Subject: Water

To whom it may concern,

Farmers need water to feed the population.

I consider wasting water like leaving water on when washing a car not only inconsiderate must be educated

but downright lazy. City people

how precious our water supply really is and

farmers must continue to get the pumps turned off as soon as the food crop is irrigated.

We need to keep the water in the valley to provide food for the population.

We need to create new dams to store more water for the increasing population. Farmers provide needed food, and stimulated economy for our Nation. We need to conserve water for drought years through conservation efforts and dams to hold the water when needed. I urge you to keep water in the farming central valley and build more dams for our future.

Thank- You,

Sharleen Robson
