

<b>Table O-1</b>						
<b>Preliminary Sizing and Cost Estimate for Constructed Subsurface Wetlands on Public Sites</b>						
<b>Seq. No.</b>	<b>Site Name</b>	<b>Topography</b>	<b>Area Native (acres)</b>	<b>Assumed Wetlands Area (Acres)<sup>1</sup></b>	<b>Estimated Flowrate (mgd)<sup>2</sup></b>	<b>Estimated Cost (\$Mil)<sup>3</sup></b>
P-20	Will Rogers State Historic Park	mixed	34	17	5.7	1.1
P-40	Santa Ynez Canyon Park	mixed, steep/flat	45	23	7.5	1.5
V-10	E. Grand Ave & Illinois St.	flat	2	1	0.4	0.1

Notes:

- 1 It was assumed that half of the native plant area could be used to construct a wetlands
- 2 Based on TM 6, it was assumed that a flowrate of 0.33 mgd/acre of wetlands could be sustained.
- 3 An estimated cost of \$0.2 Mil/mgd was developed in TM 6.
