Subject: Opposition to the Proposed Discharge Permit

Members of the Board,

It is alarming to hear on the news and read about the possibility of a potential rate increase to homeowners as well as business people on the above matter. From what we have read and heard, you, the Board Members, have chosen to ignore the current scientific evidence that shows that there is no conclusive evidence to support the additional treatments being proposed. We are not at any health risk. Any type of additional increase from \$20.00 to \$60.00 would impact our expenses. We have our own business in Roseville but live in Citrus Heights and we like others, have watched our expense go up while the income has decreased. To purpose to spend money on what current scientific evidence that has been given to you shows that we do not need does not make sense. It only makes us wonder who you Members of the Board are trying to help get richer, it certainly isn't the people or businesses of the Sacramento County area.

Please do not something that is not justified or has not been proven to be necessary. We all need to take care of our water but we can't spend money so unwisely.

Thank you for your consideration.

Sincerely,
Parviz and Pamela Sadrian
