**MODIFICATION OF TERTIARY FILTRATION REQUIREMENTS  
CONSIDERATION OF ORDER AMENDING  
WASTE DISCHARGE REQUIREMENTS ORDER R5-2010-0114-02  
(NPDES PERMIT NO. CA0077682)  
FOR  
SACRAMENTO REGIONAL COUNTY SANITATION DISTRICT  
SACRAMENTO REGIONAL WASTEWATER TREATMENT PLANT  
SACRAMENTO COUNTY**

Sacramento Regional County Sanitation District (Discharger) owns and operates the Sacramento Regional Wastewater Treatment Plant (Facility). The Discharger provides wastewater treatment service to the Cities of Sacramento, Folsom, West Sacramento, and the Sacramento Area Sewer District. The Sacramento Area Sewer District service area includes the Cities of Elk Grove, Rancho Cordova, Citrus Heights, and portions of the unincorporated areas of Sacramento County. The population served is approximately 1.3 million people. The Facility is permitted to discharge 181 million gallons per day of treated wastewater to the Sacramento River within the Sacramento-San Joaquin Delta.

On 9 December 2010, the Central Valley Water Board adopted Waste Discharge Requirements Order R5-2010-0114 (NPDES Permit) which was subsequently amended on 1 December 2011 and 4 October 2013. The NPDES Permit includes disinfection requirements to protect public health requiring wastewater to be oxidized, coagulated, filtered and adequately disinfected pursuant to California Department of Public Health reclamation criteria (Title 22) or equivalent. Consistent with these disinfection requirements, the Discharger is planning to construct tertiary filtration.

The tentative amendment proposes seasonal disinfection requirements, such that Title 22, or equivalent disinfection would only be required from May – October. The Discharger, however, would operate the filters at design capacity year-round. From November – April, during wet weather periods when treated wastewater effluent flows exceed the filter capacity, excess flows would not be filtered. Unfiltered and filtered wastewater would be combined and disinfected with chlorine prior to discharge to the Sacramento River. This combined discharge would occur at times when wet weather and other conditions minimize public use of the river, and high river dilution is generally available, minimizing increased risk of public contact with wastewater pathogens. The alternative requirements represent a seasonal level of disinfection that was not considered with adoption of the NPDES Permit, and are based on new information that was not available at the time of adoption.

A public hearing concerning this matter will be held during the Central Valley Regional Water Quality Control Board (Central Valley Water Board) meeting, which is scheduled for:

DATE: 7/8 August 2014
