Subject: 8/16/16 BOARD MEETING--- ITEM #10 Sea To Salton Sea Solution

Dear Ms Marcus and Boardmembers:

Please google: Geothermal Desalination. You will find that this mechanism operates at 20% the cost of traditional reverse osmosis, like the new one just opened at Carlsbad. Only Carlsbad does not have a geothermal asset like Imperial County does.

It's abundantly clear to me that our fellow environmentalists in Baja will agree to unobtrusively dip dual 30" PIPES into The Gulf Of California, get them up to the Border at Mexicali. From there, the soon-to-be-dry New River BED will serve as the right-of-way, 38 miles to the Niland area, where we build a geothermal desalination plant. Thereafter, fresh, clean water will refresh the lake daily, 24/7

The extracted salt can be mined for precious minerals before the waste salt is pressed into BRICKS for building materials (scientists tell us that now this can be done with epoxies and algae-wrap).

I've been visiting and studying the Sea since 1987; I sincerely appreciate your time and consideration to this crucial matter.

Feel free to contact me if I can be helpful (315) 455 - 6743 All the Best!

 John Mackey
