollution Control Program in California. Regional Board staff supplied technical information and reviewed reports. Concerted planning and implementation efforts on target coastal watersheds such as Morro Bay will be major accomplishments to satisfy Coastal Nonpoint Pollution Control Program requirements. As the program goes statewide, Regional Board staff will attend technical advisory committee meetings and will work closely with staff of the State Board and other Regional

Boards, as well as staff of other relevant local, State, and federal agencies to develop a workable Coastal Nonpoint Pollution Control Program.

Wastewater originating from nonpoint sources includes those from urban runoff, agricultural activities, on-site sewage disposal systems, and land disturbance activities. Management of these types of nonpoint source discharges are discussed in the following section. The Regional Board will be developing management practices for marinas and recreational boating; hydromodification facilities; and wetlands, riparian areas, and vegetated treatment systems at a future date.

Revise the September 8, 1991 Basin Plan, Chapter 4, Page IV-68 and Page IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES as follows:

VIII.E. LAND DISTURBANCE ACTIVITIES

Construction, mining, and other soil disturbance activities ~~which that may~~ disturb or expose soil or otherwise increase susceptibility of land areas to erosion are difficult to regulate effectively. Construction projects or timber harvesting activities may often begin and end with no obvious impairment of stream quality; however, erosion or ~~land slides~~landslides the following winter may be directly related to earlier land disturbance or tree cutting. ~~Mining and quarrying activities are generally longer in duration.~~

Under contract with the Regional Board, the California Association of Resource Conservation Districts completed a study entitled, "Erosion and Sediment in California Central Coast Watersheds - A study of Best Management Practices" (Erosion Study), dated June, 1979. This Erosion Study, funded under Section 208 of the Clean Water Act, assesses impacts of erosion and sedimentation on water quality and beneficial uses in nondesignated planning areas (San Benito, San Luis Obispo, and Santa Barbara Counties) of the Central Coast Region. This Erosion Study and supporting documents have been used by the Regional Board in developing erosion and sedimentation control policy.

Nonpoint source pollution in the remainder of the Region is addressed by designated planning agencies through their respective Area wide Waste Treatment Management Plans. Designated agencies and the areas affected within this Region include: Association of Bay Area Governments (portions of San Mateo and Santa Clara Counties), Association of Monterey Bay Area Governments (Santa Cruz and Monterey Counties), and Ventura County Board of Supervisors (portion of Ventura County). The policy herein described is compatible with those plans and is within the scope of the Regional Board authority.

The Erosion Study and Area wide Waste Treatment Management Plans identify examples of accelerated erosion resulting from insufficient land management of soil cultivation, grazing, silviculture, construction, and off-road vehicle activities, as well as wildfires.

Adverse impacts of sediment are identified, in part, as: impairment of water supplies and ground water recharge, siltation of streams and reservoirs, impairment of navigable waters, loss of fish and wildlife habitat, degradation of recreational waters, transport of pathogens and toxic substances, increased flooding, increased soil loss, and increased costs associated with maintenance and operation of water storage and transport facilities. Recommendations based on conclusions of the Erosion Study and practices recommended in Area wide Waste Treatment Management Plans are a means to reduce unnecessary soil loss due to erosion and to minimize adverse water quality impacts resulting from sediment.

~~When a practice or combination of practices is found to be the most effective, practical (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by nonpoint sources to a level compatible with water quality goals, it is designated a Best Management Practice (BMP). BMPs are determined only after problem assessment, examination of alternative practices, and appropriate public participation in the BMP development process.~~

RECOMMENDED ACTIONS

1. Land use practices should assure protection of beneficial water uses and aquatic environmental values.
2. There shall be no waste discharged into areas that possess unique or uncommon cultural, scenic, aesthetic, historical or scientific values. The Regional Board will define such areas.
3. Property owners are considered ultimately responsible for all activities and practices that could result in adverse affects on water quality from waste discharges and surface runoff.
4. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the State.
5. Use of soil sterilants is discouraged and should be minimized.

Erosion Study Recommendations

General recommendations based on conclusions of the Erosion Study are discussed below. These recommendations are considered to be Best Management Practices (BMPs) by the Regional Board as are the Area wide approved water quality management plans.

1. Soil conservation control measures should be used to minimize impacts that would otherwise result from soil erosion. Control measures are identified according to systems, which are then broken down into subsystems of erosion control techniques or component measures.

For example, a system for control of erosion from construction sites would identify component measures such as debris basins, access roads, hillside ditches, etc. Other conservation control systems include: conservation cropping, conservation irrigation, roadside erosion control, critical area treatment, diversions and ditches, grade stabilization, pasture and range management, runoff and sediment control ponds and basins, stream bank and channel protection, and watershed, wildlife, and recreation land improvement. These control measures are comparable to the USDA Soil-Natural Resources Conservation Services' Resource Management Subsystem approach as referenced in AMBAG's "Water Quality Management Plan for the Monterey Bay Region," dated July 1978, and in ABAG's, "Handbook of Best Management Practices," dated October 1977.

Experience has shown that no one control measure best solves an existing, or prevents a potential, pollution problem - especially in the area of soil erosion and sedimentation. As land use, the land user, and various situations change, so does the need for control measures. Before application, an on-site investigation with the land user is necessary to determine which practice or set of practices will be most effective and acceptable.

2. Erosion control should be implemented in a reasonable manner with as much implementation responsibility remaining with existing local entities and programs as is possible and consistent with water quality goals.
3. The Regional Board and local units of government should establish a clear policy for control of erosion, including consideration of off-site and cumulative impacts and the imposition of performance standards

according to the sensitivity of the area where land is to be disturbed.

4. Effective ordinances and regulatory programs should be adopted by local units of government. Effective programs would allow only land disturbance actions consistent with the waste load capacity of the watershed, require preparation of erosion and sediment control plans with specific contents and with attention to both offsite/on-site impacts, identify performance standards, be at least comparable to the model ordinance in the "Erosion and Sediment Control Handbook," dated May 1978, and have provisions for inspection follow-up, enforcement, and referral.
5. Watersheds with critical erosion and sediment problems should be identified by one or more concerned agencies such as the California Department of Fish and Game, the Regional Board, the local Environmental Health, Planning, or Engineering Departments, the local Flood Control District, or the local Resource Conservation District, and then referred to the remaining agencies by a designated local coordinating agency for determining the scope, nature, and significance of the identified problem. The designated local agency would evaluate the adequacy and appropriateness of the total assessment, including an assessment of the problem and causes, alternatives considered, recommended interim and permanent control measures, and the amount and sources of funding. The evaluation would then be submitted as an Impact Findings Report for consideration and decision by the local governing body.
6. Comprehensive and continuous training should be mandatory for building and grading inspectors, engineers, and planners involved in approving, designing, or inspecting erosion control plans and on-site control measures. The training program would preferably be conducted on an inter-county/agency basis and be administered through a USDA Natural ResourcesSoil Conservation Service cooperative training arrangement or through seminars through seminars conducted by the USDA Natural ResourcesSoil Conservation Service and the University of California Cooperative Extension seminars. The Soil Conservation Society of America should be requested to assist in establishing an effective training program, including public education to heighten awareness of the adverse affects of erosion and sediment on soil and water resources.

7. More intensive erosion controls should be considered within four watersheds (Lauro Reservoir and Devereaux Ranch Slough in Santa Barbara County and Pismo Lake and Morro Bay in San Luis Obispo County) with apparent critical erosion and sediment problems. Alternative practices that may be implemented to effect the necessary level of control are assigned a relative priority.

Actions By Other Authorities

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staff, increasing cost-share funds, increasing the availability of low-interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that includes incentives for the individual - such as cost-sharing, changes in State law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices, identified under Regional Board "Management Principles."
5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.
6. Resource Conservation Districts, the U.S.D.A. Soil Natural Resources Conservation Service, the California Department of Transportation, and the

U.C. Cooperative Extension Service, in conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Board will be processed entirely by that county or city.

CONTROL ACTIONS

1. All discharges to the aquatic environment shall be considered temporary unless it is demonstrated that no undesirable change will occur in the natural receiving water quality.
2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface fresh waters shall be discontinued.
4. In implementing BMP's through local units of government, or through State and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the area wide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually to reflect recent achievements, new information and new concerns.
5. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.

6. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger are exempt from this chapter providing such exemption is in the public interest.
7. Regulation of sediment discharges from routine annual agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
8. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.
9. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.
10. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to ~~November~~ October 15 each year.
11. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
12. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, ~~wherever possible,~~ between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, ~~wherever possible~~ as measured along the ground surface to the highest anticipated water line.
13. Design and maintenance of erosion and sediment control structures, (e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.
14. Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion.
15. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope length shall not be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-68 through Page IV-69, Section VIII.E.1. LAND DISTURBANCE PROHIBITIONS as follows:

VIII.E.1. LAND DISTURBANCE PROHIBITIONS

The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from timber harvesting, construction, and other soil disturbance activities at locations above the anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

Soil disturbance activities not exempted pursuant to Regional Board Management Principles in Chapter Five and Control Actions contained in this Chapter Five are prohibited:

1. In geologically unstable areas,
2. On slopes in excess of thirty percent (excluding agricultural activities), and
3. On soils rated a severe erosion hazard by soil specialists (as recognized by the Executive Officer) where water quality may be adversely impacted;

Unless,

- a. In the case of agriculture, operations comply with, a Farm Conservation or Farm Management Plan, approved by a Resource Conservation District or the USDA Soil Conservation Service;
- b. In the case of construction and land development, an erosion and sediment control plan or its equivalent (e.g., EIR, local ordinance) prescribes best management practices to minimize erosion during the

activity, and the plan is certified or approved, and will be enforced by a local unit of government through persons trained in erosion control techniques; or,

- c. There is no threat to downstream beneficial uses of water, as certified by the Executive Officer of the Regional Board.

4. As specified in Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS.

ATTACHMENT C

REVISED CHAPTER 5. PLANS AND POLICIES

CHAPTER 5. PLANS AND POLICIES

In addition to the Implementation Plan, many other plans and policies direct State and Regional Board actions or clarify the Regional Board's intent. The following pages contain brief descriptions of State Board plans and policies and numerous Regional Board plans and policies. ~~Copies of the State and Regional Board policies are contained in the Appendix.~~

I. STATE WATER RESOURCES CONTROL BOARD PLANS AND POLICIES

The State Water Resources Control Board (State Board) has adopted a number of plans and policies for Statewide water quality management including:

State Policy for Water Quality Control (1972)

Anti-degradation Policy

Thermal Plan

Bays and Estuaries Policy

Power Plant Cooling Policy

Reclamation Policy

Shredder Waste Disposal Policy

Underground Storage Tank Pilot Program

Sources of Drinking Water Policy

Nonpoint Source Pollution Control Program (January 2000)~~Nonpoint Source Management Plan~~

Ocean Plan

Discharges of Municipal Solid Waste Policy

Should any of these policies be amended by the State Board, the Regional Board will implement the amended version.

The following sections summarize the adopted policies. ~~The complete policy is available in the "Attachments" section of this document.~~

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-3 and V-4, Section I.J. NONPOINT SOURCE MANAGEMENT PLAN as follows:

I.J. NONPOINT SOURCE MANAGEMENT PLAN

Resolution R3-2002-0093: Adopting policy regarding the State Nonpoint Source Pollution Control Program (January 2000).

The "Nonpoint Source Management Plan", Resolution 88 123, was adopted by the State Water Resources Control Board on November 15, 1988 pursuant to Section 319 of the Clean Water Act. The Plan identifies nonpoint source control programs and milestones for their accomplishment. It emphasizes cooperation with local governments and other agencies to promote the implementation of Best Management Practices and remedial projects.

In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to the "Nonpoint Source Pollution Control Program (January 2000)" in December 1999 (www.swrcb.ca.gov/rwqcb3/). Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted by the State Water Resources Control Board on December 14, 1999 pursuant to Section 319 of the Clean Water Act.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

Revise the September 8, 1994 Basin Plan, Chapter 5, Page V-7, Section III.G. EROSION AND SEDIMENTATION CONTROL as follows:

III.G. EROSION AND SEDIMENTATION CONTROL

1. General recommendations for erosion control, numbered one through six under "Land Disturbance Activities" in the Implementation Plan, Chapter Four, are considered by the Regional Board to be Best Management Practices (BMP's), as are those BMP's identified in approved areawide Water Quality Management Plans.
2. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the State.
3. In implementing BMP's through local units of government, or through State and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the areawide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually to reflect recent achievements, new information and new concerns.
4. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.
5. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger

are exempt from this chapter providing such exemption is in the public interest.

6. Regulation of sediment discharges from routine annual agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
7. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.

"Control Actions" and "Actions by Other Authorities" in this chapter and the Implementation Plan, Chapter Four, contain further information regarding erosion and sedimentation control.

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-13 and V-14, Section V.G. EROSION AND SEDIMENTATION as follows:

V.G. EROSION AND SEDIMENTATION

1. Erosion from nonpoint pollution sources shall be minimized through implementation of BMP's (identified under "Management Principles" and described under "Land Disturbance Activities" in Chapter Four's "Nonpoint Source Measures" section.
2. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November 15 each year.
3. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
4. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.
5. Design and maintenance of erosion and sediment control structures. (e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.
6. Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion.
7. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope length shall not

be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

8. Use of soil sterilants is discouraged and should be minimized.

Further erosion and sedimentation information can be found in other areas of this chapter as well as the Implementation Plan, Chapter Four, under "Land Disturbance Activities."

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-15 and V-16, Section V.H.10. EROSION AND SEDIMENTATION CONTROL as follows:

V.H.10. EROSION AND SEDIMENTATION CONTROL

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staffs, increasing cost share funds, increasing the availability of low interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that includes incentives for the individual such as cost sharing, changes in State law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices identified under Regional Board "Management Principles."
5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.
6. Resource Conservation Districts, the U.S.D.A. Soil Conservation Service, the California Department of Transportation, and the Extension Service, in

conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Board will be processed entirely by that county or city.

CEQA CHECKLIST

CALIFORNIA ENVIRONMENTAL QUALITY ACT
“FUNCTIONAL EQUIVALENT” REPORT FOR BASIN PLAN AMENDMENT

(RESOLUTION NO. R3-2002-0093)

The Central Coast Regional Water Quality Control Board (Regional Board) is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

The Basin Planning process has been certified as “functionally equivalent” to the preparation of the Environmental Impact report (EIR) for the purposes of complying with the California Environmental Quality Act (CEQA) (Section 15251, Title 4, California Code of Regulation ((CCR)). Based on the certification, this Basin Plan Amendment Report is used in lieu of an EIR or a Negative Declaration.

Any Regional Board regulatory program certified as functionally equivalent, however, must satisfy the documentation requirements of Section 377 (a), Title 23, CCR. This report satisfies part (a) of that section. It contains the following:

1. A Description of Proposed Activity and Proposed Alternatives,
2. An Environmental Checklist and a Description of the Proposed Activity,
3. An Environmental Evaluation, and
4. A determination with respect to significant Environmental Impacts.

I. DESCRIPTION OF PROPOSED ACTIVITY

This section describes the changes proposed and alternatives to this proposal. The purpose of this amendment is to:

1. Incorporate the State Water Resources Control Board January 2000 Nonpoint Source Program Strategy and Implementation Plan.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Program Strategy and Implementation Plan for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Alternatives to this proposal include:

1. Require a higher level of nonpoint source protection than identified in the Nonpoint Source Program Strategy and Implementation Plan.

This alternative is not recommended because the Nonpoint Source Program Strategy and Implementation Plan as proposed already requires the highest level of nonpoint source protection feasible.

2. Require a less stringent Nonpoint Source Program Strategy and Implementation Plan.

This alternative is not recommended because it does not protect water quality and associated beneficial uses.

3. Take no action.

This alternative is not recommended because it does not protect water quality and associated beneficial uses.

4. Modify amendment

This alternative is recommended if it does not modify the Nonpoint Source Program Strategy and Implementation Plan. This alternative is recommended only if beneficial uses are protected and water quality objectives are attained.

5. Create additional amendments

The Regional Board may consider additional alternatives, but will limit its action to a logical outgrowth of the proposed amendment. Other alternatives will be subject to public notice and comment at the time those changes are proposed.

CALIFORNIA ENVIRONMENTAL QUALITY ACT REQUIREMENTS

II. EVALUATION OF ENVIRONMENTAL IMPACTS:

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
1. AESTHETICS -- Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially damage scenic resources, including, But not limited to, trees, rock outcroppings, and historic buildings with a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. AGRICULTURE RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

3. AIR QUALITY – Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project				
a) Conflict with or obstruct implementation of the applicable air quality plan?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is not attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Expose sensitive receptors to substantial pollutant concentrations?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
e) Create objectionable odors affecting a substantial number of people?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
4. BIOLOGICAL RESOURCES – Would the project:				
a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

III. ENVIRONMENTAL EVALUATION (of checklist questions answered Potentially Significant Impact, Less than Significant with Mitigation Incorporation, or Less than Significant Impact)

2a and 2c Less than Significant Impact: The Environmental Evaluation associated with this amendment (Regional Board Resolution R3-2002-0093) has less than significant impacts listed for items 2a and 2c, the conversion of prime farmland to non-agricultural use and the conversion of farmland to non-agricultural use respectively. Prime agriculture areas that would be converted are likely to be land that is only marginally sustaining its agricultural value and/or use. Implementation of nonpoint source management on agricultural land would likely result in net benefit by reducing soil and fertilizer loss into the creek. Additionally, Buffer strips (protection of riparian corridor) that would replace agricultural land could possibly provide flood protection to adjacent agricultural land uses, resulting in a net benefit. If necessary, impacts can be mitigated by assessing existing "loss" of agricultural value or land areas due to erosion and sedimentation, and by designing best management practices to compensate for this loss.

IV. DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

I find the proposed project COULD NOT have a significant effect on the environment.

I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

ENVIRONMENTAL DOCUMENT**

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
81 Higuera Street, Ste. 200, San Luis Obispo, CA 93401**

**NOTICE OF PUBLIC HEARING
NOTICE OF FILING A DRAFT ENVIRONMENTAL DOCUMENT**

TO CONSIDER ADOPTION OF REVISED STATE WATER RESOURCES CONTROL BOARD NONPOINT SOURCE POLLUTION CONTROL PROGRAM AND REFORMATTING EXISTING NONPOINT SOURCE PLANS, POLICIES, AND MANAGEMENT PRACTICES - AMENDMENT OF THE CENTRAL COAST BASIN WATER QUALITY CONTROL PLAN (BASIN PLAN) AND REQUESTING APPROVAL FROM STATE WATER RESOURCES CONTROL BOARD

NOTICE IS HEREBY GIVEN that the California Regional Water Quality Control Board, Central Coast Region (Regional Board), will hold a public hearing to hear comments and consider adoption of a resolution amending the Water Quality Control Plan (Basin Plan) for the Central Coast Region. The proposed amendment to the Basin Plan includes:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Copies of the proposed amendment to the Basin Plan (in the form of a draft amendment for adoption, staff report, and a functionally equivalent document which includes an Environmental Checklist) are available on the Internet at www.swrcb.ca.gov/rwqcb3/. At the website, on the first page you will see a staff report "PROPOSED AMENDMENT OF "WATER QUALITY CONTROL PLAN - CENTRAL COASTAL BASIN" (BASIN PLAN) REGARDING INCORPORATION OF THE STATE WATER RESOURCES CONTROL BOARD "NONPOINT SOURCE POLLUTION CONTROL PROGRAM" AND RESTRUCTURING THE BASIN PLAN NONPOINT SOURCE INFORMATION, FINDINGS, AND REQUIREMENTS." The proposed amendments to the Basin Plan are also available by request at the office of the Regional Board. You may also request a mailed copy of these documents by contacting Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

Copies of the existing Basin Plan are located at libraries in major cities throughout the region, at the office of the Regional Board, and on the Internet at www.swrcb.ca.gov/rwqcb3/.

Actions to amend the Water Quality Control Plan for Region Three will be taken in accordance with a regulatory program exempt under Section 21080.5 of the Public Resources Code from the requirement to prepare an environmental impact report under the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.) and with other applicable laws and regulations. At the conclusion of the meeting the Regional Board will consider approval of the proposed amendment or a revised amendment consistent with the intent of the amendment. At

the conclusion of the public hearing, the Regional Board will consider certification of the environmental document an approval of the proposed amendments.

The public comment period will occur from **August 8, 2002 through September 23, 2002**. We would appreciate any comments, preferably in writing, or other evidence sent in advance to Howard Kolb at the address listed above. Your timely submittal will allow staff to analyze your comments and the Regional Board to consider your comments before taking final action at the meeting to be held on December 6, 2002. Please note that all exhibits, charts, graphs, and other testimony presented, as evidence must be left with the Regional Board as part of the administrative record.

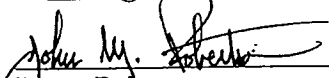

Time limits may be imposed on oral presentations at the hearing. Additional or alternative rules or regulations consistent with the general purpose of the amendment and complementary to the specific proposed rules may be developed at the hearing as a logical outgrowth of this hearing.

The public hearing is scheduled as follows:

Date: December 6, 2002
Time: 8:30 A.M.
Place: Conference Room
Regional Water Quality Control Board
895 Aerovista Place, SUITE 101
San Luis Obispo, CA 93401-5427

The location of the hearing is described on the attached map and is accessible to persons with disabilities. Individuals who require special accommodations are requested to contact **Cyndee Jones** at **805-549-3372** at least 5 working days prior to December 6, 2002. TTY users may contact the California Relay Service at 1-800-735-2929 or voice line at 1-800-735-2922.

For additional information on this Basin Plan review, please call Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

Gray Davis
Governor

August 8, 2002

TO: Interested Persons

FROM: California Regional Water Quality Control Board, Central Coast Region
81 Higuera Street, Suite 200, San Luis Obispo, California 93401-5411

SUBJECT: NOTICE OF FILING SUBMITTED IN COMPLIANCE WITH §21080.5
OF THE PUBLIC RESOURCES CODE

PROPONENT: California Regional Water Quality Control Board, Central Coast Region

PROJECT TITLE: Proposed Amendment of "Water Quality Control Plan - Central Coast Region" (Basin Plan) Regarding Incorporation of the State Water Resources Control Board "Nonpoint Source Pollution Control Program" and Restructuring the Basin Plan Nonpoint Source Information, Findings, and Requirements.

CONTACT: Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

LOCATION: Central Coast Region

DESCRIPTION: The Central Coast Regional Water Quality Control Board (Regional Board) is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

A draft copy of the proposed amendments is enclosed for your review. The purpose of this amendment is to:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

The Regional Board will hold a hearing to identify and prioritize water quality issues. The public hearing is scheduled as follows:

California Environmental Protection Agency

Recycled Paper

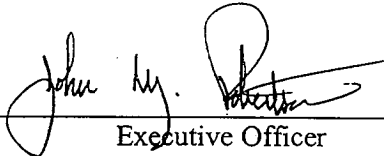

Basin Plan History p.1151

000580

Date: December 6, 2002
Time: 8:30 A.M.
Place: Conference Room
Regional Water Quality Control Board
895 Aerovista Place, SUITE 101
San Luis Obispo, CA 93401-5427

The location of the hearing is described on the attached map and is accessible to persons with disabilities. Individuals who require special accommodations are requested to contact **Cyndee Jones** at **805-549-3372** at least 5 working days prior to December 6, 2002. TTY users may contact the California Relay Service at 1-800-735-2929 or voice line at 1-800-735-2922.

Please review the proposed amendment and provide additions and/or comments by **September 23, 2002**. Comments or questions regarding this matter should be directed to Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

CALIFORNIA ENDANGERED SPECIES ACT CONSULTATION FOR PROPOSED AMENDMENT TO UPDATE THE WATER QUALITY CONTROL PLANS FOR THE CENTRAL COAST REGION (BASIN PLAN)

The Central Coast Regional Water Quality Control Board (Regional Board) requests your agency's comments pursuant to the California Endangered Species Act (CESA) on potential impacts of the proposed amendment to update the Water Quality Control Plans for the Central Coast Region. The Regional Board is the California Environmental Quality Act (CEQA) lead agency for this project. The basin planning process is certified by the Secretary of Resources as being exempt from the CEQA requirement for preparation of the Environmental Impact Report (EIR) or negative declaration and initial study (California Code of Regulations, Title 14, Section 15251). Based upon this certification, the plan amendment, as well as the staff report and backup materials, serve as a "functional equivalent" to an EIR or negative declaration and initial study. Any regulatory programs of the Regional Board certified as functional equivalent, however, must satisfy the requirements of CCR, Title 23, Section 377 (a), including preparation of an Environmental Checklist with a description of the proposed activity and a determination with respect to significant environmental impacts.

The purpose of this amendment is to:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

A copy of the draft staff report is enclosed for your review. The Regional Board is currently gathering comments. Please submit comments by September 23, 2002 so we may prepare a written response for the final staff report. Certification of the Environmental Document/Checklist will be considered by the Regional Board at their regular meeting. The public hearing is scheduled as follows:

NOTICE OF PUBLIC HEARING NOTICE OF FILING A DRAFT ENVIRONMENTAL DOCUMENT

TO CONSIDER ADOPTION OF REVISED STATE WATER RESOURCES CONTROL BOARD NONPOINT SOURCE POLLUTION CONTROL PROGRAM AND REFORMATTING NONPOINT SOURCE PLANS, POLICIES, AND MANAGEMENT PRACTICES - AMENDMENT OF THE CENTRAL COAST BASIN WATER QUALITY CONTROL PLAN AND REQUESTING APPROVAL FROM WATER RESOURCES CONTROL BOARD

NOTICE IS HEREBY GIVEN that the California Regional Water Quality Control Board, Central Coast Region (Regional Board) will hold a public hearing to hear comments and consideration of a resolution amending the Water Quality Control Plan (Basin Plan) for the Central Coast Region. The proposed amendment to the Basin Plan includes:

1. Reference the State Water Resources Control Board's 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions concerning the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions designated section of the Basin Plan. The section is titled "Control of Nonpoint Source Pollutants."

Copies of the proposed amendment to the Basin Plan (in the form of a draft amendment for adoption, staff report, and a fully equivalent document which includes an Environmental Checklist) are available on the Internet at www.swrcb.ca.gov/rwqcb3/. At the website, on the first page you will see report "PROPOSED AMENDMENT OF THE WATER QUALITY CONTROL PLAN - CENTRAL COAST BASIN" (PLAN) REGARDING INCORPORATION OF THE WATER RESOURCES CONTROL BOARD "NONPOINT SOURCE POLLUTION CONTROL PROGRAM" AND REFORMATTING THE BASIN PLAN NONPOINT SOURCE INFORMATION, FINDINGS, AND REQUIREMENTS." The proposed amendments to the Basin Plan are also available by request at the office of the Regional Board. You may also request a copy of these documents by contacting Howard Kolb at 3332 or hkolb@rb3.swrcb.ca.gov.

Copies of the existing Basin Plan are located at libraries throughout the region, at the office of the Regional Board, and on the Internet at www.swrcb.ca.gov/rwqcb3/.

Actions to amend the Water Quality Control Plan for the Central Coast Region will be taken in accordance with a regulatory exemption under Section 21080.5 of the Public Resources Code. The requirement to prepare an environmental impact statement under the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.) and with other applicable laws and regulations. At the conclusion of the meeting, the Regional Board will consider approval of the proposed amendment or a revised amendment consistent with the intent of the Act. At the conclusion of the public hearing, the Regional Board will consider certification of the environmental document as an approval of the proposed amendments.

The public comment period will occur from August 15, 2002 through September 23, 2002. We would appreciate any comments preferably in writing, or other evidence sent in advance to Howard Kolb at the address listed above. Your timely submission will allow staff to analyze your comments and the Regional Board to consider your comments before making final decisions at the meeting to be held on December 6, 2002. Please note that exhibits, charts, graphs, and other testimony presented, if any, must be left with the Regional Board as part of the administrative record.

Time limits may be imposed on oral presentations of the proposed amendments. Additional alternative rules or regulations consistent with the general purpose of the amendment and complementary to specific proposed rules may be developed at the hearing.

The public hearing is scheduled for December 6, 2002 at 10:00 AM in the Regional Board Conference Room, 81 Higuera Street, San Luis Obispo, CA 93401. For more information, please contact Howard Kolb at 3332 or hkolb@rb3.swrcb.ca.gov.

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

STAFF REPORT FOR REGULAR MEETING OF DECEMBER 13, 2002

Prepared on November 20, 2002

ITEM NUMBER: 10

SUBJECT: PROPOSED AMENDMENT OF "WATER QUALITY CONTROL PLAN - CENTRAL COASTAL BASIN" (BASIN PLAN) REGARDING REFERENCE OF THE STATE WATER RESOURCES CONTROL BOARD "NONPOINT SOURCE POLLUTION CONTROL PROGRAM" AND RESTRUCTURING THE BASIN PLAN NONPOINT SOURCE INFORMATION, FINDINGS, AND REQUIREMENTS.

SUMMARY

The Central Coast Regional Water Quality Control Board (Regional Board) Staff is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin, 1994 (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy and legal standards for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

The purpose of this amendment is to:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to move appropriate nonpoint source information, requirements, and prohibitions into one designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

4. Add a new section for currently adopted and future Total Maximum Daily Loads and associated Implementation Plans.

This amendment is presented to the Board for review and consideration.

DISCUSSION

In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to the Nonpoint Source Pollution Control Program (January 2000) in December 1999. Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted by the State Water Resources Control Board on December 14, 1999 pursuant to Section 319 of the Clean Water Act.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Management measures will be implemented using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

State Board Resolution No. 99-114 directs regional boards to implement the Nonpoint Source Pollution Control Program. The Basin Plan for the Regional Water Quality Control Board, Central Coast Region includes the state November 1988, Nonpoint Source Management Plan. This amendment updates the Basin Plan to comply with Resolution No. 99-114.

This revision proposes to reference the Nonpoint Source Pollution Control Program and emphasize information and management actions for the protection and restoration of riparian areas; and restructure sections of the Basin Plan to move appropriate nonpoint source information, requirements, and prohibitions into one designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Below is a summary of all edits, additions, and changes in Chapter Four (4), Chapter Five (5), and Appendices of the Basin Plan. Chapter 4 edits, additions, and changes are shown in Attachment B. Chapter 5 edits, additions, and changes are shown in Attachment C. Appendices edits are shown in Attachment D.

Chapter 4

1. Page IV-1, edited Table of Contents.
2. Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES, moved to page IV-45, Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS. Made minor clerical edits, then deleted Section V.A.7. BEST MANAGEMENT PRACTICES, on Pages IV-5 and IV-6 of Chapter 4.
3. Pages IV-7 and IV-8, Section V.B. NONPOINT SOURCE PROGRAM, moved to page IV-44, Section VIII. Made major edits using language from "Nonpoint Source Pollution Control Program (January 2000)", then deleted Section V.B. NONPOINT SOURCE PROGRAM, on Pages IV-7 and IV-8 of Chapter 4.
4. Pages IV-44 and IV-45, Section VIII. NONPOINT SOURCE MEASURES - Title of Section VIII. changed to CONTROL OF NONPOINT SOURCE POLLUTANTS.

Major edits to Section VIII using language from "Nonpoint Source Pollution Control Program (January 2000)".

Added section titled BEST MANAGEMENT PRACTICES, using information from Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES. Minor clerical edits made to the new Section.

5. Pages IV-45 and IV-46, Section VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS, deleted information contained in the Coastal Zone Act Reauthorization Amendment section. The Coastal Zone Act Reauthorization Amendments are addressed in the "Nonpoint Source Pollution Control Program (January 2000)".
6. Pages IV-45 and IV-46, Renamed Section VIII.A. Wetlands, Riparian Areas, and Vegetated Treatment Systems, using information from "Nonpoint Source Pollution Control Program (January 2000)", Page 152, Section G Wetlands, Riparian Areas, and Vegetated Treatment Systems. Minor clerical edits made to the new Section.

Three headings added: "Recommended Actions", "Control Actions", and "Prohibitions". Under "Recommended Actions", stated recommended actions (management measures) are found in the 2000 Nonpoint Source Pollution Control Program. Under "Control Actions", repeated three items found in Chapter V, Management Principles, Section III.A. GENERAL, three items found in Chapter V, Management Principles, Section III.C. DISCHARGE TO SURFACE WATERS, and one item found in Chapter V, Section V.G. EROSION AND SEDIMENTATION. Under "Prohibitions" repeated one item found in Chapter IV Section VIII.E. LAND DISTURBANCE ACTIVITIES and added reference, "For additional prohibitions see Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS."
7. Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, added

header "Recommended Actions". Under "Recommended Actions" added sub-headers "Erosion Study Recommendations" and "Actions By Other Authorities".

Under "Recommended Actions" repeated three items found in Chapter V, Management Principles, Section III.A. General, repeated one item found in Chapter V, Management Principles, Section III.G EROSION AND SEDIMENTATION CONTROL, and repeated one item found in Chapter V, Management Principles, Section V.G EROSION AND SEDIMENTATION. Also added headers Erosion Study Recommendations and Actions By Other Authorities.

8. Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, added header "Control Actions" and repeated three items found in Chapter V, Management Principles, Section III.C. Discharge to Surface Waters, moved items 1 through 7 from Section V.G. EROSION AND SEDIMENTATION, and moved items 3 through 7 from Section III.G. EROSION AND SEDIMENTATION CONTROL.
9. Page IV-70, Section VIII.E.1. LAND DISTURBANCE PROHIBITIONS, made minor edits. Added reference, "For additional prohibitions see Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS."
10. Page IV-75, after all other text, added "Section IX. TOTAL MAXIMUM DAILY LOADS" and introductory paragraph.

Chapter 5

1. Page V-1, Section I. STATE WATER RESOURCES CONTROL BOARD PLANS AND POLICIES - Updated section to reflect "Nonpoint Source Pollution Control Program (January 2000)".
2. Page V-3, Section I.J. NONPOINT SOURCE MANAGEMENT PLAN - Updated section adding additional language to reflect "Nonpoint Source Pollution Control Program (January 2000)".

3. Page V-7, Section III.G. EROSION AND SEDIMENTATION CONTROL - Delete Item 1, moved Item 2 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations", moved Items 3 through 7 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Control Actions", and deleted last paragraph. Once the appropriate Items were moved to Chapter 4, made minor edits to Items 2 through 7, then deleted Section III.G. EROSION AND SEDIMENTATION CONTROL on Page V-7 of Chapter 5.
4. Pages V-13 and 14, Section V.G. EROSION AND SEDIMENTATION -, moved Items 1 through 7 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Control Actions" and moved Item 8 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations", and deleted last paragraph of Section V.G. Page V-14. Once the appropriate Items were moved to Chapter 4, made minor edits to Items 1 through 7, then deleted Section V.G. EROSION AND SEDIMENTATION on Pages V-13 and 14 of Chapter 5.
5. Pages V-15 and V-16, Section V.H.10. EROSION AND SEDIMENTATION CONTROL - Moved Items 1 through 8 to Pages IV-68 and IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES, under header "Recommendations" (ACTIONS BY OTHER AUTHORITIES). Once the appropriate Items were moved to Chapter 4, deleted Section V.H.10. EROSION AND SEDIMENTATION CONTROL on Pages V-15 and V-16 of Chapter 5.

Appendices

1. Revised Plans and Policies Appendix "Table of Contents" to show deletion of Appendix A-10, Nonpoint Source Management Plan.
2. Deleted Appendix A-10, Nonpoint Source Management Plan (November 1988). This appendix references an outdated version of the

State Nonpoint Source Pollution Control Program.

ENVIRONMENTAL SUMMARY

A Notice of Public Hearing has been circulated. A Notice of Filing, Written Report, and Environmental Checklist (Attachment E) will be prepared and circulated to interested agencies and persons prior to consideration of the Basin Plan amendment. This will satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

COMMENTS

Deborah Johnston, Department of Fish and Game (phone call)

1. **Comment:** Section VIII.E. Land Disturbance, Control Actions, Item 3 states, The discharge of pollutants into surface waters shall be discontinued. The item specifies "surface fresh waters." Modify the item to address saline surface waters.

Response: Staff agrees. The item has been revised to read, "The discharge of pollutants into surface fresh waters shall be discontinued."

2. **Comment:** Section VIII.E. Land Disturbance, Control Actions, Item 14 states, Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion. Replace "Cover crops" with "Cover crops (using native plant species)."

Response: Staff has revised item 14 as follows, "Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion. The use of native plant species is recommended."

Regional Board Staff

3. **Comment:** Add a new section to the Basin Plan that will include currently adopted and future Total Maximum Daily Loads and associated Implementation Plans.

Response: Staff agrees. On Page IV-75, add "Section IX. TOTAL MAXIMUM DAILY LOADS" and the introductory paragraph.

4. **Comment:** Section VIII., Item 3., Use the term "Management Options" in place of "Three Tiered Approach".

Response: Staff has modified the section to read, "Continues use of Management Options (the "Three-Tiered Approach") for addressing NPS pollution problems".

RECOMMENDATION

The Regional Board should adopt the attached Resolution R3-2002-0093 (Attachment A), as proposed. Resolution R3-2002-0093 approves revision of the Basin Plan.

RESOLUTION R3-2002-0093

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 AEROVISTA PLACE, SUITE 101
SAN LUIS OBISPO, CALIFORNIA 93401-7906**

**RESOLUTION R3-2002-0093
(Drafted November 18, 2002)**

**Adopting Revised State Water Resources Control Board
Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source
Plans, Policies, and Management Practices in an
Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)
Requesting Approval from State Water Resources Control Board**

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

1. The California Regional Water Quality Control Board, Central Coast Region, adopted the *Water Quality Control Plan, Central Coastal Basin* (hereafter Basin Plan), on September 8, 1994.
2. The Regional Board periodically revises and amends the Basin Plan. The most recently finalized amendment to the Basin Plan was in April 1995.
3. The Regional Board is responsible for reviewing water quality standards and implementation plans as appropriate and for modifying and adopting standards contained in the Plans under provisions set forth in section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code.
4. The State Water Resources Control Board revised the State Nonpoint Source Management Plan to the "Nonpoint Source Pollution Control Program" (January 2002).
5. State Water Resources Control Board Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted on December 14, 1999, pursuant to Section 319 of the Clean Water Act.
6. The Nonpoint Source Pollution Control Program (dated January 2000) includes a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Management measures will be implemented using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

7. The Nonpoint Source Pollution Control Program process includes: Assessing Program activities, targeting efforts, planning activities based on Program goals and objectives, coordinating the efforts of federal, State, and local agencies and stakeholders, implementing coordinated actions, tracking and monitoring the results of implemented actions, and reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.
8. The Basin Plan contains existing nonpoint source information distributed throughout the document.
9. The Basin Plan requires restructuring in order to have appropriate nonpoint source information, findings, and requirements in a designated section of the Basin Plan (Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS).
10. Section 303(d) of the Clean Water Act requires States to establish total maximum daily loads for waterbodies that do not meet water quality objectives that will insure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
11. Regional Board consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and threatened and endangered plants and animal species. The Department of Fish and Game has made a determination of "no jeopardy" pursuant to the California Endangered Species Act.
12. A draft notice of filing, staff report, the proposed amendment, and environmental checklist have been prepared and distributed to interested persons and agencies for review and comment in accordance with state and federal environmental regulations (23 CCR § 3775, 40 CFR 25 and 40 CFR 131).
13. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of the California Environmental Quality Act of 1977 (Public Resources Code 21000 et seq.).
14. The Regional Board finds adoption of these amendments will have no potential for adverse effect, either individually or cumulatively, on wildlife. The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.
15. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
16. On December 13, 2002 in San Luis Obispo California, the Regional Board held a public hearing and considered all public testimony.

THEREFORE, BE IT RESOLVED:

1. Pursuant to section 13240 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment **Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source Plans, Policies, and Management Practices in an Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)** as shown in Attachments B "Revised Chapter 4. Implementation Plan", C "Revised Chapter 5. Plans and Policies", and D "Revised Basin Plan Appendix". The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency.
2. The Regional Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
4. That the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the State Board shall file a Notice of Decision with the State Clearinghouse.
5. That the Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results in a "*De Minimus*" impact finding.
6. That if during the approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Roger W. Briggs, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 13, 2002.

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-1, Table of Contents as follows:
Draft November 12, 2002

CHAPTER 4. IMPLEMENTATION PLAN

A program of implementation to protect beneficial uses and to achieve water quality objectives is an integral component of this Basin Plan. The program of implementation is required to include, but is not limited to:

- A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private.
- A time schedule for the actions to be taken.
- A description of surveillance to be undertaken to determine compliance with objectives.

Additional surveillance activities to determine compliance with objectives are described in Chapter Six, "Surveillance and Monitoring".

This chapter includes discussions of:

- Regional Water Quality Control Board Goals;
- General Control Actions and Related Issues;
- Waste Discharge Regulation;
- Hazardous Waste Compliance Issues; and
- Nonpoint Source Measures.

~~Detailed descriptions of waterbodies with their specific water quality problems and recommended control actions are included in the Region's Water Quality Assessment database and Fact Sheets.~~

This chapter is organized in the following manner:

- I. Regional Water Quality Control Board Goals
- II. General Control Actions and Related Issues
- III. Control Actions under State Board Authority
- IV. Control Actions to be Implemented by Other Agencies with Water Quality or Related Authority
- V. Control Actions under Regional Board Authority
 - A. ~~Waste Discharge Restrictions~~ Control of Point Source Pollutants
 1. Water Quality Certification
 2. National Pollutant Discharge Elimination System
 3. Waste Discharge Requirements
 4. Waivers

5. Prohibitions and Prohibition Exemptions
 6. Enforcement Actions
 7. ~~Best Management Practices~~
 8. Compliance Schedules
- ~~B. Nonpoint Source Program~~
- VI. Waste Discharge Program Implementation
 - A. Effluent Limits
 1. Stream Disposal
 2. Estuarine Disposal
 3. Ocean Disposal
 4. Land Disposal
 5. Reclamation and Reuse
 6. Pretreatment Programs
 7. Sludge Treatment
 - B. Municipal Wastewater Management Plans (arranged by hydrologic subarea)
 - C. Industrial Wastewater Management
 - D. Solid Waste Management
 - E. Storm Water Management
 - F. Bay Protection and Toxic Cleanup Program
 - G. Military Installations
 - H. Spills, Leaks, Investigations, and Cleanup Program
 - I. Underground Tank Storage Tank Program
 - J. Aboveground Petroleum Storage Tanks
 - K. California Code of Regulations, Title 23, Chapter 15
 1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)
 2. Wastewater Sludge (Septage Management)
 3. Mining Activities (Nonfuel Commodities)
 4. Other Industrial Activities
 - L. Resource Conservation and Recovery Act (Subtitle D)
 - M. Solid Waste Water Quality Assessment Test
 - VII. Hazardous Waste Compliance Issues
 - A. Reportable Quantities of Hazardous Waste and Sewage Discharges
 - B. Proposition 65
 - VIII. Control of Nonpoint Source Measures Pollutants
 - A. ~~Coastal Zone Act Reauthorization Amendments~~ Wetlands, Riparian Areas, and Vegetated Treatment Systems
 - B. Urban Runoff Management
 - C. Agricultural Water and Wastewater Management
 - D. Individual, Alternative, and Community Disposal Systems
 - E. Land Disturbance Activities

Revise the September 8, 1994 Basin Plan,
Chapter 4, Page IV-3, Section V.A. Waste
Discharge Restrictions as follows:

V.A. WASTE
DISCHARGE
RESTRICTIONS
CONTROL OF POINT
SOURCE
POLLUTANTS

Revise the September 8, 1994 Basin Plan, Chapter 4, Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES as follows (Moved to page IV-45, Section VIII.A.):

V.A.7. BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. (Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter). The term "Best Management Practices" is used in reference to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations Section 103.2[m]) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6[b][4][i]) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment practices which remove pollutants from a discharge before it reaches surface or ground waters.

These practices include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized;

Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.

The use of Best Management Practices does not necessarily ensure compliance with effluent limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970's, the long term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.

To be effective, most Best Management Practices must be implemented on a long term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.

- The "state-of-the-art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on nonpoint source management practices is provided under different water quality problem categories throughout this chapter. For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate Best Management Practices Handbook for the project type or location.

Text Moved

Revise the September 8, 1994 Basin Plan, Chapter 4, Pages IV-7 and IV-8, Section V.B., NONPOINT SOURCE PROGRAM as follows (Moved to page IV-44, Section VIII.):

V.B. NONPOINT SOURCE PROGRAM

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

In order to address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By amending the Clean Water Act, Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which outlined steps to initiate the systematic management of nonpoint sources in California. For effective management of nonpoint sources the Management Plan required:

- [-] An explicit long term commitment by the State Board and Regional Boards;
- [-] More effective coordination of existing State Board and Regional Board nonpoint source related programs;
- [-] Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;

~~[-] Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and~~

~~[-] Development of new funding sources.~~

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1. Voluntary implementation of Best Management Practices

Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.

2. Enforcement of Best Management Practices

Although the California Porter Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use their regulatory authority to encourage implementation of Best Management Practices.

The Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements, and approved Management Agency Agreements, or other State or Regional Board formal action.

3. Adoption of Effluent Limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations

Text Moved

~~may be set at a level which, in practice, requires implementation of Best Management Practices.~~

~~Not all of the categories of nonpoint source pollution follow this three tiered approach. For example, silviculture activities or nonpoint source pollution administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with the California Department of Forestry which allows the Regional Board to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.~~

~~The Regional Board approach to addressing or regulating categories of nonpoint source pollution is discussed in various sections throughout this chapter.~~

Text Moved

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-44 and Page IV-45, Section VIII. NONPOINT SOURCE MEASURES as follows:

VIII. NONPOINT SOURCE PROGRAM CONTROL OF NONPOINT SOURCE MEASURES POLLUTANTS

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as diffuse discharges of waste without a single point of origin sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is typically caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

In order to address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By a Amendments to the Clean Water Act (www.swrcb.ca.gov/rwqcb3/). Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to become the "Nonpoint Source Pollution Control Program (January 2000)" in December 1999 (www.swrcb.ca.gov/rwqcb3/). The State Water Resources Control Board adopted Resolution 99-114, revising the Nonpoint Source Pollution Control Program on December 14, 1999, pursuant to Section 319 of the

Clean Water Act. For effective management of nonpoint sources the Management Plan required:

- An explicit long-term commitment by the State Board and Regional Boards;
- More effective coordination of existing State Board and Regional Board nonpoint source related programs;
- Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;
- Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and
- Development of new funding sources.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process. The program process includes:

- (1) Assessing Program activities
- (2) Targeting efforts
- (3) Planning activities based on Program goals and objectives
- (4) Coordinating the efforts of federal, State, and local agencies and stakeholders
- (5) Implementing coordinated actions
- (6) Tracking and monitoring the results of implemented actions
- (7) Reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.

Specifically, the 2000 Nonpoint Source Pollution Control Program:

1. Adopts 61 management measures as goals for six nonpoint source categories (agriculture, forestry, urban areas, marinas and recreational boating, hydromodification, and wetlands/riparian areas/vegetated treatment systems)

2. Provides a fifteen-year strategy for implementing Management Measures
3. Continues use of Management Options (the "Three-Tiered Approach") for addressing NPS pollution problems
 - a) Tier 1: Self-Determined Implementation of Management Practices (formerly referred to as "voluntary" implementation)
 - b) Tier 2: Regulatory Based Encouragement of Management Practices (e.g., Management Agency Agreements, established waivers, etc.)
 - c) Tier 3: Effluent Limitations and Enforcement Actions (e.g., Basin Plan prohibitions, Waste Discharge Requirements, etc.)
4. Provides the first of three five-year implementation plans targeting activities for specific management measures consistent with state and regional priorities in specific watersheds and also establishes mechanisms for: (a) coordination among agencies; (b) participation by the public; (c) assistance technically and financially; (d) adoption of additional management measures as goals, if needed; and; (e) monitoring and reporting of program effectiveness
5. Promotes long-term interagency coordination among State agencies of the California Environmental Protection Agency and Resources Agency as well as other local, State, and federal agencies
6. Identifies back-up authorities and enforceable policies and mechanisms for the 61 management measures adopted by the State
7. Relies on the use of existing authorities and regulatory processes (see page IV-3, Section V, Control Actions Under Regional Board Authority) to achieve implementation but allows for the adoption of the management measures as regulation after each five-year cycle if adequate progress in NPS pollution control has not been demonstrated.

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1. Voluntary implementation of Best Management Practices

Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.

2. Enforcement of Best Management Practices

Although the California Porter-Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use their regulatory authorities to encourage implementation of Best Management Practices.

First, the Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements and approved Management Agency Agreements, or other State or Regional Board formal action.

3. Adoption of Effluent Limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations may be set at a level which, in practice, requires implementation of Best Management Practices.

Not all of the categories of nonpoint source pollution follow the three-tiered approach. For example, silviculture activities on non-federal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with California Department of Forestry which allows the Regional Boards to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.

The Regional Board approach to addressing or regulating categories of nonpoint source pollution as discussed in various sections throughout this chapter, the Basin Plan and the Central Coast Region Watershed Management Initiative, is available at www.swrcb.ca.gov/rwqcb/.

The Nonpoint Source Pollution Control Program has State Nonpoint Source Management Plan initiated

development implements of specific program objectives to be implemented at the State and Regional level. Currently, Regional Board staff are implementing the following State Board program objectives:

A. Control of Nonpoint Source pollution (urban runoff; agriculture; land disturbance activities such as road construction/maintenance, land construction, timber harvesting, and mining; hydrologic modification; and individual disposal systems). These activities include outreach, education, public participation, technical assistance, financial assistance, interagency coordination, demonstration projects, and regulatory activities such as imposing septic tank area prohibitions.

B. Preparation of contracts for projects selected for grant funding. Regional Board staff also participate in these projects by providing technical assistance and publicizing their results.

C. Implementation of the 1990 Coastal Zone Act Reauthorization Amendments, as developed by the State Board and the California Coastal Commission. This shall be an enforceable Nonpoint Source Management Program to control land use and anthropomorphic activities impacts that have a significant affect on coastal waters. (Further discussion of the Amendments is provided later.)

D. Initiation of nonpoint source watershed pilot programs.

Using State program objectives, Regional Board staff annually developed task-specific workplans work plans to address nonpoint sources of pollution. For the Central Coastal Region, the following Nonpoint Source Program tasks activities are managed and implemented by the Nonpoint Source Program staff are documented in the Central Coast Region Watershed Management Initiative Chapter (January 2002 WMI at www.swrcb.ca.gov/rwqcb3/).

Task 1: Water Quality Assessment

Regional Board staff reviewed and updated the nonpoint source portion of the Water Quality Assessment and prepared water body fact sheets. (The Water Quality Assessment and water body fact sheets are discussed in Chapter Six.)

Task 2: Watershed Studies/Planning

Three impaired watersheds (Morro Bay Watershed, San Luis Obispo Creek Watershed, and San Lorenzo River Watershed) have been targeted for intensive activity. Major activities for San Luis Obispo Creek watershed include:

1. Develop a Demonstration "Total Maximum Daily Load" model.
2. Create a "San Luis Obispo Creek Riparian Task Force".
3. Implement a riparian corridor restoration project.
4. Identify major nonpoint pollutants and sources.
5. Develop a watershed management program.

For Morro Bay watershed, the activities include:

1. Develop a long term monitoring program to assess water quality improvements associated with the implementation of nonpoint source pollution control measures.
2. Develop funding for the long term monitoring program.
3. Implement a sediment reduction program using best management practices.
4. Participate in the Morro Bay Task Force.

For San Lorenzo River watershed, the activities include:

1. Develop a detailed assessment of Nonpoint Source impacts in the watershed.
2. Develop a wastewater management plan for on/off-site wastewater disposal.
3. Develop of a nutrient objective for the river.
4. Conduct experimental on-site wastewater treatment to reduce nitrogen discharge into the environment.

Task 3: Outreach Program

Staff meets regularly with individual and local government agencies to promote education and solutions on Nonpoint Source problems. Additionally, the use of

grant and loan resources to correct Nonpoint Source problems is emphasized during outreach activities.

Specific outreach activities include participation on the San Luis Obispo Creek Riparian Task Force, Morro Bay Task Force, and various 319(h)/205(j)/Basin Planning Technical Advisory Committees, and development of grant applications with local agencies.

Task 4: Project Tracking and Participation

Regional Board staff prepare contracts, coordinate with project proponents, track project progress, review and approve invoices, and provide technical support for Nonpoint Source grant funded projects.

Examples of additional management actions are documented in the following:

California Rangeland Water Quality Management Plan

Salinas River Watershed Management Action Plan

Water Quality Protection Program for Monterey Bay National Marine Sanctuary, Action Plan IV: Agriculture and Rural Lands

Central Coast Region Watershed Management Initiative Chapter

These documents are located on the Regional Board website at (www.swrcb.ca.gov/rwqcb3/).

BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. (Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter). The term "Best Management Practices" is used in references to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations, Section 103.2[m]) (www.swrcb.ca.gov/rwqcb3/) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not

limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6[b][4][i]) (www.swrcb.ca.gov/rwqcb3/) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which that prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment controls which remove pollutants from a discharge before it reaches surface or ground waters.

Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized:

- Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.
- The use of Best Management Practices does not necessarily ensure compliance with effluent

limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970s, the long-term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

- The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.
- To be effective, most Best Management Practices must be implemented on a long-term long-term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.
- The "state-of-the-art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on recommended nonpoint source management practices is provided under different water quality problem categories throughout this chapter for urban, agriculture, onsite wastewater disposal, and other land disturbance activities are described in the following sections (also see "Nonpoint Source Pollution Control Program (January 2000)"). For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate references Best Management Practices Handbook for the project type or location.

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-45 and Page IV-46, Section VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS as follows:

VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS Wetlands, Riparian Areas, and Vegetated Treatment Systems

The State has identified four Management Measures (MMs) to promote the protection and restoration of wetlands and riparian areas and the use of vegetated treatment systems as means to control nonpoint sources of pollution. Wetlands and riparian areas reduce polluted runoff by filtering out runoff-related contaminants, such as sediment, nitrogen, and phosphorus, thus maintaining the water quality benefits of these areas is important. These areas also help to attenuate flows from higher-than-average storm events. This attenuation protects downstream areas from adverse impacts, such as channel scour, erosion, and temperature and chemical fluctuations. Changes in hydrology, substrate, geochemistry, or species composition can impair the ability of wetland or riparian areas to filter out excess sediment and nutrients and therefore can result in deteriorated water quality. The following activities can cause such impairment: drainage of wetlands for cropland, overgrazing, hydromodification, highway construction, deposition of dredged material, and excavation for ports and marinas.

RECOMMENDED ACTIONS

Recommended actions (management measures) are found in the 2000 Nonpoint Source Pollution Control Program.

CONTROL ACTIONS

1. All discharges to the aquatic environment shall be considered temporary unless it is demonstrated that no undesirable change will occur in natural receiving water quality.

2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface waters shall be discontinued.
4. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.
5. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November October 15 each year.
6. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
7. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.

PROHIBITIONS

1. The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.
2. As specified in Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS.

In November 1990, Congress enacted Section 6217 of the Coastal Zone Act Reauthorization Amendments to help address the problem of nonpoint source pollution in coastal waters. Section 6217 requires that coastal states with federally approved coastal management programs develop Coastal Nonpoint Pollution Control Programs. The legislative history indicates that the central purpose of section 6217 is to strengthen the links between federal and State coastal zone management and water quality programs in order to enhance efforts to manage land use

~~activities that degrade coastal beneficial uses. The State coastal zone management agency designated under Section 306 of the Amendments and nonpoint source management agency designated under section 319 of the Clean Water Act will have a dual and co-equal role and responsibility in developing and implementing the coastal nonpoint program.~~

~~The program gives the U.S. Environmental Protection Agency (U.S. EPA) and the National Oceanic and Atmospheric Administration joint authority to approve programs developed by the State to address 6217 requirements.~~

~~The State agencies chosen to develop California's Coastal Nonpoint Pollution Control Program are the State Board and the Coastal Commission. The statute requires that the State program be "coordinated closely with State and local water quality plans and programs." This means that the State's nonpoint source programs under Sections 208 and 319 of the Clean Water Act and the coastal program must be examined to determine if they comprehensively address land use activities and anthropomorphic effects that have a significant effect on coastal waters. In addition, the State agencies are charged with developing a coordinated program that:~~

- ~~—identifies categories of nonpoint sources that adversely impact coastal waters;~~
- ~~—describes management measures to be implemented;~~
- ~~—identifies the land uses and critical coastal areas that will require more stringent or additional management measures;~~
- ~~—describes the State developed additional management measures to be implemented in critical areas;~~
- ~~—documents the authorities the State will use to implement both the guidance and additional management measures, including designation of a lead agency for each source category and/or subcategory; and~~
- ~~—sets forth a schedule to achieve full implementation of the guidance management measures within three years of program approval by U.S. EPA and National Oceanic and Atmospheric Administration, and full implementation of additional management measures within six years of program approval.~~

~~The Coastal Commission and the State Board staff have been working on a strategy to develop the required~~

~~Coastal Nonpoint Pollution Control Program plan. Recently, the State Board directed staff to review and revise the statewide Nonpoint Source Management Plan to include a strong coastal component. Revision of the Plan is intended to satisfy the requirements of Section 6217 within the existing framework of current nonpoint source activities.~~

~~On a Regional Board level, staff has been involved with the statewide program since 1991. A pilot project, "The New Coastal Nonpoint Pollution Control Program using the Morro Bay Watershed as a Model" was performed to assess the feasibility of establishing the Coastal Nonpoint Pollution Control Program in California. Regional Board staff supplied technical information and reviewed reports. Concerted planning and implementation efforts on target coastal watersheds such as Morro Bay will be major accomplishments to satisfy Coastal Nonpoint Pollution Control Program requirements. As the program goes statewide, Regional Board staff will attend technical advisory committee meetings and will work closely with staff of the State Board and other Regional Boards, as well as staff of other relevant local, State, and federal agencies to develop a workable Coastal Nonpoint Pollution Control Program.~~

~~Wastewater originating from nonpoint sources includes those from urban runoff, agricultural activities, on site sewage disposal systems, and land disturbance activities. Management of these types of nonpoint source discharges are discussed in the following section. The Regional Board will be developing management practices for marinas and recreational boating; hydromodification facilities; and wetlands, riparian areas, and vegetated treatment systems at a future date.~~

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-68 and Page IV-69, Section VIII.E.1. LAND DISTURBANCE ACTIVITIES as follows:

VIII.E. LAND DISTURBANCE ACTIVITIES

Construction, mining, and other soil disturbance activities which that may disturb or expose soil or otherwise increase susceptibility of land areas to erosion are difficult to regulate effectively. Construction projects or timber harvesting activities may often begin and end with no obvious impairment of stream quality; however, erosion or land slides landslides the following winter may be directly related to earlier land disturbance or tree cutting. Mining and quarrying activities are generally longer in duration.

Under contract with the Regional Board, the California Association of Resource Conservation Districts completed a study entitled, "Erosion and Sediment in California Central Coast Watersheds - A study of Best Management Practices" (Erosion Study), dated June, 1979. This Erosion Study, funded under Section 208 of the Clean Water Act, assesses impacts of erosion and sedimentation on water quality and beneficial uses in nondesignated planning areas (San Benito, San Luis Obispo, and Santa Barbara Counties) of the Central Coast Region. This Erosion Study and supporting documents have been used by the Regional Board in developing erosion and sedimentation control policy.

Nonpoint source pollution in the remainder of the Region is addressed by designated planning agencies through their respective Area wide Waste Treatment Management Plans. Designated agencies and the areas affected within this Region include: Association of Bay Area Governments (portions of San Mateo and Santa Clara Counties), Association of Monterey Bay Area Governments (Santa Cruz and Monterey Counties), and Ventura County Board of Supervisors (portion of Ventura County). The policy herein described is compatible with those plans and is within the scope of the Regional Board authority.

The Erosion Study and Area wide Waste Treatment Management Plans identify examples of accelerated erosion resulting from insufficient land management of soil cultivation, grazing, silviculture, construction, and off-road vehicle activities, as well as wildfires.

Adverse impacts of sediment are identified, in part, as: impairment of water supplies and ground water recharge, siltation of streams and reservoirs, impairment of navigable waters, loss of fish and wildlife habitat, degradation of recreational waters, transport of pathogens and toxic substances, increased flooding, increased soil loss, and increased costs associated with maintenance and operation of water storage and transport facilities. Recommendations based on conclusions of the Erosion Study and practices recommended in Area wide Waste Treatment Management Plans are a means to reduce unnecessary soil loss due to erosion and to minimize adverse water quality impacts resulting from sediment.

~~When a practice or combination of practices is found to be the most effective, practical (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by nonpoint sources to a level compatible with water quality goals, it is designated a Best Management Practice (BMP). BMPs are determined only after problem assessment, examination of alternative practices, and appropriate public participation in the BMP development process.~~

RECOMMENDED ACTIONS

1. Land use practices should assure protection of beneficial water uses and aquatic environmental values.
2. There shall be no waste discharged into areas that possess unique or uncommon cultural, scenic, aesthetic, historical or scientific values. The Regional Board will define such areas.
3. Property owners are considered ultimately responsible for all activities and practices that could result in adverse affects on water quality from waste discharges and surface runoff.
4. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the State.
5. Use of soil sterilants is discouraged and should be minimized.

Erosion Study Recommendations

General recommendations based on conclusions of the Erosion Study are discussed below. These recommendations are considered to be Best Management Practices (BMPs) by the Regional Board as are the Area wide approved water quality management plans.

1. Soil conservation control measures should be used to minimize impacts that would otherwise result from soil erosion. Control measures are identified according to systems, which are then broken down into subsystems of erosion control techniques or component measures.

For example, a system for control of erosion from construction sites would identify component measures such as debris basins, access roads, hillside ditches, etc. Other conservation control systems include: conservation cropping, conservation irrigation, roadside erosion control, critical area treatment, diversions and ditches, grade stabilization, pasture and range management, runoff and sediment control ponds and basins, stream bank and channel protection, and watershed, wildlife, and recreation land improvement. These control measures are comparable to the USDA Soil-Natural Resources Conservation Services' Resource Management Subsystem approach as referenced in AMBAG's "Water Quality Management Plan for the Monterey Bay Region," dated July 1978, and in ABAG's, "Handbook of Best Management Practices," dated October 1977.

Experience has shown that no one control measure best solves an existing, or prevents a potential, pollution problem - especially in the area of soil erosion and sedimentation. As land use, the land user, and various situations change, so does the need for control measures. Before application, an on-site investigation with the land user is necessary to determine which practice or set of practices will be most effective and acceptable.

2. Erosion control should be implemented in a reasonable manner with as much implementation responsibility remaining with existing local entities and programs as is possible and consistent with water quality goals.
3. The Regional Board and local units of government should establish a clear policy for control of erosion, including consideration of off-site and cumulative impacts and the imposition of performance standards

according to the sensitivity of the area where land is to be disturbed.

4. Effective ordinances and regulatory programs should be adopted by local units of government. Effective programs would allow only land disturbance actions consistent with the waste load capacity of the watershed, require preparation of erosion and sediment control plans with specific contents and with attention to both offsite/on-site impacts, identify performance standards, be at least comparable to the model ordinance in the "Erosion and Sediment Control Handbook," dated May 1978, and have provisions for inspection follow-up, enforcement, and referral.
5. Watersheds with critical erosion and sediment problems should be identified by one or more concerned agencies such as the California Department of Fish and Game, the Regional Board, the local Environmental Health, Planning, or Engineering Departments, the local Flood Control District, or the local Resource Conservation District, and then referred to the remaining agencies by a designated local coordinating agency for determining the scope, nature, and significance of the identified problem. The designated local agency would evaluate the adequacy and appropriateness of the total assessment, including an assessment of the problem and causes, alternatives considered, recommended interim and permanent control measures, and the amount and sources of funding. The evaluation would then be submitted as an Impact Findings Report for consideration and decision by the local governing body.
6. Comprehensive and continuous training should be mandatory for building and grading inspectors, engineers, and planners involved in approving, designing, or inspecting erosion control plans and on-site control measures. The training program would preferably be conducted on an inter-county/agency basis and be administered through a USDA Natural Resources Soil Conservation Service cooperative training arrangement or ~~through seminars~~ through seminars conducted by the USDA Natural Resources Soil Conservation Service and the University of California Cooperative Extension seminars. The Soil Conservation Society of America should be requested to assist in establishing an effective training program, including public education to heighten awareness of the adverse affects of erosion and sediment on soil and water resources.

7. More intensive erosion controls should be considered within four watersheds (Lauro Reservoir and Devereaux Ranch Slough in Santa Barbara County and Pismo Lake and Morro Bay in San Luis Obispo County) with apparent critical erosion and sediment problems. Alternative practices that may be implemented to effect the necessary level of control are assigned a relative priority.

Actions By Other Authorities

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staff, increasing cost-share funds, increasing the availability of low-interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that includes incentives for the individual - such as cost-sharing, changes in State law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices identified under Regional Board "Management Principles."
5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.
6. Resource Conservation Districts, the U.S.D.A. Soil Natural Resources Conservation Service, the

California Department of Transportation, and the U.C. Cooperative Extension Service, in conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Board will be processed entirely by that county or city.

CONTROL ACTIONS

1. All discharges to the aquatic environment shall be considered temporary unless it is demonstrated that no undesirable change will occur in the natural receiving water quality.
2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface waters shall be discontinued.
4. In implementing BMPs through local units of government, or through State and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the area wide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually to reflect recent achievements, new information and new concerns.
5. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.

6. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger are exempt from this chapter providing such exemption is in the public interest.
7. Regulation of sediment discharges from routine annual non-irrigated agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
8. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.
9. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.
10. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November October 15 each year.
11. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
12. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.
13. Design and maintenance of erosion and sediment control structures (e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practice.
14. Cover crops shall be established by seeding and/or mulching or other equally effective measures for all disturbed areas not otherwise protected from

excessive erosion. The use of native plant species is recommended.

15. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope length shall not be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-68 through Page IV-69, Section VIII.E.1. LAND DISTURBANCE PROHIBITIONS as follows:

VIII.E.1. LAND DISTURBANCE PROHIBITIONS

The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from timber harvesting, construction, and other soil disturbance activities at locations above the anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

Soil disturbance activities not exempted pursuant to Regional Board Management Principles in Chapter Five and Control Actions contained in this Chapter Five are prohibited:

1. In geologically unstable areas,
2. On slopes in excess of thirty percent (excluding agricultural activities), and
3. On soils rated a severe erosion hazard by soil specialists (as recognized by the Executive Officer) where water quality may be adversely impacted;

Unless,

- a. In the case of agriculture, operations comply with, a Farm Conservation or Farm Management Plan, approved by a Resource Conservation District or the USDA-Soil Conservation Service Natural Resources Conservation Service;
- b. In the case of construction and land development, an erosion and sediment control plan or its equivalent (e.g., EIR, local ordinance) prescribes best

management practices to minimize erosion during the activity, and the plan is certified or approved, and will be enforced by a local unit of government through persons trained in erosion control techniques; or,

- c. There is no threat to downstream beneficial uses of water, as certified by the Executive Officer of the Regional Board.

4. As specified in Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS.

IX. TOTAL MAXIMUM DAILY LOADS

The goal of setting a Total Maximum Daily Load (TMDL) is to attain state water quality standards for waterbodies identified to be impaired by a pollutant and, therefore, not meeting water quality standards. Development of a TMDL typically involves a quantitative assessment of water quality problems, contributing pollutant sources, and numeric goals that indicate if and when water quality standards are met. The TMDL value specifies the maximum amount of pollutant that can be discharged (or the amount of a pollutant that needs to be reduced) to meet water quality standards. Components of a TMDL include load allocations for nonpoint source and background pollution, waste load allocations for point source pollution, and a margin of safety that accounts for the uncertainty about the relationship between the pollutant loads and the quality of the receiving waterbody. This section includes the TMDLs calculated for the specified waterbody identified to be impaired by a pollutant, the numeric targets set for the waterbody/pollutant combination that serve as indicators of water quality standards, and allocations of pollutant loads among sources contributing the pollutant to the waterbody. Associated with each TMDL is an implementation plan and a monitoring plan. The implementation plan describes how the water quality standards will be achieved for the waterbody/pollutant combination. These implementation plans typically include actions to be taken, requirements to be imposed through regulatory authorities, and a time schedule for actions and requirements to be implemented. The monitoring plans typically include monitoring parameters, collection methods, analysis methods, and sample collection locations. Monitoring data is used to track

implementation efforts and make informed decisions
about water quality conditions and standards.

REVISED CHAPTER 5. PLANS AND POLICIES

CHAPTER 5. PLANS AND POLICIES

In addition to the Implementation Plan, many other plans and policies direct State and Regional Board actions or clarify the Regional Board's intent. The following pages contain brief descriptions of State Board plans and policies and numerous Regional Board plans and policies. ~~Copies of the State and Regional Board policies are contained in the Appendix.~~

Nonpoint Source Pollution Control Program (January 2000) Nonpoint Source Management Plan

Ocean Plan

Discharges of Municipal Solid Waste Policy

Should any of these policies be amended by the State Board, the Regional Board will implement the amended version.

The following sections summarize the adopted policies. ~~The complete policy is available in the "Attachments" section of this document.~~

I. STATE WATER RESOURCES CONTROL BOARD PLANS AND POLICIES

The State Water Resources Control Board (State Board) has adopted a number of plans and policies for Statewide water quality management including:

State Policy for Water Quality Control (1972)

Anti-degradation Policy

Thermal Plan

Bays and Estuaries Policy

Power Plant Cooling Policy

Reclamation Policy

Shredder Waste Disposal Policy

Underground Storage Tank Pilot Program

Sources of Drinking Water Policy

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-3 and V-4, Section I.J. NONPOINT SOURCE MANAGEMENT PLAN as follows:

I.J. NONPOINT SOURCE MANAGEMENT PLAN

Resolution R3-2002-0093: Adopting policy regarding the State Nonpoint Source Pollution Control Program (January 2000).

~~The "Nonpoint Source Management Plan", Resolution 88-123, was adopted by the State Water Resources Control Board on November 15, 1988 pursuant to Section 319 of the Clean Water Act. The Plan identifies nonpoint source control programs and milestones for their accomplishment. It emphasizes cooperation with local governments and other agencies to promote the implementation of Best Management Practices and remedial projects.~~

In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to the "Nonpoint Source Pollution Control Program (January 2000)" in December 1999 (www.swrcb.ca.gov/rwqcb3/). Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted by the State Water Resources Control Board on December 14, 1999 pursuant to Section 319 of the Clean Water Act.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

Revise the September 8, 1994 Basin Plan,
Chapter 5, Page V-7, Section III.G.
**EROSION AND SEDIMENTATION
CONTROL** as follows:

**III.G. EROSION AND
SEDIMENTATION CONTROL**

1. General recommendations for erosion control, numbered one through six under "Land Disturbance Activities" in the Implementation Plan, Chapter Four, are considered by the Regional Board to be Best Management Practices (BMP's), as are those BMP's identified in approved areawide Water Quality Management Plans.
2. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the State.
3. In implementing BMP's through local units of government, or through State and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the areawide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually. They receive achievements, new information, and concerns.
4. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.
5. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger

are exempt from this chapter providing such exemption is in the public interest.

6. Regulation of sediment discharges from routine annual agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
7. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.

"Control Actions" and "Actions by Other Authorities" in this chapter and the Implementation Plan, Chapter Four, contain further information regarding erosion and sedimentation control.

~~Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-13 and V-14, Section V.G. EROSION AND SEDIMENTATION as follows:~~

~~V.G. EROSION AND SEDIMENTATION~~

- ~~1. Erosion from nonpoint pollution sources shall be minimized through implementation of BMP's (identified under "Management Principles" and described under "Land Disturbance Activities" in Chapter Four's "Nonpoint Source Measures" section.~~
- ~~2. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November 15 each year.~~
- ~~3. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.~~
- ~~4. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, wherever possible, between significant land disturbance activities and watercourses, lakes, bays, quarries, ponds, and other water bodies. For construction activities, the minimum width of the filter strip shall be 10 feet, wherever possible as measured along the ground surface to the highest anticipated water line.~~
- ~~5. Design and maintenance of erosion and sediment control structures, (e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.~~
- ~~6. Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion.~~
- ~~7. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope length shall not~~

~~be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.~~

- ~~8. Use of soil sterilants is discouraged and should be minimized.~~

~~Further erosion and sedimentation information can be found in other areas of this chapter as well as the Implementation Plan, Chapter Four, under "Land Disturbance Activities."~~

Text Moved

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-15 and V-16, Section V.H.10. EROSION AND SEDIMENTATION CONTROL as follows:

V.H.10. EROSION AND SEDIMENTATION CONTROL

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staffs, increasing cost share funds, increasing the availability of low interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that include incentives for the local, state, and federal share changes in State land use taxes, local property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices identified under Regional Board "Management Principles."
5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.
6. Resource Conservation Districts, the U.S.D.A. Soil Conservation Service, the California Department of Transportation, and the Extension Service, in

conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Board will be processed entirely by the county or city.

CEQA CHECKLIST

CALIFORNIA ENVIRONMENTAL QUALITY ACT
"FUNCTIONAL EQUIVALENT" REPORT FOR BASIN PLAN AMENDMENT

(RESOLUTION NO. R3-2002-0093)

The Central Coast Regional Water Quality Control Board (Regional Board) is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

The Basin Planning process has been certified as "functionally equivalent" to the preparation of the Environmental Impact report (EIR) for the purposes of complying with the California Environmental Quality Act (CEQA) (Section 15251, Title 4, California Code of Regulation ((CCR)). Based on the certification, this Basin Plan Amendment Report is used in lieu of an EIR or a Negative Declaration.

Any Regional Board regulatory program certified as functionally equivalent, however, must satisfy the documentation requirements of Section 377 (a), Title 23, CCR. This report satisfies part (a) of that section. It contains the following:

1. A Description of Proposed Activity and Proposed Alternatives,
2. An Environmental Checklist and a Description of the Proposed Activity,
3. An Environmental Evaluation, and
4. A determination with respect to significant Environmental Impacts.

I. DESCRIPTION OF PROPOSED ACTIVITY

This section describes the changes proposed and alternatives to this proposal. The purpose of this amendment is to:

1. Incorporate the State Water Resources Control Board January 2000 Nonpoint Source Program Strategy and Implementation Plan.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Program Strategy and Implementation Plan for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Alternatives to this proposal include:

1. Require a higher level of nonpoint source protection than identified in the Nonpoint Source Program Strategy and Implementation Plan.

This alternative is not recommended because the Nonpoint Source Program Strategy and Implementation Plan as proposed already requires the highest level of nonpoint source protection feasible.

2. Require a less stringent Nonpoint Source Program Strategy and Implementation Plan.

This alternative is not recommended because it does not protect water quality and associated beneficial uses.

3. Take no action.

This alternative is not recommended because it does not protect water quality and associated beneficial uses.

4. Modify amendment

This alternative is recommended if it does not modify the Nonpoint Source Program Strategy and Implementation Plan. This alternative is recommended only if beneficial uses are protected and water quality objectives are attained.

5. Create additional amendments

The Regional Board may consider additional alternatives, but will limit its action to a logical outgrowth of the proposed amendment. Other alternatives will be subject to public notice and comment at the time those changes are proposed.

CALIFORNIA ENVIRONMENTAL QUALITY ACT REQUIREMENTS

II. EVALUATION OF ENVIRONMENTAL IMPACTS:

	Potentially Significant Impact	Less Than Significant With Mitigation Incorporation	Less Than Significant Impact	No Impact
1. AESTHETICS – Would the project:				
a) Have a substantial adverse effect on a scenic vista?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
b) Substantially damage scenic resources, including, But not limited to, trees, rock outcroppings, and historic buildings with a state scenic highway?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Substantially degrade the existing visual character or quality of the site and its surroundings	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
d) Create a new source of substantial light or glare which would adversely affect day or nighttime views in the area	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
2. AGRICULTURE RESOURCES: In determining whether impacts to agricultural resources are significant environmental effects, lead agencies may refer to the California Agricultural Land Evaluation and Site Assessment Model (1997) prepared by the California Dept. of Conservation as an optional model to use in assessing impacts on agriculture and farmland. Would the project				
a) Convert Prime Farmland, Unique Farmland, or Farmland of Statewide Importance (Farmland), as shown on the maps prepared pursuant to the Farmland Mapping and Monitoring Program of the California Resources Agency, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>
b) Conflict with existing zoning for agricultural use, or a Williamson Act contract?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
c) Involve other changes in the existing environment which, due to their location or nature, could result in conversion of Farmland, to non-agricultural use?	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>	<input type="checkbox"/>

<p>3. AIR QUALITY -- Where available, the significance criteria established by the applicable air quality management or air pollution control district may be relied upon to make the following determinations. Would the project</p>				
<p>a) Conflict with or obstruct implementation of the applicable air quality plan?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>b) Violate any air quality standard or contribute substantially to an existing or projected air quality violation?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>c) Result in a cumulatively considerable net increase of any criteria pollutant for which the project region is not attainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors)?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>d) Expose sensitive receptors to substantial pollutant concentrations?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>e) Create objectionable odors affecting a substantial number of people?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>4. BIOLOGICAL RESOURCES -- Would the project:</p>				
<p>a) Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the California Department of Fish and Game or U.S. Fish and Wildlife Service?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>b) Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by the California Department of Fish and Game or US Fish and Wildlife Service?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>c) Have a substantial adverse effect on federally protected wetlands as defined by Section 404 of the Clean Water Act (including, but not limited to, marsh, vernal pool, coastal, etc.) through direct removal, filling, hydrological interruption, or other means?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>
<p>d) Interfere substantially with the movement of any native resident or migratory fish or wildlife species or with established native resident or migratory wildlife corridors, or impede the use of native wildlife nursery sites?</p>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input checked="" type="checkbox"/>

III. ENVIRONMENTAL EVALUATION (of checklist questions answered Potentially Significant Impact, Less than Significant with Mitigation Incorporation, or Less than Significant Impact)

2a and 2c Less than Significant Impact: The Environmental Evaluation associated with this amendment (Regional Board Resolution R3-2002-0093) has less than significant impacts listed for items 2a and 2c, the conversion of prime farmland to non-agricultural use and the conversion of farmland to non-agricultural use respectively. Prime agriculture areas that would be converted are likely to be land that is only marginally sustaining its agricultural value and/or use. Implementation of nonpoint source management on agricultural land would likely result in net benefit by reducing soil and fertilizer loss into the creek. Additionally, Buffer strips (protection of riparian corridor) that would replace agricultural land could possibly provide flood protection to adjacent agricultural land uses, resulting in a net benefit. If necessary, impacts can be mitigated by assessing existing "loss" of agricultural value or land areas due to erosion and sedimentation, and by designing best management practices to compensate for this loss.

IV. DETERMINATION: (To be completed by the Lead Agency)

On the basis of this initial evaluation:

I find the proposed project COULD NOT have a significant effect on the environment.

I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

**NOTICE OF PUBLIC HEARING
NOTICE OF FILING A DRAFT
ENVIRONMENTAL DOCUMENT**

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
81 Higuera Street, Ste. 200, San Luis Obispo, CA 93401**

**NOTICE OF PUBLIC HEARING
NOTICE OF FILING A DRAFT ENVIRONMENTAL DOCUMENT**

TO CONSIDER ADOPTION OF REVISED STATE WATER RESOURCES CONTROL BOARD NONPOINT SOURCE POLLUTION CONTROL PROGRAM AND REFORMATTING EXISTING NONPOINT SOURCE PLANS, POLICIES, AND MANAGEMENT PRACTICES - AMENDMENT OF THE CENTRAL COAST BASIN WATER QUALITY CONTROL PLAN (BASIN PLAN) AND REQUESTING APPROVAL FROM STATE WATER RESOURCES CONTROL BOARD

NOTICE IS HEREBY GIVEN that the California Regional Water Quality Control Board, Central Coast Region (Regional Board), will hold a public hearing to hear comments and consider adoption of a resolution amending the Water Quality Control Plan (Basin Plan) for the Central Coast Region. The proposed amendment to the Basin Plan includes:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

Copies of the proposed amendment to the Basin Plan (in the form of a draft amendment for adoption, staff report, and a functionally equivalent document which includes an Environmental Checklist) are available on the Internet at www.swrcb.ca.gov/rwqcb3/. At the website, on the first page you will see a staff report "PROPOSED AMENDMENT OF "WATER QUALITY CONTROL PLAN - CENTRAL COASTAL BASIN" (BASIN PLAN) REGARDING INCORPORATION OF THE STATE WATER RESOURCES CONTROL BOARD "NONPOINT SOURCE POLLUTION CONTROL PROGRAM" AND RESTRUCTURING THE BASIN PLAN NONPOINT SOURCE INFORMATION, FINDINGS, AND REQUIREMENTS." The proposed amendments to the Basin Plan are also available by request at the office of the Regional Board. You may also request a mailed copy of these documents by contacting Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

Copies of the existing Basin Plan are located at libraries in major cities throughout the region, at the office of the Regional Board, and on the Internet at www.swrcb.ca.gov/rwqcb3/.

Actions to amend the Water Quality Control Plan for Region Three will be taken in accordance with a regulatory program exempt under Section 21080.5 of the Public Resources Code from the requirement to prepare an environmental impact report under the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.) and with other applicable laws and regulations. At the conclusion of the meeting the Regional Board will consider approval of the proposed amendment or a revised amendment consistent with the intent of the amendment. At

the conclusion of the public hearing, the Regional Board will consider certification of the environmental document an approval of the proposed amendments.

The public comment period will occur from **August 8, 2002 through September 23, 2002**. We would appreciate any comments, preferably in writing, or other evidence sent in advance to Howard Kolb at the address listed above. Your timely submittal will allow staff to analyze your comments and the Regional Board to consider your comments before taking final action at the meeting to be held on December 6, 2002. Please note that all exhibits, charts, graphs, and other testimony presented, as evidence must be left with the Regional Board as part of the administrative record.

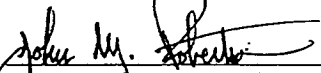

Time limits may be imposed on oral presentations at the hearing. Additional or alternative rules or regulations consistent with the general purpose of the amendment and complementary to the specific proposed rules may be developed at the hearing as a logical outgrowth of this hearing.

The public hearing is scheduled as follows:

Date: December 6, 2002
Time: 8:30 A.M.
Place: Conference Room
Regional Water Quality Control Board
895 Aerovista Place, SUITE 101
San Luis Obispo, CA 93401-5427

The location of the hearing is described on the attached map and is accessible to persons with disabilities. Individuals who require special accommodations are requested to contact **Cyndee Jones** at 805-549-3372 at least 5 working days prior to December 6, 2002. TTY users may contact the California Relay Service at 1-800-735-2929 or voice line at 1-800-735-2922.

For additional information on this Basin Plan review, please call Howard Kolb at 805-549-3332 or hkolb@rb3-swrqb.ca.gov.

SUBJECT: NOTICE OF FILING SUBMITTED IN COMPLIANCE WITH §21080.5
OF THE PUBLIC RESOURCES CODE

PROPONENT: California Regional Water Quality Control Board, Central Coast Region

PROJECT TITLE: Proposed Amendment of "Water Quality Control Plan - Central Coast Region" (Basin Plan) Regarding Incorporation of the State Water Resources Control Board "Nonpoint Source Pollution Control Program" and Restructuring the Basin Plan Nonpoint Source Information, Findings, and Requirements.

CONTACT: Howard Kolb at 805-549-3332 or hkolb@rb3.swrcb.ca.gov.

LOCATION: Central Coast Region

DESCRIPTION: The Central Coast Regional Water Quality Control Board (Regional Board) is proposing an amendment to its Water Quality Control Plan - Central Coastal Basin (Basin Plan). The Basin Plan serves as the cornerstone water quality protection policy for the Central Coast. It identifies beneficial uses of surface and ground waters, establishes water quality objectives to protect beneficial uses, and provides an implementation plan to achieve those objectives.

A draft copy of the proposed amendments is enclosed for your review. The purpose of this amendment is to:

1. Reference the State Water Resources Control Board January 2000 Nonpoint Source Pollution Control Program.
2. Emphasize information and management actions contained in the January 2000 Nonpoint Source Pollution Control Program for the protection and restoration of riparian areas.
3. Restructure sections of the Basin Plan to have appropriate nonpoint source information, requirements, and prohibitions in a designated section of the Basin Plan. The section is titled Control of Nonpoint Source Pollutants.

The Regional Board will hold a hearing to identify and prioritize water quality issues. The public hearing is scheduled as follows:

NOTICE OF PUBLIC MEETING AND ADDRESS CHANGE

To Whom It May Concern:

The California Regional Water Quality Control Board December 13, 2002 meeting contains the following items that may be of interest to you:

1. Waiver Actions Related to Waste Discharge Requirements
(This will be a combination of Background Information, a General Waiver Resolution and a Status Report on Agricultural Runoff)
2. Basin Plan Chapter 6 Revision
(Adopt Basin Plan Amendment)
3. Basin Plan Nonpoint Source/Riparian Policy – Implementation and Review
(Adopt Basin Plan Amendment)
4. Chorro Creek and Los Osos Creek Total Maximum Daily Load for Nutrients and Dissolved Oxygen (Adopt Basin Plan Amendment)
5. Morro Bay Total Maximum Daily Load for Pathogens
(Adopt Basin Plan Amendment)

These items may be viewed in their entirety at www.swrcb.ca.gov. The meeting will be held at our new address located at 895 Aerovista Place, Suite 101 San Luis Obispo, CA 93401. Please see reverse for detailed directions.

If you have any questions, please call **Howard Kolb at (805) 549- 3332 or Kimberly Gonzalez at (805) 549-3150.**

Sincerely,

FOR Roger W. Briggs
Executive Officer

Phone (805) 549-3147 • FAX (805) 543-0397

NOTICE OF PUBLIC MEETING
Friday, December 13, 2002
CENTRAL COAST REGIONAL WATER QUALITY CONTROL BOARD MEETING
NOTE NEW LOCATION FOR DECEMBER MEETING:
Regional Board Conference Room
895 Aerovista Place, Suite 101
San Luis Obispo CA 93401-7906
(See Page 8 for location map)

[Staff will review and transmit all written material to the Board Members received by December 2, 2002, 5:00 p.m. Written material submitted after that day will be placed into the official record (unless excluded by ruling of the Board Chair), but will not be sent to Board Members before the Board Meeting.]

[The board and staff welcome information on pertinent problems, but comments at the meeting should be brief and directed to specifics of the case to enable the board to take the appropriate action. Whenever possible, lengthy testimony should be presented to the board in writing and only a summary of pertinent points presented verbally. In order to give everyone an opportunity to be heard, comments should have been previously submitted in writing and a time limit on presentations may be imposed on any agenda item. Speakers should plan to summarize key points within 3 minutes. We would appreciate staff being notified prior to meetings of presentations planned for longer than 3 minutes, for scheduling purposes.]

Friday, December 13, 2002, 8:30 a.m.

1. Roll Call [Carol Hewitt 805/549-3503]..... Board Members Present
2. Introductions [Roger Briggs 805/549-3140] Guests and Staff Present
3. Approval of November 1, 2002 Meeting Minutes. Board Motion
4. Public Forum..... Board Direction
(Any person may address the Board on any matter within its jurisdiction that is not on the agenda. Please walk to the rostrum and after receiving recognition from the Chair, give your name and address, and your comments or questions. In order that all interested parties have an opportunity to speak, please be brief. The Chair generally limits the time allotted to each speaker to three minutes).

Your comments on agenda items should be submitted according to the deadlines we send with draft agenda items to our interested parties lists. The Regional Board can then review your comments with our staff analysis and response. If you wish to be added to our list for a specific item, please contact the staff person listed with each item in this agenda notice.

Uncontested Items (*)

5. Uncontested Items Calendar Board Motion
(Agenda Item numbers 20, 21, 22, 23, and 24 with a single asterisk (), are expected to be routine and non-controversial. Recommended action on these items will be taken at the beginning of the meeting without discussion. If any Interested Party, Board Member, or the Executive Officer requests that an item be removed from the calendar, it will be taken up in order).*

Watershed Management and Basin Planning

6. Waiver Action Related to Waste Discharge Requirements
A) Background Information [Eric Gobler 805/549-3467].....Information
B) General Waiver [Kimberly Gonzalez 805/549-3150] Resolution No.2002-0115
C) Conditional Waiver for Agricultural Runoff [Alison Jones 805/542-4646]..... Status Report
(This will be a combination of Background Information, General Waiver Resolution, and a Status Report)
7. Chorro Creek and Los Osos Creek Total Maximum Daily Load for Nutrients
and Dissolved Oxygen Resolution No. 2002-0118
(Adopt Basin Plan Amendment) [Katie McNeill 805/549-3336]
8. Morro Bay Total Maximum Daily Load for Pathogens
(including Chorro and Los Osos Creeks)..... Resolution No. 2002-0117
(Adopt Basin Plan Amendment) [Shanta Duffield 805/549-3464]
9. Basin Plan Chapter 6 Revision..... Resolution No. 2002-0094
(Adopt Basin Plan Amendment) [Angus Lewis 805/549-3692, Howard Kolb 805/549-3332]
- *10. Basin Plan Nonpoint Source / Riparian Policy - Implementation Revision..... Resolution No. 2002-0093
(Adopt Basin Plan Amendment) [Howard Kolb 805/549-3332, Angus Lewis 805/549-3692]
11. Toro Creek Groundwater Basin Board Direction
*(Consideration whether to proceed with a Basin Plan Amendment to remove the MUNICIPAL AND DOMESTIC SUPPLY beneficial use from a portion of the Toro Creek Groundwater Basin)
[Sheila Soderberg 805/549-3592]*

Low Threat and General Discharge Cases

12. Low Threat Cases..... Information/Discussion

General NPDES Permit:

ExxonMobil Service Station No. 18-J4F, 4801 Hollister Avenue, Goleta, Santa Barbara County
[Sheila Soderberg 805/ 549-3592]
Chevron Station No. 9-8169, 3180 Broad Street, San Luis Obispo, San Luis Obispo County
[Corey Walsh 805/542-4781]
Beacon Station No. 3737, 1180 Main Street, Watsonville, Santa Cruz County
[Matthew Keeling 805/549-3685]

Corrective Action Plan Approvals:

Beacon Station No. 3735, 1516 Soquel Avenue, Santa Cruz, Santa Cruz County [Tom Sayles 805/42-4640]
Exxon Station No. 7-0228, 595 Munras Avenue, Monterey, Monterey County [Wei Liu 805/542-4648]
Former BP Oil Site No. 11166, 401 Fremont Street, Monterey, Monterey County [Wei Liu 805/542-4648]
Former Arco Service Station No. 0365, 400 Fremont Street, Monterey, Monterey County
[Wei Liu 805/542-4648]

Cleanup Cases

13. MTBE Sites [Jay Cano 805/549-3699] Status Reports
Quick Stop Market, Soquel, Santa Cruz County
Chevron, Cambria, San Luis Obispo County
Camp Evers Underground Tank Sites, Scotts Valley, Santa Cruz County
Los Osos Valley Garage/Bear Valley Chevron, Los Osos, San Luis Obispo County
Lake San Antonio, Monterey County
Sturdy Oil Company (Exxon Station), San Miguel Canyon, Monterey County
Regionwide MTBE Site List
14. Prospective Purchaser Agreement, Innovative Micro Technologies, Inc., Board Approval
6300 Hollister Avenue, Goleta, Santa Barbara County [Sheila Soderberg 805/549-3592]

Enforcement

15. Enforcement Report [Gerhardt Hubner 805/542-4647] Status Report
16. Mr. William Evert, dba., the Corner Store, Monterey County Order No. 2002-0137
(*Consideration of Administrative Civil Liability for late report*) [Wei Liu 805/542-4648]
17. Global Mushroom, Santa Clara County Order No. 2002-0127
(*Consideration of Administrative Civil Liability*) [Kimberly Gonzalez 805/549-3150]
18. PG&E, Moss Landing Power Plant, Monterey County Board Approval
(*Settlement of NPDES Permit Violations*) [Brad Hagemann 805/549-3697]

Permits

- * 19. Goleta Sanitary District, Santa Barbara County Resolution No. 2002-0077
(*Consideration of Revision to Resolution No. 2002-077*) [Mike Higgins 805/542-4649]

Waste Discharge Requirements

- *20. City of Santa Maria WWTP, Santa Barbara County Order No. 2002-0111
(*Reissuance of Waste Discharge Requirements*) [Bob Hurford 805/542-4776]
- *21. Live Oak Park, Santa Barbara County Order No. 2002-0112
(*Issuance of Waste Discharge Requirements*) [Bob Hurford 805/542-4776]
- *22. Rancho Los Lobos Class II Landfill, Monterey County Order No. 2002-0014
(*Issuance of Closure Waste Discharge Requirements*) [Frank DeMarco 805/542-4638]
- *23. Santa Cruz Biotechnology, Inc., Stephenson Ranch and Edwards Property Grazing and
Manure Land Application Sites, Santa Cruz County Order No. 99-007
(*Rescission of Waste Discharge Requirements*) [Todd Stanley 805/542-4769]
- *24. San Martin Tire, Santa Clara County Order No. 88-34
(*Rescission of Waste Discharge Requirements*) [Burton Chadwick 805/542-4786]

Administrative Items

- 25. Report by State Water Resources Control Board Liaison [Gary Carlton 916/341-5603]..... Status Report
- 26. Reports by Regional Board Members Status Report
- 27. Executive Officer's Report [Roger Briggs 805-549-3140]..... Information/Discussion
Regulations Summary
Water Quality Certifications
(A chart is provided in the agenda listing the applications received from October 1, 2002 through October 31, 2002. A listing of pending applications for Water Quality Certifications pursuant to Section 401 of the Clean Water Act may be obtained by calling Corinne Huckaby 805-549-3504.)

Watershed Branch Reports

Status Reports (Informational Updates; NOTE: Board may give policy direction):
Carpinteria Valley Greenhouse update [Mike Higgins 805/542-4649]
Basin Plan Exemption Request [Matt Fabry 805/549-3458]
Las Tablas Creek TMDL [Doug Gouzie 805/542-4762]

Cleanup Branch Reports

Status Reports (Informational Updates; NOTE: Board may give policy direction):
Underground Tanks Summary Report dated November 12, 2002 [Jay Cano 805/549-3699]
Olin Corporation, 425 Tennant Avenue, Morgan Hill, Santa Clara County [John Mijares 805/549-3696]

Regionwide Reports

Regional Monitoring [Karen Worcester 805/549-3333]
Total Maximum Daily Load Program [Lisa McCann 805/549-3132]

Administrative Reports

Governor's Executive Order D-62-02 Regarding Decommissioned Radioactive Materials
[Michael LeBrun 805/542-4645]
Presentations and Training [Roger Briggs 805/549-3140]

Closed Session

Discussion of Cases in Litigation [Staff Counsel Jennifer Soloway]..... Closed Session
(The Board will meet in closed session to discuss pending litigation in the cases of Unocal v. Regional Water Quality Control Board; South County Regional Waste Water Authority v. Regional Water Quality Control Board, Cambria Community Services District v. Regional Water Quality Control Board, and Voices of the Wetlands, et al, v. Regional Water Quality Control Board, as authorized by Government Code (GC) Section 11126[e][2][A]. The Board may discuss significant exposure to litigation as authorized by GC Section 11126[e][2][B]. The Board may also decide whether to initiate litigation as authorized by GC Section 11126[e][2][C].)

Adjournment

The next regularly scheduled Board meeting is February 7, 2003 in San Luis Obispo.

REGIONAL BOARD MEETING SCHEDULE 2002/2003

Date	City	Address
December 13, 2002	San Luis Obispo	Regional Board Conference Room, 895 Aerovista Place, Suite 101, San Luis Obispo, CA 93401-7906
February 7, 2003	San Luis Obispo	Regional Board Conference Room, 895 Aerovista Place, Suite 101, San Luis Obispo, CA 93401-7906
March 21, 2003	San Luis Obispo	Regional Board Conference Room 895 Aerovista Place, Suite 101, San Luis Obispo, CA 93401-7906
May 16, 2003	Watsonville	Watsonville City Council Chambers, 250 Main Street, Watsonville, CA 95076
July 11, 2003	San Luis Obispo	Regional Board Conference Room 895 Aerovista Place, Suite 101, San Luis Obispo, CA 93401-7906
Sept. 12, 2003	Salinas	Salinas City Council Chamber Rotunda 200 Lincoln Avenue, Salinas, CA 93901
October 24, 2003	Santa Barbara	Santa Barbara County Supervisors Board Hearing Room 105 East Anapamu St. - 4th Floor, Santa Barbara, CA 93101
December 5, 2003	San Luis Obispo	Regional Board Conference Room 895 Aerovista Place, Suite 101, San Luis Obispo, CA 93401-7906

LEAD STAFF PERSONS

Roger W. Briggs, *Executive Officer* 805-549-3140
 Brad Hagemann, *Assistant Executive Officer/Ombudsman* 805-549-3697
 Carol Hewitt, *Executive Assistant* 805-549-3503
 Cyndee Jones, *Regional Administrative Officer* 805-549-3372
 Jennifer Soloway, *Staff Counsel* 916-341-5176
 Vacant, *Supervising Water Resources Control Engineer*

INVESTIGATION AND CLEANUP BRANCH

Jay Cano, *Above and Under Ground Tanks* 805-549-3699
 Michael LeBrun, *Department of Defense Program and Landfills* 805-542-4645
 Harvey Packard, *Cost Recovery Program, Major Oil Field and Pipeline Cleanups* 805-542-4639

WATERSHED BRANCH

Chris Adair, *Northern Watershed Unit Supervisor* 805-549-3761
 Gerhardt Hubner, *Coastal Watershed Unit Supervisor* 805-549-4647
 Eric Gobler, *Central Watershed Unit Supervisor* 805-549-3467
 Lisa Horowitz McCann, *Watershed Assessment Unit Supervisor* 805-549-3132
 John Robertson, *Southern Watershed Unit Supervisor* 805-542-4630

REGIONAL MONITORING AND BASIN PLANNING

Karen Worcester, *Environmental Specialist* 805-549-3333

(Please send or fax correspondence to (refer to instructions at the bottom of page one):

Regional Water Quality Control Board – Central Coast Region

Phone: 805-549-3147 Fax: 805-543-0397

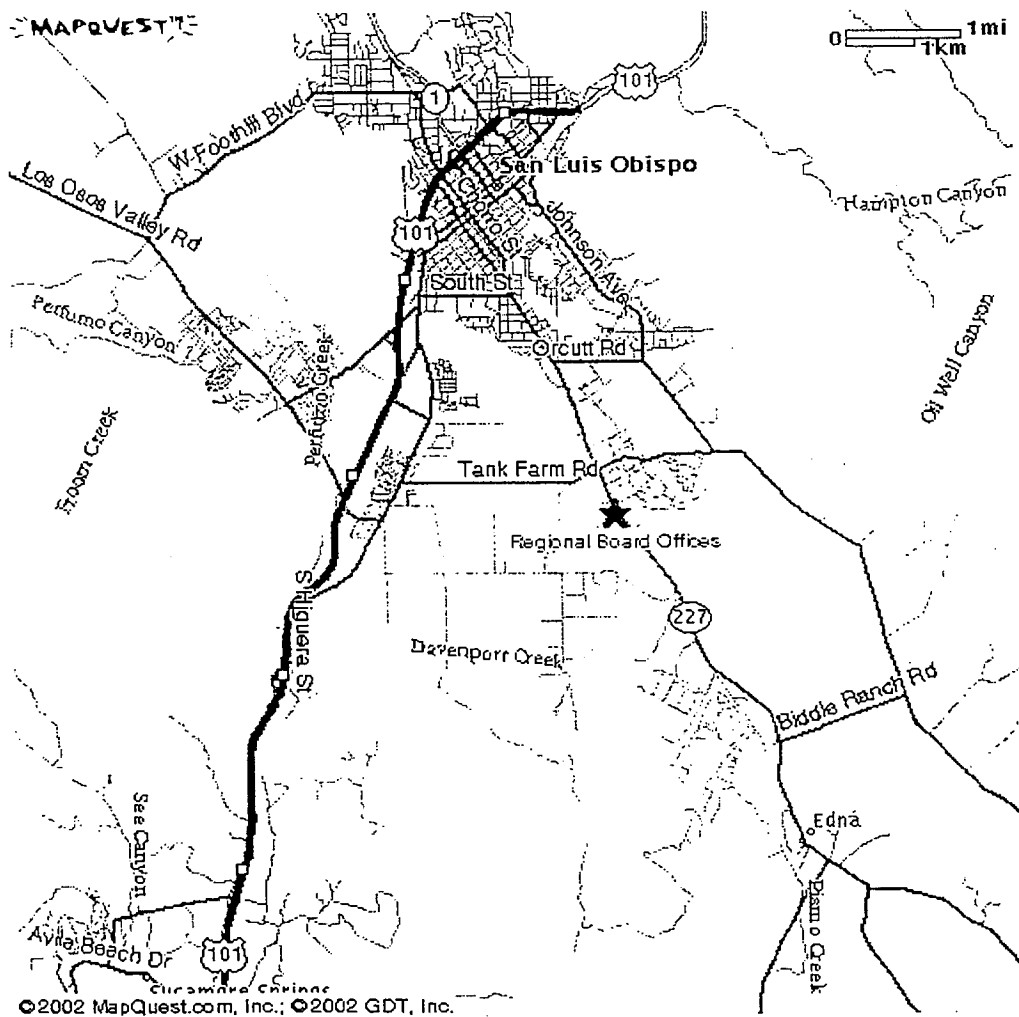

CENTRAL COAST REGIONAL BOARD MEMBERS

Board Member	Appointment Category	Term Expires
Gary Shallcross Chair – Monterey	Recreation, Fish or Wildlife	9/18/2002
Leslie S. Bowker Co-Vice Chair – Los Osos	County Government	9/30/2003
Bruce K. Daniels Co-Vice Chair – Capitola	Water Quality	9/18/2002
John Hayashi Arroyo Grande	Irrigated Agriculture	9/30/2003
Russell M. Jeffries Salinas	Water Quality	9/30/2004
Daniel M. Press Santa Cruz	Public	9/30/2004
Marco L. Rizzo San Luis Obispo	Industrial Water Use	9/30/2004
Donald A. Villeneuve Cambria	Water Supply	9/30/2005
Jeffrey S. Young Santa Barbara	Municipal Government	9/30/2005

CONDUCT OF MEETING

- A - The primary duty of the Regional Board is to protect the quality of waters within the Region for all beneficial uses. This duty is implemented by formulating and adopting water quality plans for specific ground or surface water basins and by prescribing and enforcing requirements on all domestic, municipal, and industrial waste discharges. Specific responsibilities and procedures of the Regional Water Quality Control Boards and the State Water Resources Control Board are outlined in the Porter-Cologne Water Quality Act (Division 7), California Water Code.
- B - The purpose of the meeting is for the Board to obtain testimony and information from staff and concerned and affected parties and make decisions after considering the recommendations made by the Executive Officer. The Board will vote only on matters listed on the agenda. The Board may give direction to the Executive Officer on any matter discussed during the meeting.
- C - Agenda items are numbered for identification purposes and will not necessarily be considered in the order listed.
- D - The Board and staff welcome information on pertinent problems, but comments at the meeting should be brief and directed to specifics of the case to enable the Board to take the appropriate action. Whenever possible, lengthy testimony should be presented to the Board in writing and only a summary of pertinent points presented verbally. In order to give everyone an opportunity to be heard, comments should have been previously submitted in writing and a time limit on presentations may be imposed on any agenda item. Speakers should plan to summarize key points within 3 minutes. We would appreciate staff being notified prior to meetings of presentations planned for longer than 3 minutes, for scheduling purposes.
- E - Material presented to the Board, as part of testimony (e.g., photographs, slides, charts, diagrams, etc.) that is to be made part of the record must be left with Executive Assistant, Carol Hewitt. Photographs or slides of large exhibits are acceptable.
- F - All Board files, exhibits, and agenda material pertaining to items on this agenda are hereby part of the record.
- G - Any person affected adversely by a certain decision of the California Regional Water Quality Control Board, Central Coast Region (Regional Board), may petition the State Water Resources Control Board (State Board) according to Water Code section 13320 and Title 23 California Code of Regulation section 2050. The Petition should be addressed to Office of Chief Counsel and must be filed within 30 days of the EO's or the Board's action or failure to act. The State Board must receive the petition within 30 days of the Regional Board's meeting at which the action was taken. Copies of the law and regulations applicable to filing petitions will be provided upon request.
- H - A copy of the procedures governing Regional Water Quality Control Board meetings may be found at Title 23, California Code of Regulations, Section 647 et seq., and is available upon request. Hearings before the Regional Board are not conducted pursuant to Government Code sections 11400 et seq. but not Government Code sections 11500 et seq.
- I - The facility is accessible to people with disabilities. Individuals who require special accommodations are requested to contact Jay Cano (805/549-3699) at least five working days prior to the meeting. TTY users may contact the California Relay Service at 1-800-735-2929 or voice line at 1-800-735-2922.
- J - All persons who actively support or oppose the adoption of waste discharge requirements or an NPDES permit pending before the Regional Board must submit a statement to the Board disclosing any contributions of \$100 or more to be used in a federal, state, or local election, made by the action supporter or opponent, or his or her agent within the last 12 months to any Regional Board Member.
- K - All permit applicants or persons who actively support or oppose adoption of a set of waste discharge requirements or an NPDES permit pending before the Regional Board, are prohibited from making a contribution of \$100 (or more) to any Board Member for three months following a Regional Board decision on the permit application.

ATTACHMENT B

REVISED CHAPTER 4. IMPLEMENTATION PLAN

Notes for reading the proposed Basin Plan amendment:

1. New or edited text is underlined.

Example: The effectiveness of a water quality control program cannot be judged without the information supplied by

2. Removed text is crossed out.

Example: ~~The effectiveness of a water quality control program cannot be judged without the information supplied by~~

3. Moved text is highlighted.

Example: **The effectiveness of a water quality control program cannot be judged without the information supplied by**

4. Original text is unmarked.

Example: The effectiveness of a water quality control program cannot be judged without the information supplied by

CHAPTER 4. IMPLEMENTATION PLAN

A program of implementation to protect beneficial uses and to achieve water quality objectives is an integral component of this Basin Plan. The program of implementation is required to include, but is not limited to:

- A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private.
- A time schedule for the actions to be taken.
- A description of surveillance to be undertaken to determine compliance with objectives.

Additional surveillance activities to determine compliance with objectives are described in Chapter Six, "Surveillance and Monitoring".

This chapter includes discussions of:

- Regional Water Quality Control Board Goals;
- General Control Actions and Related Issues;
- Waste Discharge Regulation;
- Hazardous Waste Compliance Issues; and
- Nonpoint Source Measures.

~~Detailed descriptions of waterbodies with their specific water quality problems and recommended control actions are included in the Region's Water Quality Assessment database and Fact Sheets.~~

This chapter is organized in the following manner:

- I. Regional Water Quality Control Board Goals
- II. General Control Actions and Related Issues
- III. Control Actions under State Board Authority
- IV. Control Actions to be Implemented by Other Agencies with Water Quality or Related Authority
- V. Control Actions under Regional Board Authority
 - A. ~~Waste Discharge Restrictions~~ Control of Point Source Pollutants
 1. Water Quality Certification
 2. National Pollutant Discharge Elimination System
 3. Waste Discharge Requirements
 4. Waivers

5. Prohibitions and Prohibition Exemptions
 6. Enforcement Actions
 7. ~~Best Management Practices~~
 8. Compliance Schedules
- ~~B. Nonpoint Source Program~~
- VI. Waste Discharge Program Implementation
 - A. Effluent Limits
 1. Stream Disposal
 2. Estuarine Disposal
 3. Ocean Disposal
 4. Land Disposal
 5. Reclamation and Reuse
 6. Pretreatment Programs
 7. Sludge Treatment
 - B. Municipal Wastewater Management Plans (arranged by hydrologic subarea)
 - C. Industrial Wastewater Management
 - D. Solid Waste Management
 - E. Storm Water Management
 - F. Bay Protection and Toxic Cleanup Program
 - G. Military Installations
 - H. Spills, Leaks, Investigations, and Cleanup Program
 - I. Underground Tank Storage Tank Program
 - J. Aboveground Petroleum Storage Tanks
 - K. California Code of Regulations, Title 23, Chapter 15
 1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)
 2. Wastewater Sludge (Septage Management)
 3. Mining Activities (Nonfuel Commodities)
 4. Other Industrial Activities
 - L. Resource Conservation and Recovery Act (Subtitle D)
 - M. Solid Waste Water Quality Assessment Test
 - VII. Hazardous Waste Compliance Issues
 - A. Reportable Quantities of Hazardous Waste and Sewage Discharges
 - B. Proposition 65
 - VIII. Control of Nonpoint Source Measures Pollutants
 - A. ~~Coastal Zone Act Reauthorization Amendments~~ Wetlands, Riparian Areas, and Vegetated Treatment Systems
 - B. Urban Runoff Management
 - C. Agricultural Water and Wastewater Management
 - D. Individual, Alternative, and Community Disposal Systems
 - E. Land Disturbance Activities

Revise the September 8, 1994 Basin Plan,

Discharge Restrictions as follows:

V.A. WASTE
DISCHARGE
RESTRICTIONS
CONTROL OF POINT
SOURCE
POLLUTANTS

Revised the September 25, 1994 Basin Plan, Chapter 4, Pages IV-5 and IV-6, Section V.A.7. BEST MANAGEMENT PRACTICES as follows (Moved to page IV-15, Section III.A.):

V.A.7. BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. (Implementation and effectiveness of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter). The term "Best Management Practices" is used in reference to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations Section 103.2[m]) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6[b][4][i]) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment practices which remove pollutants from a discharge before it reaches surface or ground waters.

Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized;

☐ Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.

☐ The use of Best Management Practices does not necessarily ensure compliance with effluent limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970's, the long-term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

☐ The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.

To be effective, most Best Management Practices must be implemented on a long-term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.

- The "state of the art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on the design and implementation of source management practices is provided under different water quality problem categories throughout this chapter. For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate Best Management Practices Handbook for the project type or location.

Text Moved

~~Revise the September 28, 1994 Basin Plan, Chapter 4, Pages IV-7 and IV-8, Section V.B, NONPOINT SOURCE PROGRAM as follows: (Moved to page IV-44, Section VIII):~~

~~V.B. NONPOINT SOURCE PROGRAM~~

~~Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.~~

~~In order to address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By amending the Clean Water Act, Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each State to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which outlined steps to initiate the systematic management of nonpoint sources in California. For effective management of nonpoint sources the Management Plan required:~~

- ~~□ An explicit long term commitment by the State Board and Regional Boards;~~
- ~~□ More effective coordination of existing State Board and Regional Board nonpoint source related programs;~~
- ~~□ Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;~~

~~□ Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and~~

~~□ Development of new funding sources.~~

~~The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:~~

~~1. Voluntary implementation of Best Management Practices~~

~~Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.~~

~~2. Enforcement of Best Management Practices~~

~~Although the California Porter-Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use their regulatory authority to encourage implementation of Best Management Practices.~~

~~The Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.~~

~~The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements, and approved Management Agency Agreements, or other State or Regional Board formal action.~~

~~3. Adoption of Effluent Limitations~~

~~The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations~~

Text Moved

may be set at a level which, in practice, requires implementation of Best Management Practices.

~~Not all of the categories of nonpoint source pollution follow this three tiered approach. For example, silviculture activities on nonfederal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with the California Department of Forestry which allows the Regional Board to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.~~

~~The Regional Board approach to addressing or regulating categories of nonpoint source pollution is discussed in various sections throughout this chapter.~~

Text Moved

Revise the September 8, 1994 Basin Plan, Chapter 4, Page IV-44 and Pages IV-45, Section VIII, NONPOINT SOURCE MEASURES as follows:

VIII. NONPOINT SOURCE PROGRAM CONTROL OF NONPOINT SOURCE MEASURES POLLUTANTS

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as diffuse discharges of waste without a single point of origin, sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is typically caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

In order to address the nonpoint source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By Amendments to the Clean Water Act (www.swrcb.ca.gov/wqach319), Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to become the Nonpoint Source Pollution Control Program (January, 2000) in December, 1999 (www.swrcb.ca.gov/wqach319/). The State Water Resources Control Board adopted Resolution 99-114 revising the Nonpoint Source Pollution Control Program in December, 1st, 1999 pursuant to Section 319 of the

Clean Water Act, and effective management of nonpoint sources in the Management Plan required:

☐ An explicit long-term commitment by the State Board and Regional Boards;

☐ More effective coordination of existing State Board and Regional Board nonpoint source related programs;

☐ Greater use of Regional Board regulatory authority coupled with nonregulatory Regional Board programs;

☐ Stronger links between the local, State, and federal agencies which have authority to manage nonpoint sources; and

• Development of new funding sources.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to manage nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process. The program process includes:

- (1) Assessing Program activities
- (2) Targeting efforts
- (3) Planning activities based on Program goals and objectives
- (4) Coordinating the efforts of federal, State, and local agencies and stakeholders
- (5) Implementing coordinated actions
- (6) Tracking and monitoring the results of implemented actions
- (7) Reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.

Specifically, the 2000 Nonpoint Source Pollution Control Program:

• Adopt a management measure as a goal for nonpoint source management. Implement management measures in urban, rural, and recreational watersheds. Implement management measures in agricultural watersheds and riparian areas. Implement management measures in watersheds with degraded treatment systems.

2. Provide a unified overall strategy for implementing Management Practices.

3. Continue to evaluate Management Options (the Three-Tiered Approach) for addressing NPS pollution problems.

a) Tier 1: Self-Determined Implementation of Management Practices (formerly referred to as voluntary implementation).

b) Tier 2: Regulatory Based Encouragement of Management Practices (e.g. Management Agency Agreements, established waivers, etc.)

c) Tier 3: Effluent Limitations and Enforcement Actions (e.g. Basin Plan prohibitions, Waste Discharge Requirements, etc.)

4. Provide the five to three five-year implementation plans, target activities, for specific management measures consistent with state and regional priorities in specific watersheds and also establish mechanisms for: (a) coordination among agencies, (b) participation by the public, (c) assistance technically and financially, (d) adoption of additional management measures as goals if needed, and (e) monitoring and reporting of program effectiveness.

5. Promote long-term interagency coordination among State agencies of the California Environmental Protection Agency and Resources Agency as well as other local, State, and federal agencies.

6. Identify back-up authorities and enforceable policies and mechanisms for the 6d management measures adopted by the State.

7. Rely on the use of existing authorities and regulatory processes (see page IV-2, Section IV, Control Actions Under Regional Board Authority) to achieve implementation but allow for the adoption of the management measures as regulation after each five-year cycle if adequate progress in NPS pollution control has not been demonstrated.

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1. Voluntary Implementation of Best Management Practices

Best Management Practices (BMPs) are voluntary measures that are designed to prevent or reduce nonpoint source pollution from agricultural, urban, and other land uses.

2. Enforcement of Best Management Practices

Although the California State Board of Water Quality Control is prohibited from prescribing the manner of compliance with water quality standards, there are many ways in which the Board can encourage Best Management Practices. Encouraging implementation of Best Management Practices:

First, the Regional Board may encourage Best Management Practices by having adoption of waste discharge requirements on condition that discharges comply with Best Management Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements and approved Management Agency Agreements or other State or Regional Board formal action.

3. Adoption of Effluent Limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations may be set at a level which, in practice, requires implementation of Best Management Practices.

Not all of the categories of nonpoint source pollution follow the three-tiered approach. For example, agriculture activities on non-federal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with California Department of Forestry which allows the Regional Boards to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.

The Regional Board approach to addressing (or reducing) agriculture nonpoint source pollution is discussed in various sections throughout this Plan. The Basin Plan and the Central Coast Regional Water Quality Management Plan include Chapter 10, Agriculture, Chapter 11, Forestry, and Chapter 12, Urban Stormwater.

The Nonpoint Source Pollution Control Program in the State Nonpoint Source Management Plan

developmental implements of specific program objectives to be implemented at the State and Regional level. Currently, Regional Board staff are implementing the following State Board program objectives:

A. Control of Nonpoint Source pollution (urban runoff, agriculture, and disturbance activities such as road construction, maintenance, and construction, timber harvesting, and mining, hydrologic modification, and individual disposal systems). These activities include outreach, education, public participation, technical assistance, financial assistance, interagency coordination, demonstration projects, and regulatory activities such as imposing septic tank area prohibitions.

B. Preparation of contracts for projects selected for grant funding. Regional Board staff also participate in these projects by providing technical assistance and publicizing their results.

C. Implementation of the 1990 Coastal Zone Act Reauthorization Amendments as developed by the State Board and the California Coastal Commission. This shall be an enforceable Nonpoint Source Management Program to control land use and anthropomorphic activities impacts that have a significant effect on coastal waters. (Further discussion of the Amendments is provided later.)

D. Initiation of nonpoint source watershed pilot programs.

Using State program objectives, Regional Board staff annually developed task specific workplans, work plans to address nonpoint sources of pollution. For the Central Coastal Region, the following Nonpoint Source Program tasks activities are managed and implemented by the Nonpoint Source Program staff are documented in the Central Coast Region Watershed Management Initiative Chapter 222 (January 2002) (WMI) at www.swrcb.ca.gov/rsq/ch3/.

Task 1: Water Quality Assessment

Regional Board staff reviewed and updated the nonpoint source portion of the Water Quality Assessment and Control Policy for the Central Coast Region.

Task 2: Watershed Studies/Planning

Three impaired watersheds (Morro Bay Watershed, San Luis Obispo County Watershed, and San Lorenzo River Watershed) have been selected for intensive activity. Major activities for San Luis Obispo Creek watershed include:

1. Develop a Demonstration "Total Maximum Daily Load" model.
2. Create a "San Luis Obispo Creek Riparian Task Force".
3. Implement a riparian corridor restoration project.
4. Identify major nonpoint pollutants and sources.
5. Develop a watershed management program.

For Morro Bay watershed, the activities include:

1. Develop a long term monitoring program to assess water quality improvements associated with the implementation of nonpoint source pollution control measures.
2. Develop funding for the long term monitoring program.
3. Implement a sediment reduction program using best management practices.
4. Participate in the Morro Bay Task Force.

For San Lorenzo River watershed, the activities include:

1. Develop a detailed assessment of Nonpoint Source impacts in the watershed.
2. Develop a wastewater management plan for on/off site wastewater disposal.
3. Develop of a nutrient objective for the river.
4. Conduct experimental on site wastewater treatment to reduce nitrogen discharge into the environment.

Task 3: Outreach Program

grant and plan review to correct Nonpoint Source problems as emphasized during such activities.

Specific outreach activities include participation on the San Luis Obispo, Santa Barbara, San Diego, Morro Bay, San Luis Obispo, and San Luis Obispo (SLO) Basin Planning Technical Advisory Committee, and development of grant applications with local agencies.

Task 4: Project Tracking and Participation

Regional Board staff prepare contracts, coordinate with project proponents, track project progress, review and approve invoices, and provide technical support for Nonpoint Source grant funded projects.

Examples of additional management actions are documented in the following:

California Rangeland Water Quality Management Plan

Salinas River Watershed Management Action Plan

Water Quality Protection Program for Monterey Bay National Marine Sanctuary, Action Plan IV: Agriculture and Rural Lands

Central Coast Region Watershed Management Initiative Chapter

These documents are located on the Regional Board website at (www.swrcb.ca.gov/rwqcb3/).

BEST MANAGEMENT PRACTICES

Property owners, managers, or other dischargers may implement Best Management Practices to protect water quality. Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter. The term "Best Management Practices" is used in references to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations, Section 103.2(m)) (www.swrcb.ca.gov/rwqcb3/) defines Best Management Practices as follows:

Effective measures or practices selected by an agency to meet its nonpoint source control goals. Best Management Practices include, but are not

limited to structural and nonstructural control, and operation and maintenance procedures. Best Management Practices term is applied to for, farming, and other pollution-producing activities, to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 103.6(b)(4)(i)) (www.swrcb.ca.gov/rwqcb3/) provide that Basin Plans:

"shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which that prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing stream banks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion control, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment controls which remove pollutants from a discharge before it reaches surface or ground waters.

Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized:

- Best Management Practices are not officially considered "best practices" for use in California unless they have been certified by the State Board.

- The use of Best Management Practices does not necessarily ensure compliance with sufficient

limitations are with receiving water bodies. Because nonpoint source control has been applied only since the 1970s, the long-term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.

- The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.
- To be effective, most Best Management Practices must be implemented on a long-term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.
- The "state-of-the-art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on recommended nonpoint source management practices is provided under different water quality problem categories throughout this chapter for urban, agriculture, onsite wastewater disposal, and other land disturbance activities are described in the following sections (also see "Nonpoint Source Pollution Control Program (January 2000)"). For detailed information on the design, implementation, and effectiveness of specific Best Management Practice practices, the reader should consult the appropriate references Best Management Practices Handbook for the project type or location.

Revised the September 8, 1994 Basin Plan, Chapter 4, Page IV-45 and Page IV-46, Section VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS as follows:

VIII.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS Wetlands, Riparian Areas, and Vegetated Treatment Systems

The State has identified four Management Measures (MMs) to promote the protection and restoration of wetlands and riparian areas and the use of vegetated treatment systems as means to control nonpoint sources of pollution. Wetlands and riparian areas reduce polluted runoff by filtering out runoff-related contaminants, such as sediment, nitrogen, and phosphorus, thus maintaining the water quality benefits of these areas is important. These areas also help to attenuate flows from higher-than-average storm events. This attenuation protects downstream areas from adverse impacts, such as channel scour, erosion, and temperature and chemical fluctuations. Changes in hydrology, substrate, geochemistry, or species composition can impair the ability of wetland or riparian areas to filter out excess sediment and nutrients and therefore can result in deteriorated water quality. The following activities can cause such impairment: drainage of wetlands for cropland, overgrazing, hydromodification, highway construction, deposition of dredged material, and excavation for ports and marinas.

RECOMMENDED ACTIONS

Recommended actions (management measures) are found in the 2000 Nonpoint Source Pollution Control Program.

CONTROL ACTIONS

All discharges to the aquatic environment shall be considered nonpoint source discharges that will occur in riparian receiving water quality.

2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface waters shall be discontinued.
4. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.
5. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November October 15 each year.
6. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
7. A filter strip of appropriate width and consisting of undisturbed soil and riparian vegetation or its equivalent shall be maintained wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated water line.

PROHIBITIONS

1. The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.
2. As specified in Chapter Five (5), Page V-7, Section IV. DISCHARGE PROHIBITIONS.

In November 1990, Congress enacted Section 6217 of the Coastal Zone Act Reauthorization Amendments to help address the problem of nonpoint source pollution in coastal waters. Section 6217 requires that coastal states with federally approved coastal management programs develop Coastal Nonpoint Pollution Control Programs. The legislative history indicates that the central purpose of section 6217 is to strengthen the links between federal and State coastal zone management and water quality programs in order to enhance efforts to manage land use

~~activities that degrade coastal beneficial uses. The State coastal zone management agency designated under Section 306 of the Amendments and nonpoint source management agency designated under section 319 of the Clean Water Act will have a dual and co-equal role and responsibility in developing and implementing the coastal nonpoint program.~~

~~The program gives the U.S. Environmental Protection Agency (U.S. EPA) and the National Oceanic and Atmospheric Administration joint authority to approve programs developed by the State to address 6217 requirements.~~

~~The State agencies chosen to develop California's Coastal Nonpoint Pollution Control Program are the State Board and the Coastal Commission. The statute requires that the State program be "coordinated closely with State and local water quality plans and programs." This means that the State's nonpoint source programs under Sections 208 and 319 of the Clean Water Act and the coastal program must be examined to determine if they comprehensively address land use activities and anthropomorphic effects that have a significant effect on coastal waters. In addition, the State agencies are charged with developing a coordinated program that:~~

- ~~□ identifies categories of nonpoint sources that adversely impact coastal waters;~~
- ~~— describes management measures to be implemented;~~
- ~~□ identifies the land uses and critical coastal areas that will require more stringent or additional management measures;~~
- ~~— describes the State developed additional management measures to be implemented in critical areas;~~
- ~~□ documents the authorities the State will use to implement both the guidance and additional management measures, including designation of a lead agency for each source category and/or subcategory; and~~
- ~~□ sets forth a schedule to achieve full implementation of the guidance management measures within three years of program approval by U.S. EPA and National Oceanic and Atmospheric Administration, and full implementation of additional management measures within six years of program approval.~~

~~The Coastal Commission and the State Board staff have been working on a strategy to develop the required~~

~~Coastal Nonpoint Pollution Control Program plan. Recently, the State Board directed staff to review and revise the statewide Nonpoint Source Management Plan to include a strong coastal component. Revision of the Plan is intended to satisfy the requirements of Section 6217 within the existing framework of current nonpoint source activities.~~

~~On a Regional Board level, staff has been involved with the statewide program since 1991. A pilot project, "The New Coastal Nonpoint Pollution Control Program using the Morro Bay Watershed as a Model" was performed to assess the feasibility of establishing the Coastal Nonpoint Pollution Control Program in California. Regional Board staff supplied technical information and reviewed reports. Concerted planning and implementation efforts on target coastal watersheds such as Morro Bay will be major accomplishments to satisfy Coastal Nonpoint Pollution Control Program requirements. As the program goes statewide, Regional Board staff will attend technical advisory committee meetings and will work closely with staff of the State Board and other Regional Boards, as well as staff of other relevant local, State, and federal agencies to develop a workable Coastal Nonpoint Pollution Control Program.~~

~~Wastewater originating from nonpoint sources includes those from urban runoff, agricultural activities, on-site sewage disposal systems, and land disturbance activities. Management of these types of nonpoint source discharges are discussed in the following section. The Regional Board will be developing management practices for marinas and recreational boating; hydromodification facilities; and wetlands, riparian areas, and vegetated treatment systems at a future date.~~

Revise the September 8, 1991 Basin Plan, Chapter 4, Page IV-68 and Page IV-69, Section VIII.E. LAND DISTURBANCE ACTIVITIES as follows:

VIII.E. LAND DISTURBANCE ACTIVITIES

Construction, mining, and other soil disturbance activities which ~~that~~ may disturb or expose soil or otherwise increase susceptibility of land areas to erosion are difficult to regulate effectively. Construction projects or timber harvesting activities may often begin and end with no obvious impairment of stream quality; however, erosion or land slides landslides the following winter may be directly related to earlier land disturbance or tree cutting. Mining and quarrying activities are generally longer in duration.

Under contract with the Regional Board, the California Association of Resource Conservation Districts completed a study entitled, "Erosion and Sediment in California Central Coast Watersheds - A study of Best Management Practices" (Erosion Study), dated June, 1979. This Erosion Study, funded under Section 208 of the Clean Water Act, assesses impacts of erosion and sedimentation on water quality and beneficial uses in nondesignated planning areas (San Benito, San Luis Obispo, and Santa Barbara Counties) of the Central Coast Region. This Erosion Study and supporting documents have been used by the Regional Board in developing erosion and sedimentation control policy.

Nonpoint source pollution in the remainder of the Region is addressed by designated planning agencies through their respective Area wide Waste Treatment Management Plans. Designated agencies and the areas affected within this Region include: Association of Bay Area Governments (portions of San Mateo and Santa Clara Counties), Association of Monterey Bay Area Governments (Santa Cruz and Monterey Counties), and Ventura County Board of Supervisors (portion of Ventura County). The policy herein described is compatible with those plans and is within the scope of the Regional Board authority.

The Erosion Study and Area wide Waste Treatment Management Plans identify examples of accelerated erosion resulting from insufficient land management of soil cultivation, grazing, silviculture, construction, and off-road vehicle activities, as well as wildfires.

Adverse impacts of sediment are identified, in part, as: impairment of water supplies and ground water recharge, siltation of streams and reservoirs, impairment of navigable waters, loss of fish and wildlife habitat, degradation of recreational waters, transport of pathogens and toxic substances, increased flooding, increased soil loss, and increased costs associated with maintenance and operation of water storage and transport facilities. Recommendations based on conclusions of the Erosion Study and practices recommended in Area wide Waste Treatment Management Plans are a means to reduce unnecessary soil loss due to erosion and to minimize adverse water quality impacts resulting from sediment.

~~When a practice or combination of practices is found to be the most effective, practical (including technological, economic, and institutional considerations) means of preventing or reducing the amount of pollution generated by nonpoint sources to a level compatible with water quality goals, it is designated a Best Management Practice (BMP). BMPs are determined only after problem assessment, examination of alternative practices, and appropriate public participation in the BMP development process.~~

RECOMMENDED ACTIONS

1. Land use practices should assure protection of beneficial water uses and aquatic environmental values.
2. There shall be no waste discharged into areas that possess unique or uncommon cultural, scenic, aesthetic, historical or scientific values. The Regional Board will define such areas.
3. Property owners are considered ultimately responsible for all activities and practices that could result in adverse effects on water quality from waste discharges and surface runoff.
4. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of water of the State.
5. Use of soil sealants is discouraged and should be minimized.

Erosion Study Recommendations

General recommendations based on conclusions of the Erosion Study are discussed below. These recommendations are considered to be Best Management Practices (BMPs) by the Regional Board as are the Area wide approved water quality management plans.

1. Soil conservation control measures should be used to minimize impacts that would otherwise result from soil erosion. Control measures are identified according to systems, which are then broken down into subsystems of erosion control techniques or component measures.

For example, a system for control of erosion from construction sites would identify component measures such as debris basins, access roads, hillside ditches, etc. Other conservation control systems include: conservation cropping, conservation irrigation, roadside erosion control, critical area treatment, diversions and ditches, grade stabilization, pasture and range management, runoff and sediment control ponds and basins, stream bank and channel protection, and watershed, wildlife, and recreation land improvement. These control measures are comparable to the USDA Soil-Natural Resources Conservation Services' Resource Management Subsystem approach as referenced in AMBAG's "Water Quality Management Plan for the Monterey Bay Region," dated July 1978, and in ABAG's, "Handbook of Best Management Practices," dated October 1977.

Experience has shown that no one control measure best solves an existing, or prevents a potential, pollution problem - especially in the area of soil erosion and sedimentation. As land use, the land user, and various situations change, so does the need for control measures. Before application, an on-site investigation with the land user is necessary to determine which practice or set of practices will be most effective and acceptable.

2. Erosion control should be implemented in a reasonable manner with as much implementation responsibility remaining with existing local entities and programs as is possible and consistent with water quality goals.
3. The Regional Board and local units of government should establish a clear policy for control of erosion, including consideration of off-site and cumulative impacts and the imposition of performance standards

according to the sensitivity of the area where land is to be disturbed.

4. Effective ordinances and regulatory programs should be adopted by local units of government. Effective programs would allow only land disturbance actions consistent with the waste load capacity of the watershed, require preparation of erosion and sediment control plans with specific contents and with attention to both offsite/on-site impacts, identify performance standards, be at least comparable to the model ordinance in the "Erosion and Sediment Control Handbook," dated May 1978, and have provisions for inspection follow-up, enforcement, and referral.
5. Watersheds with critical erosion and sediment problems should be identified by one or more concerned agencies such as the California Department of Fish and Game, the Regional Board, the local Environmental Health, Planning, or Engineering Departments, the local Flood Control District, or the local Resource Conservation District, and then referred to the remaining agencies by a designated local coordinating agency for determining the scope, nature, and significance of the identified problem. The designated local agency would evaluate the adequacy and appropriateness of the total assessment, including an assessment of the problem and causes, alternatives considered, recommended interim and permanent control measures, and the amount and sources of funding. The evaluation would then be submitted as an Impact Findings Report for consideration and decision by the local governing body.
6. Comprehensive and continuous training should be mandatory for building and grading inspectors, engineers, and planners involved in approving, designing, or inspecting erosion control plans and on-site control measures. The training program would preferably be conducted on an inter-county/agency basis and be administered through a USDA Natural Resources Soil Conservation Service cooperative training arrangement or ~~through seminars~~ through seminars conducted by the USDA Natural Resources Soil Conservation Service and the University of California Cooperative Extension seminars. The Soil Conservation Society of America should be requested to assist in establishing an effective training program, including public education to heighten awareness of the adverse affects of erosion and sediment on soil and water resources.

000689

7. More intensive erosion controls should be considered within four watersheds (Lauro Reservoir and Devereaux Ranch Slough in Santa Barbara County and Pismo Lake and Morro Bay in San Luis Obispo County) with apparent critical erosion and sediment problems. Alternative practices that may be implemented to effect the necessary level of control are assigned a relative priority.

Actions By Other Authorities

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staff, increasing cost-share funds, increasing the availability of low-interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that includes incentives for the individual, such as cost-sharing, changes in State law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy and shall adopt or improve ordinance to include definitive performance standards for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices, identified under Regional Board Management Principles.

5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.

6. Resource Conservation Districts, the U.S. Fish and Wildlife Service, the National Resources Conservation Service, the

California Department of Transportation, and the U.S. Environmental Protection Agency Extension Service, in consultation with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land development in those counties and cities that have signed management agency agreements with the Board will be processed entirely by that county or city.

CONTROL ACTIONS

1. All discharges to the aquatic environment shall be considered temporary unless it is demonstrated that no undesirable change will occur in the natural receiving water quality.
2. The quality of all surface waters of the basin shall be such as to permit unrestricted recreational use.
3. The discharge of pollutants into surface waters shall be discontinued.
4. In implementing BMP's through local units of government or through State and Federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the area wide waste treatment planning agency and the local management agency. Agreements will be reviewed and updated annually to reflect recent achievements, new information and new concerns.
5. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local voluntary programs fail to correct sediment problems within a reasonable period.

6. Emergency erosion control measures approved by a public agency and necessary to prevent or minimize loss of or damage to air, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger are exempt from this chapter, providing such exemption is in the public interest.

7. Regulation of sediment discharges from routine annual non-irrigated agricultural operations such as tilling, grazing and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.

8. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.

9. Erosion from nonpoint pollution sources shall be minimized through implementation of Best Management Practices.

10. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November/ October 15 each year.

11. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.

12. A filter strip of appropriate width and consisting of undisturbed soil and riparian vegetation or its equivalent shall be maintained, wherever possible, between significant land disturbance activities and watercourses, lakes, bays, estuaries, marshes, and other water bodies. For construction activities, minimum width of the filter strip shall be thirty feet, wherever possible as measured along the ground surface to the highest anticipated waterline.

13. Design and maintenance of erosion and sediment control structures (e.g., ditches and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.

14. Cover crops shall be established by seeding and/or mulching or other equally effective measures on all disturbed areas not otherwise protected from

excessive erosion. The use of native plant species is recommended.

15. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope lengths shall not be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

Revise the September 8, 1993 Basin Plan, Chapter 4, Page IV-68 through Page IV-69, Section VIII.E.1. LAND DISTURBANCE PROHIBITIONS as follows:

VIII.E.1. LAND DISTURBANCE PROHIBITIONS

The discharge or threatened discharge of soil, silt, bark, slash, sawdust, or other organic and earthen materials into any stream in the basin in violation of best management practices for timber harvesting, construction, and other soil disturbance activities and in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from timber harvesting, construction, and other soil disturbance activities at locations above the anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited.

Soil disturbance activities not exempted pursuant to Regional Board Management Principles in Chapter Five and Control Actions contained in this Chapter Five are prohibited:

1. In geologically unstable areas,
2. On slopes in excess of thirty percent (excluding agricultural activities), and
3. On soils rated a severe erosion hazard by soil specialists (as recognized by the Executive Officer) where water quality may be adversely impacted;

Unless,

- a. In the case of agriculture, operations comply with, a Farm Conservation or Farm Management Plan, approved by a Resource Conservation District or the USDA Soil Conservation Service Natural Resources Conservation Service;
- b. In the case of construction and land development, an erosion and sediment control plan or its equivalent (e.g., EIR, local ordinance) prescribes best

management practices to minimize erosion during the activity, and the plan is certified or approved, and will be enforced by a local unit of government through persons trained in erosion control techniques; or,

- c. There is no threat to downstream beneficial uses of water, as certified by the Executive Officer of the Regional Board.

4. As specified in Chapter Five (5), Page V-7. Section IV. DISCHARGE PROHIBITIONS.

IX. TOTAL MAXIMUM DAILY LOADS

The goal of setting a Total Maximum Daily Load (TMDL) is to attain state water quality standards for waterbodies identified to be impaired by a pollutant and, therefore, not meeting water quality standards. Development of a TMDL typically involves a quantitative assessment of water quality problems, contributing pollutant sources, and numeric goals that indicate if and when water quality standards are met. The TMDL value specifies the maximum amount of pollutant that can be discharged (or the amount of pollutant that needs to be reduced) to meet water quality standards. Components of a TMDL include load allocations for nonpoint source and background pollution, waste load allocations for point source pollution, and a margin of safety that accounts for the uncertainty about the relationship between the pollutant loads and the quality of the receiving waterbody. This section includes the TMDLs calculated for the specified waterbody identified to be impaired by a pollutant, the numeric targets set for the waterbody/pollutant combination that serve as indicators of water quality standards, and allocations of pollutant loads among sources contributing the pollutant to the waterbody. Associated with each TMDL is an implementation plan and a monitoring plan. The implementation plan describes how the water quality standards will be achieved for the waterbody/pollutant combination. These implementation plans typically include actions to be taken, requirements to be imposed through regulatory authorities, and a time schedule for actions and requirements to be implemented. The monitoring plans typically include monitoring parameters, collection methods, analysis methods, and sample collection locations. Monitoring data is used to track

000692

implementation efforts and make informed decisions
about water quality conditions and standards.

REVISED CHAPTER 5. PLANS AND POLICIES

000694

CHAPTER 5. PLANS AND POLICIES

In addition to the Implementation Plan, many other plans and policies direct State and Regional Board actions or clarify the Regional Board's intent. The following pages contain brief descriptions of State Board plans and policies and numerous Regional Board plans and policies. ~~Copies of the State and Regional Board policies are contained in the Appendix.~~

Nonpoint Source Pollution Control Program (January 2000) Nonpoint Source Management Plan

Ocean Plan

Discharges of Municipal Solid Waste Policy

Should any of these policies be amended by the State Board, the Regional Board will implement the amended version.

The following sections summarize the adopted policies. ~~The complete policy is available in the "Attachments" section of this document.~~

I. STATE WATER RESOURCES CONTROL BOARD PLANS AND POLICIES

The State Water Resources Control Board (State Board) has adopted a number of plans and policies for Statewide water quality management including:

State Policy for Water Quality Control (1972)

Anti-degradation Policy

Thermal Plan

Bays and Estuaries Policy

Power Plant Cooling Policy

Reclamation Policy

Shredder Waste Disposal Policy

Underground Storage Tank Pilot Program

Sources of Drinking Water Policy

000695

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-3 and V-4, Section I.J. NONPOINT SOURCE MANAGEMENT PLAN as follows:

I.J. NONPOINT SOURCE MANAGEMENT PLAN

Resolution R3-2002-0093: Adopting policy regarding the State Nonpoint Source Pollution Control Program (January 2000).

~~The "Nonpoint Source Management Plan", Resolution 88-123, was adopted by the State Water Resources Control Board on November 15, 1988 pursuant to Section 319 of the Clean Water Act. The Plan identifies nonpoint source control programs and milestones for their accomplishment. It emphasizes cooperation with local governments and other agencies to promote the implementation of Best Management Practices and remedial projects.~~

In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan that outlined steps to initiate the systematic management of nonpoint sources in California. The Nonpoint Source Management Plan was revised to the "Nonpoint Source Pollution Control Program (January 2000)" in December 1999 (www.swrcb.ca.gov/rwqcb3/). Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted by the State Water Resources Control Board on December 14, 1999 pursuant to Section 319 of the Clean Water Act.

The 2000 Nonpoint Source Pollution Control Program is a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Implementation of management measures will occur using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.

000696

III.G. EROSION AND SEDIMENTATION CONTROL

1. General recommendations for erosion control, numbered one through six under "Land Disturbance Activities" in the Implementation Plan, Chapter Four, are considered by the Regional Board to be Best Management Practices (BMP's), as are those BMP's identified in approved areawide Water Quality Management Plans.
2. Local units of government should have the lead role in controlling land use activities that cause erosion and may, as necessary, impose further conditions, restrictions, or limitations on waste disposal and other activities that might degrade the quality of waters of the State.
3. In implementing BMP's through local units of government, or through State and federal agencies for lands under their control, working relationships, priorities, and time schedules will be defined in management agency agreements between the areawide waste treatment planning agency and the local management agency. Agreements shall be reviewed and updated annually to reflect recent achievements, new information, and new concerns.
4. Regional Board participation in sediment control programs shall include assistance in the establishment of local control programs, participation in the determination of water quality problems, and a cooperative program evaluation with local units of government. Regional Board enforcement authority will be exercised where local volunteer programs fail to correct sediment problems within a reasonable period.
5. Emergency projects undertaken or approved by a public agency and necessary to prevent or mitigate loss of, or damage to, life, health, property, or essential public services from an unexpected occurrence involving a clear and imminent danger

are exempt from this chapter providing such exemption is in the public interest.

6. Regulation of sediment discharges from routine annual agricultural operations, such as tilling, grazing, and land grading and from construction of agricultural buildings is waived except where such activity is causing severe erosion and causing, or threatening to cause, a pollution or nuisance.
7. Regulation of discharges from State and federal lands managed by agencies operating in accordance with approved management agency agreements is waived except where such activity is causing, or threatening to cause, a pollution or nuisance.

"Control Actions" and "Actions by Other Authorities" in this chapter and the Implementation Plan, Chapter Four, contain further information regarding erosion and sedimentation control.

Text Moved

Revised the September 8, 1994 Basin Plan, Chapter 5, Pages V-13 and V-14, Section V.G. EROSION AND SEDIMENTATION as follows:

V.G. EROSION AND SEDIMENTATION

1. Erosion from nonpoint pollution sources shall be minimized through implementation of BMP's (identified under "Management Principles" and described under "Land Disturbance Activities" in Chapter Four's "Nonpoint Source Measures" section.
2. All necessary control measures for minimizing erosion and sedimentation, whether structural or vegetal, shall be properly established prior to November 15 each year.
3. All structural and vegetal measures taken to control erosion and sedimentation shall be properly maintained.
4. A filter strip of appropriate width, and consisting of undisturbed soil and riparian vegetation or its equivalent, shall be maintained, wherever possible between significant land disturbance activities and watercourses, lakes, bays, quarries, or ponds, and other water bodies. For erosion control activities, the minimum width of the filter strip shall be 10 feet, wherever possible as measured along the ground surface to the highest anticipated water line.
5. Design and maintenance of erosion and sediment control structures, (e.g., debris and settling basins, drainage ditches, culverts, etc.) shall comply with accepted engineering practices.
6. Cover crops shall be established by seeding and/or mulching, or other equally effective measures, for all disturbed areas not otherwise protected from excessive erosion.
7. Land shall be developed in increments of workable size that can be completed during a single construction season. Graded slope length shall not

be excessive and erosion and sediment control measures shall be coordinated with the sequence of grading, development, and construction operations.

8. Use of soil sterilants is discouraged and should be minimized.

Further erosion and sedimentation information can be found in other areas of this chapter as well as the Implementation Plan, Chapter Four, under "Land Disturbance Activities."

Revise the September 8, 1994 Basin Plan, Chapter 5, Pages V-15 and V-16, Section V.H.10. EROSION AND SEDIMENTATION CONTROL as follows:

V.H.10. EROSION AND SEDIMENTATION CONTROL

1. The federal government should increase its support of erosion and sediment control programs by increasing its technical staffs, increasing cost share funds, increasing the availability of low interest loans, and changing its income tax laws to encourage the use of Best Management Practices for erosion and sediment control.
2. The State of California should establish an erosion and sediment control program that include incentives for the individual states and sharing changes in State law that would reduce property taxes for enduring erosion and sediment control practices, and incentives through state income taxes.
3. Resource Conservation Districts within the Central Coast Region should develop management agency agreements with the Regional Board agreeing to work jointly with the Regional Board to integrate soil and water resource programs in the application of Best Management Practices to correct existing erosion and sediment problems and to prevent new problems from occurring.
4. Local units of government should improve land use plans to establish a clear policy, and shall adopt or improve ordinances to include definitive performance standards, for the control of erosion and sedimentation, including consistency with this Basin Plan and Best Management Practices identified under Regional Board "Management Principles."
5. Local units of government developing Local Coastal Programs shall establish a clear policy on erosion and sedimentation and adopt an ordinance consistent with Best Management Practices for their land areas within the Coastal Zone.
6. Resource Conservation Districts, the U.S.D.A. Soil Conservation Service, the California Department of Transportation, and the Extension Service, in

conjunction with the cities and counties, should develop and carry out an erosion and sediment control training program for employees who check erosion and sediment control plans and who enforce local ordinances and regulations relating to erosion and sediment control practices.

7. Counties and cities should work with the Regional Board to identify priorities, time schedules, and limitations and to negotiate management agency agreements concerning implementation of Best Management Practices for control of erosion and sedimentation.
8. Review and assessment of erosion and sediment control plans for new land developments in those counties and cities that have signed management agency agreements with the Board will be processed entirely by the county or city.

SAN LUIS OBISPO, CALIFORNIA 93401-7906**

RESOLUTION R3-2002-0093

**Adopting Revised State Water Resources Control Board
Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source
Plans, Policies, and Management Practices in an
Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)
Requesting Approval from State Water Resources Control Board**

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

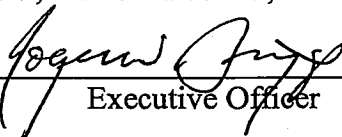

1. The California Regional Water Quality Control Board, Central Coast Region, adopted the *Water Quality Control Plan, Central Coastal Basin* (hereafter Basin Plan), on September 8, 1994.
2. The Regional Board periodically revises and amends the Basin Plan. The most recently finalized amendment to the Basin Plan was in April 1995.
3. The Regional Board is responsible for reviewing water quality standards and implementation plans as appropriate and for modifying and adopting standards contained in the Plans under provisions set forth in section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code.
4. The State Water Resources Control Board revised the State Nonpoint Source Management Plan to the "Nonpoint Source Pollution Control Program" (January 2002).
5. State Water Resources Control Board Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted on December 14, 1999, pursuant to Section 319 of the Clean Water Act.
6. The Nonpoint Source Pollution Control Program (dated January 2000) includes a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Management measures will be implemented using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.
7. The Nonpoint Source Pollution Control Program process includes: Assessing Program activities, targeting efforts, planning activities based on Program goals and objectives,

- coordinating the efforts of federal, State, and local agencies and stakeholders, implementing coordinated actions, tracking and monitoring the results of implemented actions, and reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.
8. The Basin Plan contains existing nonpoint source information distributed throughout the document.
 9. The Basin Plan requires restructuring in order to have appropriate nonpoint source information, findings, and requirements in a designated section of the Basin Plan (Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS).
 10. Section 303(d) of the Clean Water Act requires States to establish total maximum daily loads for waterbodies that do not meet water quality objectives that will insure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
 11. Regional Board consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and threatened and endangered plants and animal species. The Department of Fish and Game has made a determination of “no jeopardy” pursuant to the California Endangered Species Act.
 12. A draft notice of filing, staff report, the proposed amendment, and environmental checklist have been prepared and distributed to interested persons and agencies for review and comment in accordance with state and federal environmental regulations (23 CCR § 3775, 40 CFR 25 and 40 CFR 131).
 13. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of the California Environmental Quality Act of 1977 (Public Resources Code 21000 et seq.).
 14. The Regional Board finds adoption of these amendments will have no potential for adverse effect, either individually or cumulatively, on wildlife. The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.
 15. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
 16. On December 13, 2002 in San Luis Obispo California, the Regional Board held a public hearing and considered all public testimony.

THEREFORE, BE IT RESOLVED:

1. Pursuant to section 13240 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment **Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source Plans, Policies, and Management Practices in an Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)** as shown in Attachments B "Revised Chapter 4. Implementation Plan", C "Revised Chapter 5. Plans and Policies", and D "Revised Basin Plan Appendix". The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency.
2. The Regional Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
4. That the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the State Board shall file a Notice of Decision with the State Clearinghouse.
5. That the Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results in a "*De Minimus*" impact finding.
6. That if during the approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Roger W. Briggs, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 13, 2002.

RESOLUTION R3-2002-0093

**Adopting Revised State Water Resources Control Board
Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source
Plans, Policies, and Management Practices in an
Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)
Requesting Approval from State Water Resources Control Board**

The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board) finds:

1. The California Regional Water Quality Control Board, Central Coast Region, adopted the *Water Quality Control Plan, Central Coastal Basin* (hereafter Basin Plan), on September 8, 1994.
2. The Regional Board periodically revises and amends the Basin Plan. The most recently finalized amendment to the Basin Plan was in April 1995.
3. The Regional Board is responsible for reviewing water quality standards and implementation plans as appropriate and for modifying and adopting standards contained in the Plans under provisions set forth in section 303(c) of the Federal Clean Water Act and Section 13240, Division 7 of the California Water Code.
4. The State Water Resources Control Board revised the State Nonpoint Source Management Plan to the "Nonpoint Source Pollution Control Program" (January 2002).
5. State Water Resources Control Board Resolution 99-114, revising the Nonpoint Source Pollution Control Program was adopted on December 14, 1999, pursuant to Section 319 of the Clean Water Act.
6. The Nonpoint Source Pollution Control Program (dated January 2000) includes a coordinated statewide approach to managing nonpoint source pollution structured around 61 management measures. Management measures serve as goals for the control and prevention of polluted runoff. Site-specific management practices are used to achieve the goals of each management measure. Management measures will be implemented using a fifteen-year strategy with three nested five-year implementation plans. The fifteen-year strategy and each five-year implementation plan use an iterative program process.
7. The Nonpoint Source Pollution Control Program process includes: Assessing Program activities, targeting efforts, planning activities based on Program goals and objectives,

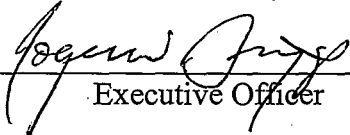

coordinating the efforts of federal, State, and local agencies and stakeholders, implementing coordinated actions, tracking and monitoring the results of implemented actions, and reporting on Program results. The Program Plan is designed to be flexible and adaptable over time.

8. The Basin Plan contains existing nonpoint source information distributed throughout the document.
9. The Basin Plan requires restructuring in order to have appropriate nonpoint source information, findings, and requirements in a designated section of the Basin Plan (Section VIII. CONTROL OF NONPOINT SOURCE POLLUTANTS).
10. Section 303(d) of the Clean Water Act requires States to establish total maximum daily loads for waterbodies that do not meet water quality objectives that will insure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
11. Regional Board consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and threatened and endangered plants and animal species. The Department of Fish and Game has made a determination of "no jeopardy" pursuant to the California Endangered Species Act.
12. A draft notice of filing, staff report, the proposed amendment, and environmental checklist have been prepared and distributed to interested persons and agencies for review and comment in accordance with state and federal environmental regulations (23 CCR § 3775, 40 CFR 25 and 40 CFR 131).
13. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of the California Environmental Quality Act of 1977 (Public Resources Code 21000 et seq.).
14. The Regional Board finds adoption of these amendments will have no potential for adverse effect, either individually or cumulatively, on wildlife. The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.
15. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
16. On December 13, 2002 in San Luis Obispo California, the Regional Board held a public hearing and considered all public testimony.

THEREFORE, BE IT RESOLVED:

1. Pursuant to section 13240 of the California Water Code, the Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment **Nonpoint Source Pollution Control Program and Reformatting Existing Nonpoint Source Plans, Policies, and Management Practices in an Amendment of the Central Coast Basin Water Quality Control Plan (Basin Plan)** as shown in Attachments B "Revised Chapter 4. Implementation Plan", C "Revised Chapter 5. Plans and Policies", and D "Revised Basin Plan Appendix". The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency.
2. The Regional Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board in accordance with the requirements of section 13245 of the California Water Code.
3. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
4. That the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the State Board shall file a Notice of Decision with the State Clearinghouse.
5. That the Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results in a "*De Minimus*" impact finding.
6. That if during the approval process, the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Roger W. Briggs, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on December 13, 2002.

Executive Officer

December 13, 2002
Date

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

San Luis Obispo, California 93401-7906**

**RESOLUTION NO. R3-2002-0063
(REVISED MAY 16, 2003)
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN
TO INCLUDE
SAN LORENZO RIVER TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION PLAN
FOR SEDIMENT INCLUDING
CARBONERA CREEK, LOMPICO CREEK AND SHINGLE MILL CREEK**

The California Regional Water Quality Control Board, Central Coast Region hereby finds:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on September 8, 1994. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Regional Board periodically revises and amends the Basin Plan. The Regional Board has determined the Basin Plan requires further revision and amendment to incorporate a San Lorenzo River Total Maximum Daily Load (TMDL) and Implementation Plan for Sediment, including Carbonera Creek, Lompico Creek, and Shingle Mill Creek.
3. The Regional Board proposes to amend the Basin plan by inserting amendments into Chapter Four, Section IX Total Maximum Daily Loads.
4. Section 303(d) of the Clean Water Act requires States to identify and to prepare a list of water bodies that do not meet water quality objectives and then to establish load and waste load allocations, or a TMDL, for each water body, which will ensure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
5. The San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek were identified as impaired by sediment on the 1998 Clean Water Act Section 303(d) list of impaired water bodies. Therefore, the Regional Board is required to adopt a TMDL for those water bodies and incorporate the TMDL and associated Implementation Plan into the Basin Plan. (40 CFR 130.6(c)(1), 130.7, Water Code section 13242).
6. The San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek are located entirely within Santa Cruz County.
7. The TMDL report contains a Problem Statement, Source Analysis, Numeric Targets, Total Maximum Load, Load Allocation, an Implementation Plan, and a Monitoring Plan.
8. The Problem is as follows: The natural processes of erosion and sedimentation in the San Lorenzo River Watershed have been accelerated due to anthropogenic watershed disturbances. The San Lorenzo

001241

River and its tributaries, Carbonera Creek, Lompico Creek and Shingle Mill Creek exceed narrative water quality objectives for settleable materials because beneficial uses associated with anadromous fisheries have been adversely impacted by sediment. Studies conducted by various authors have concluded that erosion rates are accelerated beyond natural rates. These studies have also documented and quantified the decline in anadromous fisheries and the quality of fish habitat. Excessive sedimentation has interfered with the beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD).

9. The Source of sediment can be described by source category, and by subwatershed. Contributing sources include: Timber Harvest Plan (THP) Roads, Public and Private Roads, Active and Recent THP Parcels, Other Urban and Rural Lands, Mass Wasting, and Channel/Bank Erosion. Sediment loading in the 15 subwatersheds ranges from an estimated 877 to 54,836 tons per year. Sediment loading to the San Lorenzo River is approximately 419,369 tons per year. The Upper San Lorenzo River, Kings Creek, Ben Lomond, Bear Creek, and Zayante Creek subwatersheds each contribute more than ten percent of the total loading. Virtually all controllable sediment comes from non-point sources, as well as land uses subject to regulation under NPDES stormwater permits, and Waste Discharge Requirements.
10. The TMDL is: The overall target for the San Lorenzo River Watershed is a 27 percent reduction in the estimated current loading. This results in TMDLs for the San Lorenzo River of 306,139 tons/year; for Shingle Mill Creek, 857 tons/year; for Carbonera Creek, 11,728 tons/year; and for Lompico Creek, 9,542 tons/year. The TMDL for each waterbody is allocated to the source categories identified in finding 9, above. The allocations are based on source reductions attainable through implementation of management practices and other related measures.
11. Because the sediment objectives in the Basin Plan are narrative, rather than numeric, the TMDL report establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. Targets are assigned to Residual Pool Volume, Percentage of Fine Particles and Median Diameter of Sediment Particles in Spawning Gravels. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to the listed waterbodies. Furthermore, direct measurement of loads would not characterize the *effect* of those loads on beneficial uses. The parameters selected do characterize effect by targeting specific habitat requirements for aquatic organisms. The selection of these targets does not preclude efforts to directly measure loading, however the natural variability inherent in annual sediment loads in this region is large enough to suggest that clear trends could not readily be identified by data collection in the near term.
12. The TMDL will be achieved by implementing the State Water Resource Control Board's Nonpoint Source Pollution Control Program Plan, Resolution 99-114, adopted December 4, 1999, and on existing or anticipated regulatory activities where responsible dischargers are identified. The Nonpoint Source Plan guides the Regional Board in its control of nonpoint source pollution by implementing the "Three-Tiered Approach." For nonpoint source discharges, the Regional Board will rely upon Tier 1 (self-determined cooperative efforts) to achieve this TMDL as long as proposed actions are implemented and sufficient progress toward attaining the numeric targets is being achieved. At this time implementation emphasizes the activities of the Santa Cruz County Departments of Planning and Public Works, of the Santa Cruz County Resource Conservation District, and of other public and private groups, not currently identified as dischargers responsible for causing erosion, to implement Tier 1, self-determined activities (Implementation Actions C through R in the list of Trackable Implementation Actions in the Amendment). These entities' failure to implement Tier 1, self-determined activities to reduce sedimentation could trigger Board actions, authorized through Section 13267 of the California Water Code, including investigation and identification of individual responsible dischargers (e.g., landowners or public agencies). If necessary, the Regional Board may

001242

rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean up and abate sediment discharges and/or prevent the threat of discharges. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, evaluation of progress indicates regulatory mechanisms are needed to implement actions that will result in attainment of the numeric targets, this will be achieved on a case-by-case basis using existing authority or if necessary, by amending the TMDL implementation program through a Basin Plan amendment.

13. To regulate sediment discharges derived from storm water, implementation relies on National Pollutant Discharge Elimination System (NPDES) general permits, anticipated to be in place by March 2003, covering municipalities and construction activities. Implementation Actions T, U, and V (see following list of Trackable Implementation Actions) identify actions that will be required of entities enrolling in these general permits. These actions will be required pursuant to the terms of the general permits, so this portion of the implementation program also does not impose any new regulatory requirements. If the management practices are not included in these Plans, the Regional Board will work with dischargers to condition the Plans on an individual basis, will consider issuing individual Storm Water permits, or waste discharger requirements, and/or, if necessary take actions to enforce the terms of the permits or waste discharge requirements. The Regional Board will take any such actions on a case-by-case basis using existing authority or if necessary, by amending the TMDL implementation program through a Basin Plan amendment.
14. The TMDL will be evaluated by monitoring the four numeric targets specified in finding 11, above, as well as by tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking, reporting status, and evaluating the effectiveness of voluntary implementation actions, is shared by the Regional Board and participating members of the San Lorenzo River Technical Advisory Committee. Initially the Regional Board will be responsible for monitoring numeric targets and progress on implementation actions in consultation with the Committee. As more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified thorough an amendment to the Basin Plan, as appropriate.
15. The Regional Board Staff conducted outreach by coordinating with the San Lorenzo River Technical Advisory Committee and Interested Parties for review and comment on the TMDL report. Public review and comment were solicited after completion of the TMDL report and during the public meeting of this Regional Board on September 20, 2002.
16. The Regional Board submitted the TMDL Report to an external scientific review panel on March 29, 2002 as required by Health and Safety Code Section 57004. The review panel submitted its response to the Regional Board on April 29, 2002. The review panel commented on several specific areas of concern. The Regional Board revised the proposed Basin Plan amendment in response to the comments submitted by the review panel, or prepared a written response, which explained its basis for not incorporating their comments.
17. The TMDL report contains an estimate of the cost of preventing erosion and sedimentation via implementation of Implementation Actions and management practices, pursuant to Public Resources Code, Section 21159 (a)(3)(c). The cost of implementation will be incurred by the implementers and offset with grants, loans, in-kind donations, and matching funds as much as possible.
18. This Basin Plan amendment must be submitted for review and approval by the State Water Resources Control Board and the State Office of Administrative Law (OAL). The TMDL must further be approved by the USEPA. The Basin Plan amendment will become effective upon approval by the State Board and OAL.

001243

19. This amendment meets the "Necessity" standard of the Administrative Procedure Act, Government Code §11353(b).
20. The Regional Board has determined that the TMDL for sediment for the San Lorenzo River, Carbonera Creek, Lompico Creek, and Shingle Mill Creek, is set at levels necessary to attain and maintain the applicable narrative water quality objectives (there are no applicable numeric objectives) with seasonal variations and a margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)).
21. The basin planning process has been certified as functionally equivalent to the California Environmental Quality Act requirements for preparing environmental documents (Public Resources Code, Section 21000 et seq.) and as such, the required environmental documentation and CEQA environmental checklist have been prepared. Drafts of the Notice of Filing, staff report, environmental checklist, and proposed amendment have been prepared and distributed to interested persons and agencies for review and comment in accordance with Title 23 California Code of Regulations section 3777. All public comments were considered. No significant environmental impacts will result from approval of this Basin Plan amendment.
22. The proposed amendments to the Basin Plan were developed in accordance with California Water Code Section 13240 et seq.
23. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies.
24. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and so is exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
25. On September 20, 2002 in Salinas, California, the Regional Board held a public hearing and heard and considered all public comments and evidence in the record and adopted Resolution no. R3-2002-0063.
26. On March 17, 2003, State Board returned the Administrative Record to the Regional Board with a memo stating that Regional Board adoption procedures did not comply with section 3777 of Title 23 California Code of Regulations, which requires consideration of reasonable alternatives to the proposed amendment that would achieve the stated goal.
27. On May 16, 2003, in Watsonville, California, the Regional Board held a public meeting and reheard this item to correct the omission stated above. The Regional Board gave 45 days public notice for this meeting and filing of an environmental document. The Regional Board heard and considered all public comments and evidence in the record.

THEREFORE, BE IT RESOLVED,

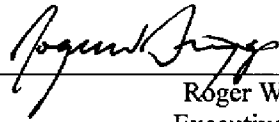

1. The Regional Board, after considering the entire record, including oral testimony, adopts the Basin Plan amendment shown on "Attachment-Proposed Basin Plan Amendments." The amendment will not take effect until approved by the State Board and the California Office of Administrative Law.
2. The Board's Executive Officer is authorized to submit the amendment to the State Water Resources Control Board (State Board). The State Board is requested to approve the Basin Plan amendment in

001244

accordance with the requirements of sections 13245 and 13246 of the California Water Code, and upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law for approval.

3. The environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. The Regional Board shall file a CEQA Notice of Decision with the Secretary for Resources. Following approval of the revised Basin Plan by the State Board and the California Office of Administrative Law. A Certificate of Fee Exemption will be included with the Notice of Decision.
4. The Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results from adoption of this Basin Plan amendment.
5. If during approval process the State Board or the Office of Administrative Law determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, Roger W. Briggs, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on May 16, 2003.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2002-0063

ATTACHMENT—PROPOSED BASIN PLAN AMENDMENTS

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to chapter 4 under the section, IX A:

**IX.B SAN LORENZO RIVER TOTAL MAXIMUM DAILY LOAD FOR SEDIMENT
(INCLUDING CARBONERA CREEK, LOMPICO CREEK, AND SHINGLE MILL CREEK)**

This TMDL was adopted by the Regional Water Quality Control Board on May 16, 2003.

This TMDL was approved by:

The State Water Resources Control Board on insert date.

The California Office of Administrative Law on insert date (effective date).

The U.S. Environmental Protection Agency on insert date. 2/19/04

TMDL ELEMENTS

Problem Statement:

The natural processes of erosion and sedimentation in the San Lorenzo River Watershed have been accelerated due to anthropogenic watershed disturbances. Studies conducted by various authors have concluded that erosion rates were two to four times natural rates. These studies have also documented and quantified the decline in anadromous fisheries and the quality of fish habitat. Excessive Sedimentation has interfered with the beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD).

Numeric Targets (interpretation of the narrative water quality objectives for settleable solids and sediment):

Because the sediment objectives in the Basin Plan are narrative, rather than numeric, this Basin Plan amendment establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to the listed waterbodies. Attainment of Numeric Targets will be measured over a ten-year rolling time period. Numeric targets for the listed waterbodies and compliance points on tributaries are as follows:

001246

Parameter	Numeric Target ¹
Residual Pool Volume (V^*) ²	$V^* =$ Mean values ≤ 0.21 Max values ≤ 0.45
Median Diameter (D_{50}) of Sediment Particles in Spawning Gravels	$D_{50} =$ Mean values ≥ 69 mm Minimum values ≥ 37 mm
Percent of Fine Fines (< 0.85 mm) in Spawning Gravels	Percent fine fines $\leq 21\%$
Percent of Coarse Fines (< 6.0 mm) in Spawning Gravels	Percent coarse fines $\leq 30\%$

¹ Target values are for sampling reach(es) within an individual waterbody.

² Residual Pool Volume refers to the portion of a pool in a stream that is available for fish to occupy. Pool habitat is the primary habitat for steelhead in summer. Overwintering habitat requirements include deeper pools, undercut banks, side channels, and especially large, unembedded rocks, which provide shelter for fish against the high flows of winter. V^* gives a direct measurement of the impact of sediment on pool volume. It is the ratio of the amount of *pool volume filled by fine, mobile sediment*, to *total pool volume*. Qualifying pools are those having a gradient less than 5%, a minimum depth twice the riffle-crest depth, a fairly even spacing between tributaries, and are located on streams fifth order or smaller.

001247

Total Maximum Daily Load and Load Allocations

The Total Maximum Daily Load (expressed here as an annual load) was based on reductions necessary to achieve desired conditions of streambed sediment parameters (embeddedness and fraction of sediment particles less than 4mm in diameter). Desired conditions taken from values published in the scientific literature were 27% lower on average for the San Lorenzo River, Carbonera Creek and Shingle Mill Creek, and 24% lower on Lompico Creek, than measured values in these waterbodies, respectively. Load allocations were based on percent attainable reductions in each sediment source category.

Natural background sediment load was not calculated as a separate allocation of the TMDL. The Mass Wasting and Channel/Bank Erosion categories account for natural and anthropogenic loads associated with these processes. The load from Timber Harvest Plan Roads, Public/Private Roads, Timber Harvest Plan Lands and Other Urban and Rural Lands is assumed to be entirely anthropogenically derived and controllable.

Sediment Source Category	Allocations (tons/year)			
	Shingle Mill Creek	Carbonera Creek	Lompico Creek	San Lorenzo River
Upland Timber Harvest Plan (THP) Roads	0	419	362	25,215
Streamside THP Roads on Steep Slopes	0	182	164	10,949
Upland Public/Private Roads	146	1,235	367	13,835
Streamside Public/Private Roads on Steep Slopes	77	135	239	6,178
THP Land	0	23	16	1,057
Other Urban and Rural Land	310	2,622	965	43,368
Mass Wasting	0	4,082	6,440	157,388
Channel/Bank Erosion	324	3,030	989	48,149
Total Allocation = TMDL³	857	11,728	9,542	306,139

Implementation Plan

The sediment load to the San Lorenzo River, Lompico Creek, Carbonera Creek, and Shingle Mill Creek derives from nonpoint sources (NPS) and point sources. As such, implementation to achieve the TMDL will rely on the State's Plan for NPS pollution control (CWC §13369) and on existing and anticipated independent regulatory programs for regulated storm water discharges.

At this time implementation emphasizes the activities of the Santa Cruz County Departments of Planning and Public Works, the Santa Cruz County Resource Conservation District, and other public and private groups, not currently identified as dischargers responsible for causing erosion, to implement self-determined activities (Implementation Actions C through R, see following list, Trackable Implementation Actions). Regional Board staff will meet annually with these "Implementing Parties" identified in the list of Trackable Implementation Actions to provide technical assistance, and to evaluate and track progress (See following Implementation Compliance Schedule). By the end of the first year of implementation, the Regional Board and the implementing parties will establish a time schedule for completion of Trackable Implementation Actions C

³ The term "Total Maximum Daily Load" or "TMDL" is used here for familiarity. The allowable loads for the San Lorenzo River and its tributaries are actually expressed as a Total Annual Loads (tons/year). This expression of load accounts for seasonal variation in sediment loads explained by the seasonality of rainfall in this region of the Central Coast.

through R. If the Regional Board along with implementing parties do not establish the time schedule by the end of year one, Regional Board Staff will present a time schedule for completion of these actions as a Basin Plan Amendment. If the Regional Board determines that the implementing parties have failed to complete these self-determined activities and/or resulting management practices have failed to reduce sedimentation per the time schedule established, Regional Board staff intends to conduct inspections and investigations to identify individual responsible dischargers (e.g., landowners or regulated public agencies). Regional Board staff may rely on Section 13267 of the California Water Code and other appropriate authorities for investigation and identification of individual responsible dischargers. Regional Board staff will also rely on Section 13267 of the California Water Code to require reporting and/or monitoring to determine the level of implementation of management practices to reduce sedimentation. If necessary, the Regional Board may rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean up and abate sediment discharges and/or prevent the threat of discharges. The Implementation Actions identified in this Implementation Plan do not identify the specific management practices that will result in sediment reduction. As such the management practices developed through pursuit of the Implementation Actions are not intended to be independently enforceable by the Regional Board. Therefore, the Regional Board will rely on scheduled 3-year reviews to track Implementation Actions and the effectiveness of management practices to determine whether to continue with Tier 1, self-determined implementation. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, self-determined actions have not been completed, staff will develop a regulatory approach (rather than a self-determined approach) and present a revised implementation plan to the Regional Board as a Basin Plan amendment.

To regulate sediment discharges derived from regulated storm water discharges, implementation relies on National Pollutant Discharge Elimination System (NPDES) general permits covering municipalities and construction activities anticipated to be in place by March 2003. Implementation Actions S, T and U (see following list, Trackable Implementation Actions) identify actions that will be required of entities enrolling in these general permits. These entities are identified as "Responsible Dischargers" on this list. These actions will be required pursuant to the terms of the general permits, so this portion of the implementation program also does not impose any new regulatory requirements. To the extent the discharge is addressed by a Storm Water Permit, the Regional Board anticipates that management practices developed from any of the Implementation Actions (in the list of Trackable Implementation Actions) will be included in Storm Water Management Plans and Storm Water Pollution Prevention Plans. If the management practices are not included in these Plans, the Regional Board will work with dischargers to condition the Plans on an individual basis, will consider issuing individual Storm Water permits or waste discharge requirements, and/or, if necessary take actions to enforce the terms of the permits or waste discharge requirements. The Regional Board will take any such actions on a case-by-case basis using existing authority or if necessary, by amendment of the TMDL implementation program.

Margin of Safety

A margin of safety has been established implicitly in the TMDL calculation through conservative assumptions used in establishing the percent reduction from existing loads necessary to protect beneficial uses.

Monitoring

The TMDL will be evaluated by monitoring the four numeric targets specified above, as well as by tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking, reporting status, and evaluating the effectiveness of voluntary implementation actions, is shared by the Regional Board and participating members of the San Lorenzo River Technical Advisory Committee. Initially the Regional Board will be responsible for monitoring numeric targets. Any monitoring besides that for numeric targets, including turbidity monitoring by the San Lorenzo Valley Water District and the City of Santa Cruz Water Agency, as well as "comprehensive" monitoring of parameters affecting cold water fisheries conducted by various agencies, will be on a voluntary basis. Monitoring efforts pursuant to existing or anticipated regulatory programs or other voluntary efforts will be evaluated along with monitoring for numeric

001249

targets. The Board will evaluate progress on implementation actions in consultation with the San Lorenzo River Technical Advisory Committee. As more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified through an amendment to the Basin Plan, as appropriate.

001254

STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
895 Aerovista Place, Suite 101
San Luis Obispo, California 93401-7906

RESOLUTION NO. R3-2002-0051
(REVISED FEBRUARY 7, 2003)
(REVISED MAY 16, 2003)
AMENDING THE WATER QUALITY CONTROL PLAN
FOR THE CENTRAL COAST BASIN
TO INCLUDE
MORRO BAY TOTAL MAXIMUM DAILY LOAD AND IMPLEMENTATION PLAN
FOR SEDIMENT INCLUDING
CHORRO CREEK, LOS OSOS CREEK AND THE MORRO BAY ESTUARY

The California Regional Water Quality Control Board, Central Coast Region hereby finds:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan), on March 14, 1975. The Basin Plan includes beneficial use designations, water quality objectives, implementation plans for point source and nonpoint source discharges, and statewide plans and policies.
2. The Regional Board periodically revises and amends the Basin Plan. The Regional Board has determined the Basin Plan requires further revision and amendment to incorporate a Total Maximum Daily Load (TMDL) and Implementation Plan for Sediment including Chorro Creek, Los Osos Creek and the Morro Bay Estuary.
3. The Regional Board proposes to amend the Basin Plan by inserting amendments into Chapter Four, Section IX Total Maximum Daily Loads.
4. Section 303(d) of the Clean Water Act requires States to identify and to prepare a list of water bodies that do not meet water quality objectives and then to establish load and waste load allocations, or a TMDL, for each water body, which will ensure attainment of water quality objectives, and then to incorporate those allocations into their Basin Plans.
5. Chorro Creek, Los Osos Creek, and the Morro Bay Estuary were identified as impaired by sediment on the 1998 Clean Water Act Section 303(d) list of impaired water bodies. Therefore, the Regional Board is required to adopt a TMDL for those water bodies and incorporate the TMDL and associated Implementation Plan into the Basin Plan (40 CFR 130.6(c)(1), 130.7, Water Code section 13242).
6. Chorro Creek, Los Osos Creek, and the Morro Bay Estuary are located entirely within San Luis Obispo County.
7. The TMDL contains a Problem Statement, Source Analysis, Numeric Targets, Total Maximum Load, Load Allocations, an Implementation Plan, and a Monitoring Plan.
8. The Problem identified in the TMDL is summarized as follows: Over time all estuaries eventually fill with sediment due to the natural processes of erosion and sedimentation. However, the concern with

Morro Bay is that these natural processes have been accelerated due to anthropogenic watershed disturbances. Studies conducted by various authors over the past 25 years have concluded that the rate of sedimentation to Morro Bay has rapidly increased. These studies have also documented and quantified the loss of Morro Bay's acreage, volume, and tidal prism, as well as an increase in sedimentation in Chorro and Los Osos Creeks. These results imply that encroachment from the margins and aggradation of the shallowest areas within the Bay are the processes causing the decrease in volume. The narrative objective for sediment in the Basin Plan has been exceeded resulting in adverse impacts to several beneficial uses of these waterbodies including, Fish and Wildlife (RARE, MIGR, SPWN, WILD), Estuarine and Marine Habitat (EST, MAR, BIOL), Water Contact and Non-Contact Recreation, and Navigation (REC1, REC2, NAV).

9. The TMDL characterizes sources of sediment by land use categories, erosion categories, and subwatersheds. Contributing land uses include rangeland, brushland, woodland, cropland, and urban, due to grazing, row crop and land development activities (e.g., roads, homes). Erosion categories include sheet and rill, streambanks, roads, and gullies. Sheet and rill contribute the most sediment by erosion category. The Chorro and Los Osos Creeks subwatersheds deliver an average of approximately 70,000 tons per year of sediment into the estuary. The Chorro Creek watershed is estimated to contribute 86 percent of the total sediment produced in the Morro Bay watershed. These subwatersheds contain the vast majority of the upland areas of the Morro Bay watershed—areas of steepest slope and highest rainfall intensity and are the most significant source of sediment loading to Morro Bay. Virtually all sediment loading comes from non-point sources, although there is minor contribution from other land uses subject to regulation under NPDES stormwater permits, Waste Discharge Requirements, and clean up and abatement order.
10. The numeric targets and TMDL is summarized as follows: Because the sediment objectives in the Basin Plan are narrative, rather than numeric, this TMDL establishes numeric targets as indicators of water quality that are supportive of beneficial uses. The numeric targets serve to interpret the narrative water quality objectives and provide a measure with which to determine if the objectives and the TMDL are being met. This TMDL uses multiple numeric targets. For Chorro and Los Osos Creeks these targets are assigned to Residual Pool Volume, and Median Diameter of Sediment Particles in Spawning Gravels. In Morro Bay Estuary a numeric target is established for Tidal Prism Volume. The combination of these parameters is considered an effective approach in lieu of directly measuring sediment loading to Morro Bay from Chorro and Los Osos Creeks. Furthermore, direct measurement of loads would not characterize the *effect* of those loads on beneficial uses. The parameters selected do characterize effect by targeting specific habitat requirements for aquatic organisms. The selection of these targets does not preclude efforts to directly measure loading, however the natural variability inherent in annual sediment loads in this region is large enough to suggest that clear trends could not readily be identified from results of loading data collected in the near term.
11. The Regional Board Staff assigned sediment load allocations to subwatersheds of the Morro Bay Watershed, and achievement of these numeric targets will indicate when load allocations are met.
12. The Implementation Plan relies on the State Water Resource Control Board's Plan for California's Nonpoint Source Pollution Control Program, (Resolution 99-114, adopted December 14, 1999) and on existing or anticipated regulatory activities where responsible dischargers are identified. The Nonpoint Source Plan guides the Regional Board in its control of nonpoint source pollution by implementing the "Three-Tiered Approach." Self-determined actions will be relied on to achieve the water quality goals being established in this TMDL as long as proposed actions are implemented and interim targets set forth in this TMDL are being achieved. The specific self-determined projects for the first three years of TMDL implementation are set forth in detail in the list of Trackable Implementation Actions. At this time the Implementation Plan relies principally on the activities of the Morro Bay National Estuary Program and the Coastal San Luis Resource Conservation District and other public and private groups, that are not dischargers responsible for causing erosion, to implement the self-

A000131

determined projects identified as items 1 through 11 in the list of Trackable Implementation Actions in the Amendment. This portion of the implementation program currently relies on voluntary compliance and so is not regulatory. If, in future years, evaluation of progress indicates regulatory mechanisms are needed to implement actions that will result in attainment of the numeric targets, this will be achieved on a case-by-case basis using existing authority or, if necessary, by amending the TMDL implementation program through a Basin Plan amendment.

13. The TMDL Implementation Plan calls for monitoring the four numeric targets specified in finding 10, above, as well as tracking progress in implementation of voluntary and required implementation actions. Responsibility for tracking and reporting status and effectiveness of voluntary implementation actions, and some monitoring of numeric targets, rests with the Morro Bay National Estuary Program. The Regional Board will consult with the MBNEP regarding monitoring numeric targets and progress on implementation actions. If voluntary implementation action projects are not implemented, or if numeric targets are not achieved, Regional Board staff may identify responsible dischargers and recommend regulatory mechanisms. Also, as more information is obtained concerning sources, locations and rates of sedimentation, TMDL numeric targets and implementation projects may be amended or modified.
14. The Regional Board Staff conducted TMDL outreach by coordinating with forums and events of the Morro Bay National Estuary Program and Farm Bureau, as well as direct outreach to an Estuary Program technical committee (Implementation Committee) and a TMDL steering committee of stakeholders for review and comment. Public review and comment were solicited after completion of the TMDL report and during the public meeting of this Regional Board on May 31, 2002.
15. The Morro Bay National Estuary Program's Comprehensive Conservation and Management Plan for Morro Bay Estuary advocates Total Maximum Daily Loads for siltation, as a means to protect Morro Bay Estuary.
16. The Regional Board submitted the TMDL and a corresponding proposed Basin Plan amendment to an external scientific review panel. On September 17, 2001, the review panel submitted its response to the Regional Board, which stated that in general, the TMDL and proposed Basin Plan amendment presented a sound and scientifically justifiable program for decreasing the rate of sediment filling Morro Bay and improving stream channel conditions as habitat for fish. In addition, the review panel identified several specific areas of concern. The Regional Board revised the proposed Basin Plan amendment in response to the comments submitted by the review panel.
17. Water Code section 13141 mandates that prior to implementation of any agricultural water quality control program, an estimate of the total cost of such a program, together with an identification of potential sources of financing, shall be indicated in any regional water quality control plan. The TMDL and Implementation Plan, in Chapter 8.7, contain an estimate of the cost of preventing erosion and sedimentation via implementation of Best Management Practices. The cost of implementing the Best Management Practices in the TMDL Implementation Plan will be incurred by the implementers and offset with grants, loans, in-kind donations, and matching funds as much as possible.
18. This Basin Plan amendment must be submitted for review and approval by the State Water Resources Control Board, the State Office of Administrative Law (OAL), and the USEPA. The Basin Plan amendment will become effective upon approval by the State Board OAL and USEPA.
19. This amendment meets the "Necessity" standard of the Administrative Procedure Act, Government Code §11353(b).
20. The Regional Board has determined that the TMDL for sediment for Chorro Creek, Los Osos Creek and Morro Bay Estuary, is set at levels necessary to attain and maintain the applicable narrative water

quality objectives (there are no applicable numeric objectives) with seasonal variations and margin of safety that takes into account any lack of knowledge concerning the relationship between effluent limitations and water quality (40 CFR 130.7(c)(1)). The TMDL also takes into account critical conditions for stream flow, loading and water quality parameters.

21. The basin planning process has been certified as functionally equivalent to the California Environmental Quality Act requirements for preparing environmental documents (Public Resources Code, Section 21000 et seq.) and as such, the required environmental documentation has been prepared. Drafts of the Notice of Filing, staff report, environmental checklist, and alternatives analysis proposed amendment have been prepared and distributed to interested persons and agencies for review and comment in accordance with Title 23 California Code of Regulations section 3777. All public comments were considered. No significant environmental impacts will result from approval of this Basin Plan amendment.
22. The proposed amendments to the Water Basin Plan were developed in accordance with California Water Code Section 13240 et seq.
23. Notice of public hearing was given by advertising in newspapers of general circulation within the Region and by mailing a copy of the notice to all persons requesting such notice and applicable government agencies.
24. The amendment to the Basin Plan will result in no potential adverse effect, either individually or cumulatively, on wildlife and so is exempt from fee payments to the Department of Fish and Game under the California Fish and Game Code.
25. On May 31, 2002 in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public comments and evidence in the record and adopted Resolution R3-2002-0051.
26. In preparing to present this Basin Plan Amendment to the State Board, State Board technical and legal staff reviewed the resolution and identified several concerns that caused Regional Board Staff to propose revisions to the resolution.
27. On February 7, 2003, in San Luis Obispo, the Regional Board considered public comments on the revisions and re-adopted resolution no. R3-2002-0051.
28. On March 17, 2003, State Board returned the Administrative Record to the Regional Board with a memo stating that Regional Board adoption procedures did not comply with section 3777 of Title 23 California Code of Regulations, which requires consideration of reasonable alternatives to the proposed amendment that would achieve the stated goal.
29. On May 16, 2003, in Watsonville, California, the Regional Board held a public meeting and re-heard this item to correct the omission stated above. The Regional Board provided 45-days public notice of this meeting and filing of an environmental document. The Regional Board heard and considered all public comments and evidence in the record.

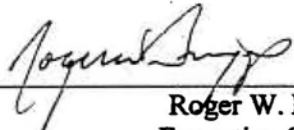

THEREFORE, BE IT RESOLVED,

1. The Basin Plan is hereby amended by adding to Chapter Four, Section IX Total Maximum Daily Loads by reference the TMDL and Implementation Plan entitled Morro Bay Total Maximum Daily Load for Sediment (including Chorro Creek, Los Osos Creek and the Morro Bay Estuary), dated April 24, 2002. Because this document is approximately 100 pages long, it is too cumbersome to be

reproduced in its entirety in the Basin Plan. While the entire document is incorporated by reference, key elements, as presented in Exhibit A to this resolution, will be reproduced in the Basin Plan.

2. The Regional Board requests that the State Water Resources Control Board approve the Basin Plan amendment in accordance with the requirements of sections 13245 and 13246 of the California Water Code, and that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.
3. The environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified.
4. The Regional Board's Executive Officer is authorized to sign a Certificate of Fee Exemption, since no adverse effect on wildlife results from adoption of this Basin Plan amendment.
5. The Regional Board shall file a CEQA Notice of Decision with the Secretary for Resources, following approval of the revised Basin Plan by the State Board, California Office of Administrative Law, and the U.S. Environmental Protection Agency. A Certificate of Fee Exemption will be included with the Notice of Decision.
6. If during approval process the State Board or OAL determines that minor, non-substantive corrections to the language of the amendment are needed for clarity or consistency, the Executive Officer may make such changes, and shall inform the Board of any such changes.

I, **Roger W. Briggs, Executive Officer**, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on May 16, 2003.

Roger W. Briggs
Executive Officer

RESOLUTION NO. R3-2002-0051

ATTACHMENT—PROPOSED BASIN PLAN AMENDMENTS

Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to chapter 4 under IX TOTAL MAXIMUM DAILY LOADS:

IX.A MORRO BAY TOTAL MAXIMUM DAILY LOAD FOR SEDIMENT (INCLUDING CHORRO CREEK, LOS OSOS CREEK AND THE MORRO BAY ESTUARY)

This TMDL was adopted by the Regional Water Quality Control Board on [insert date].

This TMDL was approved by:

The State Water Resources Control Board on [insert date].

The California Office of Administrative Law on [insert date] (effective date).

The U.S. Environmental Protection Agency on [insert date].

1/20/04

TMDL ELEMENTS

Element	
Problem Statement	Over time, all estuaries eventually fill with sediment due to the natural processes of erosion and sedimentation. In Morro Bay these natural processes have been accelerated due to anthropogenic watershed disturbances, resulting in impairment of Beneficial Uses, principally biological resources, but also recreational uses, including: RARE, MIGR, SPWN, WILD, EST, MAR, BIOL, REC1, REC2, NAV. This impairment indicates an exceedance of the Basin Plan narrative objective for sediment, which states that: "the suspended sediment load and suspended sediment discharge rate of surface waters shall not be altered in such a manner as to cause nuisance or adversely affect beneficial uses."

Element		
Numeric Targets	Parameter	Numeric Target
	Chorro and Los Osos Creeks and Tributaries Streambed Sediment	
	Residual Pool Volume ¹	V* (a ratio) = Mean values ≤ 0.21 (mean of at least 6 pools per sampling reach) Max values ≤ 0.45
	Median Diameter (D ₅₀) of Sediment Particles in Spawning Gravels	D ₅₀ = Mean values ≥ 69 mm Minimum values ≥ 37 mm
	Percent of Fine Fines (< 0.85 mm) in Spawning Gravels	Percent fine fines ≤ 21%
	Percent of Coarse Fines (all fines < 6.0 mm) in Spawning Gravels	Percent coarse fines ≤ 30%
	Morro Bay and Estuary	
Tidal Prism Volume	4,200 acre-feet	
Loading Allocations ² (TMDL expressed as annual load)	Watershed	Total (tons/year, rounded to nearest ton)
	Chorro Creek at Reservoir	6,541
	Dairy Creek	440
	Pennington Creek	966
	San Luisito Creek	7,315
	San Bernardo Creek	10,270
	Minor Tributaries	4,489
	Chorro Creek	30,021
	Los Osos Creek	3,052
	Warden Creek and Tributaries	1,812
	Los Osos Creek	4,864
Morro Bay Watershed	34,885	

¹ Residual Pool Volume refers to the portion of a pool in a stream that is available for fish to occupy. Pool habitat is the primary habitat for steelhead in summer. Overwintering habitat requirements include deeper pools, undercut banks, side channels, and especially large, unembedded rocks, which provide shelter for fish against the high flows of winter. V* gives a direct measurement of the impact of sediment on pool volume. It is the ratio of the amount of pool volume filled in with fine, mobile sediment, to total scour pool volume. Qualifying pools are those having a gradient less than 5%, a minimum depth twice the riffle-crest depth, a fairly even spacing between tributaries, and are located on streams fifth order or smaller.

² These loading allocations are 50% of the estimated current sediment loading to Morro bay.

<p>Implementation</p>	<p>The sediment load to Morro Bay, Los Osos Creek and Chorro Creek derives from nonpoint sources (NPS) and point sources. As such, implementation will rely on the State's Plan for NPS pollution control (CWC §13369) and continued implementation of existing regulatory controls as appropriate for point sources, including storm water pursuant to NPDES surface water discharge regulations and Waste Discharge Requirements (Porter Cologne).</p> <p>At this time, implementation emphasizes the activities of the Morro Bay National Estuary Program, Coastal San Luis Resources Conservation District, and other public and private groups that are not currently identified as dischargers responsible for sediment loading, to implement self-determined activities (see Table: Trackable Implementation Actions). Other actions, currently required because of another program, will be evaluated to make sure progress is taking place (see Table: Trackable Implementation Actions identifying Responsible Dischargers). Regional Board Staff will meet annually with the implementing parties identified in the list of Trackable Implementation Actions to provide technical assistance and to evaluate and track progress (see Implementation Schedule for details). If at the end of year three, implementing parties fail to complete these self-determined activities or resulting management practices fail to reduce sediment loads, then Regional Board staff may conduct inspections and investigations to identify individual responsible dischargers (e.g., landowners or public agencies). Regional Board staff may rely on Section 13267 of the California Water Code or other appropriate authorities for investigation and identification of individual responsible dischargers. Regional Board staff will also rely on Section 13267 of the California Water Code to require reporting and/or monitoring to determine the level of implementation of identified activities to reduce erosion and sediment. If necessary, the Regional Board may rely on enforcement authority, pursuant to California Water Code Section 13304, to require dischargers to clean-up and abate sediment discharges and/or prevent the threat of discharges on a case-by case basis. Additionally, Implementation Actions (in the Table of Implementation Actions) may be required as conditions of compliance with storm water permits and Waste Discharge Requirements.</p> <p>If at the end of the third year, self-determined actions have not been completed, staff will develop a regulatory approach (rather than a self-determined approach) and present a revised implementation plan to the Regional Board as a Basin Plan Amendment.</p> <p>Direct measurement of sediment loading is not proposed for this TMDL. Numeric Targets, which characterize the effect of loading are to be measured in lieu of loadings. The 50-year schedule for achieving the TMDL acknowledges that implementation actions taken in the near term are expected to take years to produce a response as measured through Numeric Target monitoring. Allocations will achieve the targets because over the long term, these allocated sediment loads are expected to result in changes in sediment distributions in the channel and the estuary that meet water quality objectives.</p> <p>Numeric targets and other parameters will be monitored to ensure that numeric targets are met. The Regional Board will rely on existing or planned efforts for this monitoring (e.g., Morro Bay National Estuary Program, Central Coast Ambient Monitoring Program).</p>
<p>Margin of Safety</p>	<p>An implicit margin of safety has been incorporated into this TMDL through the use of conservative assumptions throughout the source analysis and characterization of beneficial use impacts. The margin of safety is required due to uncertainty in calculations of sediment loading and of the effects of this loading on beneficial uses of the Morro Bay Estuary, Chorro Creek and Los Osos Creek.</p>

A000137

Trackable Implementation Actions

PROJECT NAME		ACTION	SCHEDULE	IMPLEMENTING PARTY
1	Hollister Ranch Acquisition	Design and construct floodplain restoration project	January 2002-May 2005	CSLRCD and MBNEP
2	Los Osos Creek Wetland Restoration Project	Design and construct Los Osos Creek wetland restoration project	Fall 2000-Spring 2004	CSLRCD and MBNEP
3	Watershed Crew Curriculum	Develop a curriculum that will provide training for a year-round crew of Civilian Conservation Corps	Winter 2001-Fall 2001	CCC
4	Catalogue of Erosion Control Projects	Develop a list of areas in need of erosion control projects	Spring 2001-Fall 2001; on-going	MBNEP
5	Project Clearwater	Provide technical assistance and cost sharing to install BMPs	2001-June 2004; on-going	CSLRCD
6	Agricultural Water Quality Program	Develop and implement a voluntary, cost-effective, and landowner/manager-directed program	2001-2002; on-going	Farm Bureau
7	Land Acquisitions and Conservation Easements	Acquire or otherwise protect lands in cooperation with willing land owners	2000-2010; on-going	MBNEP
8	Fire Management Plan	Develop and implement a Fire Management Plan	2001-2006; on-going	CDF
9	Maintenance of Sediment Basins Above Chorro Reservoir	Continue maintenance of the sediment basins above Chorro Reservoir	on-going	California Army National Guard
10	Road Maintenance	Increase the use of management measures for road maintenance and construction	2001-2006; on-going	County of San Luis Obispo, Public and Private Landowners; California Department of Transportation
11	Sediment Traps	Install sediment traps	2000-2007; on-going	CSLRCD; Natural Resource Conservation Service; DFG; Public and Private Land Owners
PROJECT NAME		ACTION	SCHEDULE	RESPONSIBLE DISCHARGERS
12	Primera Mine Rehabilitation and Erosion Control	Remediation of Primera Mine	2003	California Army National Guard
13	Stormwater Sediment Control on Roads	Include specific road sediment control measures in County stormwater management plan prior to enrollment in Stormwater Permit; track implementation of BMPs	Prior to March 2003; on-going	County of San Luis Obispo
14		Track implementation of BMPs in Stormwater Permit	On-going	Caltrans
15	Water Quality Management Plans on Chorro Creek Ranches	Implement Waste Discharge Requirements to address Chorro Creek Ranches	Fall 2002-Fall 2003	California Polytechnic State University

Implementation Schedule

At End of Implementation Year:	IMPLEMENTATION MILESTONE			MONITORING ACTIVITY		
	<i>Chorro Creek</i>	<i>Los Osos Creek</i>	<i>Morro Bay</i>	<i>Chorro Creek</i>	<i>Los Osos Creek</i>	<i>Morro Bay</i>
1	RB and MBNEP Staff meet to review progress. RB and County Staff meet to review inclusion of road erosion control measures in Stormwater Management Plan.			Baseline Streambed Parameters ³ , Turbidity		
2	<i>As above</i> RB and MBNEP Staff meet to review progress; RB requests implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions			Baseline Streambed Parameters, Turbidity		
4	RB and MBNEP Staff meet to review progress			Baseline Streambed Parameters, Turbidity		
5	RB and MBNEP Staff meet to review progress		RB Staff calculate: 5-year changes to Bay area and volume	Baseline Streambed Parameters, Turbidity		Bathymetry survey
6	RB and MBNEP Staff meet to review progress; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions			Baseline Streambed Parameters, Turbidity		
7	RB and MBNEP Staff meet to review progress			Baseline Streambed Parameters, Turbidity		
8	<i>As above</i>					
9	RB and MBNEP Staff meet to review progress; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions					
10	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data		RB Staff calculate: 5-year changes to Bay area and volume			Bathymetry survey
11	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data					

³ Streambed Parameters, which are the Numeric Targets, include Residual Pool Volume, Median Diameter of Sediment Particles, Percent Fine Sediment, and Percent Coarse Sediment.

A 000139

At End of Implementation Year:	IMPLEMENTATION MILESTONE		MONITORING ACTIVITY	
12	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions		Streambed Parameters, Turbidity	
13	RB and MBNEP Staff meet to review progress; RB Staff calculates 10-year rolling average of Streambed Sediment data		Streambed Parameters, Turbidity	
14	<i>As above</i>			
15	RB and MBNEP Staff meet to review progress; RB Staff calculate 10-year rolling average of Streambed Sediment data; RB request implementation tracking report from Implementing Parties if not provided; RB staff consider modifications to Trackable Implementation Actions	RB Staff calculate: 5-year changes to Bay area and volume	Streambed Parameters Turbidity	Bathymetry survey
16-49	<i>Repeat as above with 3-, 5- and 10-year milestones.</i> Numeric targets achieved; load reduction achieved			

A 0001 AN

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
San Luis Obispo, California**

RESOLUTION NO. 00-003

**ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM THE STATE WATER RESOURCES
CONTROL BOARD TO:**

**ADOPT A TOTAL MAXIMUM LOAD FOR NITRATE IN THE SAN LORENZO
RIVER WATERSHED**

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975,

WHEREAS, the Regional Board periodically revises and amends the Basin Plan,

WHEREAS, in response to extreme environmental conditions found in the San Lorenzo River Watershed, the excessive number of failing septic systems, and water quality degradation, the Regional Board adopted Resolution 95-04 to implement a program to improve water quality,

WHEREAS, Regional Board Resolution 95-04 partially satisfies Federal Clean Water Act Total Maximum Daily Load requirements,

WHEREAS, a Total Maximum Daily Load is necessary to identify an appropriate target to protect water quality,

WHEREAS, staff prepared a study titled San Lorenzo River Watershed Total Maximum Daily Load Model for Nitrate, Santa Cruz, California dated June 29, 2000 to satisfy clean Water Act Requirements,

WHEREAS, the aforesaid study identifies the nitrate problem, develops an appropriate nitrate target, determines nitrate sources, allocates loads to the nitrate sources, discusses the implementation plan adopted by the Regional Board with Resolution 95-04, and discusses the monitoring program/public participation activities,

WHEREAS, the County of Santa Cruz is required to report upon Resolution 95-04 implementation to the Regional Board by annual reports. Resolution 95-04 annual reporting is a cumbersome frequency,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment,

WHEREAS, drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment,

WHEREAS, Regional Board staff followed appropriate procedures to satisfy the environmental documentation requirement of the California Environmental Quality Act (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment,

**RESOLUTION NO. 00-003
ATTACHMENT - PROPOSED BASIN PLAN AMENDMENTS**

The following Basin Plan amendment is proposed. New language is shown in **bold** and deleted language is ~~struck out~~.

1. Revise the September 8, 1994 Basin Plan, Chapter Four, as follows:

Add the following to the end of Chapter Four.

III. TOTAL MAXIMUM DAILY LOADS

The goal of a Total Maximum Daily Load (TMDL) is to attain state water quality standards. A TMDL is a quantitative assessment of water quality problems and contributing pollutant sources. It specifies the maximum amount of pollutant that can be discharged (or the amount of a pollutant that needs to be reduced) to meet water quality standards). The TMDL allocates pollutant loads among sources in the watershed and provides an implementation plan needed to protect or restore water quality.

This section identifies TMDLs completed to date and identifies the maximum pollutant contributions allowed to attain water quality standards.

<u>Target Attainment Stations</u>	<u>Nitrate Target</u>	<u>Total Maximum Load*</u>	<u>Percent Reduction</u>	<u>Target Attainment Year</u>
San Lorenzo River at Felton,		4233 pounds nitrate/month	15 %	2005
		4076 pounds nitrate/month	20%	2010
	1.5 mg/l nitrate, as nitrate	3728 pounds nitrate/month	30%	2020
Carbonera Creek at the confluence of Branciforte Creek		339 pounds nitrate/month	15%	2005
		326 pounds nitrate/month	20%	2010
	1.5 mg/l nitrate, as nitrate	299 pounds nitrate/month	30%	2020
Shingle Mill Creek at the confluence of the San Lorenzo River		77 pounds nitrate/month	15%	2005
		74 pounds nitrate/month	20%	2010
	1.5 mg/l nitrate, as nitrate	68 pounds nitrate/month	30%	2020

* Measured in July, August, and September

1. Revise Regional Board Resolution 95-04 (adopted on April 14, 1995) as follows:

"In fulfilling the responsibilities identified above, the County of Santa Cruz shall submit ~~annual~~ **triennial** reports beginning on January 15, ~~1996-2003~~. The report shall state the status and progress of the Wastewater Management Plan within the San Lorenzo River Watershed. The County of Santa Cruz ~~annual~~ **triennial** report shall document the results of:

- a. Existing disposal system performance evaluations,
- b. Disposal system improvements,

- c. Inspection and maintenance of on-site systems,
- d. Community disposal system improvements,
- e. New development and expansion of existing systems protocol and standards,
- f. Water quality monitoring and evaluation,
- g. Program administration management, and
- h. Program information management.

The report shall also document progress on each element of the Nitrate Management Plan, including,

- a. Parcel size limit,
- b. Wastewater Management Plan Implementation,
- c. Boulder Creek Country Club Wastewater Treatment Plant Upgrade,
- d. Shallow leachfield installation,
- e. Enhanced wastewater treatment for sandy soils,
- f. Enhanced wastewater treatment for large on-site disposal systems,
- g. Inclusion of nitrogen reduction in Waste Discharge Permits,
- h. Livestock and stable management,
- i. Protection of ground water recharge areas,
- j. Protection of riparian corridors and erosion control,
- k. Nitrate control for new uses,
- l. Scotts Valley nitrate discharge reduction, and
- m. Monitoring for nitrate in surface and ground water.

Every five years, the County will submit a Report on Nitrate Management Plan Implementation. The report will include loading rates for the previous five years. The reports shall be due December 31 beginning year 2000. The Regional Board will compare actual loading to target loading and evaluate compliance with this TMDL. In the event the nitrate loads for ~~County does not meet the target nitrate loads specified by the interim and final targets (for years 2005, 2020, and 2045) are not met,~~ the County will perform a nitrate budget within six months. Major nitrate sources will be expressed in terms of loading. The Regional Board will determine additional monitoring, implementation, or enforcement measures are necessary upon receiving the County's loading evaluation report.

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
San Luis Obispo, California**

RESOLUTION NO. 00-001

**ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN AND
REQUESTING APPROVAL FROM THE STATE WATER RESOURCES CONTROL
BOARD TO**

REMOVE THE NITRATE OBJECTIVE FOR SAN LORENZO RIVER

WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975,

WHEREAS, the Regional Board periodically revises and amends the Basin Plan,

WHEREAS, the current nitrate objective for the San Lorenzo River is not reasonable. For example, the existing objective is below background concentrations,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment,

WHEREAS, water quality will be protected by the narrative water quality objectives. Regional Board Resolution 95-04 also encourages the County to implement reduced nitrate discharge measures contained within the San Lorenzo Nitrate Management Plan, Phase II Final Report, February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service. Water quality will also be protected by the nitrate target contained within the draft San Lorenzo River nitrate TMDL once it is approved by the U.S. EPA,

WHEREAS, drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment,

WHEREAS, Regional Board staff followed appropriate procedures to satisfy the environmental documentation requirement of the California Environmental Quality Act (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment,

WHEREAS, notice of public hearing was given by advertising in newspapers of general circulation within the Region,

AND WHEREAS, on June 2, 2000, in San Luis Obispo, California, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE, BE IT RESOLVED that based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant adverse effect on the environment,

THEREFORE, BE IT RESOLVED that the environmental document prepared by Regional Board staff pursuant to Public Resource Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse,

THEREFORE, BE IT RESOLVED that when appropriate, the Regional Board shall replace the nitrate objective with a TMDL nitrate target for San Lorenzo River or U.S. EPA nutrient criteria,

THEREFORE, BE IT RESOLVED that the Basin Plan amendment shown on "Attachment A--Basin Plan Amendment" is approved. The amendment will not take effect until approved by the State Board, the Office of Administrative Law, and the United States Environmental Protection Agency,

AND THEREFORE, BE IT RESOLVED that upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.

I, ROGER W. BRIGGS, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of the Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on June 2, 2000.

Executive Officer

June 2, 2000
Date

RESOLUTION NO. 00-001
ATTACHMENT A -- BASIN PLAN AMENDMENT

The following Basin Plan amendment is proposed. New language is shown in **bold** and deleted language is ~~struck out~~.

1. Revise the September 8, 1998 Basin Plan, Chapter Three, page III-14 as follows:

~~A specific monthly mean objective for Nitrate (as NO₃) of 0.25 mg/l shall apply to both the upper and lower San Lorenzo River to protect beneficial uses from adverse biostimulatory effects. Specific biostimulant objectives for other surface waters will be added to this section in tabular form once they are determined from further studies.~~

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION**

RESOLUTION NO. 95-04

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN AND REQUESTING APPROVAL FROM THE STATE WATER RESOURCES CONTROL BOARD TO RESCIND ON-SITE SYSTEM PROHIBITION AND ADD WASTEWATER MANAGEMENT PLAN FOR THE SAN LORENZO RIVER WATERSHED, SANTA CRUZ COUNTY

WHEREAS:

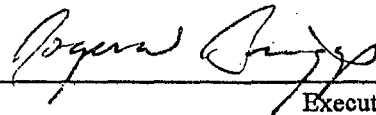

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975.
2. The Regional Board periodically revises and amends the Basin Plan.
3. In response to extreme environmental conditions found in the San Lorenzo River Watershed, the excessive number of failing septic systems, and water quality degradation, the Regional Board adopted Resolution 82-10.
4. Resolution 82-10 recognized the difficulties associated with on-site wastewater disposal and addressed the problem in two ways. First, five communities within the watershed were designated as "Prohibition Zones." These five areas were referred to as "Class I" areas. Discharge of wastewater from on-site systems was prohibited as of July 1, 1986 and off-site wastewater disposal solutions were to be implemented. Second, other areas of the watershed were labeled "Class II." In Class II areas, the County of Santa Cruz was to implement a program to manage on-site wastewater disposal .
5. The "Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan) is a satisfactory mitigation of Regional Board Resolution 82-10.
6. The United States Congress Coastal Zone Act Reauthorization Amendments (CZARA, Section 6217 (g)) require states to "restore and protect" coastal waters.
7. The Regional Board has determined the Basin Plan requires further revision and amendment.
8. Drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment.
9. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.

10. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and the threatened and endangered plants and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made determination of "no jeopardy" pursuant to the California Endangered Species Act.
11. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
12. On April 14, 1995 in Salinas, California, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant adverse effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. Based on the approval and adoption of Resolution 95-04, the Board shall rescind Resolution 82-10.
4. The Basin Plan amendment shown on Attachment "A" is approved. The amendments will not take effect until approved by the State Board and the Office of Administrative Law.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.

I, **ROGER W. BRIGGS**, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on April 14, 1995.

Executive Officer

RESOLUTION 95-04
ATTACHMENT A
PROPOSED BASIN PLAN AMENDMENTS

The following Basin Plan amendment is proposed. (Note new language is shown in bold, existing language is shown in plain text, and deleted language is ~~struck out~~.)

1. Revise the September 8, 1994 Basin Plan, Chapter Four, page 14 as follows:

Individually owned septic tank leachfield systems in the San Lorenzo Valley ~~are being studied closely~~ have been inspected and monitored from 1986 through 1994. ~~to identify~~ **Problem areas have been identified and determine** the suitability of these problem areas for the continued use of septic systems has been determined as documented in the County of Santa Cruz, Environmental Health Services reports (1) Preliminary Report, An Evaluation of Wastewater Disposal And Water Quality In The San Lorenzo Watershed, September, 1989, (2) Final Project Report, Boulder Creek Wastewater Feasibility Study, October, 1991; and (3) Final Project Report, San Lorenzo Valley Community Wastewater Feasibility Studies, March, 1994. ~~Alternatives will be proposed and evaluated~~ have been evaluated and solutions proposed to reduce septic system problems and to respond to this Plan's discharge prohibition in certain areas of the valley. Solutions are contained in the "Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan). ~~Specific design criteria for conventional and modified septic systems will be developed as part of on-going county studies~~ The Wastewater Management Plan documents standards and conditions that shall be met for the protection and enhancement of beneficial uses.

Implementation of the Wastewater Management Plan precludes the Regional Board from reestablishing the discharge prohibition.

2. Revise the September 8, 1994 Basin Plan, Chapter Four, pages 66-67 as follows:

Discharges from individual sewage disposal systems within the San Lorenzo River Watershed ~~Valley north of Henry Cowell State Park~~ shall be managed as follows:

- a. ~~Discharges within five communities are prohibited shall be allowed, where the affected area (Class I Area) is defined by the Santa Cruz County Assessor's Parcel~~

~~Numbers as described in Appendix A-23~~ providing the County of Santa Cruz, as lead agency, implements the "Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan) and assures the Regional Board that areas of the San Lorenzo River Watershed are serviced by wastewater disposal systems to protect and enhance water quality, to protect and restore beneficial uses of water, and to abate and prevent nuisance, pollution, and contamination..

- b. ~~To preclude prohibition of discharges outside the Class I Area, the County of Santa Cruz, shall act as lead agency in coordinating and establishing a program that will assure the Regional Board that:~~

~~additional systems in these areas will be designed, sized, located, spaced, and constructed in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.~~

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 95-53

APPROVAL OF AN AMENDMENT TO THE WATER QUALITY
CONTROL PLAN FOR THE CENTRAL COAST BASIN
REGARDING ON-SITE SEPTIC SYSTEMS

WHEREAS:

1. The Regional Water Quality Control Board, Central Coast Region (CCRWQCB), adopted a revised Water Quality Control Plan for the Central Coast Basin (Basin Plan) on February 11, 1994, under Resolution No. 94-01, and the Basin Plan was approved by the State Water Resources Control Board (SWRCB) in May 1994 and by the Office of Administrative Law (OAL) in September 1994.
2. On April 14, 1995, the CCRWQCB adopted Resolution No. 95-04 (Attachment) revising the Basin Plan by rescinding an on-site septic system prohibition and replacing it with regulation of on-site systems through implementation of a Wastewater Management Plan for the San Lorenzo River Watershed, Santa Cruz County.
3. In adopting the amendment, two statements (stated in Resolved No. 1 of this Resolution) were incorporated which introduced clarity problems and, therefore, cannot be approved.
4. Section 303(c) of the Federal Clean Water Act requires that water quality standards be reviewed and revised, if appropriate, at least every three years, and Section 13240 of the California Water Code provides that Basin Plans be periodically reviewed and, if appropriate, revised.
5. The CCRWQCB prepared documents and followed procedures satisfying environmental documentation requirements in accordance with the California Environmental Quality Act (Public Resources Code, Section 21000 et seq.).
6. The CCRWQCB Resolution No. 95-04 was adopted in accordance with State laws and regulations.
7. Basin Plan amendments do not become effective until approved by the SWRCB and until regulatory provisions are approved by OAL.

THEREFORE BE IT RESOLVED THAT:

The SWRCB:

1. Approves the Basin Plan amendment adopted by CCRWQCB Resolution No. 95-04 on April 14, 1995, with the exception of the portions shown below in "strikeout" format which are disapproved:
 - a. Attachment A, item 1, middle of paragraph
"Alternatives have been evaluated and solutions proposed to reduce septic system problems and to respond to this Plan's discharge prohibition in certain areas of the valley."
 - b. Attachment A, item 1, final sentence
"~~Implementation of the Wastewater Management Plan precludes the Regional Board from reestablishing the discharge prohibition.~~"
2. Authorizes staff to submit the approved revision of the Basin Plan to OAL for approval.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a resolution duly and regularly adopted at a meeting of the State Water Resources Control Board held on August 17, 1995.

Maureen Marché
Administrative Assistant to the Board

April 14, 1995 Revision to the Water Quality
Control Plan

I. Revise paragraph on page IV-14 of the
September 8, 1994 Water Quality Control Plan
as follows:

~~“Individually owned septic tank leachfield systems in the San Lorenzo Valley are being studied closely have been inspected and monitored from 1986 through 1994. to identify~~
p Problem areas have been identified and determine the suitability of these problem areas for the continued use of septic systems has been determined as documented in the County of Santa Cruz, Environmental Health Services reports (1) Preliminary Report, An Evaluation of Wastewater Disposal and Water Quality in the San Lorenzo Watershed, September 1989, (2) Final Project Report, Boulder Creek Wastewater Feasibility Study, October, 1991; and (3) Final Project Report, San Lorenzo Valley Community Wastewater Feasibility Studies, March, 1994. Alternatives will be proposed and evaluated have been evaluated and solutions proposed to reduce septic system problems and to respond to this Plan's discharge prohibition in certain areas of the valley. Solutions are contained in the “Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service”, February 1995 and “San Lorenzo Nitrate Management Plan, Phase II Final Report”, February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan). ~~Specific design criteria for conventional and modified septic systems will be developed as part of on-going county studies~~ The Wastewater Management Plan documents standards and conditions that shall be met for the protection and enhancement of beneficial uses.

April 14, 1995 Revision to the Water Quality Control Plan

2. Revise paragraphs on page IV-66 of the September 8, 1994 Water Quality Control Plan as follows:

"2. Discharges from individual sewage disposal systems within the San Lorenzo River Watershed Valley north of Henry Cowell State Park shall be managed as follows:

- a. **Discharges within five communities are prohibited shall be allowed; where the affected area (Class I Area) is defined by the Santa Cruz County Assessor's Parcel numbers as described in Appendix A-28. providing the County of Santa Cruz, as lead agency, implements the "Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan) and assures the Regional Board that areas of the San Lorenzo River Watershed are serviced by wastewater disposal systems to protect and enhance water quality, to protect and restore beneficial uses of water, and to abate and prevent nuisance, pollution, and contamination.**

3. Revise paragraphs on page IV-67 of the September 8, 1994 Water Quality Control Plan as follows.

- b. ~~To preclude prohibition of discharges outside the Class I Area, the County of Santa Cruz, shall act as lead agency in coordinating and establishing a program that will assure the Regional Board that:~~
- ~~• additional systems in these areas will be designed, sized, located, spaced, and constructed in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.~~
 - ~~• existing systems within specific communities are systematically evaluated and redesigned, resized, relocated, and reconstructed as appropriate to protect and enhance water quality, to protect and restore beneficial uses of water, and abate and prevent nuisance, pollution and contamination, where the specific communities (Class II Area) are defined by the Santa Cruz County Assessor's Parcel Numbers as described in Appendix A-29.~~
 - ~~• systems within the Class II Area are regularly inspected and maintained in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.~~

In fulfilling the responsibilities identified above, the County of Santa Cruz shall submit annual reports beginning on January 15, 1996. The report shall state the status and progress of the Wastewater Management Plan in the San Lorenzo River Watershed. The County of Santa Cruz annual report shall document the results of:

- a. Existing disposal system performance evaluations,
- b. Disposal system improvements,
- c. Inspection and maintenance of on-site systems,
- d. Community disposal system improvements,
- e. New development and expansion of existing system protocol and standards,
- f. Water quality monitoring and evaluation,
- g. Program administration management, and
- h. Program information management.

The report shall also document progress on each element of the Nitrate Management Plan, including:

- a. Parcel size limit,
- b. Wastewater Management Plan implementation,
- c. Boulder Creek Country Club Wastewater Treatment Plant Upgrade,
- d. Shallow leachfield installation,
- e. Enhanced wastewater treatment for sandy soils,
- f. Enhanced wastewater treatment for large on-site disposal systems,
- g. Inclusion of nitrogen reduction in Waste Discharge Permits,
- h. Livestock and stable management,
- i. Protection of ground water recharge areas,
- j. Protection of riparian corridors and erosion control,
- k. Nitrate control for new uses,
- l. Scotts Valley nitrate discharge reduction, and
- m. Monitoring for nitrate in surface and ground water.

LH

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION**

APRIL 24, 1995

ITEM: 6

SUBJECT: AMENDMENT OF THE CENTRAL COAST WATER QUALITY CONTROL PLAN TO:

- (1) **RESCIND ON-SITE SYSTEM PROHIBITION AND ADD THE WASTEWATER MANAGEMENT PLAN FOR THE SAN LORENZO RIVER WATERSHED, SANTA CRUZ COUNTY AND**
- (2) **ADD NUTRIENT OBJECTIVES/MANAGEMENT MEASURES FOR PAJARO RIVER AND LLAGAS CREEK**

SUMMARY:

The purpose of this amendment is to:

1. Incorporate an on-site septic system management program for the San Lorenzo River Watershed
and
2. Incorporate nutrient objectives and management measures for the Pajaro River and Llagas Creek.

San Lorenzo River Watershed

This Water Quality Control Plan (Basin Plan) amendment contains two issues. The first deals with the San Lorenzo River Watershed. This amendment, requested for future Board consideration at the July 8, 1994 Board meeting, rescinds the on-site system prohibition (Resolution 82-10) for five communities within San Lorenzo Valley and grants authority to the County of Santa Cruz to manage on-site wastewater disposal. The County of Santa Cruz will manage all areas of the watershed using the guidelines and standards contained in the:

- (1) "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995
and
- (2) "Draft San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service

The Wastewater Management Plan was developed by Santa Cruz County to mitigate water quality degradation and on-site system failure. The Wastewater Management Plan was approved by the Regional Board on July 8, 1994. Staff believes implementation of the Wastewater Management Plan will protect beneficial uses. Staff recommends adoption of this Basin Plan amendment.

Pajaro River and Llagas Creek

Another purpose of the amendment is to propose nutrient (nitrogen and phosphorus) objectives and management measures for Pajaro River and Llagas Creek. No numerical nutrient objectives exist for Pajaro River and Llagas Creek. Staff utilized Basin Plan update funds to contract with San Jose State University to develop nutrient objectives. Dr. Rhea Williamson, the project director, developed nutrient objectives and determined nutrient sources, impacts, and Management Measures/Practices.

Pajaro River and Llagas Creek exhibit nuisance algae conditions from time to time. Nuisance algae causes problems with dissolved oxygen, aesthetics, and odors. Limiting nitrogen and phosphorus is one mechanism to control nuisance algae.

This amendment recommends nutrient water quality objectives for nitrogen and phosphorus for the Pajaro River and Llagas Creek. This amendment also recommends management measures that will bring these water bodies into compliance with the recommended objective.

DISCUSSION:

This section is divided into two components. The first component, Wastewater Management Plan for the San Lorenzo River Watershed, Santa Cruz County, begins on this page. The second component, Pajaro River/Llagas Creek Nutrient Objectives and Management Measures begins on page 12.

WASTEWATER MANAGEMENT PLAN FOR THE SAN LORENZO RIVER WATERSHED, SANTA CRUZ COUNTY

Water quality in the San Lorenzo River Watershed, Santa Cruz County, has been monitored since the late 1960's. Analysis of water samples collected in the San Lorenzo River Watershed revealed water quality degradation and public health threats from failing septic systems. Regional Board staff determined that high density of septic systems, steep slopes, shallow ground water, impermeable soils, and poor system maintenance were among the factors contributing to septic system failure and water quality degradation.

In response to the extreme environmental conditions found in the San Lorenzo River Watershed, the excessive number of failing septic systems, and water quality degradation, the Regional Board adopted Resolution 82-10. Resolution 82-10 recognized the difficulties associated with on-site wastewater disposal and addressed the problem in two ways. First, areas of the watershed were labeled Class I and designated as "Prohibition Zones." In these prohibition zones, discharge of wastewater on-site was prohibited as of July 1, 1986, and off-site wastewater disposal solutions were to be implemented. Second, other areas of the watershed were labeled Class II. Resolution 82-10 stated that for the Class II Areas, the County of Santa Cruz would implement a program to manage on-site wastewater disposal in the San Lorenzo watershed.

The County of Santa Cruz and Regional Board staff have worked diligently to develop the "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz," February 1995 and "Draft San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz. (Both reports will hereafter be referred to as the Wastewater Management Plan.) This Plan, when implemented by the County, will meet the intent of Resolution 82-10 by reducing the number of failing septic systems and protecting beneficial uses. Reducing the number of failing systems will decrease bacteria and nitrate discharges to surface

waters in the San Lorenzo River Watershed. (The County will finalize both reports after Regional Board approval of this amendment.)

Plan Development

County Environmental Health Services collected data and documented water quality conditions in the San Lorenzo Valley watershed from 1986 through 1989. This information was presented to the Regional Board on January 12, 1990 in a report titled "An Evaluation of Wastewater Disposal and Water Quality in the San Lorenzo River Watershed." This report contained the first draft of the County's proposed program for managing on-site wastewater disposal. In early 1990, Regional Board and County staff agreed that there were many unresolved issues regarding the draft program for managing on-site wastewater disposal and that a Wastewater Management Plan which met all the conditions of Resolution 82-10 should be developed.

Board and County staff have worked together over the last four years to solve the remaining issues of on-site wastewater disposal in the San Lorenzo River Watershed. During this process, Board and County staff encountered issues that could not be resolved at a staff level. At these critical junctures, a subcommittee made up of Regional Board members and County Supervisors met to discuss and formulate specific elements of the Wastewater and Nitrate Management Plan. At the conclusion of each step, Board staff developed status reports and Executive Officer reports discussing various components of the Management Plan. Some key issues contained in the reports to the Board are summarized below:

- 1) In September 1990, staff reported to the Board that off-site solutions for Class I areas and technical standards for on-site wastewater management of the Class II areas required resolution before Board review of the County's Management Plan.
- 2) On January 11, 1991, Board staff reported that the draft Management Plan had been revised. However, additional revision of on-site system repair standards and off-site structural solutions for areas unsuitable for on-site wastewater disposal was needed.
- 3) The first complete draft of the San Lorenzo Valley Wastewater Management Plan was made available to Board staff on October 9, 1991. Board staff reviewed the Plan, however, the Plan still lacked adequate on-site system repair standards and off-site structural solutions.
- 4) By February of 1994, the on-site system repair standards had been formulated by the Regional Board-County Supervisors subcommittee, County staff, and Board staff. On April 8, 1994 the results of the "Feasibility of Wastewater Alternatives for Class I Areas in the San Lorenzo Valley" were presented to the Board.

The Wastewater Management Plan meets the conditions of Resolution 82-10. On July 8, 1994 the Regional Board approved the draft Wastewater Management Plan for the San Lorenzo Watershed. The Plan protects water quality with limited economic hardship for septic system owners.

This section is organized as follows:

- I. San Lorenzo River Watershed Recommended Wastewater Management Plan and Alternatives.
 - A. Recommended Wastewater Management Plan
 - 1. Elements of On-site System Improvements in the Wastewater Management Plan
 - 2. Elements of the Nitrate Management Plan
 - B. Alternatives to the Wastewater Management Plan
- II. Implications of the Wastewater Management Plan
- III. Porter-Cologne Implementation Requirements Summarized
 - A. Description of the Nature of Actions
 - B. Time Schedule
 - C. Surveillance Program
- IV. Anti-degradation Policy Compliance

I. SAN LORENZO RIVER WATERSHED RECOMMENDED WASTEWATER MANAGEMENT PLAN AND ALTERNATIVES

A. Recommended Wastewater Management Plan

The San Lorenzo Wastewater Management Plan provides for the improvement of wastewater disposal practices to protect public health and beneficial uses of surface and ground water in the San Lorenzo River Watershed. The Management Plan represents a refinement and strengthening of wastewater management programs that have been implemented by the County of Santa Cruz Health Services Agency since 1985. The Management Plan addresses: (1) on-site wastewater system improvements and (2) nitrate management.

1. Elements of On-site System Improvements in the Wastewater Management Plan

a. Existing Disposal System Performance Evaluations

The Wastewater Management Plan presents protocol for evaluating current and expected long term performance of on-site wastewater disposal systems for the 12,900 developed parcels in the entire San Lorenzo Watershed.

b. Disposal System Improvements

The County uses strict septic repair standards for conventional and alternative system improvements to eliminate discharge of pathogens, reduce cumulative discharge of nitrate, and provide satisfactory long term performance.

c. **Inspection and Maintenance of On-site Systems**

The County proposes to inspect conventional systems at regular intervals of six years to ensure satisfactory long term system performance. (More frequent inspections of one to three years are required for systems close to creeks and alternative/unconventional systems).

d. **Community Disposal System Improvements**

The Wastewater Management Plan contains feasibility evaluations of potential community disposal systems for heavily developed areas of the Valley. These areas contain parcels where conventional on-site septic systems (as defined in the repair standards) will not function and where continued use of existing on-site disposal is contributing to water quality degradation.

e. **New Development and Expansion of Existing System Protocols and Standards**

The Wastewater Management Plan presents the protocols and standards for new development and expansion of existing systems. The Wastewater Management Plan also references County Code Chapter 7.38, which contains strict standards that meet or exceed this Board's Basin Plan requirements for new systems (e.g., a minimum parcel size of one acre for new disposal systems on undeveloped parcels in the Watershed).

f. **Water Quality Monitoring and Evaluation**

The Wastewater Management Plan presents the protocols for continued water quality sampling to monitor long term water quality (primarily bacteria and nitrogen levels), evaluate impacts of wastewater disposal on water quality, and guide any necessary changes in County programs or policies.

g. **Program Administration Management**

The Wastewater Management Plan presents the protocols for program administration, staffing, and financing. For example, the Section calls for continued use of annual service charges from property owners in County Service Area (CSA) No. 12, Zone A to fund augmented wastewater management programs.

h. **Program Information Management**

The Wastewater Management Plan also presents the protocols for the County's computer information system. This system is used to record and track data on system installations, site conditions, system performance, complaint investigations, inspection results, and septic tank pumping.

2. Elements of the Nitrate Management Plan

A major component of the San Lorenzo Wastewater Management Plan is the Nitrate Management Plan section. The intent of this section is to establish nitrogen reduction targets, develop management measures to achieve those targets, and implement the management measures over a specific time frame.

The Nitrate Management Plan proposes to prevent any increase in existing nitrate levels and promote a moderate (15-30%) reduction in nitrate levels in the watershed over the next 10-20 years. The County intends to achieve this target reduction by implementing specific nitrate reduction management measures in the San Lorenzo watershed.

The elements of the San Lorenzo Nitrate Management Plan to be implemented by the County are:

a. Parcel Size Limit

Maintain existing density restrictions for new development served by septic systems in the San Lorenzo Watershed (one acre minimum for existing lots of record and a ten acre minimum for new land divisions in ground water recharge areas).

b. Implement the San Lorenzo Wastewater Management Plan

This program provides for regular inspection of all on-site disposal systems in the watershed, upgrade of failing systems, improved system maintenance, and improved system management. As implemented this program reduces the impact of wastewater disposal and provides for improved nitrogen management.

c. Boulder Creek Country Club Wastewater Treatment Plant Upgrade

Complete ongoing efforts to improve treatment procedures at Boulder Creek Country Club Treatment Plant to reduce nitrate discharge by using wastewater reclamation on the golf course.

d. Shallow Leachfield Installation

Maintain the new requirement for shallow leachfields for new and repaired septic systems (less than four feet in sandy areas and four to six and one half feet in other areas).

e. Enhanced Wastewater Treatment for Sandy Soils

Require septic systems serving new or expanded uses in sandy soils (percolation rate faster than six minutes per inch) to install enhanced treatment measures which will reduce nitrogen discharge by at least 50%. Sandy soils are those designated as sands or sandy loams, which have an infiltration rate greater than or equal to ten minutes per inch.

f. Enhanced Wastewater Treatment for Large On-site Disposal Systems

Require all new and existing large on-site disposal systems which serve more than five residential units or having a peak daily flow of more than 2000 gallons per day to utilize enhanced treatment to reduce nitrate discharge by at least 50%. Installation of such measures for existing systems shall be required at the time of system repair or upgrade. (New community systems serving more than five residential units or disposing more than 2500 gallons per day may be required to implement current Basin Plan limits where Basin Plan limits are more stringent.)

g. Nitrogen Control in New or Revised Waste Discharge Permits

Include requirements for nitrogen removal in permits developed or revised by the Regional Board for wastewater systems discharging in the San Lorenzo River watershed.

h. Livestock and Stable Management

Implement management measures through operator education, modification of permit conditions, and new ordinances to reduce water quality impacts from livestock and stable facilities.

i. Protection of Groundwater Recharge Areas

Maintains the ten acre minimum parcel size for any new lot in a designated recharge area and prohibits any new land use which could cause significant water quality degradation of aquifers.

j. Protection of Riparian Corridors and Erosion Control

Maintains and protects riparian areas for use as filters for nitrogen reduction and erosion control.

k. Nitrogen Control for New Uses

Review new development proposals to prevent significant increases in nitrogen discharges and reduce nitrogen discharges overall in the watershed.

l. Scotts Valley Nitrate Discharge Reduction

Monitor the Scotts Valley nitrate plume, and identify potential ongoing sources of nitrate. Work with the City of Scotts Valley and property owners to reduce nitrate discharge from Scotts Valley.

m. Monitoring Results for Nitrate in Surface and Ground Water

Continue to monitor levels in surface and ground water. Reevaluate implementation of more stringent control measures if summer nitrate levels in the River have not declined by at least 15 percent by 2005.

Implementation of the recommended management measures will provide for a 15 to 20 percent reduction in current nitrate levels being discharged over the next ten years, with a further discharge reduction of three to nine percent in the following ten years.

B. Alternatives to the Wastewater Management Plan

Some possible alternatives to the proposed Wastewater and Nitrate Management Plan for the San Lorenzo River watershed include:

a. No action.

This alternative will not be a detriment to water quality because the on-site system prohibition would remain in effect. However, this alternative would not result in a solution to existing failing and polluting on-site systems.

b. Postponement to a later date.

This alternative is not recommended because it does not satisfy the intent of the Santa Cruz County Board of Supervisors/Regional Water Quality Control Board Subcommittee.

c. Require higher levels of wastewater treatment for existing on-site wastewater disposal systems than are currently contained in the proposed Wastewater Management Plan .

This alternative is not recommended because the current repair standards were negotiated by the Santa Cruz County Supervisors and Regional Board Subcommittee. The proposed levels of wastewater treatment protect beneficial uses, while limiting the economic hardship to septic system owners.

d. Require the problem areas (identified in Appendix H of the Wastewater Management Plan) to implement off-site wastewater disposal solutions.

This alternative is not recommended because of the limited increase in protection of beneficial uses over on-site wastewater disposal. Additionally, off-site solutions would create extreme economic hardship to local land owners.

e. Partial adoption of the proposed amendment.

This alternative is recommended only if it does not result in a detriment to water quality.

f. Modify amendment.

Public review may make this alternative likely. This alternative is recommended only if it does not result in a detriment to water quality.

g. Additional amendments.

The Regional Board may consider additional alternatives, but will limit its action to a logical outgrowth of the proposed action.

Specific substantive changes, such as amending a specific action plan, will be subject to public notice and comment at the time those changes are proposed.

II. IMPLICATIONS OF THE WASTEWATER MANAGEMENT PLAN

County staff estimates that over the next ten to twenty years, approximately 75% of the systems in the San Lorenzo Watershed will be upgraded using conventional septic systems to meet the repair standards contained in the Management Plan. The remaining parcels will be served by alternative systems, haulaway systems, nonstandard systems, or community disposal systems that generally cost more and may place additional

restrictions on property development. Promoting compliance with the Plan will require property owner education, increased enforcement effort, and financial assistance for properties requiring costly system upgrades.

Regional Board approval of the Wastewater Management Plan will lead to modification of the Board's restrictions on wastewater disposal which limit development and expansion of existing uses in the Watershed. For example, under the current regulations, only systems on parcels outside Class I areas may expand to accommodate additional wastewater discharge. If a parcel can accommodate an upgraded system and additional discharge, then the home owner may also be allowed to expand their house. Modification of the Board's restrictions on wastewater disposal will allow this same process to take place on all parcels, requiring the County to approve system upgrades and home expansions on a parcel by parcel basis.

While removal of these restrictions will benefit many properties, development on some properties will remain constrained because they cannot meet the County's standards for septic system use, which include: 1) the requirement of one acre for any new development in the San Lorenzo Watershed, and 2) the need to meet current strict technical standards for any new development or significant expansion of an existing use.

This technical standard requirement is especially critical for parcels that upgrade existing on-site wastewater disposal using nonstandard systems. The use of nonstandard systems allows the installation of a system that has reduced separation to ground water, reduced leachfield size, reduced pump chamber size, or less than 100 percent of the required expansion area. Houses on parcels using nonstandard systems will be limited to a one time expansion of up to 250 square feet. The County shall have authority to limit the home expansion based on the area required for wastewater disposal.

Restrictions for on-site wastewater disposal may also limit commercial development. For Village areas (e.g., Boulder Creek) where on-site wastewater disposal remains a problem, some new and expanded uses may be served by localized off-site disposal systems (see Wastewater Management Plan, Appendix H).

Most elements of the proposed Management Plan are already in place and in operation. Full application of all recommendations in the proposed Plan will require the following additional actions by the County Board of Supervisors after the Plan is adopted:

1. Amend County Code Chapter 7.38 to reflect the ground water standards for repair of existing systems contained in Appendix C of the Management Plan. As documented in Appendix C, the required separation from ground water is three feet at distances greater than 250 feet from a water body. The required separation is already set at three feet at distances closer to a waterbody. This will improve protection of ground water quality.
2. Increase the annual CSA 12 service charges by approximately \$3.00 per year beginning in FY 1995-96 to provide an additional staff person for increased inspection frequencies. Currently all parcels are inspected at six year intervals. The Management Plan will require increased inspection frequencies for most nonconventional systems.

The elements of the Wastewater Management Plan presented above clearly meet the intent of Resolution 82-10 for the Class II areas and all other unclassified areas of the watershed. In areas of the San Lorenzo River Watershed designated Class I, the elements of the Wastewater Management Plan do not directly meet the criteria of Resolution 82-10. For the Class I areas, Resolution 82-10 states:

- 1) No new systems are allowed to discharge (as of adoption of Resolution 82-10),

- 2) Existing systems in Class I areas are prohibited from discharging as of July 1, 1986, and
- 3) Structural solutions must be implemented resulting in off-site wastewater disposal.

For Class I areas, the Management Plan differs from Resolution 82-10 requirements in the following ways:

- 1) The Wastewater Management Plan proposes to allow existing and new discharges and
- 2) On-site systems are proposed.

The Wastewater Management Plan includes a summary of feasibility studies that evaluate potential on-site and off-site wastewater disposal solutions. The off-site solutions presented in the Wastewater Management Plan are not feasible alternatives due to economic constraints and cost benefit analyses. The potential wastewater solutions were evaluated based on technical, social, and economic criteria. A graphic of the cost for various solutions (on-site/off-site) versus the failure rate of the various solutions is presented in Attachment A. In spite of the difference to the original requirements, staff believes beneficial uses will be protected with the implementation of the Wastewater Management Plan.

III. PORTER-COLOGNE IMPLEMENTATION REQUIREMENTS SUMMARIZED

The California Porter-Cologne Water Quality Control Act specifies an implementation plan to achieve water quality objectives should include the following components (at a minimum):

- A. A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private;
- B. A time schedule for actions to be taken; and
- C. A surveillance program description to determine compliance with objectives.

A description of the nature of necessary actions, time schedule to implement necessary actions, and surveillance program to assure implementation of the Management Plan are discussed below.

A. Description of the Nature of Actions

The County of Santa Cruz shall manage on-site wastewater disposal in all areas of the watershed using the guidelines and standards contained in the Wastewater Management Plan as described above.

B. Time Schedule

The Regional Board expects the County to implement the on-site Wastewater Management Plan upon adoption of this Resolution. Accordingly, the Board shall approve the following timeline for County action:

<u>COUNTY ACTIONS</u>	<u>DATE</u>
a. Implement/Monitor Nitrate Management Plan (NMP)	4/95 to 1/2015
b. Five Year Report on NMP Implementation	2/2000

- c. Require Upgrade of all Failing Prestandard Systems 4/95 to 1/2004
- d. Annual Reports on Wastewater Management Plan Implementation 1/96 to 1/2005
- e. Review Wastewater Management Program 3/2000 to 2/2005
- f. Modify Management Program (as needed) 6/2000 to 5/2005

C. Surveillance Program

Regional Board staff will inspect the San Lorenzo Wastewater Management Program semi-annually. Once every six months Board staff will review the County's computer data base. Examples of data staff will inspect include pumping frequencies, system failures, number of alternative systems constructed, and number of nonstandard systems. Staff will also conduct independent field inspections including inspection of individual septic systems.

IV. Anti-degradation Policy Compliance

This action will improve water quality and thus restore the high water quality that existed prior to the on-site system failure and pollution.

PAJARO RIVER/LLAGAS CREEK NUTRIENT OBJECTIVES AND MANAGEMENT MEASURES

The Water Quality Control Plan (Basin Plan) originally contained water quality objectives for nitrogen and phosphorus. In 1977, the Regional Board deleted the nutrient objectives because the Board did not believe *one* value for nitrogen or phosphorus was applicable regionwide (the Board preferred site-specific objectives for problem water bodies).

The Regional Board attempted to amend nutrient objectives for Pajaro River and Llagas Creek in 1984. However, limited staff resources produced a minimal quantity of monitoring data (only four stations were sampled four times).

In 1992, Basin Plan Update funds were used to contract with San Jose State University to develop nutrient objectives. San Jose State University expanded the monitoring program originally used by staff (seven stations were sampled approximately twenty times). San Jose State University also determined nutrient sources, impacts, and Best Management Measures/Practices.

This amendment recommends nutrient water quality objectives for nitrogen and phosphorus for the Pajaro River and Llagas Creek. This amendment also recommends management measures that will bring these water bodies into compliance with the recommended objective.

The remainder of this section is organized as follows:

- I. Pajaro River/Llagas Creek Recommended and Alternative Nutrient Objectives
 - A. Recommended Objective
 - B. Causes of Nuisance Algae Growth
 - C. Alternative Objectives
 1. Numerical Objectives
 - a. Reduce Nutrient Concentration by Staged Reduction Program
 - b. Reduce Nutrient Concentration by Using Historical Nutrient Concentrations
 - c. Reduce Nutrient Concentration by Using Nutrient Concentrations from Nearby Rivers and Streams
 - d. Reduce Nutrient Concentration by Using Other Regional Board's Objective
 2. Nutrient Loading Reduction Goals
 3. Develop and Propose Algal Biomass Limits
 4. Continue to Implement Narrative Objective
- II. Factors to be Considered in Establishing Water Quality Objectives
 - A. Past, Present, and Probable Future Beneficial Uses of Water
 - B. Environmental Characteristics of the Hydrographic Unit
 - C. Economic Considerations
 - D. Need for Developing Housing within the Region
 - E. Need to Develop and Use Recycled Water
- III. Implementation
 - A. Description of the Nature of Actions
 - B. Time Schedule
 - C. Surveillance Program
- IV. Anti-degradation Policy Compliance

I. PAJARO RIVER/LLAGAS CREEK RECOMMENDED AND ALTERNATE NUTRIENT OBJECTIVES

A. Recommended Objective

TABLE ONE. NUTRIENT OBJECTIVES RECOMMENDED BY STAFF

RECOMMENDED NITROGEN OBJECTIVE	RECOMMENDED PHOSPHORUS OBJECTIVE
Total Inorganic Nitrogen (ammonia, nitrite, and nitrate), as nitrogen, mg/l	Phosphorus, as phosphate, mg/l
1.2	0.12

(The proposed objectives are semi-annual mean values.)

San Jose State University recommended these values for the following reasons:

1. Six out of seven monitoring stations exceeded the nitrate California drinking water standard (10 mg/l, as nitrogen) on occasion.
2. Only one monitoring station did not exceed the nitrate drinking water standard. This station is on Llagas Creek near California Street. This station is upstream of San Martin and downstream of Chesbro Reservoir (the contractor calls this station "L4"). No nuisance algae was observed at station L4 by the contractor.
3. At a minimum, the nitrate concentrations in Pajaro River and Llagas Creek should not exceed the California Drinking Water Standard for nitrate (10 mg/l, as nitrogen).
4. The average nitrate-nitrogen and ammonia-nitrogen concentration total at station L4 during 1992-93 was approximately 1.2 mg/l N (as nitrogen). Since station L4 is upstream in a relatively undisturbed part of the watershed, it is a concentration that best reflects water quality conditions absent of anthropogenic effects (the contractor recommended a nitrate and ammonia nitrogen objective because suspended and attached algae most readily use nitrate and ammonia forms of nitrogen).
5. The 1992-93 average nitrate nitrogen concentration (1.1 mg/l, as nitrogen) at station L4 is slightly higher than estimated historical levels of 0.2 to 0.4 mg/l, as nitrogen, at station L4 during 1955-60. The slightly higher nitrate-nitrogen concentration now found at station L4 may be due to a slight increase in loading to Chesbro Reservoir.
6. Little information exists upon which to base a phosphate objective. However, one can be developed from the cellular composition of algae which corresponds to a nitrogen/phosphorous ratio of approximately 10:1 by weight. With a water quality objective of 1.2 mg/l N for inorganic nitrogen, an equivalent objective for phosphorus would be approximately ten times less or about 0.12 mg/l P, as phosphate. (This is consistent with the average orthophosphate concentration of 0.108 mg/l phosphate found at station L4 during 1992-93.)

B. Causes of nuisance algae growth

The results of San José State University's investigation indicate nuisance growths of attached and suspended algae occur as a result of the interaction of several factors:

1. Sunlight -

Riparian vegetation, which shades streams and limits algal growth, is absent in extensive reaches of streams in the study area.

2. Flow -

Some reaches of streams are pond-like due to the absence of flow, which promotes growth of suspended algae. High flow rates (where the river is shallow) tends to promote attached algae.

3. Substratum -

Attached algae grow where medium substratum (gravel) and coarse substratum (cobble) is available. Suspended algae grow where the substrate is sand, silt, or mud.

4. Erosion -

Phosphorus adsorbs to soil particles. Erosion increases phosphorus loading to water bodies. Erosion leads to suspended algae growth.

5. Nutrients-

High nutrient conditions lead to high algal biomass, but high algal biomass also occurs in the absence of apparent nutrient sources.

C. Alternative Objectives

1. Numerical Objectives

a. Reduce Nutrient Concentration by Staged Reduction Program

The current quarterly average for total inorganic nitrogen at Pajaro River/Llagas Creek monitoring stations is approximately 6.0 mg/l N, as nitrogen. A staged nitrogen reduction program could implement the nitrogen reductions as shown in Table Two below.

TABLE TWO. STAGED NITROGEN AND PHOSPHORUS REDUCTION PROGRAM

Concentration Reduction, %	Total Inorganic Nitrogen Concentration, mg/l	Total Phosphorus Concentration, mg mg/l	Date
50	3.0	0.3	5 years from adoption
75	1.5	0.15	10 years from adoption

The advantage of this alternative is a greater likelihood of attaining compliance. Furthermore, the Board may determine, at a future date, satisfaction with only 50% reduction. It is conceivable the Board could make such a determination if management measures are successful in controlling algal growth.

The disadvantage of this approach is that landowners may utilize Management Measures to a minimal extent.

b. Reduce Nutrient Concentration by Using Historical Nutrient Concentrations

Historical water quality conditions before the presence of agricultural effects could be adopted.

As early as 1952 to 1960 (the earliest data available), agriculture was probably impacting Pajaro River and lower Llagas Creek. For example, nitrate at Bloomfield Road during this period ranged from 0.1 to 9.9 mg/l nitrogen, as nitrogen. The site is affected by the Planel agricultural drain. The Planel ag drain is one of the major agricultural drainage systems providing input to Llagas Creek. During this same time period, nitrate at the upstream stations in Llagas Creek and Pajaro River ranged between 0.2 to 0.5 mg/l nitrogen, as nitrogen. These values may be a close approximation of historic pre-agriculture nitrate concentrations. Orthophosphate data are not available for this time period.

The advantage of this approach is that water quality will be improved.

The disadvantage is that this option may be too costly.

c. Reduce Nutrient Concentrations by Using Nutrient Concentrations from Nearby Rivers and Streams

Nitrate concentrations in streams found in open and mixed development land uses in Alameda, Santa Clara, and Contra Costa Counties are presented in Table Three. These Counties are in close proximity to the Pajaro River and Llagas Creek. These nutrient concentrations, measured during periods of storm water runoff, represent maximum winter concentrations that could be expected in similar watersheds (e.g., Pajaro and Llagas).

TABLE THREE. NITRATE CONCENTRATIONS IN STREAMS IN ALAMEDA, CONTRA COSTA, AND SANTA CLARA COUNTIES DURING STORM RUNOFF

Location	Land Use	
	Open	Mixed
Alameda County mean nitrate, mg/l, as nitrogen	0.55, 2.02 ^a	1.2
Contra Costa County mean nitrate, mg/l, as nitrogen	0.5, 2.3 ^a	1.3
Santa Clara County mean nitrate, mg/l, as nitrogen	0.18	0.64

^a Two different watershed concentrations

There are no known advantages to this alternative. The nutrient concentration values serve as an interesting comparison for other alternatives.

The disadvantage of this approach is that water quality and other characteristics of the Pajaro River/Llagas Creek watershed are not considered in selecting an objective.

d. Reduce Nutrient Concentrations by Using Objectives from Other Regional Boards

Examples of water quality objectives established by Regional Water Quality Control Boards for other regions in California are summarized in Table Four.

TABLE FOUR. EXAMPLES OF WATER QUALITY OBJECTIVES ESTABLISHED BY REGIONAL WATER QUALITY CONTROL BOARDS

Regional Water Quality Control Boards	Water Quality Objectives
Central Coast	Narrative and 0.06 mg/l nitrogen, as nitrogen - San Lorenzo River
Central Valley	Narrative
Colorado River Basin	Narrative (formerly 7 mg/l, nitrogen, as nitrogen)
Lahontan	Narrative, 0.8 mg/l total nitrogen, as nitrogen, on the Walker River, and 0.12, 0.4, and 0.4 mg/l total nitrogen, as nitrogen, along the Truckee River
North Coast	Narrative
San Diego	0.1 mg/l phosphorus, 1.0 mg/l nitrogen
San Francisco	Narrative and 50 µg/l chlorophyll a upstream from Carquinez Bridge
Santa Ana	Various, ranging from 1 to 13 mg/l nitrogen total inorganic nitrogen

Water quality objectives removed by the Regional Board in 1977 are shown in Table Five.

TABLE FIVE. WATER QUALITY OBJECTIVES FOR BIOSTIMULANTS IN BASIN PLAN IN 1977

Water Quality Objectives for Biostimulants in Basin Plan in 1977		
Designated Water	Concentration Not to be Exceeded	
	Total Nitrogen, mg/l	Total Phosphorus, mg/l
MAR ^a or WARM ^b	2.0	0.2
COLD ^c or SPWN ^d	1.0	0.1
REC -1 ^e or REC-2 ^f	0.5	0.05

^a Marine Habitat

^b Warm Freshwater Habitat

^c Cold Freshwater Habitat

^d Fish Spawning

^e Water-Contact Recreation

^f Non-Contact Water Recreation

There are no known advantages to this alternative other than the fact that these objectives were adopted by other Regional Boards. The nutrient concentration values also serve as an interesting comparison for other alternatives.

The disadvantage of this approach is that water quality and other characteristics of the Pajaro River/Llagas Creek watershed are not considered in selecting an alternative.

2. Nutrient Loading Reduction Goals

A second alternative to numerical nutrient objectives is to impose nutrient loading reduction goals. San Jose State University provided loading rates for cropland, rangeland, storm water, and percolation pond exfiltration (feedlots and septic system exfiltration are not expected to contribute significant loading).

The advantage of this approach is loading rates can be calculated on a site-specific basis and compared to previous loadings to determine if reductions are occurring.

The disadvantage of the process is that it requires extensive staff resources to do water sampling and site specific nutrient loading calculations.

Staff has not proposed specific optional nutrient loading limits because this option is not feasible with current staff resources.

3. Develop and Propose Algal Biomass Limits

A third alternative to recommended numerical nutrient objectives is to develop and propose maximum algal biomass (for example, chlorophyll-a limits and percent cover by algae limits).

The advantages of this approach is that such objectives would correlate directly with algal growth. Nutrients alone do not control algae growth in the Pajaro River and Llagas Creek. The concept of one single limiting factor (such as nutrients) is somewhat simplistic since many environmental factors may be limiting under different conditions and times. The most important factors controlling algal growth include nutrients, flow, substrate type, riparian vegetation (shading), and water clarity or turbidity.

The disadvantage of this alternative is another study of equal caliber would be necessary for developing a different objective. There would be no gain in such a delay because management measure implementation will mitigate the nuisance algae problem.

There is no indication a different constituent objective would be better at controlling nuisance algae.

4. Continue to Implement Narrative Objective

Continue to implement narrative objective for biostimulatory substances.

There are no advantages to this option.

The disadvantage of this approach is that there is no basis for compliance with a narrative objective.

II. FACTORS TO BE CONSIDERED IN ESTABLISHING WATER QUALITY OBJECTIVES

The Porter-Cologne Water Quality Control Act identifies issues to be considered in establishing water quality objectives. These include, but are not necessarily limited to, the following:

- Past, present, and probable future beneficial uses of water.
- Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.
- Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
- Economic considerations.
- The need for developing housing within the region.
- The need to develop and use recycled water.

A. Past, Present, and Probable Future Beneficial Uses of Water

The recommended and alternative water quality objectives proposed are expected to improve water quality and increase beneficial water use in the Pajaro River and Llagas-Creek Basin. Those beneficial uses that may be improved by the proposed objective are cold and warm water habitat; wildlife habitat; fish migration; spawning habitat; municipal/domestic water supply; agricultural water supply, industrial water supply; ground water recharge; water contact/non-contact water recreation; and rare, threatened, or endangered species habitat (the "Bank Swallow," a designated "threatened" species, exists in this area).

B. Environmental Characteristics of the Hydrographic Unit

The recommended water quality objective (1.2 mg/l total inorganic nitrogen, as nitrogen) was determined based on monitoring of the Pajaro River and Llagas Creek.

C. Economic Considerations

Is the Objective Currently being Attained?

The proposed objective is not currently being met.

Methods available to achieve compliance, if objective is currently not being attained

The proposed objective can be attained by implementation of Management Measures. The Management Measures are identified in Attachment A of Resolution 95-04.

Objective Attainment Costs

Cost examples for achieving the recommended and alternative water quality objectives were predominately determined by using the United States Environmental Protection Agency (U.S. EPA) "Guidance Specifying Management Measures for Sources of Nonpoint Pollution in Coastal Waters" document, dated January 1993. To achieve these objectives, site-specific practices that are economically and technically feasible -- "Best Management Practices" -- are implemented. Best Management Practices are regarded as practices or a

combination of practices which accomplish a variety of management measures to meet environmental regulations and/or production goals. The U.S. EPA guidance manual states:

U.S. "EPA has determined that all of the management measures in this guidance are economically achievable...cost effective. Congress defined "management measures" to mean "*economically achievable* measures... which reflect the greatest degree of pollutant reduction achievable through the application of the best available nonpoint pollution control practices, technologies, processes, siting criteria, operating methods, or other alternatives."

A detailed cost presentation is available in Appendix F.

Plans should be developed on a site-by-site basis to determine the Best Management Practice(s) for each situation. A good plan will improve water quality, soil, livestock, and crop productivity.

Technical assistance to develop plans for each site is offered by the U.S. Natural Resource Conservation Service, Resource Conservation Districts, and U.C. Cooperative Extension.

Private lands can receive technical assistance free of charge. Public lands usually must reimburse costs for larger projects. Cost sharing is available for some agricultural producers. The maximum benefit is \$3,500 per year. The maximum cost share ranges between 50% and 75%.

D. Need for Developing Housing Within the Region

The need for developing housing within the region should not be adversely affected by the proposed water quality objective.

E. Need to Develop and Use Recycled Water

This amendment proposes water quality objectives for nutrients (nitrogen and phosphorus) and Management Measures to attain objectives. One practice a plan can consider is to recycle water. Farmers could collect irrigation return flow for reuse in the irrigation process.

III. IMPLEMENTATION

The California Porter-Cologne Water Quality Control Act also specifies an implementation program should be developed to achieve water quality objectives. Porter-Cologne requires an implementation program include the following components (at a minimum):

- A. A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private;
- B. A time schedule for actions to be taken; and
- C. A surveillance program description to determine compliance with objectives.

A description of the nature of necessary actions, time schedule to implement necessary actions, and surveillance program to measure water quality improvement is provided in Resolution 95-04, Attachment A. Each item is also summarized below.

A. Description of the Nature of Actions

Land owners and dischargers should implement Management Measures to mitigate nuisance algae growth in Pajaro River and Llagas Creek. Management Measures can be achieved by applying one or more Best Management Practices. Management Measures and example Best Management Practices to control water quality degradation are listed in Table Six. Many Management Practices are conceptual, can be implemented in a variety of ways, and require site-specific considerations. For example, reducing nutrient and sediment loading from irrigation return flow depends on a variety of factors such as crop type, soil type, and land slope.

TABLE SIX. MANAGEMENT MEASURES, EXAMPLES OF BEST MANAGEMENT PRACTICES, AND RESPONSIBLE IMPLEMENTATION PARTY

MANAGEMENT MEASURE	EXAMPLES OF SOME SUITABLE BEST MANAGEMENT PRACTICE(S)	RESPONSIBLE IMPLEMENTATION PARTY
Reduce Nutrient and Sediment Loading from Irrigation Return Flow	Crop nutrient management; efficient irrigation water use; and vegetated buffer strips	Landowner
Reduce Nutrient and Sediment Loading from Cropland Storm Water Runoff	Conservation tillage; cover crops; vegetated drainages; and constructed wetlands	Landowner
Minimize Waste from Mushroom Farm Operations	Waste Minimization Plans	Landowner
Minimize Waste from Feedlot Operations	Waste Minimization Plans	Landowner
Reduce Poor Quality Ground Water Recharge of Pajaro River/Llagas Creek	Buffer strips	Landowner
Control Erosion	Livestock enclosures; grazing management; permanent vegetation in highly erodible areas; minimization of bare field exposure time; rehabilitation of riparian lands and establishment of protective buffer; vegetated drainages; constructed wetlands; and vegetated buffer strips	Landowner; Rancher; County; Municipal government; State
Upgrade Gilroy/Morgan Hill Wastewater Treatment System	Nitrification/Denitrification Systems	Wastewater facility
Reduce Pollutant Loading from Rangeland Storm Water Runoff	Infiltration basins	Rancher and County
Reduce Pollutant Loading from Urban and Storm Water Runoff	Education program; composting; vegetated filter strips; vegetated buffer strips; vegetated drainages; constructed wetlands; infiltration basins; porous pavement; and household hazardous chemical pick-up	Municipal Government or Transportation District
Riparian Habitat Management	Protect wetland vegetation; low flow channel restoration; and augmentation of stream flow	State

Implementing parties can contact agencies to develop and design appropriate site-specific Best Management Practices. The agencies that dischargers and/or landowners can contact are listed below.

- (1) The U.S. Department of Agriculture, Natural Resource Conservation Service,
- (2) Resource Conservation Districts, and
- (3) University of California Cooperative Extension.

Land owners are encouraged to contact these agencies now.

B. Time Schedule

The Regional Board expects the nutrient water quality objective to be attained by the year 2005. To reach this goal, the following three-tiered approach will be used to obtain compliance (these three steps were adopted by the Regional Board in February 1994 in Resolution 94-01).

First Step to Obtain Nutrient Objective Compliance -- Voluntary Implementation of Best Management Practices

Property owners or managers are encouraged to implement Management Measures as soon as possible. Landowners should contact agencies listed above to select and implement Best Management Practices that satisfy management measure requirements.

Second Step to Obtain Nutrient Objective Compliance -- Regional Board Encourages Management Measures

The Regional Board will encourage land owners to implement Management Measures by waiving adoption of waste discharge requirements on the condition that dischargers comply with Management Measures. Alternately, the Regional Board may enforce Management Measures indirectly by entering into management agency agreements with other agencies that have the authority to enforce Management Measures.

The Regional Board will generally refrain from imposing effluent requirements on dischargers that are implementing Management Measures in accordance with a waiver of waste discharge requirements, approved Management Agency Agreements, or other State or Regional Board formal action. Landowners should contact agencies listed above to select and implement Best Management Practices that satisfy Management Measure requirements.

The Regional Board will activate this second step by April 1998 if the semi-annual mean concentration is not reduced by 25 % of the average value shown for the applicable sampling station shown in Appendix 2-E of the "Establishment of Nutrient Objectives, Sources, Impacts, and Best Management Practices for the Pajaro River and Llagas Creek."

Third Step to Obtain Nutrient Objective Compliance - Regional Board Adoption of Effluent Limitations

The Regional Board will adopt and enforce waste discharge requirements. Limitations will be set at a level which requires implementation of Management Measures.

The Regional Board will activate this third step by April 2000 if the semi-annual mean concentration is not reduced by 50 % of the average value shown for the applicable sampling station shown in Appendix 2-E of the "Establishment of Nutrient Objectives, Sources, Impacts, and Best Management Practices for the Pajaro River and Llagas Creek."

C. Surveillance Program

Regional Board staff will monitor Pajaro River and Llagas Creek on a semi-annual basis. Regional Board staff will sample at the following locations:

- 1) Pajaro River at Chittenden Pass,
- 2) Pajaro River at Highway 25,
- 3) Pajaro River at Frazier Lake Road,
- 4) Llagas Creek at Bloomfield Road,
- 5) Llagas Creek at Luchessa Road, and
- 6) Llagas Creek at Highway 152.

IV. Antidegradation Policy Compliance

This action will improve water quality and thus restore the high water quality that existed prior to point and nonpoint source pollution impacts.

ENVIRONMENTAL SUMMARY:

An environmental assessment package has been prepared and is available to interested individuals. The basin planning process has been determined to be functionally equivalent to the California Environmental Quality Act process in accordance with Section 21000 et seq. of the Public Resources Code. Appropriate notices and waiting periods have been provided. This process will satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

COMMENTS:

A. Bill Allayaud, California State Coastal Commission, Phone Call on March 8, 1995.

1. The Pajaro River and Llagas Creek Nutrient Objective implementation time schedule should indicate when steps two and three will be implemented.

Response: Agree. The staff report now indicates that the second and third step to obtain nutrient objective compliance will be activated if the quarterly mean concentration is not reduced by 25 and 50%, respectively, of the average value shown for the applicable sampling station shown in Appendix 2-E of the "Establishment of Nutrient Objectives, Sources, Impacts, and Best Management Practices for the Pajaro River and Llagas Creek."

B. Several comments from Diane L. Evans, County of Santa Cruz Environmental Health Service, Letter received March 20, 1995.

1. For consistency the watershed should be referred to as the San Lorenzo River Watershed.

Response: Agree. The staff report now uses the San Lorenzo River Watershed.

2. Page 3, 1.e. of the staff report should refer to County Code 7.38, not County Ordinance No. 4220, Chapter 7.38.

Response: Agree. This reference is now on page four of the staff report.

- 3a. The recommendations for nitrate management have been refined since the staff report was prepared. On page 5, 2.d sandy soils are defined as having a percolation rate faster than 6 minutes per inch.

Response: Agree. This reference is now on page six of the staff report.

- 3b. Under 2.e, large systems are defined as those serving more than five residential units or having a peak daily flow of more than 2000 gallons per day.

Response: Agree. This reference is now on page six of the staff report.

4. On page 9 of the staff report, item II.2, the estimated annual CSA 12 service charge may need to be increased to \$3.00 per year per parcel to provide for increased inspections.

Response: Agree. This reference is now on page ten of the staff report.

5. On page 9 of the staff report, under III.B, Time Schedule, item c. should read: "Require Upgrade of all Failing Prestandard Systems". The County does not have the authority to require upgrades unless the systems are found to be failing.

Response: Agree. This reference is now on page eleven of the staff report.

6. Request for editorial changes to the proposed Basin Plan amendment contained in Attachment A.

Response: Agree. Editorial changes made to Attachment A which is now Attachment B of the staff report.

7. Request for the Board to consider revision of the nitrate objective for the San Lorenzo River.

Response: Disagree. The proposed Basin Plan amendment for the San Lorenzo River Watershed only addresses changes to Resolution 82-10. Staff does agree that the nitrate objective for the San Lorenzo River should be reviewed at a later date.

- C. David Ross, President, Board of Directors San Lorenzo Valley Water District, Letter received March 20, 1995.

1. The letter urges the Board to approve and adopt Resolution 95-04.

Response: Agree.

RECOMMENDATION:

Adopt Resolution 95-04

Angela G Carpenter has a Bachelor's degree in Environmental Engineering from Cal Poly, San Luis Obispo, and has worked developing Basin Plan Amendments for 13 years. She has completed training course dealing with nonpoint source management.

Howard E. Kolb graduated from Humboldt State University in 1984 with a B.Sc. in Environmental Engineering, emphasis in water quality. After graduation, Howard spent two years in Central America as a water and sanitation advisor with CARE International. In October 1988, Howard completed a M.Sc. in Public Health Engineering at the University of Leeds, England. Howard has been with the Board since 1989 and now holds the position of Associate Water Resources Control Engineer (Registered Civil Engineer, CA #C-50959). While working as the Board's nonpoint source program manager, Howard has co-authored several reports and papers on both septic systems and the fate of bacteria in the environment.

RESOLUTION 95-04
ATTACHMENT A
PROPOSED BASIN PLAN AMENDMENTS

The following Basin Plan amendment is proposed. (Note new language is shown in bold, existing language is shown in plain text, and deleted language is ~~struck out~~.)

1. Revise the November 17, 1989 Basin Plan, Chapter Four, page 11 as follows:

~~Individually owned septic tank leachfield systems in the San Lorenzo Valley are being studied closely have been inspected and monitored from 1986 through 1994. to identify p~~Problem areas have been identified and ~~determine~~ the suitability of these problem areas for the continued use of septic systems has been determined as documented in the County of Santa Cruz, Environmental Health Services reports **(1) Preliminary Report, An Evaluation of Wastewater Disposal And Water Quality In The San Lorenzo Watershed, September, 1989, (2) Final Project Report, Boulder Creek Wastewater Feasibility Study, October, 1991; and (3) Final Project Report, San Lorenzo Valley Community Wastewater Feasibility Studies, March, 1994.** Alternatives ~~will be proposed and evaluated~~ have been evaluated and solutions proposed to reduce septic system problems and to respond to this Plan's discharge prohibition in certain areas of the valley. Solutions are contained in the "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "Draft San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan). ~~Specific design criteria for conventional and modified septic systems will be developed as part of on-going county studies~~ The Wastewater Management Plan documents standards and conditions that shall be met for the protection and enhancement of beneficial uses.

Implementation of the Wastewater Management Plan precludes the Regional Board from reestablishing the discharge prohibition.

2. Revise the November 17, 1989 Basin Plan, Chapter Four, pages 53-54 as follows:

~~Discharges from individual sewage disposal systems within the San Lorenzo River Watershed Valley north of Henry Cowell State Park shall be managed as follows:~~

- a. ~~Discharges within five communities are prohibited shall be allowed, where the affected area (Class I Area) is defined by the Santa Cruz County Assessor's Parcel Numbers as described in Appendix A-23~~ providing the County of Santa Cruz, as lead agency, implements the "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "Draft San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan) and assure the Regional Board that areas of the San Lorenzo River Watershed are serviced by wastewater disposal systems to protect and enhance water quality, to protect and restore beneficial uses of water, and to abate and prevent nuisance, pollution, and contamination..
- b. ~~To preclude prohibition of discharges outside the Class I Area, the County of Santa Cruz, shall act as lead agency in coordinating and establishing a program that will assure the Regional Board that:~~

~~additional systems in these areas will be designed, sized, located, spaced, and constructed in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.~~

~~existing systems within specific communities are systematically evaluated and redesigned, resized, relocated, and reconstructed as appropriate to protect and enhance water quality, to protect and restore beneficial uses of water, and abate and prevent nuisance, pollution and contamination, where the specific communities (Class II Area) are defined by the Santa Cruz County Assessor's Parcel Numbers as described in Appendix A-24.~~

~~systems within the Class II Area are regularly inspected and maintained in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.~~

In fulfilling the responsibilities identified above, the County of Santa Cruz shall submit annual reports beginning on January 15, 1996. The report shall state the status and progress of the Wastewater Management Plan in the San Lorenzo River Watershed. The County of Santa Cruz annual report shall document the results of:

1. Existing Disposal System Performance Evaluations,
2. Disposal System Improvements,
3. Inspection and Maintenance of On-site Systems,
4. Community Disposal System Improvements,
5. New Development and Expansion of Existing System Protocol and Standards,
6. Water Quality Monitoring and Evaluation,
7. Program Administration Management, and
8. Program Information Management.

The report shall also document progress on each element of the Nitrate Management Plan, including:

1. Parcel Size Limit,
2. Wastewater Management Plan Implementation,
3. Boulder Creek Country Club Wastewater Treatment Plant Upgrade,
4. Shallow Leachfield Installation,
5. Enhanced Wastewater Treatment for Sandy Soils,
6. Enhanced Wastewater Treatment for Large On-site Disposal Systems,
7. Inclusion of Nitrogen Reduction in Waste Discharge Permits,
8. Livestock and Stable Management,
9. Protection of Groundwater Recharge Areas,
10. Protection of Riparian Corridors and Erosion Control,
11. Nitrate Control for New Uses,
12. Scotts Valley Nitrate Discharge Reduction, and
13. Monitoring for Nitrate in Surface and Ground Water,

3. Revise Resolution 94-01, Chapter Four, pages 26 through 28 as follows:

"A program of implementation to protect beneficial uses and to achieve water quality objectives is an integral component of this Basin Plan. The program of implementation is required to include, but is not limited to:

-A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private.

-A time schedule for the actions to be taken.

-A description of surveillance to be undertaken to determine compliance with objectives.

Additional surveillance activities to determine compliance with objectives are described in Chapter Six, "Surveillance and Monitoring".

This chapter includes discussions of:

- Regional Water Quality Control Board Goals
- General Control Actions and Related Issues
- Waste Discharge Regulation
- Hazardous Waste Compliance Issues, and
- Nonpoint Source Measures, and
- Nutrient Management Measures.

Detailed descriptions of waterbodies with their specific water quality problems and recommended control actions are included in the Region's Water Quality Assessment database and Fact Sheets.

This chapter is organized in the following manner:

- I. Introduction
- II. Regional Water Quality Board Goals
- III. General Control Actions and Related Issues
- IV. Control Actions under State Board Authority
- V. Control Actions to be Implemented by Other Agencies with Water Quality or Related Authority
- VI. Control Actions under Regional Board Authority
 - A. Waste Discharge Restrictions
 - 1. Water Quality Certification
 - 2. National Pollutant Discharge Elimination System
 - 3. Waste Discharge Requirements
 - 4. Waivers
 - 5. Prohibitions and Prohibition Exemptions
 - 6. Enforcement Actions
 - 7. Best Management Practices
 - 8. Compliance Schedules
 - B. Nonpoint Source Program
- VII. Waste Discharge Program Implementation
 - A. Effluent Limits
 - 1. Stream Disposal
 - 2. Estuarine Disposal
 - 3. Ocean Disposal
 - 4. Land Disposal
 - a. Wastewater Disposal
 - 5. Reclamation and Reuse
 - 6. Pretreatment Program
 - 7. Sludge Treatment

- B. Municipal Wastewater Management Plans (arranged by hydrologic sub-area)
- C. Industrial Wastewater Management
- D. Solid Waste Management
- E. Storm Water Management
- F. Bay Protection and Toxic Cleanup Program
- G. Military Installations
- H. Spills, Leaks, Investigations, and Cleanup Program
- I. Underground Tank Storage Tank Program
- J. Aboveground Petroleum Storage Tanks
- K. California Code of Regulations, Title 23, Chapter 15
 - 1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)
 - 2. Wastewater Sludge/Septage Management
 - 3. Mining Activities
 - 4. Other Industrial Activities
- L. Resource Conservation Recovery Act (Subtitle D)
- M. Solid Waste Water Quality Assessment Test

VIII. Hazardous Waste Compliance Issues

- A. Reportable Quantities of Hazardous Waste and Sewage Discharges
- B. Proposition 65

IX. Nonpoint Source Measures

- A. Coastal Zone Act Reauthorization Amendments
- B. Urban Runoff Management
- C. Agricultural Water and Wastewater Management
- D. Individual, Alternative, and Community Disposal Systems
- E. Land Disturbance Activities

X. Management Measures

A. Pajaro River and Llagas Creek

4. Revise page III-14 of November 17, 1989 Basin Plan as follows:

~~A specific monthly mean objective for Nitrate (as NO₃) of 0.25 mg/l shall apply to both the upper and lower San Lorenzo River to protect beneficial uses from adverse biostimulatory effects. Specific biostimulant objectives for other surface water will be added to this section in tabular form once they are determined from further studies.~~

5. Revise page III-14 of November 17, 1989 Basin Plan as follows:

Table 3-7. Surface Water Quality Objectives, mg/l^a

Sub-Basin/Sub-Area	TDS ^a	Cl ^a	SO ₄ ^a	B ^a	Na ^a	Nitrate (as NO ₃) ^b	Total Inorganic Nitrogen (as N) ^c
Pajaro River							
at Chittenden	1000	250	250	1.0	200		1.2
Llagas Creek	200	10	20	0.2	20		1.2
San Lorenzo River							
Above Bear Creek	400	60	80	0.2	50	0.25	
At Tait Street Check Dam	250	30	60	0.2	25	0.25	

^a Objectives shown are annual mean values. Objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources.

^b Objectives shown are monthly mean values. Objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point and nonpoint sources.

^c Objectives shown are quarterly mean values. Objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point and nonpoint sources.

6. Add the following language to the end of Chapter Four (page IV-64 of the November 17, 1989 version):

NUTRIENT MANAGEMENT MEASURES

upstream of Chittenden
 Management measures are necessary to mitigate nuisance algae growths in the Pajaro River and Llagas Creek basin. Management measures include practices that reduce nutrient discharges to surface waters or mitigate biological, chemical, and/or physical factors contributing to nuisance growths of algae. Management measures can be achieved by applying one or more Best Management Practices. Best Management Practices are determined on a site-by-site case based on each property's unique characteristics.

We have provided some Best Management Practices below. These practices are intended merely as an example of approaches that can be taken to meet water quality objectives.

A. Minimize Nutrient and Sediment Loading from Irrigation Return Flow

Source control measures should be utilized to reduce nutrient and sediment loading from irrigation return flow. Examples of Best Management Practices include crop nutrient management and efficient irrigation water use.

Hydrologic modification measures may be necessary. For example, farmers could install vegetated buffer strips to attenuate the direct flow of irrigation water and storm water runoff to surface waters from adjacent cropland, pasture land, or rangeland. Buffer strips enhance water quality by attenuating flow, increasing infiltration, filtering out soil particles, and protecting riparian/aquatic resources.

B. Minimize Nutrient and Sediment Loading from Cropland Storm Water Runoff

Source control measures should be utilized to reduce nutrient and sediment loading from cropland storm water. Examples of Best Management Practices include conservation tillage and cover crops.

Hydrologic modification measures listed below may also be necessary. Some examples of such Best Management Practices are listed below:

Vegetated Drainages

Farmers should install grass cover in constructed drainages that convey irrigation return flow or cropland storm water runoff. Grass cover in drainages will act to enhance infiltration and absorb some soluble forms of nutrients contained in ditch water. In some cases, ditches can be replaced with wider, easily vegetated swales that reduce flow energy.

Constructed Wetlands

Small constructed wetlands which can achieve substantial nutrient removal can be used in drainages exhibiting year-round saturated conditions.

C. Minimize Waste from Mushroom Farm Operations

Dischargers should prepare and implement waste minimization plans every third year. The discharger should identify sources of waste streams (including contaminated storm water, boiler blowdown waste, and water softener waste). The plan should develop handling procedures and control waste streams.

D. Minimize Waste from Feedlot Operations

Feedlot operators should prepare and implement waste minimization plans every third year. The discharger should identify sources of waste streams (including contaminated storm water). The plan should develop handling procedures and control waste streams.

E. Minimize Poor Quality Ground Water Recharge of Pajaro River/Llagas Creek

Source control measures should be utilized to reduce impacts of poor quality ground water recharging surface waters. An example includes the use of buffer strips.

F. Control Erosion

Source control measures should be utilized to reduce sediment loading impacts. Example Best Management Practices include: livestock enclosures, grazing management, permanent vegetation in highly erodible areas, and minimization of bare field exposure time.

Ecosystem modification measures may be necessary. For example, landowners should rehabilitate riparian lands. Revegetation and erosion control measures should be installed to inhibit direct runoff to surface waters, enhance infiltration, and provide stream shading. Protective buffers should be installed to prevent heavy equipment and other disturbances on riparian land.

Landowners may need to install hydrologic modification Best Management Practices. Examples of such practices are shown below:

Vegetated Drainages

Landowners should install grass cover in constructed drainages that convey storm water runoff. Grass cover in drainages will act to enhance infiltration and absorb some soluble forms of nutrients contained in ditch water. In some cases, ditches should be replaced with wider, easily vegetated swales that reduce flow energy.

Constructed Wetlands

Small constructed wetlands which can achieve substantial nutrient removal can be used in drainages exhibiting year-round saturated conditions.

Vegetated Buffer Strips

Landowners should install vegetated buffer strips to attenuate the direct flow of storm water runoff to surface waters. Buffer strips enhance water quality by attenuating flow, increasing infiltration, filtering out soil particles, and protecting riparian/aquatic resources.

G. Upgrade Gilroy/Morgan Hill Wastewater Treatment System

Nitrification/denitrification processes were added to the Gilroy/Morgan Hill wastewater treatment system in 1993. These processes will improve ground water quality and any ground water that exfiltrates to Llagas Creek.

H. Minimize Rangeland Storm Water Runoff

Ranchers should install infiltration basins to collect runoff from rangelands. Ponds promote infiltration and evaporation. In areas of high nitrates in ground water, linings or special management may prevent ground water contamination.

I. Minimize Pollutant Loading from Urban and Storm Water Runoff

Source control measures should be utilized to reduce pollutant loading. Example Best Management Practices include education programs and composting to reduce need for added fertilizer. Materials used for compost can either be composted on-site or collected by a curbside collection program.

Preventative treatment measures should be utilized to keep nutrients from reaching surface waters. For example, landowners should install vegetated filterstrips adjacent to sources of urban and transportation runoff. This practice enhances infiltration and nutrient removal. Filterstrips placed adjacent to large commercial site with intensive landscaping inhibit the delivery of nutrients from heavily fertilized areas.

Hydrologic modification management measures may further improve water quality. Examples of such Best Management Practices include:

Vegetated Buffer Strips

Landowners should install vegetated buffer strips to attenuate direct flow of storm water runoff to surface waters from adjacent industries and urban activities. Buffer strips enhance water quality by attenuating flow, increasing infiltration, filtering out soil particles, and protecting riparian/aquatic resources.

Vegetated Drainages

Landowners should install grass cover in constructed drainages that convey storm water runoff. Grass cover in drainages will act to enhance infiltration and absorb some soluble forms of nutrients contained in ditch water. In some cases, ditches should be replaced with wider, easily vegetated swales that reduce flow energy.

Constructed Wetlands

Small constructed wetlands which can achieve substantial nutrient removal can be used in drainages exhibiting year-round saturated conditions.

Infiltration Basins

Landowners should install storm water retention basins to promote infiltration and evaporation of urban/storm water runoff. Ponds may require linings or special management to prevent ground water contamination.

Porous Pavement

Landowners should use permeable surfaces for walkways, landscaping, and parking areas to maximize storm water infiltration.

Household Hazardous Chemical Pick-up

Cities and Counties should provide hazardous waste collection opportunities on a regular basis. This practice reduces the illicit disposal of hazardous materials.

J. Protect Riparian Habitat

Wetland vegetation should be protected. This vegetation provides some nutrient treatment and should be maintained as long as the channel and flow conditions remain unchanged. Wetland vegetation also appears to inhibit algae growth by covering the prime substrate for attached algae growth.

Ecosystem modifications may further enhance water quality. Such modifications are described below:

Low Flow Channel Restoration

Landowners and Public Agencies should restore greater in-stream flow depths to inhibit light penetration to algae substrate.

Augmentation of Streamflow

Public agencies responsible for stream flow should augment streamflow to dilute nutrient concentrations in regions where nutrient sources make up the only component of streamflow.

ATTACHMENT B

**STATE OF CALIFORNIA
CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION**

RESOLUTION NO. 95-04

**ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD TO:**

- 1) RESCIND ON-SITE SYSTEM PROHIBITION AND ADD WASTEWATER MANAGEMENT PLAN
FOR THE SAN LORENZO RIVER WATERSHED, SANTA CRUZ COUNTY**

AND

- 2) ADD NUTRIENT OBJECTIVES/MANAGEMENT MEASURES
FOR PAJARO RIVER AND LLAGAS CREEK**

WHEREAS:

1. The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975.
2. The Regional Board periodically revises and amends the Basin Plan.
3. In response to extreme environmental conditions found in the San Lorenzo River Watershed, the excessive number of failing septic systems, and water quality degradation, the Regional Board adopted Resolution 82-10.
4. Resolution 82-10 recognized the difficulties associated with on-site wastewater disposal and addressed the problem in two ways. First, five communities within the watershed were designated as "Prohibition Zones." These five areas were referred to as "Class I" areas. Discharge of wastewater from on-site systems was prohibited as of July 1, 1986 and off-site wastewater disposal solutions were to be implemented. Second, other areas of the watershed were labeled "Class II." In Class II areas, the County of Santa Cruz was to implement a program to manage on-site wastewater disposal .
5. The "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995 and "Draft San Lorenzo Nitrate Management Plan, Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service (Wastewater Management Plan) is a satisfactory mitigation of Regional Board Resolution 82-10.
6. San Jose State University prepared a study titled "The Establishment of Nutrient Objectives, Sources, Impacts, and Best Management Practices for the Pajaro River and Llagas Creek", February 28, 1994.

7. The aforesaid study identified nutrient water quality objectives and Management Measures/Best Management Practices to control nuisance algal blooms in the Pajaro River and Llagas Creek.
8. The United States Congress Coastal Zone Act Reauthorization Amendments (CZARA, Section 6217 (g)) require states to "restore and protect" coastal waters. The Pajaro River and Llagas Creek are subject to CZARA, Section 6217 (g)).
9. The Regional Board has determined the Basin Plan requires further revision and amendment.
10. Drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment.
11. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.
12. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and the threatened and endangered plants and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made determination of "no jeopardy" pursuant to the California Endangered Species Act.
13. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
14. On April 14, 1995 in Salinas, California, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant adverse effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. Based on the approval and adoption of Resolution 95-04, the Board shall rescind Resolution 82-10.
4. The Basin Plan amendment shown on Attachment "A" is approved. The amendments will not take effect until approved by the State Board and the Office of Administrative Law.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the U.S. Environmental Protection Agency for approval.

I, ROGER W. BRIGGS, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on April 14, 1995.

Executive Officer

ATTACHMENT C

CALIFORNIA ENVIRONMENTAL QUALITY ACT "FUNCTIONAL EQUIVALENT" REPORT FOR BASIN PLAN AMENDMENT (RESOLUTION 95-04)

The California Regional Water Quality Control Board, Central Coast Region intends to update the Water Quality Control Plan (Basin Plan), Central Coast Region. The purpose of this amendment is to:

1. Incorporate an on-site septic system management program for the San Lorenzo River watershed and
2. Incorporate nutrient objectives and Management Measures for Pajaro River and Llagas Creek

The Basin Planning process has been certified as "functionally equivalent" to the preparation of the Environmental Impact Report (EIR) for the purposes of complying with the California Environmental Quality Act (CEQA) (Section 15251, Title 14, California Code of Regulations (CCR)). Based on the certification, this Basin Plan Amendment Report is used in lieu of an EIR or a Negative Declaration.

Any Regional Board regulatory program certified as functionally equivalent, however, must satisfy the documentation requirements of Section 377 (a), Title 23, CCR. This report satisfies part (a) of that section. It contains the following:

1. A Description of Proposed Activity and Proposed Alternatives,
2. An Environmental Checklist with a Description of the Proposed Activity,
3. An Environmental Evaluation, and
4. A Determination with respect to significant Environmental Impacts.

I. DESCRIPTION OF PROPOSED ACTIVITY

This section details changes proposed for the April 1995 Water Quality Control Plan (Basin Plan) amendment, Resolution 95-04. This amendment addresses changes to the Basin Plan. The purpose of this amendment is to:

1. Incorporate an on-site septic system management program for the San Lorenzo River watershed and
2. Incorporate nutrient objectives and management measures for Pajaro River and Llagas Creek.

Alternatives to this proposal include:

1. No action. This alternative is not recommended because it represents a potential detriment to water quality.
2. Postponement to a later date. For the San Lorenzo River Watershed, this alternative is not recommended because it does not satisfy the intent of the Santa Cruz County Board of Supervisors/Regional Water Quality Control Board Subcommittee.

For both amendments, this alternative is not recommended because it delays water quality improvement.

3. For the San Lorenzo River Watershed, require higher levels of wastewater treatment for existing on-site wastewater disposal systems. This alternative is not recommended because the current repair standards were negotiated by the Santa Cruz County Supervisors and Regional Board Subcommittee. The proposed levels of wastewater treatment protect beneficial uses, while limiting the economic hardship to septic system owners.
4. For the San Lorenzo River Watershed, require the problem areas identified in Appendix H of the Management Plan to implement off-site wastewater disposal solutions. This alternative is not recommended because of the limited increase in protection of beneficial uses over on-site wastewater disposal. Additionally, off-site solutions would create extreme economic hardship to local land owners.

5. Some possible options to the proposed objective for Pajaro River/Llagas Creek are evaluated in the staff report and are listed below:
 - a. Numerical Objective Options
 - Reduce Nutrient Concentrations by Staged Reduction Program
 - Reduce Nutrient Concentrations by Using Historical Nutrient Concentrations
 - Reduce Nutrient Concentrations by Using Nutrient Concentrations from Nearby Rivers and Stream
 - Reduce Nutrient Concentrations by Using Water Quality Objectives Imposed by Other Regional Boards
 - b. Nutrient Loading Reduction Goals
 - c. Develop and Propose Maximum Algal Biomass Objectives
 - d. Continue to implement Current Narrative Objective
6. Possible options to Management Measures for the Pajaro River/Llagas Creek may vary from those proposed in the amendment. Optional Management Measures should only be utilized after considering the unique characteristics of each site.
7. Partial adoption of the proposed amendment. This alternative is recommended only if it does not result in a detriment to water quality.
8. Modify amendment. This alternative is recommended only if it does not result in a detriment to water quality and sufficient information is available to substantiate the modification.
9. Additional amendments. The Regional Board may consider additional alternatives, but will limit its action to a logical outgrowth of the proposed action. Specific substantive changes to the basin Plan, such as amending a specific action plan, will be subject to public notice and comment at the time those changes are proposed.

II. ENVIRONMENTAL IMPACTS

(Explanations of all "yes" and "maybe" answers are attached.)

	YES	MAYBE	NO
1. Earth. Will the proposal result in:			
a. Unstable earth conditions or in changes in geologic substructures?	—	—	<u>X</u>
b. Disruptions, displacements, compaction or over covering of the soil?	—	<u>X</u>	—
c. Change in topography or ground surface relief features?	—	<u>X</u>	—
d. The destruction, covering or modification of any unique geologic or physical features?	—	—	<u>X</u>
e. Any increase in wind or water erosion of soils, either on or off the site?	—	—	<u>X</u>
f. Changes in deposition or erosion of beach sands, or changes in siltation, deposition or erosion which may modify the channel of a river or stream or the bed of the ocean or any bay, inlet or lake?	<u>X</u>	—	—
g. Exposure of people or property to geologic hazards such as earthquakes, landslides, mudslides, ground failure, or similar hazards?	—	—	<u>X</u>
2. Air. Will the proposal result in:			
a. Substantial air emissions or deterioration of ambient air quality?	—	—	<u>X</u>
b. The creation of objectionable odors?	—	<u>X</u>	—
c. Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally?	—	—	<u>X</u>
3. Water. Will the proposal result in:			
a. Changes in currents, or the course or direction of water movements, in either marine or fresh waters?	—	<u>X</u>	—
b. Changes in absorption rates, drainage patterns or the rate and amount of surface water runoff?	—	<u>X</u>	—
c. Alterations to the course or flow of flood waters?	—	<u>X</u>	—
d. Change in the amount or surface water in any water body?	—	<u>X</u>	—
e. Discharge into surface waters, or in any alteration of surface water quality, including but not limited to			

	YES	MAYBE	NO
temperature, dissolved oxygen or turbidity?	<u>X</u>	—	—
f. Alteration of the direction or rate of flow of ground waters?	—	<u>X</u>	—
g. Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations?	—	<u>X</u>	—
h. Substantial reduction in the amount of water otherwise available for public water supplies?	—	<u>X</u>	—
i. Exposure of people or property to water related hazards such as flooding or tidal waves?	—	—	<u>X</u>
4. Plant Life. Will the proposal result in:			
a. Change in the diversity of species, or number of any species of plants (including trees, shrubs, grass, crops, microflora and aquatic plants)?	—	<u>X</u>	—
b. Reduction of the numbers of any unique, rare or endangered species of plants?	—	—	<u>X</u>
c. Introduction of new species of plants into an area, or in a barrier to the normal replenishment of existing species?	—	—	<u>X</u>
d. Reduction in acreage of any agricultural crop?	—	<u>X</u>	—
5. Animal Life. Will the proposal result in:			
a. Change in the diversity of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects or microfauna)?	—	<u>X</u>	—
b. Reduction of the numbers of any unique, rare or endangered species of animals?	—	—	<u>X</u>
c. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals?	—	<u>X</u>	—
d. Deterioration to existing fish or wildlife habitat?	—	—	<u>X</u>
6. Noise. Will the proposal result in:			
a. Increases in existing noise levels?	—	—	<u>X</u>
b. Exposure of people to severe noise levels?	—	—	<u>X</u>

	YES	MAYBE	NO
7. Light and Glare. Will the proposal produce new light or glare?	—	—	<u>X</u>
8. Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area?	—	<u>X</u>	—
9. Natural Resources. Will the proposal result in:			
a. Increase in the rate of use of any natural resources?	—	—	<u>X</u>
b. Substantial depletion of any nonrenewable natural resource?	—	—	<u>X</u>
10. Risk of Upset. Does the proposal involve a risk of an explosion or the release of hazardous substances (including, but not limited to, oil, pesticides, chemicals or radiation) in the event of an accident or upset conditions?	—	—	<u>X</u>
11. Population. Will the proposal alter the location, distribution, density, or growth rate of the human population in the area?	—	—	<u>X</u>
12. Housing. Will the proposal affect existing housing, or create a demand for additional housing?	—	—	<u>X</u>
13. Transportation/Circulation. Will the proposal result in:			
a. Generation of substantial additional vehicular movement?	—	—	<u>X</u>
b. Effects on existing parking facilities, or demand for new parking?	—	—	<u>X</u>
c. Substantial impact upon existing transportation systems?	—	—	<u>X</u>
d. Alterations to present patterns of circulation or movement of people and/or goods?	—	—	<u>X</u>
e. Alterations to waterborne, rail or air traffic?	—	—	<u>X</u>
f. Increase in traffic hazards to motor vehicles, bicyclists or pedestrians?	—	—	<u>X</u>
14. Public Services. Will the proposal have an effect upon, or result in a need for new or altered governmental services in any of the following areas?			
a. Fire protection?	—	—	<u>X</u>
b. Police protection?	—	—	<u>X</u>
c. Schools?	—	—	<u>X</u>
d. Parks or other recreational facilities?	—	<u>X</u>	—

	YES	MAYBE	NO
e. Maintenance of public facilities, including roads?	—	—	<u>X</u>
f. Other governmental services?	—	<u>X</u>	—
15. Energy. Will the proposal result in:			
a. Use of substantial amounts of fuel or energy?	—	—	<u>X</u>
b. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy?	—	—	<u>X</u>
16. Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities:			
a. Power or natural gas?	—	—	<u>X</u>
b. Communications systems?	—	—	<u>X</u>
c. Water?	—	—	<u>X</u>
d. Sewer or septic tanks?	—	<u>X</u>	—
e. Storm water drainage?	—	<u>X</u>	—
f. Solid waste and disposal?	—	—	<u>X</u>
17. Human Health. Will the proposal result in:			
a. Creation of any health hazard or potential health hazard (excluding mental health)?	—	<u>X</u>	—
b. Exposure of people to potential health hazards?	—	<u>X</u>	—
18. Aesthetics. Will the proposal result in the obstruction of any scenic vista or view open to the public, or will the proposal result in the creation of an aesthetically offensive site open to public view?	—	—	<u>X</u>
19. Recreation. Will the proposal result in an impact upon the quality or quantity of existing recreational opportunities?	—	<u>X</u>	—
20. Archeological/Historical. Will the proposal result in the alteration of a significantly archeological or historical site, structure, object or building?	—	—	<u>X</u>

III. DISCUSSION ON ENVIRONMENTAL EVALUATION (of checklist questions answered yes or maybe)

Potential environmental impacts occur for the proposed San Lorenzo River Watershed Management Plan and the proposed nutrient objective/management measures for the Pajaro River and Llagas Creek. The impacts due to the San Lorenzo River Watershed Management Plan are discussed first. Afterwards the impacts of the Pajaro River/Llagas Creek nutrient objectives and management measures are discussed.

San Lorenzo River Watershed Management Plan

- 2b. Septic systems may produce objectionable odors if improperly managed. However, the impacts are considered minimal because the water quality improvements are much greater.
- 3f. Septic systems may alter the rate of ground water flow. However, the impacts are considered minimal because the water quality improvements are much greater.
- 3g. Septic systems may change ground water quality through direct addition. This impact may or may not be significant depending on the type of system installed and the level of treatment provided by the system. However, with improved on-site wastewater disposal systems the impacts are considered minimal because of the improvement in effluent quality.
- 3h. Septic systems may reduce the amount of ground water available through direct contamination. However, with improved on-site wastewater disposal systems the impacts are reduced because of improved effluent quality.
- 8. Some parcels may no longer be "buildable" due to improved on-site wastewater disposal standards. Although this may alter some present or planned land use, the loss of some developable area is preferred to degraded public health.
- 17a. Septic systems may create health hazards if improperly managed. However, the impacts are considered minimal because the water quality improvements are much greater.
- 17b. People are exposed to septic systems during construction and maintenance. This may create a health hazard to the public if improperly managed. However, the impacts are considered minimal because the water quality improvements are much greater.

Nutrient Objectives and Management Measures for the Pajaro River and Llagas Creek

- 1b. This amendment recommends measures to minimize soil disruption. However, some soil disruption will occur (even though the impacts are minimized). For example, conservation tillage practices are suggested in this amendment. Conservation tillage does disrupt soil, but this practice reduces erosion that results from conventional tillage practices.
- 1c. Changes in ground surface relief features could occur in the Pajaro River/Llagas Creek if some of the Best Management Practices are implemented. For example, low flow channel restoration would result in greater in-stream flow depth. Increased flow depth would cover the surface water bed with more water thereby covering some river/creek bed features with water.

This impact is considered minimal because water quality improvements produce a greater positive impact.

- 1f. This amendment will improve siltation, deposition, or erosion which may stabilize river or stream channels and reduce sediment in water bodies.
- 3a. This amendment recommends augmentation of streamflow. Streamflow augmentation could increase water currents. This impact is overshadowed by the resulted water quality improvement.
- 3b. This amendment may retain or protect vegetation near waterways which may beneficially improve absorption rates or surface runoff rates.
- 3c. The course for flood waters could be narrowed in some instances by some Best Management Practices such as vegetated buffer strips. Other Best Management Practices, such as storm water retention basins, could reduce flood water flow.
- 3d. This amendment recommends low flow channel restoration and augmentation of streamflow to dilute nutrients. This recommendation will be effective if implemented in the summer season. Therefore, flooding is not expected to be a problem.
- 3e. This amendment will improve water quality due to reduction in pollutants.
- 4a. This amendment may improve the diversity of plant species, or number of species of plants due to vegetation buffers or livestock enclosures.
- 4d. This amendment could reduce agricultural crop acreage in some cases. For example, installation of vegetated buffer strips or wetlands could reduce crop acreage. This impact is offset by the greater improvement to water quality.
- 5a. This amendment may improve the diversity of fish, benthic organisms, insects and/or microfauna. Many Best Management Practices will improve water quality and improve aquatic habitat which is expected to improve aquatic organism diversity.
- 5c. Livestock enclosures will keep cattle out of waterways. Fencing can be designed and constructed to minimize impacts to native animals.
- 14d. Some Best Management Plans can be utilized on park and recreational facility lands adjacent to the river/creek. For example, vegetated biofilters could be installed. The cost of this recommendation is offset by the improvement to water quality.
- 14f. Some Best Management Plans can be implemented by the assistance of government services. For example, agricultural land owners are encouraged to contact the U.S. Department of Agriculture, U.S. Natural Resource Conservation Service, to develop site specific Best Management Practices best suited for the unique characteristics of each property. Increased government services is offset by the improvement to water quality.
- 16.d. There may be instances when wastewater facilities need to be upgraded. For example, septic tank discharges may need to be relocated farther from surface waters.
- 16.e. Storm drainage facility Best Management Practices are recommended. For example, landowners should install vegetated biofilters adjacent to sources of urban or transportation runoff. This impact is offset by improvement to water quality.
- 19. Water quality improvement originating from this proposal could improve recreational opportunities.

IV. DETERMINATION

On the basis of this initial evaluation:

I find the proposed project COULD NOT have a significant effect on the environment.

I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

Date _____ Signature _____

February 10, 1995

To: Interested Persons

**PROPOSED AMENDMENT OF THE CENTRAL COAST WATER QUALITY CONTROL PLAN REGARDING:
(1) ON-SITE SEPTIC SYSTEM MANAGEMENT PROGRAM FOR THE SAN LORENZO RIVER WATERSHED
AND
(2) NUTRIENT OBJECTIVES AND MANAGEMENT MEASURES FOR PAJARO RIVER/LLAGAS CREEK**

The California Regional Water Quality Control Board, Central Coast Region (Regional Board), is proposing an amendment to its Water Quality Control Plan, Central Coast Basin (Basin Plan). A draft copy is enclosed for your review. The purpose of this amendment is to :

1. Incorporate an on-site septic system management program for the San Lorenzo River watershed and
2. Incorporate Nutrient (nitrogen and phosphorus) objectives and Management Measures for Pajaro River/Llagas Creek.

The proposed changes are included in Resolution 95-04, Attachment A. The potential environmental impacts of this proposal discussed in the attached "Summary Report and Potential Environmental Impacts of Proposed Basin Plan Amendment (Resolution 95-04)."

The first amendment requires the (1) "Draft Wastewater Management Plan for the San Lorenzo River Watershed, County of Santa Cruz, Health Services Agency, Environmental Health Service", February 1995, and (2) "Draft San Lorenzo Nitrate Management Plan Phase II Final Report", February 1995, County of Santa Cruz, Health Services Agency, Environmental Health Service to be implemented. The second amendment is based upon a report prepared by San Jose State University titled "The Establishment of Nutrient Objectives, Sources, Impacts, and Best Management Practices for the Pajaro River and Llagas Creek, February 28, 1994. Copies of these documents can be obtained from this office by contacting the individuals mentioned below.

A public hearing for the Board to Consider the Basin Plan amendments is scheduled as follows:

DATE: April 14, 1995
TIME: 8:30 a.m.
PLACE: Salinas City Council Chamber Rotunda
200 Lincoln Avenue
Salinas, CA

If you have any comments regarding this Basin Plan amendment, please submit them by March 16, 1994. Your expedient submittal will allow the Regional Board to thoroughly analyze your comments before a decision is made.

Comments or questions regarding the San Lorenzo Management Plan should be directed to Howard Kolb at 805-542-3332. Comments or questions regarding the Pajaro River/Llagas Creek nutrient objectives and Best Management Practices should be directed to Angela G. Carpenter at 805-542-4624.

Sincerely,

Roger W. Briggs
Executive Officer

ENCLOSURES:

1. Staff Report with Attachments

ATTACHMENT E

SUMMARY OF THE NECESSITY FOR THE REGULATORY PROVISIONS

REGIONAL WATER QUALITY CONTROL BOARD RESOLUTION NO. 95-04

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN AND REQUESTING APPROVAL FROM THE STATE WATER RESOURCES CONTROL BOARD

AUTHORITY AND REFERENCE

Water Code Section 13240 mandates each Regional Water Quality Control Board (Regional Board) to formulate water quality control plans for all areas within the region and to review the plans periodically. Section 13240 also authorizes Regional Water Boards to revise the plans. A water quality control plan or a revision of a plan becomes effective upon approval by the State Water Resources Control Board (State Board) (Water Code Section 13245).

A Regional Board may also adopt policy statements relating to any water quality matter within its jurisdiction (Water Code Section 13224). Policies (guidelines) adopted by a Regional Board are not effective unless and until approved by the State Board (Water Code Section 13245.5).

Water Code Section 13050(j) provides that a water quality control plan consists of a designation or establishment for the waters within a specified area of all of the following:

- (1) Beneficial uses to be protected.
- (2) Water quality objectives.
- (3) A program of implementation needed for achieving water quality objectives.

Each Regional Water Board must establish water quality objectives in each water quality control plan which will ensure the reasonable protection of beneficial uses and the prevention of nuisance (Water Code Section 13241). Additionally, the Regional Board, in a water quality control plan, may specify certain conditions or areas where the discharge of waste, or certain types of waste will be prohibited (Water Code Section 13243).

NECESSITY FOR REGULATORY PROVISIONS

Resolution No. 95-04 includes a number of regulatory provisions. The following describes the reasons that these regulatory provisions are necessary.

Introduction

The Federal Clean Water Act Section 303(a) (33 U.S.C. Section 1313(a)) requires all states to adopt water quality standards applicable to surface waters. These water quality standards include the criteria and implementation plans necessary to protect those uses (referred to in California as water quality objectives, Water Code Section 13050(h)). Water quality standards for surface water must, wherever attainable, provide water quality for: protection and propagation of fish, shellfish, and wildlife; recreation in and on the water; use and value for public water supplies, propagation of fish, shellfish, wildlife, and recreation in and on the water; and agricultural, industrial and other purposes including navigation (40 C.F.R. Section 130.3).

State law mandates the Regional Boards to formulate water quality control plans which must include water quality objectives and implementation plans for surface water. Water Code Sections 13050(e), (f), (h), and (j) and 13240. Water quality objectives for surface waters must be established for the reasonable protection of beneficial uses of water or the prevention of nuisance within a specific area (Water Code Section 13050(h)). State law requires that water quality control plans, including water quality objectives, must be reviewed periodically and may be revised (Water Code Section 13240).

Discussion

1. Addition of an on-site septic system management program for the San Lorenzo River watershed.

State Water Code Section 13242 requires Regional Boards to have an Implementation Plan to attain water quality objectives. These regulations provide such a Plan. These regulations are necessary to mitigate the impacts of on-site wastewater treatments systems in the San Lorenzo Valley watershed. These regulations also mitigate the impacts of other nitrogen discharges in the San Lorenzo Valley.

2. Addition of water quality objectives and management measures for Pajaro River/Llagas Creek

State law mandates adoption of water quality objectives to protect the beneficial uses of water (Water Code Section 13050(h)). Pajaro River and Llagas Creek have beneficial use designations of municipal and domestic water supply; agricultural water supply; industrial use; ground water recharge; water and non-water contact recreation, wildlife habitat, cold and warm freshwater habitat; migration of aquatic organisms; and spawning, reproduction, and/or early aquatic development. It is necessary to adopt water quality objectives for nutrients (nitrogen and phosphorus) for the Pajaro River and Llagas Creek in order to protect water and non-water contact recreation; cold and warm freshwater habitat; migration of aquatic organisms; and spawning, reproduction and/or early aquatic development.

Water quality objectives are required for all surface water in the Region. These objectives are being adopted for these particular waters because nuisance algal blooms occur on occasion. Dissolved oxygen depletion also occurs. These occurrences hinder attainment of beneficial uses. The staff report contains a discussion of how these constituents will improve beneficial uses.

The State Water Code Section 13242 requires Regional Boards to have an Implementation Plan to attain water quality objectives. Management Measures are included to achieve compliance with proposed objectives.

March 24, 1995

Mr. Boyd Gibbons, Director
CA Dept. of Fish and Game
Environmental Services
1419 Ninth Street, 12th Floor
Sacramento, CA 95814

CALIFORNIA ENDANGERED SPECIES ACT CONSULTATION FOR PROPOSED AMENDMENT TO UPDATE THE WATER QUALITY CONTROL PLANS FOR THE CENTRAL COAST REGION (UPDATED BASIN PLAN)

The Central Coast Regional Water Quality Control Board (Central Coast Region) requests your agency's comments pursuant to the California Endangered Species Act (CESA) on potential impacts of the proposed Amendment to update the Water Quality Control Plans for the Central Coast Region (Updated Basin Plan). The Regional Board is the California Environmental Quality Act (CEQA) Lead Agency for this project. The basin planning process is certified by the Secretary of Resources as being exempt from the CEQA requirement for preparation of an Environmental Impact Report (EIR) or negative declaration and initial study (California Code of Regulations, Title 14, Section 15251). Based upon this certification, the plan amendment, as well as the staff report and backup materials, serve as a "functional equivalent" to an EIR or negative declaration and initial study. Any regulatory programs of the Regional Board certified as functionally equivalent, however, must satisfy the requirements of CCR, Title 23, Section 377 (a), including preparation of an Environmental Checklist with a description of the proposed activity and a determination with respect to a significant environmental impacts.

Copies of the draft Environmental Document/Checklist are enclosed for your review. **The Regional Board is currently gathering comments. Please submit comments by March 16, 1995 so we may prepare a written response for the final Staff Report.** Certification of the Environmental Document/Checklist will be considered by the Regional Board at their regular meeting to be held April 13, 1995.

The purpose of the Basin Plan amendment is to:

1. Incorporate an on-site septic system management program for the San Lorenzo River watershed and .
2. Incorporate nutrient (nitrogen and phosphorus) objectives and management measures for Pajaro River/Llagas Creek.

Please contact Angela Carpenter at (805) 542-4624 if you have any questions or wish to discuss this matter.

Sincerely,

ROGER W. BRIGGS
Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 94-06

ADOPTING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The California Water Code directs the Regional Water Quality Control Boards (Regional Boards) to adopt Water Quality Control Plans (Basin Plans) and to revise them as necessary.
2. This Regional Board, at the February 11, 1994 Board Meeting, directed staff to include the latest Beneficial Use categories approved by the State Water Resources Control Board in Table 2-1 of the Basin Plan.
3. The Regional Board, and others, proposed waters not previously listed in Table 2-1 for designation of beneficial uses.
4. Regional Board staff proposes that the Existing "E" and Intermittent "I" designations are confusing; and that all water body designations in Table 2-1 be identified with an "X" indicating that the beneficial use occurs, at least part of the year and/or in some segment of the water body.
5. Regional Board staff was advised of at least one error in the current Table 2-1 which should be corrected.
6. Drafts of the proposed revisions have been prepared and distributed to interested persons and agencies for review and comment.
7. The specific amendment proposed is shown in Attachment "A - Appendix One and Two".
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of this amendment will not have a significant adverse effect on the environment.
9. Amendment of the Administrative Procedure Act, Government Code Section 11340, requires Basin Plan amendments be submitted to the California Office of Administrative Law.
10. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and on threatened and endangered plant and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made a conditional finding of "no jeopardy" pursuant to the California Endangered Species Act.
11. The Department of Fish and Game conditions their approval with the understanding that: "Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents."
12. Due notice of public hearing was given by advertising in eight newspapers of general circulation within the Region.

13. On September 8, 1994, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of this amendment by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents.
4. The Basin Plan amendment shown on Attachment "A - Appendix One and Two" is approved. The amendment will not take effect until approved by the State Board and the Office of Administrative Law.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the Environmental Protection Agency for approval.

I, **ROGER W, BRIGGS**, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on September 8, 1994.

Executive Officer

ATTACHMENT A - APPENDIX ONE

BASIN PLAN AMENDMENT

CHAPTER TWO

The following Basin Plan amendment is proposed. (Note new language is in **bold**, existing language is shown in plain text, and deleted language is ~~struck-out~~.)

1. Table 2-1 of California Central Coastal Regional Water Quality Control Plan (Basin Plan) is revised to include the following changes as shown in Appendix Two, Revised Table 2-1, Identified Uses of Water:
 - a. Adds beneficial use categories not previously listed and assigns the uses to appropriate water bodies.
 - b. Adds water bodies not previously listed and assigns appropriate beneficial uses to them.
 - c. Corrects Table 2-1 assigned uses for Struve Slough.
 - d. Changes all Existing "E" and Intermittent "I" designations to "X" to indicate occurrence in the water body.
2. Beneficial use definitions are revised as shown below.

Municipal and Domestic Supply (MUN) - Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply. **According to State Board Resolution No. 88-63, "Sources of Drinking Water Policy" all surface waters are considered suitable, or potentially suitable, for municipal or domestic water supply except where:**

- a. **TDS exceeds 3000 mg/l (5000 uS/cm electrical conductivity)**
- b. **Contamination exists, that cannot reasonably be treated for domestic use**
- c. **The source is not sufficient to supply an average sustained yield of 200 gallons per day**
- d. **The water is in collection or treatment systems of municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff**
- e. **The water is in systems for conveying or holding agricultural drainage waters.**

Agricultural Supply (AGR) - Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.

Industrial Process Supply (PRO) - Uses of water for industrial activities that depend primarily on water quality (i.e., waters used for manufacturing, food processing, etc.).

Industrial Service Supply (IND) - Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well repressurization.

Ground Water Recharge (GWR) - Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers.

Freshwater Replenishment (FRSH) - Uses of water for natural or artificial maintenance of surface water quantity or quality (e.g., salinity) **which includes a water body that supplies water to a different type of water body, such as, streams that supply reservoirs and lakes, or estuaries; or reservoirs and lakes that supply streams. This includes only immediate upstream water bodies and not their tributaries.**

Navigation (NAV) - Uses of water for shipping, travel, or other transportation by private, military, or commercial vessels. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~ **This Board interprets NAV as, "Any stream, lake, arm of the sea, or other natural body of water that is actually navigable and that, by itself, or by its connections with other waters, for a period long enough to**

be of commercial value, is of sufficient capacity to float watercraft for the purposes of commerce, trade, transportation, and including pleasure; or any waters that have been declared navigable by the Congress of the United States" and/or the California State Lands Commission.

Hydropower Generation (POW) - Uses of water for hydropower generation. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Water Contact Recreation (REC-1) - Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, white water activities, fishing, or use of natural hot springs.

Non-contact Water Recreation (REC-2) - Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, or aesthetic enjoyment in conjunction with the above activities.

Commercial and Sport Fishing (COMM) - Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Aquaculture (AQUA) - Uses of water for aquaculture or mariculture operations including, but not limited to, propagation, cultivation, maintenance, or harvesting of aquatic plants and animals for human consumption or bait purposes. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Warm Freshwater Habitat (WARM) - Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Cold Freshwater Habitat (COLD) - Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Inland Saline Water Habitat (SAL) - Uses of water that support inland saline water ecosystems including, but not limited to, preservation or enhancement of aquatic saline habitats, vegetation, fish, or wildlife, including invertebrates. Soda Lake is a saline habitat typical of desert lakes in inland sinks.

Estuarine Habitat (EST) - Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds). **An estuary is generally described as a semi-enclosed body of water having a free connection with the open sea, at least part of the year and within which the seawater is diluted at least seasonally with fresh water drained from the land. Included are water bodies which would naturally fit the definition if not controlled by tidegates or other such devices.**

Marine Habitat (MAR) - Uses of water that support marine ecosystems including, but not limited to, preservation or enhancement of marine habitats, vegetation such as kelp, fish, shellfish, or wildlife (e.g., marine mammals, shorebirds).

Wildlife Habitat (WILD) - Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.

Preservation of Biological Habitats of Special Significance (BIOL) - Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources requires special protection.

Rare, Threatened, or Endangered Species (RARE) - Uses of water that support habitats necessary, at least in part, for

the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

Migration of Aquatic Organisms (MIGR) - Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish.

Spawning, Reproduction, and/or Early Development (SPWN) - Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.

Shellfish Harvesting (SHELL) - Uses of water that support habitats suitable for the collection of filter-feeding shellfish (e.g., clams, oysters, and mussels) for human consumption, commercial, or sport purposes. **This includes waters that have in the past, or may in the future, contain significant shellfisheries.**

3. Revise Table 2-1 "Notes" to read as follows:

"Notes: **X: Existing beneficial water uses, whether perennial or ephemeral, intermittent or continuous flow.**

~~E: Existing beneficial water uses~~

~~I: Beneficial water use in a watercourse with seasonally intermittent flow characteristics. Use is concurrent with flow.~~

EXECUTIVE SUMMARY

The Central Coast Regional Water Quality Control Board (RWQCB) is located in San Luis Obispo between Los Angeles and San Francisco. This agency regulates water quality for Region 3, an area of approximately 11,270 square miles in nine counties on California's Central Coast.

The RWQCB has accomplished two goals. The first dealt with updating the Basin Plan for Region 3 by adding 7 beneficial use categories to existing water bodies (waters) and adding 29 new waters for beneficial use designation. Both additions were submitted as an amendment and approved on 8 September 1994 by the Regional Board.

The second goal involved justifying why the Biological and Rare beneficial use classifications were designated to waters in Region 3. This goal arose from an increasing public interest in these two uses. Approximately 147 waters were researched to justify the Biological designation and 266 waters were researched for the Rare designation.

The seven month effort justified 132 waters for Biological designations and 161 waters for Rare designations. Recommendations include furthering the study of reasons why the Biological and Rare beneficial uses were designated to waters in Region 3. These uses should be removed from those waters where justifications cannot be obtained for the designations.

INTRODUCTION

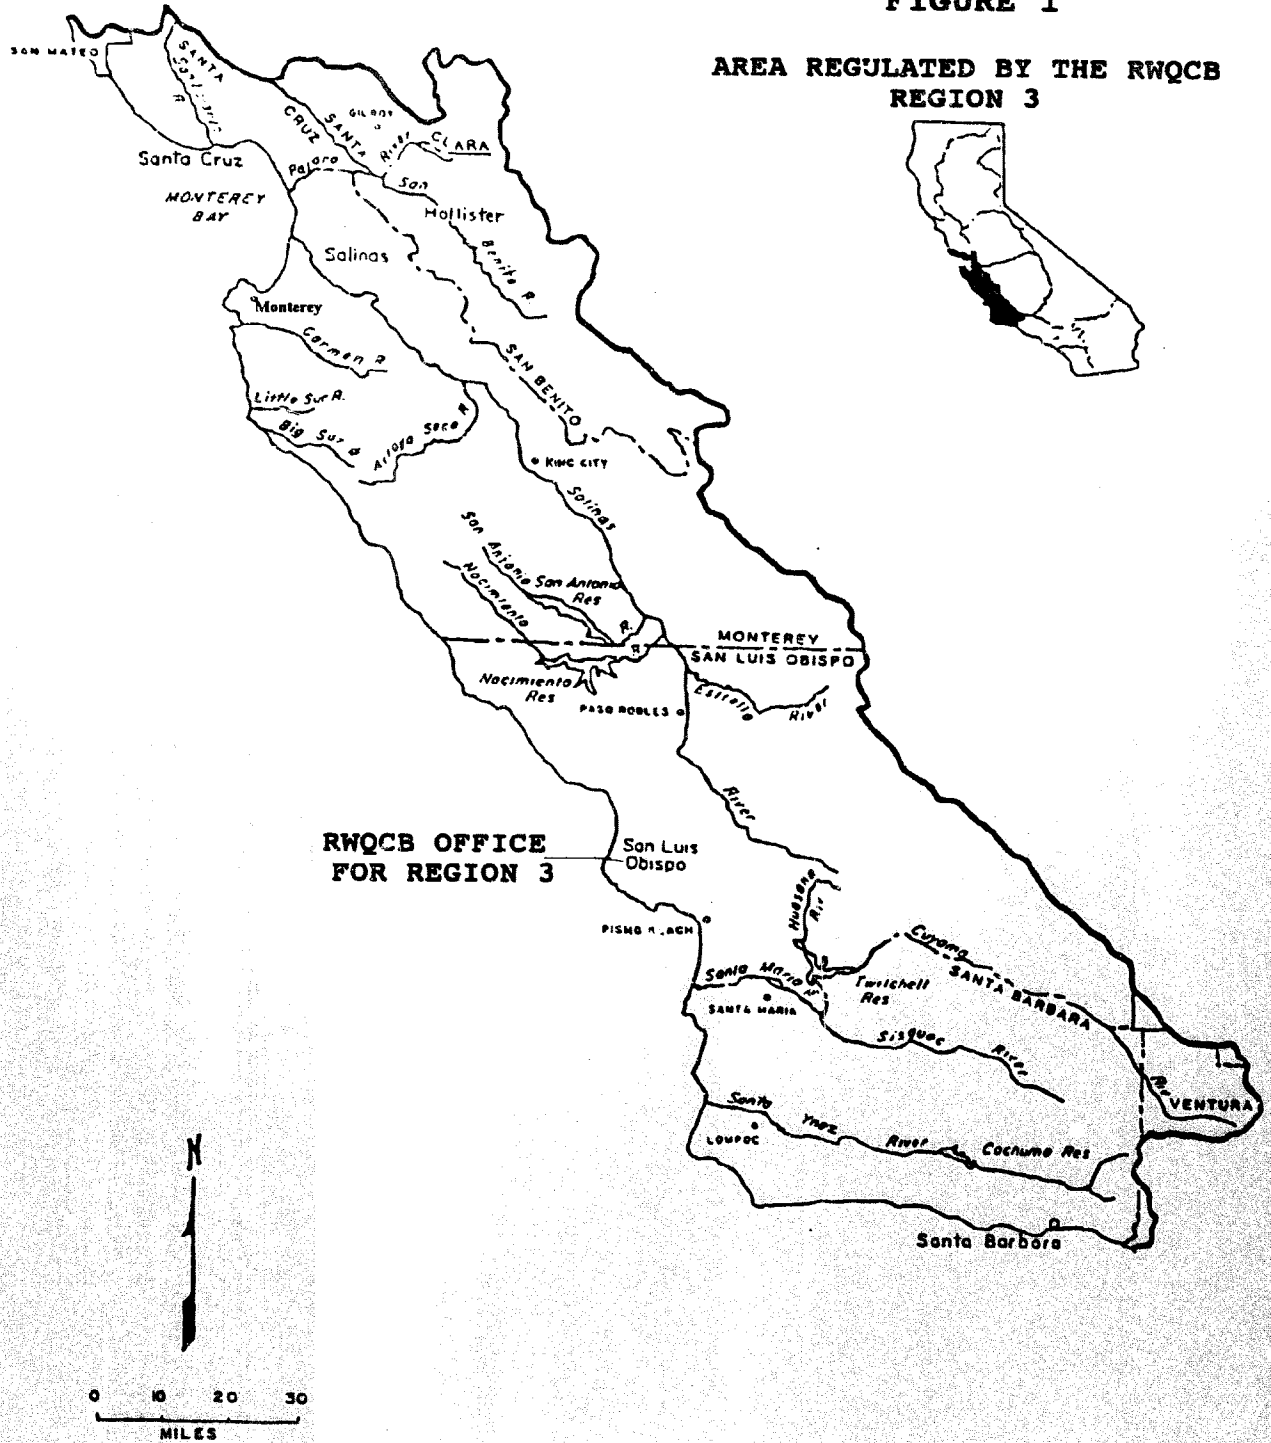

The Central Coast Regional Water Quality Control Board (RWQCB) office is located in the city of San Luis Obispo between Los Angeles and San Francisco. This agency protects water quality for Region 3, an area of approximately 11,270 square miles (300 miles long and 40 miles wide) in nine counties on California's Central Coast (Figure 1).

The RWQCB protects water quality by implementing the Regional Water Quality Control Plan (Basin Plan) in three ways. First, beneficial uses are assigned to waters in Region 3. Beneficial uses can be described as uses of water, such as the use of water for agricultural purposes. They establish the basis upon which water quality is protected.

Second, objectives are established to improve water quality for a certain water. Third, a plan is developed to accomplish these objectives. For example, water quality objectives would be established to remove pollutants from navigable waters. A plan is then implemented to issue waste discharge requirements upon individuals who are affecting the water quality of navigable waters.

FIGURE 1

AREA REGULATED BY THE RWQCB
REGION 3

In order to improve the water quality in Region 3, the Basin Plan is revised periodically. On 24 March 1994, a study began to accomplish the goal of updating the Basin Plan by adding 7 new beneficial use categories (FRESH, NAV, POW, COMM, AQUA, SAL, SHELL) to existing waters (Appendix A). Furthermore, 29 new waters were added for beneficial use designation (30 waters were initially added, but one was removed towards the end of the research, as explained in the RESULTS Section of this report). These designations are shown in Table 2-1 (Appendix B) within the Basin Plan. This table identifies inland surface waters and their beneficial use designations.

The 30 new waters were identified and proposed for inclusion into the Basin Plan by a research team from California Polytechnic State University, San Luis Obispo. This team consisted of a project director (Cal Poly), contract manager (RWQCB), and Cal Poly graduate assistants. Their recommendations were integrated into a Final Report (Standard Agreement NO 1-049-253-0) and submitted to the RWQCB. The seven new beneficial use categories and their accompanying definitions were submitted to the RWQCB by the State Water Resources Control Board (SWRCB).

Another study was also conducted to accomplish the goal of justifying the BIOL (Preservation of Biological Habitats of Special Significance) and RARE (Rare, Threatened, or Endangered Species) beneficial use designations to waters in Region 3. Recent public interest has arisen in the past few

years regarding why these two beneficial uses have been assigned to certain waters. This interest has encouraged the RWQCB to gather the justifications and make this information available to the public.

All work was conducted at the RWQCB under direction of the following project managers: Ms. Angela Carpenter, Associate Sanitation Engineer, and Mr. Jesse Nighswonger, Environmental Specialist. The contents of this document do not necessarily reflect the views and policies of the RWQCB nor does mention of trade names or commercial products constitute endorsement or recommendation for use.

PROBLEM STATEMENT

The RWQCB recognized two goals needing to be accomplished. The first dealt with updating the Basin Plan by adding beneficial use categories and increasing the list of waters within Region 3 for beneficial use designation. Seven categories and 29 waters were proposed for the update.

The second goal involved justifying reasons why the beneficial use designations of BIOL and RARE were assigned to Region 3 waters. Approximately 147 waters with BIOL designations and 266 with RARE designations were assigned to study. Both goals were assigned by the project managers with a deadline date of 7 September 1994.

PROCEDURE/METHODS

Beneficial Use Designations

The four tasks to assist the RWQCB in accomplishing the goal of beneficial use designations are described below.

Task #1: Incorporating Water bodies and New Categories into a Database Management System

The insertion of the new categories and waters into Table 2-1 were accomplished by the following three steps. First, data was retrieved from an Excel file on Microsoft Works. This file was comprised of 476 waters with 15 beneficial use categories. Waters were listed in rows by ascending order of hydrologic units with tributaries to streams indented. There are 13 hydrologic units within Region 3. These units represent large watershed areas in California.

The second step involved identifying the boundaries of the new waters on United States Geologic Survey (USGS) topographical maps, 7.5 series. Location of these waters were then verified on the Region 3 Hydrologic Basin Planning Area Map (State Water Resources Control Board Surveillance and Monitoring Section, August 1986) (Figure 2). Third, waters were inserted into rows by ascending order of

CENTRAL COAST-REGION 3 HYDROLOGIC PLANNING AREA

REGION 3 INDEX

hydrologic units (Appendix C).

Task #2: Assigning Beneficial Use Categories to Water Bodies

Beneficial use categories were assigned to waters in Region 3 by the project managers and associate staff in the following way: (1) the new beneficial use categories were assigned to existing waters listed in Table 2-1, and (2) all 22 beneficial use categories, which includes the 7 new ones, were assigned to new waters.

Task #3: Replacing Existing (E) and Intermittent (I) Designations with an "X"

In previous Basin Plans, Table 2-1 contained Existing (E) and Intermittent (I) beneficial use designations. An "E" indicated the use occurs year round, whereas an "I" represented a use occurs seasonally. These two designations were replaced with an "X" to indicate that beneficial uses consistently occur or can occur at least part of the year and/or in some segment of the water.

Task #4: Changing Beneficial Use Designations for Struve Slough

Two beneficial use designations were changed for the water of Struve Slough, as suggested by Santa Cruz County (Appendix D). One involved removing Migration of Aquatic Organisms (MIGR) because the slough does not support migratory activities by aquatic organisms, such as fish.

The other change involved replacing Cold Water Habitat (COLD) with Warm Water Habitat (WARM). Struve slough is more adapted to support warm water ecosystems rather than cold.

Biological and Rare Beneficial Use Assessment

Three tasks were used to accomplish the goal of justifying why BIOL and/or RARE beneficial use designations were assigned to particular waters in Region 3. The criteria used to determine justifications are italicized below in the definitions. Tasks to accomplish the goal follow these definitions.

- Preservation of Biological Habitats of Special Significance (BIOL) - *Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources requires special protection.*
- Rare, Threatened, or Endangered Species (RARE) - *Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.*

Task #1: Incorporating Water Bodies and Beneficial Uses into a Database Management System

Table 2-1 was retrieved from an Excel file in Microsoft Works. Waters assigned a BIOL and/or RARE beneficial use were moved into a new file of Excel and arranged in rows by ascending order of hydrologic units. Five columns were then added with the titles "USGS MAP 7.5", "BIOL", "RARE", "Biological Justification", and "Rare Justification" (Appendix E).

The topographical location of each water was listed under the USGS MAP 7.5 column. Under the BIOL and RARE columns, an "X" was inserted where the beneficial use applied to a particular water. The Biological and Rare justification columns contain explanations for the designations.

Task #2: Determining Agencies to Survey

A preliminary phone list of 94 agencies (organizations, individuals, or contacts) was acquired from the research effort by Cal Poly, who chose these agencies based upon their management, oversight, and ability to provide information of water uses for Region 3. For example, the California Department of Parks and Recreation could provide information concerning REC1, which is a particular beneficial use that supports water contact recreation.

From this phone list, 24 agencies who could provide

information concerning the BIOL and RARE beneficial uses were selected to survey. The California Department of Fish and Game (DFG) was the agency primarily consulted based upon their knowledge of rare species. Others contacted include the Nature Conservancy and State Parks. Appendix F identifies the individuals contacted, affiliation, telephone number, and comment made concerning the BIOL and/or RARE beneficial use designation.

Task #3: Justifying Biological and Rare Designations

In justifying BIOL justifications, 147 waters containing BIOL designations were located on USGS 7.5 series topographical maps. These maps provided information necessary to determine whether a water is located in areas of an established refuge, park, reserve or sanctuary. If a water was located in one of the areas, the BIOL designation could be justified.

When waters were not located in these areas, phone surveys were conducted using the prepared list of agencies. These surveys involved asking agencies located in a particular area whether a water is located within a refuge, park, reserve, or sanctuary. These surveys enabled large amounts of information to be derived without conducting lengthy research.

In addition to the 147 waters designated as BIOL, all other waters were located on USGS maps in order to verify their location in Region 3. These locations not only

enabled justifications of the RARE beneficial use to be gathered, as explained below, but also provided the RWQCB with a means to locate waters on topographic maps more efficiently.

In determining RARE justification, "Rarefind" of the DFG's Natural Diversity Database was reviewed. "Rarefind" is a computer program that provides information concerning the listing of plant and animal species in California as rare, threatened, or endangered. To facilitate this program, USGS quad locations for waters are inputted. Output provides a specie's listing status and siting location.

For waters not identified in "Rarefind", various literature sources were reviewed and telephone surveys conducted. Agencies familiar with a particular area were asked whether any threatened, endangered, or rare species listed by the DFG were dependent upon a particular water for habitat.

RESULTS

Beneficial Use Designations

The beneficial uses update began 24 March 1994 and terminated on 7 September 1994. This update focused on (1) assigning new beneficial use categories to existing waters, and (2) assigning all 22 beneficial uses to the new waters.

Water body removed. The Urban Creeks Council submitted a comment to the RWQCB regarding Gaviota Creek, which was one of the waters added to the Basin Plan. They believed that Gaviota Creek was the same as the existing Canada de la Gaviota already included in the Basin Plan. Staff of the RWQCB agreed with the Council and removed the creek from the table. Therefore, only 29 waters were added to the Basin Plan.

Biological and Rare Beneficial Use Assessment

The assessment of the BIOL and RARE beneficial uses began 24 March 1994 and continued through 2 December 1994. In justifying the BIOL designations, the USGS topographical maps served as the primary information source. They provided 123 justifications whereas telephone surveys supplied 9. RARE justifications were obtained primarily by

"Rarefind" and telephone surveys. "Rarefind" justified designations for 132 waters whereas telephone surveys justified 29.

Determining BIOL justification. The BIOL designation could not be justified for 16 waters. Reasons include either a lack of information available or designations made during previous Basin Plan updates not complying with the current definition of BIOL. An example of a correct justification of a BIOL designation would be Big Basin Redwoods State Park, because of its location within a state park. Refer to the definition in Appendix A.

Determining RARE justification. The RARE designation was assigned to approximately 133 waters. However, justification for assigning the RARE designation to waters could not be obtained for approximately 97 waters. The most likely reasons are either a lack of resources available or designations made during previous updates not complying to the current definition.

Telephone survey. A minimum of 24 agencies were surveyed by telephone regarding 38 waters with BIOL and/or RARE designations. Many agencies contacted in the phone surveys provided information of species not state or federally listed as threatened, endangered, or rare. For example, the red-legged frog represents a common response by agencies for justifying the RARE use. But because this spe-

cies is not formally listed, the response could not be used as a justification. The most common response of a species which could justify the RARE designation was the tidewater goby (*Eucyclogobius newberryi*). Appendix G shows formally listed species in Region 3 which were used in justifying the RARE beneficial use.

Literature survey. Overall, the information for beneficial uses was difficult to locate. The primary information source for the BIOL designations was topographic maps. As for the RARE designations, only two literature sources were consulted. These documents provided information concerning the designations for waters Santa Rosa Island, Santa Cruz Island, and in San Luis Obispo County. Most information was derived from "Rarefind" of the DFG's Natural Diversity Database.

RECOMMENDATIONS

- The BIOL and/or RARE beneficial use designations should be examined for those waters where designations could not be justified. If no justifications are found, remove the BIOL and/or RARE use(s) from Table 2-1 for that particular water.
- Add Canada de la Gaviota Estuary, Eagle Canyon Creek, Bell Canyon Creek, Gato Canyon Creek, and Laguna Channel Creek into the Basin Plan for beneficial use designation.
- Assign the RARE beneficial use to waters identified below based upon their justifications.

TABLE 1. Recommended RARE designations.

<u>WATER BODY</u>	<u>JUSTIFICATION</u>
Moore Creek	Western Snowy Plover
Wilder Creek	Western Snowy Plover
Green Oaks Creek	San Francisco Garter Snake
Bates Creek	Santa Cruz Tarplant
Berry Creek	Marbled Murrelet

CONCLUSIONS

In regards to the beneficial use designations, all categories and waters were added to the Basin Plan using the best information available. All designations can be suspect because they were not established using scientific data.

As for the BIOL and RARE assessment, many of the beneficial use designations seem inappropriately assigned to waters. This was concluded following the telephone surveys. The inappropriate designations may be accredited towards the definitions of BIOL and RARE being interpreted differently each time the Basin Plan is updated.

These are also waters that should be designated BIOL and/or RARE. This seems to be a result of an increasing list of state and federal rare, threatened, and endangered species. Overall, the research provided a large amount of valuable information concerning waters in Region 3 that can be made available to the public.

APPENDIX A

BENEFICIAL USE DEFINITIONS

APPENDIX A

BENEFICIAL USE DEFINITIONS

Beneficial use categories are defined below with new categories italicized:

Municipal and Dometic Supply (MUN) - Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply.

Agricultural Supply (AGR) - Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.

Industrial Process Supply (PRO) - Uses of water for industrial activities that depend primarily on water quality.

Industrial Service Supply (IND) - Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well repressurization.

Ground Water Recharge (GWR) - Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers.

Water Contact Recreation (REC-1) - Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, white water activities, fishing, or use of natural hot springs.

Non-contact Water Recreation (REC-2) - Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to,

picnicking, sunbathing, hiking, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, or aesthetic enjoyment in conjunction with the above activities.

Wildlife Habitat (WILD) - Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.

Cold Freshwater Habitat (COLD) - Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Warm Freshwater Habitat (WARM) - Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Migration of Aquatic Organisms (MIGR) - Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish.

Spawning, Reproduction, and/or Early Development (SPWN) - Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.

Preservation of Biological Habitats of Special Significance (BIOL) - Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources requires special protection.

Rare, Threatened, or Endangered Species (RARE) - Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

Estuarine Habitat (EST) - Uses of water that support estuarine ecosystems including, but not limited to preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds).

Freshwater Replenishment (FRESH) - Uses of water for natural or artificial maintenance of surface water quantity or quality (e.g., salinity).

Navigation (NAV) - Uses of water for shipping, travel, or other transportation by private, military, or commercial vessels.

Hydropower Generation (POW) - Uses of water for hydropower generation.

Commercial and Sport Fishing (COMM) - Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes.

Aquaculture (AQUA) - Uses of water for aquaculture or mariculture operations including, but not limited to propagation, cultivation, maintenance, or harvesting of aquatic plants and animals for human consumption or bait purposes.

Inland Saline Water Habitat (SAL) - Uses of water that support inland saline water ecosystems including, but not limited to, preservation or enhancement of aquatic saline habitats, vegetation, fish, or wildlife, including invertebrates.

Shellfish Harvesting (SHELL) - Uses of water that support habitats suitable for the collection of filter-feeding shellfish (e.g., clams, oysters, and mussels) for human consumption, commercial, or sport purposes.

CENTRAL COAST REGION

RESOLUTION NO. 94-01

ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The Federal Clean Water Act directs states to adopt water quality standards and to review them on a triennial basis. The California Water Code directs the Regional Water Quality Control Board (Regional Board) to adopt Water Quality Control Plans (Basin Plans) and to update them periodically.
2. The Water Quality Control Plan, Central Coastal Basin (Basin Plan) was approved by the State Water Resources Control Board (State Board) on March 20, 1975 and a revised Basin Plan was approved by the State Board on August 16, 1990.
3. The State Board identified the need for comprehensive update of all Regional Board Basin Plans statewide and provided contract funding for a variety of studies to facilitate this process.
4. Several major Basin Plan amendments are proposed herein to partially satisfy Basin Plan Update Program requirements:
 - a. Revise Beneficial Use definitions to statewide consistent format.
 - b. Assign Beneficial Uses to approximately 300 water bodies and revise Beneficial Uses for approximately 150 water bodies.
 - c. Update organic chemicals objectives.
 - d. Add ground water objectives for the Paso Robles ground water basin.
 - e. Update Regional Board program descriptions.
 - f. Update State/Regional Board Plans and Policies.
 - g. Add description of Quality Control and Data Management.
 - h. Add description of Water Quality Assessment.

The specific amendment proposed is shown in Attachment "A".

5. Several additional minor changes (as described in Attachment "A") are also necessary to update the Basin Plan. Changes are proposed to clarify, edit, or correct the current Basin Plan.
6. This Basin Plan revision update process satisfies the federal triennial review requirements of Section 303 (c) of the Clean Water Act and the periodic review requirements of Water Code Act Section 12340.
7. Drafts of the proposed amendments have been prepared and distributed to interested persons and agencies for review and comment.
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional

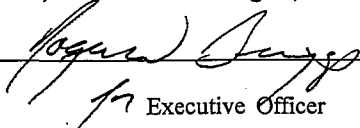

Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these amendments will not have a significant adverse effect on the environment.

9. The State Board is required to adopt numerical water quality objectives for toxics in accordance with Section 303(C)(2)(b) of the Clean Water Act. The State Board adopted objectives in the California Inland Surface Waters Plan, April 1992, and the California Enclosed Bays and Estuaries Plan, April, 1991. These Plans are currently implemented by the Regional Board. These Plans are being contested in court. It is uncertain whether the Plans will be upheld in their current form.
10. State Board Plans are in effect after approval by the California Office of Administrative Law. These Plans supersede Basin Plans to the extent of any conflict. State Board Plans must be implemented by the Regional Board whether the Plans are referenced in the Basin Plan or not.
11. Amendment of the Administrative Procedure Act, Government Code Section 11340, requires Basin Plan amendments be submitted to the California Office of Administrative Law.
12. A "Summary of Necessity for the Regulatory Provisions (Attachment D)", has been prepared as required by the California Office of Administrative Law.
13. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and on threatened and endangered plant and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made a conditional determination of "no jeopardy" pursuant to the California Endangered Species Act. A finding of "no jeopardy" is conditioned upon the Regional Board implementing water quality objectives in accordance with Section 303(C)(1) of the Clean Water Act by June 1, 1995.
14. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
15. On February 11, 1994, in the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of the revised Basin Plan by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. The Basin Plan amendment shown on Attachment "A" is approved. The amendments will not take effect until approved by the State Board and the Office of Administrative Law.
4. The Regional Board intends to implement water quality objectives adopted by the State Board in accordance with Section 303(C)(1) of the Clean Water Act by June 1, 1995.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the Environmental Protection Agency for approval.

I, **WILLIAM R. LEONARD**, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on February 11, 1994.

Executive Officer

ATTACHMENT A

PROPOSED BASIN PLAN AMENDMENTS

The following Basin Plan amendments are proposed. (Note new language is shown in **bold**, existing language is shown in plain text, and deletions are struck out.)

CHAPTER TWO

1. Amend Table 2-1 (pages II-2 through II-5) to identify or revise beneficial uses as shown on revised Table 2-1. New beneficial uses are identified for the "Preservation of Biological Habitats of Special Significance" (BIOL); Rare, Threatened, or Endangered Species (RARE); and Estuarine Habitat (EST). Specific proposed changes are shown on Attachment E, Beneficial Use Revisions, February 8, 1994.
2. Amend Table 2-1, footnote "a" (pages II-2 through II-5) to read as follows:

"See Figure 1-1 for general location. This table lists selected streams and water bodies. It is not a complete inventory of the Central Coast Region. Unlisted streams and water bodies have implied beneficial use designations for protection of both recreation and aquatic life **with the exception of constructed agricultural drains. Constructed agricultural drains may be assigned beneficial uses on a case-by-case basis.**"

13. Amend Beneficial Use Definitions shown on Pages II-10 through II-11. Changes include adding an "Estuarine Habitat", "Freshwater Replenishment", "Hydropower Generation", and "Aquaculture" beneficial use. The "Fish Migration" (Migr) definition is clarified to emphasize waters supporting habitat needed by migrating aquatic organisms is included in the definition. The "Navigation" beneficial use is expanded to include waters used for all types of shipping (not just Naval shipping), waters used for travel, or waters used for transportation. The "Commercial and Sport Fishing" beneficial use is expanded to consider fresh water body areas not just saline waters. The "Shellfish Harvesting" beneficial use is expanded to include waters used for collection of shellfish for human consumption. Shellfish are also defined as filter feeding varieties. No change in meaning for other beneficial uses is proposed. Revisions to definitions are proposed to be consistent with Statewide amended definitions. Revised definitions are shown below:

~~"Municipal and Domestic Supply (Mun)-Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply. Includes usual uses in community or military water systems and domestic uses from individual water supply systems.~~

~~Agricultural Supply (AGR) - Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing. Includes crops, orchard and pasture irrigation, stock watering, support of vegetation for range grazing, and all uses in support of farming and ranching operations.~~

~~Industrial Process Supply (PRO) - Uses of water for industrial activities that depend primarily on water quality. Includes process water supply and all uses related to the manufacturing of products.~~

~~Industrial Service Supply (IND) - Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well repressurization. Includes uses that do not depend primarily on water quality such as mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, and oil well repressurization.~~

~~Ground Water Recharge (GWR) - Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers. Natural or artificial recharge for future extraction for beneficial uses and to maintain salt balance or halt salt water intrusion into fresh water aquifers.~~

~~Freshwater Replenishment (FRSH) - Uses of water for natural or artificial maintenance of surface water quantity or quality (e.g., salinity). (Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

~~Navigation (NAV) - Uses of water for shipping, travel, or other transportation by private, military, or commercial vessels. Includes commercial and naval shipping. (Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

~~Hydropower Generation (POW) - Uses of water for hydropower generation. (Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

~~Water Contact Recreation (REC-1) - Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, white water activities, fishing, or use of natural hot springs. Includes all recreational uses involving actual body contact with water, such as swimming, wading, waterskiing, skindiving, surfing, sail boarding, jet skiing, sport fishing, uses in therapeutic spas, and other uses where ingestion of water is reasonably possible.~~

Non-contact Water Recreation (REC-2) - Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, or aesthetic enjoyment in conjunction with the above activities. ~~Recreational uses that involve the presence of water but do not require contact with water, such as picnicking, sunbathing, hiking, beachcombing, camping, pleasure boating, tidepool and marine life study, hunting, and aesthetic enjoyment in conjunction with the above activities as well as sightseeing.~~

Commercial and Sport Fishing (COMM) ~~Ocean Commercial and Sport Fishing~~ - Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes. ~~The commercial collection of various types of fish and shellfish, including those taken for bait purposes, and sport fishing in oceans, bays, estuaries, and similar non fresh water areas.~~ Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.

Aquaculture (AQUA) - Uses of water for aquaculture or mariculture operations including, but not limited to, propagation, cultivation, maintenance, or harvesting of aquatic plants and animals for human consumption or bait purposes. (Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)

Warm Freshwater Habitat (WARM) - Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates. ~~Provides a warm water habitat to sustain aquatic resources associated with a warm water environment.~~

Cold Freshwater Habitat (COLD) - Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates. ~~Provides a cold water habitat to sustain aquatic resources associated with a cold water environment.~~

Inland Saline Water Habitat (SAL) ~~Saline Water Habitat~~ - Uses of water that support inland saline water ecosystems including, but not limited to, preservation or enhancement of aquatic saline habitats, vegetation, fish, or wildlife, including invertebrates. Soda Lake is a saline habitat typical of desert lakes in inland sinks. ~~Provides an inland saline water habitat for aquatic life resources.~~

Estuarine Habitat (EST) - Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds).

Marine Habitat - Uses of water that support marine ecosystems including, but not limited to, preservation or enhancement of marine habitats, vegetation such as kelp, fish, shellfish, or wildlife (e.g., marine mammals, shorebirds). ~~Provides for the preservation of the marine ecosystem including the propagation and sustenance of fish, shellfish, marine mammals, water fowl, and vegetation such as kelp.~~

Wildlife Habitat (WILD) - Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources. ~~Provides a water supply and vegetative habitat for the maintenance of wildlife.~~

~~Preservation of Biological Habitats of Special Significance (BIOL) Preservation of Areas of Special Biological Significance (BIOL) - Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources requires special protection. Includes marine life refuges, ecological reserves, and designated areas of special biological significance, such as areas where kelp propagation and maintenance are features of the marine environment requiring special protection.~~

~~Rare, Threatened, or Endangered Species (RARE) Preservation of Rare and Endangered Species (RARE) - Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered. Provides an aquatic habitat necessary, at least in part, for the survival of certain species.~~

~~Migration of Aquatic Organisms (MIGR) Fish Migration (MIGR) - Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish. Provides a migration route and temporary aquatic environment for anadromous or other fish species.~~

~~Spawning, Reproduction, and/or Early Development (SPWN) Fish Spawning (SPWN) - Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish. Provides a high quality aquatic habitat especially suitable for fish spawning.~~

~~Shellfish Harvesting (SHELL) - Uses of water that support habitats suitable for the collection of filter-feeding shellfish (e.g., clams, oysters, and mussels) for human consumption, commercial, or sport purposes. The collection of shellfish such as clams, oysters, mussels, abalone, shrimp, crab, and lobster for either commercial or sport purposes."~~

4. Revise Table 2-1 "Notes" to read as follows:

"Notes: E: Existing beneficial water uses

I: Beneficial water use in a watercourse with seasonally intermittent flow characteristics. Use is concurrent with flow.

~~A: Anticipated beneficial water use."~~

5. Amend Table 2-1 "Notes" as follows:

"Notes: Ground water recharge includes recharge of surface water underflow."

CHAPTER THREE

1. Revise Organic Chemical Objectives (page III-6 and page III-16) to read:

"Organic Chemicals

All inland surface waters, enclosed bays, and estuaries ~~Waters~~ shall not contain concentrations of organic chemicals ~~pesticides or herbicides~~ in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

2. Revise Table 3-1 (page III-7) to be consistent with California Code of Regulations, Title 22, Chapter 15, Article 5.5. Specific changes proposed are shown below:

Table 3-1. Organic Concentrations Not to be Exceeded in Domestic or Municipal Supply

	Constituent	Maximum Contaminant Level, mg/l
(a)	Chlorinated Hydrocarbons	
	Endrin	0.0002
	Lindane	0.004
	Methoxychlor	0.1
	Toxaphene	0.005
(b)	Chlorophenoxy's	
	2,4-D	0.1
	2,4,5-TP Silvex	0.01
(c)	Synthetics

- a Objectives shown are median values based on data averages over the referenced study period; objectives are based on preservation of existing quality or water quality enhancement believed attainable following control of point sources.
- b Measured as Nitrogen
- c Basis for objectives is in the "Water Quality Objectives for the Santa Maria Ground Water Basin Revised Staff Report, May, 1985" and the February 1986, Staff Report.
- d These are maximum objectives in accordance with Title 22 of the Code of Regulations.
- e Expressed as NO₃-N
- e Ground water basin currently exceeds usable mineral quality.
- f Ground water basin boundary map available in appendix.
- g Basis for objectives is in the report "A Study of the Paso Robles Ground Water Basin to Establish Best Management Practices and Establish Salt Objectives", Coastal Resources Institute, June 1993
- h Standard exceeds California Secondary Drinking Water Standards contained in Title 22 of the Code of Regulations. Water quality standard is based upon existing water quality. If water quality degradation occurs, the Regional Board may consider salt limits on appropriate discharges.

CHAPTER FOUR

1. Revise "Introduction" at the beginning of Chapter Four, Implementation Plan, page IV-1. This revision will replace the first two paragraphs with the following wording: .

"A program of implementation to protect beneficial uses and to achieve water quality objectives is an integral component of this Basin Plan. The program of implementation is required to include, but is not limited to:

- A description of the nature of actions which are necessary to achieve the objectives, including recommendations for appropriate action by any entity, public or private.
- A time schedule for the actions to be taken.
- A description of surveillance to be undertaken to determine compliance with objectives.

Additional surveillance activities to determine compliance with objectives are described in Chapter Six, "Surveillance and Monitoring".

This chapter includes discussions of:

- Regional Water Quality Control Board goals
- General Control Actions and Related Issues
- Waste Discharge Regulation
- Hazardous Waste Compliance Issues, and
- Nonpoint Source Measures.

Detailed descriptions of waterbodies with their specific water quality problems and recommended control actions are included in the Region's Water Quality Assessment database and Fact Sheets.

This chapter is organized in the following manner:

- I. Introduction
- II. Regional Water Quality Board Goals
- III. General Control Actions and Related Issues
- IV. Control Actions under State Board Authority
- V. Control Actions to be Implemented by Other Agencies with Water Quality or Related Authority
- VI. Control Actions under Regional Board Authority
 - A. Waste Discharge Restrictions
 1. Water Quality Certification
 2. National Pollutant Discharge Elimination System
 3. Waste Discharge Requirements
 4. Waivers
 5. Prohibitions and Prohibition Exemptions
 6. Enforcement Actions
 7. Best Management Practices
 8. Compliance Schedules
 - B. Nonpoint Source Program
- VII. Waste Discharge Program Implementation
 - A. Effluent Limits
 1. Stream Disposal
 2. Estuarine Disposal

- 3. Ocean Disposal
- 4. Land Disposal
 - a. Wastewater Disposal
- 5. Reclamation and Reuse
- 6. Pretreatment Program
- 7. Sludge Treatment
- B. Municipal Wastewater Management Plans (arranged by hydrologic sub-area)
- C. Industrial Wastewater Management
- D. Solid Waste Management
- E. Storm Water Management
- F. Bay Protection and Toxic Cleanup Program
- G. Military Installations
- H. Spills, Leaks, Investigations, and Cleanup Program
- I. Underground Tank Storage Tank Program
- J. Aboveground Petroleum Storage Tanks
- K. California Code of Regulations, Title 23, Chapter 15
 - 1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)
 - 2. Wastewater Sludge/Septage Management
 - 3. Mining Activities
 - 4. Other Industrial Activities
- L. Resource Conservation Recovery Act (Subtitle D)
- M. Solid Waste Water Quality Assessment Test
- VIII. Hazardous Waste Compliance Issues
 - A. Reportable Quantities of Hazardous Waste and Sewage Discharges
 - B. Proposition 65
- IX. Nonpoint Source Measures
 - A. Coastal Zone Act Reauthorization Amendments
 - B. Urban Runoff Management
 - C. Agricultural Water and Wastewater Management
 - D. Individual, Alternative, and Community Disposal Systems
 - E. Land Disturbance Activities"

The actions intended to protect beneficial uses and water quality of the Central Coast Basin are presented in this chapter under three categories: (1) Regional Water Quality Control Board goals, (2) point source control measures, and (3) nonpoint source control measures. Water bodies considered to be water quality limited segments and the implication of such a designation is also discussed.

This chapter is organized in the following manner:

- ~~A. Regional Water Quality Control Board Goals~~
- ~~B. Point Source Measures~~
 - ~~1. Effluent Limits~~
 - ~~a. Stream Disposal~~
 - ~~b. Estuarine Disposal~~
 - ~~c. Ocean Disposal~~
 - ~~d. Land Disposal~~
 - ~~e. Reclamation and Reuse~~
 - ~~f. Pretreatment Programs~~
 - ~~g. Sludge Processing and Disposal~~
 - ~~2. Municipal Wastewater Management Plans (arranged by hydrologic sub area)~~
 - ~~3. Industrial Wastewater Management~~
 - ~~4. Solid Waste Management~~

- ~~C. Nonpoint Source Measures~~
 - ~~1. Urban Runoff Management~~
 - ~~2. Agricultural Water and Wastewater Management~~
 - ~~3. Individual Sewage Disposal Systems~~
 - ~~4. Land Disturbance Activities~~
- ~~D. Water Quality Limited Segments~~

2. Insert new section, Sections III through VI, after the existing section titled "Regional Water Quality Control Board Goals":

"III. GENERAL CONTROL ACTIONS AND RELATED ISSUES

The Regional Water Quality Control Board (Regional Board) regulates the sources of water quality related problems which could result in actual or potential impairment or degradation of beneficial uses or degradations of water quality. The Regional Board regulates both point and nonpoint source discharge activities. A point source discharge generally originates from a single, identifiable source, while a nonpoint source discharge comes from diffuse sources. To regulate the point and nonpoint sources, control actions are required for effective water quality protection and management. Such control actions are set forth for implementation by the State Water Resources Control Board (State Board), by other agencies with water quality or related authority, and by the Regional Board.

IV. CONTROL ACTIONS UNDER STATE BOARD AUTHORITY

The State Board has adopted several statewide areawide water quality plans and policies which complement or may supersede portions of the Water Quality Control Plan. These plans and policies may include specific control measures. See Chapter Five, "Plans and Policies" for summaries of the most significant State Board plans and policies which do affect the Central Coast Region.

V. CONTROL ACTIONS TO BE IMPLEMENTED BY OTHER AGENCIES WITH WATER QUALITY OR RELATED AUTHORITY

Water quality Management Plans prepared under Section 208 of the Federal Water Pollution Water Control Act (Clean Water Act) have been prepared by various public agencies. These Section 208 plans, as well as other plans adopted by federal, state, and local agencies, may affect the Regional Board's water quality management and control activities. A summary of relevant water quality management plans is included in Chapter Five, "Plans and Policies".

VI. CONTROL ACTIONS UNDER REGIONAL BOARD AUTHORITY

Control measures implemented by the Regional Board must provide for the attainment of this Basin Plan's beneficial uses and water quality objectives. These uses and objectives can be found in Chapters Two and Three, respectively. In addition, the control measures must be consistent with State Board and Regional Board plans, policies, agreements, prohibitions, guidance, and other restrictions and requirements contained within this document.

To prevent water quality problems, waste discharge restrictions are often used. The waste discharge restrictions can be implemented through Water Quality Certification, National Pollutant Discharge Elimination System (NPDES) permits, waste discharge requirements/permits (WDRs), discharge prohibitions, enforcement actions, and/or "Best Management Practices".

VI. A. Waste Discharge Restrictions

VI.A.1. Water Quality Certification

Clean Water Act Section 401 Water Quality Certification gives the State extremely broad authority to review proposed federal activities in and/or affecting the Region's waters. The Regional Board can recommend to the State Board that it grant, deny, or condition certification of federal permits or licenses that may result in a discharge to "waters of the United States".

VI.A.2. National Pollutant Discharge Elimination System (NPDES)

NPDES permits are issued to regulate discharges of waste from point sources to "waters of the United States" including discharges of storm water from urban separate storm sewer systems and certain categories of industrial activity. Waters of the United States are surface waters such as rivers, intermittent streams, dry stream beds, lakes, bays, estuaries, oceans, etc. The permits are authorized by Section 402 of the Clean Water Act and Section 13370 of the California Porter-Cologne Water Quality Control Act. The permit content and the issuance process are contained in 40 Code of Federal Regulations Part 122 and Chapter 9 of the California Code of Regulations. Regional Water Boards are authorized to take a variety of enforcement actions to obtain compliance with an NPDES permit. Enforcement actions the Regional Board may take are described below.

The U.S. Environmental Protection Agency (U.S. EPA) has approved the State's program to regulate discharges of waste water from point sources to "waters of the United States". The State, through the Regional Water Boards, issues the NPDES permits, reviews discharger self-monitoring reports, performs independent compliance checking, and takes enforcement actions as needed.

NPDES permits are required to prescribe conditions of discharge which will ensure protection of beneficial uses of the receiving water. The Regional Board uses this Basin Plan, the Ocean Plan, and water quality control policies adopted by the State Board to develop permits for specific types of discharges or uses of waste water.

In addition to regulating discharges of waste water to surface waters, NPDES permits also require municipal sewage treatment systems to conduct pretreatment programs if their design capacity is greater than five million gallons per day. Smaller municipal treatment systems may be required to conduct pretreatment programs if there are significant industrial users of their systems. The pretreatment programs must comply with 40 Code of Federal Regulations Part 403. The pretreatment program is further described under separate heading in the "Waste Discharge Regulation" Section further in this chapter.

VI.A.3. Waste Discharge Requirements (WDRs)

The California Porter-Cologne Water Quality Control Act authorizes Regional Boards to regulate discharges to protect ground and surface water quality. Regional Boards issue WDRs in accordance with Section 13263 of the California Porter-Cologne Water Quality Control Act. Regional Boards are required to review WDRs periodically based on the complexity and threat to water quality. WDRs seek to protect the beneficial uses of ground and surface water. Regional Boards issue WDRs, review self-monitoring reports submitted by the discharger, perform independent compliance checking, and take necessary enforcement action. The California Porter-Cologne Water Quality Control Act authorizes the Regional Boards to issue enforcement actions (see below) ranging from orders requiring relatively simple corrective action to monetary penalties in order to obtain compliance with WDRs.

VI.A.4. Waivers

Regional Boards may waive issuance of WDRs pursuant to California Porter-Cologne Water Quality Control Act Section 13269 if the Regional Board determines that such waiver is in the public interest. The requirement to submit a Report of Waste Discharge can also be waived. WDRs can be waived for a specific discharge or types of discharges. A waiver of WDRs is conditional and may be terminated at any time by the Regional Board. Regional Boards may delegate their power to waive WDRs to the Regional Board Executive Officer in accordance with policies adopted by the Regional Board and approved by the State Board. The Regional Board's general policy regarding waivers is described in Chapter Five, "Plans and Policies". Regional Boards may not waive NPDES permits.

VI.A.5. Prohibitions and Prohibition Exceptions

The Regional Board can prohibit specific types of discharges to certain areas (California Porter-Cologne Water Quality Control Act Section 13243). These discharge prohibitions may be revised, rescinded, or adopted as necessary. Discharge prohibitions are described in pertinent sections of Chapter Four, "Implementation Plan" and Chapter Five, "Plans and Policies" in the Regional Board Discharge Prohibitions Section. Prohibitions can be found by referring to the Table of Contents.

VI.A.6. Enforcement Actions

To facilitate water quality problem remediation or Basin Plan violation remediation, the Regional Board can use different types of enforcement measures. These measures can include:

Notice of Violation

A Notice of Violation is a letter formally advising the discharger that the facility is in noncompliance and that additional enforcement actions may be necessary, if appropriate actions are not taken.

Time Schedule

A Time Schedule (California Porter-Cologne Water Quality Control Act Section 13300) is a time schedule for specific actions a discharger shall take to correct or prevent violations of requirements. A Time Schedule is issued by the Regional Board for situations in which the Board is reasonably confident that the problem will be corrected.

Cleanup or Abatement Order

A Cleanup or Abatement Order (California Porter-Cologne Water Quality Control Act Section 13304) is an order requiring a discharger to clean up a waste or abate its effects or, in the case of a threatened pollution or nuisance, take other necessary remedial action. A Cleanup or Abatement Order can be issued by the Regional Board or by the Regional Board Executive Officer. Cleanup or Abatement Orders are issued for situations when action is needed to correct a problem caused by regulated or unregulated discharges which are creating or threatening to create a condition of pollution or nuisance. A Cleanup or Abatement Order is also used by the Regional Board to establish the acceptable level of cleanup.

Cease and Desist Order

A Cease and Desist Order (California Porter-Cologne Water Quality Control Act Section 13301) is an order requiring a discharge to comply with Waste Discharge Requirements or prohibitions according to a time schedule. If the violation is threatening, a Cease and Desist Order can be used

to require appropriate remedial or preventative action. A Cease and Desist order is issued by the Regional Board when violations of requirements or prohibitions are threatened, are occurring, or have occurred and probably will continue in the future. Issuance of a Cease and Desist Order requires a public hearing.

Administrative Civil Liabilities

Administrative Civil Liabilities (monetary liabilities or fines) may also be imposed administratively by the Regional Board after a public hearing.

State Attorney General Referral

State Attorney General referral is used under certain circumstances. Enforcement actions may be referred to either the General or District Attorney.

VI.A.7. Best Management Practices

Property owners, managers, or other dischargers may implement "Best Management Practices" to protect water quality. (Implementation and enforcement of Best Management Practices are discussed below under the "Nonpoint Source Measures" section of this chapter.) The term "Best Management Practices" is used in reference to control measures for nonpoint source water pollutants and is analogous to the terms "Best Available Technology/Best Control Technology" used for control of point source pollutants. The U.S. EPA (40 Code of Federal Regulations Section 103.2[m]) defines Best Management Practices as follows:

"Methods, measures, or practices selected by an agency to meet its nonpoint source control needs. Best Management Practices include, but are not limited to structural and nonstructural controls and operation and maintenance procedures. Best Management Practices can be applied before, during, and after pollution producing activities to reduce or eliminate the introduction of pollutants into receiving waters."

U.S. EPA regulations (40 Code of Federal Regulations Section 130.6[b][4][i]) provide that Basin Plans:

"...shall describe the regulatory and nonregulatory programs, activities, and Best Management Practices which the agency has selected as the means to control nonpoint source pollution where necessary to protect or achieve approved water uses. Economic, institutional, and technical factors shall be considered in a continuing process of identifying control needs and evaluating and modifying the Best Management Practices as necessary to achieve water quality goals."

Best Management Practices fall into two general categories:

1. Source controls which prevent a discharge or threatened discharge.

These may include measures such as recycling of used motor oil, fencing streambanks to prevent livestock entry, fertilizer management, street cleaning, revegetation and other erosion controls, and limits on total impervious surface coverage. Because the effectiveness of Best Management Practices is often uncertain, source control is generally preferable to treatment. It is also often less expensive.

2. Treatment controls which remove pollutants from a discharge before it reaches surface or ground waters. Examples include infiltration facilities, oil/water separators, and constructed wetlands.

Several important points about Best Management Practices must be emphasized:

- Best Management Practices are not officially considered "best" practices for use in California unless they have been certified by the State Board.
- The use of Best Management Practices does not necessarily ensure compliance with effluent limitations or with receiving water objectives. Because nonpoint source control has been a priority only since the 1970's, the long-term effectiveness of some Best Management Practices has not yet been documented. Some source control Best Management Practices (e.g., waste motor oil recycling) may be 100 percent effective if implemented properly. Monitoring and evaluation of Best Management Practice effectiveness is an important part of nonpoint source control programs.
- The selection of individual Best Management Practices must take into account specific site conditions (e.g., depth to ground water, quality of runoff, infiltration rates). Not all Best Management Practices are applicable at every location. High ground water levels may preclude the use of runoff infiltration facilities, while steep slopes may limit the use of wet ponds.
- To be effective, most Best Management Practices must be implemented on a long-term basis. Structural Best Management Practices (e.g., wet ponds and infiltration trenches) require periodic maintenance, and may eventually require replacement.
- The "state-of-the-art" for Best Management Practices design and implementation is expected to change over time. The State planning process will include periodic review and update of Best Management Practices certifications.

General information on recommended nonpoint source management practices is provided under different water quality problem categories throughout this chapter. For detailed information on the design, implementation, and effectiveness of specific Best Management Practices, the reader should consult the appropriate Best Management Practices Handbook for the project type or location.

VI.A.8. Compliance Schedules

The California Porter-Cologne Water Quality Control Act (Section 13242[b]) requires a Basin Plan's implementation program for achieving water quality objectives to include a "time schedule for the actions to be taken". Regional Board prohibitions are effective upon adoption, unless specifically mentioned otherwise. The Regional Board issues discharge permits. Each includes an effective date. (Often compliance is effective upon Regional Board adoption.) Waste discharge permits for construction projects generally require implementation of Best Management Practices during and immediately after construction. Long-term maintenance of permanent Best Management Practices is expected. Regional Board enforcement orders for specific problems also generally include compliance schedules.

The 1975 Basin Plans included recommendations that specific studies be carried out by specific dates on community wastewater collection and treatment facilities needs in certain areas of the Central Coast Region. These plans also recommended that some communities construct specific facilities by given dates. Most of these schedules were not met. Because expected year-to-year changes in availability of and priorities for funding will ensure that long term schedules are unrealistic, this Basin Plan does not include such recommendations. Priorities are set on a short-term basis for studies through the State Board's use of the Clean Water Strategy ranking system in various grant programs, and for facilities construction through the State Board Division of Clean Water Programs needs assessment process for loans and grants. Once funding is allocated, completion schedules are set through the contract process.

VI.B. NONPOINT SOURCE PROGRAM

Nonpoint source pollution has been identified as a major cause of water pollution throughout the United States, and the California Central Coast Region is no exception. Nonpoint sources of water pollution are generally defined as sources which are diffuse (spread out over a large area). These sources are not as easily regulated or controlled as are point sources. Nonpoint source pollution is caused by land use activities or anthropomorphic activities. Deposition of pollutants may occur in lakes, rivers, wetlands, coastal waters, or ground waters.

In order to address the Nonpoint Source pollution problem nationwide, the U.S. Congress incorporated Section 319 into the 1987 amendments to the Clean Water Act. By amending the Clean Water Act, Congress shifted the federal emphasis from nonpoint source pollution planning and problem identification to a new nonpoint source action program. Section 319 of the Federal Clean Water Act required each state to develop a State Nonpoint Source Management Program describing the measures the State would take to address nonpoint sources of pollution. In November 1988, the State Water Resources Control Board adopted a Nonpoint Source Management Plan which outlined steps to initiate the systematic management of nonpoint sources in California. For effective management of nonpoint sources the Management Plan required:

- An explicit long-term commitment by the State Board and Regional Boards,
- More effective coordination of existing State Board and Regional Board nonpoint source related programs,
- Greater use of Regional Board regulatory authority coupled with non-regulatory Regional Board programs,
- Stronger links between the local, state, and federal agencies which have authority to manage nonpoint sources, and
- Development of new funding sources.

The 1988 State Board Nonpoint Source Management Plan advocates three approaches for addressing nonpoint source management:

1) Voluntary implementation of Best Management Practices

Property owners or managers may volunteer to implement Best Management Practices. Implementation could occur for economic reasons and/or through awareness of environmental benefits.

2) Enforcement of Best Management Practices

Although the California Porter-Cologne Water Quality Control Act constrains Regional Boards from specifying the manner of compliance with water quality standards, there are two ways in which Regional Boards can use their regulatory authorities to encourage implementation of Best Management Practices.

First, the Regional Board may encourage Best Management Practices by waiving adoption of waste discharge requirements on condition that discharges comply with Best Management

Practices. Alternatively, the Regional Board may enforce Best Management Practices indirectly by entering into management agency agreements with other agencies which have the authority to enforce Best Management Practices.

The Regional Board will generally refrain from imposing effluent requirements on discharges that are implementing Best Management Practices in accordance with a waiver of waste discharge requirements, and approved Management Agency Agreements, or other State or Regional Board formal action.

3) Adoption of Effluent limitations

The Regional Board can adopt and enforce requirements on the nature of any proposed or existing waste discharge, including discharges from nonpoint sources. Although the Regional Board is precluded from specifying the manner of compliance with waste discharge limitations, in appropriate cases, limitations may be set at a level which, in practice, requires implementation of Best Management Practices.

Not all of the categories of nonpoint source pollution follow this three-tiered approach. For example, silviculture activities on non-federal lands are administered by the California Department of Forestry. The State Board has entered into a Management Agency Agreement with California Department of Forestry which allows the Regional Boards to review and inspect timber harvest plans and operations for implementation of Best Management Practices for protection of water quality.

The Regional Board approach to addressing or regulating categories of nonpoint source pollution is discussed in various sections throughout this Chapter."

3. Revise "Point Source Measures" paragraph on page IV-2. The paragraph should be revised as follows:

~~"VII. WASTE DISCHARGE PROGRAM IMPLEMENTATION POINT SOURCE MEASURES.~~

~~"Water Quality Control Plans to regulate point source wasteloads in the Central Coastal Basin have been developed to insure protection of beneficial uses of water described in Chapter Two, as well as water quality objectives and anti-degradation policies described in Chapter Three. In addition, effluent limits, applicable to various disposal modes, and waste discharge prohibitions, described in the chapter, influenced plan selection. Point source wastes can be generated by residential, commercial, industrial, agricultural, certain recreational activities, and by solid waste disposal practices. Other wastes are considered under the category of nonpoint source wasteloads and are discussed in appropriate sections of this chapter.~~

4. Revise "Effluent Limits" section on page IV-2 as follows:

~~"Effluent limitations for disposal of treated point source wastes are based on water quality objectives for the area of effluent disposal..."~~

5. Revise "Land Disposal" section starting on page IV-4 with the following:

"VII.A.4. LAND DISPOSAL

To protect ground water resources, the Regional Board allows few waste discharges to land. Those that are permitted are closely regulated under existing laws and regulations to maintain and to protect ground water quality and beneficial uses.

Disposal of waste to land in the Central Coast Region is regulated by California Code of Regulations Title 23, Chapter 15; the Federal Resource Conservation and Recovery Act; the Toxic Pits Cleanup Act; the Porter-Cologne Water Quality Control Act; and State Health Department Regulations.

Types of land disposal operations being regulated by the Central Coast Region include landfills, surface impoundments, septage and sludge disposal, mining operations, confined animal facilities, and some oil field exploration and production facilities.

California Code of Regulations Title 23, Chapter 15 -- All land disposal operations are regulated by Chapter 15. Formerly called Subchapter 15, this is the most significant regulation used by the Regional Board in regulating hazardous and nonhazardous waste treatment, storage, and disposal. These regulations include very specific siting, construction, monitoring and closure requirements for all existing and new waste treatment, storage, and disposal facilities. Chapter 15 requires operators to provide assurances of financial responsibility for initiating and completing corrective action for all known or reasonably foreseeable releases from their waste management units. Detailed technical criteria are provided for establishing water quality protection programs, and corrective action programs are mandated for releases from waste management units. Chapter 15 requires the review and update of waste discharge requirements for all hazardous waste treatment, storage, and disposal sites by January 1, 1993 and for all nonhazardous waste, storage, and disposal sites by July 1, 1994.

Resource Conservation and Recovery Act -- The State implements Resource Conservation and Recovery Act's Subtitle C (Hazardous Waste Regulations for Treatment, Storage, and Disposal) through the Department of Toxic Substances Control and the Regional Boards. In August 1992, the U.S. EPA formally delegated the Act program implementation authority to Department of Toxic Substances Control. As described above, regulation of hazardous waste discharges is also included in California Code of Regulations Title 23, Chapter 15. (Chapter 15 monitoring requirements were also amended in August 1991 so as to be equivalent to Act requirements.) These will be implemented through the adoption of Waste Discharge Requirements for hazardous waste sites covered by the Act. The discharge requirements will then become part of a State Resource Conservation and Recovery Act permit issued by Department of Toxic Substances Control.

Federal regulations required by Resource Conservation and Recovery Act Subtitle D have been adopted for Municipal Solid Waste landfills (40 Code of Federal Regulations Parts 257 & 258). The California Integrated Waste Management Board is the State lead agency for Subtitle D implementation. The State Board and the California Integrated Waste Management Board received U.S. EPA State program approval. Delegation of authority for the State Board to implement Subtitle I (Underground Storage Tanks) will occur after U.S. EPA approval of the State's program application. (The Underground Storage Tank Section is discussed later in this chapter.)

Toxic Pits Cleanup Act -- The Toxic Pits Cleanup Act of 1984 required that all impoundments containing liquid hazardous wastes or free liquids containing hazardous waste be retrofitted

with a liner/leachate collection system, or dried out by July 1, 1988, and subsequently closed to remove all contaminants or contain any residual contamination."

~~Land disposal is regulated by California Code of Regulations, Title 23, Chapter 15. These regulations establish waste and site classifications and waste management requirements for waste treatment, storage, or disposal in landfills, surface impoundments, waste piles, and land treatment facilities. Chapter 15 requirements are minimum standards for proper management. Regional Boards may impose more stringent requirements to accommodate regional and site-specific conditions.~~

VII.A.4.a. Wastewater Disposal

Principal factors affecting treatment process selection for land disposal are the nature of soils and ground waters in the disposal areas and, where irrigation is involved, the nature of crops. Wastewater characteristics of particular concern are total salt content, nitrate, boron, pathogenic organisms, and toxic chemicals. Where percolation alone is considered, the nature of underlying ground waters is of particular concern. Treatment processes should be tailored to insure that local ground waters are not degraded.

Nitrate removal is required in many cases where percolation is to usable ground water basins. Percolation basins operated in alternating wet and dry cycles can provide significant nitrogen removal through nitrification/denitrification processes in the soil column. Finer textured soils are more effective than coarse soils. Nitrate removal would not necessarily be required, and secondary treatment may be adequate where recharge is for other purposes such as prevention of seawater intrusion or where soil percolation constraints do not require further treatment. Monitoring in the immediate vicinity of the disposal site is required in either case. Where the need for nitrate removal is not clear, removal could be considered at a possible future stage depending on monitoring results. Where well controlled irrigation is practiced, nitrate problems in the dry season will be controlled. Vegetative uptake will utilize soluble nitrates which would otherwise move into ground water under a percolation operation. Demineralization techniques or source control of total dissolved solids may be necessary in some inland areas where ground waters have been or may be degraded. Presence of excessive salinity, boron, or sodium could be a basis for rejection of crop irrigation with effluent.

State Health Department regulations, described in Title 22 of the California Code of Regulations, stipulate disinfection levels required for specific drops. In some cases, such as pasture for milking animals, the California Code of Regulations requires oxidation with disinfection to a median number of coliform organisms of 23 MPN/100 ml. Environmental Protection Agency guidelines for secondary treatment do not apply to land disposal cases. However, municipal treatment facilities must provide effective solids removal and some soluble organics removal for percolation bed operations and for reduction of nuisance in wastewater effluent irrigation operations. Disinfection requirements are dictated by the disposal method. Oxidation ponds may be cost-effective in some remote locations and may be equivalent of secondary treatment."

6. Replace "Sludge Processing and Disposal" on page IV-7 with the following:

~~"VII.A.7. SLUDGE TREATMENT SLUDGE PROCESSING AND DISPOSAL~~

Sludge management is a difficult aspect of wastewater treatment. The methods used for sludge disposal or reuse tend to determine the sludge processing methods. Major goals of sludge treatment include pathogen destruction, vector attraction reduction, odor reduction, moisture removal, and

contaminant removal. Treated sludge is commonly referred to as "Biosolids".

Solids removed during wastewater treatment include grit, primary sludge, and biological sludges. Grit is typically removed in a grit chamber and is usually inert and easily dewatered, so landfilling is usually the preferred management option. Primary sludges are generally solids that readily float or sink, whereas biological sludges are organic materials which float or sink following biological treatment (e.g., trickling filter, activated sludge, or oxidation pond). Polymers are widely used to increase settling and thickening efficiencies and to reduce chemical sludge handling problems. Primary and biological sludges are usually combined prior to final treatment. Anaerobic digestion and lagoon stabilization are common sludge treatment methods, but methods which can render sludge pathogen and odor free, such as lime stabilization, composting, thermophilic aerobic digestion, and heat treatment, are becoming increasingly popular. Public acceptance of beneficial sludge uses, such as spreading on farm land and reclamation of strip mines, may be improved by advanced sludge treatment technologies.

Sludge treatment methods are evolving as disposal is discouraged and beneficial reuse is encouraged. Ocean disposal of sludge is prohibited by the California Ocean Plan. Landfilling of sludge is generally allowed if the sludge is non-hazardous and meets specific moisture content requirements. Sludge may be disposed in Class I and II waste management units, but this practice is uncommon due to its high cost. Disposal of sludge is becoming less attractive as landfill capacity decreases, recycling mandates (Assembly Bill 939) must be met, and society becomes aware that sludge can be a valuable resource as a soil amendment/fertilizer."

~~Sludge treatment and disposal is usually the most difficult aspect of wastewater treatment. Biological sludges have a higher nutrient content than primary treatment sludges and are thus more desirable as a soil conditioner, but handling problems are compounded. Chemical precipitation will produce a greater quantity of sludge that is composed of inorganic material. Such sludges may be digested but require greater digestion tank capacity than is necessary for biological sludges. The large inorganic content of chemical precipitation sludges may also render them less desirable as a soil conditioner. Polymers are widely used to increase settling and thickening efficiencies, and to reduce chemical sludge handling problems. Increasing power costs have made sludge energy recovery projects economically attractive.~~

~~Burial of digested sludge or incinerated residues, often mixed with garbage and other solid wastes, has been a common method of disposal. Dewatering is generally economically desirable to reduce weight, volume, and transport costs and is often required because of moisture limitations in landfills. Soil conditioning as a means of digested sludge disposal and of returning humus material and nutrients to the soil has been practiced in many parts of the world for many years. Liquid sludge, heat dried sludge, dewatered sludge, and composted sludge have all been used successfully as soil conditioners. Some means of sterilizing the sludge (such as heat drying or wet combustion) is usually required prior to unrestricted sale to the public. Experience has shown that demand for such a product is generally limited or seasonal and that some disposal method is necessary.~~

~~Examples of disposal of liquid or dewatered digested sludge as a soil conditioner are numerous. Some treatment plants have contracts with local farmers for the use of digested sludge in agriculture. This practice is widespread in Great Britain and is becoming more popular in the United States. Dewatered and air dried sludge cake has also been used in many major city parks. Some municipal sludges are digested, composted, packaged, and sold commercially as soil amendments. Most communities in the Central Coastal Basin dispose of sludge in liquid or dewatered form on land fill, dump sites, or on local farms. Continuation of this practice is recommended where beneficial uses of soil and water are not adversely affected. Wastewater heavy metals tend to concentrate in sludge. Proper application rates are required to avoid unacceptable metal concentrations in the soil~~

~~(cadmium is of particular concern).~~

~~Many of the world's major coastal cities have discharged sludge to the ocean for years. This practice has in some cases resulted in detrimental conditions while in others, significant impacts have not been shown. The federal government and many state governments have banned the use of federal and state monies in any system that returns sludge to the receiving waters. Some states have banned the practice outright. California's Ocean Plan prohibits discharge of municipal and industrial waste sludge directly to the ocean, or into a waste stream that discharges to the ocean. The contention of the regulatory agency is that return of the sludge negates the purpose of the wastewater treatment process. Though controversial, this legal ban has led to land disposal and reclamation, or to incineration, depending on local conditions. Land is more readily available for sludge disposal or use on agricultural land in the Central Coastal Basin than in more intensively urbanized areas of California.~~

~~Currently, the Board can regulate handling and disposal of sludge pursuant to Chapter 15 of Title 23, California Code of Regulations and California Department of Health Services (DOHS) Standards for hazardous waste management. The EPA has promulgated a policy of promoting those municipal sludge management practices that provide for the beneficial use of sludge while maintaining or improving environmental quality and protecting public health. The EPA has also proposed a rule which requires states to develop a program to assure that use and disposal of sewage sludges are compatible with federal sludge use and disposal criteria which are being developed by EPA.~~

7. Revise "Storm Water Management" section on page IV-29 to read as follows:

"VII.E. STORM WATER MANAGEMENT

Storm water runoff can be a significant pollution source. The United States Environmental Protection Agency (U.S. EPA) estimates that at least 33% of all contamination in lakes and estuaries and 10% of all river contamination are caused by storm water runoff. Sources of pollution include runoff from industrial facilities, construction sites, and urban municipalities.

Federal Regulations (40 Code of Federal Regulations 122.26) require certain industrial facility owners and/or operators to obtain storm water discharge permits. The specific types of facilities that need coverage is dependent upon the facility's Standard Industrial Classification Code. The program is primarily directed at manufacturing facilities, oil and gas extraction facilities, transportation maintenance facilities (trucking and mass transit), and construction sites (with greater than five acres of land disturbance). In addition, municipalities with populations greater than 100,000 must participate in a municipal storm water permitting program.

In August and September 1992, the State Water Resources Control Board (State Board) adopted the statewide General Construction Activity Storm Water Permit and amended the statewide General Industrial Activities Storm Water Permit, respectively. The statewide permits expire five years after adoption. At that time, Regional Boards will most likely adopt Region specific General Permits.

The storm water program objectives include identification and elimination of pollutant contact with storm water by implementation of Best Management Practices. To obtain coverage under a General Permit, an applicant (i.e. those facilities required under 40 Code of Federal Regulation Section 122.26) must submit a Notice of Intent and the appropriate fee. The Notice of Intent is an agreement accepting the discharge specifications and monitoring requirements of the General Permit.

General Industrial Permit Requirements include the development of a Storm Water Pollution Prevention Plan and storm water runoff monitoring. The Storm Water Pollution Prevention Plan is a facility specific document which includes: a site description, facility processes, pollutant sources, storm water management system, employee education and training program, and measures proposed to eliminate non-storm water discharges. Minimum monitoring and reporting requirements include: sampling and analysis of four pollutant indicator parameters, wet and dry weather storm water conveyance system inspections, and annual reporting. The Regional Board can recommend additional monitoring parameters based on the presence of specific pollutant sources.

The Construction Permit has similar requirements regarding development of a storm water pollution prevention plan, but mainly deals with reducing pollutant sources associated with erosion and sediment transfer and chemicals used at construction sites. The monitoring requirements are less stringent and no sampling is required.

Annual monitoring reports required by the Industrial Permit are due July 1 of each year. Sampling results and annual report information will be used to prioritize Regional Board staff education and enforcement efforts and to develop future group general permits. Compliance is measured through implementation of pollution prevention Best Management Practices, reduction in pollutant loadings, and accurate and timely report submittal."

~~Storm water runoff can be a significant pollution source. Water can become contaminated when pollutants, such as oil grease, pesticides, industrial wastes, herbicides, bacteria, and metals are washed off city streets, agricultural lands, forested areas, and industrial areas, to name a few.~~

~~Federal regulations define storm water point source discharges subject to the National Pollutant Discharge Elimination System (NPDES) Program (40 Code of Federal Regulations 122.26). The Environmental Protection Agency may require NPDES permits from a storm water point source covering all conveyances part of that storm water discharge. Where more than one owner/operator exists for a single conveyance system, all owners/operators will be identified and regulated by each own's discharge limitations.~~

8. Add new section, Sections VII.F. through VII.M., after the existing section titled "Storm Water Management" on page IV-29:

"VII.F. BAY PROTECTION AND TOXIC CLEANUP PROGRAM

The State Water Resources Control Board (State Board) established the Bay Protection and Toxic Cleanup Program in response to legislation enacted in 1989 (Chapter 269; Senate Bill 475 Torres) which added Chapter 5.6, Sections 13390 through 13396, to the California Porter-Cologne Water Quality Control Act. The Bay Protection and Toxic Cleanup Program is a statewide program that is coordinated with the California Department of Fish and Game and California Environmental Protection Agency's Office of Environmental Health Hazard Assessment. The Water Code requires the State and Regional Water Quality Control Boards to do the following to attain the goals of the Bay Protection and Toxic Cleanup Program:

1. Develop and maintain a program to identify toxic hot spots, plan for their cleanup or mitigation, and amend Water Quality Control Plans/Policies to abate toxic hot spots;
2. Formulate and adopt a Water Quality Control Plan for enclosed bays and estuaries;

3. Review and, if necessary, revise Waste Discharge Requirements to conform to the Plan;
4. Develop a database of toxic hot spots;
5. Develop an ongoing monitoring and surveillance program;
6. Develop sediment quality objectives;
7. Develop criteria for assessment and priority ranking of toxic hot spots;
8. Fund the program through fees on point and nonpoint dischargers. (California Code of Regulations, Title 17, section 2236, authorizes the fee program.)

Funds for the Bay Protection and Toxic Cleanup Program will come from user fees, as proposed by State Board staff. User fees have been drafted for the following:

1. All NPDES and WDR dischargers to the ocean, bays, or estuaries.
2. Counties or cities which operate a storm drain system which discharges to the ocean, a bay, or estuary.
3. Dischargers of agricultural drainage to the ocean, bays, or estuaries.
4. Boat construction and repair facilities.
5. Boat marinas and recreational facilities.
6. Operators of commercial harbors and ports.
7. Operators of dredging discharges.

The fees are based on threat to water quality, as defined by the Waste Discharge System (WDS) ranking system (threat to water quality and complexity criteria).

The Central Coast Regional Board has identified 17 potential toxic hot spots to be addressed under this program. These 17 sites are identified in the Appendix. An assessment/monitoring plan has been developed for potential toxic hot spots. Potential hot spots are ranked according to threat to beneficial uses. The assessment/monitoring plan includes the following:

1. Definition of the extent of degradation.
2. Analysis of existing point and nonpoint discharges in the area.
3. Identification of contaminant sources.
4. Development of options for removing the threat to beneficial uses, including consideration of additional effluent limits on point and nonpoint discharges and actual cleanup.

VII.G. MILITARY INSTALLATIONS

Military installations throughout the country include some of the largest and most complex contamination problems. In 1987, President Reagan signed into law Executive Order No. 12580 directing all federal facilities to investigate and remediate areas of environmental contamination. As a result, the U.S. Department of Defense has assumed responsibility for investigation and remediation at military bases. Certain environmental restoration projects involving hazardous materials and wastes from past military activities are being addressed through what is known as the U.S. Department of Defense Program. Although U.S. Department of Defense has assumed environmental restoration responsibility, the Regional Board is an active oversight participant.

From its inception, the Regional Board has been involved with a variety of military installation activities. Since 1990, this Regional Board has been actively and extensively involved in U.S. Department of Defense Program investigations and remedial activities at numerous military facilities within its jurisdiction. Active military installations in the Region addressed by the U.S. Department of Defense Program (current as of 1993) includes Fort Ord, Presidio of Monterey, Monterey Naval Post Graduate School, Fort Hunter Liggett, Camp Roberts, Estero Bay Defense Fuel Supply Point, and Vandenberg Air Force Base. Fort Ord is unique since it is a closing base and has been identified as a federal Superfund site. Four formerly used defense sites in the Region undergoing U.S. Department of Defense remediation (as of 1993) include: Camp San Luis Obispo - California National Guard, Camp San Luis Obispo - San Luis Obispo County, Paso Robles Airport, and Santa Barbara Airport. Potentially, additional military facilities can be added to the U.S. Department of Defense Program.

Program Background

Decades of intense military activities have generated significant quantities of hazardous waste. As a result of insufficient internal control, improper handling and disposal practices, and inadequate regulation, military installations are now considered one of the Nation's most significant environmental polluters. Pollution problems are exacerbated by the large base size, the complex and varying missions, as well as routine personnel changes and inconsistent regulation and control. Many bases are actually small to midsize, totally contained communities providing complete services for base operations. Services vary from base to base, but range from aircraft, vehicle, or shop-maintenance and repair facilities to laundry services, photo shops, gas stations, and other typical municipal services (e.g., utilities, streets, water supply, sewerage, and solid waste disposal).

Past waste disposal practices in both government and private industries were insufficient to protect public health and the environment. Environmental laws and regulation developed in the 1970s addressed many deficiencies, but Federal operations, especially the military, remained inadequately addressed. The military was adamant that sovereign immunity protected them from State and local environmental regulation. Enforcement actions to force the military to comply with State and Federal regulation were often protracted or disregarded. In 1976, U.S. Department of Defense developed its Installation-Restoration Program to help identify, investigate, and cleanup contamination from past operations. Due to funding and timing, Program activities were initiated at most military facilities in the early 1980s.

In 1980, the Federal Comprehensive, Environmental Response, Compensation, and Liability Act which is also referred to as "Superfund" was enacted to address cleanup of hazardous substance disposal and spill sites. The Superfund Amendments and Reauthorization Act was enacted in 1986 to enhance hazardous waste cleanup. The Superfund Amendments and Reauthorization Act, in part, mandated the Defense Environmental Restoration Program specifically to address cleanups at U.S. Department of Defense facilities. The Defense Environmental Restoration Program included an

Inland Restoration Program as a component. To carry out required environmental restoration at its military facilities, U.S. Department of Defense established the Defense Environmental Restoration Account as the funding mechanism.

Executive Order No. 12580 was enacted in 1987 to intensify investigation and remediation of environmental problems. The Executive Order directed all Federal agencies to ensure environmental restoration. To comply with this Executive Order, U.S. Department of Defense has assumed lead responsibility to cleanup military bases throughout the world. California has the largest number of active military bases covered by the military cleanup plan.

As a result of Executive Order No. 12580 and growing public awareness, U.S. Department of Defense is now actively pursuing environmental restoration at military facilities. U.S. Department of Defense has demonstrated its restoration sincerity by providing oversight reimbursement to the State. The Defense/State Memorandum of Agreement, signed by U.S. Department of Defense and State of California officials, provides State oversight cost reimbursement to a maximum of one percent (1%) of the total cleanup cost. The Memorandum of Agreement requires preparation and administration of a Cooperative Agreement between the State and Corps of Engineers to verify funding and services for remedial responses. The Memorandum of Agreement lists specific sites for which the State will receive Federal funding for its oversight and regulatory involvement. In California, Regional Boards and the Department of Toxic Substances Control share State regulatory responsibility and reimbursement dollars allocated to the U.S. Department of Defense Program.

To ensure proper regulatory compliance and environmental restoration, Executive Order No. 12580 requires all Federal agencies to complete cleanup pursuant to "Superfund". This means cleanups at all military installations must comply with the stringent Federal Comprehensive, Environmental Response, Compensation, and Liability Act requirements, whether or not the base is a listed Superfund site. The Act requires Federal facilities which are placed on the Superfund National Priorities List by the U.S. Environmental Protection Agency (U.S. EPA), to conduct cleanup following the National Contingency Plan and U.S. EPA procedures and standards. In this Region, Fort Ord is the only currently listed U.S. Department of Defense Superfund National Priority List site.

In addition to following Federal Comprehensive, Environmental Response, Compensation, and Liability Act requirements, Superfund National Priority List site cleanups must be conducted pursuant to agreements called Federal Facility Agreements. These agreements are between the Federal agency owning the base (e.g., Department of the Army at Fort Ord) and the U.S. EPA. The agreements may include certain State agencies. The Fort Ord Federal Facility Agreement includes the Regional Board and Department of Toxic Substances Control as signatories.

By federal law non-Superfund military sites must cleanup hazardous waste releases pursuant to Federal Comprehensive, Environmental Response, Compensation, and Liability Act requirements and to state laws. Federal non-Superfund facilities may enter into a state compliance agreement. Such an agreement is called a Federal Facility Site Remediation Agreement. At Vandenberg Air Force Base (a non-Superfund site), a Federal Facility Site Remediation Agreement was signed by the Department of the Air Force, the Regional Board, and Department of Toxic Substances Control in June 1991. Both Federal Facility Agreements and Federal Facility Site Remediation Agreements identify roles, responsibilities, dispute resolution procedures, and schedules.

By signing an agreement (Federal Facility Agreement or Federal Facility Site Remediation Agreement), and following Federal Comprehensive, Environmental Response, Compensation, and Liability Act requirements, site remediation is modified from typical State procedures. The modification eliminates the need for State and local permits and enforcement action. Generally, Waste Discharge Requirements, Cleanup of Abatement Orders, and local agency permits are not

imposed. Such provisions were included to ensure compliance with stringent Federal cleanup standards, while limiting permit and enforcement involvement by local or State Agencies. In some parts of the Country, local and State involvement slowed or obstructed cleanup efforts.

The Federal Comprehensive, Environmental Response, Compensation, and Liability Act (Section 121) does require compliance with State and Federal laws and regulations which are more stringent than the Federal Act, and which are necessary to ensure site-specific environmental and public health protection. This compliance process is referred to as "Applicable" or "Relevant and Appropriate" requirements, because it allows consideration of either "Applicable" or "Relevant and Appropriate" requirements pursuant to State or Federal law and regulations. At Superfund sites, U.S. EPA has final authority to approve "Applicable" or "Relevant and Appropriate" requirements. At non-Superfund sites, the lead State agency is responsible to ensure "Applicable" or "Relevant and Appropriate" requirements are identified.

Federal Comprehensive, Environmental Response, Compensation, and Liability Act ("Superfund") Response Process

Although cleanup pursuant to the Federal Comprehensive, Environmental Response, Compensation, and Liability Act is quite complex, it was developed with the intent of simplifying regulatory requirements in a uniform manner and expediting environmental cleanup and restoration. The Act, although similar, is significantly more complex than the Regional Board's typical cleanup procedures pursuant to the California Porter-Cologne Water Quality Control Act. Following is a very simplified summary of the basic "Superfund" response process.

Many initial past military installation investigations included a Preliminary Assessment/Site Inspection. The Preliminary Assessment is an assessment based on existing, readily available information. The Preliminary Assessment attempts to evaluate the magnitude of a potential hazard and identify the source and nature of hazard release. The Site Inspection includes a site visit and possibly sample collection, soil borings, and well installation. The Site Inspection is intended to better characterize the problem and determine the need for further action. Often, information from the Preliminary Assessment/Site Inspection is used to place a site on the Superfund list.

Once a site has been Superfund listed, or has been identified as requiring remedial activities, more in-depth characterization is required. The next phase of remedial activities-site characterization is called the Remedial Investigation/Feasibility Study. The Remedial Investigation is the mechanism for collecting detailed site data to define fully the nature and extent of contamination. During the Remedial Investigation, treatability studies may be conducted to evaluate available treatment technologies in support of remedy selection. The Feasibility Study focuses on developing and screening specific remedial alternatives. The Feasibility Study goal is to identify preferred cleanup alternatives. The Remedial Investigation/Feasibility Study includes risk assessment, identifies "Applicable" or "Relevant and Appropriate" requirements, and develops cleanup goals.

The next phase is the Proposed Plan, which presents the preferred cleanup alternatives and allows public input. After public comments are considered, a Record of Decision is prepared at Superfund sites. The Record of Decision establishes cleanup levels and discharge standards and is based, in part, on identified "Applicable" or "Relevant and Appropriate" requirements. When the Record of Decision is complete and acceptable, the selected remedy is administratively approved by the military department, U.S. EPA, and the State (Regional Boards and Department of Toxic Substances Control). The final cleanup levels are established and "frozen" in the Record of Decision. Agencies that signed the Federal Facility Agreements also sign the Final Record of Decision. At non-Superfund sites in California, the typical document establishing the cleanup levels and discharge standards is called the Remedial Action Plan. The Remedial Action Plan is signed by the agencies that signed the Federal

Facility Site Remediation Agreement. Decision Documents are used sometimes to identify cleanup levels for individual sites at non-Superfund installations. Agencies and the public can petition U. S. EPA to change the Record of Decision levels (or the State to change the Remedial Action Plan), if substantial evidence is available demonstrating that an established cleanup level is not protective of human health and the environment.

Once the Record of Decision (or Remedial Action Plan) is signed, Remedial Design plans are prepared to implement the Record of Decision. Remedial Action, the long-term remediation, begins when Remedial Design and construction are complete. Operation and maintenance, including monitoring, evaluate long term performance and ensure that the Remedial Action is carried out as intended. Long term remediation (e.g., ground water cleanup) continues until conditions of the Record of Decision (or Remedial Action Plan) have been met. Remediation progress must be evaluated at least every five years.

The Federal Comprehensive, Environmental Response, Compensation, and Liability Act includes the Removal Action process to allow remediation of small/limited areas of contamination or time critical cleanups. A Removal Action may be undertaken at any time to address problems that do not require a full scale remediation project. Removal Actions are short term activities that remove immediate threats to public health or that can be implemented in a timely manner. Generally, Removal Actions are limited to \$2 million and are completed in twelve months or less (e.g., removal and proper disposal of a small volume of surface soil contamination).

It is worthy to note that environmental assessment is addressed during the Remedial Investigation/Feasibility Study process. All military installations must comply with the National Environmental Policy Act by preparing an Environmental Impact Statement or Finding of No Significant Impact. An Environmental Impact Statement is similar to an Environmental Impact Report and a Finding of No Significant Impact is similar to a Negative Declaration in California. In California, National Environmental Policy Act compliance may not be sufficient to address all environmental impacts; thus, environmental assessment must also comply with the California Environmental Quality Act.

Regional Board Responsibility

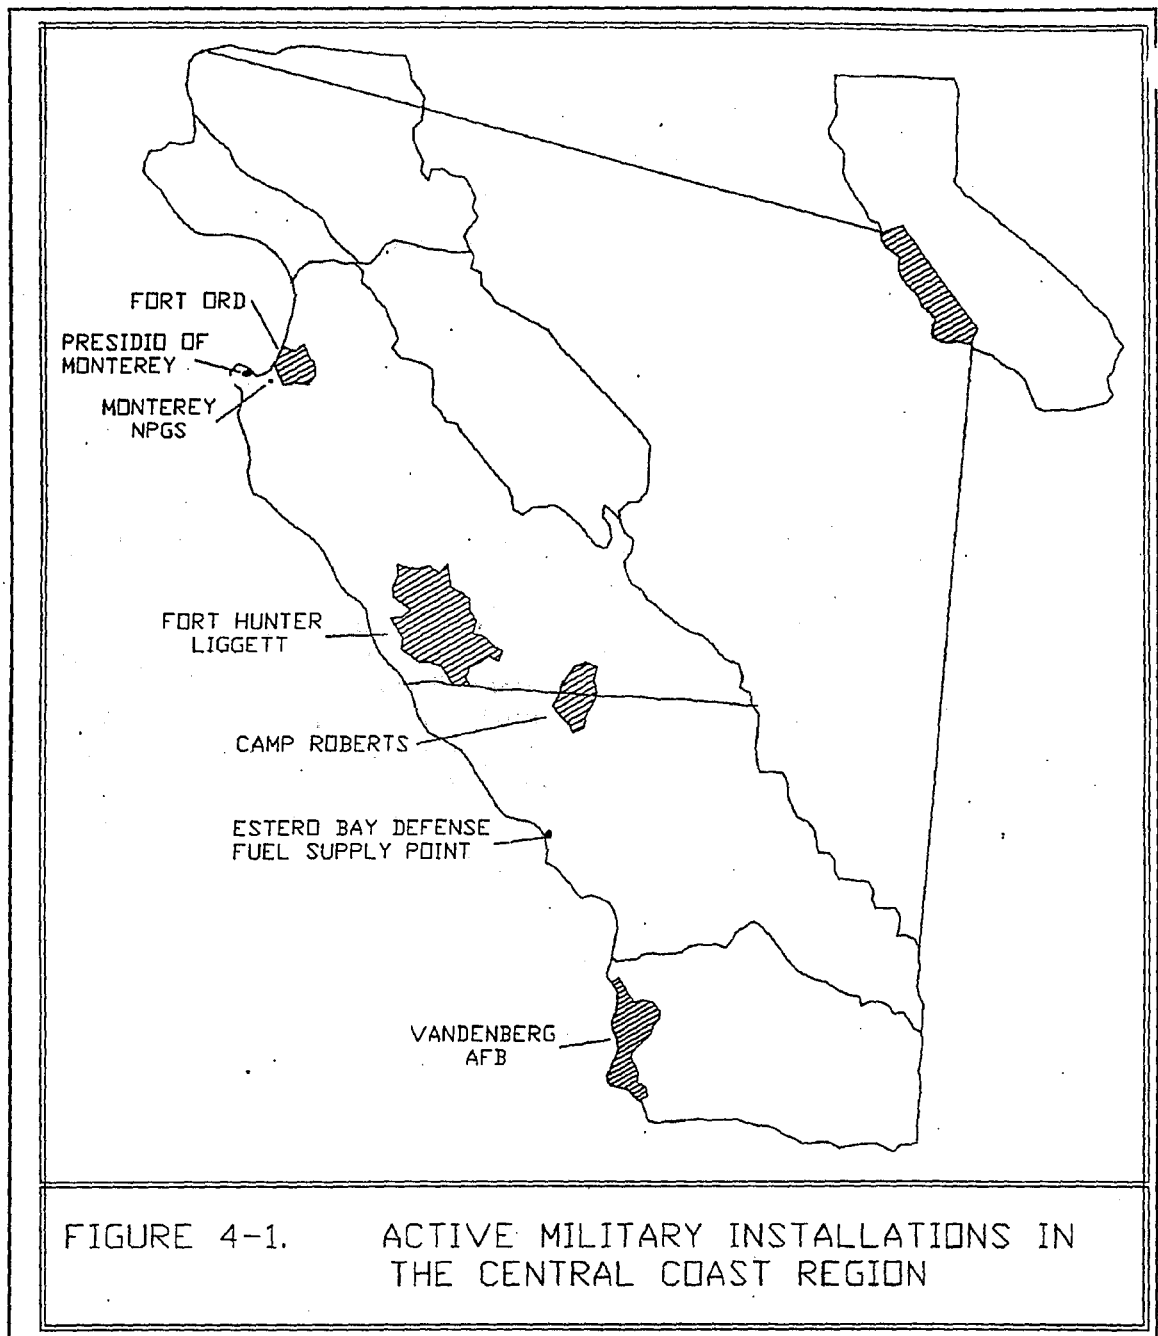

The Federal Clean Water Act and the California Porter-Cologne Water Quality Control Act give the Regional Board regulatory responsibility and authority to protect water quality, including waters within and beneath federal lands. The primary role of the Regional Board and its staff, relative to military installations (U.S. Department of Defense Program) is to ensure that waters of the State are adequately protected. Involvement includes review and direction of all investigation and remediation documents, site visits to guide field activities, and oversight to ensure that cleanup/remediation is carried out properly to protect beneficial uses of water resources. Identification of "Applicable" or "Relevant and Appropriate" requirements and direction on cleanup level establishment require considerable involvement by the Regional Board and its staff.

Typically, the U.S. EPA is the lead regulatory agency at Superfund sites (e.g., Fort Ord). The Regional Board and Department of Toxic Substances Control are responsible State agencies. In the past, at non-Superfund sites (all other military installations in the Region) either the Regional Board or Department of Toxic Substances Control has been the lead regulatory agency. At military installations where water quality and public health is threatened or impacted due to the release of hazardous substances, the Regional Board and Department of Toxic Substances Control may have overlapping jurisdiction. A Memorandum of Understanding exists between the State Water Resources Control Board, the Regional Boards, and Department of Toxic Substances Control specifying roles and responsibilities in hazardous waste cleanups where overlap may occur. In September 1993, the California Environmental Protection Agency requested the overall state "lead"

become Department of Toxic Substance Control's responsibility. This transition should not impact the basic responsibilities. In general, Regional Boards have primary regulatory responsibility for water and soils directly related to water quality protection. Department of Toxic Substances Control has primary regulatory responsibility for public health protection, soil (where waters are not involved), air, and hazardous waste treatment and storage.

In this Region, the Regional Board has been the lead State agency at six of the currently active (1993) U.S. Department of Defense facilities (Vandenberg Air Force Base, Estero Bay Defense Fuel Supply Point, Camp Roberts, Fort Hunter Liggett, Monterey Naval Post-Graduate School, and Presidio of Monterey). These sites are shown in Figure 4-1. The lead may be shared with Department of Toxic Substances Control at Fort Hunter Liggett, since there are several federal Resource Conservation and Recovery Act sites requiring investigation. In California, U.S. EPA has authorized Department of Toxic Substances Control to implement Resource Conservation and Recovery Act program compliance.

Agreements have been signed only at Fort Ord and Vandenberg Air Force Base in this Region. The Federal Facility Agreements for Fort Ord identifies the Regional Board as a support agency since the U.S. EPA is the lead regulatory agency. The current Federal Facility Site Remediation Agreement identifies the Regional Board as the lead agency at Vandenberg Air Force Base. Agreements could be negotiated at other military installations, or re-negotiated when they currently exist, if and when it becomes necessary to clarify roles and responsibilities. Changes are being considered in California to streamline regulatory processes associated with military installation cleanup, particularly at closing bases. The California Environmental Protection Agency has recently designated (September 1993) Department of Toxic Substances Control as the overall State lead at military installations. This designation will impact program activities, roles, and responsibilities.

VII.H. SPILLS, LEAKS, INVESTIGATIONS AND CLEANUP PROGRAM

The Spills, Leaks, Investigations, and Cleanup program was established to allow Regional Boards to address water quality problems and potential problems resulting from discharges not covered by other state programs. Investigations and cleanups of Spills, Leaks, Investigations, and Cleanup program sites proceed as described in State Board Resolution No. 92-49 explained in the "Hazardous Waste Compliance Issues" section later in this chapter.

Spill, Leak, and Complaint Responses

Regional Board staff responds to complaints of nuisance conditions (e.g., odors from sewage treatment plants) and discharges or threatened discharges of substances which may impact ground and/or surface water quality. Complaints are followed up as soon as feasible. Proper response to a complaint includes the following:

- * Completion of a Central Coast Region spill report form.
- * Notification to other responsible agencies, or interested parties, as needed.
- * Site inspection to determine validity of the complaint and to assess the situation, including determination of responsible party/parties.
- * Written follow-up as needed (letters, cleanup or abatement orders, and/or waste discharge requirements).
- * Except in cases where anonymity is requested, notification to complainant of findings and subsequent actions, if any.

Except for a discharge in compliance with waste discharge requirements, any person who causes or permits any reportable quantity of hazardous substance or sewage to be discharged in or on any waters of the State, or discharged or deposited where it is or probably will be discharged into or on any waters of the State, shall, as soon as possible, notify the Office of Emergency Services of the discharge in accordance with the spill reporting provision of the State toxic disaster contingency plan. The person shall also immediately notify the State Board or the appropriate Regional Board of the discharge (California Porter-Cologne Water Quality Control Act Section 13271).

Similarly any person who discharges any oil or petroleum product under the above stated conditions shall, as soon as possible, notify the Office of Emergency Services of the discharge in accordance with the spill reporting provision of the State oil spill contingency plan. Immediate notification of an appropriate agency of the federal government, or of the appropriate Regional Board (in accordance with the reporting requirements set under California Porter-Cologne Water Quality Control Act Section 13267 or 13383) shall satisfy the oil spill notification requirements of this paragraph (California Porter-Cologne Water Quality Control Act Section 13272).

The Regional Board staff will assist other agencies and work cooperatively at large-scale hazardous material releases resulting from surface transportation accidents. The Regional Board staff's role is primarily to provide immediate, on-site technical assistance concerning water quality in order to minimize the potential damage to the public health and safety, and the environment. In cases of railroad incidents, Regional Board staff will work with other agencies pursuant to the Office of Emergency Services Railroad Accident Prevention and Immediate Deployment Plan. Specifically,

Regional Board staff are required to:

- * Provide information on existing downstream beneficial uses and potential impacts from released substances.
- * Provide toxicity information about released substances.
- * Set up water sediment monitoring program.
- * Collect water samples or provide technical assistance for others to collect samples.
- * Coordinate available resources and equipment.

VIII. UNDERGROUND STORAGE TANK PROGRAM

In 1981, citizens of Santa Clara County determined the cause of numerous birth defects to be polluted ground water. The source of pollution was traced to underground storage tanks leaking chlorinated solvents. This revelation prompted the San Francisco Bay Regional Water Quality Control Board to investigate numerous other underground storage tanks, the majority of which were found to be leaking. The Santa Clara County Fire Chiefs Association then sponsored a task force which developed, in 1982, a Model Hazardous Material Storage Permit Ordinance. The Ordinance addressed materials regulated, secondary containment, permits, inspections, and so forth.

Recognizing the problem was a statewide problem, the Legislature passed the initial State underground storage tank law in 1983, and numerous counties and cities followed with local ordinances to regulate underground storage of hazardous materials. The State law contains a sunset provision with a termination date of January 1, 1998.

Since 1985, over 21,000 leaking tank sites have been reported statewide and over 1250 have been reported within the Central Coast Region. Of the reported cases, approximately 90% are petroleum product cases and one-third have impacted ground water. As one might expect, Regions with the larger cities (thus more gasoline stations) have the largest number of reported leaks. The same holds true in the Central Coast Region. Santa Barbara County has almost fifty percent of the cases in this Region (up from 37% a few years ago) and San Benito County has only four percent; Monterey County has about twenty percent.

The Health and Safety Code gives both Regional Boards and local agencies authority to oversee investigation and cleanup of leaky Underground Petroleum Storage Tank sites. The California Code of Regulations, Title 23, Chapter 16, Article 11 requires local agencies to oversee leak reporting and tank closures. Two agencies within the Central Coast Region, Santa Clara and Santa Barbara Counties, also provide oversight for cleanup of leaky Tank sites under a Local Oversight Program contract with the State Board.

Unauthorized releases from underground tanks are reported to the Regional Board by local agencies or private parties. Generally, investigation and cleanup of leaky Underground Petroleum Storage Tank sites is shared between the Regional Board and local agencies. Typically the Regional Board oversees cases involving impact to surface and ground water and local agencies oversee impacts to soil. However, in some circumstances the Regional Board oversees both soil and ground water cleanup, and, in Santa Barbara and Santa Clara Counties, Local Oversight Programs oversee both soil and ground water cleanup.

Investigations and cleanup of leaky Tanks are carried out in a manner similar to investigations and cleanups in the Spills, Leaks, Investigations, and Cleanup Program mentioned earlier.

To assist responsible parties to pay for cleanups and to meet federal financial responsibility requirements, the state has established a Tank Cleanup Fund. Money for the fund is generated by a fee paid for each gallon of petroleum delivered to Tanks. Owners and operators of Tanks may draw upon the fund after paying for the initial \$10,000 in cleanup costs. The Fund will pay up to \$990,000 per cleanup.

Underground Petroleum Storage Tank regulations regarding construction, monitoring, repair, release reporting, and corrective action are found in the California Code of Regulations, Title 23, Division 3, Chapter 16. Regulations regarding the State's Underground Petroleum Storage Tank Cleanup fund are found in California Code of Regulations, Title 23, Division 3, Chapter 18, and regulations regarding underground testers are found in California Code of Regulations Title 23, Division 3, Chapter 17.

VII.J. ABOVE GROUND PETROLEUM STORAGE TANKS

Above ground petroleum storage tanks and associated piping leaks have been found to cause impacts to surface and ground water. Prior to 1990, above ground tank sites were regulated by the United States "Environmental Protection Agency Regulations on Oil Pollution Prevention", 40 Code of Federal Regulations Section 112, as amended. On January 1, 1990, the Above ground Petroleum Storage Act became effective as Chapter 6.67 (commencing with Section 25270), Division 20, of the Health and Safety Code and amendment to Section 3106 of the Public Resources Code. The regulations require:

- * Regional Boards to inspect above ground storage tanks used for crude oil and its fractions;
- * Owners or operators of tank facilities to prepare and initiate a spill prevention control and countermeasure plan in accordance with Part 112, Subchapter D, Chapter I, Title 40 of the Code of Federal Regulations by January 1, 1991 and any required monitoring program within 180 days later;
- * Tank facility owners or operators to report releases of crude oil and its fractions in excess of one barrel; and
- * Owners or operators of tank facilities to submit a storage statement and appropriate filing fee every two years.

The Above ground Petroleum Storage Act provides for recovery of cost incurred by Regional Board staff for oversight of above ground tank site cleanups.

VII.K. CALIFORNIA CODE OF REGULATIONS, TITLE 23, CHAPTER 15

The California Code of Regulations, Title 23, Chapter 15 (Chapter 15) contains minimum, prescriptive standards for proper management of applicable wastes. Landfills, surface impoundments, septage and sludge disposal, mining operations, confined animal facilities, and some oil field exploration and production facilities are regulated according to Chapter 15. Regional Boards may impose more stringent requirements to accommodate regional and/or site-specific conditions. Factors affecting site specific considerations include: depth to ground water, permeability of underlying soils, geologic structure, importance of underlying ground water uses, waste characteristics, ability to remediate leaks, adequacy of the monitoring system, proximity of beneficial uses such as aquatic life, and others.

Dischargers may propose engineering alternatives to the construction or prescriptive standards contained in Chapter 15 if they can show the prescriptive standard is not feasible (i.e., too difficult or costly to implement, or not likely to perform adequately under the given circumstances). The proposed alternative must be able to provide equivalent management of the waste, and must not be less stringent than the prescribed standards.

Discharges to land which may be exempt from Chapter 15 are listed in the Basin Plan Waiver Policy in Chapter Five.

Wastes fall into four categories under the current classification system. These four categories are: Hazardous, Designated, Non-Hazardous, and Inert, and are defined in Article 2 of Chapter 15. Hazardous and Designated wastes can often be generated by the same source and may differ only by their concentrations of given constituents.

Wastes must be disposed of differently depending on their liquids content and the waste category into which they fall. A table containing the Summary of Waste Management Strategies for Discharge of Waste to Land is provided in the appendix.

Receiving water monitoring is required at all waste management units. Article 5 discusses the monitoring requirements for the various classes of waste management units, and describes the progressive phases of monitoring.

The routine ground water monitoring conducted during the entire compliance period of a project's life is referred to as "detection monitoring". If a release (leak) is detected during the course of detection monitoring, an "evaluation monitoring" program must be established. If the evaluation monitoring verifies the presence of a leak, a decision must be made as to whether the release represents a significant enough threat to water quality and the environment to warrant corrective action. If the leak is a significant water quality threat, a "corrective action program" must be established, including monitoring of the effectiveness of corrective action, and conducted until the problem has been successfully corrected.

Vadose zone monitoring must be conducted at all waste management units where feasible. Article 5 discusses the minimum requirements for an acceptable vadose zone monitoring program.

Special requirements for confined animal facilities are discussed in Article 6 of Chapter 15 and in Chapter 5 of this Basin Plan. These facilities are also subject to other portions of Chapter 15 as applicable.

Under Chapter 15, mining waste discharges are only subject to the requirements of Article 7, or other portions of Chapter 15 as referenced by Article 7. Mining wastes are also subject to regulation under the Surface Mining and Reclamation Act, Public Resources Code Title 14, Division 2, Chapter 9).

Discharges of hazardous and nonhazardous waste, and the waste management units at which the wastes are discharged (e.g., landfills, surface impoundments), are regulated by the Regional Board through Waste Discharge Requirements to properly contain the wastes, and to ensure effective monitoring is undertaken to protect water resources of the Region. These waste discharges are also concurrently regulated by other State and local agencies. Local agencies implement the State's solid waste management programs as well as local ordinances governing the siting, design, and operation of solid waste disposal facilities (usually landfills) with the concurrence of the California Integrated Waste Management Board.

The California Integrated Waste Management Board also has direct responsibility for review and approval of plans for closure and post-closure maintenance of solid waste landfills. The Department of Toxic Substance Control issues permits for all hazardous waste management, treatment, storage, and disposal facilities. The State Board, Regional Boards, California Integrated Waste Management Board, and Department of Toxic Substances Control have entered into Memorandums of Understanding to coordinate their respective roles in the concurrent regulation of these discharges.

The laws and regulations governing both hazardous and nonhazardous solid waste disposal have been revised and strengthened in recent years.

An inactive waste management unit can still pose a threat to water quality. In fact, due to the nature of some wastes and the characteristics of some disposal sites, sometimes water quality problems do not become evident until years after a site has closed. Therefore, Chapter 15 requires all waste management units have a plan for acceptable closure procedures and post-closure maintenance and monitoring.

VII.K.1. Solid and Liquid Waste Requirements (Landfills and Surface Impoundments)

Solid wastes are usually disposed of in a landfill or Solid Waste Disposal Site. A landfill, as defined in Chapter 15, is a waste management unit at which waste is discharged in or on land for disposal. A landfill may be classified as Class I, II, or III, depending on the type of waste being accepted, but the term "landfill" typically refers to a Class III municipal solid waste landfill which accepts only inert or non-hazardous, municipal solid waste. Class I units are for hazardous wastes, Class II units are for designated wastes, and Class III landfills are for nonhazardous wastes as defined in Chapter 15, Article 3. Landfills are an integral component of many communities in the Central Coast Region. Hazardous and/or designated solid wastes must be disposed of in Class I or II landfills or waste piles, also referred to as Resource Conservation and Recovery Act or non-Resource Conservation and Recovery Act solid waste management units.

Liquid wastes may not be disposed of to Class III waste management units. Rather, liquid wastes must be discharged to Class I or II surface impoundments, depending on the waste classification.

Discharges from solid and liquid waste management units can impact both ground and surface waters. The receiving water most likely to be at risk from a waste management unit is the ground water beneath the site. Precipitation or runoff may enter the unit and contact the waste, percolate through it, and travel to ground water, carrying constituents of the waste with it to the vadose zone or ground water beneath the unit. Solid waste may contain enough free liquids to form a leachate which can migrate to ground water. Vapors may migrate from a waste management unit into the soils and ground water below the unit. Gases forming in a closed waste management unit may pressurize the unit and force contaminants into the ground water. A liquid waste impoundment may leak its content into the soils and ground water beneath the unit. Liquids may exit a waste management unit and travel to nearby surface waters. Uncontained solid waste may also be transported to surface waters by wind.

The Regional Board regulates all the active waste management units and some of the closed units in the Region under Waste Discharge Requirements which contain pertinent Chapter 15 regulations. Some of the applicable requirements include:

1. Waste management units must be sited in locations where they will not extend over a known Holocene fault, other areas of rapid geologic change or into areas with inadequate separation from ground water.

2. Waste management units must be constructed to minimize (Class III) or prevent (Class I and II) the possibility of leachate contacting ground water. The probability of accomplishing this goal may be improved by siting the unit in an area where the depth to ground water is very great or where natural geologic features will provide containment. A Class III waste management unit is required to have a composite clay and synthetic liner with a leachate collection and removal system, in accordance with Federal Subtitle D requirements. New Class I and II units must also be lined. A discharger may propose engineered alternatives to the Chapter 15 and Subtitle D containment requirements, but the alternatives must provide equal or greater protection to the receiving waters at the site, per Article One.
3. To minimize or prevent the formation of leachate, solid waste management units shall be covered periodically (typically daily) with soil or other approved materials. The importance of effective interim cover is illustrated by recent improvements to some landfill interim covers which resulted in an apparent cessation of ground water degradation. Rainwater surface flow from offsite should be prevented from entering a waste management unit and contacting the wastes in the unit.
4. The potential receiving waters shall be monitored. A waste management unit shall have sufficient ground water monitoring wells at appropriate locations and depths to yield ground water samples from the uppermost water bearing strata with continued saturation at depth, to provide the best assurance of the earliest possible detection of a release from the waste management unit. Perched ground water zones shall also be monitored. Background monitoring should be conducted for at least one year prior to opening a new waste management unit.

Chapter 15 requires vadose zone monitoring at all new sites and at any existing site, unless it can be shown to the satisfaction of the Regional Board no vadose zone monitoring devices would work at the site, or that installation of vadose zone monitoring devices would require unreasonable dismantling or relocating of permanent structures.

5. All operating waste management units must have an approved closure/post-closure monitoring and maintenance plan and their operators must provide the Regional Board with assurance sufficient funds are irrevocably committed to ensure the site will be properly reclaimed and maintained.
6. The operator of a waste management unit must obtain and maintain assurances of financial responsibility for known and foreseeable releases from the unit.

VII.K.2. Wastewater Sludge/Septage Management

Wastewater sludge (biosolids) is a by-product of wastewater treatment. Treated domestic sludge is now referred to as biosolids to encourage using this material for fertilizer and soil amendment. Raw sludge usually contains 93 to 99.5 percent water with the balance being solids present in the wastewater and added to or cultured by wastewater treatment processes. Most Publically Owned Treatment Works treat the sludge prior to ultimate use or disposal. Normally, this treatment consists of dewatering and/or digestion.

Treated and untreated sludges may contain high concentrations of heavy metals, organic pollutants, pathogens, and nitrates. Storage and disposal of municipal sludges on land can result in degradation of ground and surface water, if not properly performed. Therefore, sludge handling and disposal must be regulated.

Septage and grease are usually considered liquid waste, so landfill disposal is usually restricted. Septage, the residual solids periodically pumped from septic tanks, is commonly applied to farm land as fertilizer. Grease waste is usually recycled, but grease trap pumpings are commonly rejected by grease recyclers. Grease and septage usually must be disposed in a Class I or II waste management unit.

The Board will regulate disposal of sludge and septage pursuant to Chapter 15 and Department of Health Services standards for sludge management.

Sludge containing less than 50% solids by weight may be placed in a Class III landfill (see section on Chapter 15) if it can meet the following requirements, otherwise it must be placed in a Class II surface impoundment:

1. The landfill is equipped with a leachate collection and removal system;
2. The sludge must contain at least 20 percent solids if primary sludge, or at least 15 percent solids if secondary sludge, mixtures of primary and secondary sludges, or water treatment sludge; and
3. A minimum solids-to-liquid ratio of 5:1 by weight must be maintained to ensure that the co-disposal will not exceed the initial moisture-holding capacity of the nonhazardous solid waste. The Regional Board may require that a more stringent solids-to-liquid ratio be maintained, based on site-specific conditions.
4. Non-hazardous sludge contained greater than 50% solids by weight is generally considered solid waste.

Beneficial reuse of sludge/septage is increasing in popularity. Sludges and septage, (including composted, liquid, dewatered and dried sludges) have been successfully used as a soil amendment/fertilizer on farmland, orchards, forest lands, pasture, land reclamation projects (e.g., strip mines and landfills), parks and home gardens. As the concentrations of heavy metals has dropped in municipal sludge, and as advanced sludge treatment methods are utilized, the public's acceptance of beneficial reuse projects has improved. However, improper land application of sludge/septage can cause significant odor nuisance, attract flies, contain high levels of pathogens and heavy metals, and be aesthetically offensive due to the presence of plastics.

Currently, regulation of sludge and septage management projects is under the jurisdiction of the Board. Handling and disposal of sludge/septage can be regulated under Chapter 15 of Title 23, California Code of Regulations and California Department of Toxic Substance Control Standards for hazardous waste management. If sludge is used beneficially, the project may be exempted from Chapter 15, but the Board may issue waste discharge requirements.

The U.S. Environmental Protection Agency (U.S. EPA) has promulgated a policy of promoting those municipal sludge management practices that provide for the beneficial use of sludge and septage while maintaining or improving environmental quality and protecting public health. On February 19, 1993, the U.S. EPA published final sewage sludge regulations in 40 Code of Federal Regulations 503. The 503 regulations are intended to assure that use and disposal of sewage sludges and septage comply with Federal sludge use and disposal criteria developed by the U.S. EPA. The State Board or the California Integrated Waste Management Board may develop a State sludge management program consistent with the U.S. EPA's policy and criteria for land application, surface disposal, and incineration of sludge to seek Federal authorization to implement the 40 Code of Federal Regulations 503 sludge regulations.

VII.K.3. Mining Activities (Nonfuel Commodities)

The Central Coast has had a rich and varied mining history. Currently extracted products include asbestos, decomposed granite, diatomite, dimension stone, dolomite, gypsum, limestone, sand and gravel, shale, specialty sand and stone. The hundreds of inactive metal mines and prospects appear to be the worst polluters though. Mercury, used partly to amalgamate gold ore, was mined from the Little Bonanza deposit, San Luis Obispo County, as early as 1862. The Buena Vista Mine, which ceased production in 1970 or 1971, is believed to have been the last mercury producer in the Central Coast Region. Chromite deposits have been mined in San Luis Obispo County since about 1870. By 1944, and probably until the demise of production possibly 20 years ago, San Luis Obispo County produced more chromite than any other California county. Other products mined or prospected for historically include gold, silver, manganese, magnesium, antimony, copper, nickel, iron, barite, coal, feldspar, gemstones, biotite, molybdenum, peat, phosphate, sodium sulfate, sulfur, titanium, uranium, zircon, and possibly platinum.

The extent of environmental degradation by all mining ventures is not yet known. Active operations are regulated individually pursuant to the California Code of Regulations, Chapter 15, the Porter-Cologne Water Quality Control Act, the California Surface Mining and Reclamation Act and/or the Federal Clean Water Act (including the NPDES permit program). About 25 active mines currently hold Waste Discharge Requirements and/or NPDES surface water discharge permits and a few operations have been granted waivers. Chapter 15 land disposal requirements are imposed as required.

Inactive operations with responsible parties fall under the same purview, as warranted. Inactive mines, with or without responsible parties (those without are considered abandoned) may be remediated as Federal Superfund sites pursuant to Federal Comprehensive, Environmental Response, Compensation, and Liability Act, or as State Board Cleanup and Abatement Account sites. Low interest loans or government or academic grants may, in rare cases, be applied to inactive mine remediation.

Mines are subject to the Resource Conservation and Recovery Act, although comprehensive regulations have not yet been written. If hazardous constituents are present, Resource Conservation and Recovery Act, Subtitle C, and California Code of Regulations Title 22 may apply to active and inactive sites.

VII.K.4. Other Industrial Activities

Cement Industry -- Concrete manufacturing operations generate two significant types of solid waste, kiln dust and "off-specification" concrete. The first, kiln dust, is classified as a designated waste under Title 22 and is typically disposed of in Class II or III landfills operated by the concrete manufacturers. The second waste, "off-spec" concrete, is generated in much greater quantities and, while classified as a hazardous waste due to its very high pH (often ranging from 12.5 to 13.5 pH units), is frequently dumped on-site at the concrete plants and spread.

Cement batch plants generate large quantities of liquid and semi-solid wastes from rinsing of cement trucks and/or cement covered equipment. This waste, referred to as "washout" is very alkaline (pH may be as high as 12.5 in fresh cement), is high in total dissolved solids, and may contain assorted heavy metals. Washout may also contain various air-entrainment additives or other chemicals.

The Regional Board regulates cement kiln dust disposal and all ready mix cement plants where water quality could be impacted. Wastewater from cement batch plants is considered to be a designated waste, and may need to be discharged to a lined impoundment, if site-specific characteristics (e.g.,

soil type, depth to ground water, ground water quality, etc.) will not protect ground water from degradation. The Regional Board will consider, on a case-by-case basis, the need to line cement wastewater ponds. Solid or semi-solid wastes should be deposited in landfills or other legal points of disposal unless the discharger can demonstrate the waste will not pose a threat to water quality if deposited onsite.

Asphalt production -- Asphalt batch plants generally involve mixing heavy long chain hydrocarbons with aggregates. Occasionally other hydrocarbon sources (diesel and gasoline contaminated soil) are mixed with asphalt as a beneficial reuse. Diesel fuel and other solvents are used to clean equipment and as "lubricants" to prevent asphalt from sticking to equipment. Large quantities of these materials are generally stored on-site. Water quality can be significantly degraded if these materials reach water courses. Waste control measures are fairly straightforward at such sites. Petroleum products should be stored in tanks, and the tanks placed in lined holding areas. If spillage to soil occurs, contaminated soils should be scraped up, stored on a liner, and incorporated into asphalt as soon as possible. A berm (or other runoff control) should be placed downgradient from earthen material stockpiles.

Oil Field Exploration and Production Facilities -- Oil exploration and production is a thriving business in the Central Coast Region. Although drilling muds are exempt from Resource Conservation and Recovery Act, Oil Exploration and Production Operations are often subject to the requirements of Chapter 15 because they represent a threat to water quality. Due to the significant Chapter 15 workload, remote oil operations may not reach the top of the regulatory priority list. The Interstate Oil and Gas Compact Commission recently recommended:

"The review team recommends State Board obtain the resources necessary to fully discharge its responsibilities...seek adequate resources from the legislature or use some other mechanism to enable Regional Boards to process applications for WDRs in a timely manner...One option is to remove or raise the statutory cap on discharger fees so that State Board may restructure its fee system to improve its equity and cure substantial resource shortcomings."

The Interstate Oil and Gas Compact Commission also commended the Central Coast Regional Board for having a road spreading policy. This policy, Resolutions No. 73-05 and 89-04, is located in the appendix.

VII.L. RESOURCE CONSERVATION RECOVERY ACT (SUBTITLE D)

Policy for Regulation of Discharges of Municipal Solid Waste

On June 17, 1993, the State Water Resources Control Board (State Board) adopted Resolution 93-62, entitled Policy For Regulations Of Discharges Of Municipal Solid Waste. A copy of this policy is available in the appendix.

The Policy implements the State Board's regulations governing the discharge of waste to land California Code of Regulations, Title 23, Chapter 15 (23 California Code of Regulations Section 2510 et seq., "Chapter 15"), and implements those water quality related portions of the federal regulations governing the discharge of municipal solid waste at landfills (40 Code of Federal Regulations Section 258.1 et seq., "federal municipal solid waste regulations") that are not addressed by Chapter 15. The federal municipal solid waste regulations apply to all landfills that receive waste on or after October 9, 1991; the majority of the federal provisions become effective on October 9, 1993 (federal deadline).

The Policy directs Regional Boards to revise or adopt, as appropriate prior to the Federal Deadline, the waste discharge requirements (WDRs) for each landfill subject to the federal municipal solid waste regulations. The revised WDRs must implement those regulations in the manner described in the Policy and must implement the Chapter 15 regulations as well.

Landfills are subject to Subtitle D in California beginning October 9, 1993 or October 9, 1995 depending on landfill size and whether it is within one mile of a drinking water intake.

These Federal regulations apply to municipal solid waste landfills (Class III landfills, under Chapter 15). The Subtitle D regulations outline the classification of municipal landfills, siting criteria, design criteria, operation procedures, water quality monitoring parameters and standards, closure and post-closure care requirements, and financial assurance guidelines similar to Chapter 15. U.S. EPA considers Subtitle D to be minimum standards for landfill operation. States may have equal or more stringent requirements, but may not have less stringent requirements. If a state's landfill regulation program meets U.S. EPA's approval, that state may apply to become an U.S. EPA "approved state" for landfill regulation.

California received Subtitle D approval in October 1993 and will be able to consider engineering alternatives to certain provisions of Subtitle D.

VII.M. SOLID WASTE WATER QUALITY ASSESSMENT TEST

In 1984, California Porter-Cologne Water Quality Control Act Section 13273 was adopted to require operators (and/or owners) of active and inactive solid waste disposal sites to perform a Solid Waste Assessment Test investigation. About 150 sites per year are to be analyzed Statewide. The State Board has approved a statewide ranked list including 2,242 sites in 15 ranks. It has prioritized all sites on the basis of the potential threat to water quality and has established schedules for Investigation Workplan (Workplan) and Solid Waste Assessment Test report's submittals. The Central Coast Region's 15 ranks include 131 sites. Test reports are due the first day of July each year, depending on their ranking. Rank 1 sites were due July 1, 1987.

If monitoring information conclusively demonstrates hazardous waste is migrating, or has migrated to State waters, the site owner/operator may request a waiver of the Test reporting requirements pursuant to Water Code Section 13273(c). Waiver requests are usually requested within 120 days of the notification date. Water Code Section 13273.1, allows the site operator to request an exemption from Test reporting requirements by submitting a Solid Waste Assessment Questionnaire. Questionnaires may be submitted if a site contains less than 50,000 cubic yards of waste and is not known nor suspected of containing hazardous substances, other than household hazardous wastes. Based on this Questionnaire, the Board may exempt the Operator from all or part of the Solid Waste Assessment reporting requirements.

Solid Waste Assessment Test reports are required to contain:

1. An analysis of the surface and ground water on, under, and within one mile of the solid waste disposal site to provide a reliable indication whether there is any leakage of hazardous waste.
2. A chemical characterization of the soil-pore liquid in those areas which are likely to be affected if the solid waste disposal site is leaking, as compared to geologically similar areas near the solid waste disposal site which have been affected by leakage or waste discharge (Porter-

Cologne §13273[b]).

3. A finding whether hazardous waste is leaching into surface or ground water on, under, and within one mile of the disposal site.

If hazardous waste has migrated, the Regional Board must notify the Department of Health Services and the Integrated Waste Management Board, and take appropriate remedial action (Porter-Cologne §13273[e]).

More than eighty percent of Test sites (mostly unlined) evaluated in all climates and geologic terrain in California have been found to impact ground water quality as part of the Solid Waste Assessment Test program.

From the beginning, the Test program was supported by the California General Fund. In recent years, agencies with programs with such funding have been under increasing pressure to find alternative funding or face elimination. These pressures resulted in the Test Program being understaffed and, in the summer of 1991, eliminated. At that time, almost 200 Test Reports had been accepted and reviewed by the Regional Water Boards. However, a backlog of nearly 300 additional Test Reports had been submitted and had not been reviewed. The Central Coast Region had reviewed and accepted 29 reports, however 14 were backlogged.

In 1992, the Legislature adopted Assembly Bill 3348 (Eastin) which allocated \$2,500,000 from the Integrated Waste Management Board's "Solid Waste Disposal Site Cleanup and Maintenance Account" to the State and Regional Boards to fund the review of the above backlog. This law restricted these funds to the review of Solid Waste Assessment Reports from Ranks 1 through 5 only and required the work be in accordance with a Memorandum of Understanding between the Regional Boards and the California Integrated Waste Management Board. This Memorandum of Understanding was signed by the Executive Directors of the two agencies in January 1993."

9. Add new section, section VIII, to page IV-29 before the existing "Nonpoint Source Measures" section.

"VIII. HAZARDOUS WASTE COMPLIANCE ISSUES

"The Regional Board obtains information regarding hazardous waste discharge through two reporting programs. These programs are "Reportable Qualities of Hazardous Waste and Sewage Discharges" and the "Proposition 65" program. These mechanisms are discussed below:

VIII.A. REPORTABLE QUANTITIES OF HAZARDOUS WASTE AND SEWAGE DISCHARGES

California Porter-Cologne Water Quality Control Act Section 13271 requires the State Board and the Department of Health Services to adopt regulations establishing reportable quantities for substances listed as hazardous wastes or hazardous materials pursuant to Section 25140 of the Health and Safety Code. Reportable quantities are those which should be reported because they may pose a risk to public health or the environment if discharged to ground or surface water.

Similarly, the State Board was required to adopt regulations establishing reportable quantities for sewage. These requirements for reporting the discharge of sewage and hazardous materials do not supersede waste discharge requirements or water quality objectives.

The regulations for reportable quantities adopted by the State Board are included in Subchapter 9.2 of the California Code of Regulations.

VIII.B. PROPOSITION 65

The Safe Drinking Water and Toxic Enforcement Act of 1986 (Proposition 65) went into effect January 1, 1987. Proposition 65 is found in the Health and Safety Code, Section 25249.5, et seq.. It prohibits discharges of chemicals known to the State to cause cancer or reproductive toxicity to a potential source of drinking water, with certain exceptions. The Governor is required to publish a list of such chemicals. The list must be updated yearly. The current list is found in 22 California Code of Regulations, Section 12000.

Section 25180 of the Health and Safety Code requires designated governmental employees to disclose information to the local Board of Supervisors and local health officer regarding an illegal discharge of hazardous waste if the discharge is likely to cause substantial injury to the public. A designated employee is one who is required to sign a conflict of interest statement. Any designated employee who knowingly or intentionally fails to report information, as required by Proposition 65 is subject to fines and imprisonment (Section 25180.7). The following information should be reported:

- * Discharge type
- * How discharge was discovered
- * Location of discharge
- * Probable discharger
- * Possible contacts
- * Concentration of contaminant in soil and/or water."

10. Revise first three paragraphs of the "Nonpoint Source Measures" section on page IV-29 to read as follows:

"IX. NONPOINT SOURCE MEASURES

(Delete first three paragraphs.)

The State Nonpoint Source Management Plan initiated development of specific program objectives to be implemented at the State and Regional level. Currently Regional Board staff are implementing the following State Board program objectives:

- A. Control of Nonpoint Source pollution (urban runoff; agriculture; land disturbance activities such as road construction/maintenance, land construction, timber harvesting, and mining; hydrologic modification; and individual disposal systems). These activities include outreach, education, public participation, technical assistance, financial assistance, interagency coordination, demonstration projects, and regulatory activities such as imposing septic tank area prohibitions.

- B. Preparation of contracts for projects selected for grant funding. Regional Board staff also participate in these projects by providing technical assistance and publicizing their results.
- C. Implementation of the 1990 Coastal Zone Act Reauthorization Amendments, as developed by the State Board and the California Coastal Commission. This shall be an enforceable Nonpoint Source Management Program to control land use and anthropomorphic activities impacts that have a significant affect on coastal waters. (Further discussion of the Amendments is provided later.)
- D. Initiation of nonpoint source watershed pilot programs.

Using State program objectives, Regional Board staff developed task-specific workplans to address nonpoint sources of pollution. For the Central Coastal Region, the following tasks are managed and implemented by the Nonpoint Source Program staff:

Task 1: Water Quality Assessment

Regional Board staff reviewed and updated the nonpoint source portion of the Water Quality Assessment and prepared water body fact sheets. (The Water Quality Assessment and water body fact sheets are discussed in Chapter Six.)

Task 2: Watershed Studies/Planning

Three impaired watersheds (Morro Bay Watershed, San Luis Obispo Creek Watershed, and San Lorenzo River Watershed) have been targeted for intensive activity. Major activities for San Luis Obispo Creek watershed include:

- 1) Develop of a Demonstration "Total Maximum Daily Load" model.
- 2) Create a "San Luis Obispo Creek Riparian Task Force".
- 3) Implement a riparian corridor restoration project.
- 4) Identify major nonpoint pollutants and sources.
- 5) Develop a watershed management program.

For Morro Bay watershed, the activities include:

- 1) Develop a long term monitoring program to assess water quality improvements associated with the implementation of nonpoint source pollution control measures.
- 2) Develop funding for the long term monitoring program.
- 3) Implement a sediment reduction program using best management practices.
- 4) Participate in the Morro Bay Task Force.

For San Lorenzo River watershed, the activities include:

- 1) Develop a detailed assessment of Nonpoint Source impacts in the watershed.
- 2) Develop a wastewater management plan for on/off-site wastewater disposal.
- 3) Develop of a nutrient objective for the river.
- 4) Conduct experimental on-site wastewater treatment to reduce nitrogen discharge into the environment.

Task 3: Outreach Program

Staff meets regularly with individuals and local government agencies to promote education and solutions on Nonpoint Source problems. Additionally, the use of grant and loan resources to correct Nonpoint Source problems is emphasized during outreach activities.

Specific outreach activities include participation on the San Luis Obispo Creek Riparian Task Force, Morro Bay Task Force, and various 319(h)/205(j)/Basin Planning Technical Advisory Committees, and development of grant applications with local agencies.

Task 4: Project Tracking and Participation

Regional Board staff prepare contracts, coordinate with project proponents, track project progress, review and approve invoices, and provide technical support for Nonpoint Source grant funded projects.

IX.A. COASTAL ZONE ACT REAUTHORIZATION AMENDMENTS

In November 1990, Congress enacted Section 6217 of the Coastal Zone Act Reauthorization Amendments to help address the problem of nonpoint source pollution in coastal waters. Section 6217 requires that coastal states with federally approved coastal management programs develop Coastal Nonpoint Pollution Control Programs. The legislative history indicates that the central purpose of section 6217 is to strengthen the links between Federal and State coastal zone management and water quality programs in order to enhance efforts to manage land use activities that degrade coastal beneficial uses. The State coastal zone management agency designated under Section 306 of the Amendments and nonpoint source management agency designated under section 319 of the Clean Water Act will have a dual and co-equal role and responsibility in developing and implementing the coastal nonpoint program.

The program gives the U.S. Environmental Protection Agency (U.S. EPA) and the National Oceanic and Atmospheric Administration joint authority to approve programs developed by the State to address 6217 requirements.

The State agencies chosen to develop California's Coastal Nonpoint Pollution Control Program are the State Board and the Coastal Commission. The statute requires that the state program be "coordinated closely with State and local water quality plans and programs." This means that the State's nonpoint source programs under Sections 208 and 319 of the Clean Water Act and the coastal program must be examined to determine if they comprehensively address land use activities and anthropomorphic effects that have a significant effect on coastal waters. In addition, the state agencies are charged with developing a coordinated program that:

- identifies categories of nonpoint sources that adversely impact coastal waters;
- describes management measures to be implemented;
- identifies the land uses and critical coastal areas that will require more stringent or additional management measures;
- describes the state-developed additional management measures to be implemented in critical areas;
- documents the authorities the state will use to implement both the guidance and additional management measures, including designation of a lead agency for each source category and/or subcategory; and
- sets forth a schedule to achieve full implementation of the guidance management measures within three years of program approval by U.S. EPA and National Oceanic and Atmospheric Administration, and full implementation of additional management measures within six years of program approval.

The Coastal Commission and the State Board staff have been working on a strategy to develop the required Coastal Nonpoint Pollution Control Program plan. Recently, the State Board directed staff to review and revise the statewide Nonpoint Source Management Plan to include a strong coastal component. Revision of the Plan intends to satisfy the requirements of Section 6217 within the existing framework of current nonpoint source activities.

On a Regional Board level, staff has been involved with the Statewide program since 1991. A pilot project, "The New Coastal Nonpoint Pollution Control Program using the Morro Bay Watershed as a Model" was performed to assess the feasibility of establishing the Coastal Nonpoint Pollution Control Program in California. Regional Board staff supplied technical information and reviewed reports. Concerted planning and implementation efforts on target coastal watersheds such as Morro Bay will be major accomplishments to satisfy Coastal Nonpoint Pollution Control Program requirements. As the program goes statewide, Regional Board staff will attend technical advisory committee meetings and will work closely with staff of the State Board and other Regional Boards, as well as staff of other relevant local, state, and federal agencies to develop a workable Coastal Nonpoint Pollution Control Program.

Wastewater originating from nonpoint sources includes those from urban runoff, agricultural activities, on-site sewage disposal systems, and land disturbance activities. Management of these types of nonpoint source discharges are discussed in the following section. The Regional Board will be developing management practices for marinas and recreational boating; hydromodification facilities; and wetlands, riparian areas, and vegetated treatment systems at a future date."

~~Wastewater originating from nonpoint sources includes those from agricultural activities, urban runoff, erosion from construction, mining or timber harvesting operations, vessels, and individual waste disposal systems.~~

~~Control of nonpoint wastewaters falls into several categories including: 1) changes in practices to minimize waste emission; 2) prohibition of polluting activities; or 3) some form of treatment program. For example, to minimize waste emissions, agricultural irrigation practices can be modified to reduce salt buildup rates in ground water and there are ways to control drainage from dairies and feedlots to minimize contamination of surface waters. Prohibition may be effectively used to eliminate vessel waste discharges and individual disposal systems in areas where such practices cause water degradation. Treatment approaches can be~~

~~applied to all of the above examples and to collected urban drainage; use of buffer strips along water courses can be effective in controlling effects of erosion from timber harvesting or construction activities~~

~~Effluent limits and facility requirements are not readily applicable to most nonpoint wastewater sources. Controls emphasize use of upgraded on-site practices; improved regulatory controls such as performance standards, policies, and inspection programs; and first line implementation by local agencies. Topical discussions of significant nonpoint source control measures applicable to the Central Coastal Basin follow for urban runoff management; agricultural wastewater management; individual, alternative, and community waste disposal practices; and, land disturbance activities.~~

11. Add new section, section IX.C.6., at the end of the "Agricultural Water and Wastewater Management" section on page IV-40:

"IX.C.6. RANGE MANAGEMENT

Rangeland is the most extensive land use type in California, accounting for more than 40 million acres of the State's 101 million acres. As most of the rangelands are located between forested areas and major river systems, nearly all surface waters in the State flow through rangelands. Thus, rangeland activities can greatly impact water quality. In this section, grazing activities are discussed.

Grazing

Grazing activities (particularly overgrazing), by contributing excessive sediment, nutrients, and pathogens, can adversely impact water quality and impair beneficial uses. Soil erosion and sedimentation are the primary causes of lowered water quality from rangelands. When grazing removes most of the vegetative cover from pastures and rangelands, the soil surface is exposed to erosion from wind and water. With runoff, eroded soil becomes sediment which can impair stream uses and alter stream channel morphology and results in decreased recharge capacity through clogging of channel bottoms. With steep slopes, highly erodible soils and interim storm events, the sediment delivery ratio (a measure of the amount of eroded soil delivery to a waterbody) on rangeland can be very high. Streambank erosion and lakeshore erosion are other sources of sediment on rangelands. Lakeshores, streambanks, and associated riparian zones are often subjected to heavy livestock use. Trampling and grazing of vegetation contribute to lakeshore and streamside instability as well as accelerated erosion.

Sediments can contribute large amounts of nutrients to surface water. Nutrients, mainly nitrogen and phosphorous, from manure and decaying vegetation also enter surface waters, particularly during runoff periods. Very critical nutrient problems can develop where livestock congregate for water, feed, salt, and shade. Pasture fertilization can also be a source of nutrients to surface waters, as well as a source of pesticides, particularly if flood irrigation techniques are used on rangelands.

Stream zone and lakeshore areas are important for water quality protection in that they can "buffer" (intercept and store nutrients which have entered surface and ground waters from upgradient areas). These "buffer zones" are more sensitive to processes which can increase nutrient discharges such as soil compaction, soil erosion, and vegetation damage than other areas of the rangeland.

Localized contamination by pathogens that could impact human health in surface water, ground water, and soils can result from livestock in pastures and rangelands. Rangeland streams can show increased coliform bacterial levels with fecal coliform levels tending to increase as intensity of

livestock use increases. Fecal coliform serve as indicators that pathogens could exist and flourish. The extent of contamination is usually determined by livestock density, sizing, and frequency of grazing, and access to the surface waters.

Grazing Control Measures

Grazing activities occur on both public and private lands in the Central Coast Region. Regulation of grazing on federal lands differs from that on private lands.

Federal lands -- Grazing activities on federal lands are regulated by the responsible land management agency, such as the U. S. Bureau of Land Management or the U. S. Forest Service. Through Memorandum of Understandings and Management Agency Agreements, the Regional Board recognizes the water quality authority of the U.S. Forest Service and U.S. Bureau of Land Management in range management activities on federal lands. Both these agencies require allotment management plans to be prepared for a specific area and for an individual permittee. The Regional Board relies on the water quality expertise of these agencies to include appropriate water quality measures in the allotment management plans. Most allotment management plans include specific Best Management Practices to protect water quality and existing and potential beneficial uses.

Non-federal (private) lands -- The Range Management Advisory Committee is a statutory committee which advises the California Board of Forestry on rangeland resources. The Committee has identified water quality protection as a major rangeland issue and has assumed a lead role in developing a Water Quality Management Plan for private rangelands in California. Regional Board staff is participating in the Plan's development. Sections proposed for inclusion in the Plan are status of water quality and soil stability on state rangelands, authority, mandates, and programs for water quality and watershed protection, local water quality planning guidelines, sources of assistance, development of management measures (Best Management Practices), state agency water quality responsibilities, and monitoring guidelines. Upon its completion, the Plan will be submitted to the State Board. On private lands whose owners request assistance, the U.S. Soil Conservation Service, in cooperation with the local Resource Conservation Districts, can provide technical and financial assistance for range and water quality improvement projects. A Memorandum of Understanding is in place between the U.S. Soil Conservation Service and the State Board for planning and technical assistance related to water quality actions and activities undertaken to resolve nonpoint source problems on private lands.

On both public and private lands, the Regional Board encourages grazing strategies that maintain adequate vegetative cover to reduce erosion and sedimentation. The Regional Board promote dispersal of livestock away from surface waters as an effective means of reducing nutrient and pathogen loading. The Regional Board encourages use of Best Management Practices to improve water quality, protect beneficial uses, protect stream zone and lakeshore areas, and improve range and watershed conditions including:

- Implementing rest-rotation grazing strategies,
- Changing the season of use (on/off dates),
- Limiting the number of animals,
- Increasing the use of range riders to improve animal distribution and use of forage,
- Fencing to exclude grazing in sensitive areas,
- Developing non-lakeshore and non-stream zone watering sites,
- Constructing physical improvement projects such as check dams, and
- Restoring riparian habitat.

These same Best Management Practices may result in improved range and increased forage production, resulting in increased economic benefit to the rancher and land owner. The Regional Board also encourages land owners to develop appropriate site-specific Best Management Practices using the technical assistance of the U.S. Soil Conservation Service and the U.S. EPA.

In addition to relying on the grazing management expertise of agencies such as the U.S. Forest Service, U.S. Bureau of Land Management, or Range Management Advisory Committee, the Regional Board can directly regulate grazing activities to protect water quality. Actions available to the Regional Board include:

1. Require that a Report of Waste Discharge be filed, that allotment management plans for specific federal lands be prepared, or that a Coordinated Resource Management Plan be adopted within one year of problem documentation. Such problems indicate impairment of beneficial uses or violation or threatened violation of water quality objectives.
2. Require that all allotment management plans (utilized for federal lands) and Coastal Resource Management Plans contain Best Management Practices necessary to correct existing water quality problems or to protect water quality so as to meet all applicable beneficial uses and water quality objectives contained in Chapters Two and Three, respectively, of this Basin Plan. Corrective measures would have to be implemented within one year of submittal of the allotment management plan or Coastal Resource Management Plan, except where staged Best Management Practices are appropriate. Implementation of a staged Best Management Practice must commence within one year of submittal of the allotment management plan or Coastal Resource Management Plan.
3. Require that each allotment management plan (utilized for federal lands) or Coastal Resource Management Plan include specific objectives, actions, and monitoring and evaluation procedures. The discussion of actions must establish the seasons of use, number of livestock

permitted, grazing system(s) to be used, a schedule for rehabilitation of ranges in unsatisfactory condition, a schedule for initiating range improvements, and a schedule for maintenance of range improvements must include priorities and planned completion dates. The discussion of monitoring and evaluation must propose a method and timetable for reporting of livestock forage conditions, watershed condition, and surface and ground water quality.

4. Require that all allotment management plans and Coastal Resource Management Plans be circulated to interested parties, organizations, and public agencies.
5. Consider adoption of waste discharge requirements if an allotment management plan or Coastal Resource Management Plan is not prepared or if the Executive Officer and the landowner do not agree on Best Management Practices proposed in an allotment management plan or Coastal Resource Management Plan.
6. Decide that allotment management plans and Coastal Resource Management Plans prepared to address a documented watershed or water quality problem may be accepted by the Regional Board's Executive Officer in lieu of adoption of Waste Discharge Requirements.
7. Oversee monitoring of water quality variables and beneficial uses. Provide data interpretation.
8. Encourage the U.S. Bureau of Land Management, U.S. Forest Service, Resource Conservation District, and private landowners to develop watering sites for livestock away from lakeshores, stream zones, and riparian areas.
9. Encourage private landowners to request technical and financial assistance from U.S. Soil Conservation Service, in cooperation with the local Resource Conservation Districts, in the preparation of allotment management plans and the implementation or construction of grazing and water quality improvements.
10. Continue to coordinate with the Range Management Advisory Committee in the development of a water quality management plan for private rangelands."

12. Revise introductory paragraph under heading "Individual, Alternative, and Community Systems Prohibitions" on page IV-51 to read as follows:

"Discharges from new soil adsorption systems installed after September 16, 1983 in sites with any of the following conditions are prohibited:"

13. Replace Mining Activities Section on page IV-59 with the following:

"Pollution control at the hundreds of inactive mine sites riddling the Coast Ranges is in its infancy. Accurate regional inventories are being compiled, isolated mine cases are addressed individually, and several polluting mines are under direct regulation. Regional Board assistance and consultation are aiding several proactive responsible parties and focused study of inactive mine effects on four Central Coast watersheds has been funded by the Clean Water Act, Water Quality Planning Program.

About a decade ago Toxic Substances Monitoring Program data revealed elevated mercury concentrations in Lake Nacimiento, a high priority municipal and agricultural water storage reservoir in San Luis Obispo County. The Lake is fed by the Las Tablas Creek system (among others), which receives discharge water from the Buena Vista Mine, a mercury mine inactive since 1970 or 1971. An academic study conducted by respected Cal Poly scientists (team leader, Dr. Thomas J. Rice) of Lake Nacimiento mercury sources recently concluded that greater than 50% and possibly up to 78% of the fluvial mercury transport to the Lake is contributed by the Las Tablas Creek system. Further, the inactive Buena Vista and Klau Mines were identified as the primary point sources of Las Tablas Creek mercury. Based on these conclusions and other independent supporting data, the Board on May 14, 1993, adopted four orders requiring strict implementation of NPDES surface water discharge standards and California Code of Regulations Title 23 mine waste management and mine closure standards at the Buena Vista Mine and the adjacent Klau Mine.

The U. S. Bureau of Land Management and Forest Service are addressing several inactive mercury mines on their properties pursuant to the Federal "Superfund" process. Sample analyses data taken by Board staff have been instrumental in aiding these investigations.

Two sequential studies of inactive mines in four watersheds of northwest San Luis Obispo County are underway. Funded partially by the Clean Water Act Water Quality Planning Program, the studies address all inactive mines in the Las Tablas Creek, Santa Rosa Creek, San Simeon Creek (all primarily mercury mines), and Chorro Creek (primarily chromium) watersheds. The primary goals of the watershed studies are:

- identification of all inactive mines
- attribution of specific water quality problems to specific mines, and
- determinations of the best methods of abating contaminant sources and remediating already emplaced surface contamination, based on field and possibly lab experiments.

These are considered pilot studies and the Regional Board ultimately plans to conduct such studies for the complete Region and to implement the findings, resulting in abatement of inactive mines as surface and ground water contaminant sources and remediation of contaminated media."

~~Mining and petroleum related activities, including abandoned mines or well fields, affecting water quality should be covered by up to date waste discharge permits and monitoring programs. Offshore oil operations, mercury mines, and gravel operations should receive high priority in this regard. Monitoring of coastal waters should include oil surveillance from federal lease areas to state waters.~~

CHAPTER FIVE

1. Add "Nonpoint Source Management Plan" and "Discharges to Municipal Solid Waste Policy" to list of Plans and Policies under the heading "State Water Resources Control Board Plans and Policies" on page V-1.
2. Revise "Ocean Plan" section on page V-2 to read as follows:

The "Water Quality Control Plan for Ocean Waters of California", Resolution No. ~~90-27 88-111~~ was adopted by the State Water Resources Control Board on ~~March 22, 1990~~ ~~September 22, 1988~~. ~~(This 1988 plan is a major revision of the original plan adopted by State Water Resources Control Board Resolution 72-45 on July 6, 1972.)~~ This ~~1990~~ ~~1988~~ plan establishes beneficial uses and water quality objectives for waters of the Pacific Ocean adjacent to the California Coast outside of enclosed bays, estuaries, and coastal lagoons... (The remainder of this section remains unchanged.)

3. Add new State Plan below the "Ocean Plan" section and before the "Bays and Estuaries Policy" section on page V-3:

"NONPOINT SOURCE MANAGEMENT PLAN"

The "Nonpoint Source Management Plan", Resolution 88-123, was adopted by the State Water Resources Control Board on November 15, 1988 pursuant to Section 319 of the Clean Water Act. The Plan identifies nonpoint source control programs and milestones for their accomplishment. It emphasizes cooperation with local governments and other agencies to promote the implementation of Best Management Practices and remedial projects."

4. Insert new State Board Policy on page V-4, between the "Sources of Drinking Water Policy" and the "Recommended State Water Resources Control Board Control Actions" sections:

"DISCHARGES OF MUNICIPAL SOLID WASTE POLICY"

The "Policy for Regulation of Discharges of Municipal Solid Waste", Resolution No. 93-62, was adopted by the State Water Resources Control Board on June 17, 1993. This policy implements State regulations of waste discharge to land (California Code of Regulations, Title 23, Chapter 15) and Federal regulations related to municipal solid waste disposal (40 Code of Federal Regulations Sections 257 and 258). The Policy directs Regional Water Quality Control Boards to revise or adopt, prior to the Federal deadline (currently October 9, 1993), Waste Discharge Requirements for all municipal solid waste landfills subject to State and Federal regulations. A detailed description of this policy is provided in Chapter Four under the Resource Conservation and Recovery Act section."

5. Insert new section on page V-15, below the Salinity Management Section, as follows:

" Seawater Intrusion

Water Management Plans should be prepared and adopted by Monterey County for the Salinas ground water basin and the Pajaro Valley Water Management Agency for the Pajaro ground water basin. These management plan should include immediate actions these agencies can take to help alleviate seawater intrusion as well as measures to stop seawater intrusion from advancing. These agencies should remediate sea water intrusion as a long-term goal.

Local and State agencies having jurisdiction to help control seawater intrusion should assist in implementing sea water intrusion remedies."

6. Revise last sentence under "Waiver of Waste Discharge Requirements" starting on page V-17 to read as follows:

"...Following this hearing, the Regional Board established certain discharges which waived WDRs. ~~These waived are listed below:~~The types of discharges which may be waived are shown in the appendix.

7. Add Regional Board policy to page V-21:

"APPRECIATION FOR DISCHARGER COMPLIANCE

Resolution 93-04: Appreciation for Discharger Compliance.

This policy addresses the manner in which the Regional Board will protect water quality protection and improvement at the most cost effective manner to society. A copy of the policy is shown in the appendix."

CHAPTER SIX

1. Insert new section, "Quality Control and Data Management", between the "Program Objectives" and "State Water Resources Control Board Program Tasks" sections on page VI-2"

"QUALITY CONTROL AND DATA MANAGEMENT

Federal regulations and state policy require the preparation and implementation of Quality Assurance/Quality Control Plans for most monitoring carried out by the Regional Board's staff or its contractors. Dischargers must use laboratories approved by the Regional Board's Executive Officer and/or Regional Board's laboratory must have an approved Quality Assurance/Quality Control program.

Discharger monitoring reports are kept in the Regional Board's files; older files are microfiched. The Board has increasingly sophisticated computer facilities for analysis of data collected in special studies. "Raw" data are periodically made available to the State Board for entry into the Statewide Water Quality Information System database for use by other agencies.

The results of special studies are generally summarized in Regional Board staff reports and are discussed at public meetings of the Regional Board. The results of complaint monitoring are provided to the person or agency submitting the complaint. Copies of Regional Board planning documents and special studies reports are provided to public and university libraries."

2. Add following section below "Biennial Water Quality Inventory" on page VI-5:

"WATER QUALITY ASSESSMENT

The State Board has been preparing "Section 305(b) Reports" since the mid-1970's. Most of these reports have been fairly general in nature, highlighting a few significant problem areas and estimating total area or stream mileage of waters statewide which were classified as "good", "medium", or "poor" quality. In 1989, the State Board began a more detailed Water Quality Assessment process to fulfill U.S. EPA reporting requirements and to provide the basis for prioritizing funding under the State's Clean Water Strategy.

The Water Quality Assessment is a computer database. It includes a table which lists water bodies of each Region alphabetically by water body type (lakes, streams, ground water, etc). Initially, Regional Boards were directed to include at least all water bodies mentioned by name in their Basin Plans in the Water Quality Assessment table. Additional water bodies are to be added in future updates of the Water Quality Assessment, with the eventual goal of including all waters of the Region. The 1992 Water Quality Assessment for the Central Coast Region includes approximately 400 entries.

For each water body, the Water Quality Assessment table identifies the wetland, lake, or ground water basin area or the stream mileage classified as having "good", "intermediate", "impaired", or "unknown" water quality. The table includes space for brief narrative problem descriptions. It identifies problem sources as point, nonpoint, or both. It also indicates whether the water body is included on one or more of the following federal "lists" (numbers refer to sections of the Clean Water Act):

- 131.11 Segments which may be affected by toxic pollutants, or segments with concentrations of toxic pollutants that warrant concern.
- 303(d) List of Water Quality Limited Segments where objectives or goals of the Clean Water Act are not attainable with the Best Available Treatment/Best Control Technology
- 304(M) A "mini-list" of waters not meeting State adopted numeric water quality objectives due to toxic point sources and/or nonpoint sources after implementation of Best Available Technology/Best Control Technology.
- 304(S) A "short-list" of waters not achieving water quality standards due to point source implementation of Best Available Technology/Best Control Technology.
- 304 (L) A "long-list" of waters not meeting the water quality goals of the Clean Water Act after implementation of Best Available Technology/Best Control Technology due to either point or nonpoint source discharges.
- 314 A list of lake priorities for restoration.
- 319 A list of impaired surface water bodies from nonpoint source problems due to both toxic and nontoxic pollutants.

The information used by Regional Board staff in compiling and revising the Water Quality Assessment table includes the type of monitoring data discussed in this chapter, records of past Regional Board enforcement actions, professional judgement of Regional Board scientists and engineers, and public comments.

The Water Quality Assessment database also includes the capability to print out a more detailed "Fact Sheet" for each water body in the table. Fact Sheets can include longer problem descriptions, information on threatened or impaired beneficial uses, and summaries of current and projected remedial actions by the state Board and/or the Regional Board. Due to time constraints and, in many cases, lack of information, detailed Fact Sheets have not been prepared for all water bodies in the Central Region's Water Quality Assessment table. Additional Fact Sheets will be added during the ongoing Water Quality Assessment update process.

The Water Quality Assessments adopted by the nine Regional Boards were combined into a statewide Water Quality Assessment which was formally adopted by the State Board. The State Board is using the system to print out statewide "reports", statistical tables graphs, and charts summarizing the total numbers or percentages of water bodies affected by different types of water quality problems. The State Board also uses information in the Water Quality Assessment to prioritize funding proposals affecting specific water bodies.

COPY FOR YOUR INFORMATION
1/17/94

JAMES R VILKITIS
COASTAL RESOURCES INSTITUTE
CAL POLY, SAN LUIS OBISPO
REGION 3: CCRWQCB

OVERVIEW

Study Period: 20 months (1 January 1993 to 31 August 1994).

Objective: Update the Basin Plan by

- (1) identifying water bodies for reevaluation in the Basin Plan and those that need to be added to the Basin Plan, and
- (2) assigning beneficial use designations to those waters.

Contract Specifications: The focus of the project was an assessment and reevaluation of approximately 400 water bodies for potential inclusion into the updated Basin Plan as an amendment.

- (1) approximately 250 new water bodies to be added to the Water Quality Assessment (WQA) System (known as List A);
- (2) 100 waters already listed in the Basin Plan be reevaluated (known as List B); and
- (3) 40 to 50 waters be reevaluated as a result of the State Board Beneficial Uses definition revisions (known as List C).

Funding: This project was wholly funded by the United States Environmental Protection Agency using Federal 201(G)(1)(B) grant funds, and does not necessarily reflect the views or policies of that agency or of the State Water Resources Control Board of California.

Study Area: Primarily in Santa Cruz, Santa Barbara, San Luis Obispo and Monterey counties. Some waters in San Benito, Santa Clara and Ventura were also evaluated.

Procedure:

(1) Data Collection

- (a) questionnaire and telephone surveys,
- (b) spring and fall sampling of approximately 75 water bodies (QA/QC), and
- (c) field observations of other waters during the sampling periods.

(2) Data Analysis

- (a) verify agency jurisdiction, authority or knowledge for beneficial use identification,
- (b) review agency groupings of assigned uses for congruency,
- (c) identify data gaps and secure necessary information if available,
- (d) group waters by basin and/or sub-basin to determine consistency of designations and identify data gaps, and
- (e) assign beneficial uses.

Results: A total of 482 waters were assigned beneficial use designations. Of these,

- (1) 300 were identified for inclusion in the Water Quality Assessment (WQA) System;
- (2) 149 that were in the Basin Plan were reevaluated; and
- (3) 33 were added to the list based on survey information and field observations.
- (4) State Board Beneficial Uses definition revisions were not available in time for the assessment.

Recommendations:

- (1) eliminate the discrepancies between the Basin Plan and USGS Topographic Maps, and
- (2) include all secondary and tertiary streams including those on the Channel Islands.

PROJECT RESULTS

Meetings: Eighteen informal meeting were held. Meeting Notes.

Agencies targeted for survey information:

- Basic assumption that all information was valid.
- Survey involved two processes
 - questionnaire for specific waters,
 - follow up telephone survey to validate and fill in gaps. Establish an information network.

Questionnaire:

- (1) 193 agencies were involved with the process.
- (2) Fifteen Beneficial Uses were identified for the survey. The definitions primarily used throughout the assessment process were taken from the RWQCB 1989 Basin Plan. It was agreed that the proposed beneficial use category definitions issued June 15, 1993 by the SWRCB (as interpreted by the contract manager and project director) would be used to aid in the beneficial uses designations for the waters identified in this contract. Criteria and concepts used in the interpretation of the June 15, 1993 designations are in italics.

•Municipal and Domestic Supply (MUN). *All water bodies were given the MUN designation except sloughs, marshes, wetlands or estuaries and those that met the following criteria:*

1. *TDS exceeds 3000 mg/l (5000 uS/cm, electrical conductivity).*
2. *Contamination that cannot reasonably be treated for domestic use.*
3. *Source not sufficient to supply an average sustained yield 200 gallons per day.*
4. *Wastewater collection systems.*
5. *Agricultural drainage systems.*

•Agricultural Supply (AGR). *No AGR designation was given to wetlands, sloughs, estuaries or marshes. Most waters that were suitable for the AGR designation were considered suitable for the MUN designation.*

•Industrial Process Supply (PROC).

•Industrial Service Supply (IND).

•Ground Water Recharge (GWR).

•Water Contact Recreation (REC-1).

•Non-contact Water Recreation (REC-2). *All water bodies designated as REC 1 were also designated as REC 2.*

•Warm Freshwater Habitat (WARM).

•Cold Freshwater Habitat (COLD). *When a water body received an "E" for WARM or COLD, it automatically received an "E" for REC 1 and other beneficial uses that would be sustained with the "E" designation for WARM or COLD.*

•Wildlife Habitat (WILD).

•Migration of Aquatic Organisms (MIGR).

•Spawning, Reproduction, and/or Early Development (SPWN). *Aquatic organisms including but not limited to fish spawning.*

•Preservation of Biological Habitats of Special Significance (BIOL). *The water must provide a special habitat and be in an established specially designated area where the water body is a significant feature. This beneficial use definition was difficult to apply without the added clarity. The words "the water must provide a special habitat" meant that the water, not just the surrounding land, had to be present and an integral part of the habitat before this beneficial use could be applied. Also many individuals or agencies surveyed were of the opinion that an area by its nature alone should have special biological significance. Adding the words "...in an established specially designated area where the water body is a significant feature" meant that an agency had given the water body an official listing as being biologically significant, thus, making the designation by the assessor less subjective. As a result all water bodies within state parks as well as estuaries were given the BIOL designation.*

•Rare, Threatened, or Endangered Species (RARE).

•Estuarine Habitat (EST). *This beneficial use was added by the contract manager as the project neared completion. Therefore it was not included in the questionnaire or telephone surveys. All water bodies that had previously been assigned an "E" designation (estuary) were given the EST designation before submission of the draft final report.*

- (3) Subcategories (E, A, I) were not addressed in the questionnaire. Too complicated.
- (4) Only waters located within the recipient's jurisdiction and surrounding area were include.
- (5) 64 % of the questionnaires were returned.

Field Observations: Waters with little or no informations were targeted for field reconnaissance. QA/QC was developed. The 34 waters that had one agency response and the 41 that had no responses served as the bases for field observations. In addition, the following criteria were used to identify waters whose beneficial use designation would benefit from field observations.

- (1) A response was considered invalid when both the contract manager (CM) and project manager (PD) questioned it.
- (2) If either the CM or PD questioned the response, that Beneficial Use was a candidate for further investigation.
- (3) The BIOL designation, in most cases, would be further investigated to determine which agency designated the area and its location.

Table 1: Water Bodies by County Requiring Additional Information.

<i>County</i>	<i>Total</i>	<i>Site Visit</i>	<i>Phone Survey</i>
Monterey	31	8 to 12	19 to 23
San Benito	10	0 to 6	5 to 10
San Luis Obispo	35	1 to 12	23 to 34
Santa Barbara	70	0	70
Santa Clara	13	0	13
Santa Cruz	47	36	11
Ventura	<u>1</u>	<u>0</u>	<u>1</u>
Totals	207	45 to 65	142 to 162

Field observations yielded information for 79 waters. In the spring, photographic slides were taken of almost all the sampling area.

Data Base: A work sheet matrix that included all field, telephone, and questionnaire data for each water was developed. Data was verified and evaluated in three step process.

- (1) quality of information, with reference to all responses and the jurisdiction of the agency,
- (2) logic of uses identified by each agency and congruency of uses, and
- (3) grouping of waters by hydrologic unit and sub-unit to view grouping consistency.

Assigning Beneficial Uses: five step process,

(1) Information verification,

- verification of all information in the work sheet matrix,
- assess agency responses for consistency based on their mission statement,
- identify any inconsistencies within the agency response and resolve them (an agency may have assigned a use outside of their jurisdiction or beyond their mission statement, i e, if an agency assigned a COLD designation but did not take water temperatures or have knowledge of water temperatures, the designation was not considered),
- identify data gaps that could be filled through the agency telephone network, and
- pursue and implement means to gather information to fill gaps.

(2) Data review,

- for every water, review, evaluate, and compare each agency's response (questionnaire and telephone) for the beneficial uses under consideration,
- review field log and slides (if appropriate) for insight into water body uses, and
- review telephone responses and follow-up if necessary.

(3) Evaluation,

- evaluate merits of all use designations for each water,
- evaluate the logical organization of the combined use designations for each water, and
- validate questionable information by telephone.

(4) Assign uses:

- assign appropriate Beneficial Uses.

(5) Confirm beneficial uses:

- team review to discuss and resolve any discrepancies between and among assigned uses.

The final Beneficial Uses designations were determined jointly by Cal Poly and CCRWQCB. The Contract Manager and relevant technical staff reviewed the Draft Final Report and submitted comments. The comments were evaluated and changes incorporated into the Final Report. All water bodies and their beneficial uses were incorporated into a table following the Basin Plan format.

Results:**Table 2. Summary of Findings.**

County	Total Waters	Quest Responses	Field Log Obs/Mes.	Phone Survey	Waters Added
Monterey	75	73	21	35	6
San Benito	10	10	5	10	0
San Luis Obispo	95	93	11	53	7
Santa Barbara	86	82	2	79	14
Santa Clara	19	18	2	13	0
Santa Cruz	163	131	38	62	6
Ventura	1	1	0	1	0
Totals	449	408	79	253	33

FINAL REPORT

8/31/93

Task: Reevaluate Beneficial Use Definitions.

Forty (40) to fifty (50) waters in the Basin Plan were to be reevaluated based on the State Board's revised beneficial use definitions. This task was contingent upon revising the definitions by 30 January 1992. This did not occur by that date; therefore this task was not completed. Resources were redirected to Task 1 in the contract to help compensate for the 99 additional waters identified for evaluation. The contract specified 350 waters but a total of 449 were identified for (re)evaluation in Lists A and B. However, Beneficial Uses needed to be defined and agreed upon in order to evaluate and designate uses for the water bodies under consideration. It was agreed that the proposed beneficial use category definitions issued June 15, 1993 by the SWRCB (as interpreted by the contract manager and project director) would be used to designate the final beneficial uses for the waters identified in this contract. Fifteen beneficial uses were involved in the beneficial use designation analysis. Criteria and concepts used in the interpretation of the June 15, 1993 designations are in italics.

•Municipal and Domestic Supply (MUN) - Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply. *All water bodies were given the MUN designation except sloughs, marshes, wetlands or estuaries and those that met the following criteria:*

1. *TDS exceeds 3000 mg/l (5000 uS/cm, electrical conductivity).*
2. *Contamination that cannot reasonably be treated for domestic use.*
3. *Source not sufficient to supply an average sustained yield 200 gallons per day.*
4. *Wastewater collection systems.*
5. *Agricultural drainage systems.*

•Agricultural Supply (AGR) - Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.

No AGR designation was given to wetlands, sloughs, estuaries or marshes. Most waters that were suitable for the AGR designation were considered suitable for the MUN designation.

FINAL REPORT

8/31/93

- Industrial Process Supply (PROC) - Uses of water for industrial activities that depend primarily on water quality.
- Industrial Service Supply (IND) - Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well repressurization.
- Ground Water Recharge (GWR) - Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers.
- Water Contact Recreation (REC-1) - Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, (*wind*) surfing, white water activities, fishing (*contains fish suitable for sport fishing*), or use of natural hot springs.
- Non-contact Water Recreation (REC-2) - Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is not reasonably possible. These uses include, but are not limited to, picnicking, sunbathing, hiking, *pleasure boating*, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, *bird watching*, *wildlife study etc.* or aesthetic enjoyment in conjunction with the above activities.

All water bodies designated as REC 1 were also designated as REC 2.

- Warm Freshwater Habitat (WARM) - Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.
- Cold Freshwater Habitat (COLD) - Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

When a water body received an "E" for WARM or COLD, it automatically received an "E" for REC 1 and other beneficial uses that would be sustained with the "E" designation for WARM or COLD.

FINAL REPORT

8/31/93

- Wildlife Habitat (WILD) - Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.
- Migration of Aquatic Organisms (MIGR) - Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish.
- Spawning, Reproduction, and/or Early Development (SPWN) - Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish (*aquatic organisms including but not limited to fish spawning*).
- Preservation of Biological Habitats of Special Significance (BIOL) - Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources *is a feature of the environment requiring special protection. The water must provide a special habitat and be in an established specially designated area where the water body is a significant feature.*

This beneficial use definition was difficult to apply without the added clarity. The words "the water must provide a special habitat " meant that the water, not just the surrounding land, had to be present and an integral part of the habitat before this beneficial use could be applied. Also many individuals or agencies surveyed were of the opinion that an area by its nature alone should have special biological significance. Adding the words "...in an established specially designated area where the water body is a significant feature" meant that an agency had given the water body an official listing as being biologically significant, thus making the designation by the assessor less subjective. As a result all water bodies within state parks as well as estuaries were given the BIOL designation.

- Rare, Threatened, or Endangered Species (RARE) - Uses of water that support habitats necessary, at least in part, for the survival and successful maintenance of plant or animal species established under state law as rare, threatened or endangered.

FINAL REPORT

8/31/93

•Estuarine Habitat (EST) - Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish or wildlife (e.g., estuarine mammals waterfowl, shorebirds).

This beneficial use was added by the contract manager as the project neared completion. Therefore it was not included in the questionnaire or telephone surveys. All water bodies that had previously been given an "E" for type were given the EST designation before submission of the draft final report

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, CA 93401**

RESOLUTION NO. 90-05

**Adopting Monterey Bay Desalinization Discharge Waiver
Amendment to the Water Quality Control Plan
and Requesting Approval From the
State Water Resources Control Board**

WHEREAS:

1. The Water Quality Control Plan for the Central Coastal Basin (Basin Plan) prohibits "waste discharges" into the northern and southern extremities of Monterey Bay (Prohibition Zone). (This prohibition is contained in the Plans and Policies Discharge Prohibitions section of the Basin Plan.)
2. The Prohibition Zone was established because sluggish circulation in the Bay's extremities caused waste parameters to accumulate. The zone was established to reduce accumulation of ammonia nitrogen and bacteria in the northern and southern corners of the Bay.
3. Desalinization discharges do not contribute the type of pollutants which are a concern in the Prohibition Zone.
4. Circulating seawater systems from aquariums and marine labs may contribute some pollutants of concern. However, these are generally of minor amounts and can be regulated through the NPDES process.
5. Sufficient regulatory mechanisms exist to protect Monterey Bay from desalinization and circulating seawater discharges.
6. A Basin Plan Amendment is necessary to allow desalinization and circulating seawater discharges in Monterey Bay.
7. Drafts of the proposed amendment have been prepared and distributed to interested persons and agencies for review and comment.
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and Federal Clean Water Act of 1977 (PL 92-500 and PL 95217). The Regional Board finds adoption of this amendment will not have a significant adverse effect on the environment.
9. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
10. On September 14, 1990 in the Seaside City Council Chambers, 440 Harcourt Avenue, Seaside, California after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the Plan.

THEREFORE BE IT RESOLVED:

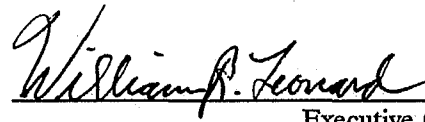

1. The Basin Plan for the Central Coast Region be amended as follows on Page V-9 under "Waters Subject to Tidal Action" but before "Areas of Special Biological Significance" (November or July, 1989 draft):

"Discharges to the Monterey Bay Prohibition Zone from desalinization units and circulating seawater system discharges may be permitted after each proposal satisfies California Environmental Quality Act requirements and completes the National Pollutant Discharge Elimination System process."

2. This amendment will not have a significant adverse impact on the environment.

3. The State Board is requested to approve the proposed amendment in accordance with Sections 13245 and 13246 of the California Water Code.
4. Upon approval, the State Board is requested to transmit the proposed amendment to the U.S. Environmental Protection Agency for approval.

I, **WILLIAM R. LEONARD**, Executive Officer, do hereby certify the foregoing is full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on September 14, 1990.

Executive Officer

sm28:90-05.Res

**CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION**

RESOLUTION NO. 89-04

**ADOPTING AMENDMENTS TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD**

WHEREAS:

1. The Water Quality Control Plan, Central Coastal Basin (Basin Plan) was approved by the State Water Resources Control Board (State Board) on March 20, 1975.
2. Since March 20, 1975, thirty-seven Basin Plan amendments have been approved by the Regional Water Quality Control Board (Regional Board) and the State Board.
3. Since 1975, several changes in water quality regulations and administrative procedures have occurred.
4. An updated Basin Plan incorporating all previously approved amendments, updated regulations, and procedures is needed.
5. Several significant new Basin Plan amendments are needed:
 - a. Revise PCB and Phthalate Ester objective for all Inland Surface Waters, Enclosed Bays, and Estuaries in the Water Quality Objectives chapter.
 - b. Update "Municipal Wastewater Management Plans" in the Implementation Plan chapter.
 - c. Update "Solid Waste Management" in the Implementation Plan chapter.
 - d. Add "Water Quality Limited Segments" designation in the Plans and Policies chapter.
 - e. Add general toxic or hazardous materials discharge prohibition to all waters in the Plans and Policies chapter.
 - f. Amend Resolution 73-05, "Adopting Policy Regarding Beneficial Use of Oil Field Waste Materials in the Santa Maria Valley Oil Fields, Santa Barbara County" to apply Regionwide.
 - g. Add Regional Board policy for Highway Grooving Residues in the Plans and Policies chapter.

- h. Add Regional Board Policy for Waiver of Regulation of Specific Types of Waste Dischargers in the Plans and Policies chapter.
 - i. Add Water Bodies Needing Intensive Surveillance in the Surveillance and Monitoring chapter.
6. Several additional changes (as described in Attachment "A") are necessary to update the 1975 Basin Plan.
 7. Several minor wording changes are necessary to improve the readability of the Basin Plan.
 8. Drafts of the proposed Basin Plan have been prepared and distributed to interested persons and agencies for review and comment.
 9. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of these objectives will not have a significant adverse effect on the environment.
 10. Due notice of public hearing was given by advertising in newspapers of general circulation within the Region.
 11. On September 8, 1989, and November 17, 1989, in the Salinas City Council Chamber Rotunda, 200 Lincoln Avenue, Salinas, California, and in the Embassy Suites-Edna Room, 333 Madonna Road, San Luis Obispo, California, respectively, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to the Plan.

THEREFORE BE IT RESOLVED:

1. All amendments mentioned above and in Attachment "A," will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.
2. All amendments mentioned above and in Attachment "A' are adopted.
3. Any minor editorial changes to correct data or grammar and/or clarify meaning in the final copy which may not be included in Attachment "A", are also adopted.

4. Staff responses which propose specific Basin Plan changes provided in the Regional Water Quality Control Board letter dated October 12, 1989, are adopted.
5. The State Board is requested to approve the proposed updated Basin Plan with amendments in accordance with Sections 13245 and 13246 of the California Water Code.
6. Upon approval, the State Board is requested to transmit the updated Basin Plan to the U.S. Environmental Protection Agency for approval.

I, WILLIAM R. LEONARD, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on November 17, 1989.

Executive Officer

sm4:89-04.Res

ATTACHMENT A
MINOR BASIN PLAN AMENDMENTS
CENTRAL COASTAL BASIN

CHAPTER 1. Revise Basin Plan Format:

- a) Add Introduction Chapter
- b) Continuing Planning Section added to Introduction Chapter
- c) Delete Historical Beneficial Uses Chapter
- d) Delete Historical Water Quality Objectives
- e) Revise format of Water Quality Objectives Chapter (chapter arranged by beneficial uses and water body type)
- f) Plan Assessment Chapter deleted
- g) Add Plans and Policies chapter (Chapter 5)

CHAPTER 2. Present and Potential Beneficial Uses Chapter

- a) "Selection Considerations" section deleted (this section discussed conditions by which "historical beneficial uses" could be deleted.)
- b) "Present Uses" section deleted (information summarized in current Chapter 1)
- c) "Projected Water Demands" deleted (Section is out of date)
- d) Reorganized Table 2-1 to coordinate with 1986 Hydrologic Basin Map prepared by the State Water Resources Control Board
- e) Add footnote to Table 2-1 Municipal Beneficial Use Column reading "In accordance with State Water Resources Control Board Resolution 88-63".
- f) "Newell Creek Res." changed to "Loch Lomond Res." in Table 2-1
- g) Changed footnote "b" Table 2-1 from "swamp" to "wetland"
- h) Addition of table listing ground water basins and map showing ground water basins from DWR Bulletin 118.
- i) Definition of "Water Contact Recreation" amended to include "sail boarding" and "jet skiing."
- j) Delete "The Ocean Plan, and hence the designation of areas of special biological significance, is not applicable to vessel wastes, the control of dredging, or the disposal of dredging spoil." (Ocean Plan already includes this statement; redundant in Basin Plan).

- k) Delete "The staff will advise other agencies to whom the list of designated areas is to be provided, that the basis for this action by the Board is limited to considerations related to protection of marine life from waste discharges." (This statement is superfluous; Agencies are aware of designated ASBS areas.)
- l) Carmel Bay added to ASBS areas in accordance with past State Water Resources Control Board approval.
- m) "Recommended Beneficial Uses" section deleted. ("Present and Potential Beneficial Uses" adequately covers this section).
- n) Minor word changes made throughout chapter to improve readability.

CHAPTER 3. Water Quality Objectives Chapter (Formerly Chapter 4)

- a) Delete following section, "For planning purposes there are three basic long-term strategies for water pollution control. These are to be applied to specific geographic areas or to be compared in terms of their relative impact on an area of designated use, whichever is deemed appropriated. The strategies are defined as follows:
 - i) Elimination of all waste discharges from both point sources and diffuse sources,
 - ii) Elimination of direct point source waste discharges and regulation of diffuse sources,
 - iii) Elimination of discharge of pollutants into navigable waters.

Strategy number one, in effect, restricts land use and is consistent with policies to protect wilderness areas, selected water supply catchments, and some areas of special biological significance. Strategy two is consistent with maintenance of certain wild rivers and protection of sensitive aquatic habitats where no allocation of stream assimilation capacity can be provided for controllable discharges unless water reclamation concepts are applied. Strategy three is consistent with the long-term national goals of the Federal Water Pollution Control Act with the understanding that pollutants will be defined in relevant terms and that best

practicable treatment would be consistently applied on a case-by-case basis depending on the physical character of the receiving water and the beneficial uses to be protected."

- b) "Non-Degradation Policy" changed to "Anti-Degradation Policy"
- c) Paragraph added:
"Several water quality objectives listed herein originate from the California Code of Regulations, Title 22, If Title 22 concentrations are amended, Basin Plan objectives are automatically amended to correspond with the new regulations."
- d) Tables 4-1 and 4-2 deleted.
These tables compare 1970 water quality to planning criteria. These tables are not used to regulate dischargers.
- e) Water quality objectives changed to comply with California Code of Regulations, Title 22.
- f) Table 3-2 (previously Table 4-6) "Sodium Absorption Ration (SAR)" corrected to "SAR, adj"; correction was made according to L.V. Wilcox, U.S. Salinity Lab, memo Dec. 30, 1966.
- g) Table 3-2 (previously Table 4-6) footnote "c" clarified to refer to Appendix A-23 for calculation support material.
- h) Soda Lake removed from Table 3-6 (previously Table 4-8). No median surface water quality objectives were provided in original Basin Plan. Table 3-6 referenced a footnote "b" but no footnote "b" was provided.
- i) Minor word changes made throughout chapter to improve readability.

CHAPTER 4. Implementation Plan Chapter 4 (Formerly Chapter 5)

- a) Introductory paragraphs eliminated; brief introduction and outline provided instead.
- b) Table 5-1 eliminated

- c) Introduction paragraph added to "Reclamation and Reuse" chapter
- d) Paragraph added to "Sludge Processing and Disposal" section (last paragraph)
- e) Introductory Paragraphs under "Municipal Wastewater Management" deleted
- f) Figure 5-1 deleted-not used in implementation program
- g) Table 5-2 deleted-out of date
- h) Table 5-3 deleted-not necessary
- i) Table 5-4 deleted-out of date
- j) Table 5-5 deleted-out of date
- k) Municipal Wastewater Management Plan section updated
- l) 1st paragraph under "Industrial Wastewater Management" deleted. Paragraph referred to alternative industrial management plans in Chapter 16. This reference is unnecessary.
- m) Last sentence in second paragraph under "Industrial Wastewater Management" deleted. This sentence was not necessary.
- n) Last paragraph under "Industrial Wastewater Management" section deleted. This paragraph is not necessary.
- o) "Solid Waste Management" section updated
- p) "Storm Water Management" section added
- q) "Irrigation Operations-Need for Salt Management" Section, add to end of paragraph beginning "Compromises and trade-offs will be necessary": "5. Change Crops Grown"
- r) "Improved Salt Management Techniques" Section, second paragraph, change last sentence to read "Present Statewide efficiency of water use may average 50 to 60 percent, but individual uses will vary from an estimated low of 30 percent where water is plentiful and inexpensive to a high of 95 percent where water quantity is limited and/or the price is high."
- s) Changes made in "Individual, Alternative, and Community Systems":

- i) Change last sentence under "Septic Tank Maintenance Districts" to: "Maintenance districts should establish septic tank surveillance, maintenance and pumping programs, where appropriate; provide repairs..."
- ii) Sentence added to first paragraph under "Criteria for New Systems":
"Local governing jurisdictions should incorporate these guidelines into their local ordinances. These recommendations will be used by the Regional Board for Regional Board regulated systems and exemptions."
- iii) Dual disposal field recommendation changed from: "Both drainfields should be constructed initially and diversion valves or boxes installed when access to the disposal system is restricted in such a way that future additions and repairs cannot be made easily" to "Dual disposal fields (200% of original calculated area) are recommended."
- iv) Definition of "gravels" and "gravels w/few fines" clarified.
- v) Section (d) of San Lorenzo Valley prohibition eliminated. The prohibition was historical and unnecessary.
- vi) Last paragraph of Baywood Park/Los Osos prohibition deleted. This prohibition was historical and unnecessary.
- t) Land disturbance prohibition changed from: "The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen material from any logging, construction, or similar activity where it may be discharged into State waters by runoff from less than a 25-year, 24-hour rainfall event is prohibited" to:

"The placing or disposal of soil, silt, bark, slash, sawdust, or other organic and earthen materials from logging, construction, and other soil disturbance activities at locations above the

anticipated high water line of any stream in the basin where they may be washed into said waters by rainfall or runoff in quantities deleterious to fish, wildlife, and other beneficial uses is prohibited."

- u) "Legislation" section deleted. This section was obsolete.
- v) Minor word changes made throughout chapter to improve readability.

**CHAPTER 5. Plans and Policies Chapter 5
(Formerly Part of Chapter 4)**

- a) Delete State Water Resources Control Board Recommended Control Action #10. Action read:

"The non-degradation policy of 1968 should be revised or clarified to recognize short-term and long-term aspects of ground water management as affected by irrigated agriculture and an environmental impact assessment should be prepared on this policy."

This revision never occurred.
- b) Delete Regional Water Quality Control Board Management Principle #7:
"Applicants for state and federal grants for construction of waste treatment facilities shall be required to submit proof of implementation of source control and industrial waste ordinances, including an equitable system of cost recovery."

The grant program no longer exists.
- c) Add to "Recommended State Water Resources Control Board Control Actions" section to read:
"The State Water Resources Control Board should consider water quality effects when reviewing water rights permits."
- d) Revise Regional Water Quality Control Board Management Principle #12 to read: "The discharge of pollutants into surface fresh waters shall be discontinued."

e) Discharge Prohibition for Toxic or Hazardous Pollutants for all Waters--"community waste treatment systems" changed to "publicly owned treatment works"

f) Regional Water Quality Control Board Control Action #1 deleted:

"The Regional Water Quality Control Board should implement water quality control plan provisions through establishment of requirements and timetables for compliance with plan actions."

This action is unnecessary since the Regional Water Quality Control Board must accomplish this action according to Porter-Cologne Water Quality Control Act requirements. This policy is redundant.

g) Delete Regional Water Quality Control Board Control Action #9:

"Industrial schedules of compliance with the State Ocean Plan and PL92-500 including time tables, should be established by mid-1976. Dischargers should effect compliance with the 1977 and 1983 effluent limitations."

This action is unnecessary since Porter-Cologne Water Quality Control Act requires compliance. This policy is redundant.

h) Delete Regional Water Quality Control Board Action #21:

"Designate temporary or permanent salt sinks within each water basin that can accept waters of quality too poor for reuse in agriculture. As a minimum step, designate the Pacific Ocean and Soda Lake as acceptable salt sinks."

This policy conflicts with State Water Resources Control Board Resolution 88-63, Sources of Drinking Water Policy.

- i) Actions by Other Authorities #1 changed to read: "The Association of Monterey Bay Area Governments (AMBAG) should coordinate with local agencies and the Regional Board relative to implementation of water quality control plans in that area.
- j) Regional Board policies added

Several policies were previously adopted by the Regional Board. These policies are included for public information regarding Regional Board policies. New policies (or old policies never formally adopted) are adopted by this resolution (Resolution 89-04).
- k) Minor word changes made throughout chapter to improve readability.

**CHAPTER 6. Surveillance and Monitoring Chapter 6
(Formerly Chapter 7)**

- a) Introduction rewritten
- b) "Program Tasks" section deleted-unnecessary
- c) Surveillance Section rewritten; now titled "State Water Resources Control Board Program Tasks" and "Regional Water Quality Control Board Program Tasks"

sm4:Res.Att

State of California
Regional Water Quality Control Board
Central Coast Region

September 8, 1989

ITEM: 8

SUBJECT: Resolution 89-04 Adopting Amendments to the *Water Quality Control Plan* and Requesting Approval from the State Water Resources Control Board.

DISCUSSION: The purpose of this hearing is to consider adoption of amendments to the *Water Quality Control Plan* (Basin Plan) proposed in Resolution 89-04. Draft copies of Basin Plan were mailed to you on July 21, 1989.

Staff is proposing a second draft of Resolution 89-04 which incorporates revised wording for Item 5f as follows:

5f. Amend Resolution 73-05, Adopting Policy Regarding Beneficial Use of Oil Field Waste Materials in the Santa Maria Valley Oil Fields, Santa Barbara County" to apply regionwide.

This revision is proposed so that only one policy for oil field wastes will exist.

Please note this hearing is to consider the proposed amendments only. These proposed amendments have been properly public noticed and are summarized in Resolution 89-04. Amendments cannot be adopted for issues not addressed in this Resolution.

**ENVIRONMENTAL
SUMMARY:**

An environmental assessment package has been prepared and is available to interested agencies and persons. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq. of the Public Resources Code and appropriate notices and waiting periods have been complied with. This process will satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent, and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

COMMENTS:

1. Bob Roebuck, City of Santa Barbara (July 24, 1989) - objects to a sentence on page IV-25 "The City needs to improve sludge treatment and disposal techniques." The City is not violating waste discharge requirements. This sentence reads like a mandate to the City to make improvements above and beyond waste discharge requirements.

Staff Response: Sentence should be changed to read "the City could consider implementing a cost-effective composting program to reduce transportation costs". Staff merely wishes to recommend sludge composting to reduce the 40-mile round-trip route (approximately) for sludge disposal. Should a grant, for example, become available for composting, the Basin Plan would support funding.

2. Endel Sepp, California Department of Health Services (August 7, 1989) - Reference to wastewater reclamation criteria on page IV-6 should be specified as conforming to Title 22, Division 4, Chapter 3, California Code of Regulations.

Staff Response: Correction Made.

3. Dale Ducharme, City of Lompoc - Page IV-23 gives the impression the City of Lompoc is responsible for solving the entire Lompoc ground water basin salt problem. Also, page IV-23 gives the impression the City of Lompoc is not currently regulating salt discharges.

Staff Response: The following word changes are recommended:

- a. "It is imperative that impacts of point-source waste discharges to land be reduced by continuing to implementing strict salt limitations...."
- b. "The recommended plan for Lompoc is to control mineral concentrations in the effluent by enforcing strict limits on discharges to the sewer system and to continue to develop--and implement a pretreatment program/"

4. D'Minga Ferguson, Whiskey Hill Home Owners Association (August 10, 1989)

Matthew and Sons Mushroom Farm runoff was entering the Home Owners Association property. Ms. Ferguson wanted to ensure that the proposed amendments do not lessen current water quality standards applicable to Matthew's discharge permit.

Staff Response: Proposed amendments will not reduce the Board's Control over water quality standards. Prohibition No. 1 on page IV-40, protects neighboring properties.

5. Jennifer Soloway (August 23, 1989)

The draft Basin Plan modified the "Sources of Drinking Water Policy" adopted by the Regional Board on April 14, 1989. The modified wording does not comply with the State Board policy. The following change should be made to page II-1. "Ground water throughout the Central Coastal Basin, except for that found in the Soda Lake Subbasin, is suitable for agricultural water supply, municipal and domestic water supply, and industrial use."

Staff Response: Agree. The draft Basin Plan is not intended to differ from the State Board policy. -

6. EPA (August 15, 1989) -

- a. Show radioactivity objectives in Chapter III, rather than referencing regulations.

Staff Response: The Basin Plan is kept up to date in the proposed format for incorporating objectives by reference. When changes occur in the regulations, the Basin Plan is automatically updated by reference.

September 8, 1989

- b. Table 3-6 is entitled "median surface water objectives". It is not clear whether the median values reflect the 50 percentile values of the monthly means for a calendar year.

Staff Response: The word "median" should be deleted in the title. The footnote to the table explains objectives are annual mean values.

7. DHS (August 16, 1989) -

- a. The California Code of Regulations, Title 22, was revised in 1988. Several changes are necessary in the Water Quality Objectives chapter to reflect Title 22 amendments. These amendments pertain to:

- 1) Adding organic chemicals (adds maximum contaminant levels for 22 chemicals);
- 2) Adding fluoride maximum contaminant levels;
- 3) Adding aluminum maximum contaminant levels;
- 4) Revising endrin maximum contaminant level.

Staff Response: These changes should be made to the draft Basin Plan.

- b. Radioactivity concentrations should be listed rather than referenced.

Staff Response: See staff response to EPA's comment 8a above.

8. County of Santa Cruz, Environmental Health Service (August 22, 1989)

- a. Carbonera Creek is a tributary of Branciforte Creek, not the reverse as shown in the table. Doyle Gulch and Schwan Lake are not tributaries to the San Lorenzo River.

Staff Response: Correction will be made.

- b. Page Nos. II-8 and II-9, Figure 2-2. The map is difficult to interpret as to the location and size of the Scotts Valley ground water basin. It appears that much of the basin is not designated.

Staff Response: We agree the map is difficult to interpret. This map will be used for the short-term until funds are available to develop a better map. A portion of the budget change proposal includes funds to develop ground water basin boundary maps.

- c. Page II-12. Mussels should be added to the heading Shellfish Harvesting

Staff Response: This change will be made.

- d. Page IV-22. Big Basin State Park discussion should reflect the operational and plant problems that have lead to the sewage discharges and Cease and Desist Order.

Staff Response: This change will be made.

- e. Page IV-28. The statement that County Solid Waste Management Plans (COSWMPS) are normally available through the respective County Health Offices/Health Departments is not correct. COSWMPS' are the responsibility of differing lead agencies from county to county. For example, in Santa Cruz County the Planning Department has the responsibility.

Staff Response: This change will be made.

9. Other comments received pertained to additions and revisions which are not germane to the subject of these amendments. These comments will be directed into the triennial review process. Most of these comments pertain to Chapters II and III. These chapters need priority in the triennial review. Comments to be addressed in the triennial review are discussed below.

- a. EPA (August 15, 1989)
 - 1) National Sanctuaries such as Elkhorn Slough and, possibly, Monterey Bay could be recognized in the Basin Plan.
 - 2) A general salinity objective should be included.
 - 3) Objectives should be added for total coliform, enterococci, and E. Coli.
 - 4) Consider application of California Code of Regulations, Section 30269 to Basin Plan (radioactivity objectives).
 - 5) Consider application of statewide consistent turbidity objective.
 - 6) Include standard language addressing Clean Water Act Section 303(c)(2)(b).
 - 7) Basin Plans should reflect State Nonpoint Source assessment Report and State Nonpoint Management Programs.

- b. DHS (August 16, 1989)
 - 1) Beneficial uses for Mill Creek, Liddel Creek, Majors Creek, and Cachagua Creek need to be changed.
 - 2) Secondary Drinking Water Standards in California Code of Regulations Title 22, Article 8, Chapter 15, Section 64473, Table Nos. 6 and 7 should be added to the Basin Plan.
 - 3) Radioactivity concentrations specified in California Code of Regulations, Title 22, Chapter 15, Article 5, Section 64441, should be added as ground water municipal and domestic supply objective.

- c. County of Santa Cruz, Environmental Health Service (August 22, 1989)

- 1) Beneficial use changes are recommended for Carbonera Creek, Lompico Creek, Boulder Creek, and Bear Creek.
- 2) Ground water objectives are not identified as to what ground water basin or aquifer they apply. Specifically in relation to the Upper San Lorenzo Valley, there may be areas where the nitrate value of 5 mg/l would be too high.
- 3) Bacteria should be added to the discussion of urban run-off. Anti-litter efforts will result in bacteria reduction.
- 4) Several comments pertain to the individual/community on-site sewage disposal system policy.
- 5) Page V-18, Section 7. Section should clarify what is meant by "where no water quality problems are contemplated..."
- 6) Page V-20, Section 24. Should be revised to reflect 2500 gpd daily peak flow, rather than average flow.

10. Miscellaneous staff comments -

Some additional editorial modifications will be made to the final Basin Plan before it is submitted to the State Board for approval. For example, typographical errors will be corrected. Some improvements in format (not content) are proposed as well.

ATTACHMENTS:

1. Resolution No. 89-04, second draft with attached listing of minor revisions
2. CEQA Compliance Documents
3. Basin Plan Mailing List

RECOMMENDATION:

Adopt Resolution 89-04, second draft.

sept89-5.itm/27

CHAIRMAN'S OPENING STATEMENT

**WATER QUALITY CONTROL PLAN (BASIN PLAN)
California Regional Water Quality Control Board
Central Coast Region**

September 8, 1989

This is a hearing by the Regional Water Quality Control Board, Central Coast Region, to consider adopting Resolution No. 89-04, accepting amendments to the Water Quality Control Plan (Basin Plan) and requesting approval from the State Water Resources Control Board.

The order of presentation at this hearing will be as follows:

1. Witnesses called by the Board's staff.
2. Representatives of Federal, State, and Local Agencies.
3. Other interested persons.
4. Summation or closing statements by parties.

Board members and staff counsel may ask questions to clarify the testimony of a witness at any time. Others may ask questions at the conclusion of a person's testimony.

Each person who testifies at this hearing shall begin by stating his or her name and address unless the address has already been given. All persons who expect to testify at this hearing, please stand, raise your right hand, and take the following oath:

"Do you solemnly swear that the testimony which you will give in this matter is the truth, the whole truth, and nothing but the truth, so help you God?"

WRL:pal
basinpln.cos/12

ITEM 8

ADDITIONAL COMMENTS
RECEIVED SINCE STAFF
REPORT PRESENTATION
AND
STAFF RESPONSE

1. SAN LUIS OBISPO COUNTY ENGINEERING DEPARTMENT (August 24, 1989).

- a. Page IV-6: Los Osos Wastewater Facility is based on maximum utilization of ground water recharge. More ground water recharge supportive language is suggested.

Staff Response: Agree. The following word change is proposed. Add following sentence to beginning of reclamation and reuse section on page IV-5: "Water shortages in California are resulting in increased demand for reclamation." Delete section starting with first new paragraph on page IV-6 starting "The State Department of Health Services has provided guidelines...." and ending with first incomplete paragraph on page IV-7 ending "...although this may be retained as a future option."

Add new paragraph to end of page IV-6 "California Code of Regulations, Title 22 is being revised to expand reclamation opportunities. New regulations will soon be available."

- b. Delete reference to Infiltration Problems in Nacimiento Area (page IV-18).

Staff Response: Staff does not agree this should be deleted because future problems could occur. The following word change is recommended: "Part of the collection system is located below the spillway elevation of Nacimiento Reservoir. This has been a source of excessive infiltration in the past and the problem has been corrected. This area should be watched closely as reservoir level rises and wastewater flows increase to insure infiltration and/or exfiltration do not reoccur."

- c. Elaborate on Lopez Recreation Area Monitoring Program (page IV-21).

Staff Response: Refer to Lopez Recreation Area Waste Discharge Requirements.

d. Page IV-35 Salt Management.

Nothing is said about urban water softening equipment. Additional restrictions should be implemented where discharges cause problems to wastewater treatment plants.

Staff Response: This is not necessary. Water softener management is discussed on page V-11 and V-14. These sections were not subject to Regional Board amendment in Resolution 89-04.

e. Page IV-21 Urban Runoff Management.

Runoff has been associated with quantity (i.e. flooding concerns) rather than quality. Treatment of storm water is cost prohibitive and not a reasonable alternative.

Staff Response: This section is directly from the 1975 Basin Plan and is not subject to Regional Board amendment. This section should remain the same since federal storm water and nonpoint source management regulations will regulate urban runoff.

f. Page IV-45: The lack of funding makes septic tank maintenance districts difficult to implement.

Staff Response: This section was not amended and is not subject to Regional Board amendment. Staff believes it is inappropriate to delete this section.

g. Page V-11: Could small maintenance districts lacking funding for maintenance districts receive State funds?

Staff Response: This section was not amended and is not subject to Regional Board amendment. If funds are available, the County is notified of fund availability.

2. CITY OF GILROY (August 24, 1989).

- a. Page IV-13: Geohydrological assessments to determine continued effluent disposal impacts have been completed. This recommendation should be deleted.

Staff Response: This section should not be deleted because future capacity/pond sealing problems could arise. Staff recommends the following wording change: "The recommended plan for the Gilroy-Morgan Hill wastewater treatment facilities is to continue geohydrological assessments to determine impacts of continued effluent disposal by percolation at the Gilroy site."

- b. Page IV-13: Evaporation is infeasible considering the enormous land required (5,400 acres costing over \$50 million); reclamation is undependable because of market dependency.

Staff Response: This section should be revised. Delete "A possible solution is to allow percolation ponds to seal (by eliminating yearly pond bottom ripping operation) and disposing of effluent by evaporation and/or exportation to a suitable disposal or reclamation area." Insert following sentence instead, "Disposal will continue to be by percolation, evaporation and reclamation. Before a discharge to surface waters is considered, the City will be required to evaluate feasible land disposal options."

3. STEVE JORDAN, JORDAN BROTHERS RANCH (August 24, 1989).

- a. Lompoc ground water quality is among the worst in the State.

Staff Response: The ability of Lompoc ground water to sustain beneficial uses is in jeopardy.

- b. An action plan to discuss the relationship between the SWRCB Water Rights Division and RWQCB is needed for water rights applications with water quality ramifications.

Staff Response: Agree. While water rights decisions are made by the State, RWQCB should be able to provide input to SWRCB decisions.

- c. RWQCB does not provide comments regarding water supply diversions affecting water quality.

Staff Response: We have received applications for permits from time to time but we have not reviewed them all due to a lack of budget for this task. At one time our budget did include 1/10 personnel year to provide input to the SWRCB, but this was deleted by the SWRCB.

Staff recommends the following amendment. "Regional Water Quality Control Board Management Principles" Section on page V-5.

"Water Rights

1. The Regional Water Quality Control Board should review water supply issues affecting water quality."

If the SWRCB provides funding, staff will provide water quality input.

4. SANTA CLARA VALLEY WATER DISTRICT (August 24, 1989).

- a. Page III-16. Present and future beneficial uses should be protected. Suggest following word change for bottom of first column from "(1) beneficial uses potentially to be affected by the waste discharge" to "(1) present and probable future beneficial uses affected by the waste discharge."

Staff Response: This change should be made.

- b. Page III-2 "Controllable water quality" should be defined.

Staff Response: A definition is provided on page III-2.

- c. Page III-15. Add statement that groundwater shall not contain concentrations above which exposure to the mixture of chemicals may affect health due to additive effects of a chemical mixture.

Staff Response: Such a change is inappropriate at this time. We rely upon health agencies to establish health-based concentrations. The SWRCB is also in the process of providing limits for Proposition 65 chemicals. When we get guidance from either agency, we will revise the Basin Plan. This comment will also be addressed in part in our ground water cleanup amendment.

- d. Page IV-2. Improvement of waste treatment systems and processes should be based on best economically achievable technology, not just minimum costs.

Staff Response: We agree. This wording change is recommended.

- e. Page IV-13. For ephemeral and recharge streams, the level of treatment should assure compliance with ground water objectives.

Staff Response: No change is necessary. Ground water objectives must be met if "Ground Water Recharge" is a beneficial use.

- f. Page IV-13, San Martin area, Llagas Ground Water Basin exceeds nitrate objectives in 20% of the wells. It is a critical area because it is the sole recharge area for Santa Clara Valley ground water. Septic tanks should be prohibited in the area. District disagrees with Basin

Plan stating sewage collection systems and treatment is an infeasible solution to high nitrate levels. In addition, the District wonders if it is the County's plan to retain individual on-site systems.

Staff Response: We agree wording changes are necessary. The following rewording is recommended. "Individual on-site systems are used for sewage disposal systems in the San Martin Area. 20% of the area's wells exceed the nitrate drinking water objective. This is a significant problem since this area serves as the sole recharge area for the Santa Clara Valley. Methods of providing a water supply that is free of excessive nitrate concentration should be investigated and implemented. Nitrate loadings from various sources should be calculated for the area to determine the contribution from various sources. The need for on-site system restrictions should be determined."

- g. Page IV-6 Basin Plan should address injection of reclaimed water resulting from ground water pollution remediation activities by industries, fuel station owners, and others.

Staff Response: Staff will be providing an amendment to address this in the near future.

- h. Page IV-26 Solid Waste Management section should include discussion of Toxic Pits Cleanup Act.

Staff Response: We recommend the following wording change to be inserted before 1st complete paragraph starting "There are 28 authorized active waste disposal sites..."

"The Toxic Pits Cleanup Act of 1984 (TPCA) declares that discharges of liquid hazardous wastes or hazardous wastes containing free liquids into lined or unlined impoundments pose a serious threat to the quality of the waters of the state. Therefore, the legislature enacted TPCA as Article 9.5 (Surface Impoundments) of Chapter 6.5 (Hazardous Waste Control) of Division 20 of the California Health and Safety Code with the intent of insuring that existing surface impoundments were either made safe or were closed.

The effect of TPCA was to prohibit discharge (defined to include storage) of liquid hazardous wastes and hazardous wastes containing free liquids to surface impoundments, which did not satisfy specific construction and

monitoring standards, by June 30, 1988, or December 31, 1988, depending on the location and characteristics of the impoundment. TPCA allows specific exemptions with varying application and granting deadlines. However, on and after January 1, 1989, all discharge of liquid hazardous wastes and of hazardous wastes containing free liquids to surface impoundments which had not been granted exemptions, and which did not meet specific construction and monitoring standards, was prohibited. There is a rare set of circumstances which may exempt a surface impoundment from the January 1, 1989, deadline.

TPCA is fulfilling its goal of reducing the threat of liquid hazardous wastes to the waters of the state."

- i. Page IV-28 and Page V-18, Solid Waste Discharge Prohibitions. Item #3 on page IV-28 implies Class III waste can be disposed outside a permitted Class III Waste Management Unit (WMU). This is supported by waiver of Waste Discharge Requirements of "group 3 solid wastes" in item 5 on page V-18. As written, this does not prevent an individual from burying garbage, pesticides, or solvents. Controls of such practices should be implemented.

Staff Response: Item #3 on page IV-28 is an appropriate prohibition. As stated on page IV-27, Class III wastes may be disposed only at any classified WMU. However, a wording change is necessary on page V-18. Item 5 wording should be changed from "group 3" to "inert wastes" in accordance with updated language of Subchapter 15.

- j. "Llagas Groundwater/Surface Basin" is given several different names. Name should be standardized to this name.

Staff Response: Figure 2-1 cannot be changed since this was developed by the SWRCB. Figure 2-2 and Table 2-3 uses a California Department of Water Resources map and identification system, respectively. This can be changed when ground water maps are developed as part of the Basin Plan budget augmentation. However, on page III-17, the following word change is recommended, change "Gilroy" to Llagas Creek."

5. MONTEREY COUNTY FLOOD CONTROL AND WATER CONSERVATION DISTRICT
(August 24, 1989, and August 30, 1989).

- a. Page I-3, Santa Lucia range should be 6,000 feet high, not 4,000 feet high.

Staff Response: Staff review of maps indicates 5,200 feet is highest peak. Staff recommends "4,000 feet" be changed to "5,200 feet."

- b. Page I-5, second to last sentence. Seawater intrusion has already occurred in Salinas Valley.

Staff Response: Change sentence to "Water mining and seawater intrusion have resulted in some locations."

- c. Page II-3, Salinas River, Chualar to Nacimiento River. Groundwater recharge should be "E" not "A."

Staff Response: This correction must be made. In addition, several typographical errors in (1) Salinas River, Spreckels Gage to Chualar and (2) Salinas River, Chualar to Nacimiento River are present in the draft Basin Plan. This is because Resolution 85-04 was used as the reference for the draft Basin Plan. However, Resolution 85-04 contained typographical errors for these water bodies. Resolution 85-04 did not amend beneficial uses for these water bodies. Resolution 85-04 amended beneficial uses for other water bodies.

The appropriate reference for these water bodies is Resolution 82-08. The draft Basin Plan should be changed to correlate with Resolution 82-08 for these water bodies.

- d. Page V-12, definition of animal confinement facility should be provided.

Staff Response: Staff agrees. The following should be inserted below "Animal Confinement Operations." "The California Code of Regulations, Title 23, Subchapter 15, Section 2601 defines a confined animal facility as "any place where cattle, calves, sheep, swine, horses, mules, goats, fowl, or other domestic animals are corralled, penned, tethered, or otherwise enclosed or held and where feeding is by means other than grazing."

- e. The Basin Plan is weak with regard to specific actions and programs needed to protect ground water. The SWRCB Groundwater Protection Strategy and a Nonpoint Source Strategy should be added.

Staff Response: The SWRCB Groundwater Protection Strategy was not developed and a policy may result after a Clean Water Protection Strategy is developed by the SWRCB and RWQCB. The RWQCB is tentatively scheduled to complete a draft Nonpoint Source Management Plan by March, 1990.

6. RWO�B STAFF. The following changes are recommended by staff.

- (a) List of Tables - Add new Table 3-1 "Organic Concentrations Not to be Exceeded in Domestic or Municipal Supply."
- (b) Change Table 3-2 to "Inorganic and Fluoride Concentrations Not to be Exceeded in Domestic or Municipal Supply."
- (c) Delete Appendix A-14, A-16 and A-22.
- (d) Add footnote "a" to Table 2-3, "Basin number locations identified on Figure 2-2."
- (e) Add footnote "a" to Figure 2-2, "Basin name and number identified in Table 2-3."
- (f) Add new Table 3-1:

Table 3-1.

Organic Concentrations Not to be Exceeded in
Domestic or Municipal Supply

<u>Constituent</u>	<u>Maximum Contaminant Level, mg/l</u>
(a) Chlorinated Hydrocarbons	
Endrin	0.0002
Lindane	0.004
Methoxychlor	0.1
Toxaphene	0.005
(b) Chlorophenoxy	
2,4-D	0.1
2,4,5-TP Silvex	0.01
(c) Synthetics	
Atrazine	0.003
Bentazon	0.018
Benzene	0.001
Carbon Tetrachloride	0.0005
Dibromochloropropane	0.0002
1,4-Dichlorobenzene	0.005
1,2-Dichloroethane	0.0005
1,1-Dichloroethylene	0.006
1,3-Dichloropropene	0.0005
Ethylbenzene	0.680
Ethylene Dibromide	0.00002
Molinate	0.02
Monochlorobenzene	0.030
Simazine	0.010
1,1,2,2-Tetrachloroethane	0.001
Tetrachloroethylene	0.005
Thiobencarb	0.07
1,1,1-Trichloroethane	0.200
1,1,2-Trichloroethane	0.032
Trichloroethylene	0.005
Vinyl Chloride	0.0005
*Xylenes	1.750

*MCL is for either a single isomer or the sum of the isomers.

(g) Page III-7, change 3-1 to Table 3-2; add Fluoride Maximum Contaminant Levels (MCL):

<u>Fluoride</u>	<u>MCL, mg/l</u>
53.7 and below	2.4
53.8 to 58.3	2.2
58.4 to 63.8	2.0
63.9 to 70.6	1.8
70.7 to 79.2	1.6
79.3 to 90.5	1.4

- (h) Page III-7, change Inorganic chemicals to be under a "Maximum Contaminant Level" column.
- (i) Page III-7 add Aluminum MCL of 1. mg/l.
- (j) Page III-11, Fish Spawning Cadmium in soft water shall not exceed 0.0004 mg/l instead of 0.004 mg/l.
- (k) Change footnote "e" to be applicable to Nickel.
- (l) Page III-15, add below "Objectives for Ground Water, Municipal and Domestic Supply:

Organic Chemicals

Waters shall not contain concentrations of pesticides or herbicides in excess of the limiting concentrations set forth in California Code of Regulations, Title 22, Chapter 15, Article 5.5, Section 64444.5, Table 5 and listed in Table 3-1.

- (m) Blue Sheet clarification recommended by staff.

Blue Sheet
Item No

- 2. "Page IV-6, sentence beginning on line 8 corrected to: Title 22, Division 4, Chapter 3 of the California Code of Regulations provides wastewater reclamation criteria..."
- 5. Page II-1, Paragraph 6, delete "... (in accordance with the provisions of State Water Resources Control Board Resolution No. 88-63 [Appendix A-1]),...."
- 8a. Page II-2, reverse position of Carbonera Creek and Branciforte Creek; do not indent Doyle Gulch and Schwan Lake.
- c. Page II-11, add "mussels" to collection of shellfish under "Shellfish Harvesting."
- e. Page IV-28, first complete paragraph, delete last sentence "County Solid Waste Management Plans are normally available...."

Katherine Wong
Specialist Legal Assistant
355 South Grand Avenue, Suite 4400
Los Angeles, CA 90071-1560

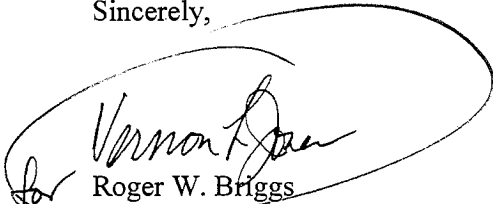

Dear Ms. Wong:

Subject: Public Records Act Request

I received a letter recently wherein you requested public records pertaining to Proposition 65 and the Sources of Drinking Water Policy. The Regional Board adopted two amendments that addressed the Sources of Drinking Water Policy. These Resolutions and the Board meeting minutes for each are enclosed.

If you need additional information, please contact our attorney, **Jennifer Soloway at 916-657-0433.**

Sincerely,

Roger W. Briggs
Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, CA 93401

REGIONAL BOARD RESOLUTION NO. 89-03

INCORPORATION OF "SOURCES OF DRINKING WATER" POLICY
INTO THE WATER QUALITY CONTROL PLAN (BASIN PLAN)

WHEREAS:

1. California Water Code Section 13140 provides that the State Water Resources Control Board (State Board) shall formulate and adopt State policy for water quality control; and,
2. California Water Code Section 13240 provides that Basin Plans shall conform to any State policy for water quality control; and,
3. The State Board adopted Resolution No. 88-63 entitled "Sources of Drinking Water" on May 19, 1988 as a State policy for water quality control; and,
4. Previous to passage of State Board Resolution 88-63, two public workshops on January 6, 1988 and April 6, 1988 and a public hearing on May 4, 1988 were conducted in order to receive comments on the Policy; and,
5. Incorporation of State Board Resolution No. 88-63 into Basin Plans will conform these Basin Plans to this Policy; and,
6. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq. of the Public Resources Code and appropriate notices and waiting periods have been complied with; and,
7. A public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,
8. On April 14, 1989, in the Solvang City Hall Council Chambers, 1644 Oak Street, Solvang, California, the Regional Board reviewed staff documents pertaining to the amendment, environmental documents, written comments, and staff responses, as well as received additional evidence and testimony concerning the proposed amendments to the Basin Plan.

THEREFORE BE IT RESOLVED THAT:

1. The Basin Plan chapter entitled Beneficial Uses be amended to include the following statement:

"Water bodies in the Region 3 without beneficial uses designated in Table 2-1 are assigned MUN designations in accordance with the provisions of State Water Resources Control Board Resolution No. 88-63 which is, by reference, a part of this plan. These MUN designations in no way affect the presence or absence of other beneficial use designations for these waters bodies."

2. A copy of this resolution with other appropriate materials be submitted to the State Board for approval.

Certification

I, William R. Leonard, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on April 14, 1989.

AGC:mmm

sodw.res/4

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 88-63

ADOPTION OF POLICY ENTITLED
"SOURCES OF DRINKING WATER"

WHEREAS:

1. California Water Code Section 13140 provides that the State Board shall formulate and adopt State Policy for Water Quality Control; and,
2. California Water Code Section 13240 provides that Water Quality Control Plans "shall conform" to any State Policy for Water Quality Control; and,
3. The Regional Boards can conform the Water Quality Control Plans to this policy by amending the plans to incorporate the policy; and,
4. The State Board must approve any conforming amendments pursuant to Water Code Section 13245; and,
5. "Sources of drinking water" shall be defined in Water Quality Control Plans as those water bodies with beneficial uses designated as suitable, or potentially suitable, for municipal or domestic water supply (MUN); and,
6. The Water Quality Control Plans do not provide sufficient detail in the description of water bodies designated MUN to judge clearly what is, or is not, a source of drinking water for various purposes.

THEREFORE BE IT RESOLVED:

All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards¹ with the exception of:

1. Surface and ground waters where:
 - a. The total dissolved solids (TDS) exceed 3,000 mg/L (5,000 us/cm, electrical conductivity) and it is not reasonably expected by Regional Boards to supply a public water system, or

- b. There is contamination, either by natural processes or by human activity (unrelated to a specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices, or
- c. The water source does not provide sufficient water to supply a single well capable of producing an average, sustained yield of 200 gallons per day.

2. Surface waters where:

- a. The water is in systems designed or modified to collect or treat municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards; or,
- b. The water is in systems designed or modified for the primary purpose of conveying or holding agricultural drainage waters, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards.

3. Ground water where:

The aquifer is regulated as a geothermal energy producing source or has been exempted administratively pursuant to 40 Code of Federal Regulations, Section 146.4 for the purpose of underground injection of fluids associated with the production of hydrocarbon or geothermal energy, provided that these fluids do not constitute a hazardous waste under 40 CFR, Section 261.3.

4. Regional Board Authority to Amend Use Designations:

Any body of water which has a current specific designation previously assigned to it by a Regional Board in Water Quality Control Plans may retain that designation at the Regional Board's discretion. Where a body of water is not currently designated as MUN but, in the opinion of a Regional Board, is presently or potentially suitable for MUN, the Regional Board shall include MUN in the beneficial use designation.

The Regional Boards shall also assure that the beneficial uses of municipal and domestic supply are designated for protection wherever those uses are presently being attained, and assure that any changes in beneficial use designations for waters of the State are consistent with all applicable regulations adopted by the Environmental Protection Agency.

The Regional Boards shall review and revise the Water Quality Control Plans to incorporate this policy.

¹ This policy does not affect any determination of what is a potential source of drinking water for the limited purposes of maintaining a surface impoundment after June 30, 1988, pursuant to Section 25208.4 of the Health and Safety Code.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 19, 1988.

Maureen Marche
Administrative Assistant to the Board

Basin Planning

8. Incorporation of State Water Resources Resolution 89-03
Control Board "Sources of Drinking Water"
Policy into the Water Quality Control Plan, (Basin Plan).

Angela Carpenter presented information to the Board regarding Sources of Drinking Water Policy, the first of a series of Basin Plan amendments. She stated that the Safe Drinking Water and Toxic Enforcement Act was approved by the voters in 1986 (Prop 65). Prop 65 requires identification of reproductive toxicants and carcinogens and limits their release to sources of drinking water. The Health and Welfare Agency has assigned the State Water Resources Control Board the responsibility of defining sources of drinking water. The State Board reviewed the Regional Boards' Basin Plans and determined that there was insufficient detail to determine exact sources of drinking water and subsequently developed Sources of Drinking Water Policy, Resolution 88-63. The California Water Code requires the Regional Board adopt and incorporate this policy into its Basin Plan.

The Sources of Drinking Water Policy will require determination of which water bodies are suitable for MUN (Municipal and Domestic Water Supply Beneficial Use) designations. Table 2-1 of the Basin Plan, developed in 1975, is very incomplete because many surface waters do not have designated "beneficial uses". The newly-developed policy states that all surface waters not listed in Table 2-1 will have an MUN beneficial use, unless they qualify for an exemption.

Mr. Stubchaer asked if the proposed designation of water bodies would be brought to the Board for discussion. Ms. Carpenter responded that the matter would probably be taken to the State Board for consideration, since it is a State Board policy. The policy would not apply to Region 3 ground water because the Basin Plan has already designated all ground waters within the region suitable for municipal drinking water supply, ("All ground waters within the Central Coast Region shall be considered suitable for municipal, industrial and agricultural water supply except the Soda Lake ground water basin"). Referring to State Board Policy, Item No. 4, Ms. Carpenter noted that there are conditions by which exceptions may not be applied; "Exceptions may not apply if the water is currently suitable or serves an existing municipal water supply." Exceptions may apply to surface and ground waters if the TDS exceeds 3000 mg/l; if there is contamination (natural or non-specific) and cleanup cannot be achieved with Best

Management Practices or is not economically feasible; or if well production is less than 200 gpd. Exceptions also apply to surface waters that collect/treat municipal, industrial waste water, mining or stormwater runoff, as well as agricultural drainage conveyance or holding systems.

Executive Officer William Leonard explained to the Board that this initiative originated with Proposition 65, which charges the State Board with determining all the water bodies that can meet the municipal designation. State Board adopted a basic policy (Sources of Drinking Water Policy) which is to be amended in each Regional Board's plan. Due to current time deadlines, it is not possible to review each water body now; however, staff can review the water body conditions at a later date and, if exception conditions are met, exception from municipal use can be granted.

Ms. Carpenter confirmed that this agenda item (Resolution 89-03) was noticed in the newspapers, and sent to the Basin Plan Amendment "interested parties" lists.

Charles Allen expressed concern related to the grower who needs a well replacement quickly to prevent crop failure. If the County failed to understand the new State policy, they might not grant a permit. He felt this should be researched to be certain the procedure would not become an entrapment to the agricultural industry.

Executive Officer Bill Leonard explained that this issue pertains to the Board's power of regulating waste discharges. When a request is made for discharge of waste that could affect a water body, implementation of the "Sources of Drinking Water Policy" is established by placing standards on the discharge that protect municipal use if the water body is designated as a municipal use. It does not prevent a property owner from installing a well and pumping from an aquifer. The Board has authority over with the type of discharge control standards implemented to protect receiving water.

Legal Counsel Jennifer Soloway clarified that with regard to Prop 65, there may be some chemicals listed which have been allowed in minute quantities in the past which would be prohibited under the new policy.

Robert Thornton requested clarification on the purpose of the new policy and method of implementation. He understood that this policy would apply to both surface and ground waters and provide direction to the Regional Boards so that the Basin Plans would be revised to more accurately reflect the policy.

Bill Leonard stated that the Central Coast Region Basin Plan already designates all ground waters except Soda Lake for municipal beneficial use. This aspect of the policy did not change. However, the current policy does not allow the application of exception criteria, while the new policy would.

In response to a question by Manuel De Maria, Mr. Leonard explained that, from a water quality point of view, there is no distinction between an aquifer and an underground river (riparian aquifer).

Mark Chytilo, representative of Environmental Defense Center, referenced his letter to the Board dated April 7, 1989. Mr. Chytilo stated that the State-wide criteria may not be appropriate for the Central Coast Region. He felt that this particular policy would have a relatively limited impact on the Central Coast Basin. He encouraged the Board to be alert to the fact that the 3000 ppm TDS limit may open the door for the degradation of future water supplies. He urged the Board to use figures sufficiently cautious to prevent jeopardizing our natural resources.

MOTION: Curtis Tunnell moved for approval of Resolution 89-03 Incorporation of State Water Resources Control Board "Sources of Drinking Water" Policy into the Water Quality Control Plan (Basin Plan).

SECOND: George Rathmell

CARRIED: Unanimously (9 - 0)

9. San Lorenzo Valley Discharge Prohibition Zone-Status Report Information Only

Roger Briggs explained that the twelve page report, dated April 11, 1989, given to the Board, was prepared by Regional Board staff using excerpts from a lengthy report received after agenda preparation from the County of Santa Cruz. Jay Cano informed the Board of the reported actions taken by the County of Santa Cruz as a result of the Board's adopted Resolution 82-10, which prohibited septic tank systems in the chronic problem areas of San Lorenzo Valley, as well as requiring the County to impose improved septic tank criteria in other lesser problem areas.

Mr. Cano reported that the sewerage project failed in 1984, and in lieu of that project the County came up with a plan to assess performance of and make improvements to the

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 94-06

ADOPTING AN AMENDMENT TO THE WATER QUALITY CONTROL PLAN
AND REQUESTING APPROVAL FROM
THE STATE WATER RESOURCES CONTROL BOARD

WHEREAS:

1. The California Water Code directs the Regional Water Quality Control Boards (Regional Boards) to adopt Water Quality Control Plans (Basin Plans) and to revise them as necessary.
2. This Regional Board, at the February 11, 1994 Board Meeting, directed staff to include the latest Beneficial Use categories approved by the State Water Resources Control Board in Table 2-1 of the Basin Plan.
3. The Regional Board, and others, proposed waters not previously listed in Table 2-1 for designation of beneficial uses.
4. Regional Board staff proposes that the Existing "E" and Intermittent "I" designations are confusing; and that all water body designations in Table 2-1 be identified with an "X" indicating that the beneficial use occurs, at least part of the year and/or in some segment of the water body.
5. Regional Board staff was advised of at least one error in the current Table 2-1 which should be corrected.
6. Drafts of the proposed revisions have been prepared and distributed to interested persons and agencies for review and comment.
7. The specific amendment proposed is shown in Attachment "A - Appendix One and Two".
8. Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent) and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217). The Regional Board finds adoption of this amendment will not have a significant adverse effect on the environment.
9. Amendment of the Administrative Procedure Act, Government Code Section 11340, requires Basin Plan amendments be submitted to the California Office of Administrative Law.
10. Regional Board staff consulted with the Department of Fish and Game regarding potential impacts of proposed Basin Plan revisions on fish and wildlife resources, and on threatened and endangered plant and animal species. The draft amendment has been revised in response to comments by Department of Fish and Game staff. The Department of Fish and Game has made a conditional finding of "no jeopardy" pursuant to the California Endangered Species Act.
11. The Department of Fish and Game conditions their approval with the understanding that: "Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents."
12. Due notice of public hearing was given by advertising in eight newspapers of general circulation within the Region.

13. On September 8, 1994, the Regional Board held a public hearing and heard and considered all public testimony.

THEREFORE BE IT RESOLVED:

1. Based on the draft Basin Plan amendment, the environmental checklist, accompanying written documentation, and public comments received, the Regional Board finds that there is no substantial evidence in the record that adoption of the proposed Basin Plan amendment will have a significant effect on the environment.
2. The environmental document prepared by Regional Board staff pursuant to Public Resources Code Section 21080.5 is hereby certified. Following approval of this amendment by the State Board, the Executive Officer shall file a Notice of Decision with the State Clearinghouse.
3. Within three years after the Department notifies the California Regional Water Quality Control Board that specific water bodies support threatened or endangered species, and that scientific evidence indicates that certain water quality objectives for these water bodies protect such species, the Board shall determine, in consultation with the Department, whether these objectives are adequately protective. In cases where such objective do not provide adequate protection for listed species, the Board shall develop and adopt adequately protective site-specific objectives for those constituents.
4. The Basin Plan amendment shown on Attachment "A - Appendix One and Two" is approved. The amendment will not take effect until approved by the State Board and the Office of Administrative Law.
5. Upon approval, the State Board is requested to transmit the amendment to the California Office of Administrative Law and the Environmental Protection Agency for approval.

I, ROGER W, BRIGGS, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of the resolution adopted by the California Regional Water Quality Control Board, Central Coastal Region, on September 8, 1994.

Executive Officer

ATTACHMENT A - APPENDIX ONE

BASIN PLAN AMENDMENT

CHAPTER TWO

The following Basin Plan amendment is proposed. (Note new language is in **bold**, existing language is shown in plain text, and deleted language is ~~struck-out~~.)

1. Table 2-1 of California Central Coastal Regional Water Quality Control Plan (Basin Plan) is revised to include the following changes as shown in Appendix Two, Revised Table 2-1, Identified Uses of Water:
 - a. Adds beneficial use categories not previously listed and assigns the uses to appropriate water bodies.
 - b. Adds water bodies not previously listed and assigns appropriate beneficial uses to them.
 - c. Corrects Table 2-1 assigned uses for Struve Slough.
 - d. Changes all Existing "E" and Intermittent "I" designations to "X" to indicate occurrence in the water body.
2. Beneficial use definitions are revised as shown below.

Municipal and Domestic Supply (MUN) - Uses of water for community, military, or individual water supply systems including, but not limited to, drinking water supply. According to State Board Resolution No. 88-63, "Sources of Drinking Water Policy" all surface waters are considered suitable, or potentially suitable, for municipal or domestic water supply except where:

- a. TDS exceeds 3000 mg/l (5000 uS/cm electrical conductivity)
- b. Contamination exists, that cannot reasonably be treated for domestic use
- c. The source is not sufficient to supply an average sustained yield of 200 gallons per day
- d. The water is in collection or treatment systems of municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff
- e. The water is in systems for conveying or holding agricultural drainage waters.

Agricultural Supply (AGR) - Uses of water for farming, horticulture, or ranching including, but not limited to, irrigation, stock watering, or support of vegetation for range grazing.

Industrial Process Supply (PRO) - Uses of water for industrial activities that depend primarily on water quality (i.e., waters used for manufacturing, food processing, etc.).

Industrial Service Supply (IND) - Uses of water for industrial activities that do not depend primarily on water quality including, but not limited to, mining, cooling water supply, hydraulic conveyance, gravel washing, fire protection, or oil well repressurization.

Ground Water Recharge (GWR) - Uses of water for natural or artificial recharge of ground water for purposes of future extraction, maintenance of water quality, or halting of saltwater intrusion into freshwater aquifers.

Freshwater Replenishment (FRSH) - Uses of water for natural or artificial maintenance of surface water quantity or quality (e.g., salinity) which includes a water body that supplies water to a different type of water body, such as, streams that supply reservoirs and lakes, or estuaries; or reservoirs and lakes that supply streams. This includes only immediate upstream water bodies and not their tributaries.

Navigation (NAV) - Uses of water for shipping, travel, or other transportation by private, military, or commercial vessels. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~ This Board interprets NAV as, "Any stream, lake, arm of the sea, or other natural body of water that is actually navigable and that, by itself, or by its connections with other waters, for a period long enough to

be of commercial value, is of sufficient capacity to float watercraft for the purposes of commerce, trade, transportation, and including pleasure; or any waters that have been declared navigable by the Congress of the United States" and/or the California State Lands Commission.

Hydropower Generation (POW) - Uses of water for hydropower generation. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Water Contact Recreation (REC-1) - Uses of water for recreational activities involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, swimming, wading, water-skiing, skin and scuba diving, surfing, white water activities, fishing, or use of natural hot springs.

Non-contact Water Recreation (REC-2) - Uses of water for recreational activities involving proximity to water, but not normally involving body contact with water, where ingestion of water is reasonably possible. These uses include, but are not limited to, picnicking, sunbathing, hiking, beachcombing, camping, boating, tidepool and marine life study, hunting, sightseeing, or aesthetic enjoyment in conjunction with the above activities.

Commercial and Sport Fishing (COMM) - Uses of water for commercial or recreational collection of fish, shellfish, or other organisms including, but not limited to, uses involving organisms intended for human consumption or bait purposes. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Aquaculture (AQUA) - Uses of water for aquaculture or mariculture operations including, but not limited to, propagation, cultivation, maintenance, or harvesting of aquatic plants and animals for human consumption or bait purposes. ~~(Regional Board designation of this beneficial use will be added to the proposed Triennial Review Priority List.)~~

Warm Freshwater Habitat (WARM) - Uses of water that support warm water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Cold Freshwater Habitat (COLD) - Uses of water that support cold water ecosystems including, but not limited to, preservation or enhancement of aquatic habitats, vegetation, fish, or wildlife, including invertebrates.

Inland Saline Water Habitat (SAL) - Uses of water that support inland saline water ecosystems including, but not limited to, preservation or enhancement of aquatic saline habitats, vegetation, fish, or wildlife, including invertebrates. Soda Lake is a saline habitat typical of desert lakes in inland sinks.

Estuarine Habitat (EST) - Uses of water that support estuarine ecosystems including, but not limited to, preservation or enhancement of estuarine habitats, vegetation, fish, shellfish, or wildlife (e.g., estuarine mammals, waterfowl, shorebirds). **An estuary is generally described as a semi-enclosed body of water having a free connection with the open sea, at least part of the year and within which the seawater is diluted at least seasonally with fresh water drained from the land. Included are water bodies which would naturally fit the definition if not controlled by tidegates or other such devices.**

Marine Habitat (MAR) - Uses of water that support marine ecosystems including, but not limited to, preservation or enhancement of marine habitats, vegetation such as kelp, fish, shellfish, or wildlife (e.g., marine mammals, shorebirds).

Wildlife Habitat (WILD) - Uses of water that support terrestrial ecosystems including, but not limited to, preservation and enhancement of terrestrial habitats, vegetation, wildlife (e.g., mammals, birds, reptiles, amphibians, invertebrates), or wildlife water and food sources.

Preservation of Biological Habitats of Special Significance (BIOL) - Uses of water that support designated areas or habitats, such as established refuges, parks, sanctuaries, ecological reserves, or Areas of Special Biological Significance (ASBS), where the preservation or enhancement of natural resources requires special protection.

Rare, Threatened, or Endangered Species (RARE) - Uses of water that support habitats necessary, at least in part, for

the survival and successful maintenance of plant or animal species established under state or federal law as rare, threatened, or endangered.

Migration of Aquatic Organisms (MIGR) - Uses of water that support habitats necessary for migration or other temporary activities by aquatic organisms, such as anadromous fish.

Spawning, Reproduction, and/or Early Development (SPWN) - Uses of water that support high quality aquatic habitats suitable for reproduction and early development of fish.

Shellfish Harvesting (SHELL) - Uses of water that support habitats suitable for the collection of filter-feeding shellfish (e.g., clams, oysters, and mussels) for human consumption, commercial, or sport purposes. **This includes waters that have in the past, or may in the future, contain significant shellfisheries.**

3. Revise Table 2-1 "Notes" to read as follows:

"Notes: **X: Existing beneficial water uses, whether perennial or ephemeral, intermittent or continuous flow.**

~~E: Existing beneficial water uses~~

~~I: Beneficial water use in a watercourse with seasonally intermittent flow characteristics. Use is concurrent with flow.~~

DRAFT MINUTES UNTIL REVIEWED AND APPROVED BY THE BOARD AT ITS OCTOBER 14, 1994 MEETING

4. Basin Plan Amendment-Table 2-1 Update Resolution No. 94-06
3:50-5:15

Roger Briggs noted that in accordance with the Office of Administrative Law, this item is concerning the amendment of the Basin Plan, which requires a verbatim transcript. He introduced Court Reporter Cameron Kircher and announced that a transcript will be available for review at the Central Coast Regional Board Office, or a copy can be obtained from San Luis Reporting, 102 Palm Street, Suite 101, San Luis Obispo, CA 93401 (1-800-500-5942).

Chairman Allen noted that Vice-Chair Melanie Mayer Gideon submitted a letter since she could not attend Thursday's portion of the meeting and he read it into the record at her request.

Environmental Specialist IV Jesse Nighswonger used bullet point overheads while discussing what was considered in developing Central Coast Region Resolution 94-06 for the Board's consideration. He explained it deals with designating beneficial uses to Inland Surface Waters of the Central Coast Region. It continues the efforts of a Cal Poly study, that investigated beneficial uses of about 450 waters, which was considered by the Board in February 1994 as

part of Resolution 94-01. The Board discussed each point of Vice Chair Mayer Gideon's letter as well as the contents of the agenda staff report.

Brian Trautwein, President of the Santa Barbara Urban Creeks Council, addressed the Board, referring to his comments in the agenda staff report. He distributed portions of documents he believed supported his comments which include: Summer of 1994 Santa Barbara Urban Creeks Council Newsletter; a letter dated March 3, 1994 from him to Tom Keegan of Entrix; Page 2 of a letter dated May 31, 1994 to the Santa Ynez Technical Advisory Committee; and Page 2 of an undated, unsalutated letter.

After further discussion, the Board's changes are referenced on Page 2 of Melanie Mayer Gideon's letter dated September 7, 1994; and, after discussion of her comment on Page 1, the Board modified the definition of EST (Page 3 of the Staff Report, Agenda Page 35), by changing the second sentence to read: "... An ~~estuary~~ estuarine habitat is ~~generally~~ defined as a semi-enclosed body of water having a free connection with the open sea, at least part of the year and within which the seawater is measurably diluted at least seasonally within which the seawater is measurably diluted at least seasonally with fresh water drained from the land...."

MOTION: Bill Newman made a motion to adopt Resolution 94-06 with the changes discussed at the meeting referenced in Melanie Mayer Gideon's September 7, 1994 letter. SECONDED by, Russ Jeffries; CARRIED - Unanimously (6 -0).

2. Approval of Minutes of the July 8, 1994 Meeting Board Motion
5:15-5:30

MOTION: Russ Jeffries made a motion to adopt the minutes of the July 8, 1994 meeting as submitted. SECONDED by, Bill Newman; CARRIED - Unanimously (6 - 0)

Adjournment Next Meeting Announcement

Chairman Allen adjourned the meeting at 5:30 p.m. to be continued on Friday, September 9, 1994, at the same location, beginning at 8:30 a.m.

SEPTEMBER 9, 1994

Chairman Charles Allen called the meeting to order at 8:30 a.m. and asked Executive Assistant Paulette Lacy to take the Board Member roll, as follows:

State of California
California Regional Water Quality Control Board
Central Coast Region

✓ Basin Plan
x Sources of Drinking Water

April 14, 1989

ITEM: 8

SUBJECT: Resolution 89-03. Incorporation of State Water Resources Control Board "Sources of Drinking Water" Policy into the Water Quality Control Plan, (Basin Plan)

DISCUSSION: The purposes of this hearing are to incorporate the State Water Resources Control Board (State Board) adopted "Sources of Drinking Water" policy into the Basin Plan. The Board may also wish to consider adoption of specific exceptions to this State policy. California Water Code Section 13240 requires Water Quality Control Plans to conform to any State Policy for Water Quality Control.

This policy was adopted by the State Board to designate those water bodies subject to Proposition 65 requirements. Specifically, the policy applies to water bodies not listed in Table 2-1. The effect of the Policy in Region 3 is to designate all surface waters (not listed in Table 2-1) in Region 3 as sources of drinking water, (MUN) with some specific exceptions. While the policy also addresses ground waters, all ground waters in the Central Coast Region currently have a MUN designation (except Soda Lake). Therefore this policy has no added impact upon ground waters in this Region.

Discharge of a significant quantity of a Proposition 65 chemical to sources of drinking water is prohibited. Furthermore, discharge of such chemicals into water or onto land likely to be in hydraulic continuity with a source of drinking water is also prohibited. (Waters in hydraulic continuity with MUN waters will always be protected as if the MUN use was present).

There are three ways by which the MUN designation can be removed from a particular water body. These are:

1. The water body qualifies for at least one of the six exceptions listed in the State Policy, or
2. The Regional Board had previously considered the water body for MUN designation, but rejected MUN for reasons that can be demonstrated in the record (i.e., the water body did not then support MUN nor was it considered likely to support MUN in the future), or

3. Evidence is presented to the Regional Board demonstrating that a particular water body is not suitable for present or potential MUN uses. Note: water body that serves existing MUN uses or is currently suitable for MUN uses cannot have a MUN designation removed.

**ENVIRONMENTAL
SUMMARY:**

An environmental assessment package has been prepared and is available to interested agencies and persons. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq. of the Public Resources Code and appropriate notices and waiting periods have been complied with. This process will satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217).

- COMMENTS:**
1. Chevron Corporation petitions the Regional Board to amend the Basin Plan to conform with the State Board Sources of Drinking Water Policy.

Staff concurs.

- ATTACHMENTS:**
1. Resolution 89-03
 2. SWRCB Resolution 88-63 (Sources of Drinking Water Policy)
 3. CEQA Compliance Documents
 4. Chevron Corporation Letter (Sept. 6, 1988)

RECOMMENDATION: Adopt Resolution 89-03 after considering additional comments received during the public hearing.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, CA 93401

REGIONAL BOARD RESOLUTION NO. 89-03, DRAFT

INCORPORATION OF "SOURCES OF DRINKING WATER" POLICY
INTO THE WATER QUALITY CONTROL PLAN (BASIN PLAN)

WHEREAS:

1. California Water Code Section 13140 provides that the State Water Resources Control Board (State Board) shall formulate and adopt State policy for water quality control; and,
2. California Water Code Section 13240 provides that Basin Plans shall conform to any State policy for water quality control; and,
3. The State Board adopted Resolution No. 88-63 entitled "Sources of Drinking Water" on May 19, 1988 as a State policy for water quality control; and,
4. Previous to passage of State Board Resolution 88-63, two public workshops on January 6, 1988 and April 6, 1988 and a public hearing on May 4, 1988 were conducted in order to receive comments on the Policy; and,
5. Incorporation of State Board Resolution No. 88-63 into Basin Plans will conform these Basin Plans to this Policy; and,
6. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq. of the Public Resources Code and appropriate notices and waiting periods have been complied with; and,
7. A public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,
8. On April 14, 1989, in the Solvang City Hall Council Chambers, 1644 Oak Street, Solvang, California, the Regional Board reviewed staff documents pertaining to the amendment, environmental documents, written comments, and staff responses, as well as received additional evidence and testimony concerning the proposed amendments to the Basin Plan.

THEREFORE BE IT RESOLVED THAT:

1. The Basin Plan chapter entitled Beneficial Uses be amended to include the following statement:

"Water bodies in the Region 3 without beneficial uses designated in Table 2-1 are assigned MUN designations in accordance with the provisions of State Water Resources Control Board Resolution No. 88-63 which is, by reference, a part of this plan. These MUN designations in no way affect the presence or absence of other beneficial use designations for these waters bodies."

2. A copy of this resolution with other appropriate materials be submitted to the State Board for approval.

Certification

I, _____, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on _____.

sodw.res/4

ADOPTION OF POLICY ENTITLED
"SOURCES OF DRINKING WATER"

WHEREAS:

1. California Water Code Section 13140 provides that the State Board shall formulate and adopt State Policy for Water Quality Control; and,
2. California Water Code Section 13240 provides that Water Quality Control Plans "shall conform" to any State Policy for Water Quality Control; and,
3. The Regional Boards can conform the Water Quality Control Plans to this policy by amending the plans to incorporate the policy; and,
4. The State Board must approve any conforming amendments pursuant to Water Code Section 13245; and,
5. "Sources of drinking water" shall be defined in Water Quality Control Plans as those water bodies with beneficial uses designated as suitable, or potentially suitable, for municipal or domestic water supply (MUN); and,
6. The Water Quality Control Plans do not provide sufficient detail in the description of water bodies designated MUN to judge clearly what is, or is not, a source of drinking water for various purposes.

THEREFORE BE IT RESOLVED:

All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards¹ with the exception of:

1. Surface and ground waters where:
 - a. The total dissolved solids (TDS) exceed 3,000 mg/L (5,000 uS/cm, electrical conductivity) and it is not reasonably expected by Regional Boards to supply a public water system, or

- b. There is contamination, either by natural processes or by human activity (unrelated to a specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices, or
- c. The water source does not provide sufficient water to supply a single well capable of producing an average, sustained yield of 200 gallons per day.

2. Surface waters where:

- a. The water is in systems designed or modified to collect or treat municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards; or,
- b. The water is in systems designed or modified for the primary purpose of conveying or holding agricultural drainage waters, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards.

3. Ground water where:

The aquifer is regulated as a geothermal energy producing source or has been exempted administratively pursuant to 40 Code of Federal Regulations, Section 146.4 for the purpose of underground injection of fluids associated with the production of hydrocarbon or geothermal energy, provided that these fluids do not constitute a hazardous waste under 40 CFR, Section 261.3.

4. Regional Board Authority to Amend Use Designations:

Any body of water which has a current specific designation previously assigned to it by a Regional Board in Water Quality Control Plans may retain that designation at the Regional Board's discretion. Where a body of water is not currently designated as MUN but, in the opinion of a Regional Board, is presently or potentially suitable for MUN, the Regional Board shall include MUN in the beneficial use designation.

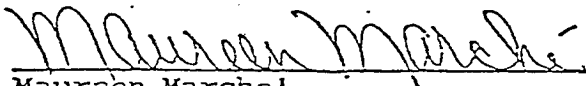

The Regional Boards shall also assure that the beneficial uses of municipal and domestic supply are designated for protection wherever those uses are presently being attained, and assure that any changes in beneficial use designations for waters of the State are consistent with all applicable regulations adopted by the Environmental Protection Agency.

The Regional Boards shall review and revise the Water Quality Control Plans to incorporate this policy.

-
- 1 This policy does not affect any determination of what is a potential source of drinking water for the limited purposes of maintaining a surface impoundment after June 30, 1988, pursuant to Section 25208.4 of the Health and Safety Code.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 19, 1988.

Maureen Marche

Administrative Assistant to the Board

ENVIRONMENTAL CHECKLIST FORM

I. Background

1. Name of Proponent California Regional Water
Quality Control Board, Central Coast Region
2. Address and Phone Number of Proponent _____
1102 "A" Laurel Lane
San Luis Obispo, CA 93401

3. Date of Checklist Submitted April 14, 1989
4. Agency Requiring Checklist Resources Agency
5. Name of Proposal, if applicable: Sources of
Drinking Water Policy

II. Environmental Impacts

(Explanations of all "yes" and "maybe" answers are required on attached sheets.)

- | | <u>YES</u> | <u>MAYBE</u> | <u>NO</u> |
|--|------------|--------------|-----------|
| 1. Earth. Will the proposal result in: | | | |
| a. Unstable earth conditions or in changes in geologic substructures? | ___ | ___ | <u>X</u> |
| b. Disruptions, displacements, compaction, or overcovering of the soil? | ___ | ___ | <u>X</u> |
| c. Change in topography or ground surface relief features? | ___ | ___ | <u>X</u> |
| d. The destruction, covering, or modification of any unique geologic or physical features? | ___ | ___ | <u>X</u> |

- | | | | | |
|----|--|-------|----------|----------|
| e. | Any increase in wind or water erosion of soils, either on or off the site? | _____ | _____ | <u>X</u> |
| f. | Changes in deposition or erosion of beach sands, or changes in siltation, deposition, or erosion which may modify the channel of a river or stream or the bed of the ocean or any bay, inlet, or lake? | _____ | _____ | <u>X</u> |
| g. | Exposure of people or property to geologic hazards such as earthquakes, landslides, mudslides, ground failure, or similar hazards? | _____ | _____ | <u>X</u> |
| 2. | Air. Will the proposal result in: | | | |
| a. | Substantial air emissions or deterioration of ambient air quality? | _____ | _____ | <u>X</u> |
| b. | The creation of objectionable odors? | _____ | _____ | <u>X</u> |
| c. | Alteration of air movement, moisture, or temperature, or any change in climate, either local or regionally? | _____ | _____ | <u>X</u> |
| 3. | Water. Will the proposal result in: | | | |
| a. | Changes in currents, or the course of direction of water movements, in either marine or fresh waters? | _____ | _____ | <u>X</u> |
| b. | Changes in absorption rates, drainage patterns, or the rate and amount of surface runoff? | _____ | <u>X</u> | _____ |
| c. | Alterations to the course or flow of flood waters? | _____ | _____ | <u>X</u> |
| d. | Change in the amount of surface water in any water body? | _____ | <u>X</u> | _____ |
| e. | Discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen, or turbidity? | _____ | <u>X</u> | _____ |

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
f. Alteration of the direction or rate of flow of ground waters?	_____	<u> X </u>	_____
g. Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations?	_____	<u> X </u>	_____
h. Substantial reduction in the amount of water otherwise available for public water supplies?	_____	_____	<u> X </u>
i. Exposure of people or property to water related hazards such as flooding or tidal waves?	_____	_____	<u> X </u>
4. Plant Life. Will the proposal result in:			
a. Change in the diversity of species, or number of any species of plants (including trees, shrubs, grass, crops, and aquatic plants)?	_____	_____	<u> X </u>
b. Reduction of the numbers of any unique, rare, or endangered species of plants?	_____	_____	<u> X </u>
c. Introduction of new species of plants into an area, or in a barrier to the normal replenishment of existing species?	_____	_____	<u> X </u>
d. Reduction in acreage of any agricultural crop?	_____	<u> X </u>	_____
5. Animal Life. Will the proposal result in:			
a. Change in the diversity of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, or insects)?	_____	_____	<u> X </u>
b. Reduction of the numbers of any unique, rare, or endangered species of animals?	_____	_____	<u> X </u>

- | | | | | |
|-----|--|-------|----------|----------|
| c. | Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? | _____ | _____ | <u>X</u> |
| d. | Deterioration to existing fish or wildlife habitat? | _____ | _____ | <u>X</u> |
| 6. | Noise. Will the proposal result in: | | | |
| a. | Increases in existing noise levels? | _____ | _____ | <u>X</u> |
| b. | Exposure of people to severe noise levels? | _____ | _____ | <u>X</u> |
| 7. | Light and Glare. Will the proposal produce new light or glare? | _____ | _____ | <u>X</u> |
| 8. | Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area? | _____ | <u>X</u> | _____ |
| 9. | Natural Resources. Will the proposal result in: | | | |
| a. | Increase in the rate of use of any natural resources? | _____ | _____ | <u>X</u> |
| b. | Substantial depletion of any nonrenewable natural resource? | _____ | _____ | <u>X</u> |
| 10. | Risk of Upset. Will the proposal involve: | | | |
| a. | A risk of an explosion or the release of hazardous substances (including, but not limited to, oil, pesticides, chemicals, or radiation) in the event of an accident or upset conditions? | _____ | _____ | <u>X</u> |
| b. | Possible interference with an emergency response plan or an emergency evacuation plan? | _____ | _____ | <u>X</u> |
| 11. | Population. Will the proposal alter the location, distribution, density, or growth rate of the human population of an area? | _____ | <u>X</u> | _____ |

	<u>YES</u>	<u>MAYBE</u>	<u>NO</u>
12. Housing. Will the proposal affect existing housing or create a demand for additional housing?	_____	<u> X </u>	_____
13. Transportation/Circulation. Will the proposal result in:			
a. Generation of substantial additional vehicular movement?	_____	_____	<u> X </u>
b. Effects on existing parking facilities or demand for new parking?	_____	_____	<u> X </u>
c. Substantial impact upon existing transportation systems?	_____	_____	<u> X </u>
d. Alterations to present patterns of circulation or movement of people and/or goods?	_____	_____	<u> X </u>
e. Alterations to waterborne, rail, or air traffic?	_____	_____	<u> X </u>
f. Increase in traffic hazards to motor vehicles, bicyclists, or pedestrians?	_____	_____	<u> X </u>
14. Public Services. Will the proposal have an effect upon, or result in a need for new or altered governmental services in any of the following areas:			
a. Fire protection?	_____	_____	<u> X </u>
b. Police protection?	_____	_____	<u> X </u>
c. Schools?	_____	_____	<u> X </u>
d. Parks or other recreational facilities?	_____	_____	<u> X </u>
e. Maintenance of public facilities, including roads?	_____	_____	<u> X </u>
f. Other governmental services?	_____	_____	<u> X </u>
15. Energy. Will the proposal result in:			
a. Use of substantial amounts of fuel of energy?	_____	_____	<u> X </u>

- b. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? _____ X
16. Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities:
- a. Power of natural gas? _____ X
- b. Communications systems? _____ X
- c. Water? _____ X
- d. Sewer or septic tanks? _____ X
- e. Storm water drainage? _____ X
- f. Solid waste and disposal? _____ X
17. Human Health. Will the proposal result in:
- a. Creation of any health hazard or potential health hazard (excluding mental health)? _____ X
- b. Exposure of people to potential health hazards? _____ X
18. Aesthetics. Will the proposal result in the obstruction of any scenic vista or view open to the public, or will the proposal result in the creation of an aesthetically offensive site open to public view? _____ X
19. Recreation. Will the proposal result in an impact upon the quality or quantity of existing recreational opportunities? _____ X
20. Cultural Resources.
- a. Will the proposal result in the alteration of or the destruction of a prehistoric or historic archaeological site? _____ X

YES MAYBE NO

- b. Will the proposal result in adverse physical or aesthetic effects to a prehistoric or historic building, structure, or object? _____ _____ X
- c. Does the proposal have the potential to cause a physical change which would affect unique ethnic cultural values? _____ _____ X
- d. Will the proposal restrict existing religious or sacred uses within the potential impact area? _____ _____ X
21. Mandatory Findings of Significance.
- a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal, or eliminate important examples of the major periods of California history or prehistory? _____ _____ X
- b. Does the project have the potential to achieve short-term, to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time while long-term impacts will endure well into the future.) _____ _____ X
- c. Does the project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environment is significant.) _____ _____ X

- d. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? _____ _____ X

III. Discussion of Environmental Evaluation

See attached report.

IV. Determination

On the basis of this initial evaluation:

I find that the proposed project COULD NOT have a significant effect on the environment. _____

I find that the proposed project MAY have a significant adverse impact on the environment, however, there are feasible alternatives and/or mitigation measures available which will substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report. X

I find the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. See the attached written report for a discussion of this determination. _____

Date 3/22/89

REPORT ON THE POTENTIAL ENVIRONMENTAL IMPACTS
OF THE SOURCES OF DRINKING WATER POLICY

The Sources of Drinking Water Policy, as stated in State Water Resources Control Board Resolution No. 88-63, was adopted on May 19, 1988. Pursuant to Water Code Section 13140, Resolution No. 88-63 establishes State policy. Water Code Section 13240 requires Water Quality Control Plans (Basin Plans) to conform to State policy. Because Resolution No. 88-63 contains specific beneficial use designations, to conform the Basin Plans to this policy necessitates specific Basin Plan amendments. The basin planning process, which provides the mechanism for amending Basin Plans, has been determined to be functionally equivalent to the process required by the California Environmental Quality Act (CEQA) and is therefore exempt from the Environmental Impact Report process required by CEQA. Environmental review is, however, required under the basin planning process. This environmental review consists of completion of an Environmental Checklist and a written report identifying the adverse impacts and discussing the alternatives and mitigation measures considered for the project.

This report is presented to satisfy environmental review requirements of the basin planning process.

The Sources of Drinking Water Policy (hereafter the Policy) declares all waters of the State suitable for designation as MUN (municipal and domestic supply) and, with certain exceptions, requires that Basin Plans be amended to designate all waters MUN. The adverse impacts associated with the Policy are secondary effects that may result from the principle action of designating waters MUN and regulating those waters to attain appropriate water quality objectives.

The numbered headings in this report refer to items on the Environmental Checklist.

3. Water. Will the proposal result in:
 - b. Changes in absorption rates, drainage patterns, or the rate and amount of surface runoff?

In order to meet objectives for MUN-designated water bodies the amount of drainage water or ground water recharge at specific locations may have to be adjusted in some areas. Stricter control of urban and agricultural surface runoff may be required in some instances. Mitigation of any detrimental effect will be considered on a case-by-case basis.

- d. Change in the amount of surface water in any water body?

Rerouting of drainage to comply with objectives may divert waters from one water body to another. Rerouting of drainage flow will not necessarily produce adverse effects. Mitigation of any adverse effects will be considered on a case-by-case basis.

- e. Discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen, or turbidity?

Rerouting of drainage may affect non MUN-designated waters, but it is not clear whether an impairment to any waters will result.

- f. Alteration of the direction or rate of flow of ground waters?

Ground water recharge from drainage channels may be affected if drainage is rerouted. Conjunctive use and ground water recharge may be adjusted to meet objectives. These changes may impact the hydraulic gradient. However, this impact may not adversely effect ground waters.

- g. Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations?

See response to question 3f.

4. Plant Life. Will the proposal result in:

- d. Reduction in acreage of any agricultural crop?

Agricultural lands which produce low-quality drainage water may be subject to reduced acreage of specific crops as well as treatment and other management alternatives in order to provide drain water and tail water from these fields that comply with receiving water objectives. This essentially becomes an assessment of the relative costs and benefits of water quality and the limited agricultural areas and commodities that would be affected.

8. Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area?

If attainment of MUN objectives prevents certain agricultural, industrial, or manufacturing activities from being sited at a specific location, then a secondary effect

could be the adjustments to land use resulting from those restrictions. Similarly, concentration of certain activities may occur in order to most effectively utilize characteristics of receiving waters. Mitigation of any adverse effects should be addressed through the local planning and land use processes.

11. Population. Will the proposal alter the location, distribution, density, or growth rate of the human population of an area?

See response to question 8.

12. Housing. Will the proposal affect existing housing, or create a demand for additional housing?

See response to question 8 .

16. Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities:

- d. Sewer or septic tanks?

Where receiving waters are redesignated from a designation other than MUN to MUN, higher levels of treatment or discharge limitations may be required to comply with MUN objectives.

- e. Storm water drainage?

Treatment or other management practices for storm water runoff may be required to meet MUN objectives.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, CA 93401

REGIONAL BOARD RESOLUTION NO. 89-03

INCORPORATION OF "SOURCES OF DRINKING WATER" POLICY
INTO THE WATER QUALITY CONTROL PLAN (BASIN PLAN)

WHEREAS:

1. California Water Code Section 13140 provides that the State Water Resources Control Board (State Board) shall formulate and adopt State policy for water quality control; and,
2. California Water Code Section 13240 provides that Basin Plans shall conform to any State policy for water quality control; and,
3. The State Board adopted Resolution No. 88-63 entitled "Sources of Drinking Water" on May 19, 1988 as a State policy for water quality control; and,
4. Previous to passage of State Board Resolution 88-63, two public workshops on January 6, 1988 and April 6, 1988 and a public hearing on May 4, 1988 were conducted in order to receive comments on the Policy; and,
5. Incorporation of State Board Resolution No. 88-63 into Basin Plans will conform these Basin Plans to this Policy; and,
6. The basin planning process has been determined to be functionally equivalent to the CEQA process in accordance with Section 21000 et seq. of the Public Resources Code and appropriate notices and waiting periods have been complied with; and,
7. A public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,
8. On April 14, 1989, in the Solvang City Hall Council Chambers, 1644 Oak Street, Solvang, California, the Regional Board reviewed staff documents pertaining to the amendment, environmental documents, written comments, and staff responses, as well as received additional evidence and testimony concerning the proposed amendments to the Basin Plan.

THEREFORE BE IT RESOLVED THAT:

1. The Basin Plan chapter entitled Beneficial Uses be amended to include the following statement:

"Water bodies in the Region 3 without beneficial uses designated in Table 2-1 are assigned MUN designations in accordance with the provisions of State Water Resources Control Board Resolution No. 88-63 which is, by reference, a part of this plan. These MUN designations in no way affect the presence or absence of other beneficial use designations for these waters bodies."

2. A copy of this resolution with other appropriate materials be submitted to the State Board for approval.

Certification

I, William R. Leonard, Executive Officer, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on April 19, 1989.

STATE WATER RESOURCES CONTROL BOARD
RESOLUTION NO. 88-63

ADOPTION OF POLICY ENTITLED
"SOURCES OF DRINKING WATER"

WHEREAS:

1. California Water Code Section 13140 provides that the State Board shall formulate and adopt State Policy for Water Quality Control; and,
2. California Water Code Section 13240 provides that Water Quality Control Plans "shall conform" to any State Policy for Water Quality Control; and,
3. The Regional Boards can conform the Water Quality Control Plans to this policy by amending the plans to incorporate the policy; and,
4. The State Board must approve any conforming amendments pursuant to Water Code Section 13245; and,
5. "Sources of drinking water" shall be defined in Water Quality Control Plans as those water bodies with beneficial uses designated as suitable, or potentially suitable, for municipal or domestic water supply (MUN); and,
6. The Water Quality Control Plans do not provide sufficient detail in the description of water bodies designated MUN to judge clearly what is, or is not, a source of drinking water for various purposes.

THEREFORE BE IT RESOLVED:

All surface and ground waters of the State are considered to be suitable, or potentially suitable, for municipal or domestic water supply and should be so designated by the Regional Boards¹ with the exception of:

1. Surface and ground waters where:
 - a. The total dissolved solids (TDS) exceed 3,000 mg/L (5,000 uS/cm, electrical conductivity) and it is not reasonably expected by Regional Boards to supply a public water system, or

- b. There is contamination, either by natural processes or by human activity (unrelated to a specific pollution incident), that cannot reasonably be treated for domestic use using either Best Management Practices or best economically achievable treatment practices, or
- c. The water source does not provide sufficient water to supply a single well capable of producing an average, sustained yield of 200 gallons per day.

2. Surface waters where:

- a. The water is in systems designed or modified to collect or treat municipal or industrial wastewaters, process waters, mining wastewaters, or storm water runoff, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards; or,
- b. The water is in systems designed or modified for the primary purpose of conveying or holding agricultural drainage waters, provided that the discharge from such systems is monitored to assure compliance with all relevant water quality objectives as required by the Regional Boards.

3. Ground water where:

The aquifer is regulated as a geothermal energy producing source or has been exempted administratively pursuant to 40 Code of Federal Regulations, Section 146.4 for the purpose of underground injection of fluids associated with the production of hydrocarbon or geothermal energy, provided that these fluids do not constitute a hazardous waste under 40 CFR, Section 261.3.

4. Regional Board Authority to Amend Use Designations:

Any body of water which has a current specific designation previously assigned to it by a Regional Board in Water Quality Control Plans may retain that designation at the Regional Board's discretion. Where a body of water is not currently designated as MUN but, in the opinion of a Regional Board, is presently or potentially suitable for MUN, the Regional Board shall include MUN in the beneficial use designation.

The Regional Boards shall also assure that the beneficial uses of municipal and domestic supply are designated for protection wherever those uses are presently being attained, and assure that any changes in beneficial use designations for waters of the State are consistent with all applicable regulations adopted by the Environmental Protection Agency.

The Regional Boards shall review and revise the Water Quality Control Plans to incorporate this policy.

-
- 1 This policy does not affect any determination of what is a potential source of drinking water for the limited purposes of maintaining a surface impoundment after June 30, 1988, pursuant to Section 25208.4 of the Health and Safety Code.

CERTIFICATION

The undersigned, Administrative Assistant to the Board, does hereby certify that the foregoing is a full, true, and correct copy of a policy duly and regularly adopted at a meeting of the State Water Resources Control Board held on May 19, 1988.

Maureen Marche
Administrative Assistant to the Board

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD—
CENTRAL COAST REGION

1102 A LAUREL LANE
SAN LUIS OBISPO, CALIFORNIA 93401
(805) 549-3147

September 9, 1987

(See Attached Mailing List)

At the September 4, 1987, regularly scheduled meeting of the Regional Water Quality Control Board, Basin Plan prohibitions in Communities of Las Lomas/Hall, Moss Landing, Scotts Valley (Pasatiempo Pines), Boronda, and Fruitland (Resolution Nos. 76-03, 76-08, 83-01, 83-09, and 84-03) were rescinded.

Very truly yours,

CALIFORNIA REGIONAL WATER QUALITY
CONTROL BOARD, CENTRAL COAST REGION

BY William R. Leonard

WILLIAM R. LEONARD
Executive Officer

WRL:mps

Enclosure: Mailing List

BP

State of California
California Regional Water Quality Control Board
Central Coast Region

September 4, 1987

ITEM: 18

SUBJECT: RESCISSION OF BASIN PLAN PROHIBITION OF DISCHARGES IN THE COMMUNITIES OF LAS LOMAS/HALL, MOSS LANDING, BORONDA, SCOTTS VALLEY (PASATIEMPO PINES), AND FRUITLAND (RESOLUTION NOS. 76-03, 76-08, 83-01, 83-09, AND 84-03).

DISCUSSION: Chapter 5 of the Basin Plan was amended by the above-listed Resolutions to prohibit discharges from individual onsite sewage disposal systems with the following wording:

"Discharges from additional individual or on-site sewage disposal systems are prohibited, and discharges from existing individual sewage disposal systems are prohibited effective"

In each case, the Regional Board working with County Government Agencies and State Water Resources Control Board staff initiated investigations of these unsewered communities. Septic system surveys were conducted house-to-house to determine the extent of failure, the use restrictions, and the required frequency for pumpings. Sampling of area wells was conducted to determine the level of pollution from the inadequate septic systems. In each case, it was determined that public health and water quality were being threatened by these systems. Each of these projects were placed on the Clean Water Grant Priority List for grant funding.

Subsequently, the projects went through the planning and design stages, applicants received construction funding, collection systems were completed for the affected communities, and dischargers have hooked up to the sewers. Thus, the purpose of the

Board's prohibitions and the Clean Water Grant Program have been fulfilled in these communities; namely, providing physical facilities needed to protect water quality.

Therefore, staff believes it appropriate now to rescind the subject Resolutions. A summary of the pertinent information is included in the table below.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 86-04

Concerning Amendment of Water Quality Control Plan
Central Coastal Basin
(Lompoc Terrace Objectives)

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of nuisance; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revisions and amendment; and,
- WHEREAS, the Regional Board when amending Chapter 4 of said Basin Plan on October 12, 1984, (Resolution No. 84-05) omitted from Table 4-9, "Median Ground Water Objectives, mg/l," the area designated as "Lompoc Terrace" in order to take into consideration well data not available at that time; and,
- WHEREAS, a staff report, "Water Quality Objectives and Management Plan for the Lompoc Ground Water Basin" (August, 1984) was prepared by Regional Board staff for Resolution No. 84-05 and an addendum evaluating additional data from the U.S. Geological Survey for Lompoc Terrace was subsequently prepared; and,
- WHEREAS, the proposed amendment applies to Table 4-9, by adding Lompoc Terrace and establishing ground water objectives for the constituents of Total Dissolved Solids, Chloride, Sulfate, Boron, Sodium, and Nitrate; and,
- WHEREAS, drafts of proposed amendment have been prepared and provided to interested persons and agencies for review and comment prior to public hearing; and,
- WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL

91-500 and PL 95-217) and the Regional Board finds adoption of this amendment to Table 4-9 will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in a newspaper of general circulation within the Lompoc region; and,

WHEREAS, on April 11, 1986, in Solvang, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed amendment to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 4-15, Table 4-9 "Median Ground Water Objectives, mg/l," -
Revise Lompoc objective to read:

	TDS	CL	SO ₄	B	Na	N ^b
Lompoc						
Lompoc Plain	1250	250	500	.75	270	2
Lompoc Upland	600	150	100	.75	100	2
<u>Lompoc Terrace</u>	<u>750</u>	<u>210</u>	<u>100</u>	<u>.3</u>	<u>130</u>	<u>1</u>

^b measured as Nitrogen

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment, and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of the Regional Board also is hereby directed to submit this amendment to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on April 11, 1986.

William R. Leonard

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 86-03

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coastal Basin,
(Santa Maria Ground Water Basin Objectives)

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,
- WHEREAS, deterioration of ground water quality prompted reevaluation of water quality objectives; and,
- WHEREAS, ground water data indicates there is a salt imbalance in the Santa Maria Valley; and,
- WHEREAS, in 1977, the U.S. Department of the Interior Geological Survey (USGS) finalized a report titled: Evaluation of Ground-Water Quality in the Santa Maria Valley, California; and,
- WHEREAS, the USGS report was made in cooperation with the State Water Resources Control Board and the Regional Board to determine the status of ground-water quality; and,
- WHEREAS, the USGS report and subsequent water quality data provide a basis for revision and amendment of the Basin Plan; and
- WHEREAS, drafts of proposed amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, proposed amendments apply to Chapter 4, "Water Quality Objectives" of said Basin Plan; and,
- WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of these objectives will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in a newspaper of general circulation within the Santa Maria area; and,

WHEREAS, on February 14, 1986, in the San Luis Obispo City Hall Council Chambers, 990 Palm Street, San Luis Obispo, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 4-15, Table 4-9 "Median Groundwater Objectives, mg/l"
 revise Santa Maria objective to read:

	TDS	Cl	SO ₄	B	Na	N ^b
Santa Maria Valley (Central)	800	80	400	0.2	70	5
Santa Maria Valley (Coastal)	1000	80	500	0.2	100	5

Table 4-10. Median Short-term and Long-term Groundwater Objectives, mg/l^a

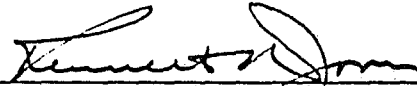

Sub-basin/Subarea	TDS		Cl ⁻		SO ₄ ⁼		B		Na ⁺		NO ₃ ⁻	
	Short Term	Long Term	Short Term	Long Term	Short Term	Long Term	Short Term	Long Term	Short Term	Long Term	Short Term	Long Term
Santa Maria												
Upper Guadalupe	1500	1000	250	165	575	500	0.5	0.5	230	230	45	6
Lower Guadalupe	1200	1000	130	85	575	500	0.45	0.2	190	90	45	9
Lower Nipomo Mesa	710	710	95	95	250	250	0.15	0.15	90	90	25	25
Orcutt	740	740	110	65	300	300	0.1	0.1	120	65	10	10
Santa Maria	1240	1000	90	90	510	510	0.2	0.2	105	105	35	35

^a Basis for objectives is in the "Water Quality Objectives for the Santa Maria Ground Water Basin Revised Staff Report, May 1985" and February, 1986 Staff Report.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 14, 1986.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 86-01

Concerning Revisions and Amendment of
the Water Quality Control Plan,
Central Coast Basin,
(Revision of Warm/Cold Water Beneficial Uses;
Radioactivity Objective for all Waters;
Phenols, Phthalate Esters and
Polychlorinated Biphenyls Objective
and Exceptions)

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, the United States Environmental Protection Agency (EPA) approved the Water Quality Control Plan, Central Coastal Basin (Basin Plan) in 1975 upon the condition that: 1) numerical radioactivity standards be adopted for all waters; and, 2) waters not designated to provide protection for aquatic life (either COLD or WARM) be designated COLD or WARM as a minimum, unless an individual detailed justification for an exception is included in the Basin Plan for each segment; and,
- WHEREAS, the current phenol, phthalate esters and polychlorinated biphenyls objectives need correction; and,
- WHEREAS, a need exists to permit exceptions to Basin Plan discharge prohibitions; and,
- WHEREAS, the California Department of Fish and Game has provided appropriate habitat temperature designations for undesignated surface waters; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, proposed revisions and amendments are to be made to Chapter 2, Beneficial Uses, Chapter 4, Water Quality Objectives, and Chapter 5, Implementation Plan, of said Basin Plan; and
- WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act; and,

WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been made available to interested persons and agencies for review and comment; and,

WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,

WHEREAS, on January 10, 1986, in the Salinas City Council Chambers Rotunda, 200 Lincoln Avenue, Salinas, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed revisions and amendments to said Plan;

NOW, THEREFORE, BE IT RESOLVED, that pages 2-3 and 2-4 (Table 2-1), page 4-6, page 4-9, page 4-13, and updated page 5-77 of the Basin Plan be revised and amended as shown on Attachment A and incorporated herein as part of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 14, 1986.

Executive Officer

ATTACHMENT A

Additions or changes are indicated by underlining.

Page 2-4 (as amended 6-11-76), amend to read:

"Table 2-1 Existing and Anticipated Uses of Inland Waters

 i>j m>n r in head waters"
 j>k n>o

Footnote "g" (seasonal) added. Subsequent footnote letters move to following letter of the alphabet. Footnote "r" (in head waters) added.

Page 4-6, Add the following objective to "Objectives for Ocean Waters", below pH objective and "Objectives for Groundwater" below "Radioactivity":

"Radioactivity

Radionuclides shall not be present in concentrations that are deleterious to human, plant, animal, or aquatic life; or result in the accumulation of radionuclides in the food web to an extent which presents a hazard to human, plant, animal or aquatic life."

Page 4-13, Revise paragraph to read:

Waters designated for use as domestic or municipal supply (MUN) shall not contain concentrations of radionuclides in excess of the limits specified in California Administrative Code, Title ~~17~~ 22, Chapter ~~3~~ 15, Subchapter 1, Group 1, Article ~~4~~ 5, Section ~~7019~~ 64443, Table 5, and listed below:

Radioactivity

Gross Beta.10000 .50	pCi/l
Strontium-90.10 .8	pCi/l
Combined Radium-226 and Radium-228.	5 5	pCi/l
<u>Gross Alpha particle activity.</u>	<u>.15</u>	<u>pCi/l</u>
(including Radium-226 but excluding Radon and Uranium)		
Tritium.20,000	pCi/l
Radium-2263	pCi/l

Until a radionuclide standard for uranium-derived alpha particles in domestic or municipal water supply is promulgated by the U.S. Environmental Protection Agency, waters designated for use as domestic or municipal supply (MUN) should not exhibit uranium-derived gross alpha particle activity in excess of 10 pCi/l, the U.S. Environmental Protection Agency's current advisory limit.

Table 5, Article 5, Section 64443, Title 22

Page 4-9, amend to read:

"Other Organics

Waters designated MUN shall not contain concentrations of phenols in excess of ~~1.0/1.0/1~~ 3.5 mg/l. Other Central Coast waters shall not contain organic substances in instantaneous concentrations greater than the following:

Methylene Blue Active Substances		0.2 mg/l
Phenols	0.1	<u>2.6 mg/l</u>
Phthalate Esters	0.002/0.01	<u>3.0 ug/l</u>
PCB's		0.3/0.1

The instantaneous concentration of polychlorinated biphenyls (PCB's) in other central coast waters shall not exceed 2.0 ug/l and the 24-hour average concentration of PCB's shall not exceed 0.014 ug/l.

Page 5-77, (updated version of Chapter 5), add the following just above "Control Actions":

Exceptions to Plan Requirements

"The Regional Board may, subsequent to a public hearing, grant exceptions to any provision of this Plan where the Board determines:

1. The exception will not compromise protection of waters for beneficial uses, and
2. The public interest will be served.

Regional Board exceptions will be effective upon State Board approval, unless exceptions involve surface water beneficial use designations or surface water quality objectives (i.e. federally accepted water quality standards). Such water quality standard related exceptions will also require Environmental Protection Agency approval to become effective."

San Luis Obispo, California 93401

RESOLUTION NO. 85-04

Concerning Revisions and Amendments of the
Water Quality Control Plan,
Central Coast Basin

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board) adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of nuisance; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, the Regional Board amended Chapter 2, Existing and Anticipated Uses of Inland Surface Waters, Table 2-1 of said Basin Plan on July 9, 1982; and,
- WHEREAS, amendment of Chapter 2 of said Basin Plan on July 9, 1982, omitted correcting municipal (MUN) uses for San Antonio Reservoir from anticipated (A) to existing (E) use and for Nacimiento Reservoir from existing (E) to anticipated (A) uses; and,
- WHEREAS, the Regional Board amended Chapter 2, Present and Anticipated Future Uses of Coastal Waters, Table 2-2 of said Basin Plan on January 20, 1984; and,
- WHEREAS, amendment of Chapter 2 of said Basin Plan on January 20, 1984, omitted shellfish harvesting as an existing (E) beneficial use for Moss Landing Harbor; and,
- WHEREAS, proposed revisions and amendment addressed herein apply to Table 2-2 of said Basin Plan, by adding shellfish harvesting as an existing beneficial use for Moss Landing Harbor; and,
- WHEREAS, to refine beneficial uses of the Moss Landing Harbor and the Elkhorn Slough two footnotes have been added to Table 2-2; the first gives location of existing shellfish harvesting in the harbor and the second recognizes the slough as an ecological reserve; and,
- WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217); and,

WHEREAS, on March 8, 1985, in Carmel, California, after public notice, the Regional Board received evidence and considered all factors concerning proposed revisions and amendments to said Plan.

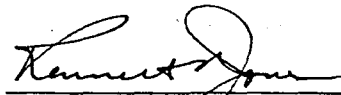

~~WHEREAS, the California Regional Water Quality Control Board, Central Coast Region~~
NOW, THEREFORE, BE IT RESOLVED, that Tables 2-1 and 2-2 of Chapter 2 of the Water Quality Control Plan, Central Coastal Basin on pages 2-3 and 2-5, respectively, be revised as shown on Attachments "A" and "B."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit the above-described portion of said Water Quality Control Plan as revised and amended to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 2 of the Water Quality Control Plan is revised by the amendment of Tables 2-1 and 2-2 contained herein.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on March 8, 1985.

*Clamming is an existing beneficial use in the North Harbor and on the south side of the entrance channel to Elkhorn Slough (north of the Pacific Gas and Electric Cooling Water Intake). Presently, no shellfishing use occurs south of the Pacific Gas and Electric Intake.

**Elkhorn Slough has been designated an ecological reserve by the California Department of Fish and Game, and recognized as a National Estuary Sanctuary by the Federal Government.

NOTES: E = Existing beneficial water use.

A = Anticipated beneficial water use.

I = Beneficial water use in a watercourse with intermittent flow characteristics.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 84-10

Concerning Revisions and Amendment of the Water
Quality Control Plan, Central Coast Basin,
(Establishment of Prohibition Areas and Management
Areas for Individual Sewage Disposal Systems
in the San Lorenzo Valley of Santa Cruz County)

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of pollution and nuisance; and,

WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain conditions or areas where the discharge of waste, or certain types of waste, is prohibited; and,

WHEREAS, such areas exist within the San Lorenzo River watershed in Santa Cruz County and are identified herein as Class I and Class II areas, which are further shown on Attachment "A", included herein; and,

WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas; and,

WHEREAS, Surface and subsurface drainage in these areas is tributary to the San Lorenzo River system, a navigable waterway of the United States with identified beneficial uses of municipal and domestic supply, agricultural supply, industrial service supply, groundwater recharge, water contact recreation, non-contact water recreation, wildlife habitat, cold freshwater habitat, and fish migration and spawning; and,

WHEREAS, Beneficial uses of ground waters in San Lorenzo Valley include municipal and domestic water supply, industrial water supply, and agricultural water supply; and,

WHEREAS, the San Lorenzo River system was added to the "California Protected Waterways Plan" in 1975 as a waterway of extraordinary scenic, fishery, wildlife, or recreation values that the Resources Agency and local agencies preserve and enhance through all feasible management and regulatory programs; and,

WHEREAS, The San Lorenzo Valley Water District (hereafter District), 13060 Central Avenue, Boulder Creek, CA, 95006, is an organized California water district with all the powers thereof; and,

WHEREAS, Article 9.5 of Chapter 1, Part 5, Division 7, of the California Water Code was amended during September, 1980, to empower the District to ensure individual sewage disposal systems along the San Lorenzo River do not pollute the river, its tributaries, and groundwater; and,

WHEREAS, the aforementioned powers include performing technical and other investigations, requiring registration of individual sewage disposal systems, assessing fees for use of individual sewage disposal systems, and adopting and enforcing regulations for individual sewage disposal systems located within the San Lorenzo Valley to prevent contamination, nuisance, and pollution of surface and groundwaters; and,

WHEREAS, the County has adopted more stringent regulations for installation of individual sewage disposal systems in recent years and has joined with the District in assessing the magnitude of the problem and in investigating remedies; and,

WHEREAS, other public entities exist or can be created within the San Lorenzo Valley that may wish, or may be created to assume, responsibility for regulation of septic systems in the area or divisions of the area described herein; and,

WHEREAS, the County of Santa Cruz (County) also regulates installation and use of individual sewage disposal systems and protects the public health and safety within San Lorenzo Valley as empowered by provisions of the California Health and Safety Code; and,

WHEREAS, an engineering consultant to the District completed the San Lorenzo Valleywide Wastewater Management Study, (201 Report) which implements a recommendation of the Water Quality Control Board, Central Coast Basin, to investigate the necessity of sewerage certain portions of the San Lorenzo Valley in order to protect beneficial uses and public health; and,

WHEREAS, use of individual sewage disposal systems are a primary source of bacteria and other pollutants in surface waters flowing through residential areas, including documented increases in coliform concentrations of 2000 percent and nitrate concentrations that stimulate algal growths that foul the stream's natural ecosystem; and,

WHEREAS, high density, and threatened high density, development within turn-of-the century subdivisions; unfavorable site characteristics such as shallow groundwaters, impermeable soils, steep slopes, and shallow bedrock; threatened urban buildout over vital aquifer recharge areas; historically poor septic system maintenance practices; and chemical and water imbalances within the watershed all contribute to this water pollution; and,

WHEREAS, surfacing effluent in individual absorption fields, direct discharges of raw and partially treated sewage to surface streams, and the aforementioned factors are evidence of public health hazards; and,

WHEREAS, a second engineering consultant to the District completed the San Lorenzo Valley 208 On-Site Wastewater Disposal Management Study, (208 Report) which concludes cumulative use of individual sewage disposal systems is causing adverse effects on quality of surface waters and shallow groundwaters; and,

WHEREAS, based on the findings of the 208 Study, the County of Santa Cruz adopted more stringent criteria applicable to installation of new individual sewage disposal systems in San Lorenzo River watershed; and,

WHEREAS, five major communities generally identified herein as Felton, Ben Lomond, Wildwood and Lower Kings Creek, Boulder Creek, and West Glen Arbor (Class I areas) have allowed use of individual sewage disposal systems to progress too far for institutional remedies to be effective, now have chronic problem areas where system failure rates are up to 50 percent, and have no available properties hydrogeologically and technically capable of remedying existing violations of water quality objectives, impairments to beneficial uses of water, pollution, nuisance, contamination, and unreasonable degradation of water quality and these areas will necessitate a community structural alternative; and,

WHEREAS, by letter dated October 5, 1981, the County Health Officer determined that conditions within Class I areas constitute a threat to the water supply and therefore to the public health; and,

WHEREAS, an engineering consultant to the District completed the San Lorenzo Valley Facilities Plan, Phase II Project Report of September, 1982, that evaluated various alternative projects for class I areas, including, among others, community systems which utilize subsurface disposal and combinations of individual and community systems that utilize subsurface disposal, and identifies the apparent best alternative plan; and,

- WHEREAS, fourteen additional communities generally defined herein as Forest Lakes, Mount Hermon, Brook Lomond, Brookdale, East Glen Arbor, Forest Springs, Forest Park, Brackenbrae, Riverside Grove, San Lorenzo Woods, Ramona Woods, San Lorenzo Park, Zayante, and Lompico (Class II areas) have allowed use of individual sewage disposal systems to progress to the point where septic system failure rates in certain areas are up to 45 percent and systems are creating conditions of pollution, nuisance, contamination, violation of water quality objectives, impairment of beneficial uses, and unreasonable degradation of water quality; and,
- WHEREAS, public health risks and water pollution may be mitigated in Class II areas, in part, by implementing District and County institutional controls, such as improved siting and design criteria and a management program to assure maintenance for conventional and alternative individual systems; and,
- WHEREAS, the Regional Board adopted Cleanup and Abatement Order No. 81-89 on October 10, 1981, ordering the District and County, jointly or severally, to complete a 201 Facilities Plan and EIR for elimination of deficient individual sewage disposal systems and to complete a 208 Report for changes to individual sewage disposal system regulations; and,
- WHEREAS, Cleanup and Abatement Order No. 81-89 specified a time schedule to abate discharges from individual sewage disposal systems in chronic problem areas and to implement institutional mitigation measures in other problem areas; and,
- WHEREAS, the Regional Board directed staff on October 10, 1981, to advise the State Water Resources Control Board, (hereafter State Board) of its concern over water quality impacts caused, directly and indirectly by water right permits authorizing increased surface water diversions; and,
- WHEREAS, the staff of the State Board completed a draft report for a fact-finding hearing concerning the "Zayante Creek/Lower San Lorenzo and the Upper San Lorenzo River Instream Beneficial Use Protection Program", which proposed the Regional Board establish controls on installation and use of septic systems in the San Lorenzo Valley as one part of an implementation plan to maintain and achieve beneficial uses of water contact recreation and esthetics, among others, and includes a proposal for additional conditions on water rights permits; and,
- WHEREAS, few locations exist in the San Lorenzo Valley that are suitable for disposal of septage from septic systems and of sludge from treatment systems and where acceptable disposal sites outside of the valley are far away and involve considerable individual cost; and,

- WHEREAS, the Board has received evidence that certain parcels within Class I areas are owned by persons who expended considerable time and effort progressing through an extremely complex building permit process to a point where they have building allocations and/or preliminary approval of local health authorities; and,
- WHEREAS, the federal Clean Water Grant Program has been amended to decrease cost-sharing ratios and discontinue cost-sharing of collection systems in October, 1984; and,
- WHEREAS, without clean water grant funds, the solution for Class I areas will not be economically feasible for local residents; and,
- WHEREAS, there is substantial evidence in the record that discharge of waste from individual sewage disposal systems within Class I and Class II areas causes violation of water quality objectives, impairs present and future beneficial uses of water, causes pollution, nuisance, or contamination, and unreasonably degrades the quality of waters of the state; and,
- WHEREAS, contributions to the aforesaid problems also may originate from systems located outside of the Class I and Class II areas, but within the San Lorenzo Valley north of Henry Cowell State Park, and improved design and siting criteria will reduce this contribution over the long-term; and,
- WHEREAS, on November 5, 1982, in Seaside, California, after due public notice and after considering all pertinent information, the Regional Board adopted Resolution 82-10, an amendment to the Basin Plan; and,
- WHEREAS, Resolution 82-10 defined Class I and Class II areas and specified a timeschedule to implement a wastewater management program; and,
- WHEREAS, Resolution 82-10 specifies that within Class I areas new discharges are prohibited and existing discharges will be prohibited by July 1, 1986 and that, to preclude prohibition of discharges within Class II areas, new and existing systems must be managed in a manner that protects water quality and public health; and,
- WHEREAS, additional information collected since adoption of Resolution 82-10 supports amending the Basin Plan to reflect current conditions and site specific adjustments to boundaries of Class I and Class II areas; and,
- WHEREAS, Regional Board staff has prepared documents and followed procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (functional equivalent), and the Federal Clean Water Act; and,

WHEREAS, drafts of proposed revisions and amendments were prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within the San Lorenzo Valley area; and,

WHEREAS, the Regional Board has consulted with and considered the recommendations of affected local agencies; and,

WHEREAS, on September 21, 1984, in the Board of Supervisors Hearing Room, 105 East Anapamu, Santa Barbara, California, after due public notice, the Regional Board reviewed staff documents pertaining to the amendment, received evidence and testimony regarding the amendment, and considered all factors concerning the proposed amendment to the Basin Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

CHAPTER 5, under CONTROL ACTIONS, Regional Water Quality Control Board, Prohibition Areas, replace the text of "4." with the following:

"4. Discharges from individual sewage disposal systems within the San Lorenzo Valley north of Henry Cowell State Park shall be managed as follows:

- a. Additional discharges within five major communities (Class I Area) are prohibited effective November 5, 1982. The Class I Area is defined by the following Santa Cruz County Assessor's Parcel Numbers*:

Ben Lomond Book 77, Pages 04 (Block 1, Lots 15, 16, 17, 20, 21, 27, 28, 29, 30, 31, 36, 37, 40, 41, 42, 47, 48, 50, 51, 52), 05 (Block 1, lots 3, 8, 9, 10, 11, 12), 06, 07, 08, 09, 10, 11, 12, 13 (All Block 1, and all Block 2 except lot 20), 14, 15, 16, 17, 18, 20, 21, 22, 23 (Block 1 except lots 40 and 43; and all Block 2), 24 (Block 1 only), 25, 26, 27, and 28.

Book 78, Page 16 (Block 2, lot 03) and 27 (Block 3, lot 15).

Book 79, Page 14, Block 2, lot 03

*Parcel numbers are indicated by complete pages, unless otherwise noted.

Boulder Creek

Book 81, Pages 06, 07, 08, 09, 11, 12, 13, 14, 15 (all Block 1 and Block 2, Lots 1, 2, 3, 4, 8, 9, 11, 12), 16, 17, 20, 21, 22, 25, 26, 27 (all lots except Block 1, Lots 21, 36, and 37), 28, and 29.

Book 82, Pages 20, 21, 22, 23, and 27 (Block 1, Lot 12 only).

Book 89, Pages 16 (Block 3, Lot 1 and Block 5, Lots 3, 4, 5), 17 (Block 1, Lots 4, and 5), and 18.

Book 90, Pages 01 and 11 (Block 1, Lots 17, 19, 21, 22, 23, 24, 25)

Lower Kings/Wildwood

Book 83, Pages 04, 07, 08, 11, 12, and 13 (Block 1, Lots 1, 2, 4, 5, 6, 18, 19; and Block 2)

Book 84, Pages 01,02,03,04 (all Block 1 and Block 2), lots 1,2,3,4,5,6,7,8, 9,12,13,23), 05 (Block 1, lots 1,2,3,4,5,6,7,8,9,10,11,12,13, 14,15,16,17,18,19,35), 06 (Block 1, lot 18), and 11 (all lots except Block 2, lot 1)

Book 85, Pages 13, 14 (all except Block 2, lot 17), 16, 17, 18 (Block 1, lots 1,2,3,4,7,8,9,10,11,12,13, 14,15,16,17,18,21,23,33,35, 36,37,38,39,41,42,43,44,45,47), and 19.

Glen Arbor

Book 72, Pages 07, 11, 14, 15, 17, and 18 (Block 1, Lots 25 and 26; Block 2, Lots 1, 2, and 3)

Felton

Book 65, Pages 01, 02, 03, 04, 05, 06, 07, 08, 09, 11, 12, 13, 14, 15, 16, 17, 18, 21, and 22 (Blocks 1 and 2; Block 3, lots 1,2,6,7,8,9,10, 12,13).

*Parcel numbers are indicated by complete pages, unless otherwise noted.

Book 71, Pages 03 (Block 01, lots 3, 13, 15, 16, 17, 18, 23, 24, 25, 26, 30, 38, 49, 50, 62, 63, 64, 65), 04, 05, 06, 07, and 15 (school district property only), 16 (Blocks 1 and 3 only), 17 (Blocks 1 and 2; Block 3, lots 1, 2, 3, 4, 5, 6, 7, 9, 11, 12, 14), 18, 19, 25, 26, and 29.

- b. Existing discharges within the Class I Area of subparagraph 4.a. are prohibited effective July 1, 1986.
- c. To preclude prohibition of discharges outside the Class I Area, the County of Santa Cruz shall act as lead agency in coordinating and establishing a program that will assure the Regional Board that:
- ° additional systems in these areas will be designed, sized, located, spaced, and constructed in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.
 - ° existing systems within specific communities are systematically evaluated and redesigned, resized, relocated, and reconstructed as appropriate to protect and enhance water quality, protect and restore beneficial uses of water, and abate and prevent nuisance, pollution, and contamination, where the specific communities (Class II Area) are defined by the following Santa Cruz County Assessor's Parcel Numbers*:

Forest Lakes/Felton Book 64, Pages 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16 (Block 1, lots 1, 2, 3), 17, 22, 29, 30 (All Block 1), 31, 32, 33, and 34.

Book 65, Pages 19, 20, 22 (Block 3, lots 15 and 16), 24, and 25.

Book 71, Pages 03 (Block 1, lot 51), 16 (Block 2, lots 1, 3, 4, 5, 7, 8, 9, 10, 11, 12, 13), and 17 (Block 3, lots 13, 18, 19).

Mount Hermon Book 66, Pages 1, 2, and 3

East Glen Arbor Book 72, Pages 12, 18 (Block 1, lots 1, 2, 8, 10, 11, 12, 13, 14, 18, 19, 20, 21, 23, 24, 27), 19, 24, 25, 26 (Block 2, lot 58), 27, 28, 29, 30, 35, and 37.

*Parcel numbers are indicated by complete pages, unless otherwise noted.

Brook Lomond Book 78, Pages 6,7, and 8

Brookdale Book 79, Pages 9 and 10 (Block 1, lots 6,8,9, 10,12,13,14,15,18; Block 2, Lots 1, 2, 3, 4).

Forest Springs/
Forest Park/ Book 81, Pages 2 (Block 1, Lots 1, 2, 3, 4, 5, 6, 7, 8, 12, 14, 15), 3 (Block 1, lots 5,6,11,12), 4 and 5 (Block 1, lots 1, 2).

Book 82, Pages 1, 2 (Block 1, lots 2, 3, 4, 5, 6, 10, 11, 12, 13, 15, 16, 17, 18, 19, 20, 21, 24, 26, 27, 28), 3, 4, 5, 7, 12, and 31.

Book 83, Pages 16 (Block 1, lots 5, 7, 8, 13, 14, 15, 16, 18), 17 (Block 1, lot 4), 18, 19, 20, 21, 22, and 23.

Riverside Grove Book 85, Pages 1 (Block 2, lot 03), 2, 3, 4, 5, 6, and 8.

San Lorenzo Woods/
Ramona Woods Book 87, Pages 16, 18, 19, 20, 21, and 22 (Block 1, lot 5).

San Lorenzo Park Book 87, Pages 7, 8, 9, 10, 11, and 12.

Zayante Book 74, Pages 2,3,4,5,7,9,11 (Block 2, lots 8,10,15,16,17,18), 12,13,14, 15,16 and 20 (Block 1, lots 2, 7, 9).

Lompico Book 74, Pages 25 and 26

Book 75, Pages 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, and 30.

Book 92, Pages 1 (Block 1, lot 35), 4 (Block 2, lots 2,3; Block 3, lot 6), 9 (Block 1, lot 7; Block 2, lot 4; Block 4, lots 1,3), 10 (Block 1, lots 2,3), 13 (Block 3, lot 3), 14 (Block 5, lots 4,5; Block 7, lot 2), 28 (Block 4, lot 4), and 30 (Block 1, lots 2,6,7,12,16,17,18,20, 23).

*Parcel numbers are indicated by complete pages unless otherwise noted.

Kings Creek/ Wildwood	Book 84, Pages 4 (Block 2, lots 14,15,16,17, 18,19,20,21,22), 5 (Block 1, lots 20 through 34 and 36 through 48; Block 2), 6, and 11 (Block 2, lot 1).
	Book 85, Pages 14 (Block 2, lot 17) and 18 (Block 1, lots 30,31,32).
Two Bar Creek	Book 84, Pages 7,8, and 9.
Boulder Creek	Book 90, Page 2.
Ben Lomond	Book 77, Pages 5 (Block 1, lots 13,14,15), 13 (Block 2, lot 20), and 23 (Block 1, lots 40, 43)

° systems within the Class II Area are regularly inspected and maintained in a manner that will protect water quality, protect beneficial uses of water, and prevent nuisance, pollution, and contamination.

d. In fulfilling the responsibility identified in subparagraph 4.c., the County of Santa Cruz shall submit a written report before July 1, 1985, identifying actions which have been taken, and which must be taken, to achieve objectives, including identification of sources of funding, a time schedule for actions to be taken, and a description of surveillance to be undertaken to determine compliance with objectives.

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that parcels within the Class I Area and with a Finding of Compliance and/or building permit allocation issued before November 6, 1982, are exempted from the prohibition of additional discharges (subparagraph "4.a." of the amendment), but not the prohibition of discharges that becomes effective July 1, 1986 (subparagraph "4.b." of the amendment).

BE IT FURTHER RESOLVED, that addition to, or replacement and repair of, existing individual sewage disposal systems in the Class I Area is not prohibited before July 1, 1986, if the volume and type of discharge will not differ from that of the existing discharge.

*Parcel numbers are indicated by complete pages unless otherwise noted.

BE IT FURTHER RESOLVED, that compliance with the prohibition of existing individual sewage disposal systems described in Prohibition Area No. 4, above, shall be achieved according to the following time schedule:

<u>TASK</u>	<u>COMPLIANCE DATE</u>
1. Complete Construction	April 1, 1986
2. Abate discharges from individual sewage disposal systems.	July 1, 1986

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with compliance schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit this revision to the Basin Plan to the State Board for approval pursuant to Section 13245 of the California Water Code.

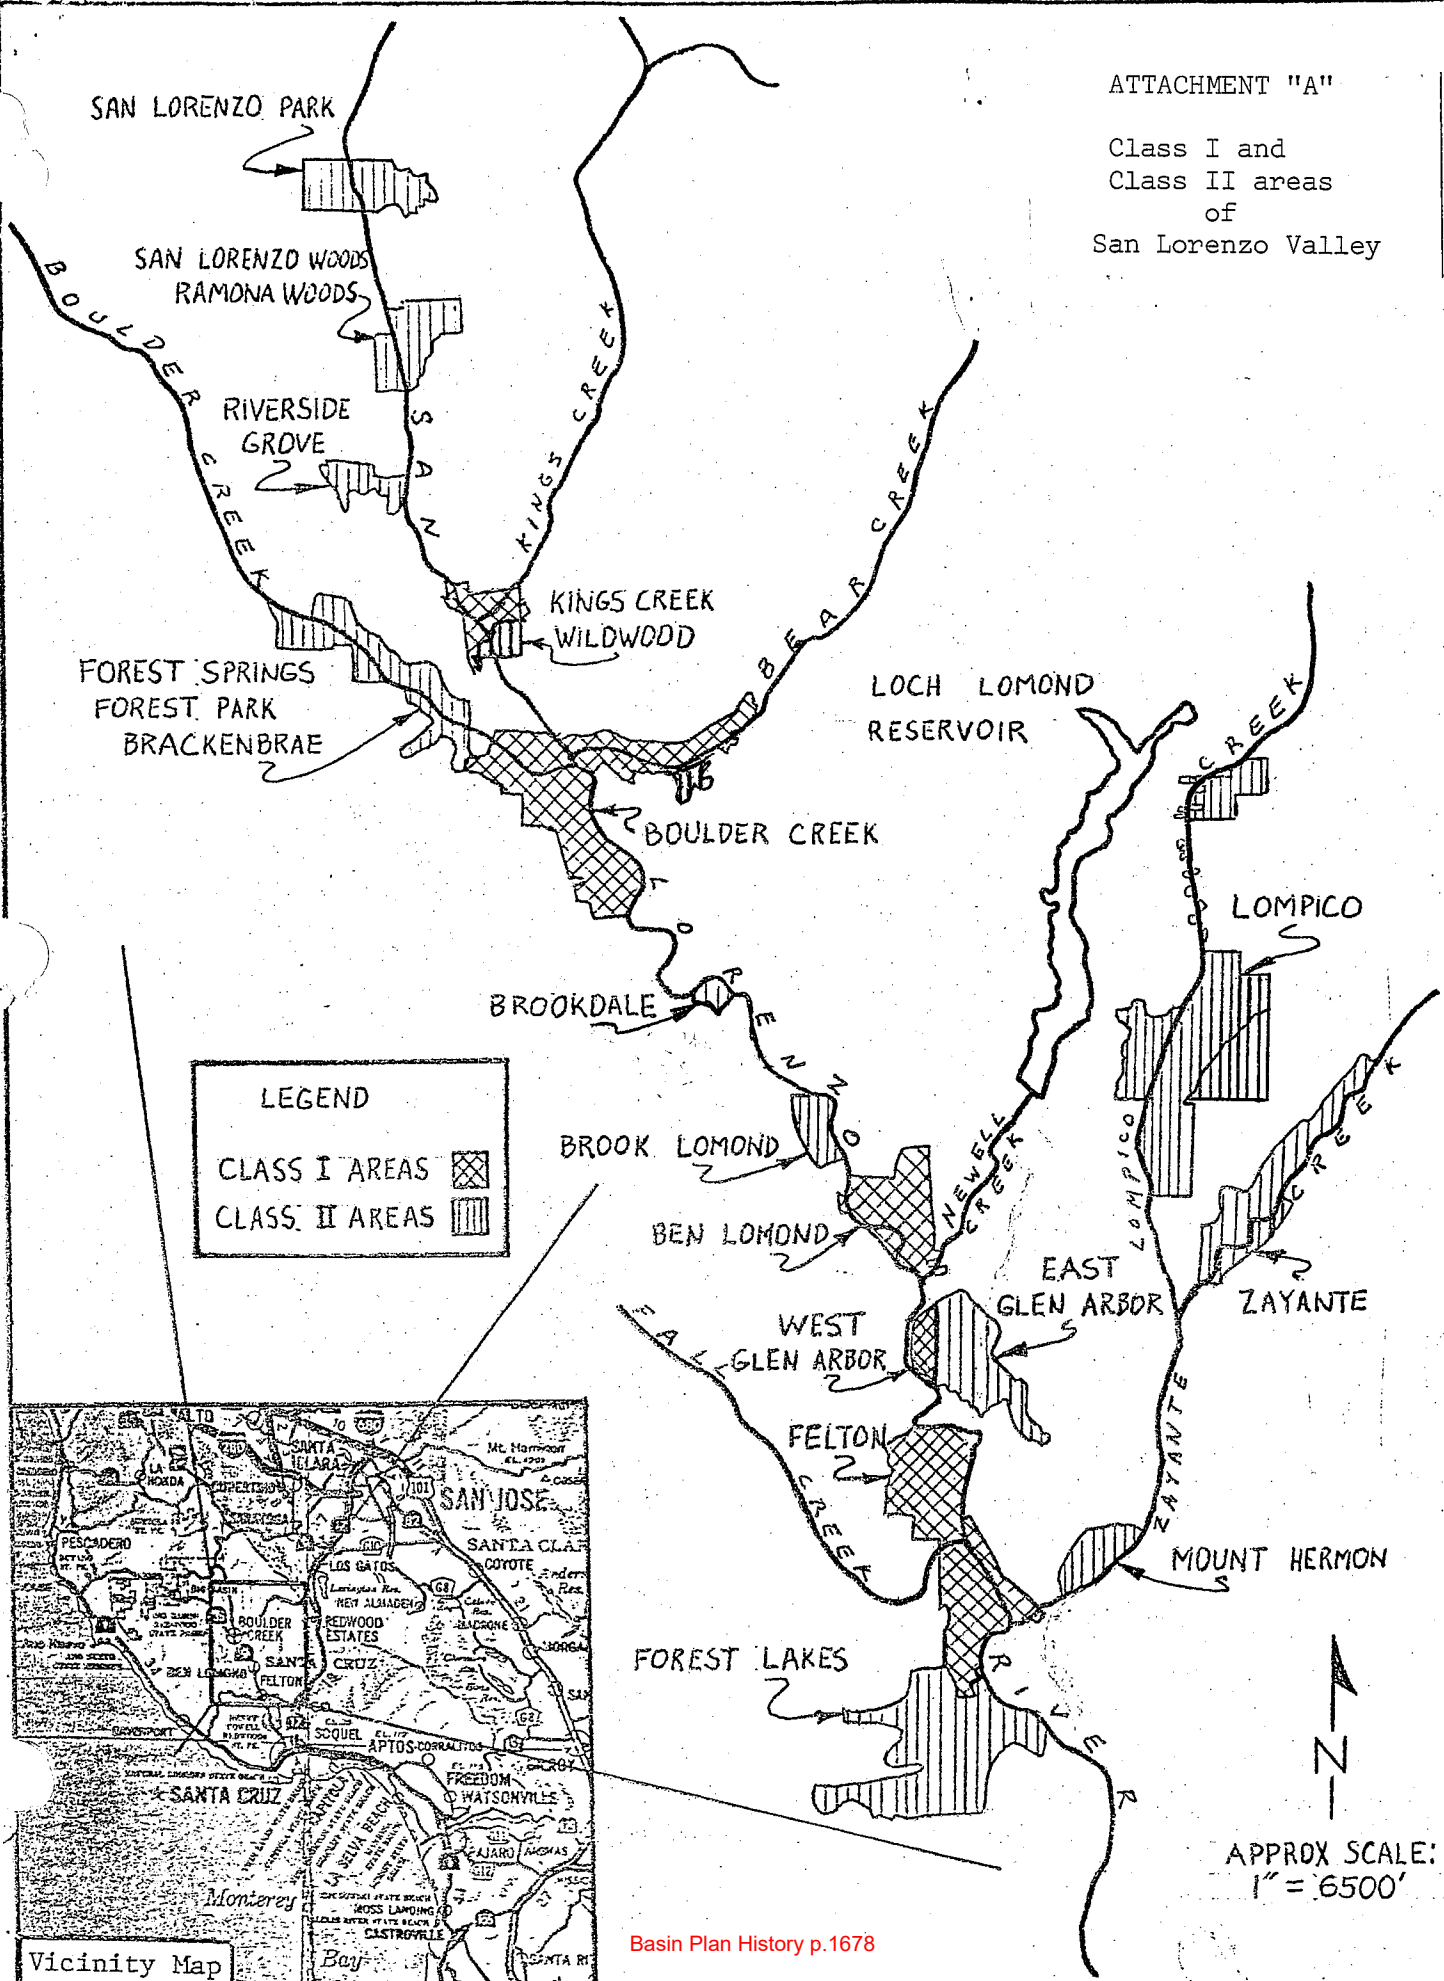

BE IT FURTHER RESOLVED, upon approval of the State Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the revised prohibition contained herein.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on September 21, 1984.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 84-07

Acceptance of Santa Barbara County Board of Supervisor's Resolution No. 84-283 "A Resolution Imposing a Moratorium on Use of Individual Sewage Disposal Systems in a Portion of Mission Canyon.

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin, (hereafter Basin Plan), on March 14, 1975; and, on February 25, 1983, amended the individual sewage disposal section of chapter five to prohibit discharges in portions of Mission Canyon, Santa Barbara County (hereafter County); and,

WHEREAS, Mission Canyon area has been designated Santa Barbara County Service Area No. 12 (hereafter CSA 12), and is recognized by the State of California as such; and,

WHEREAS, in a meeting with county staff on November 2, 1982, Regional Board staff indicated if the county could provide documentation to support expanding the Regional Board's prohibition boundary, staff would recommend amending the Basin Plan to include this additional area; and,

WHEREAS, the county conducted additional investigations and prepared a report entitled Prohibition Area Expansion Request, dated April, 1984, providing the above requested documentation; and,

WHEREAS, the State Water Resources Control Board (hereafter State Board) adopted Resolution No. 84-03, which accepts locally imposed moratoriums in lieu of Regional Board prohibitions; and,

WHEREAS, the State Board's Resolution No. 84-03 has four criteria which need to be satisfied; and,

WHEREAS, the county's Resolution No. 84-283 satisfies these four criteria; and,

WHEREAS, the county has declared the "Septic Tank Maintenance Area" on Exhibit 'A' of Resolution 84-283 a "Special Problems Area," to improve disposal systems operation and protect public health and safety in CSA 12; and,

WHEREAS, the county has certified an Environmental Impact Report, on July 28, 1983, with a Supplemental Report certified on January 5, 1984, which satisfies the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the County finds sewerage of this moratorium area will not have a significant adverse effect on the environment; and,

WHEREAS, the Regional Board accepted public testimony and considered the county's Resolution No. 84-283 at the Regional Board's regularly scheduled meeting on July 13, 1984, in San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo California;

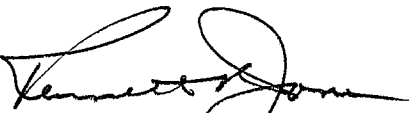

NOW, THEREFORE, BE IT RESOLVED, that the Regional Board accepts the county's moratorium adopted under its Resolution No. 84-283, in lieu of a Regional Board prohibition.

BE IT FURTHER RESOLVED, that the on-site maintenance district ('Septic Tank Maintenance Area' shown on Exhibit 'A' of Resolution No. 84-283) for the 'Special Problems Area' shall be established according to the following schedule:

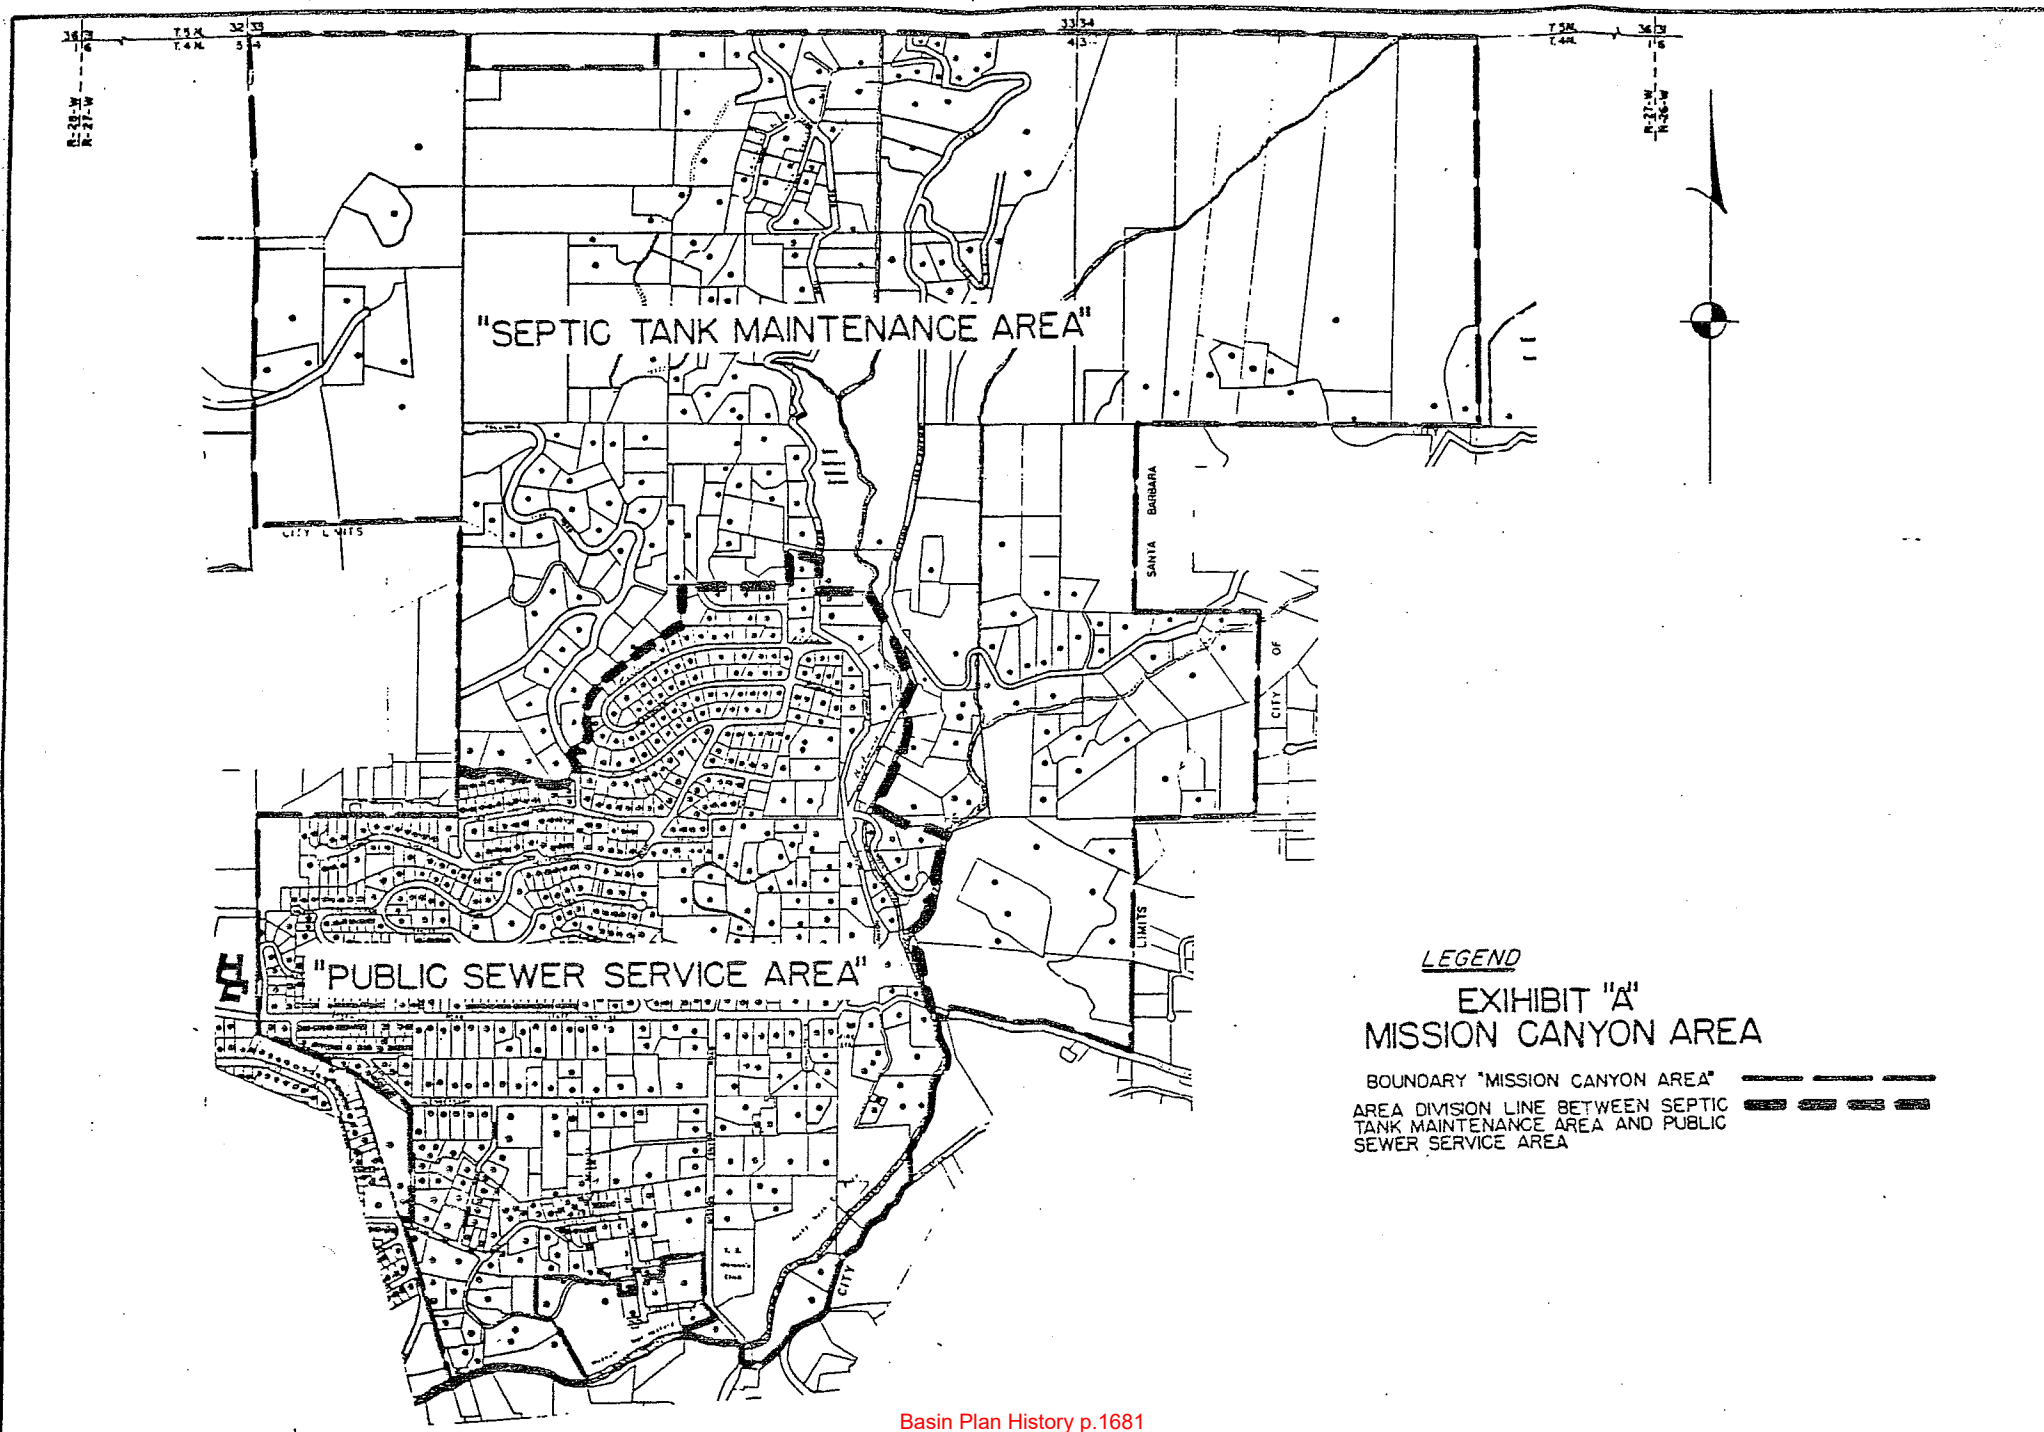

<u>Task</u>	<u>Compliance Date</u>
Draft Operations Manual for the on-site Maintenance District	August 1, 1984
Final Operations Manual	March 1, 1985
Implement on-site Maintenance District	July 1, 1986

BE IT FURTHER RESOLVED, the Regional Board assumes authority for approval of any exemptions to the moratorium, consistent with exemption criteria contained in the Basin Plan.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on July 13, 1984.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 84-05

Concerning Revisions and Amendment of
Water Quality Control Plan,
Central Coastal Basin,
(Lompoc Basin Objectives and Management)

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (hereafter Basin Plan), on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure the reasonable protection of beneficial uses of water and the prevention of nuisance; and,

WHEREAS, the City of Lompoc requested the State Board to review Regional Board "Waste Discharge Requirements for the City of Lompoc;" and,

WHEREAS, the State Water Resources Control Board (State Board) recommended review of the Basin Plan for possible revision and amendment of the sodium objective for the Lompoc ground water basin and ground water objectives at the point of Lompoc's discharge. Furthermore, the State Board requested a determination of continuity between the upper and lower aquifers in the area of Lompoc's discharge; and,

WHEREAS, a 1976 U.S. Department of the Interior Geological Survey (USGS) finalized a report titled: Ground Water Resources in the Lompoc Area, Santa Barbara County, California; and,

WHEREAS, the USGS report was made in cooperation with the Regional Board to more accurately quantify existing and historic changes in ground water quality and to evaluate management alternatives to maintain and improve Lompoc Basin quality; and,

WHEREAS, the USGS provides a basis for revision and amendment of the Basin Plan; and,

WHEREAS, drafts of proposed amendments have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, proposed amendments apply to Chapter 4, "Water Quality Objectives" of said Basin Plan; and,

WHEREAS, Regional Board staff has followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217) and the Regional Board finds adoption of this individual sewage disposal system policy will not have a significant adverse effect on the environment; and,

WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,

WHEREAS, on October 12, 1984, in the San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, after due public notice, the Regional Board received evidence and considered all factors concerning the proposed revisions and amendments to said Plan.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be revised and amended as follows:

Page 4-15, Table 4-9 "Median Groundwater Objectives, mg/l"
 revise Lompoc objective to read:

	TDS	Cl	SO ₄	B	Na	N ^b
Lompoc						
Lompoc Plain	1250	250	500	0.75	270	10
Lompoc Upland	600	150	100	0.75	100	10

^bMeasured as Nitrate

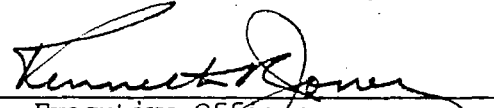

1st paragraph "Lompoc Valley Region" subsection of "Municipal Wastewater Management" section, revise and amend to read:

"Wastewater in the Lompoc Valley Region is treated at (1) the Lompoc Regional Wastewater Treatment Plant (5.0 mgd), (2) La Purisima Canyon and Rucker Road Wastewater Treatment Facilities owned by Mission Hills Community Services District (0.2 mgd), and (3) small wastewater treatment facilities at Vandenberg Air Force Base. Wastewater is also reclaimed by treatment facilities located at the U.S. Penitentiary, Lompoc (0.3 mgd). Parts of Lompoc Valley ground water basin are in a state of adverse salt balance because of municipal and agricultural discharges. It is imperative that impacts of waste discharges to land be reduced by implementing strict salt limitations, source control programs, and other salt management practices.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on October 12, 1984.

SAN LUIS OBISPO, CALIFORNIA 93401

RESOLUTION NO. 84-03

Revision and Amendment of Water Quality Control
Plan by the Addition of a Prohibition of Waste
Discharge from Individual and Community Sewage
Disposal Systems Within the Fruitland Area,
Monterey County

- WHEREAS, The California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coast Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7 of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq); and,
- WHEREAS, Fruitland is a subdivision of sixty-eight homes located in the Pajaro Valley (near the City of Watsonville), in Monterey County; and,
- WHEREAS, on-site soil absorption systems are the sole means of wastewater disposal in the Fruitland area; and,
- WHEREAS, the predominate lot size in Fruitland (67% of the lots less than one-half acre in size) is too small to accommodate individual sewage disposal systems; and,
- WHEREAS, sixty-five percent of the property owners in Fruitland have attested to on-site system problems; and,
- WHEREAS, there have been instances of surfacing effluent in the Fruitland area; and,
- WHEREAS, the Soil Conservation Service has designated the soils of Fruitland as poor (due to slow percolation) for septic tank filter fields; and,

WHEREAS, the residents of Fruitland petitioned the Monterey County Board of Supervisors to investigate their septic tank problems; and,

WHEREAS, the County Health Department at the request of the Board of Supervisors conducted a septic tank survey of the Fruitland Subdivision; and,

WHEREAS, the County Health Department has submitted documentation of conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code; and,

WHEREAS, the Regional Board is obligated to update the Basin Plan's implementation program for achieving water quality objectives; and,

WHEREAS, Fruitland area ground waters are suitable for agricultural, municipal, domestic and industrial water supply; and,

WHEREAS, a Regional Board staff report indicates public health is threatened by the high instances of surfacing effluent; and,

WHEREAS, a County of Monterey Health Department letter cites a public health threat unless sewage is disposed of properly; and,

WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Fruitland individual and community sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment, and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,

WHEREAS, on February 24, 1984, in the Board of Supervisor's Hearing Room, County Administration Building, 105 East Anapamu, Santa Barbara, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual and community disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State; and,

WHEREAS, the Regional Board finds the aforesated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 5-66, after Item 9, following the discussion of discharge limitation (added by Resolution 83-16), insert the following prohibition:

"10. Discharge of waste from additional individual and community sewage disposal systems is prohibited and the discharge of waste from existing individual and community sewage disposal systems is prohibited after July 1, 1987, in Fruitland Sub-division, Monterey County, and more particularly described as:

"Within the boundaries of the Fruitland Subdivision, excluding Assessors Parcel Numbers 117-131-22 and 117-131-23."

BE IT FURTHER RESOLVED, that the above area is consistent with the recommendations of the staff report as shown on "Attachment A."

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or community sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Complete Facility Planning	July 1, 1984
Complete Design	July 1, 1985
Begin Construction	October 1, 1985
Complete Construction	July 1, 1986

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with schedules shall be submitted to the Regional Board within fourteen days following each scheduled date, unless otherwise specified. Noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment, and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith the Clean Water Grant Project Priority List to Recognize the necessary structural solution for Fruitland as a Priority "A" project.

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

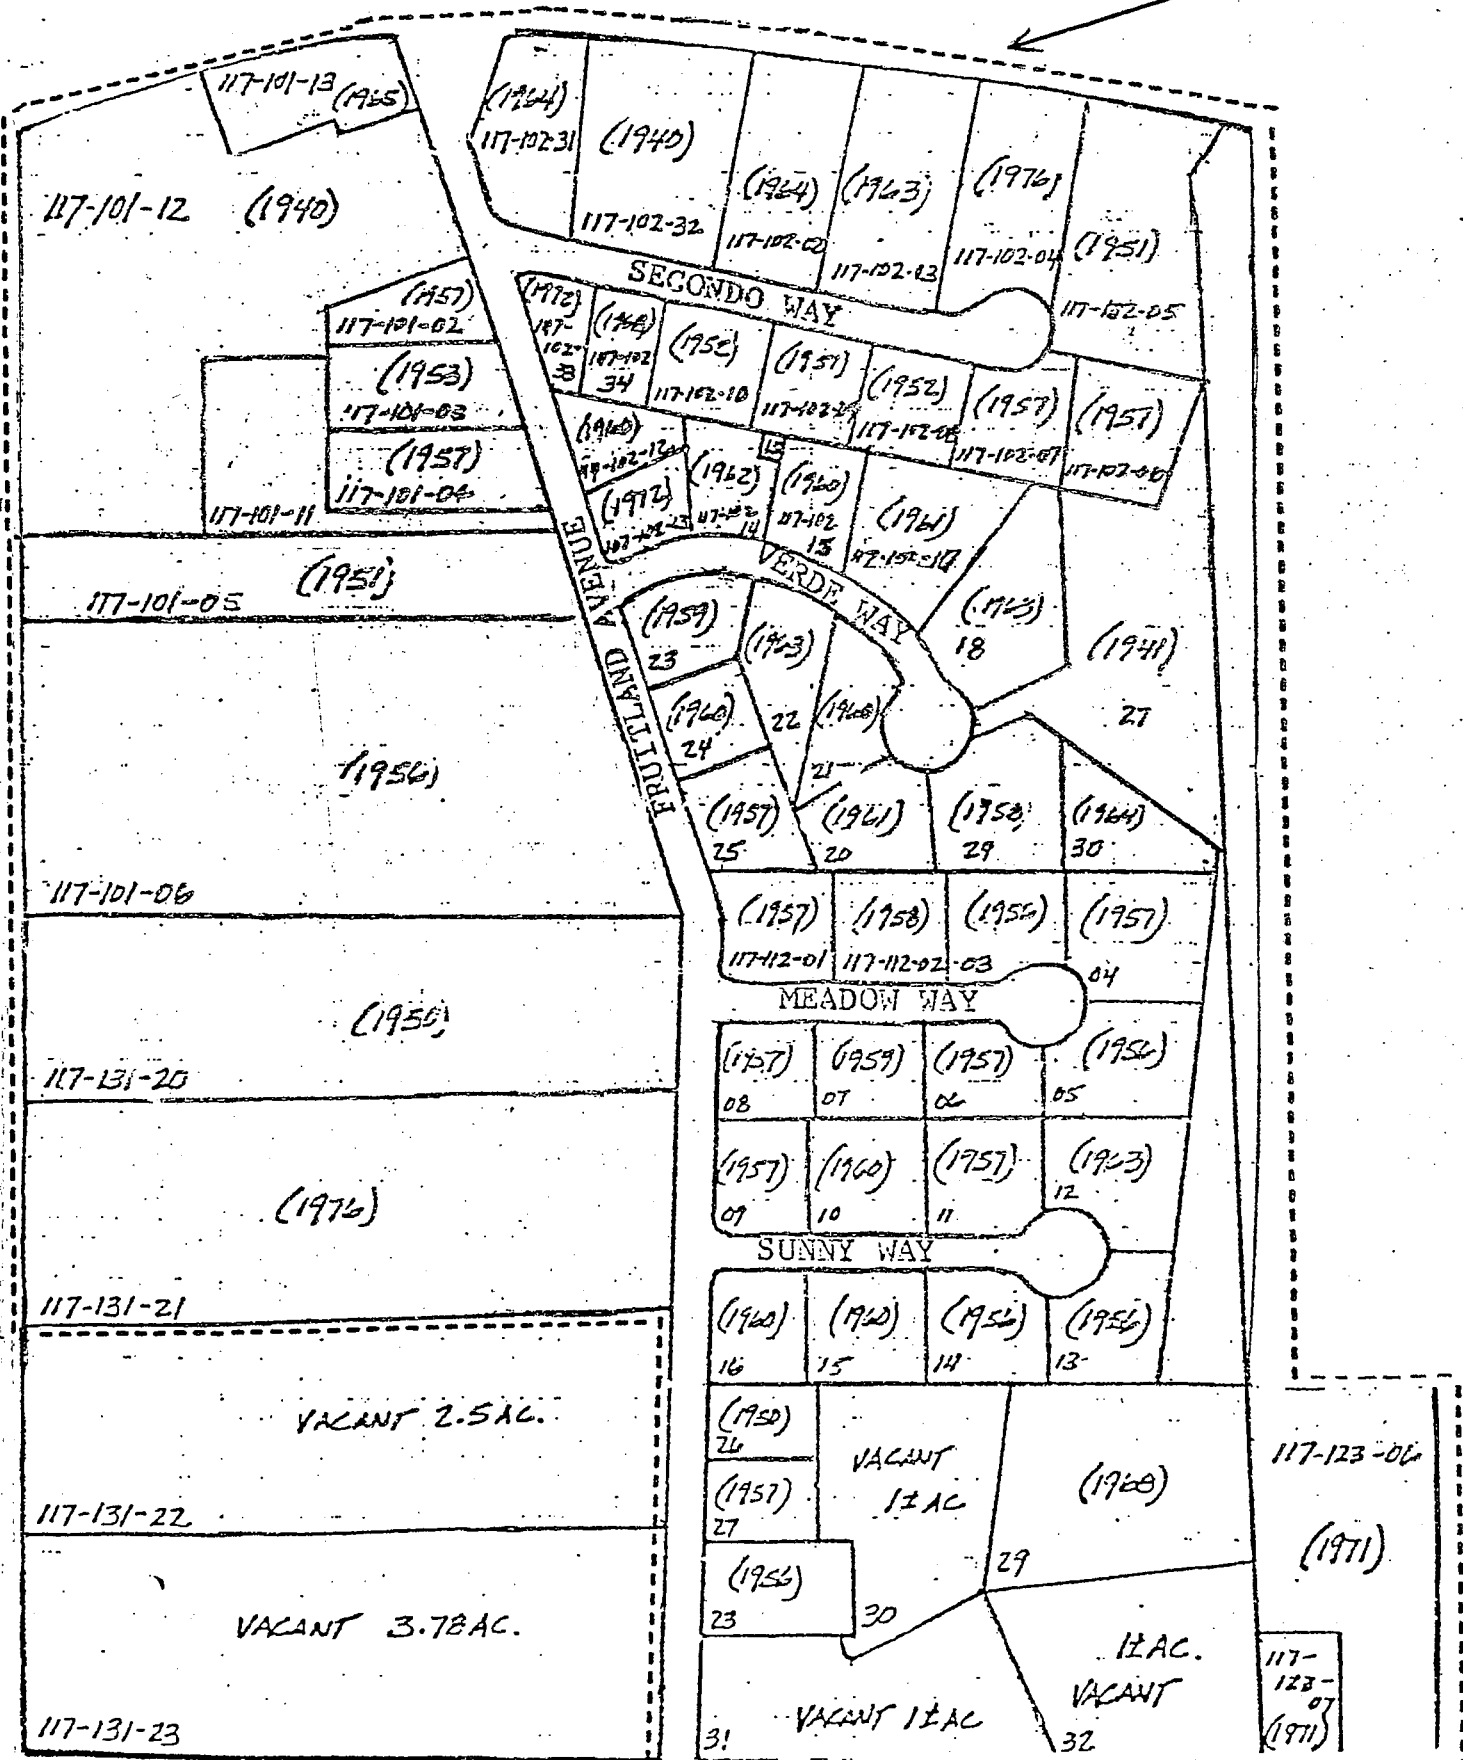

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on February 24, 1984.

Executive Officer

RESOLUTION NO. 84-02

Concerning Revisions and Amendment of
the Water Quality Control Plan,
Central Coastal Basin,
(Nutrient Objective for Pajaro River
and Llagas Creek)

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,
- WHEREAS, the Regional Board deleted general numerical objectives for nutrients (Table 4-3) in 1977; and,
- WHEREAS, the Environmental Protection Agency (EPA) is concerned that this deletion is an apparent downgrading of the Basin Plan; and,
- WHEREAS, the Regional Board was concerned that general objectives are not attainable because of: (1) variable natural background conditions; (2) irretrievable man-induced conditions; or, (3) effluent limits to attain the beneficial use that would result in substantial and widespread adverse economic and social impacts; and,
- WHEREAS, EPA responded that specific nutrient objectives should be established for several surface waters within the Central Coast Region; and,
- WHEREAS, nutrients are contributing to an algae problem along the Pajaro River and Llagas Creek; and,
- WHEREAS, the Regional Board has determined that nutrient objectives are needed for Pajaro River and Llagas Creek; and,
- WHEREAS, proposed revisions and amendments are to be made to Chapter 4, Water Quality Objectives; and,
- WHEREAS, Regional Board staff prepared documents and followed procedures to comply with environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act; and,
- WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been made available to interested persons and agencies for review and comment; and,

WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,

WHEREAS, on January 20, 1984, in San Luis Obispo City Council Chambers, 990 Palm Street, San Luis Obispo, California, the Regional Board reviewed staff documents pertaining to the amendment, including proposed changes, environmental documents, and written comments and written staff responses, as well as received additional evidence and testimony concerning the proposed amendments to the Basin Plan.

NOW, THEREFORE, BE IT RESOLVED, that pages 4-7, 4-10, 4-11, 4-12, and, 4-13 of the Basin Plan be revised and amended as shown on Attachment A of this resolution.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board also is hereby directed to submit these amendments to the Basin Plan to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 20, 1984.

I. Description of Proposed Activity

In 1975, the Regional Water Quality Control Board (Regional Board) adopted the Water Quality Control Plan for the Central Coastal Basin (Basin Plan). In 1977, the Regional Board adopted a resolution which allowed the numerical objectives in Table 4-3 to be waived in waste discharge requirements and National Pollutant Discharge Elimination System Permits on a case-by-case basis where environmental and engineering factors show that less restrictive limits will not unreasonably impair beneficial uses.

The State Board did not approve this amendment. This is because Regional Boards are required to implement the water quality objectives of adopted Basin Plans. There is no general provision or authority within the Water Code allowing adopted and approved water quality objectives to be waived during the preparation and adoption of waste discharge requirements for a particular discharger.

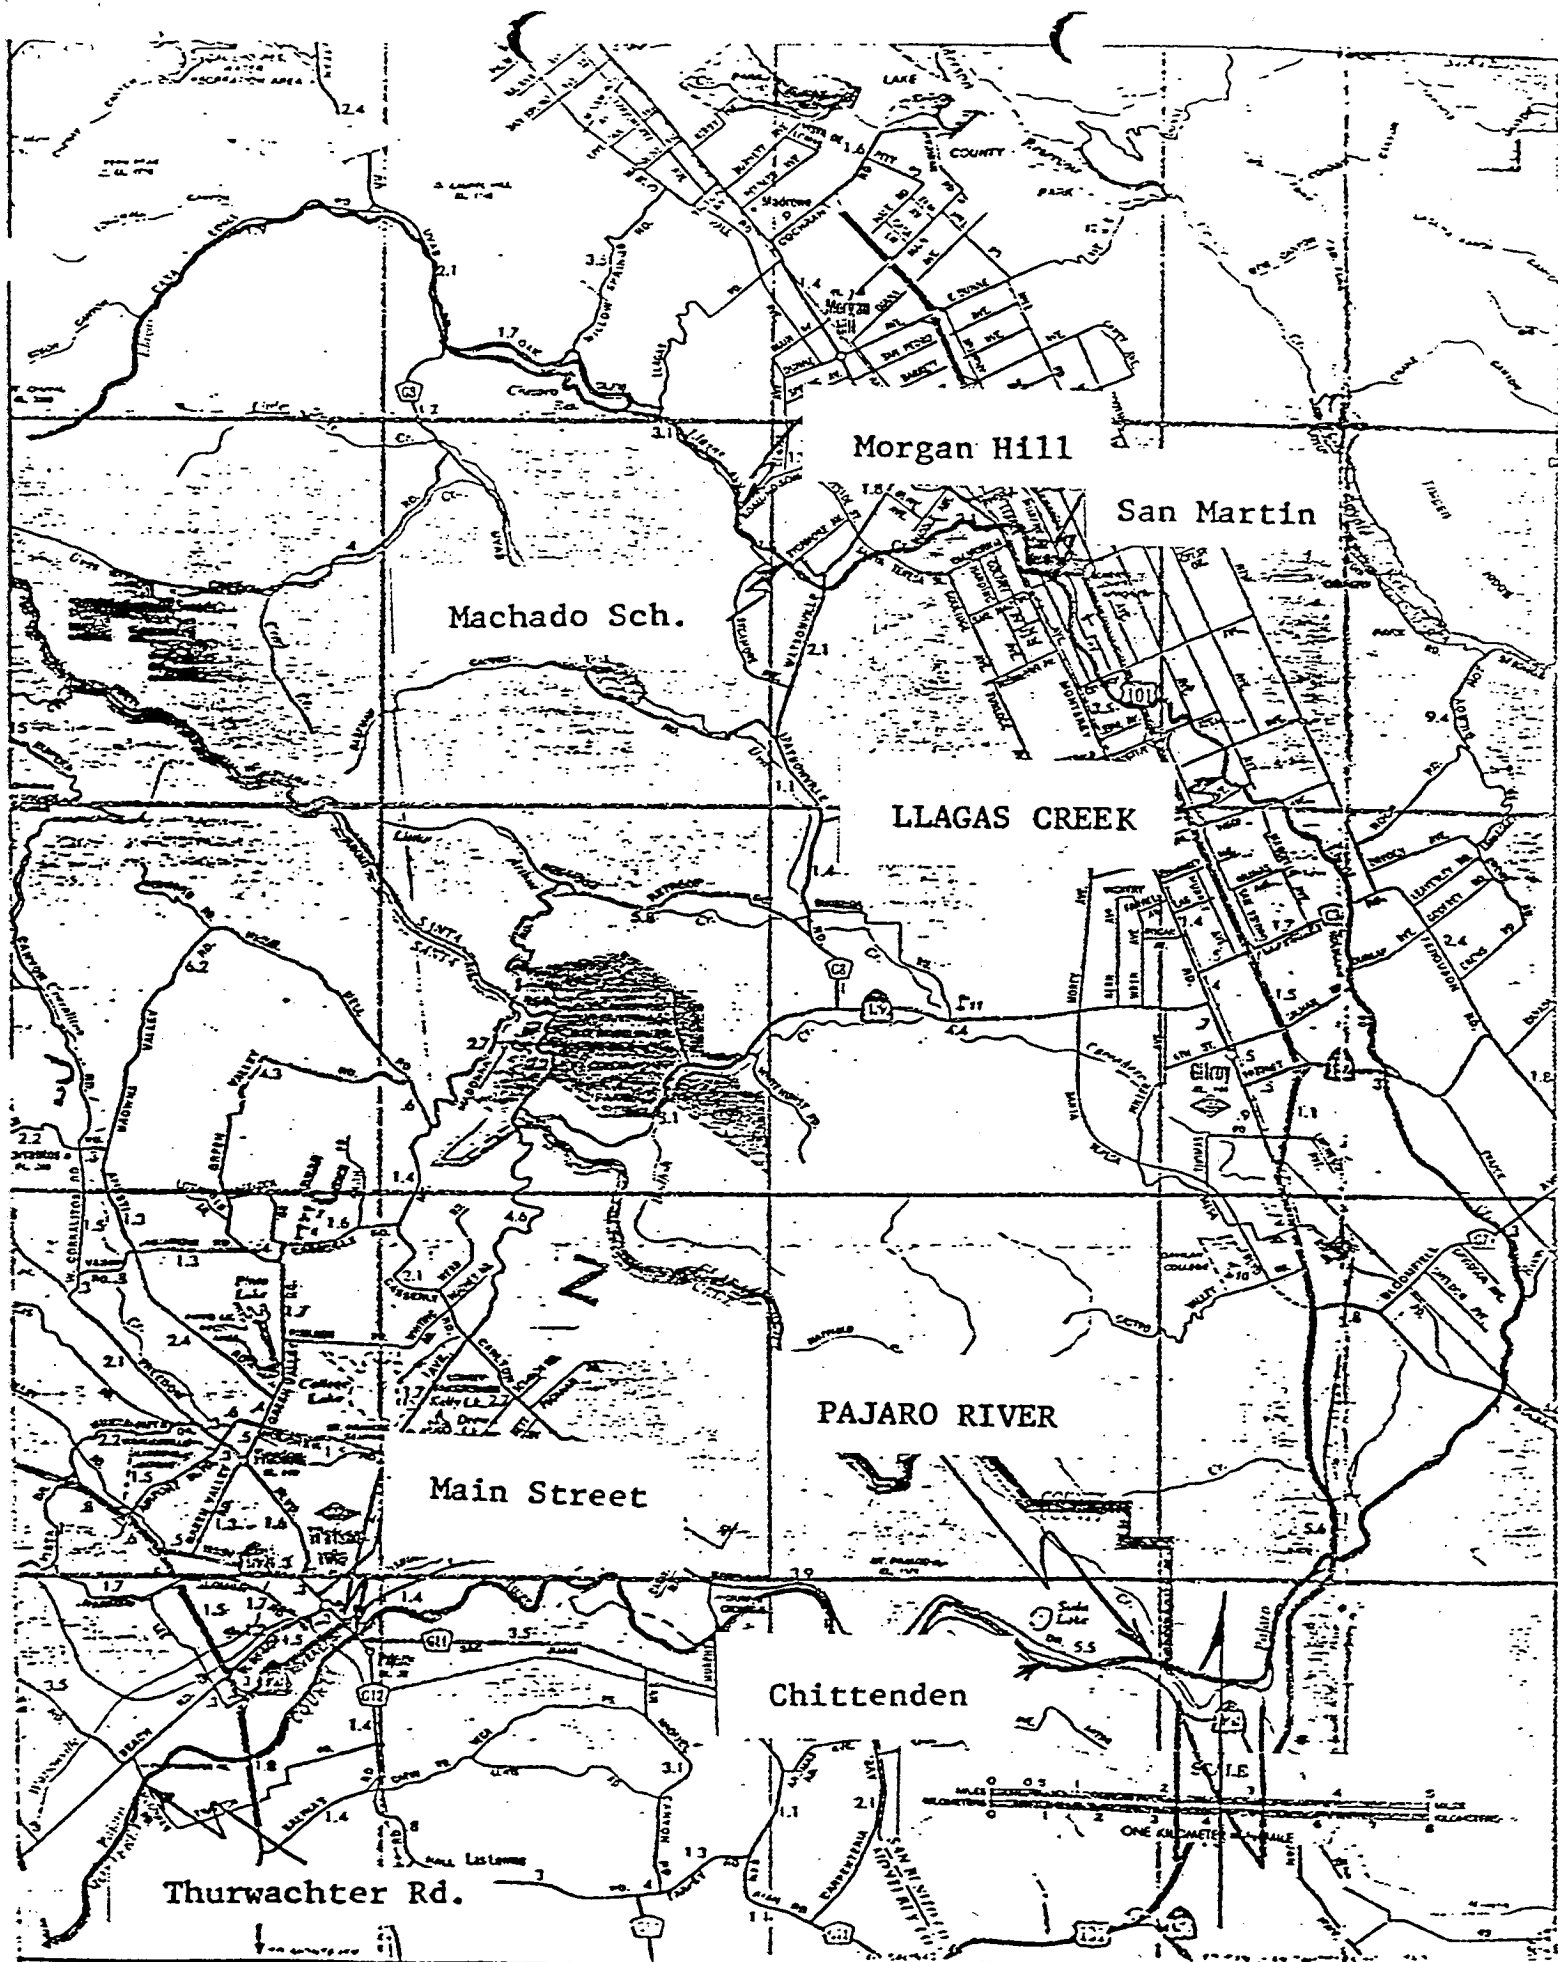

The State Board staff proposed two alternatives for the Regional Board's consideration: (1) adopt revised water quality objectives for specific receiving waters, and (2) prohibit discharges to specific receiving waters. The most practical of the two is the first option. The revisions should consider at least the factors listed in Water Code Section 13241; in particular, economically achievable treatment levels for all point sources. Revised water quality objectives can be established for selected waterbodies, while Table 4-3 would remain applicable to all others. The Regional Board responded by deleting objectives for nutrients specified in Table 4-3. The State Board approved this deletion. However, EPA did not approve this amendment. EPA requested justification of this apparent downgrading of the Approved Water Quality Standards.

The Regional Board reasoned that numerical objectives were not attainable because of: (1) variable natural background conditions; (2) irretrievable man-induced conditions; or, (3) effluent limits to attain a beneficial use that would result in substantial and widespread adverse economic and social impacts.

EPA approved the deletion of Table 4-3 containing the general numerical objectives provided specific numeric objectives would be established for several surface waters. Because the Pajaro River^{2, 12, 15, 21} and Llagas Creek^{15, 21} both have algae problems, nutrient objectives are proposed herein.

The location of Pajaro River and Llagas Creek is shown in Figure 1. The Pajaro River forms part of the borders of Santa Cruz, Monterey, San Benito and Santa Clara Counties. The only major city the Pajaro River flows through is Watsonville. Llagas Creek and the San Benito River flow into the Pajaro River. Land in this area is very fertile and agriculture is abundant. There are no point source discharges to Pajaro River.

During the summer, the Pajaro River is usually dry. Flow that does occur in the Pajaro River during the summer is composed of agricultural return water. The mouth of the Pajaro River is influenced by tides. Seawater may extend as far as two miles inland from the mouth of the river. The mean flow rate of the Pajaro River is approximately 100 cubic feet per second.

Llagas Creek drains the southerly portion of Santa Clara County. Gilroy, San Martin, and Morgan Hill are all in close proximity to Llagas Creek. Carnadero Creek and Uvas Creek are tributaries to Llagas Creek. Surface water from Chesbro Reservoir flows into Llagas Creek. Cropland, orchards, poultry farming, dairies, and pastures are typical types of agricultural usages in the watershed. The only point source discharging to Llagas Creek is the Gilroy Groundwater Dewatering Project. Domestic and industrial waste is discharged to either Gilroy's evaporation/percolation ponds or on-site sewage disposal systems.

Llagas Creek is usually dry during the summer. Summer flow that does occur is agricultural return water. The mean flow rate of the Llagas Creek is approximately 10 cubic feet per second. Beneficial uses of these surface waters includes municipal and domestic water supply, agricultural and industrial service supply and water and non-water contact recreation. The beneficial uses that will first be destroyed due to biostimulation are water contact and non-water contact recreation. Water supply treatment (filtration) can allow continuance of other beneficial uses even with algae present.

Excessively high concentrations of nutrients can result in undesirable biostimulation (algal blooms) which can impair beneficial uses. Biostimulation can result in replacement of diatoms by attached filamentous green or blue-green algae, with possible adverse impacts on the stream as a whole.

Algae is a problem in the Pajaro River and lower Llagas Creek. There are several sources of nutrients that can contribute to biostimulation. These sources may include agricultural practices, septic tanks, seepage and occasional overflows from the Gilroy sewage treatment plant, and sediments released from Chesbro Reservoir. Agriculture operations include composting, manure storage, chicken ranches, several dairies, orchards, crops, and grazing. Management practices can be implemented to control nutrient runoff/discharge. This has been the subject of a great deal of study through Section 208 of the Clean Water Act, Soil Conservation Service, farm advisors, U.S. Ag Extension, and Resource Conservation District.

II. Factors to Consider in Establishing Water Quality Objectives

Section 13241 of the Porter-Cologne Water Quality Control Act (State Water Code) provides a legal basis for establishing water quality objectives. Factors to consider by the Regional Board include:

- (a). Past, present, and probable future beneficial uses of water.
- (b). Environmental characteristics of the hydrographic unit under consideration, including the quality of water available thereto.
- (c). Water quality conditions that could reasonably be achieved through the coordinated control of all factors which affect water quality in the area.
- (d). Economic considerations.
- (e). The need for developing housing within the region.

Present and anticipated beneficial uses of Pajaro River and Llagas Creek are summarized within the Water Quality Control Plan, Central Coastal Basin (Basin

Plan). Beneficial uses for the Pajaro River and Llagas Creek include municipal and domestic water supply, agricultural supply, industrial service supply, groundwater recharge, water and non-water contact recreation, cold water habitat, wildlife habitat, and fish spawning. Llagas Creek also provides a warm water habitat for aquatic resources.

Water Quality data presented in Table 1 provide the recent environmental characteristics of Pajaro River and Llagas Creek. Typical historical water quality of Pajaro River is:

<u>Constituent</u>	<u>Units</u>	<u>Range of Values</u>	<u>Years of Record</u>
Turbidity	FTU	0 - 600	1977 - 82
Conductivity	micromho	270 - 3151	1952 - 80
Dissolved Oxygen	mg/l	1.7 - 16.4	1951 - 82
pH		7.2 - 8.8	1951 - 82
$\text{NH}_3 + \text{NH}_4^+$	mg/l N	0 - 0.73	1965 - 82
NO_2^-	mg/l N	0.02 - 7.0	1965 - 78
PO_4^-	mg/l P	0.0 - .99	1965 - 78
Total Hardness	mg/l	102 - 758	1950 - 82
Boron	ug/l	0 - 2600	1952 - 80

Typical water quality of Llagas Creek is:

<u>Constituent</u>	<u>Units</u>	<u>Range of Values</u>	<u>Years of Record</u>
Turbidity	FTU	0.5 - 230	1975 - 82
Conductivity	micromho	234 - 1040	1967 - 82
Dissolved Oxygen	mg/l	1.0 - 16.4	1967 - 82
pH		7.0 - 9.5	1967 - 82
$\text{NH}_3 + \text{NH}_4^+$	mg/l N	0 - 0.74	1979 - 82
NO_2^-	mg/l N	0.02 - 5.9	1979 - 82
PO_4^-	mg/l P	0 - 0.31	1967 - 82

As mentioned earlier in this report, several sources contribute to biostimulation. Control measures can be implemented to reduce algal presence in both surface waters. Guidelines to reduce algal blooms are: (1) California State Water Resources Control Board Minimum Guidelines for Protection of Water Quality from Animal Wastes; (2) California Regional Water Quality Control Board Policy for Enforcement of Guidelines for Waste Disposal from Dairies; and, (3) Regional Board Policy Concerning Individual/Community Sewage Disposal Systems.

Fertilization and irrigation optimization practices can also reduce nutrient input from cropland. Expansion of the Gilroy sewage treatment plant will alleviate wastewater overflows.

Economic considerations of wastewater managers vary depending upon the type of waste that impacts the surface water. Possible costs for controlling animal wastes and dairy wastes include costs for surface water retention facilities, relocating animal/manure confining facilities out of a flood plain, and distribution line between wastewater retention facilities and croplands.

Costs for on-site sewage disposal systems include those necessary to determine site suitability (such as percolation tests, soil borings/excavations, etc.) and those necessary to operate and maintain on-site sewage disposal systems (such as adequate inspection hardware, inspection and pumping costs). In addition, higher costs may be associated with septic tank maintenance districts and Wastewater Management Plans, if established. The City of Gilroy and Morgan Hill will share the local agency portion of the Clean Water Grant Project costs for expanding the Gilroy sewage treatment plant.

The demand for housing is expected to increase within the Santa Clara Valley area due to the expansion of the microelectronics industry. This proposal will not jeopardize the housing need within the area, unless Gilroy's proposed land disposal areas prove to be unsuitable for projected flows.

III. Method of Objective Determination

Literature indicates that nitrogen and phosphorus are the most important nutrients responsible for eutrophication. Other elements such as potassium, magnesium, sulfates, and trace elements (cobalt, copper, iron, manganese, zinc, boron, etc.) are also possible contributors to eutrophication. They are rarely found in natural waters in concentrations low enough to limit aquatic plant growth. Nitrogen is available to algae in the total soluble inorganic nitrogen (TSIN: nitrate, nitrite, and ammonia) forms while phosphorus is available in the orthophosphate form.

A TSIN to orthophosphate (as P) ratio of 10:1 is used to indicate the algal growth limiting element. Algal growth can be minimized by restricting the availability of the limiting element. Thus a water quality objective is provided herein based upon the limiting element. Analysis of water quality data for the Pajaro River indicates that nitrogen is limiting 47% of the time and for the Llagas Creek indicates that nitrogen is limiting 12% of the time. (Please refer to Appendix A for specific data.) Therefore, an objective for both TSIN and orthophosphate (as P) is needed for both surface waters.

Several methods were used within this study to determine a suitable objective. The techniques are: (1) water quality under non-algae conditions; (2) historical approach; and, (3) seasonal approach. Under the first approach, current water quality was analyzed under a "non-algae" condition. The nutrient concentration can serve as a basis for a suitable objective. Table I and Table II show nutrient and other data of interest for single observations during June, 1983, for Pajaro River and Llagas Creek, respectively. At the time of sampling, Pajaro River and the upper Llagas Creek did not exhibit an algae problem. Thus, data obtained by this method may serve as a basis of a nutrient objective.

Under the historical approach, water quality data was plotted versus time. The intent of this method was to evaluate water quality at a much earlier time when anthropogenic factors had not yet contributed to water quality degradation. Unfortunately, this approach was lacking because historical data

simply was not available. The earliest year of data availability was 1965. Furthermore, there was no water quality information available between 1970 and 1976.

The seasonal approach averaged data in each season (fall, winter, spring, summer) for all seasons of data availability. The intent of this method was to evaluate the impact of the various seasons upon nutrient concentrations. This method was used to determine if seasons existed when nutrients were not a problem. Such non-problem seasons could be used to determine "natural background" concentrations. In some cases, natural background concentrations may serve as a basis of a nutrient standard. Unfortunately, no information was available for algal presence with this method.

IV. Results

Recent water quality results presented in Table 1 reveal that algae was not a problem in the Pajaro River at the time of sampling. Although some algae existed in the proximity of Main Street and Chittenden, the amount of algae present is not considered a problem. In addition, algae was not a problem upstream of San Martin in Llagas Creek. Because algae was not a problem at concentrations shown in Table 1 for these locations, these concentrations serve as the primary basis for biostimulant objectives. This is the only data source that can safely be used because it is the only data that also contains algal presence observations.

Data presented in Table 1 indicates that the nutrient objectives for the Pajaro River should be either 2.5 mg/l N ($\text{NH}_3 + \text{NH}_4^+ + \text{NO}_2^- + \text{NO}_3^-$) or 1.5 mg/l PO_4^{3-} (as P). The data presented in Table 1 indicates that nitrogen is the limiting element. Hence the objective selected for N is believed to be sound. If the 10:1 ratio is applied to the N objective, it can be seen that the orthophosphate concentrations shown in Table 1 are much larger than the resulting 0.25 mg/l concentration for orthophosphate. Inspection of historical data indicates that phosphorus is limiting between concentrations of 0.08 - 0.37 mg/l orthophosphate (as P). Therefore, an orthophosphate (as P) objective of 0.3 mg/l is more appropriate than the values shown in Table 1, and would correlate well with a nitrogen objective of 2.5 mg/l.

Data presented in Table II indicates that the nutrient objectives for Llagas Creek should be developed from the non-impacted (relatively unaffected by point and non-point source discharges) upstream data. Therefore, the nutrient objectives should be 1.5 mg/l Total Nitrogen ($\text{NH}_3 + \text{NH}_4^+ + \text{NO}_2^- + \text{NO}_3^-$ as N) and 0.05 mg/l orthophosphate (PO_4^{3-} as P). This 0.05 mg/l PO_4^{3-} (as P) objective also agrees with the generalized phosphate objective discussed in Water Quality Criteria, April 1, 1968, Federal Water Pollution Control Administration. This source states that "50 micrograms per liter total phosphorus (as P) would probably restrict noxious aquatic plant growths in flowing waters and in some standing waters." Although one objective is for phosphate and the other for total phosphorus, they are the same because the only form of phosphorus that algae can utilize is phosphate.^{15,16}

These objectives were compared to seasonal data to determine possible impacts. Seasonal data for available nitrogen and orthophosphate for the Pajaro River is shown in Figures 1 and 2, respectively, and Llagas Creek data is shown in Figures 3 and 4, respectively. For the Pajaro River, nitrogen objective has been exceeded approximately 60% of the time. The phosphate objective has

TABLE I.
WATER QUALITY AND PHYSICAL CONDITIONS

been exceeded approximately 40% of the time on a seasonal average basis. For Llagas Creek, the nitrogen objective has been exceeded approximately 25% of the time in the upstream portions and the phosphate objective has been exceeded approximately 20% of the time.

According to data shown in Table 1, these proposed objectives will be difficult to meet along lower Llagas Creek.

V. Alternatives to the Proposed Activity

A. No Action

A no action alternative to setting numeric criteria would be adverse to beneficial water uses. Beneficial water uses will be reduced if algae continues to grow. Large mats of filamentous algae are aesthetically displeasing. They may snag fishing gear, make rocks slippery to waders, and cause unpleasant tastes or odors. They may be less palatable than diatoms to "fish food" invertebrates. Algae mats may trap sediment, altering the streambed character which is important both for invertebrate survival and fish spawning. Clumps of algae may break loose and clog water intakes, form sludge deposits, and increase downstream biochemical oxygen demand.

Furthermore, no action would be contrary to the Environmental Protection Agency's position that numerical criteria must be established for some surface waters with algae concentrations harmful to beneficial uses.

B. Establish Different Numeric Criteria

The method used to derive numerical objectives is the best approach because it is the only process that considers algal observations. Another approach could have been taken but there would be no indication that the problem of algal presence would be reduced.

It may be possible that the proposed objective will have to be revised in the future upon receipt of additional information concerning these surface waters. Either upward or downward changes of numeric criteria can be considered as part of the continuing planning process.

I. BACKGROUND

1. Name of Proponent Central Coast Regional Water Quality Control Board
2. Address and Phone Number of Proponent:
 - 1102 A Laurel Lane
 - San Luis Obispo, CA 93401
 - (805) 549-3147
3. Date of Checklist Submitted November 28, 1983
4. Agency Requiring Checklist Resources Agency
5. Name of Proposal, if applicable Nutrient Objectives -- Pajaro River and Llagas Creek; Region 3 Amendment to the Water Quality Control Plan (Basin Plan).

II. ENVIRONMENTAL IMPACTS

(Explanations of all "yes" and "maybe" answers are required on attached sheets.)

	YES	MAYBE	NO
1. Earth. Will the proposal result in:			
a. Unstable earth conditions or in changes in geologic substructures?	_____	_____	X
b. Disruptions, displacements, compaction or overcovering of the soil?	_____	_____	X
c. Change in topography or ground surface relief features?	_____	_____	X
d. The destruction, covering or modification of any unique geologic or physical features?	_____	_____	X
e. Any increase in wind or water erosion of soils, either on or off the site?	_____	_____	X
f. Changes in deposition or erosion of beach sands, or changes in siltation, deposition or erosion which may modify the channel of a river or stream or the bed of the ocean or any bay, inlet or lake?	_____	_____	X

- | | | | | |
|----|--|-------|-------|---|
| g. | Exposure of people or property to geologic hazards, such as earthquakes, landslides, mudslides, ground failure, or similar hazards? | _____ | _____ | X |
| 2. | Air. Will the proposal result in: | | | |
| a. | Substantial air emissions or deterioration of ambient air quality? | _____ | _____ | X |
| b. | The creation of objectionable odors? | _____ | _____ | X |
| c. | Alteration of air movement, moisture or temperature, or any change in climate, either locally or regionally? | _____ | _____ | X |
| 3. | Water. Will the proposal result in: | | | |
| a. | Changes in currents, or the course or direction of water movements, in either marine or fresh waters? | _____ | _____ | X |
| b. | Changes in absorption rates, drainage patterns or the rate and amount of surface water runoff? | _____ | _____ | X |
| c. | Alterations to the course or flow of flood waters? | _____ | _____ | X |
| d. | Change in the amount of surface water in any water body? | _____ | _____ | |
| e. | Discharge into surface waters, or in any alteration of surface water quality, including but not limited to temperature, dissolved oxygen or turbidity? | X | _____ | |
| f. | Alteration of the direction or rate of flow of ground waters? | _____ | _____ | |
| g. | Change in the quantity of ground waters, either through direct additions or withdrawals, or through interception of an aquifer by cuts or excavations? | _____ | _____ | X |
| h. | Substantial reduction in the amount of water otherwise available for public water supplies? | _____ | _____ | X |
| i. | Exposure of people or property to water related hazards such as flooding or tidal waves? | _____ | _____ | X |

4. Plant Life. Will the proposal result in:

- a. Change in the diversity of species, or number of any species of plants (including trees, shrubs, grass, crops, microflora and aquatic plants)? ___ ___ X
- b. Reduction of the numbers of any unique, rare or endangered species of plants? ___ ___ X
- c. Introduction of new species of plants into an area, or in a barrier to the normal replenishment of existing species? ___ ___ X
- d. Reduction in acreage of any agricultural crop? ___ ___ X

5. Animal Life. Will the proposal result in:

- a. Change in the diversity of species, or numbers of any species of animals (birds, land animals including reptiles, fish and shellfish, benthic organisms, insects or microfauna)? ___ ___ X
- b. Reduction of the numbers of any unique, rare or endangered species of animals? ___ ___ X
- c. Introduction of new species of animals into an area, or result in a barrier to the migration or movement of animals? ___ ___ X
- d. Deterioration to existing fish or wildlife habitat? ___ ___ X

6. Noise. Will the proposal result in:

- a. Increases in existing noise levels? ___ ___ X
- b. Exposure of people to severe noise levels? ___ ___ X

7. Light and Glare. Will the proposal produce new light or glare? ___ ___ X

8. Land Use. Will the proposal result in a substantial alteration of the present or planned land use of an area? ___ ___ X

9. Natural Resources. Will the proposal result in:

- a. Increase in the rate of use of any natural resources? ___ X ___
- b. Substantial depletion of any nonrenewable natural resource? ___ ___ X

- | | | | | |
|-----|--|-------|-------|-------|
| 10. | Risk of Upset. Does the proposal involve a risk of an explosion or the release of hazardous substances (including, but not limited to, oil, pesticides, chemicals or radiation) in the event of an accident or upset conditions? | _____ | _____ | _____ |
| 11. | Population. Will the proposal alter the location, distribution, density, or growth rate of the human population in the area? | _____ | _____ | X |
| 12. | Housing. Will the proposal affect existing housing, or create a demand for additional housing? | _____ | _____ | X |
| 13. | Transportation/Circulation. Will the proposal result in: | | | |
| a. | Generation of substantial additional vehicular movement? | _____ | _____ | X |
| b. | Effects on existing parking facilities, or demand for new parking? | _____ | _____ | X |
| c. | Substantial impact upon existing transportation systems? | _____ | _____ | X |
| d. | Alterations to present patterns of circulation or movement of people and/or goods? | _____ | _____ | X |
| e. | Alterations to waterborne, rail or air traffic? | _____ | _____ | X |
| f. | Increase in traffic hazards to motor vehicles, bicyclists or pedestrians? | _____ | _____ | X |
| 14. | Public Services. Will the proposal have an effect upon, or result in a need for new or altered governmental services in any of the following areas: | | | |
| a. | Fire protection? | _____ | _____ | X |
| b. | Police protection? | _____ | _____ | X |
| c. | Schools? | _____ | _____ | X |
| d. | Parks or other recreational facilities? | _____ | X | _____ |
| e. | Maintenance of public facilities, including roads? | _____ | _____ | X |
| f. | Other governmental services? | _____ | _____ | X |

- | | | | | |
|-----|---|-------|----------|----------|
| 15. | Energy. Will the proposal result in | | | |
| | a. Use of substantial amounts of fuel or energy? | _____ | _____ | <u>X</u> |
| | b. Substantial increase in demand upon existing sources of energy, or require the development of new sources of energy? | _____ | _____ | <u>X</u> |
| 16. | Utilities. Will the proposal result in a need for new systems, or substantial alterations to the following utilities: | | | |
| | a. Power or natural gas? | _____ | _____ | <u>X</u> |
| | b. Communications systems? | _____ | _____ | <u>X</u> |
| | c. Water? | _____ | _____ | <u>X</u> |
| | d. Sewer or septic tanks? | _____ | _____ | <u>X</u> |
| | e. Storm water drainage? | _____ | _____ | <u>X</u> |
| | f. Solid waste and disposal? | _____ | _____ | <u>X</u> |
| 17. | Human Health. Will the proposal result in: | | | |
| | a. Creation of any health hazard or potential health hazard (excluding mental health)? | _____ | _____ | <u>X</u> |
| | b. Exposure of people to potential health hazards? | _____ | _____ | <u>X</u> |
| 18. | Aesthetics. Will the proposal result in the obstruction of any scenic vista or view open to the public, or will the proposal result in the creation of an aesthetically offensive site open to public view? | _____ | _____ | <u>X</u> |
| 19. | Recreation. Will the proposal result in an impact upon the quality or quantity of existing recreational opportunities? | _____ | <u>X</u> | _____ |
| 20. | Archeological/Historical. Will the proposal result in an alteration of a significant archeological or historical site, structure, object or building? | _____ | _____ | <u>X</u> |
| 21. | Mandatory Findings of Significance. | | | |

a. Does the project have the potential to degrade the quality of the environment, substantially reduce the habitat of a fish or wildlife species, cause a fish or wildlife population to drop below self sustaining levels, threaten to eliminate a plant or animal community, reduce the number or restrict the range of a rare or endangered plant or animal or eliminate important examples of the major periods of California history or prehistory? _____ X

b. Does the project have the potential to achieve short-term to the disadvantage of long-term, environmental goals? (A short-term impact on the environment is one which occurs in a relatively brief, definitive period of time which long-term impacts will endure well into the future.) _____ X

c. Does the project have impacts which are individually limited, but cumulatively considerable? (A project may impact on two or more separate resources where the impact on each resource is relatively small, but where the effect of the total of those impacts on the environment is significant). _____ X

d. Does the project have environmental effects which will cause substantial adverse effects on human beings, either directly or indirectly? _____

III. DISCUSSION OF ENVIRONMENTAL EVALUATION

IV. DETERMINATION

On the basis of this initial evaluation:

X I find the proposed project COULD NOT have a significant effect on the environment.

_____ I find that the proposed project may have a significant adverse impact on the environment. However, there are feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impact. These alternatives and mitigation measures are discussed in the attached written report.

_____ I find that the proposed project MAY have a significant effect on the environment. There are no feasible alternatives and/or feasible mitigation measures available which would substantially lessen any significant adverse impacts. See the attached written report for a discussion of this determination.

Date _____

(Signature)

VII. Mitigation Measures

In order to meet the proposed objective, actions other than proposed will have to be implemented. This proposal does not consider such additional actions.

Environmental Impact

Mitigation Measures

Item 3e

This amendment may provide additional incentive for control actions that will improve nitrogen and phosphorus concentrations.

This is a beneficial impact and requires no mitigation.

Item 9a, 14d, and 19

This amendment may increase recreational use of the Pajaro River and Llagas Creek.

This is a beneficial impact and requires no mitigation.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 84-01

Concerning Revisions and Amendment of the
Water Quality Control Plan,
Central Coast Basin

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin (Basin Plan), on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of nuisance; and,
- WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,
- WHEREAS, the Regional Board amended Chapter 2, Present and Anticipated Future Uses of Coastal Waters, Table 2-2, of said Basin Plan on June 11, 1976; and,
- WHEREAS, amendment of Chapter 2 of said Basin Plan on June 11, 1976, did not make a distinction between Elkhorn Slough and Moss Landing Harbor beneficial uses; and,
- WHEREAS, proposed revision and amendment addressed herein apply to Table 2-2 of said Basin Plan, adding Moss Landing Harbor to Table 2-2 and redefining beneficial uses for Elkhorn Slough; and,
- WHEREAS, drafts of proposed revisions and amendments have been prepared and provided to interested persons and agencies for review and comment; and,
- WHEREAS, due notice of public hearing was given by advertising in newspapers of general circulation within the Central Coast Region; and,
- WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217); and,
- WHEREAS, on January 20, 1984, in San Luis Obispo, California, after public notice, the Regional Board received evidence and considered all factors concerning proposed revisions and amendments to said Plan.

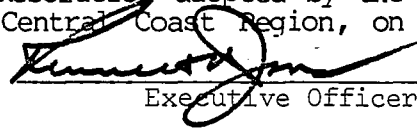

NOW, THEREFORE, BE IT RESOLVED, that Table 2-2 of Chapter 2 of the Water Quality Control Plan, Central Coastal Basin, on page 2-5 be revised as shown on Attachment "A."

BE IT FURTHER RESOLVED, that the Executive Officer of this Regional Board is hereby directed to submit the above-described portion of said Water Quality Control Plan as revised and amended to the State Water Resources Control Board for approval pursuant to California Water Code Section 13245.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 2 of the Water Quality Control Plan is revised by the amendment of Table 2-2 contained herein.

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify that the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on January 20, 1984.

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION
1102 A Laurel Lane
San Luis Obispo, California 93401

RESOLUTION NO. 83-16

Revision and Amendment of Water Quality Control Plan
by the Addition of a Prohibition of Waste Discharge
from Individual and Community Sewage Disposal
Systems Within the Los Alamos Area,
Santa Barbara County

- WHEREAS, the California Regional Water Quality Control Board, Central Coast Region (hereafter Regional Board), adopted the Water Quality Control Plan for the Central Coastal Basin (hereafter Basin Plan) on March 14, 1975; and,
- WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan to ensure reasonable protection of beneficial uses of water and prevention of pollution and nuisance; and,
- WHEREAS, in protecting and enhancing water quality, the Basin Plan specifies certain areas where the discharge of waste, or certain types of waste, is prohibited; and,
- WHEREAS, Article 5, Chapter 4, Division 7, of the California Water Code defines criteria for such prohibition areas (Section 13240 et seq.); and,
- WHEREAS, Los Alamos is unincorporated, with a 1980 population of 734 persons located south of Santa Maria, in Santa Barbara County; and,
- WHEREAS, on-site soil absorption systems are the sole means of wastewater disposal in the Los Alamos area; and,
- WHEREAS, the predominate lot size in Los Alamos, 5,000 to 10,000 square feet, is too small to accommodate individual sewage disposal systems; and,
- WHEREAS, many property owners in Los Alamos have attested to on-site system problems; and,
- WHEREAS, ground water sampling has indicated human waste contamination of shallow ground water in the Los Alamos area; and,
- WHEREAS, the Soil Conservation Service has designated the soils of Los Alamos as severe (due to slow percolation) for septic tank filter fields; and,

WHEREAS, the County Board of Supervisors, on May 14, 1974, designated, by ordinance, the Los Alamos Area as a Special Problems Area, due to a concern for ground water degradation from septic systems on small lots and shallow ground water, and a committee was established to review building permit applications; and,

WHEREAS, the County Health Department took surface water samples from San Antonio Creek in January, 1983, which showed fecal coliform in excess of 200/100 milliliters at four different locations within the Los Alamos area; and,

WHEREAS, Los Alamos Community Services District has submitted documentation of conditions which constitute contamination and pollution as defined in Section 13050 of the California Water Code; and,

WHEREAS, the Regional Board is obligated to update the Basin Plan's implementation program for achieving water quality objectives; and,

WHEREAS, present and anticipated future uses of San Antonio Creek include recreation, wildlife and aquatic habitat, ground water recharge, and municipal, domestic, and agricultural supply; and,

WHEREAS, Los Alamos ground waters are suitable for agricultural, municipal, domestic, and industrial water supply; and,

WHEREAS, a Regional Board staff report indicates beneficial uses of Los Alamos ground and surface waters are adversely affected by individual sewage disposal system discharges, and public health is potentially threatened by the presence of fecal coliform in ground and surface waters, with high nitrates also detected in ground water sampling wells; and,

WHEREAS, a County of Santa Barbara Health Care Services letter cites degradation of ground water due to sewage disposal and the County's concern for the potential of a public health threat unless sewage is disposed of properly; and,

WHEREAS, a letter from the California Health and Welfare Agency, Department of Health Services, indicates concern regarding high nitrates in the waters of Los Alamos, and recommends adequate measures be taken to correct these problems to bring the waters into compliance with California Drinking Water Standards; and,

WHEREAS, drafts of proposed revisions and amendments of the Basin Plan, prohibiting discharges from Los Alamos individual and community sewage disposal systems, have been prepared and provided to interested persons and agencies for review and comment; and,

WHEREAS, Regional Board staff has prepared documents and followed appropriate procedures to satisfy the environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act of 1977 (PL 92-500 and PL 95-217), and the Regional Board finds adoption of this prohibition area will not have a significant adverse effect on the environment; and,

WHEREAS, on November 18, 1983, in the Seaside City Council Chambers, 440 Harcourt Street, Seaside, California, after due notice, the Regional Board conducted a public hearing at which evidence was received pursuant to Section 13281 of the California Water Code concerning the impact of discharges from individual sewage disposal systems on water quality and public health; and,

WHEREAS, pursuant to Section 13280 of the California Water Code, the Regional Board finds that discharges of wastes from new and existing individual and community disposal systems which utilize subsurface disposal in the affected area will result in violation of water quality objectives; will impair beneficial uses of water; will cause pollution, nuisance, or contamination; and will unreasonably degrade the quality of waters of the State; and,

WHEREAS, the Regional Board finds the aforestated conditions in need of remedy to protect present and potential beneficial uses of water and to prevent pollution and nuisance.

NOW, THEREFORE, BE IT RESOLVED, that the Water Quality Control Plan, Central Coastal Basin, be amended as follows:

Page 5-66, after Item 8, following the discussion of discharge limitation (added by Resolution 83-13), insert the following prohibition:

- "9. Discharge of waste from additional individual and community sewage disposal systems is prohibited and the discharge of waste from existing individual and community sewage disposal systems is prohibited after July 1, 1987, in Los Alamos, Santa Barbara County, and more particularly described as:

"Within the boundaries of the Los Alamos
Community Services District extant on
December 26, 1978."

BE IT FURTHER RESOLVED, that the above area is consistent with the recommendations of the staff report as shown on "Attachment A."

BE IT FURTHER RESOLVED, that the Regional Board does intend standard exemption criteria, first paragraph of Page 5-67 of the Basin Plan, to apply to this action.

BE IT FURTHER RESOLVED, that compliance with the above prohibition of existing individual or community sewage disposal systems shall be achieved according to the following time schedule:

<u>Task</u>	<u>Compliance Date</u>
Complete Design	May 1, 1984
Obtain Construction Funding	September 30, 1984
Begin Construction	March 1, 1985
Complete Construction	July 1, 1987

BE IT FURTHER RESOLVED, that reports of compliance or noncompliance with schedules shall be submitted to the Regional Board within 14 days following each scheduled date unless otherwise specified, where noncompliance reports shall include a description of the reason, a description and schedule of tasks necessary to achieve compliance, and an estimated date for achieving full compliance.

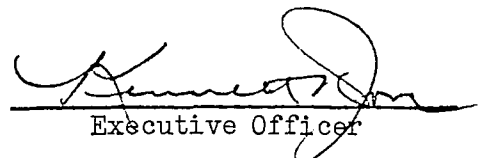

BE IT FURTHER RESOLVED, that the Regional Board has determined this action will not have a significant adverse impact on the environment and the Executive Officer of the Regional Board is hereby directed to file a Notice of Decision to this effect with the Secretary of the Resources Agency.

BE IT FURTHER RESOLVED, that the State Water Resources Control Board is hereby requested to amend forthwith the Clean Water Grant Project Priority List to recognize the necessary structural solution for Los Alamos as a Priority "A" project.

BE IT FURTHER RESOLVED, the Executive Officer of the Regional Board is hereby directed to submit this revision of the Basin Plan to the State Water Resources Control Board for approval pursuant to Section 13245 of the California Water Code.

BE IT FURTHER RESOLVED, upon approval by the State Water Resources Control Board, Chapter 5 of the Water Quality Control Plan is revised by the addition of the above prohibition.

I, KENNETH R. JONES, Executive Officer of the California Regional Water Quality Control Board, Central Coast Region, do hereby certify the foregoing is a full, true, and correct copy of a Resolution adopted by the California Regional Water Quality Control Board, Central Coast Region, on November 18, 1983.

Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL COAST REGION

RESOLUTION NO. 83-14

Concerning Revisions and Amendment of
the Water Quality Control Plan,
Central Coast Basin,
(Revision and Amendment of Table 2-1,
"Existing and Anticipated Uses of Inland Surface Waters")

WHEREAS, The California Regional Water Quality Control Board, Central Coast Region, (Regional Board), adopted the Water Quality Control Plan, Central Coastal Basin, (Basin Plan), on March 14, 1975; and,

WHEREAS, the Regional Board, after notice and public hearing in accordance with Water Code Section 13244, periodically revises and amends the Basin Plan; and,

WHEREAS, the United States Environmental Protection Agency (EPA) approved the Water Quality Control Plan, Central Coastal Basin (Basin Plan) in 1975 upon the condition that a water contact recreation (REC-1) designation be added to those waters without a REC-1 designation in Table 2-1, Existing and Anticipated Uses of Inland Surface Waters; and,

WHEREAS, for several years the Regional Board staff regarded this condition as inappropriate because many waters are extremely shallow, drainageways may be dry most of the year, or water contact recreation is prohibited; and,

WHEREAS, Regional Board staff agreed to evaluate the REC-1 designation for those waters not already designated as such as part of the continuing planning process; and,

WHEREAS, EPA states it is appropriate to identify, by means of footnotes to Table 2-1, the physical or legal reasons that water contact recreation cannot take place; and,

WHEREAS, a survey of REC-1 possibilities, for surface waters not already designated as such, has been completed; and,

WHEREAS, the Regional Board has determined the Basin Plan requires further revision and amendment; and,

WHEREAS, proposed revisions and amendments are to be made to Chapter 2, Beneficial Uses, of said Basin Plan; and

WHEREAS, Regional Board staff prepared documents and followed procedures to satisfy environmental documentation requirements of both the California Environmental Quality Act, under Public Resources Code Section 21080.5 (Functional Equivalent), and the Federal Clean Water Act; and,

WHEREAS, drafts of proposed revisions and amendments and the environmental documents have been made available to interested persons and agencies for review and comment; and,

WHEREAS, a public hearing was duly noticed by advertising in newspapers of general circulation within the Region; and,
