**Subject:** MID Spill Sites

Good morning,

The issue of elevated copper concentrations in Zone 6 was discussed during the last two Quarterly meetings, and potential contribution of algaecide applications to copper exceedances. The AMR indicates that Madera Irrigation District has a number of spill sites that feed into Cottonwood Creek, and I would like to find out more about the connections between the monitored subwatersheds and MID network of water conveyances:

Which of the monitored subwatersheds are affected by water from MID canals?

Do you know where the MID spill sites are?

Is the discharge from MID canals direct or via other water bodies?

Thanks,

Jelena
