**Subject:** 8/16/16 Board Meeting-Item #10 Sea to Salton Sea

Living only 195 driving miles from the largest inland body of water in California called the Salton Sea it is about time the direction and leadership on behalf the public trust for all the water in the lake be restored. Facebook Page called: "Importing seawater from Baja Mexico to the Salton Sea (Sea to Sea)" represents the most affordable inclusive plan for the regeneration of the vast ecosystems, bird, fish, recreation, food production and human habitat and sanctuaries. The Eden Project in partnership with Agess, Inc., Torres Martinez Desert Cahuilla Indians and Ecomedia Compass have begun the effort to restore the Salton Sea. The 3,000 year old Torres Martinez Tribe resides on 25,000 acres of land astride the Salton Sea that can facilitate the regenerative economic growth resulting from the total restoration of the Salton Sea. One of the companies that has reached out across America from NASA's Kennedy Space Center called Joi Scientific wants to be included in the efforts of the Eden Project on behalf of the total restoration project that can provide the highly profitable low cost zero pollution energy available 24/7/365 days a year. Plus this technology can produce endless sources of desalinated ocean or Salton Sea water on demand. The byproduct of producing distilled water from sewage, polluted, toxic, Salton Sea or ocean water is the lowest cost zero pollution renewable energy available today. Not only will this technology play a major role for the Salton Sea but it will benefit the entire State of California in reaching the goals of zero pollution energy, recycling water and vast new economic growth by becoming a partner in the advancement of a 21st Century sustainable energy and water distillation technology.
