

Hello,

We are a small water company of under 3,000 connections on the north coast in Sonoma County at The Sea Ranch. We understand through the California Public Utilities Commission and The SWRCB policies that conservation measures must meet a 25% reduction compared to 2013 for the months of June to November 2015. There appears to be no allowance to reduce the 25% reduction for R-GPCD for small water companies < 3,000 connections.

Our current R-GPCD looks to be around 56.52 gallons per capita. Referencing the SWRCB 25% Fact Sheet, it would appear that we would be in line for an 8% conservation standard if we were an urban water supplier, yet we cannot find out about how to apply for this type of reduction or if that is even possible within the regulations. Is there a similar allowance for the reduction of 25% for small investor owned water companies as there is for urban suppliers?

Thank you,

Randy H. Burke, MPH, REHS
