

Hello Jessica,

My comment about the 25% cuts "fact sheet" is that it MUST include cut backs for water bottling/product plants. Here in Mt. Shasta, we are watching our domestic wells lose groundwater as we cut back...and Crystal Geysers is allowed in here with no EIR.

So when are you going to require the cut back from the bottling industry? Or do they have too much \$ and clout to have to help during this extreme drought?

The "Smith Family" blurb makes me sick...the manufacturing plant can't reduce its water use? really? well they just must produce less product. and make less \$. EVERYONE has to share in the cut backs.

Feel free to share this with any agency that you feel can help.
