DIRECTIVE TO SUBMIT A REPORT OF WASTE DISCHARGE, PURSUANT TO THE CALIFORNIA WATER CODE, SECTION 13260, FOR LISA KRASNOFF PROPERTY AT 23655 MALIBU ROAD, MALIBU (FILE NO. 09-039)

The California Regional Water Quality Control Board, Los Angeles Region (Regional Board), is the public agency with primary responsibility for the protection of ground and surface water quality for all beneficial uses within major portions of Los Angeles and Ventura Counties, including your site. Sections 13260(a) and 13260 (a) (1) of the California Water Code (CWC), require that a discharger of wastewater which could affect the waters of the State shall file with the Regional Board a Report of Waste Discharge (RoWD)/Form 200 for discharge from an on-site wastewater disposal system (OWDS). The Report of Waste Discharge (RoWD)/Form 200 must be signed by the legal owner of the facility.

Based on the City of Malibu's records and our record, you are allegedly discharging waste from an OWDS to land without having filed a RoWD for Waste Discharge Requirements (WDR) from this Region Board. Section 13260 of the California Water Code (CWC) provides the Regional Board with the authority to require that you furnish information about that discharge.

Enclosed are the Form 200, a copy of the Appendix and Instructions to the Form 200 (Appendix and Instructions) and a copy of the Annual Fee Schedule. In order to provide a complete characterization of your discharge, refer to the Appendix and Instructions for guidance on providing the technical information required. In addition, you are required to attach the following information to your RoWD:

1. A list of all components of the on-site wastewater treatment system, among which may include: septic tanks, leachfields, and seepage pits/cesspools for the businesses located at the subject site. The information on the on-site wastewater disposal system for the above listed properties must include plot plans and drawings of these facilities, depths (top and bottom) of all leachfields, seepage pit dimensions (diameter, cap depth and total depth), and soil permeability and infiltration/percolation data.
2. A characterization of the type of wastewater and measurements or an estimate of the flow of wastewater discharged from your facility.
3. Seasonal (minimum and maximum) vertical separation between the bottom of the leachfields or seepage pits and the shallowest elevation of the water table, and a

California Environmental Protection Agency

Our mission is to preserve and enhance the quality of California's water resources for the benefit of present and future generations
