Kevin:

I know you have the February 24th deadline with the RWQCB. I would like to come out tomorrow (Wednesday) to take the well depth measurements. In the future this will need to be coordinated with the well purging and sampling.

In looking at the Alpha data, the last time the wells were tested was October 20, 2015, this would be for forth quarter 2015 (Q4). When Alpha came out on January 19, 2016, their last visit, they did not sample groundwater.

Groundwater sampling, and well sounding (depth measurement) needs to be coordinated such that I am able to observe the well purging and sampling after I measure the well depth. When do you have the well sampling scheduled?

To facilitate the well sounding, do you have this information:

1. The diameter of the well casing.
2. Survey data of the well elevation or a bench mark in the area of the wells.

I will give you a call this morning to coordinate.
