#1 Interim replacement water supply

For homes with swamp coolers I propose refrigerated window unit coolers be installed and the extra electric expense for these units over the cost of normal swamp cooler usage be billed to PG&E. We have to be provided a safe way to stay cool during the hot summer months until permanent replacement water is supplied. My home is about 1700 sq. feet, my swamp cooler has to be on high to cool all the rooms, that's a lot of contaminated water being pumped into the air.
