

William Hagan

In 2005, Will joined the Marine Pollution Studies Laboratory (Moss Landing Marine Laboratories) to develop and implement infrastructure and quality assurance systems for governmental, private sector, academic, and non-profit organizations. These systems have promoted comparability within large scale programs (e.g., SWAMP, California Bay-Delta Authority Mercury Studies) and have more recently been tailored to unique applications like the California Department of Fish and Wildlife's Instream Flow Program and the National Oceanic and Atmospheric Administration's *Deepwater Horizon* oil spill restoration.
