Mendocino County
WDID# 1B11153CNME

The CAO/13267 Order described herein is hereby amended as follows to reduce the number of inspections due to rainfall triggering events:

Directive 2 d. as provided in Order No. R1-1010-0089 states the following:

- d. A monitoring plan for all site remediation to determine the success of sediment remediation efforts and re-vegetation. The monitoring plan must include regularly scheduled inspections a minimum of three times per rainy season until the Site is stabilized and erosion is not ongoing. Each monitoring event must include a report within 30 days that describes the inspection findings, and provides corrective actions for any failures of the Site(s); failures include but are not limited to, erosion controls and re-vegetation success. For the first three years after restoration, provide a rainfall related inspection trigger.

Directive 2 d. as amended by Amendment No. 1 to Order No R1-2010-0089:

- d. Monitoring shall be conducted during or following wet weather conditions (rainfall) twice annually: Inspection 1 prior to January 15, and Inspection 2 prior to April 1, with the Inspection 1 monitoring report due on January 15, and the Inspection 2 monitoring report due on April 1 of each year until the site is re-vegetated in accordance with CAL FIRE stocking requirements, or the Regional Water Board determines the site is sufficiently stabilized by natural vegetative growth to no longer represent a threat to water quality. A Final Monitoring Report summarizing site recovery must be submitted within 30 days following the final inspection in which Regional Water Board staff and other interested agencies determine that the Site is adequately stabilized.
