**Subject:** Comments on The Boeing Co. Permit  
**Attachments:** ACME to RWQCB for Boeing Permit January 8 of 2015.pdf

Dear Mr. Ali,

SEE ATTACHED to view map

The above map shows the red dots to be radiological impacts in wells that are above the MCL and a closer look is needed in the placement of Outfall 009 as the Northern Buffer Zone (NBZ) of the Santa Susana Field Laboratory (SSFL) was created as a result of offsite contamination.

The watershed of the drains below Outfall 009 into the American Jewish University's Brandeis-Bardin Campus where children are coming in contact with stormwater runoff that percolates into these monitoring wells aquifers.

Boeing has violated their 2010 permit numerous times and the water remains contaminated. Instead of creating more stringent permit requirements to protect public health, your board is now proposing to relax them even more. This is not a protection of Human Health and the Environment.

To the South, the stormwater runoff from the SSFL impacts the Los Angeles River as the field lab is its headwaters. Keep in mind the past violations of Outfall 002, up to \$471,000, that's multiple violations.

The RWQCB should be concerned about the allegations in the below document...

Regional Water Board is headed by Charlie Stringer, a Principal in a firm employed by Boeing to push for reduced cleanup standards on the site, essentially pushing for less public protection. Mr. Stringer is in a position of influence even when not present at meetings which creates a conflict of interest.

Thank you for considering these comments. The Community looks forward to Ensure a Proper Cleanup of the Santa Susana Field Laboratory, it's Related Facilities and their Surrounding Communities.

Sincerely,

William Preston Bowling
