

OMG ... You have to be kidding me ? The SWB is waving the thermal conditions for Sacramento's "sewer water" that's being dumped into the delta daily by the ton; but they want farmers using drip irrigation to apply, pay for and draft discharge plans ? GIVE ME A FRICKEN BREAK.

Is this what this means ? That the "hot water" i.e. contaminated water coming from the raw sewage of Sacramento (which includes sewage from about 7,000 DWR mad SWB employee's) can exempt themselves from the law ? When regulators can exempt their own contamination from a "Waters Of The State" eco system, and yet still hold the public or select individuals responsible for following regulatory rules; That's whats known as abuse of power.
