Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use

Aquatic organisms utilize all bays, estuaries, lagoons and coastal wetlands, to a certain extent, for spawning and early development. This may include migration into areas which are heavily influenced by freshwater inputs.

s Access prohibited by Los Angeles Count DPW. w

These areas are engineered channels. All references to Tidal Prisms in Regional Board documents are functionally equivalent to estuaries.

P: Potential beneficial use

I: Intermittent beneficial use

E, P, and I shall be protected as required.

* Asterisked MUN designations are designated under SB 88-63 and RB 89-03. Some designations

Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.

Waterbodies designated as WET may have wetlands habitat associated with only a portion of the waterbody. Any regulatory section would require a detailed analysis of the area.

This reservoir is covered and thus inaccessible.

Currently dry and no plans for restoration.

P: Potential beneficial use
I: Intermittent beneficial use

E, P, and I shall be protected as required.

* Asterisked MUN designations are designated under SB 88-63 and RB 89-03. Some designations

may be considered for exemption at a later date (See pages 2-3, 4 for more details).

Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.

Waterbodies designated as WET may have wetlands habitat associated with only a portion of the waterbody. Any regulatory section would

require a detailed analysis of the area.

Coastal waterbodies which are also listed in Coastal Features Table (2-3) or in Wetlands Table (2-4).

aa Habitat of the Channel Island Fox.

а

ab

This watershed is also in Region 8 (801.23).

FOOTNOTES are consistent on all beneficial use tables.

P: Potential beneficial use

I: Intermittent beneficial use

E, P, and I shall be protected as required.

* Asterisked MUN designations are designated under SB 88-63 and RB 89-03. Some designations

may be considered for exemption at a later date (See pages 2-3, 4 for more details).

Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.

Public access to reservoir and its surrounding watershed is prohibited by Los Angeles County Department of Public Works. The majoriity of the reach is intermittent; there is a small area of rising ground water creating perennial flow.

Access prohibited by Los Angeles County Department in the concrete-channelized areas.

description of beneficial use

FOOTNOTES are consistent for all beneficial use tables.

ac: Beneficial uses for ground waters outside of the major basins listed on this table and outlined in Fig 1-9 have not been specifically listed. However, ground waters outside of the major basins are, in many cases, significant sources of water. Furthor existing sources of water for downgradient basins, and such, beneficial uses in the downgradient basins shall apply to these areas.

ad: Basins are numbered according to DWR Bulletin No. 118-Update 2003 (DWR, 2003).

ae: Ground waters in the Pitas Point area (between the lower Ventura River and Rincon Point) are not considered to comprise a major basin and, accordingly, have not been designated a basin number by the DWR or outlined on Fig. 1-9.

af: Santa Clara River Valley Basin was formerly Ventura Central Basin and Acton Valley Basin was formerly Upper Santa Clara Basin (DWR, 1980).

ag: Pleasant Valley, Arroyo Santa Rosa Valley, and Las Posas Valley Basins were formerly subbasins of Ventura Central (DWR, 1980).

ah: Nitrite pollution in the groundwater of the Sunland-Tujunga area currently precludes direct MUN uses. Since the ground water in this area can be treated or blended (or both), it retains the MUN designation.

ai: Raymond Basin was formerly a subbasin of San Gabriel Valley and Monk Hill subbasin is now part of San Fernando Valley Basin (DWR, 2003). The Main San Gabriel Basin was formerly separated into Eastern and Western areas. Since these areas had the same beneficial uses as Puente Basin all three areas have been combined into San Gabriel Valley. Any ground water upgradient of these areas is subject to downgradient beneficial uses and objectives, as explained in Footnote ac.

aj: These areas were formerly part of the Russell Valley Basin (DWR, 1980).

ak: Ground water in the Conejo-Tierra Rejada Volcanic Area occurs primarily in fractured volcanic rocks in the western Santa Monica Mountains and Conejo Mountain areas. These areas have not been delineated on Fig. 1-9.

al: With the exception of ground water in Malibu Valley (DWR Basin No. 4-22) ground waters along the southern slopes of the Santa Monica Mountains are not considered to comprise a major basin and accordingly have not been designated a basin number by DWR am: DWR has not designated basins for ground waters on the San Pedro Channel Islands.

P: Potential beneficial use

P: Potential beneficial use

I: Intermitten beneficial use

E,P, and I: shall be protected as required

^: Nearshore is defined as the zone bounded by the shoreline and a line 1000 feet from the shoreline or the 30-foot depth contours, whichever is further from the shoreline. Longshore extent is from Rincon Creek to the San Gabriel River Estuary.

- a: Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.
- b: Waterbodies designated as WET may have wetlands habitat associated with only a protion of the waterbody. Any regulatory action would require a detailed analysis of the area.
- c: Coastal waterbodies which are also listed in inland Surface Waters Table (2-1) or in Wetlands Table (2-4).
- d: Limited public access precludes full utilization.
- e: One or more rare species utilizes all ocean, bays, esturaries, and coastal wetlands for foraging and/or nesting.
- f: Aquatic organisms utilize all bays, esturaries, lagoons, and coastal wetlands, to a certain extent, for spawning and early development. This may include migration into areas which are heavily influenced by freshwater inputs.
- o: Marine Habitats of the Channel islands and Mugu Lagoon serve as pinniped haul-out areas for one or moe species (I.e., sea lions).
- p: Habitat of the Clapper Rail.
- an: Areas of Special Biological Significance (along coast from Latigo Point to Laguna Point) and Big Sycamore Canyon and Abalone Cove Ecological Reserves and Point Femin Marine Life Refuge.
- ar: Areas exhibiting large shellfish populations include Malibu, Point Dume, Point Fermin, White Point and Zuma Beach.

P: Potential beneficial use

I: Intermitten beneficial use

E,P, and I: shall be protected as required *Asterisked MUN designations are designated under SB 88-63 and RB-03. Some designations may be considered for exemptions at a later date (See pages 2-3 and 2-4 for more details). A: Nearshore is defined as the zone bounded by the shoreline and a line 1000 feet from the shoreline or the 30-foot depth contours, whichever is further from the shoreline.

- a: Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.
- b: Waterbodies designated as WET may have wetlands habitat associated with only a protion of the waterbody. Any regulatory action would require a detailed analysis of the area
- c: Coastal waterbodies which are also listed in inland Surface Waters Table (2-1) or in Wetlands Table (2-4).
- e: One or more rare species utilizes all ocean, bays, esturaries, and coastal wetlands for foraging and/or nesting.
- f: Aquatic organisms utilize all bays, esturaries, lagoons, and coastal wetlands, to a certain extent, for spawning and early development. This may include migration into areas which are heavily influenced by freshwater inputs.
- o: Marine Habitats of the Channel islands and Mugu Lagoon serve as pinniped haul-out areas for one or moe species (I.e., sea lions).
- w: These areas are engineered channels. All references to Tidal Prisms in Regional Board documents are functionally equivalent to estuaries.
- as: Most frequently used grunion spawning beaches. Other beaches may be used as well.
- at: Areas of Special Biological Significance or ecological reserves.

^{*:} This list may not be all inclusive. More areas may be added as information becomes available.

P: Potential beneficial use

I: Intermitten beneficial use

E,P, and I: shall be protected as required

- a: Waterbodies are listed multiple times if they cross hydrologic area or subarea boundaries. Beneficial use designations apply to all tributaries to the indicated waterbody, if not listed separately.
- b: Waterbodies designated as WET may have wetlands habitat associated with only a protion of the waterbody. Any regulatory action would require a detailed analysis of the area.
- c: Coastal waterbodies which are also listed in inland Surface Waters Table (2-1) or in Wetlands Table (2-4).
- d: Limited public access precludes full utilization.
- e: One or more rare species utilizes all ocean, bays, esturaries, and coastal wetlands for foraging and/or nesting.
- f: Aquatic organisms utilize all bays, esturaries, lagoons, and coastal wetlands, to a certain extent, for spawning and early development. This may include migration into areas which are heavily influenced by freshwater inputs.
- o: Marine Habitats of the Channel islands and Mugu Lagoon serve as pinniped haul-out areas for one or moe species (I.e., sea lions).
- p: Habitat of the Clapper Rail.
