Subject: Homes in the River Area

Dear Mr. St. John,

We are very concerned about the possible new regulations for septic systems near the Russian River. I am afraid that our property amongst many others which is quite small and on a hill over 3/4 mile from the river will be red tagged. Many of these septic systems have been working fine for years without any problems. The one size fits all requirements will impact many of my neighbors. Rebuilding a new septic system on my property would be prohibitively expensive if not impossible and in turn make my home useless and valueless.

Although we live in Santa Rosa now, and rent that property to a young family we are still part of the Forestville Community.

Best Regards,

Todd Victor
