Susan,
We expect the chemistry lab results for this June sampling event to be available the last week of July.
Thanks,
Rachel

Rachel,
Thank you for sending a water toxicity exceedance report for June 2011. It will be interesting to find out if there are any associated chemistry exceedances.

Dear Susan,

As required in the Monitoring and Reporting Program (Order No. R5-2008-0005) for Coalition Groups, an Exceedance Report is being submitted to address the following issues: a) the exceedances, b) the follow-up monitoring, and c) any analysis or other actions the Coalition Group may take to address the exceedances.

a.) On June 14, 2011, normal monitoring (NM) and Management Plan Monitoring (MPM) were conducted in the ESJWQC region. Water was collected for analysis of water column toxicity. Toxicity to *Selenastrum capricornutum* occurred in the grab and field duplicated samples collected from Yori Grove Drain @ East Taylor Rd. See attached Table 1 for details on this exceedance. Site pictures and flow data for all sites sampled during this event were provided to the CVRWQCB by email on June 17, 2011 and are also available on the MLJ-LLC Sharepoint website (<http://sharepoint.mlj-llc.com/mlj-db/database/forms/allitems.aspx>).

b.) Yori Grove Drain @ East Taylor Rd was monitored for all Assessment Monitoring constituents during the June sampling event. Assessment Monitoring will take place again at this site on July 12, 2011.

c.) This is the first time Yori Grove Drain @ East Taylor Rd samples have tested toxic to *Selenastrum capricornutum*. Algae growth was greater than 50% compared to the control and therefore a TIE was not initiated. When results from the chemistry laboratory arrive the Coalition will report any chemistry exceedances at that time. All new exceedances requiring Management Plans as well as Management Plan Monitoring results will be evaluated in the ESJWQC Annual Management Plan Update Report to be submitted on April 1, 2012.

Mike Johnson
