-Notice of Violation for Monitoring Reports

Dear Wendy and Guy,

Thank you for your letter regarding the violation for the monitoring reports. For the ammonia concentration, we have obtained professional advice from Alpha Analytical Laboratories Inc. to increase the aeration pump operation time to reduce the ammonia concentration. We have increased the aeration pump operation time since mid of August 2012.

We have called several geologists and they all came back telling us that they are busy and will not be able to help us, considering that our operation is very small compared to their larger clients. However, we did get positive feedback from Paul D. Horton P.G., C.H.G., who will help us in the near future for our quarterly monitoring reports. All information as required by the MRP will be included in the future quarterly monitoring reports. For your information, we have very stable water flow and usage at our marina over the past 10 years.

Please feel free to call us at 925-634-3822 for questions.

Sincerely,

Kevin Hinman
President
