Problem Description

On July 8, 2015, an approximately 300-gallon, single-walled steel Underground Storage Tank (UST), most probably a farm tank, was removed from the Site. The presence of petroleum hydrocarbons in the immediate vicinity of the former UST was documented.

Actions Completed

The UST was removed along with approximately 18 cubic yards of impacted soil. A soil and groundwater investigation was performed and demonstrated that the contamination is restricted to the immediate area of the former UST. No water supply wells were impacted by this contamination.
