Subject: Transmittal of the *Third Quarter of 2014 Agricultural Treatment Units Monitoring Report Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

Dear Ms. Kemper and Ms. Dernbach:

Enclosed is Pacific Gas and Electric Company's (PG&E's) Third Quarter of 2014 Monitoring Report for the Agricultural Treatment Units (ATUs) in Hinkley, California. The report covers the period from July 1 through September 30, 2014. This report being submitted under the Monitoring and Reporting Program (MRP) specified in the ATU Waste Discharge Requirements (WDRs) set forth in California Regional Water Quality Control Board, Lahontan Region (Water Board), Board Order No. R6V-2014-0023.¹ No violations of the WDRs occurred over this reporting period.

Facility Monitoring and Operations

The Ranch ATU was expanded during the Third Quarter of 2014, and the system was restarted on September 15. The ATUs were operated in compliance with the discharge specifications provided in the WDRs during the reporting period. During site inspections, no ponding more than 24 hours was recorded, no issues were recorded at the perimeter site fencing, and ponded water did not leave the ATUs.

Soil Monitoring

Soil samples were collected in accordance with the WDRs and analyzed for hexavalent chromium [Cr(VI)], total chromium, [Cr(T)], and uranium. Trivalent chromium was calculated as the difference between Cr(T) and Cr(VI).

Groundwater Monitoring

Groundwater monitoring was conducted in accordance with the WDRs. Baseline sampling for agricultural byproducts mitigation measure WTR-MM-5 continued for the MRP ATU compliance wells and additional monitoring locations site-wide. Two more quarters of baseline data will be collected as part of the four quarter duration mitigation measure WTR-MM-5 investigation. The WTR-MM-5 investigation report is estimated to be submitted by June 30, 2015.

Domestic and Agricultural Well Monitoring Results

Monitoring activities were conducted in accordance with the WDRs for Environmental Impact Report (EIR) Mitigation Measures WTR-MM-2a and WTR-MM-2b, which specify that private domestic and agricultural wells are monitored to ensure that chromium and/or agricultural byproducts are not adversely affecting these wells due to ATU operations.

Pre-remedial sampling began during the Second Quarter of 2014, and additional quarters of pre-remedial sampling data will be needed before pre-remedial reference concentrations can be established. The

¹ California Regional Water Quality Control Board, Lahontan Region (Water Board). 2014. *Board Order No. R6V-2014-0023, Waste Discharge Requirements for Pacific Gas and Electric Company Groundwater Remediation Project, Agricultural Treatment Units* WDID No. 6B361403002, San Bernardino County. March 12.

methodology for establishing pre-remedial reference values to identify actually affected domestic wells under EIR mitigation measures WTR-MM-2a and WTR-MM-2b is currently being discussed with the Water Board²; on October 9, 2014, the Water Board issued a letter requesting public comment to review the proposed methodology.³ Identification of actually affected domestic wells under EIR mitigation Measures WTR-MM2a and WTR-MM2b (if any) will be conducted upon Water Board approval of the methodology.

During the Third Quarter of 2014, there were no domestic wells with Cr(VI) or Cr(T) concentrations that exceeded background concentrations for the first time. Therefore, no “actually affected domestic wells” were identified during the reporting period. For EIR mitigation Measures WTR-MM2a and WTR-MM2b, no potentially affected wells were identified based on annual computer modeling performed during the Second Quarter of 2014.⁴

A “potentially affected domestic well” is partially defined as a domestic supply well that has an increase in chromium concentrations due to remediation actions. The ATU WDRs do not specify what should be considered to be an “increase in chromium concentration” or what methods might be employed to make such a determination in the WTR-MM-2a domestic wells. Also, in the event that an increase in chromium concentration is identified, the ATU WDRs do not specify the methods to determine if the increase is due to remedial actions. Criteria and methodologies to make these determinations need to be developed. In the interim, for the current data set, a statistical evaluation of Cr(VI) trends was performed using data for all domestic wells in the WTR-MM-2a program with eight or more sample results between January 2011 and September 30, 2014. The trend analysis was conducted to identify domestic supply wells (if any) that might exhibit increasing chromium concentration trends. As summarized in this report the non-parametric Mann-Kendall statistical trend analysis of 60 domestic wells in the WTR-MM-2a area did not indicate increasing trends at any of these wells. Therefore, no potentially affected wells were identified.

To evaluate agricultural byproducts potentially originating from the ATUs as part of WTR-MM-2b, monitoring well data for six wells with available data for the proposed baseline period (April 1, 2012, through March 31, 2014)⁵ were also evaluated to assess whether there are monitoring wells potentially affected by ATU operations that could indicate potentially affected domestic or agricultural supply wells. During the Third Quarter of 2014, nitrate concentrations decreased from the proposed maximum baseline concentrations reported from April 1, 2012, through March 31, 2014⁵ at all six monitoring wells included in the evaluation. No potentially affected domestic or agricultural wells were identified based nitrate data. TDS concentrations either decreased or did not exhibit increases exceeding 20 percent for five of the six monitoring wells evaluated. At one of the six wells (MW-85S), the TDS concentration in Third Quarter 2014 increased 38 percent over the proposed maximum baseline TDS concentration reported for April 1, 2012 through March 31, 2014.⁵ However, the Third Quarter of 2014 concentration did not exceed the maximum historical TDS concentration reported for this well in October 2010.

Based on the evaluation presented in this report, the calculated TDS increase at MW-85S during the Third Quarter of 2014 (compared with the proposed maximum concentration from April 1, 2012, through March

² Pacific Gas and Electric Company. 2014. *Implementation of Mitigation Measures WTR-MM-2a and WTR-MM-2b*. Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California. August 14.

³ Regional Water Quality Control Board (Water Board). 2014. *Public review Opportunity, Implementation of Mitigation Measures Requiring Replacement Water for Impacts Due to Remedial Actions*, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California. October 9.

⁴ ARCADIS. 2014. *Revised Report Of Waste Discharge for Proposed Agricultural Treatment Units*, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California. May 28.

⁵ The methodology for evaluating TDS concentration increase over a baseline maximum TDS concentration reported during the previous eight quarters is currently a proposed methodology set forth in PG&E's August 14, 2014 submittal and which is subject to public review opportunity pursuant to the Water Board's October 9, 2014 publication.

31, 2014) is not considered to indicate an actually affected monitoring well. Available data indicate that TDS at MW-85S is associated with elevated TDS that was present in this area before ATU operations were initiated. Therefore, no potentially affected domestic or agricultural supply wells were identified based on monitoring well data.

Hydraulic Control

The area of hydraulic containment observed during this reporting period was comparable to (shallow zone of Upper Aquifer), or greater than (deep zone of Upper Aquifer), the Second Quarter of 2014 reporting period. Cumulative groundwater extraction rates increased during the Third Quarter of 2014 (1,339 gpm) compared to the Second Quarter of 2014 (1,154 gpm), as air temperatures and evapotranspiration rates continued their normal seasonal increase allowing for increased irrigation (and extraction) rates.

Aquifer Drawdown and Compliance with Mitigation Measure WTR-MM2c

The aquifer drawdown mitigation measure (WTR-MM-2c) is intended to establish baseline water levels in the area where domestic and agricultural wells are near remediation activities and to monitor those levels to establish whether remediation efforts are causing drawdown impacts to private supply wells. There are 20 privately owned active or inactive domestic and agricultural wells located within the WTR-MM-2c baseline sampling area.

As discussed in the Second Quarter of 2014 ATU Monitoring Report,⁶ PG&E has identified challenges with the methodology described in the EIR, which requires that manual water level measurements are obtained from private domestic and agricultural wells. For the reasons included in the Second Quarter of 2014 ATU Monitoring Report, PG&E continues to collect groundwater level data from monitoring wells near the private domestic and agricultural wells selected to monitor potential adverse drawdown impacts. This report summarizes the estimated trigger level elevations that would result in loss of 25 percent or more of the wetted screen interval of the private supply wells. During the Third Quarter of 2014, water level measurements from PG&E's monitoring wells indicate that no private domestic or agricultural supply wells were affected.

PG&E renews the request included in the Second Quarter of 2014 ATU Monitoring Report for Water Board approval to use monitoring wells near the domestic and agricultural wells identified in mitigation measure WTR-MM-2c for compliance with WTR-MM-2c to monitor for drawdown during this reporting period and future reporting periods instead of collecting groundwater level measurements at the private wells. PG&E believes this alternate method meets the intention of the mitigation measure WTR-MM-2c, providing more representative groundwater level data and without routine disruption to private well owners.

Please call Iain Baker at (415) 265-5196 if you have any questions regarding this report.

Sincerely,

Iain Baker on behalf of

Executive Summary

This monitoring report addresses the period from July 1 through September 30, 2014 (Third Quarter of 2014), and summarizes the results of operations, maintenance, and monitoring at the Agricultural Treatment Units (ATUs). This report is being submitted under the Monitoring and Reporting Program (MRP) specified in the ATU Waste Discharge Requirements (WDRs) set forth in California Regional Water Quality Control Board, Lahontan Region (Water Board), Board Order No. R6V-2014-0023 (Water Board, 2014a).

For the 3-month period ending September 30, 2014, the combined ATU discharge rate was 1,339 gallons per minute (gpm). The annual average pumping rate for the extraction wells discharging groundwater to the ATUs from October 1, 2013, through September 30, 2014, was 1,111 gpm. The total volume of groundwater applied to the ATUs during the reporting period was approximately 178 million gallons. The cumulative volume discharged to the ATUs from start-up through September 30, 2014, is approximately 3.0 billion gallons.

Important findings for the Third Quarter of 2014 are summarized in Table ES-1.

TABLE ES-1

Summary of Findings Agricultural Treatment Units

*Third Quarter of 2014 Agricultural Treatment Units Monitoring Report,
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

WDR and Order Requirement	Compliance
Facilities Monitoring	The ATUs were operated and monitored in compliance with the discharge specifications provided in the WDRs. During site inspections, no ponding more than 24 hours occurred, no issues were recorded at the perimeter site fencing, and ponded water did not leave the ATUs.
Plant Tissue Monitoring	No plant tissue sampling was conducted during the Third Quarter of 2014. The next plant tissue sampling is scheduled for the Fourth Quarter of 2014.
Soil Monitoring	Soil sampling for Cr(VI), Cr(T), and uranium was conducted in accordance with the WDRs. Cr(III) was calculated as the difference between Cr(VI) and Cr(T). Uranium concentrations ranged from 0.73 to 1.5 mg/kg. Cr(VI) concentrations were all non-detect. Cr(T) concentrations ranged from 2.6 mg/kg to 11 mg/kg and the calculated Cr(III) concentrations ranged from 2.5 to 10.9 mg/kg. The next soil sampling event is scheduled for the First Quarter of 2015.
Groundwater Monitoring	Monitoring well, extraction well, and combined effluent sampling for Cr(T), Cr(VI), nitrate, and TDS was performed in accordance with ATU WDRs to: <ul style="list-style-type: none"> • Develop baseline data to assess chromium remediation effectiveness • Develop baseline concentrations of ATU byproducts • Provide advance warning for domestic wells that could potentially be affected by remedial actions in the future.
WTR-MM-5 Byproducts Investigation Sampling	Monitoring wells, extraction wells, and combined irrigation water samples were analyzed as part of the year-long agricultural byproducts investigation being completed for EIR mitigation measure WTR-MM-5. WTR-MM-5 requires that TDS, dissolved uranium, and other radionuclide indicators (gross alpha and gross beta) are analyzed at sampling locations associated with existing ATUs quarterly for 1 year. The results of the agricultural byproducts investigation will be reported within three months of investigation completion in 2015.
Hydraulic Containment	The area of hydraulic containment observed during the reporting period was comparable to (shallow zone of Upper Aquifer), or greater than (deep zone of Upper Aquifer), the Second Quarter of 2014 reporting period. Cumulative groundwater extraction rates increased during the Third Quarter of 2014 (1,339 gpm) compared with the Second Quarter of 2014 (1,154 gpm) as air temperatures and evapotranspiration rates continued their normal seasonal increase allowing for increased irrigation (and extraction) rates.

Summary of Findings Agricultural Treatment Units

*Third Quarter of 2014 Agricultural Treatment Units Monitoring Report,
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

WDR and Order Requirement	Compliance
Domestic and Agricultural Well Monitoring	Groundwater sampling activities were conducted in accordance with the WDRs for EIR Mitigation Measures WTR-MM-2a and WTR-MM-2b.
Chromium (WTR-MM-2a)	<p>The methodology for establishing pre-remedial reference values to identify actually affected domestic wells under this EIR mitigation measure is currently being discussed with the Water Board, per <i>Implementation of Mitigation Measures WTR-MM-2a and WTR-MM-2b, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California</i> (PG&E, 2014a). Identification of actually affected domestic wells under EIR mitigation Measure WTR-MM2a (if any) will be conducted upon Water Board approval of the methodology.</p> <p>There were no domestic wells with Cr(VI) or Cr(T) concentrations exceeding the background levels of 3.1 or 3.2 µg/L, respectively, for the first time (CH2M HILL, 2007). Two domestic wells (28-21 and 28-65) have previously exceeded Cr(VI)/Cr(T) concentrations of 3.1/3.2 µg/L. During the Third Quarter of 2014, well 28-21 did not exceed 3.1/3.2 µg/L concentrations (Table 6-2). PG&E purchased the property containing well 28-65 during the reporting period, so this well was not sampled. Therefore, no “actually affected domestic wells” were identified during the reporting period.</p> <p>A “potentially affected domestic well” is partially defined as a domestic supply well that has an increase in chromium concentrations due to remediation actions. The ATU WDRs do not specify what should be considered to be an “increase in chromium concentration” or what methods might be employed to make such a determination in the WTR-MM-2a domestic wells. Also, in the event that an increase in chromium concentration is identified, the ATU WDRs do not specify the methods to determine if the increase is due to remedial actions. Criteria and methodologies to make these determinations need to be developed. In the interim, for the current data set, a statistical evaluation of Cr(VI) trends was performed using data for all domestic wells in the WTR-MM-2a program with eight or more sample results between January 2011 and September 30, 2014. The trend analysis was conducted to identify domestic supply wells (if any) that might exhibit increasing chromium concentration trends. As summarized in this report the non-parametric Mann-Kendall statistical trend analysis of 60 domestic wells in the WTR-MM-2a area did not indicate increasing trends at any of these wells. Therefore, no potentially affected wells were identified.</p> <p>No potentially affected domestic wells were identified based on annual computer modeling conducted during the Second Quarter of 2014 (ARCADIS, 2014a).</p>
Agricultural Byproducts (WTR-MM-2b)	<p>As required in the WDRs, a year of baseline sampling for agricultural byproducts is being conducted to establish reference concentrations for TDS, nitrate, dissolved uranium, and other radionuclides. When the year of baseline sampling is completed, PG&E will be able to evaluate whether there are actually affected domestic wells. Because the 1 year of baseline sampling began during the Second Quarter of 2014 and has not been completed, there are no actually affected domestic or agricultural supply wells at this time.</p> <p>The methodology for establishing pre-remedial reference values to identify actually affected domestic, agricultural, and monitoring wells under this EIR mitigation measure is currently being discussed with the Water Board (PG&E, 2014a). Identification of actually affected monitoring wells (and domestic/agricultural supply wells once enough data are obtained) under EIR mitigation Measure WTR-MM2b (if any) will be conducted upon Water Board approval of the methodology.</p> <p>Nitrate and TDS data were evaluated at six monitoring wells outside of the hydraulic capture zone with at least four quarters of data available to estimate baseline conditions. Nitrate and TDS concentrations exceeded the MCL (10 mg/L as nitrogen) or SMCL (500 mg/L), respectively at all six monitoring wells during the proposed baseline monitoring period (April 1, 2012 through March 31, 2014)¹ used for initial comparison. During the Third Quarter of 2014, nitrate concentrations decreased from the proposed maximum baseline concentrations for all six wells. TDS concentrations either decreased or did not exhibit increases exceeding 20 percent for five of the six wells. At one of the six wells, MW-85S, the TDS</p>

¹ The methodology for evaluating TDS concentration increase over a baseline maximum TDS concentration reported during the previous eight quarters is currently a proposed methodology set forth in PG&E’s August 14, 2014 submittal and which is subject to public review opportunity pursuant to the Water Board’s October 9, 2014 publication.

TABLE ES-1

Summary of Findings Agricultural Treatment Units

*Third Quarter of 2014 Agricultural Treatment Units Monitoring Report,
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

WDR and Order Requirement	Compliance
Drawdown (WTR-MM-2c)	<p>concentration of 2,700 mg/L increased 38 percent over the proposed baseline period maximum TDS concentration of 1,960 mg/L (based on TDS data from April 1, 2012, through March 31, 2014) but did not exceed the maximum historical TDS concentration of 3,480 mg/L reported for this well in October 2010 (Appendix E, Table E-1). Based on the historically higher detection at this monitoring well in October 2010, compared with the Third Quarter of 2014 result (and additional evaluation), the TDS increase at MW-85S is not likely to be attributable to permitted ATU operations and is more likely a result of previously elevated TDS due to decades of previous agricultural operations in this area. Therefore, no potentially affected domestic or agricultural supply wells were identified due to ATU operations, based on the MW-85S monitoring well data.</p> <p>Further, no potentially affected domestic or agricultural supply wells were identified based on annual computer modeling (ARCADIS 2014a, b, c). The next computer modeling is scheduled for February 2015.</p> <p>The aquifer drawdown mitigation measure (WTR-MM-2c) is intended to establish baseline water levels in the area where domestic and agricultural wells are near remediation activities and to monitor those levels to establish whether remediation efforts are causing drawdown impacts to private supply wells. There are 20 privately owned active or inactive domestic and agricultural wells located within the WTR-MM-2c areas. The WDRs require that drawdown is monitored by collecting manual water level measurements at these private wells.</p> <p>PG&E has taken several actions to comply with the WDRs; however, well construction information is not available for 6 of the 20 supply wells, and there are no access points to obtain manual water levels at any of the 20 private supply wells. PG&E surveyed 19 of the 20 wells (one owner refused access) and determined that a significant well retrofitting effort, and disturbance of normal private well operations, would be required to make obtaining manual water level measurements possible. It is estimated that, after well retrofitting activities provided access for manual water level measurements, PG&E would need to coordinate with the private well owners each time a manual water level was needed and request that the well be shut off for 48 hours to obtain meaningful water level measurements.</p> <p>Because groundwater levels could not be obtained from the private supply wells, without significant disturbance to domestic or agricultural supply well operations, groundwater level data was collected from monitoring wells located near the private domestic and agricultural wells identified in mitigation measure WTR-MM-2c instead. The groundwater levels from the monitoring wells and the estimated trigger level elevations that would cause 25 percent or more of the private supply well wetted screens to become dry, indicate that no private domestic or agricultural supply wells were adversely affected by drawdown during the reporting period.</p>

Notes:

µg/L = micrograms per liter

ATU = Agricultural Treatment Unit

Cr(III) = trivalent chromium

Cr(T) = total dissolved chromium

SECTION 1

Introduction

This monitoring report is being submitted under the Monitoring and Reporting Program (MRP) specified in the Agricultural Treatment Unit (ATU) Waste Discharge Requirements (WDRs) set forth in California Regional Water Quality Control Board, Lahontan Region (Water Board), Board Order No. R6V-2014-0023 (Water Board, 2014a). Authorization to operate the ATUs was granted by the Water Board in the *Notice of Applicability of Waste Discharge Requirements for Agricultural Treatment Units*, dated August 1, 2014 (Water Board, 2014b). On October 1, 2014, the Water Board accepted the Southern Agricultural Treatment Unit Monitoring Program (Water Board, 2014c). The ATUs are components of the remedy for hexavalent chromium (Cr[VI]) remediation in groundwater at the Pacific Gas and Electric Company (PG&E) Compressor Station in Hinkley, California. This Third Quarter of 2014 Monitoring Report covers the period from July 1 through September 30, 2014 (Third Quarter of 2014). Figure 1-1 provides a location map for the site. This report was prepared on behalf of PG&E by CH2M HILL (contractor for ATU groundwater, soil, plant tissue, and compliance monitoring) and ARCADIS (contractor for ATU operations and operational compliance).

PG&E operates a gas compressor station at 35863 Fairview Road in Hinkley, San Bernardino County, California. The station began operating in 1952. The facility discharged cooling tower water containing Cr(VI) to evaporation ponds until 1964, when Cr(VI) was replaced by a different corrosion inhibitor. Ultimately, the ponds were taken out of service and replaced with new, lined evaporation ponds. Groundwater affected by Cr(VI) extends to the north and north-northwest from the compressor station.

Operating the ATUs involves extracting chromium-affected groundwater and applying this groundwater to cropland to grow fodder crops. ATU operations enhance both the hydraulic containment and treatment of groundwater affected with Cr(VI). Groundwater containing Cr(VI) is extracted by the ATU extraction wells, delivered to agricultural crops and used as irrigation water on the ATUs where it enters the root zone. Microbial activity in the root zone of the crops creates reducing geochemical conditions that reduce dissolved Cr(VI) to relatively insoluble trivalent chromium (Cr[III]), resulting in treatment of the extracted groundwater. As groundwater is extracted to provide irrigation water for these crops, a large area of hydraulic capture has developed providing hydraulic containment of the Cr(VI) plume.

The current ATU area consists of five ATUs comprising a combined area of approximately 249 acres. Figure 1-2 shows the location of the ATUs operating at the Site, which include the Desert View Dairy (DVD) (formerly permitted as a Land Treatment Unit [LTU]), Gorman ATU (Gorman North¹ and Gorman South²), Cottrell, Ranch, and Yang ATUs. During the Third Quarter of 2014, the Ranch ATU was expanded to include approximately 19 additional acres. This expansion increases the total area farmed at this ATU to approximately 61 acres. All currently active ATUs are considered to be within Operable Unit 2 (OU2). A large portion of the expanded Ranch ATU field area is within OU1, with a smaller portion located in OU2 (Figure 1-1); however, because groundwater extracted from OU2 provides irrigation water for the Ranch ATU, the Ranch ATU is considered to be a part of OU2.

Construction of the new Community East ATU, located south of Highway 58, also began during the Third Quarter of 2014. The Community East ATU is considered to be within OU1. Baseline groundwater sampling is being completed during the Fourth Quarter of 2014, and laboratory results of irrigation and receiving water quality will be provided in a separate notification no later than 2 weeks prior to Community East ATU startup, as required by Section I.B.5 of the WDR.

¹ Gorman North and Gorman South are collectively considered a single ATU.

² IBID.

Table 1-1 summarizes the chronology of operations and other general information for each ATU. General ATU information is summarized as follows in Exhibit 1-1.

EXHIBIT 1-1

Summary of General Information for the Agricultural Treatment Units

Component	DVD	Ranch	Gorman	Cottrell	Yang
Acreage	73	61	56	26	33
Operation began	September 2004	June 2011	March 2011	May 2011	April 2013
Irrigation system	Subsurface drip	Drag drip	Drag drip	Drag drip	Drag drip
Number of available extraction wells	12	5	Up to 14 extraction wells supply these 3 ATUs		

ATU = agricultural treatment unit

DVD = Desert View Dairy

The expansion of the Ranch ATU and construction of the Community East ATU are part of an additional 91 acres of ATU farming that were proposed in the *Revised Report of Waste Discharge for Proposed Agricultural Treatment Units, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California* (ROWD) (ARCADIS, 2014a). The additional 91 acres of farming will increase irrigation capacity, allowing for more groundwater extraction in areas with higher concentrations of Cr(VI), increases in year-round groundwater extraction rates, and enhancement of hydraulic containment and chromium treatment. The current and proposed acreages are within the WDR limit of 500 acres.

SECTION 2

ATU Monitoring, Extraction Rates, Volumes, and Maintenance

This section presents ATU site facilities monitoring observations, and operation and maintenance information for the DVD, Gorman, Cottrell, Ranch, and Yang ATUs as required by the MRP for the reporting period (Water Board, 2014a). Groundwater quality data for the ATU extraction wells and irrigation water are presented with the monitoring well groundwater data in Section 6.

2.1 Site Facilities Maintenance

Figure 1-1 shows the location of the ATUs. The ATUs were operated in compliance with WDRs during this reporting period. At least two times each week the ATUs are visually inspected with the following observations documented:

- Runoff and drainage at control facilities
- Perimeter site fencing condition
- Presence of ponding and signs of irrigation water runoff from fields

Table 2-1 presents the facility maintenance and operations log. The following were found during this reporting period:

- No ponding of a duration more than 24 hours occurred
- No breaches or other issues were recorded at the perimeter site fencing
- Runoff did not leave the ATUs

To control root intrusion into the DVD ATU subsurface drip irrigation system, a hydrogen peroxide and citric acid solution treatment was performed once during this reporting period. This treatment was applied in areas where root intrusion had previously occurred. The event was conducted on September 23 to 25.

Table 2-1 provides the quantities of the chemicals used.

2.1.1 Expansion of the Ranch ATU

Expansion of the Ranch ATU was completed during the Third Quarter of 2014. Prior to Ranch ATU expansion, an old agricultural supply well (26-28) located within the expansion area was abandoned on August 28, 2014. The log for the well abandonment is included in Appendix A. As described in the ROWD (ARCADIS, 2014a), current extraction wells (IW-01, IW-02, IW-03, EX-29, and EX-30) will continue to provide water to the proposed Ranch ATU; hence, additional extraction wells and piping are not currently planned. However, groundwater extracted from these and other extraction wells located south of the railroad tracks may also be applied to the northern ATUs (i.e., the DVD, Yang, Cottrell, or Gorman ATUs), as needed, to optimize chromium mass removal and hydraulic capture. In addition, groundwater extracted from the DVD extraction wells (or other wells north of the railroad tracks) may be applied to Ranch ATU if the need arises. In the current pumping plan, groundwater extracted from EX-29 and EX-30 will be routed to the South Central ReInjection Area In Situ Reactive Zone as needed when the agricultural water demand at the Ranch ATU is low.

The original Ranch ATU covered approximately 41.7 acres and used drag-drip irrigation. The expansion adds approximately 19.4 acres around the original Ranch ATU (Figure 2-1), for a total area of approximately 61.1 acres. This expansion was accomplished by extending the current center pivot radius and adding articulating pivot ends that can reach and irrigate the irregularly shaped expansion area.

The original pivot radius was 760 feet, whereas the expanded Ranch ATU has a maximum radius of 1,018 feet. The expanded Ranch ATU will continue to use drag-drip irrigation to prevent aerial spraying of groundwater. Construction of the expansion began on August 18, 2014, and was completed in September 2014. The expanded Ranch ATU started up on September 15, 2014. The flow rate for irrigation water during the first approximately 2 weeks of operation (September 15 to 30) was an average of 311 gallons per minute (gpm). No significant ponded water or runoff occurred. As-built construction diagrams will be provided in the Fourth Quarter of 2014 ATU Monitoring Report.

2.1.2 Construction of Community East ATU

Construction of the Community East ATU began during the Third Quarter of 2014 with the construction of four extraction wells (SAU-EX-01 through SAU-EX-04; Figure 2-1). Extraction well development and construction of the Community East ATU will continue during the Fourth Quarter of 2014. In addition, four new monitoring wells for the southern ATUs will be installed per Water Board approval of the Southern ATU monitoring plan dated October 1, 2014 (Water Board, 2014c). Boring logs and well construction information will be provided in the Fourth Quarter of 2014 ATU monitoring report. Extracted Groundwater Flow Rates and Volumes

Figure 1-2 shows the location of the ATUs and the extraction well network available to supply irrigation water to them. The extraction rates for individual extraction wells supplying irrigation to the ATUs and the cumulative rates (and volume) of groundwater applied to each ATU are frequently monitored. The site supervisory control and data acquisition system collects and records flow rate and totalizer data at a frequency of every minute for most wells. In addition, field totalizer data are collected and recorded by field staff on a weekly or biweekly basis.

Table 2-2 presents the average monthly pumping rates for ATU supply wells. Table 2-3 presents the total monthly volumes and cumulative volume extracted from extraction wells for the Third Quarter of 2014 and since start-up. Table 2-4 presents the total monthly volumes and cumulative volume discharged to the ATUs for the Third Quarter of 2014 and since start-up. Table 2-5 compares the Third Quarter of 2014 discharge rates at individual ATUs to the rates from the previous Second Quarter of 2014 and the current quarter of the previous year (Third Quarter of 2013). Tables showing the historical pumping rates and volumes discharged at the ATUs since start-up are included in Appendix A.

Flow rates and volumes include the following:

- The average pumping rate for the past 12 months (October 2013 through September 2014) across all the ATUs was 1.600 million gallons per day (mgd) or 1,111 gpm.
- Third Quarter of 2014 discharge rates (cumulative rate of 1,339 gpm) are generally higher than the Second Quarter of 2014 discharge rates (cumulative rate of 1,154 gpm) due to seasonal changes in irrigation rates as temperatures increase throughout the summer months.
- The cumulative volume of groundwater discharged to the ATUs from start-up through September 30, 2014, was approximately 3.00 billion gallons.

The Third Quarter of 2014 rates discharged to individual ATUs were within 50 percent of the Third Quarter of 2013 rates discharged at four (DVD, Cottrell, Gorman, and Ranch) of the five ATUs. The 355 percent increase in flow rate at the Yang ATU compared with the Third Quarter of 2013 reflects the shutdown of Yang during most of the Third Quarter of 2013 as the full-scale system was being constructed. The Third Quarter of 2014 discharge rates are within the agronomic rates. The term “agronomic rate” refers to a rate of irrigation water applied that provides the needed amount of water and nutrient loading which grasses and crops require while minimizing excess water or nutrients percolating beyond the root zone. An agronomic rate performance report will be submitted at the end of the year.

2.2 Groundwater Flow Tracers

No groundwater flow tracers were discharged to groundwater during the reporting period. As specified in Board Order No. R6V-2014-0023, monitoring of groundwater flow tracers will be identified in a tracer study plan submitted to the Water Board before tracers are discharged to the aquifer.

2.3 Well Rehabilitation Chemicals

No chemical well rehabilitation was conducted during the reporting period. A tabulation of volumes of well rehabilitation chemicals historically used is presented in Table 2-6. During the Second Quarter of 2014, NuWell 120™ and NuWell 310™ were used to chemically rehabilitate extraction wells that will be used to supply water to the future Southern ATUs (EX-02, X-4, X-5, X-8, X-9, X-12, and X-13). As clarified in the *Response to Response to Comments on Second Quarter of 2014 Agricultural Treatment Units Monitoring Report* dated November 3, 2014 (PG&E, 2014c), NuWell 120™ contains 65 to 80 percent by weight food-grade phosphoric acid. Because phosphoric acid is on the list of approved well chemicals and compounds in Section II of the Agricultural Treatment Unit (ATU) Waste Discharge Requirements (WDR) Monitoring and Reporting Program (ATU MRP), the use of NuWell 120™ is compliant with the WDR, and orthophosphate is an appropriate marker constituent. NuWell 310™ is a proprietary polymeric acid. Nu-Well 310™ is certified to National Sanitation Foundation (NSF)/American National Standards Institute (ANSI) Standard 60 – Drinking Water Treatment Chemicals – Health Effects for use in potable well cleaning, pipeline cleaning, and filter cleaning. The MRP states: “Commercial mixtures of rehabilitation compounds that carry the following certifications/registrations valid in the state of California by the NSF may be used: NSF/ANSI 60-2005 (Drinking Water Treatment Chemicals –Health Effects): compounds with this certification are routinely used for rehabilitation of drinking water wells in California under the California Waterworks Standard” (California Code of Regulations Title 22, Section 64590: Direct Additives). Accordingly, the use of NuWell 310™ is compliant with the ATU MRP.

Sampling for orthophosphate as a marker constituent for this mixture of well rehabilitation chemicals was conducted during the Third Quarter of 2014, as discussed in Section 5.6.

Hydraulic Monitoring

This section presents hydraulic monitoring data for the Third Quarter of 2014 and a comparison of hydraulic containment during the current quarter compared to the previous quarter.

3.1 Hydraulic Monitoring Data and Aquifer Characteristics

The hydraulic gradients in the ATU area and the inferred capture zone from extraction wells are based on the groundwater levels measured in the shallow and deep zone wells of the Upper Aquifer, as shown on Figures 3-1 and 3-2, respectively. Average groundwater elevations during this reporting period were calculated by averaging pressure transducer data recorded at 30-minute intervals from July 1 through July 31, 2014. Additional manual water level data collected between July 1 and August 7 were also included on the groundwater contour maps to provide a more complete understanding of groundwater gradients. Groundwater field parameter data (called "Aquifer Characteristics" in Table E-6 of the MRP) and groundwater levels collected for ATU monitoring are provided in Tables B-1 and B-2 of Appendix B, respectively.

3.2 Hydraulic Control and Containment

Hydraulic containment continues to be achieved with year-round operation of numerous supply wells for the ATUs (DVD, Cottrell, Ranch, Gorman [Gorman North and Gorman South], and Yang) (Figures 3-1 and 3-2). During this reporting period, hydraulic containment of the western portion of the chromium plume was also achieved by groundwater extraction for the ATUs and Northwest Area extraction wells (pumping center) east of the Northwest Freshwater Injection (NWFI) system with localized freshwater injection at the NWFI system. During the Third Quarter of 2014, approximately 10.4 million gallons of freshwater were injected into six of the seven available NWFI wells, and more than 187 million gallons³ of groundwater were extracted from within the pumping center to supply the ATUs (extraction wells shown as gold shaded squares in the ATU areas shown on Figures 3-1 and 3-2) (CH2M HILL and ARCADIS, 2014a).

Evaluation of groundwater elevations and hydraulic gradients indicates that hydraulic control has been maintained over the shallow and deep zones of the Upper Aquifer, as shown by the dark blue dashed lines on Figures 3-1 and 3-2, respectively. During the Third Quarter of 2014, the area of hydraulic control in the shallow zone of the Upper Aquifer was comparable to the Second Quarter of 2014, as shown by the dashed pink lines (Second Quarter of 2014 capture zone) on Figure 3-1. During the Third Quarter of 2014, the area of hydraulic control in the deep zone of the Upper Aquifer was greater than the Second Quarter of 2014, as shown on Figure 3-2; this was due to increased groundwater extraction rates for the summer farming season.

³ The combined groundwater extraction volume within the pumping center includes supply wells for the ATUs and the Northwest Area extraction wells (EX-15, EX-16, EX-20, EX-29, and EX-30) that convey groundwater to the South Central In Situ Reactive Zone for treatment.

Plant Tissue and Soil Sample Analytical Results

This section discusses plant and soil analytical results for the Third Quarter of 2014.

4.1 Plant Tissue Results

Plant tissue sampling did not occur during the Third Quarter of 2014. The next semiannual plant tissue sampling event is scheduled for the Fourth Quarter of 2014.

4.2 Soil Results

The MRP requires collecting and analyzing soil samples at existing and new ATUs. For existing ATUs (OU2), soil samples from DVD, Gorman (North and South), Cottrell, Ranch, and Yang ATUs are collected at a rate of approximately one sample location per 20 field acres. These soil samples are collected at depths of 0.5 and 5 feet below ground surface (ft bgs). The soil samples from 0.5 ft bgs are analyzed for uranium (soluble salts) twice yearly. The soil samples from 0.5 and 5 ft bgs are analyzed for total dissolved chromium (Cr(T)) and Cr(VI) once every 2 years. The MRP specifies that Cr(III) (insoluble salts) should be sampled, but standard commercial analyses for Cr(III) for soil are unavailable. Therefore, Cr(III) is calculated as the difference between Cr(T) and Cr(VI). Extraction methods, analytical methods, and reporting limits are provided in Table 4-1.

During the Third Quarter of 2014, soil sampling for existing ATUs (OU2) was performed in July 2014. Figure 4-1 shows the soil sampling locations, and Table 4-2 summarizes the analytical results. Soil laboratory analytical results are included in Appendix C. The next ATU soil sampling event is scheduled for the First Quarter of 2015. Thirteen soil samples were collected from 0.5 ft bgs and were analyzed for uranium. Twenty-six soil samples were collected at depths of 0.5 and 5 ft bgs and were analyzed for Cr(VI) and Cr(T); Cr(III) concentrations for these samples were also calculated as the difference between Cr(T) and Cr(VI). The uranium concentrations ranged from 0.73 to 1.5 milligrams per kilogram (mg/kg). Cr(VI) concentrations were all non-detect. Cr(T) concentrations ranged from 2.6 to 11 mg/kg, and the calculated Cr(III) concentrations ranged from 2.5 to 10.9 mg/kg.

Baseline soil sampling for OU1 Southern ATUs will begin during the Fourth Quarter of 2014. For the proposed new Southern ATUs (OU1), prior to and during remediation, samples will be collected from 0.5 and 5 ft bgs at a rate of one sample location per 20 field acres. The soil samples from 0.5 ft bgs will be analyzed for uranium (soluble salts) twice yearly and inorganic arsenic and manganese on a yearly basis. The samples from 0.5 and 5 ft bgs will be analyzed for Cr(T) and Cr(VI) on a yearly basis. The MRP specifies that Cr(III) (insoluble salts) should be sampled, but standard commercial analyses for Cr(III) for soil are unavailable. Cr(III) will be calculated as the difference between Cr(T) and Cr(VI). Extraction methods, analytical methods, and reporting limits are provided in Table 4-1.

The MRP also requires statistical analysis of soils data to determine whether significant changes are occurring. Statistical analysis will begin when a statistically sufficient dataset (8 monitoring events) are available, and the methodology for statistical analysis will be summarized at that time.

Groundwater Monitoring of ATU Water Quality

This section summarizes the ATU monitoring programs in place for compliance with the MRP specified in Board Order No. R6V-2014-0023 (Water Board, 2014a; Water Board, 2014b). This section also presents the groundwater analytical results for extraction wells, irrigation water, and monitoring wells listed in the MRP, Table E-2 and E-3 (Water Board, 2014a) for the existing ATUs. Groundwater results for the ATU extraction wells and selected domestic and agricultural are also presented on the figures in this section for reference purposes. Domestic and agricultural supply well analytical data are presented in Section 6.

Groundwater sampling, laboratory analysis, and data management are conducted according to the methods and procedures established for the Site-wide Groundwater Monitoring Program (Site-wide GMP; CH2M HILL, 2014a) and applicable procedures described in the PG&E Program Quality Assurance Project Plan (CH2M HILL, 2013). Table 4-1 lists the laboratory analytical methods and reporting limits.

5.1 Pre-Remediation Water Quality Conditions

Unrelated to ATU operations, nitrate as nitrogen (nitrate) and total dissolved solids (TDS) concentrations are above the drinking water primary Maximum Contaminant Level (MCL) or secondary Maximum Contaminant Level (SMCL) in much of the Hinkley Valley, including the existing ATU areas. The primary sources of nitrate and TDS appear to be related to historical dairy and other livestock operations, decades of agricultural operations (including application of fertilizers and manure spreading), and septic systems located on private properties (CH2M HILL, 2014b).

Uranium and gross alpha are also present above the drinking water MCLs at many monitoring locations; however, these constituents are naturally occurring in Mojave Desert soils and rocks and are not present as a result of PG&E's remedial actions or compressor station operations (CH2M HILL, 2012; Water Board, 2014a).

Additional chromium, nitrate, TDS, and radionuclide data is provided in the following prior reports:

- *Agricultural Treatment Unit Report of Waste Discharge (ROWD) Addendum #3: Groundwater Modeling Evaluating Existing Nitrate and Total Dissolved Solids. Hinkley Compressor Station. Hinkley, California* (ARCADIS, 2014b)
- *Addition to Agricultural Treatment Unit Report of Waste Discharge Addendum #3: Groundwater Modeling Evaluating Existing Nitrate and Total Dissolved Solids on July 29* (ARCADIS, 2014c)
- *Second Quarter 2014 Groundwater Monitoring Report and Domestic Well Sampling Results* (CH2M HILL, 2014a)
- *Hinkley Area Nitrate Data Summary and Distribution through Fourth Quarter 2013, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*, where a larger dataset was used to develop nitrate contours site-wide (CH2M HILL, 2014b)
- *Radionuclide Data Summary Report, Pacific Gas and Electric Company Hinkley Compressor Station, Hinkley, California* (CH2M HILL, 2012)

5.2 Agricultural Byproducts Investigation (WTR-MM-5)

During the reporting period, ATU monitoring wells, additional monitoring wells, extraction wells, and the combined effluent (irrigation water) were sampled for analytes in the agricultural byproducts investigation being completed for the Environmental Impact Report (EIR) mitigation measure WTR-MM-5 (ICF International, 2013). Mitigation measure WTR-MM-5 requires that TDS, dissolved uranium, and other radionuclides (gross alpha and gross beta) be sampled at extraction wells and irrigation water sampling

locations associated with existing ATUs quarterly for 1 year. The investigation is estimated to be completed by March 31, 2015, when the results from four quarters of sampling have been validated. The Water Board will be notified of the completion of the investigation within 2 weeks (estimated to be April 14, 2015) via e-mail, per the requirement in the ATU Notice of Applicability (Water Board, 2014b). The results of the agricultural byproducts sampling will be reported within 3 months of completion of the investigation (report estimated to be submitted to Water Board by June 30, 2015).

5.3 Irrigation Water Quality

Table 5-1 presents the groundwater quality results for irrigation water applied to each ATU during the reporting period (Third Quarter of 2014) and the previous three quarters (12-month period). Appendix C contains laboratory analytical reports for irrigation water over the reporting period, and Appendix D contains historical groundwater quality data and trend graphs for the ATU irrigation water samples.

Irrigation water analytical results represent the combined groundwater quality from extraction wells supplying water to the ATU at the time of sampling; therefore, the water quality results for each irrigation water sample are variable from quarter to quarter depending on the extraction wells in use and flow rates during the time of sample collection. Irrigation water samples were analyzed for Cr(T), Cr(VI), nitrate, TDS, uranium, gross, alpha, and gross beta. As shown in Table 5-1 and the trend graphs in Appendix D, the Third Quarter of 2014 irrigation water results were generally comparable to previous monitoring data. Third Quarter of 2014 irrigation water analytical results for ATU irrigation water are summarized as follows:

- The maximum reported Cr(VI) and Cr(T) concentrations for the ATUs were 23.0 and 24.0 micrograms per liter ($\mu\text{g/L}$), respectively, at the Ranch ATU.
- The maximum reported nitrate and TDS concentrations for the ATUs were 17.0 and 2,800 milligrams per liter (mg/L) respectively, at the Gorman-North ATU.
- The maximum reported radionuclide concentrations for the ATUs were as follows:
 - Dissolved uranium: 60.0 picocuries per liter (pCi/L) at the DVD ATU
 - Gross alpha: 71.1 pCi/L at the DVD ATU
 - Gross beta: estimated 12.0 pCi/L at the Gorman-South ATU

5.4 Monitoring and Extraction Well Water Quality

Table 5-2 lists the groundwater monitoring wells and analytical program listed in the ATU WDR MRP, Table E-2 (Water Board, 2014a) for monitoring groundwater quality associated with operation of the existing ATUs. The MRP requires sampling frequencies of semiannual or quarterly and varies by well per the MRP for Cr(T), Cr(VI), nitrate, and TDS. In general, the frequency is semiannual at monitoring wells upgradient of an ATU and quarterly at most monitoring wells located downgradient of an ATU or near the ATU field area. During the Third Quarter of 2014, samples for radionuclides (including dissolved uranium, gross alpha, and gross beta) and TDS were also collected to comply with the byproducts investigation in mitigation measure WTR-MM-5. Water levels and field parameters are also required on a quarterly or semi-annual basis in Table E-6 of the MRP.

Table 5-3 presents the groundwater quality results for extraction wells and Table 5-4 lists the water quality results for the ATU compliance monitoring well groups for the Third Quarter of 2014 and previous three quarters (12-month period). Appendix D contains historical groundwater quality data for the ATU extraction wells. Appendix E contains historical groundwater analytical data for the ATU monitoring wells.

Appendix E also includes groundwater analytical results for samples collected from additional wells to establish baseline monitoring conditions in the existing ATU areas and proposed new southern ATU areas. Appendix E also contains maps showing the distribution of nitrate, TDS, and radionuclides in the southern ATU areas.

Figures illustrating the distribution of chromium, nitrate, TDS, and radionuclides, analytical results for monitoring wells and extraction wells in the existing ATU program, with the private domestic and agricultural supply wells located in the northern ATU areas posted for reference (but not included in contouring), consist of the following:

- Figures 5-1 and 5-2 show the 3.1-, 10-, 100-, and 1,000- $\mu\text{g/L}$ chromium isoconcentration contours for the shallow and deep zones of the Upper Aquifer, respectively. These contours were developed from a larger dataset previously presented in the Site-wide GMP Report (CH2M HILL, 2014a).
- Figures 5-3 and 5-4 show the 10-, 25-, and 50-mg/L nitrate isoconcentration contours for the shallow and deep zones of the Upper Aquifer, respectively.
- Figures 5-5 and 5-6 show the 500-, 1,000-, and 2,500-mg/L TDS isoconcentration contours for the shallow and deep zones of the Upper Aquifer, respectively, for the ATU areas.
- Figures 5-7 and 5-8 show the dissolved uranium, gross alpha, and gross beta results for the shallow and deep zones of the Upper Aquifer, respectively.

ATU extraction well data posted on maps showing the shallow and deep zones of the Upper Aquifer may not represent the monitoring zone where these wells are shown. Many of the ATU extraction wells are cross-screened across both the shallow and deep zones of the Upper Aquifer, so the water quality results from some of these wells represent a combination of both zones rather than a discrete monitoring depth like monitoring well data.

The minimum, maximum, and average Cr(VI), nitrate, TDS, and radionuclide concentrations for ATU monitoring wells in the Third Quarter of 2014 include those listed in Exhibit 5-1.

EXHIBIT 5-1

Third Quarter of 2014 Minimum, Maximum, and Average Concentrations for the ATU Monitoring Well Groups shown in Table 5-4

Constituent		DVD	Ranch	Gorman	Cottrell	Yang
Cr(VI) ($\mu\text{g/L}$)	Minimum	0.57	5.4	ND (0.06)	ND (0.06)	0.2
	Maximum	45	35	4.7	12	7.6
	Average	7.1	19.5	1.6	4.1	3.7
Nitrate (mg/L)	Minimum	6.2	4.3	ND (0.05)	0.43	5.7
	Maximum	68	17	57	40	19
	Average	28.1	11.1	11.4	20.6	13
TDS (mg/L)	Minimum	820	640	240	520	890
	Maximum	5,700	1,200	6,600	4,000	3,400
	Average	3,000	1,030	2,270	2,530	1,620
Gross alpha (pCi/L)	Minimum	16.6	28.2 J	ND (17.2)	9.25	23.7
	Maximum	209	47.6	63.4	73.0J	173 J
	Average	73.5	40.5	25	55.8	60.8
Gross beta (pCi/L)	Minimum	ND (12.9)	4.03	ND (19.0)	4.17	ND (22.0)
	Maximum	21.1	7.1	20.4	13.3	7.56
	Average	8.72	5.7	7.11	9.02	5.69

EXHIBIT 5-1

Third Quarter of 2014 Minimum, Maximum, and Average Concentrations for the ATU Monitoring Well Groups shown in Table 5-4

Constituent		DVD	Ranch	Gorman	Cottrell	Yang
Dissolved uranium (pCi/L)	Minimum	13.0	27.0	1.9	7.2	20.0
	Maximum	140	40.0	77.0	65.0	100
	Average	68.9	36.2	27.0	44.3	45.3

Note: **Bold** results indicate the maximum average concentration for each well group and analyte in the ATUs.

µg/L = micrograms per liter

ATU = agricultural treatment unit

Cr(VI) = hexavalent chromium

DVD = Desert View Dairy

J = concentration is estimated based on review of quality control criteria and data validation

mg/L = milligrams per liter

ND = non-detect

nitrate = nitrate as nitrogen

pCi/L = picocuries per liter

TDS = total dissolved solids

General results and findings for this reporting period are as follows:

- The highest average chromium concentrations were reported at the southernmost Ranch ATU and the lowest average chromium concentrations were reported for the northern Gorman ATU.
- Nitrate concentrations exceeding the California Department of Public Health (CADPH) MCL of 10 mg/L as nitrogen are prevalent at most monitoring wells located upgradient, cross-gradient, and downgradient of all ATUs; the highest nitrate concentrations are generally reported for wells screened across the shallow zone of Upper Aquifer (CADPH, 2014).
- TDS concentrations exceeding the State of California SMCL of 500 mg/L are prevalent at most monitoring wells located upgradient, cross-gradient, and downgradient of all ATUs (CADPH, 2014). The highest TDS concentrations at all ATUs are generally reported for wells screened across the shallow zone of Upper Aquifer.
- Gross alpha concentrations exceeding the State of California MCL of 15 pCi/L are common at most monitoring wells located upgradient, cross-gradient, and downgradient at the ATU areas (CADPH, 2014). During the Second Quarter of 2014 monitoring event, laboratory analysis of gross alpha was performed using two U.S. Environmental Protection Agency (USEPA)-certified methods: USEPA Method 900.0 and USEPA Method 7110C. Upon review of the results, the gross alpha results reported using USEPA Method 900.0 were determined to be more accurate and representative of site conditions. Uranium typically emits the largest quantities of gross alpha, and therefore, the gross alpha results should be generally equal to or slightly higher than the corresponding dissolved uranium result. Gross alpha results obtained using USEPA Method 900.0 were generally equal to or exceeded the corresponding dissolved uranium results, while gross alpha obtained using Method 7110C results were lower than the corresponding dissolved uranium results, indicating potential interference during laboratory analysis. Both sets of results are presented in this document; however, only the USEPA Method 900.0 gross alpha results will be used for future evaluations. In Table 5-4 the minimum, maximum, and average calculations only consider USEPA Method 900.0 results.
- Gross beta concentrations did not exceed the State of California MCL of 50 pCi/L at the ATU areas (CADPH, 2014).

- Dissolved uranium concentrations exceeding the State of California MCL of 20 pCi/L are common at most monitoring wells located upgradient, cross-gradient, and downgradient of the ATU areas (CADPH, 2014). The maximum concentrations at the ATUs were generally reported for wells screened across the shallow zone of Upper Aquifer.

As listed previously and discussed in Section 5.1, most of the monitoring wells in the existing ATU areas contain nitrate, TDS, uranium, or other radionuclide concentrations above their respective MCL or SMCLs. Potential sources causing pre-existing elevated concentrations of these constituents include historic land use for nitrate and TDS. Uranium and radionuclides in the Upper Aquifer may be elevated due to both historic land use and naturally occurring minerals and rocks in the aquifer containing uranium and radionuclides.

5.5 Receiving Water Limitations

As listed in the WDRs Section D Receiving Water Limitations, no exceedances of receiving water limitations occurred at the existing ATUs during the Third Quarter of 2014 (Water Board, 2014a). As clarified in the *Notice of Applicability of Waste Discharge Requirements for Agricultural Treatment Units (WDID 6B361403002, Board Order No. R6V-2014-0023)*, because TDS concentrations already exceeding drinking water standards are present in the existing ATUs areas (OU2), evaluation of Receiving Water Limit 3 associated with increases in TDS concentrations does not apply (Water Board, 2014b) to the currently operating ATUs in OU2. Similarly, the Receiving Water Limit 4 regarding evaluation of increases in nitrate concentrations also does not apply to the existing ATUs (Water Board, 2014b). TDS and nitrate monitoring will continue, but the evaluation and action plans triggered by Limit 3 and Limit 4 in the MRP will not apply unless monitoring wells are measuring discharge from new ATUs. The first time that the ATU monitoring wells were sampled for dissolved uranium and other radionuclides was during the Second Quarter of 2014; therefore, no inferences into receiving water quality effects can be made at this time. Uranium and other radionuclides will be evaluated against Receiving Water Limit 5 as part of the mitigation measure WTR-MM-5 investigation after four quarters of data are available in 2015.

Appendix B (Table B-1) contains the field parameter results for the groundwater monitoring and extraction wells. The discharge of irrigation water to the ATUs did not cause the receiving water pH to go below 6.5 or above 8.5 pH units during this reporting period. Most wells have pH concentrations that are within the limits (6.5 to 8.5) listed in the MRP. Some of the ATU area monitoring wells have pH concentrations of less than 6.5 pH units and a few have pH concentrations of more than 8.5 pH units; however, these monitoring wells exhibited pH concentrations above or below this range before ATU operations were initiated and reflect natural conditions.

5.6 Well Rehabilitation Chemical Monitoring

During the Third Quarter of 2014, 17 monitoring wells were sampled for the marker constituent orthophosphate, as displayed in Table 5-5. These 17 wells were selected for sampling because they are located within 500 feet downgradient or cross-gradient of the seven extraction wells where chemical rehabilitation was completed during the Second Quarter of 2014 (see Section 2.4), per MRP requirement II.a.ii and are screened in a similar aquifer zone. During the Third Quarter of 2014, samples from only two wells (SA-MW-26D and CA-MW-106S) contained orthophosphate concentrations that exceeded the standard reporting limit of 0.1 mg/L (Table 5-9). The sample from SA-MW-26D contained 0.12 mg/L orthophosphate, and the sample from CA-MW-106S contained 0.29 mg/L. No action is required as a result of these low detections. This set of monitoring wells will be sampled again for orthophosphate during the Fourth Quarter of 2014. If orthophosphate is not detected for two consecutive quarters at a particular well, then orthophosphate sampling at that well will be discontinued per MRP requirement II.a.iii.

Domestic and Agricultural Well Monitoring

Domestic and agricultural supply wells are monitored both before operation of the new ATUs and during operation of existing ATUs in accordance with the MRP presented in Attachments E and F of the WDR, respectively (Water Board, 2014a). As described in Appendix F of the WDR (Water Board, 2014a), mitigation measure WTR-MM-2 addresses impacts to domestic and agricultural supply wells by the operation of ATUs and includes three components:

- Impacts of chromium on domestic supply wells (WTR-MM-2a)
- Impacts of byproducts from ATUs on domestic and agricultural supply wells (WTR-MM-2b)
- Impacts of groundwater drawdown by ATU extraction on domestic and agricultural supply wells (WTR-MM-2c)

This section presents the monitoring programs in place for these mitigation measures, the Third Quarter of 2014 monitoring data, and evaluation of the data for these mitigation measures.

6.1 Analysis of Whether Any Domestic Supply Wells Are Affected by Chromium Plume Expansion due to Remediation (WTR-MM-2a)

6.1.1 Domestic and Agricultural Supply Well Chromium Monitoring

Domestic supply wells potentially affected by chromium plume movement due to remedial actions were sampled for chromium analysis as required by mitigation measure WTR-MM-2a. As described in the ROWD, the 1-mile area specified in the mitigation measure is shown on Figure 6-1; active and inactive domestic wells within the area are also shown on Figure 6-1. This area is defined as 1 mile in the cross-gradient and downgradient directions around the contiguous plume boundary generally south of Thompson Road, as delineated in the Second Quarter of 2014 (CH2M HILL, 2014b). This area excludes the area to the southwest of the Lockhart Fault, which is upgradient of the current and proposed new ATUs. Appendix F, Table F-1 summarizes the mitigation measure WTR-MM-2a wells that were not sampled during the reporting period for various reasons. Appendix F, Table F-2 lists domestic and agricultural wells on properties purchased by PG&E during the reporting period. Appendix F, Table F-3 summarizes historical analytical results for domestic and agricultural wells.

6.1.2 Domestic and Agricultural Supply Well Chromium Results and Analysis

EIR mitigation measure WTR-MM-2a requires the determination of whether any domestic supply wells are actually affected by chromium plume movement due to remedial actions by operating existing ATUs under the ATU WDRs. Details on the criteria evaluated are summarized in Table 6-1. This mitigation measure defines actually and potentially affected domestic wells as domestic supply wells that have an increase in chromium concentrations due to remedial actions. The methodology for establishing pre-remedial reference values to identify actually affected domestic wells under this EIR mitigation measure is currently being considered by the Water Board, per *Implementation of Mitigation Measures WTR-MM-2a and WTR-MM-2b, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California* (PG&E, 2014a). Identification of actually affected domestic wells under EIR mitigation measure WTR-MM2a (if any) will be conducted upon Water Board approval of the methodology.⁴

⁴ In addition, the methodologies for implementation of mitigation measures WTR-MM-2a and WTR-MM-2b are subject to a petition "In the Matter of Lahontan Regional Water Quality Control Board Resolution No. R6V-2013-0060 Certifying a Final Environmental Impact Report" which is currently in abeyance. *Petition ID A-2266: Petition for Review; Request to Hold Petition in Abeyance* (PG&E, 2013).

The maximum background levels for Cr(VI) and Cr(T) are currently defined as 3.1 and 3.2 µg/L, respectively (CH2M HILL, 2007). Chromium sample results starting in April 2012 through the reporting period are listed in Table 6-2. Historical chromium results for the domestic wells in WTR-MM-2a are provided in Appendix F, Table F-3.

As shown in Table 6-1, criteria for an “actually affected domestic well” is a domestic well located within 1 mile downgradient or cross-gradient of the defined chromium plume with one of the following characteristics:

- Cr(VI) or Cr(T) concentrations that exceed maximum background levels for the first time (if the well previously had concentrations below maximum background levels)
- Cr(VI) or Cr(T) concentrations that increase by 10 percent or more (if the well previously had concentrations that exceeded maximum background levels)

During the Third Quarter of 2014, there were no domestic wells with Cr(VI) or Cr(T) concentrations that exceeded background concentrations (CH2M HILL, 2007) of 3.1 or 3.2 µg/L respectively, for the first time. Two domestic wells (28-21 and 28-65) have previously exceeded Cr(VI)/Cr(T) concentrations of 3.1/3.2 µg/L. During the Third Quarter of 2014, well 28-21 did not exceed 3.1/3.2 µg/L concentrations (Table 6-2). PG&E purchased the property containing well 28-65 during the reporting period, so this well was not sampled. Therefore, no “actually affected domestic wells” were identified during the reporting period.

A “potentially affected domestic well” is defined as a domestic supply well that has an increase in chromium concentrations due to remediation actions and which:

- Is located within 1-mile of the defined chromium plume; or
- Is predicted to have any of the conditions for an “actually affected domestic well” within one year, as indicated by groundwater modeling.

The ATU WDRs do not specify what should be considered to be an “increase in chromium concentration” or what methods might be employed to make such a determination. Also, in the event that an increase in chromium concentration is identified, the ATU WDRs do not specify the methods to determine if the increase is due to remedial actions. Criteria and methodologies to make these determinations need to be developed. In the interim, for the current data set, a statistical evaluation of Cr(VI) trends was performed using data for all wells in the WTR-MM-2a program with eight or more sample results between January 2011 and September 30, 2014 (historical data are provided in Appendix F) to identify domestic supply wells (if any) that might exhibit increasing chromium concentration trends. As summarized in Table 6-4, 60 wells in the WTR-MM-2a monitoring program had eight or more sample results available for statistical trend analysis. At the 95 percent confidence interval ($p = 0.05$), the non-parametric Mann-Kendall statistical trend analysis did not indicate increasing trends at any of these wells. Therefore, no potentially affected wells were identified.

Particle track modeling results for simulations of existing and proposed ATU operations were presented in the revised ROWD (ARCADIS, 2014a). In the case of WTR-MM-2a, the particles were assumed to represent Cr(VI) in the vicinity of the ATUs. The particle track modeling did not identify domestic wells as potentially affected within the next year (or in the next 10 years). Particle track results forecasted for 10 years of operation show that water applied at the active ATUs will be captured by the current set of northern extraction wells or will migrate insignificantly over the next 10 years. Therefore, the chromium plume is not expected to migrate towards domestic wells located to the east, west, or north due to remediation. Based on the modeling results, no potentially affected wells are identified.

6.2 Analysis of Whether Any Domestic and Agricultural Supply Wells Were Affected by Agricultural Byproducts due to Remediation (WTR-MM-2b)

6.2.1 Domestic and Agricultural Supply Well Byproducts Monitoring

As described in the MRP, initial monitoring of domestic and agricultural wells is required prior to operation of agricultural treatment units for a minimum of 1 year on a quarterly basis (or concurrently with commencement of operations of new ATUs if initial operations cannot be performed without delaying planned remediation efforts). Initial monitoring for agricultural byproducts in domestic and agricultural supply wells began during the Second Quarter of 2014. The initial monitoring area includes domestic and agricultural supply wells that are located within 1 mile downgradient or cross-gradient of any proposed ATU (see Figure 6-2). Appendix F, Table F-1, summarizes the mitigation measure WTR-MM-2b wells that were not sampled during the Third Quarter of 2014 for various reasons.

After the initial monitoring (minimum of four quarters) is complete, ongoing monitoring is required at domestic and agricultural supply wells on a semiannual basis during implementation of remedial activities. The ongoing monitoring area includes domestic and agricultural supply wells that are located within 0.5 mile downgradient and 0.25 mile cross-gradient of an ATU (see Figure 6-2).

6.2.2 Domestic and Agricultural Supply Well Byproduct Results and Analysis

EIR mitigation measure WTR-MM-2b requires determination of whether domestic and agricultural supply wells were affected by agricultural byproducts due to remediation. Details on the criteria evaluated are summarized in Table 6-1. Agricultural byproducts at the existing ATUs include uranium and other radionuclides (gross alpha and gross beta), TDS, and nitrate. ATU byproduct monitoring data for the reporting period are presented in Table 6-3. Historical ATU byproduct monitoring data for the domestic and agricultural supply wells is provided in Appendix F, Table F-3.

Figure 6-2 shows TDS and nitrate data for domestic and agricultural supply wells within the initial monitoring area for WTR-MM-2b. Figure 6-3 shows dissolved uranium, gross alpha, and gross beta data for domestic and agricultural supply wells within the initial monitoring area for WTR-MM-2b. A minimum of four quarters of data are needed to establish pre-remedial reference concentrations. Because initial monitoring to establish pre-remedial reference concentrations for ATU byproducts started during the Second Quarter of 2014, pre-remedial concentrations of ATU byproducts in domestic and agricultural wells are still being obtained. Therefore, no domestic or agricultural wells were identified during the Third Quarter of 2014 as being actually affected.

Potentially affected domestic and agricultural supply wells, in part, are wells within a 0.5 mile of an actually affected domestic or agricultural supply well. Because actually affected domestic or agricultural wells were not identified during the Third Quarter of 2014, no potentially affected domestic or agricultural supply wells were identified based on that criteria. Potentially affected domestic and agricultural supply wells can also be identified using computer modeling (as described directly below) or via identification of actually affected monitoring wells (see Section 6.2.3).

Particle track modeling results for simulations of existing and proposed ATU operations were presented in the revised ROWD (ARCADIS, 2014a). Particle tracking results for 10 years of current operation show that water applied at the ATUs will be captured by the current set of northern extraction wells or migrate insignificantly over a 10-year period (ARCADIS, 2014a). No potentially affected domestic wells were identified in the modeling of groundwater that may be impacted by byproducts increased by the ATUs (ARCADIS 2014a). Additional particle track modeling was performed at the request of the Water Board “to model and analyze known byproducts in groundwater, (including nitrate and TDS) while attempting to make a distinction between the byproducts that are increased by PG&E’s ATU operation and byproducts that existed prior to the operation of the ATUs.” This modeling was performed in the 0.5-mile pre-remedial

groundwater elevation sampling area specified in mitigation measure WTR-MM-2c and was reported in the revised ROWD Addendum #3 and Addition to Addendum #3 (ARCADIS, 2014b and c). Results of the additional modeling indicated that groundwater extraction associated with operation of ATUs and other remedies generally reduces the migration of existing nitrate and TDS in the vicinity of the existing and proposed ATUs. However, the modeling results suggest that there is one instance where water originating from nitrate or TDS plume boundaries may travel to active domestic wells that are located outside the depicted plume boundaries within particular aquifer units within 3 years:

- Active domestic well 25-14 is predicted to experience arrival of groundwater originating from the area with nitrate concentrations greater than 10 mg/L within 3 years with ATU pumping, slightly ahead of the predicted timing between 5 and 6 years predicted without ATU pumping. This well is not designated as potentially affected at this time, because it is not predicted to see arrival within the next year. The Third Quarter of 2014 nitrate as nitrogen result for this well was 3.4 mg/L (less than the MCL of 10 mg/L).

In summary, the byproducts generated by current and proposed ATU activities are not expected to migrate to any domestic or agricultural wells, although in one instance operation of ATUs may accelerate the movement of existing byproducts present in the aquifer toward a domestic or agricultural supply well. Therefore, based on modeling, no potentially affected domestic or agricultural supply wells are identified at this time.

Agricultural yields are not expected to decrease due to increases of TDS in agricultural supply wells resulting from remedial actions per the potentially affected well definition based on groundwater modeling for this mitigation measure (ARCADIS, 2014a).

6.2.3 Evaluation of Affected Monitoring Wells to Identify Potentially Affected Domestic and Agricultural Supply Wells

Only small quantities (if any) of extracted groundwater applied to the ATUs is expected to have percolated downward and into the aquifer since the ATU WDRs were initiated on March 12, 2014. Based on reviewing historical water level and chemistry data for the ATUs, it is estimated that it takes a year or longer for irrigation water to percolate the distance of 70 to 80 feet through the vadose zone and into the aquifer. Therefore, any changes observed in monitoring well chemistry at this time are unlikely to be related to PG&E's ATU operations and are more likely to reflect changes due to pre-existing aquifer conditions.

As required by the March 12, 2014, ATU WDRs, Appendix F of the MRP (Water Board, 2014a), monitoring well data were evaluated to determine whether there are monitoring wells potentially affected by ATU operations that could indicate potentially affected domestic or agricultural supply wells. Because this is only the second groundwater monitoring event under the new ATU WDRs, there are limited historical data from which to develop baseline reference levels of nitrate and TDS in monitoring wells to compare to quarterly monitoring results. Additionally, only two quarters of baseline data are available for dissolved uranium or other radionuclides in monitoring wells, so these constituents were not evaluated; uranium and other radionuclides will be evaluated as part of the mitigation measure WTR-MM-5 investigation.

The proposed methodology for establishing pre-remedial reference values to aid in identifying actually affected domestic and agricultural supply wells is currently being considered by the Water Board (PG&E, 2014a). In the Second Quarter of 2014 ATU Monitoring Report (CH2M HILL and ARCADIS, 2014b), the proposed methodology included using a baseline period from April 1, 2012, through March 31, 2014, for wells that have four quarters or more of data. On October 30, 2014, the Independent Review Panel (IRP) Manager provided comments on the proposed methodology to develop pre-remedial reference levels to the Water Board. The IRP Manager suggested that a review of any historical data (if available) be conducted in addition to the proposed April 1, 2012, through March 31, 2014, baseline period data and also that the historical data be incorporated into the baseline condition assessment (IRP Manager, 2014).

With respect to nitrate and TDS, the area outside of hydraulic capture zones (shallow and deep) shown on Figures 3-1 and 3-2 (dark blue dashed line) were reviewed to identify monitoring wells located

downgradient and cross-gradient from the ATUs. This criteria is intended to identify monitoring wells that could be affected by ATU operations, where groundwater is not being captured by the current groundwater extraction system. Six monitoring wells with at least four quarters of nitrate and TDS data from April 1, 2012, through March 31, 2014, were evaluated to estimate baseline conditions.⁵ As summarized in Table 6-5, nitrate and TDS concentrations at all six wells exceeded either the State of California MCL (10 mg/L) or State of California SMCL (500 mg/L), respectively, prior to the Second Quarter of 2014.

According to the March 12, 2014, ATU WDRs, Appendix F of the MRP, for wells previously exceeding the State of California MCL, a 10 percent increase in concentrations indicates an “affected monitoring well.” The Third Quarter of 2014 nitrate concentrations decreased from the proposed maximum concentration reported from April 1, 2012, through March 31, 2014, at all six wells. No potentially affected domestic or agricultural wells were identified based on the monitoring well nitrate data.

According to the March 12, 2014, ATU WDRs, Appendix F of the MRP, for wells previously exceeding the State of California SMCL for TDS, a 20 percent increase in concentrations indicates an “actually affected monitoring well.” The Third Quarter of 2014 TDS concentrations either decreased or did not exhibit increases exceeding 20 percent for five of the six monitoring wells (Table 6-5). At one of the six wells (MW-85S), the TDS concentration during the Third Quarter of 2014 (2,700 mg/L) increased 38 percent over the proposed maximum TDS concentration (1,960 mg/L) reported for April 1, 2012, through March 31, 2014. As shown on Figure 5-5, TDS concentrations exceeding 2,700 mg/L are currently (and have historically been) present at monitoring wells cross-gradient of MW-85S (for example, MW-89S, MW-127S1, MW-127S2, and MW-206S). The current and historical TDS concentrations at MW-85S are below or within the range of TDS concentrations (3,500 to 6,600 mg/L) reported for nearby monitoring wells. Elevated TDS concentrations in this area are already present from decades of historical farming and agricultural operations (see Section 5.1) and were present prior to PG&E ATU operations.

A review of historical data for MW-85S and a non-parametric statistical trend analysis of all available data using the Mann-Kendall test were also conducted to assess the statistical significance of the apparent increase in TDS concentration at MW-85S. The Third Quarter of 2014 TDS result did not exceed the maximum historical TDS concentration of 3,480 mg/L reported for this well in October 2010, which occurred prior to the start of the operation of the nearest ATU of Gorman-North (see Appendix E, Table E-1 for the historical analytical data for this well). As summarized in Exhibit 6-1 below, the Mann-Kendall statistical analysis for TDS concentrations at MW-85S indicates that concentrations at this well have no trend and are stable at the 95 percent confidence level through 18 monitoring events beginning in June 2010. Based on the analysis above, no potentially affected domestic or agricultural wells were identified based on the monitoring well TDS data.

EXHIBIT 6-1

Non Parametric (Mann-Kendall) Trend Analysis for TDS at MW-85S

Analyte	Detect	Total Samples	Min	Max	Mean	Median	Trend	Stability
TDS	18	18	1,760	3,480	2,178	1,970	No Trend	Stable

Potentially affected domestic and agricultural supply wells, in part, are wells within a 0.5 mile downgradient or 0.25 mile cross-gradient of an actually affected monitoring well. Because no actually affected monitoring

⁵ The methodology for evaluating TDS concentration increase over a baseline maximum TDS concentration reported during the previous eight quarters is currently a proposed methodology set forth in PG&E’s August 14, 2014 submittal, and is subject to public review opportunity pursuant to the Water Board’s October 9, 2014, publication.

wells were identified during the Third Quarter of 2014, no potentially affected domestic or agricultural supply wells were identified based on this criteria.

The methodology for establishing pre-remedial reference values to aid in identifying potentially or actually affected domestic and agricultural supply wells is currently being discussed with the Water Board (PG&E, 2014a). Affected monitoring wells under EIR mitigation measure WTR-MM2b (if any) will be identified upon Water Board approval of the methodology for domestic/agricultural supply wells. The methodology for identifying affected monitoring well is expected to be similar to the methodology used for domestic and/or agricultural supply wells. TDS data for monitoring and domestic wells in future quarters will be compared with pre-remedial reference values and available historical data to evaluate whether domestic or agricultural supply wells are potentially affected.

6.3 Analysis of Whether Any Domestic and Agricultural Supply Wells Were Affected by Drawdown as a Result of Remediation (WTR-MM-2c)

6.3.1 Domestic and Agricultural Supply Well Drawdown Monitoring

As described in the MRP, initial monitoring of domestic and agricultural wells is required prior to operation of ATUs for a minimum of 1 year on a quarterly basis or concurrently with commencement of operations of new ATUs if initial operations cannot be performed without delaying planned remediation efforts. PG&E attempted to begin initial monitoring activities for domestic and agricultural supply wells potentially affected by drawdown during the Second Quarter of 2014. The initial monitoring area includes domestic and agricultural supply wells that are located within 0.50 mile of any existing or proposed extraction well (see Figure 6-4). Appendix F, Table F-2 shows domestic wells within the WTR-MM-2a, -2b, and -2c areas that have been purchased by PG&E within the reporting period.

After the initial monitoring is complete, ongoing monitoring is required at domestic and agricultural supply well on a semiannual basis during implementation of remedial activities. The ongoing monitoring area includes domestic and agricultural supply wells that are located within 0.25 mile of any existing extraction well (see Figure 6-4).

As presented in *EIR Mitigation Monitoring Requirement for Collection and Use of Water Level Data from Private Supply Wells, Pacific Gas and Electric Company Hinkley Compressor Station, Hinkley, California*, PG&E has identified challenges with the methodology described in the EIR which requires the manual water level measurements are obtained from private domestic and agricultural wells (PG&E, 2014b; CH2M HILL and ARCADIS, 2014b).

In summary, the following challenges and potential impacts to property owners make implementation of the methods prescribed for water level monitoring extremely difficult:

1. Well documentation for area wells, including well depth and screening information, from the California Department of Water Resources (DWR) is incomplete and/or cannot be matched to 6 of the 20 wells. During the Second and Third Quarters of 2014, DWR well completion reports were reviewed for wells within the WTR-MM-2c area to evaluate whether potential matches could be made for these six remaining wells. No additional matches were made.
2. During the Second Quarter of 2014 visual surveys were conducted at the WTR-MM-2c wells, where owner access was allowed, to determine if it was possible to obtain manual water level measurements. To date, 19 of the 20 WTR-MM-2c wells have been surveyed via visual assessment and using historical knowledge. The information from the surveys indicates that major modifications would need to be made at each of these domestic and agricultural wells prior to being able to obtain water levels. These modifications will likely take the well out of service for several days, and accurate water level measurements still might not be obtained. Many wells are several decades old, and retrofitting could cause issues with normal private well operation. Disturbing aging well components (i.e., piping, well

casing, pumps) during well modifications could affect well operability and cause suspended sediments, which could result in discolored water and/or taste and odor issues.

3. Even if the private wells were modified to make water level measurements possible, the water level data collected from these active pumping wells would likely not be representative of regional groundwater levels unless the private wells were left off (unpumped) for a sufficient period of time to allow recovery of drawdown at each private well before a manual water level is collected. Shutting down private wells for approximately 48 hours prior to measuring the water level would require close coordination and potential disruption of the normal activities of these well owners. This 48-hour well shutdown would need to occur each time manual water levels were collected from private wells in order to obtain representative water levels.

6.3.2 Domestic and Agricultural Supply Well Drawdown Results and Analysis

For the reasons listed above, PG&E used groundwater level data from monitoring wells located near the private domestic and agricultural supply wells collected over the past year (April 1, 2013 through March 31, 2014) and during the Third Quarter of 2014 (July 1 through September 30, 2014) to evaluate domestic and agricultural supply wells potentially affected by drawdown as required by mitigation measure WTR-MM-2c. The location of the monitoring wells and the 20 privately owned active or inactive domestic and agricultural wells located within the mitigation measure WTR-MM-2c initial and ongoing monitoring areas are shown on Figure 6-4.

Estimates of aquifer drawdown causing loss of more than 25 percent of the wetted screen depth at the domestic and agricultural supply wells and a summary of the information provided in Table 6-6 include the following:

1. Monitoring wells with available water level data that are located nearest to the mitigation measure WTR-MM-2c supply wells were identified as surrogate monitoring locations to the domestic and agricultural wells. Where there were data for two monitoring well screen depths (shallow and deep zone of the Upper Aquifer), water level measurements for both screen depths were reviewed.
2. For each domestic and agricultural well, the lowest groundwater elevation measured at the deepest screened (deep zone of Upper Aquifer) nearby monitoring well from the past year (April 1, 2013, through March 31, 2014) was used to estimate pre-remediation groundwater elevations.
3. Groundwater elevation at each private supply well was estimated to be comparable with the nearby monitoring well groundwater elevation. As shown on Figures 3-1 and 3-2, this is a reasonable approximation because groundwater levels generally do not change significantly over the relatively short distances (generally less than 0.25 mile) that separate the private supply wells from the surrogate monitoring wells.
4. The well construction information for the privately owned wells (where available) and the pre-remediation reference level from the nearest monitoring well were used to estimate how much drawdown would need to occur before drawdown of more than 25 percent of the wetted screen depth would occur. This information was used to calculate a “trigger elevation” where groundwater elevations at the privately owned supply wells are estimated to lose 25 percent of their wetted screen depth.
5. No supply well construction information is available for three locations (02-02B, 23-25, and 23-28). Well construction information from nearby private supply or monitoring wells was used to estimate trigger levels at these locations. No screen information is available for private wells (02-23, 27-41, and 34-38), but total depth information is available. For these wells, it was assumed that they are screened to the total well depths shown in Table 6-6.
6. The estimated trigger levels (depth to water and elevation) that would cause a decrease of 25 percent or more in wetted screen interval for the 20 private supply wells (WTR-MM-2c) are summarized in Table 6-6 and shown on Figure 6-4. The Third Quarter of 2014 manual water level measurements were

compared with these “trigger levels” to assess if drawdown below the trigger levels has occurred. As shown on Figure 6-4 and listed in Table 6-6, the Third Quarter of 2014 manual water level measurements from monitoring wells do not indicate that drawdown below trigger levels has occurred; thus, no private domestic or agricultural supply wells were affected during the reporting period.

In addition, as described in the ROWD, water supply wells with available construction information were evaluated and were predicted not to be potentially affected by drawdown (ARCADIS, 2014a). Many wells are not predicted to be potentially affected, given the long well screens available that would require more than 20 feet of drawdown to trigger the criteria.

In the ROWD, the locations of existing private supply wells were also plotted on a map showing groundwater drawdown estimated by the groundwater flow model associated with the proposed remedy to assess wells that could potentially be affected by the remedy after 1, 2, and 3 years of operation (ARCADIS, 2014a). No domestic supply wells were predicted to experience at least 10 feet of drawdown during the first year of ATU operation. After 2 years of operation, two domestic supply wells—one active (23-27) and one inactive (23-25) (as of March 6, 2013 but active as of May 13, 2014)—fall within the model predicted area with between 10 and 20 feet of drawdown. After 3 years of operation, one additional active domestic supply well (34-38) falls within the model predicted area with between 10 and 20 feet of drawdown.

Drawdown of 10 feet at these locations will trigger monitoring for arsenic, manganese, uranium, and gross alpha. Because drawdown of at least 10 feet is predicted to occur within 2 or 3 years of operation, baseline monitoring for arsenic, manganese, uranium, and gross alpha is proposed, pending receipt of permission from the well owners, at the three domestic supply wells (23-27, 23-25, and 34-38) during the first year of operation.

TABLE 1-1

Chronology of Agricultural Treatment Unit Operations
Third Quarter 2014 Agricultural Treatment Units Monitoring Report
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Period	Key Milestone
September 2004	Part-time operation of the DVD LTU began with extraction well EX-01.
March 2005	Full-time operation began with extraction wells EX-01 and EX-02.
May 2007	Phase 1 optimization of the system was implemented with the installation and start-up of extraction wells EX-03 and EX-04.
June 2008	Phase 2A optimization began with the addition of extraction wells EX-15, EX-16, and EX-20.
October 2009	Application of groundwater from EX-15, EX-16, and EX-20 wells to the DVD LTU was discontinued. These wells were integrated into the South Central Reinjection Area in situ remediation system.
July 2010	New extraction wells EX-23 and EX-24 were installed.
July 2010	Water Board issued revised Order allowing annual average groundwater application rate at the DVD LTU to increase to a maximum of 520 gpm.
July 2010	Adjustments were made to DVD LTU so that the average flow rates for August and September were 478 and 534 gpm, respectively.
August 2010	Electrical hookups and piping to new extraction wells EX-23 and EX-24 were installed.
September 2010	Groundwater extraction was initiated at EX-23 and EX-24. Water was routed to DVD LTU.
November 2010	Annual average discharge rate to DVD LTU exceeded former permitted maximum rate (345 gpm) as a result of increased application rates. Annual average discharge rate to DVD LTU has increased steadily since that time.
November-December 2010	Vegetation stress due to over watering was observed at the DVD LTU. In response, application rates were decreased, but remained at levels much higher than previous winter rates.
March 2011	Electrical and piping for EX-25 were installed. Groundwater extraction was initiated at well EX-25. New extraction wells EX-26 and EX-28 were installed. Full-time operation of agricultural supply wells G-1R, G-2R, and G-5R (on the Gorman ATU), located north and east of the DVD LTU, begin supplying groundwater to the new Gorman ATU.
April 2011	New extraction well EX-27 was installed. Additional drip lines were installed on the DVD LTU to increase flow capacity. Total acreage at the DVD LTU is increased to 73 acres.
May-June 2011	Electrical and piping were installed for new extraction wells EX-26, EX-27, EX-28, and existing extraction well EX-09. Four new agricultural supply wells (C-01, C-02, C-03, C-04) began pumping on the Cottrell ATU. Irrigation using existing extraction wells IW-01 and IW-02 was started on the Ranch ATU. IW-03 was operated briefly before determining that optimal extraction was achieved through operation of IW-01 and IW-02.
July 2011	Groundwater extraction was initiated at wells EX-09, EX-26, EX-27, and EX-28. Water was routed to DVD LTU.
September 2011	DVD LTU flow rates increased to achieve historical high monthly average application rate of approximately 675 gpm.
May 2012	Five new extraction wells EX-29, EX-30 (Ranch ATU) and EX-31, EX-32, EX-33 (Gorman ATU) began pumping. The startup of well EX-32 fulfills Requirement 3.6 of Amended CAO Number R6V-2008-0002A3 (Water Board, 2012).
August-October 2012	New extraction well EX-34 was constructed, and piping and electrical were connected. EX-25 was plumbed to allow the extracted flow to be switched between the DVD system and ATU system. Flow from EX-25 was first diverted to the ATUs from October 2, 2012 to October 8, 2012, and periodic diversions continue to present.

TABLE 1-1

Chronology of Agricultural Treatment Unit Operations
Third Quarter 2014 Agricultural Treatment Units Monitoring Report
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Period	Key Milestone
November 2012	Groundwater extraction was initiated at well EX-34 and water was routed to the DVD LTU.
December 2012	Flow from EX- 29 and EX-30 was diverted to the SCRIA IRZ system starting December 6, 2012.
March 2013	Extraction well EX-35 began pumping to supply the Gorman and Cottrell ATUs.
April 2013	Operation of the Yang ATU began on April 3, 2013, to provide additional extraction capacity. Operation began with pumping from C-04 and application to approximately one third of the field.
October –December 2013	On October 17, 2013, start-up of the expanded Yang ATU irrigation system began, with flow supplied from the same water supply system used for the Gorman and Cottrell ATUs. Start-up and shakedown activities at the Yang ATU continued throughout Fourth Quarter 2013. Three new extraction wells (Y-01, Y-02, and Y-03) for Yang ATU were installed, and two (Y-01 and Y-03) were connected to the Yang ATU water supply system but were not yet in operation.
March 2014	Water Board adopted <i>Board Order No. R6V-2014, Waste Discharge Requirements for Pacific Gas and Electric Company Groundwater Remediation Project – Agricultural Treatment Units</i> on March 12. The DVD LTU system was initially permitted under Board Order No. R6V-2004-0034 and its amendments. All of the ATUs, including the former DVD LTU, are now operated under R6V-2014-0023, which rescinded R6V-2004-0034 and all of its amendments.
April 2014	Flow from EX- 29 and EX-30 was diverted from the SCRIA system to the Ranch ATU starting April 14, 2014. Periodic diversions of flow from EX-29 and EX-30 between the SCRIA system and Ranch ATU continue to present. Extraction wells Y-1 and Y-3 started operation.
September 2014	The Ranch ATU Expansion was completed and the expanded Ranch ATU started up on September 15. Ranch ATU acreage was increased to 61 acres. Construction for the Community East ATU began with installation of four extraction wells (SAU-EX-01, SAU-EX-02, SAU-EX-03, SAU-EX-04). Construction continued into the Fourth Quarter of 2014.

Notes:

ATU	=	Agricultural Treatment Unit
DVD LTU	=	Desert View Dairy Land Treatment Unit
gpm	=	gallons per minute
IRZ	=	In Situ Reactive Zone
SCRIA	=	South Central Re-Injection Area

TABLE 2-1

Facility Operations Maintenance Log**Third Quarter 2014 Agricultural Treatment Units Monitoring Report***Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

Date	Operations
July 1	The Third Quarter of 2014 operations began utilizing extraction wells EX-01, EX-02, EX-3, EX-23, EX-24, EX-28, EX-34, EX-25, EX-26, EX-31, EX-32, EX-33, EX-35, G-5R, C-1, C-2, C-3, C-4, IW-1, IW-2 and IW-3. Yang was started. Cottrell was shut down. Ranch was started. Conducted leak repairs in DVD field S5.
July 2	Replaced flow totalizers at IW-02 and IW-03.
July 3	Cottrell was started. Gorman North was shut down. EX-26 was stopped.
July 7	Gorman North was started. Gorman South was shut down.
July 8	EX-26 was started; EX-23, EX-24, and EX-28 were shut down.
July 9	Gorman South was started. Completed LEPA installation on irrigation lines at Gorman South. Started LEPA installation on inner tower of Gorman North. The LEPA socks were installed to replace the drip emitters to improve efficiency and reduce pressure buildup due to clogged emitters. The LEPA socks also lower overall system pressures for the ATUs. Conducted leak repairs at DVD.
July 10	Gorman North was started. Yang pivot was shutdown. Y-1 was shut down.
July 11	Gorman North was shut down for harvest. Yang pivot was started.
July 14	Started EX-04, EX-23, and EX-24 for sampling.
July 15	Gorman North was started. Yang pivot was shut down. Y-1 was shut down.
July 16	Cottrell was shutdown. Yang pivot was started. Y-1 and Y-3 were started.
July 17	Cottrell was started. Gorman South was shut down for harvest. G-1R and G-2R were started for sampling. EX-04, EX-23, and EX-24 were shut down. Replaced VFD at EX-27.
July 18	EX-29 and EX-30 were diverted to SCRIA.
July 19	Ranch pivot was shut down for harvest. IW-1 and IW-2 were shut down. G-1R and G-2R were shut down after sampling.
July 23	Gorman South was started. Yang pivot was shut down. Y-1 and Y-3 were shut down.
July 24	Yang pivot was started. Y-1 and Y-3 were started. Cottrell was shut down.
July 25	Cottrell was started. Yang pivot was shutdown. Y-1 and Y-3 were shutdown.
July 28	Cottrell was shut down. Yang pivot was started. Y-1 and Y-3 were started.
July 30	Cottrell was started. Gorman South was shut down. Ranch pivot was started. IW-1 and IW-2 were started. EX-29 and EX-30 were routed to the Ranch pivot.
July 31	Gorman South was started. Cottrell was shutdown. PLC at EX-27 malfunctioned and was reset.
August 3	A sitewide power outage occurred mid-day, affecting the Central Area, Source Area, SCRIA, DVD and northern ATUs.
August 4	Diagnosed and restarted DVD SCADA computer following power outage. Restarted Central Area, Source Area, SCRIA, DVD and northern ATUs.
August 7	Cottrell was started. Gorman North was shut down. Conducted troubleshooting at EX-02 and performed repairs.
August 8	Gorman North was started. Gorman South was shut down. Raised Cottrell drip lines to prevent the valves and weights from damaging crops. Yang 1/2 field harvest.
August 11	Gorman South was started. Yang Pivot was shut down. Y-1 and Y-3 were shut down.
August 12	Cottrell was shut down. Yang Pivot was started. Restarted Gorman North after power surge. EX-29 and EX-30 were off due to power surge. Y-1 and Y-3 were started.
August 13	Cottrell was started. Gorman North was shut down. EX-29 and EX-30 were started. Conducted leak repairs in DVD field S4.
August 15	IW-1 and IW-2 were shut down. EX-29 and EX-30 were diverted to the SCRIA.

TABLE 2-1

Facility Operations Maintenance Log*Third Quarter 2014 Agricultural Treatment Units Monitoring Report**Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California*

Date	Operations
August 19	Cottrell was shut down. Gorman North was started.
August 20	Cottrell was started. Gorman South was shut down.
August 25	Cottrell was shut down.
August 26	Gorman South was started. Yang Pivot was shut down. Y-1 and Y-3 were shut down. Started G-2R.
August 27	Cottrell was started.
August 28	Gorman North was started. EX-35 was started.
August 29	Cottrell was shut down. Yang Pivot was started. Y-3 was started.
September 3	G-2R was shut down.
September 5	Cottrell was started. Gorman South was shut down.
September 7	C-1 was shut down. EX-33 was shut down. EX-35 was shut down. Y-3 was shut down.
September 8	Started C-1. Gorman South was started. EX-33 was started. EX-35 was started. Y-1 was shut down. Yang Pivot was shut down.
September 11	Construction of Community East ATU began with drilling and construction of four extraction wells (SAU-EX-01 through SAU-EX-04). Well construction continued through the end of the Third Quarter.
September 15	Expanded Ranch pivot system was started up. IW-01 and IW-02 were started.
September 16	Y-1 was started. Yang Pivot was started. EX-29 and EX-30 were shut down. Performed leak repair at DVD backwash filter.
September 17	Gorman North was shut down. EX-29 and EX-30 were started. Conducted DVD system flushes. Identified leak in DVD field S5.
September 22	EX-29 and EX-30 were routed to the Ranch pivot. Prepared for chemical injections at DVD.
September 23	Citric acid injection was conducted at the DVD. Ten bags (50 pounds/bag) of citric acid were mixed with approximately 600 gallons of water, and the citric solution was injected into the drip irrigation tubing. Injection occurred over a period of approximately 12 hours.
September 24	Gorman North was started. Gorman South was shut down. Hydrogen peroxide injection was conducted at the DVD. Two drums (55 gallons) of hydrogen peroxide was injected into the drip irrigation tubing. DVD was offline overnight.
September 25	Flushed DVD piping network.
September 26	Y-3 was started. Completed riser repairs in DVD field S5.
September 30	EX-32 was shut down. Performed riser leak repairs in DVD field S6.

Notes:

DVD = Desert View Dairy

LEPA = low energy precise application

PLC = programmable logic controller

SCRIA IRZ = South Central Re-injection Area In Situ Reactive Zone

VFD = variable frequency drive

Notes:

a = Average monthly discharge rates for each ATU represent the monthly rate of groundwater discharge to land surface at that ATU. As of May 2012, the average monthly rate for the Gorman ATU is based on the discharge volume recorded at the Gorman North and Gorman South pivots. Cottrell ATU rates were calculated by the difference from May 2012 through August 2013. Beginning in September 2013, the discharge volume for the Cottrell pivot was measured directly and is no longer calculated. The average monthly rate for the Ranch ATU is based on the sum of the extraction well volumes located at the Ranch ATU. Discharge volume for the Yang pivot has been measured directly, and monthly rate is calculated based on this measurement. Discharge volume for the DVD has been calculated by adding the flows at the extraction wells (EX-1, EX-2, EX-3, EX-4, EX-9, EX-23, EX-24, EX-25, EX-26, EX-27, EX-28, and EX-34).

b = The Yang ATU was brought online on April 3, 2013 with extraction initially from well C-4. The balance of flow from well C-4 continued to supply the Gorman and Cottrell ATUs. As of October 17, 2013, the Yang ATU was disconnected from individual well C-4 and was connected to the distribution system supplying the Gorman and Cottrell pivots.

c = Y-01 was started on April 24, 2014, and Y-03 was started on April 3, 2014.

d = EX-29 and EX-30 were routed from the SCRIA extraction system to the Ranch pivot from June 27, 2014 to July 18, 2014. From July 18, 2014 to July 30, 2014, EX-29 and EX-30 were routed to the SCRIA extraction system. From July 30, 2014 to August 15, 2014, EX-29 and EX-30 were routed to the Ranch pivot. From August 15 to September 22, 2014, EX-29 and EX-30 were routed to the SCRIA extraction system. On September 22, 2014, EX-29 and EX-30 were routed to the Ranch pivot.

- ATU = Agricultural Treatment Unit
- DVD = Desert View Dairy
- gpm = gallons per minute
- mgd = millions of gallons per day
- SCRIA = South Central Reinjection Area

(acre-feet)	5,578	855	1,531	951	295	9,211

Notes:

a = Average monthly discharge volumes for each ATU represent the monthly volume of groundwater discharge to land surface at that ATU. As of May 2012, the average monthly volume for the Gorman ATU is based on the discharge volume recorded at the Gorman North and Gorman South pivots. Cottrell ATU rates were calculated by the difference from May 2012 through August 2013. Beginning in September 2013, the discharge volume for the Cottrell pivot was measured directly and is no longer calculated. The monthly volume for the Ranch ATU is based on the sum of the extraction well volumes located at the Ranch ATU. Discharge volume for the Yang pivot has been measured directly. Discharge volume for the DVD has been calculated by adding the volume at the extraction wells (EX-1, EX-2, EX-3, EX-4, EX-9, EX-23, EX-24, EX-25, EX-26, EX-27, EX-28, and EX-34).

b = The Yang ATU was brought online on April 3, 2013 with extraction initially from well C-4. The balance of flow from well C-4 continued to supply the Gorman and Cottrell ATUs. As of October 17, 2013, the Yang ATU was disconnected from individual well C-4 and was connected to the distribution system supplying the Gorman and Cottrell pivots.

ATU = Agricultural Treatment Unit
 DVD = Desert View Dairy
 SCRIA = South Central Reinjection Area

Extraction Method	Deionized water extraction	Modified USEPA 3005A	--				Modified USEPA 3005A	Modified USEPA 3005A				
Analytical Method	USEPA 7199	USEPA 6020	By difference: Cr(T) - Cr(VI)				USEPA 6020	USEPA 200.8				
Reporting Limit	~0.5 mg/kg	~1.0 mg/kg	~1 mg/kg				Estimated ~1.0 mg/kg	Estimated ~1.0 mg/kg				

Notes:

a - Groundwater samples for dissolved metals will be filtered in the field.

b - The analytical method used to obtain gross alpha and gross beta results will be dependent on the TDS of the samples.

c - The reporting limit for Cr(VI) will be dependent on the use of the data. For example, Cr(VI) data collected within OU1 are generally anticipated to be reported at 0.2 µg/L, while Cr(VI) results from other locations may be reported at 0.06 µg/L.

µg/L - micrograms per liter

Cr(III) - trivalent chromium

Cr(T) total chromium

Cr(VI) - hexavalent chromium

mg/L - milligrams per liter

mg/kg - milligrams per kilogram

OU1 - Operable Unit 1

pCi/L - picoCuries per liter

SM - Standard Method

STLC/DI- Soluble Threshold Limit Concentration/De-Ionized

TDS - total dissolved solids

USEPA - U.S. Environmental Protection Agency

Table 4-2

Analytical Results for Soil Samples

Third Quarter 2014 Agricultural Treatment Units Monitoring Report

Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Notes:

- ^a The Monitoring and Reporting Program specifies that Cr(III) (insoluble salts) should be sampled, but standard commercial analyses for Cr(III) for soil are unavailable. Cr(III) is calculated as the difference between Cr(T) and Cr(VI). For this calculation, half the reporting limit is used for non detects.
- ^b The Ranch ATU is physically located in both OU1 and OU2. However, irrigation water for the Ranch ATU is located in OU2. Therefore, the Ranch ATU is considered to be in OU2.

ATU = Agricultural Treatment Unit

BGS = below ground surface

Cr(T) = Chromium

Cr(III) = Trivalent Chromium

CR(VI) = Hexavalent Chromium

ft = feet

mg/kg = milligrams per kilogram

NA = not applicable

ND (x.x) = parameter is not detected at or above the reporting limit shown

OU = operable unit

Notes:

During the Second Quarter 2014 monitoring event, laboratory analysis of gross alpha was performed using two USEPA-certified methods: USEPA Method 900.0 and USEPA Method 7110C. Upon review of the results, it was determined that the gross alpha results reported using USEPA Method 900.0 were more accurate and representative of site conditions. Both sets of results are presented in this document; however, only the USEPA Method 900.0 gross alpha results will be used for future evaluations. Second Quarter 2014 USEPA Method 7110C gross alpha data is indicated by the S qualifier code.

-- = not analyzed

µg/L = micrograms per liter

ATU = Agricultural Treatment Unit

FD = field duplicate

J = concentration is estimated based on review of quality control criteria and data validation

mg/L = milligrams per liter

ND (x.x) = not detected at or above the reporting limit shown

pCi/L = picocuries per liter

S = Screening

Notes:

a - Per WTR-MM-5, any existing data that has been collected at least quarterly for a minimum of one year may be used for investigation purposes. Data will be summarized in the investigation report.

b - Long-term sampling of uranium and other radionuclides, outside of the byproduct investigation per WTR-MM-5 is not currently planned at the existing ATUs. The plan will be modified if needed upon completion of the byproducts investigation.

c - Monitoring wells MW-49A and MW-49B are included to fulfill the MRP requirement to monitor well MW-49, an identification which does not correspond to any existing well.

Abbreviations:

-- - No monitoring required

ATU - agricultural treatment unit

Cr(VI) - hexavalent chromium

Cr(T) - total chromium

EC - electrical conductivity

ft bgs- feet below ground surface

MRP - Monitoring and Reporting Program (Attachment E of Board Order No. R6V-2014-0023; Water Board, 2014)

Q - quarterly

ORP - oxidation-reduction potential

SA - semi-annual

TDS - total dissolved solids

Notes:

During the Second Quarter 2014 monitoring event, laboratory analysis of gross alpha was performed using two USEPA-certified methods: USEPA Method 900.0 and USEPA Method 7110C. Upon review of the results, it was determined that the gross alpha results reported using USEPA Method 900.0 were more accurate and representative of site conditions. Both sets of results are presented in this document; however, only the USEPA Method 900.0 gross alpha results will be used for future evaluations. Second Quarter 2014 USEPA Method 7110C gross alpha data is indicated by the S qualifier code.

-- = not analyzed

µg/L = micrograms per liter

FD = field duplicate

J = concentration is estimated based on review of quality control criteria and data validation

mg/L = milligrams per liter

ND (x.x) = not detected at or above the reporting limit shown

pCi/L = picocuries per liter

S = screening

Analytical Results for Groundwater Monitoring Wells, Current Quarter and Previous Three Quarters
Third Quarter 2014 Agricultural Treatment Units Monitoring Report
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Notes:

During the Second Quarter 2014 monitoring event, laboratory analysis of gross alpha was performed using two USEPA-certified methods: USEPA Method 900.0 and USEPA Method 7110C. Upon review of the results, it was determined that the gross alpha results reported using USEPA Method 900.0 were more accurate and representative of site conditions. Both sets of results are presented in this document; however, only the USEPA Method 900.0 gross alpha results will be used for future evaluations. Second Quarter 2014 USEPA Method 7110C gross alpha data is indicated by the S qualifier code.

- ^a Averages were calculated using the maximum concentration found between primary and field duplicate samples. For non-detects, half the reporting limit was used.
- ^b Rolling average for the last 12 months of available data.
- ^c Ranch ATU is physically located in both OU1 and OU2. However, irrigation water for the Ranch ATU is located in OU2. Therefore, the Ranch ATU is considered to be in OU2.

Evaluation Used To Determine Well Classification (cont)		<p>gradient of an actually affected domestic well or affected monitoring well</p> <ul style="list-style-type: none"> “potentially affected agricultural wells” will be identified if within one-half mile downgradient or one-quarter mile cross gradient of an actually affected agricultural well or affected monitoring well Annual particle track modeling will be completed to identify wells as “potentially affected domestic well or agricultural well” within the next year. 	“potentially affected domestic or agricultural well” within the next year
Third Quarter 2014 “Actually Affected Wells”	<p>During the Third Quarter of 2014, there were no domestic wells with Cr(VI) or Cr(T) concentrations that exceeded background concentrations of 3.1 or 3.2 µg/L, respectively, for the first time.</p> <p>Two domestic wells (28-21 and 28-65) have previously exceeded Cr(VI)/Cr(T) concentrations of 3.1/3.2 µg/L. During the Third Quarter of 2014, well 28-21 did not exceed 3.1/3.2 µg/ concentrations (Table 6-2). PG&E purchased the property containing well 28-65 during the reporting period, so this well was not sampled. Therefore, no “actually affected domestic wells” were identified during the reporting period.</p> <p>The methodology for establishing pre-remedial reference values to aid in identifying “actually</p>	<p>A minimum of four quarters of data are needed to establish pre-remedial reference concentrations. Because initial monitoring to establish pre-remedial reference concentrations for ATU byproducts began during the Second Quarter of 2014, pre-remedial concentrations of ATU byproducts in domestic and agricultural wells are still being obtained. Therefore, no domestic or agricultural wells were identified during the Third Quarter of 2014 as being actually affected.</p> <p>Nitrate and TDS data were evaluated at six monitoring wells (Table 6-4) located outside the hydraulic capture zones (shallow and deep) with at least 4 quarters of data from April 1, 2012 through March 31, 2014. Nitrate and TDS concentrations at all six wells exceeded either the MCL (10 mg/L) or SMCL</p>	NONE – Based on manual water level measurements from PG&E monitoring wells and the available screen information for the domestic and agricultural supply wells, there are no domestic or agricultural wells during the Third Quarter of 2014 water level data that meet the criteria for “actually affected wells”

<p>Third Quarter 2014 “Actually Affected Wells” (cont)</p>	<p>affected” monitoring wells under this EIR mitigation measure is currently being discussed with the Water Board, as per “Implementation of Mitigation Measures WTR-MM-2a and WTR-MM-2b, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California” (PG&E, 2014).⁵ Identification of actually affected domestic wells under this mitigation measure (if any) will be conducted upon Water Board approval of the methodology.</p>	<p>(500 mg/L), respectively, prior to the Second Quarter of 2014. During the Third Quarter of 2014, nitrate concentrations decreased from maximum concentrations for all six wells and TDS concentrations either decreased or did not exhibit increases exceeding 20% for five of the six wells.</p> <p>At one of the six wells, MW-85S, the TDS concentration of 2,700 mg/L increased 38 percent over the maximum TDS concentration of 1,960 mg/L (based on TDS data from April 1, 2012 through March 31, 2014 but did not exceed the maximum historical TDS concentration of 3,480 mg/L (Appendix E, Table E-1) at this well. Therefore, the increase in TDS at MW-85S is interpreted to be related to pre-existing TDS in the vicinity of this well rather than a result of ATU operations.</p> <p>The methodology for establishing pre-remedial reference values to aid in identifying “actually affected” monitoring wells under this EIR mitigation measure is currently being discussed with the Water Board (PG&E, 2014). Identification of actually affected monitoring wells under this mitigation measure (if any) will be conducted upon Water Board approval of the methodology.</p>

MITIGATION MEASURE	Chromium Plume Expansion	Agricultural Byproducts ¹	Aquifer Drawdown
	WTR-MM-2a	WTR-MM-2b	WTR-MM-2c
Third Quarter 2014 “Potentially Affected Wells”	NONE – A “potentially affected domestic well” is partially defined as a domestic supply well that has an increase in chromium concentrations due to remediation actions. The ATU WDRs do not specify what should be considered to be an “increase in chromium concentration” or what methods might be employed to make such a determination in the WTR-MM-2a domestic wells. Also, in the event that an increase in chromium concentration is identified, the ATU WDRs do not specify the methods to determine if the increase is due to remedial actions. Criteria and methodologies to make these determinations need to be developed. In the interim, for the current data set, a statistical evaluation of Cr(VI) trends was performed using data for all domestic wells in the WTR-MM-2a program with eight or more sample results between January 2011 and September 30, 2014. The trend analysis was conducted to identify domestic supply wells (if any) that might exhibit increasing chromium concentration trends. As summarized in this	NONE - “Actually affected monitoring wells” were not identified, so there are no potentially affected domestic or agricultural wells. As presented in the ROWD ⁶ , Addendum #3 ⁷ to the ROWD and the Addition to Addendum #3 ⁸ , modeling results indicate that there are no domestic or agricultural supply wells that would require mitigation within the first year of operation of the proposed ATUs.	Wells 23-27, 23-25, and 34-38 - Because drawdown of at least 10 feet is predicted to occur within 2 or 3 years of operation (based on computer modeling), baseline monitoring for arsenic, manganese, uranium, and gross alpha is proposed at three domestic supply wells (23-27, 23-25, and 34-38) during the first year of operation. Drawdown for these three wells did not exceed the trigger water level elevations during the Third Quarter of 2014.

Third Quarter 2014 Agricultural Treatment Units Monitoring Report
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California**

Notes:

^a The methodology for establishing pre-remedial reference values is currently being discussed with Water Board, as per "Implementation of Mitigation Measures WTR-MM-2a and WTR-MM-2b, Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California" (PG&E, 2014). In addition, the methodology for implementation of mitigation measures WTR-MM-2a and WTR-MM-2b are subject to a pending petition, "In the Matter of Lahontan Regional Water Quality Control Board Resolution No. R6V-2013-0060 Certifying a Final Environmental Impact Report." Petition ID A-2266: Petition for Review; Request to Hold Petition in Abeyance. Pacific Gas and Electric Company, Petitioner (PG&E, 2013).

^b California Department of Public Health MCL (<http://www.cdph.ca.gov/certlic/drinkingwater/Pages/Chromium6.aspx>).

^c Federal MCL from United States Environmental Protection Agency (<http://water.epa.gov/drink/contaminants/basicinformation/chromium.cfm>).

^d Background: Background concentration developed during 2007 Background Study (CH2M HILL, 2007). Background concentrations of chromium are currently being re-evaluated by the United States Geological Survey.

-- = not analyzed

µg/L = micrograms per liter

FD = field duplicate

J = concentration is estimated based on review of quality control criteria and data validation

MCL = Maximum Contaminant Level

mg/L = milligrams per liter

ND (x.x) = not detected at the reporting limit shown

NE = not established

Notes:

- ^a The California Department of Health primary MCLs are for nitrate as nitrogen, gross alpha, gross beta and dissolved uranium. A secondary MCL is listed for TDS.
- ^b The United States Environmental Protection Agency primary MCLs are for nitrate as nitrogen, gross alpha, gross beta and dissolved uranium. A secondary MCL is listed for TDS. The Federal MCL for uranium is 30 micrograms per liter. This is equivalent to the California MCL of 20 pCi/L.
- ^c A minimum of four quarters of data are needed to establish pre-remedial reference concentrations. Because initial monitoring to establish pre-remedial reference concentrations for ATU byproducts started during the Second Quarter of 2014, pre-remedial concentrations are still being obtained.

J = concentration is estimated based on review of quality control criteria and data validation

MCL = Maximum Contaminant Level

mg/L = milligrams per liter

ND (x.x) = not detected at the reporting limit shown

NE = not established

pCi/L = picocuries per liter

TDS = total dissolved solids

Notes:

Trend analysis considered groundwater data from January 1, 2011 through September 30, 2014.

Trend analysis performed using Mann Kendall single-tailed test at 0.05 significance level.

For monitoring points exhibiting no trend at the 95% confidence level, concentrations are deemed stable if the coefficient of variation (COV) is equal to or less than one.

>50% ND = greater than 50 percent of samples were not detected at laboratory reporting limits.

MK= Mann Kendall single tailed test

µg/L = micrograms per liter

NOTES:

^aOnly monitoring wells with 4 or more sample results from April 1, 2012 through March 31, 2014 that are also located outside of the hydraulic capture zone of the shallow zone of the Upper Aquifer (see Figure 3-1) during the Third Quarter of 2014 were included in this evaluation.

^bMaximum concentrations are the maximum nitrate (as N) or TDS concentration from April 1, 2012 through March 31, 2014.

^cPercent change is calculated as the percentage that nitrate (as N) or TDS increased (positive) or decreased (negative) during current reporting period when compared to the maximum concentration from April 1, 2013 through March 31, 2014.

^dThere are insufficient radionuclide data for comparison at this time. Second Quarter 2014 was the first time samples were analyzed for these constituents.

mg/L = milligrams per liter

Nitrate (as N) = nitrate as nitrogen

TDS = total dissolved solids

^a Information for domestic and agricultural supply wells potentially affected by drawdown listed here are required by WTR-MM-2c.

^b Monitoring wells screened across the shallow zone of the Upper Aquifer (UUA) and deep zone of the Upper Aquifer (LUA) were selected to estimate baseline water levels at nearby private domestic and agricultural wells. In areas where the Upper Aquifer is thin, a single monitoring well was used to estimate baseline water levels.

^c The depth to water and groundwater elevations listed here are the maximum (for depth to water) and minimum (for groundwater elevations) measured from April 1, 2013 through March 31, 2014. The calculated elevations for wells screened across the deep zone of the Upper Aquifer (LUA) were used to estimate pre-remedial reference drawdown elevations at the domestic and agricultural supply wells.

^d Calculated using the reference level LUA monitoring well groundwater elevation and the domestic or agricultural supply well screen information. The trigger elevation is the depth at which 25% of the wetted portion of the domestic or agricultural supply well screen will be dry.

^e The Third Quarter 2014 depth to water and groundwater elevations for the LUA wells were reviewed to estimate if drawdown exceeding trigger levels had potentially occurred at the domestic and agricultural supply wells.

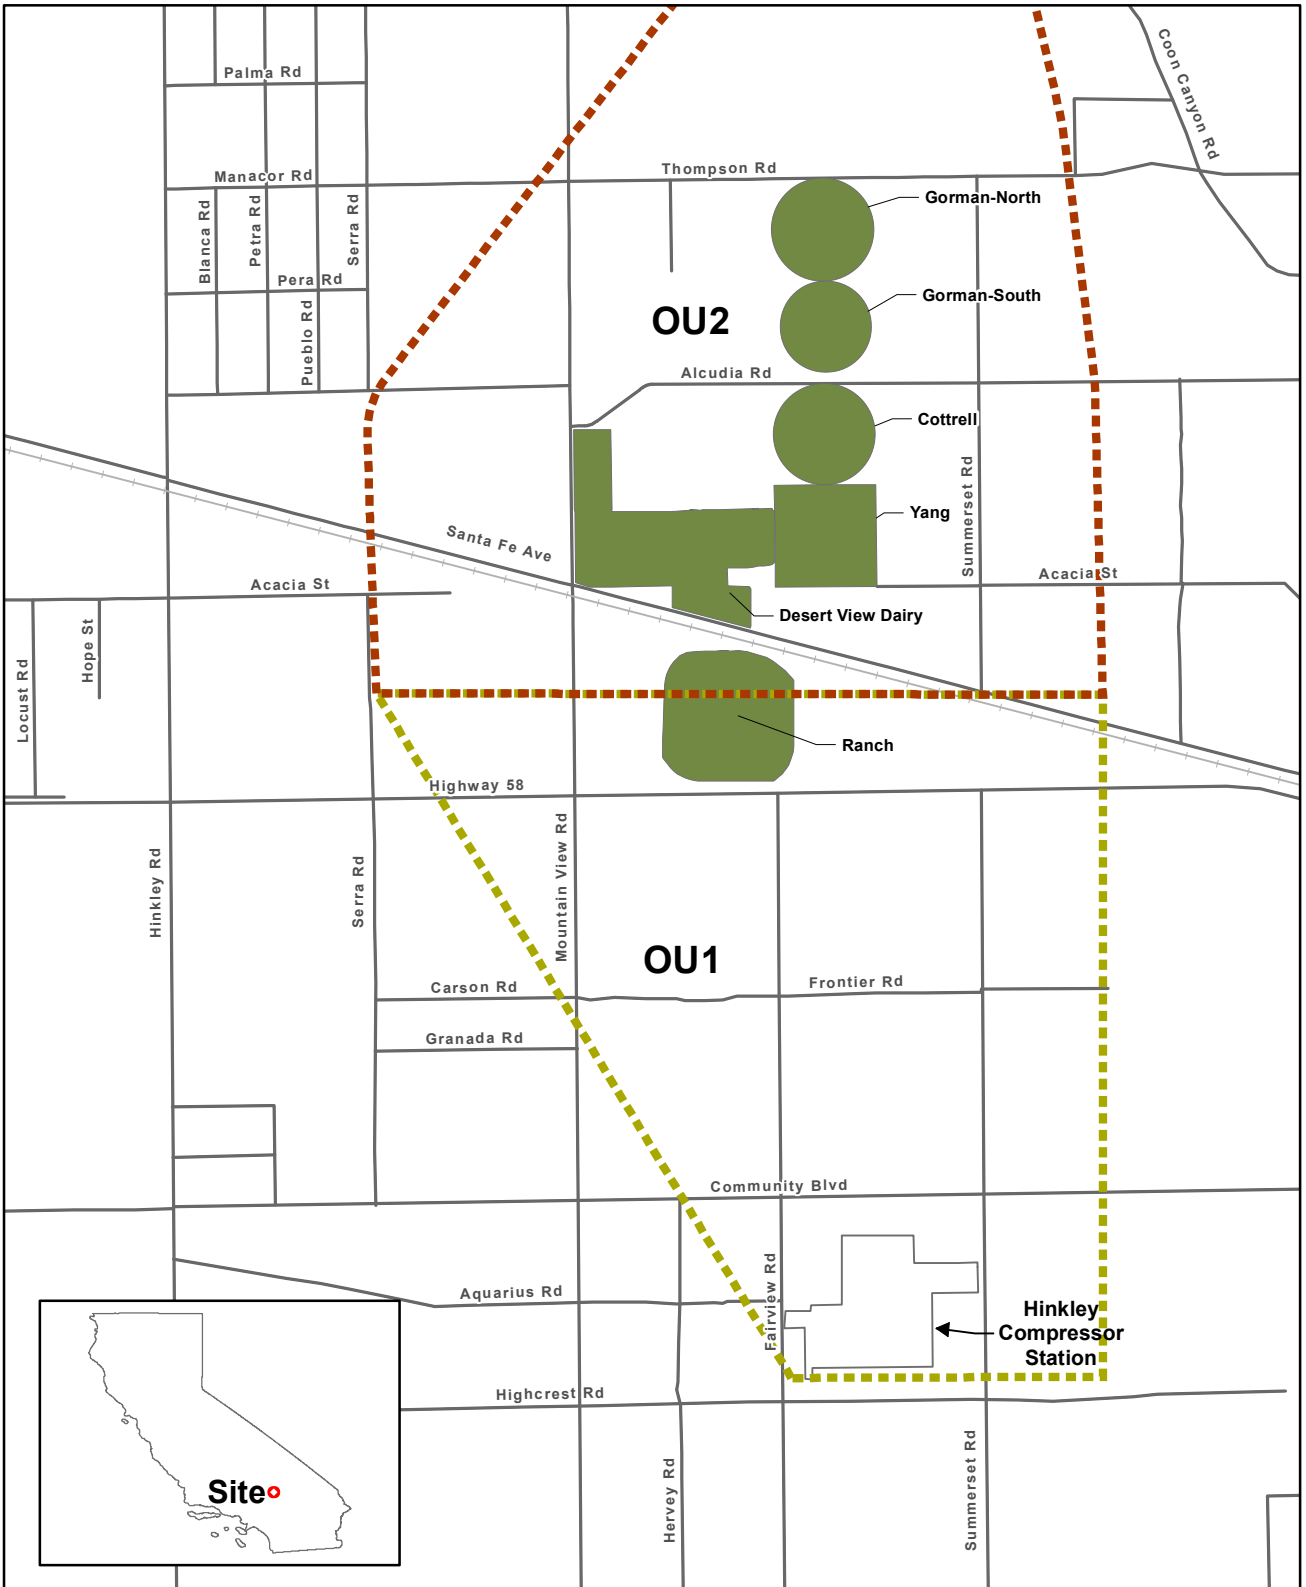

^f Based on Third Quarter 2014 groundwater measurements no domestic or agricultural supply wells lost 25% of the wetted screen depth in comparison to the reference levels provided in this table.

^g 02-02A has two screened intervals, one from 160-180 ft bgs and a second from 200-230 ft bgs.

2Q = Second Quarter
 DOM = Domestic or Agricultural Supply Well
 ft btoc = feet below top of casing
 ft bgs = feet below ground surface
 ft msl = feet above mean sea level
 MW = monitoring well
 UUA = Shallow Zone of Upper Aquifer
 LUA = Deep Zone of Upper Aquifer
 --- = unknown

01-02 Domestic or Agricultural Well ID
2,082 Trigger Level Elevation where 25% of the wetted screen depth is dry

MW-67A Monitoring Well ID
2,112.16 Reference groundwater elevation (April 1, 2013 through March 31, 2014)
2,113.09 Third Quarter 2014 Groundwater Elevation

NOTES:
1. Only domestic/agricultural wells requiring Environmental Impact Report (EIR) baseline water level monitoring are shown.
2. Groundwater levels were not obtained from the domestic supply or agricultural supply wells due to access limitations.
3. The lowest groundwater elevations obtained from monitoring wells from April 1, 2013 through March 31, 2014 were used to develop reference groundwater elevations in the areas where agricultural and domestic supply wells are present. The reference groundwater elevations at the monitoring wells and well construction information for supply wells (if known) were used to estimate the groundwater elevations at which 25% of the wetted screen depth would become dry (trigger level).

^a Ranch ATU is physically located in both OU1 and OU2. However, irrigation water for the Ranch ATU is located in OU2. Therefore, the Ranch ATU is considered to be in OU2.

uS/cm	microsiemens per centimeter
%	mass percent
ASML	above mean sea level
BGS	below ground surface
deg C	degrees celcius
ft	feet
FQ	field measurement qualified as questionable due to reading outside expected range
mg/L	milligrams per liter
mV	millivolts
nm	parameter was not measured
NTU	nephelometric turbidity units
ORP	oxidation reduction potential
OU	operable unit

Table B-2

Historical Groundwater Levels and Elevations 2012 to Present
Third Quarter 2014 Agricultural Treatment Units Monitoring Report
Pacific Gas and Electric Company, Hinkley Compressor Station, Hinkley, California

Notes:

^a Ranch ATU is physically located in both OU1 and OU2. However, irrigation water for the Ranch ATU is located in OU2. Therefore, the Ranch ATU is considered to be in OU2.

ft = feet

MP = Well measure point (either top of steel well casing or top of PVC well casing)

MSL = Mean Sea Level

OU = operable unit

* = Well was in operation

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 01, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Sample was received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Checklist Completed B AC  7/2/2014

Reviewed By:  07/08/14

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012857-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.020217 * 1 \\ &= 0.020217\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

 7/8/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012857-013A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 2.3784 * 1 \\ &= 2.3784\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 2.4$$

 7/8/2014

GLA d`Y 7 UW`Ujcb

A9H<C8 . EPA 6020
H9GH`B5 A9 . Heavy Metals by ICP-MS
A5HF±. Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **B\$%&) +!\$\$, 6 ž** the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 3.0419012898 * 1 * (25/25) \\ &= 3.0419012898 \end{aligned}$$

Reporting results in two significant figures,

$$7 \setminus fca \ ji \ a \ ži \ [\ #@ \quad 1 \quad ' \ '$$$

RE: PGE Hinkley, 492584.UR.AU

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 01, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories - Las Vegas.

Lab Order: N012858

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

Analytical Comments for EPA 300.0:

Dilution was necessary on N012858-002 due to precipitation of sample upon the addition of eluent.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012858-001C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(63.8614-63.8048)*1000000}{100}$$

566 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 570 \text{ mg/L}$$

7/8/2014

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Sample Calculation

METHOD: EPA 200.8

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Uranium Radioactivity, in pCi/L, in the original sample as follows:

$$\text{Uranium, pCi/L} = A * DF * PF * 0.67 \text{ (pCi/ug)}$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

0.67 = conversion factor

For Sample **N012858-001A**, the Uranium Radioactivity in pCi/L is calculated as follows:

$$\begin{aligned} \text{Uranium, pCi/L} &= 12.7265134234361 * 1 * (25/25) * 0.67 \\ &= 8.52676399370219 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Uranium, pCi/L} = 8.5$$

ANALYTICAL QC SUMMARY REPORT

TestCode: 200.8DIS_U_PGE

Sample ID: N012858-001A-PS	SampType: PS	TestCode: 200.8DIS_U_	Units: pCi/L	Prep Date:	RunNo: 94018						
Client ID: ZZZZZ	Batch ID: 45976	TestNo: EPA 200.8	Analysis Date: 7/3/2014	SeqNo: 1800089							
Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Uranium	24.008	1.3	13.40	8.527	116	80	120				

Qualifiers:

- B Analyte detected in the associated Method Blank
- ND Not Detected at the Reporting Limit
- DO Surrogate Diluted Out
- E Value above quantitation range
- R RPD outside accepted recovery limits
- Calculations are based on raw values
- H Holding times for preparation or analysis exceeded
- S Spike/Surrogate outside of limits due to matrix interference

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012858-002B** concentration in mg/L is calculated as follows:

$$\begin{aligned}\text{Nitrate, mg/L} &= 2.146 * 5 \\ &= 10.73\end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 11$$

RE: Project: N012858-001D
Pace Project No.: 30124387

Dear Mr. Cartin:

Enclosed are the analytical results for sample(s) received by the laboratory on July 08, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Carin Ferris for
Jacquelyn Collins

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (2.114 ug/L) and hexavalent chromium (0.668 ug/L) for sample N012863-019 (33-25-059-Q3) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 2.032 and 2.063 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012863-009A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.158193 * 1 \\ &= 0.158193\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = \mathbf{0.16}$$

Nancy 7/9/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012863-004A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 3.4406 * 1 \\ &= 3.4406\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 3.4$$

RE: PGE Hinkley, 492584.UR.AU

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 02, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories - Las Vegas.

Lab Order: N012864

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike Duplicate (MSD) is outside recovery criteria for Arsenic possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012864-003B** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 1.555 * 10 \\ &= 15.55 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 16$$

RE: PGE Hinkley, 492581.UR.IR.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 07, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

CLIENT: CH2M HILL
Project: PGE Hinkley, 492581.UR.IR.FW
Lab Order: N012883

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

EOSINE and FLUORESCEIN were subcontracted to Ozark Underground Labs- Protom, Missouri.

Analytical Comments for EPA 300.0:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Orthophosphate, Dissolved (as P) possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Please review the checklist below. Any NO signifies non-compliance. Any non-compliance will be noted and must be understood as having an impact on the quality of the data. All tests will be performed as requested regardless of any compliance issues.

If you have any questions or further instruction, please contact our Project Coordinator at (702) 307-2659.

Cooler Received/Opened On: 7/7/2014 Workorder: N012883
 Rep sample Temp (Deg C): 3.2/2.9 IR Gun ID: 2
 Temp Blank: Yes No
 Carrier name: ATL
 Last 4 digits of Tracking No.: NA Packing Material Used: None
 Cooling process: Ice Ice Pack Dry Ice Other None

Sample Receipt Checklist

- | | | | |
|---|---|-----------------------------|---|
| 1. Shipping container/cooler in good condition? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | Not Present <input type="checkbox"/> |
| 2. Custody seals intact, signed, dated on shipping container/cooler? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | Not Present <input checked="" type="checkbox"/> |
| 3. Custody seals intact on sample bottles? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | Not Present <input checked="" type="checkbox"/> |
| 4. Chain of custody present? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 5. Sampler's name present in COC? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 6. Chain of custody signed when relinquished and received? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 7. Chain of custody agrees with sample labels? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 8. Samples in proper container/bottle? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 9. Sample containers intact? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 10. Sufficient sample volume for indicated test? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 11. All samples received within holding time? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 12. Temperature of rep sample or Temp Blank within acceptable limit? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | NA <input type="checkbox"/> |
| 13. Water - VOA vials have zero headspace? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |
| 14. Water - pH acceptable upon receipt?
Example: pH > 12 for (CN,S); pH<2 for Metals | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | NA <input type="checkbox"/> |
| 15. Did the bottle labels indicate correct preservatives used? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | NA <input type="checkbox"/> |
| 16. Were there Non-Conformance issues at login? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |
| Was Client notified? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012883-007A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.014658 * 1 \\ &= 0.014658\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \text{mg/L} = \text{ND}$$

 7/17/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012883-013A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 10.4239 * 10 \\ &= 104.239\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 100$$

7/11/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012883-006C** concentration in mg/L is calculated as follows:

$$\begin{aligned}\text{Nitrate, mg/L} &= 1.142 * 10 \\ &= 11.42\end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 11$$

7/17/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012883-003D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [0.82120] [1] - 0.04960$$

$$\text{TOC} = 0.77160$$

Reporting results in two significant figures,

$$\text{TOC} = 0.77 \text{ mg/L}$$

$$\text{TOC} = \text{ND}$$

PS 7/17/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Water

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012883-001B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0.8898944333 * 1 * (25/25) \\ &= 0.8898944333 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Iron, mg/L} = 0.89$$

- H Holding times for preparation or analysis exceeded
- S Spike/Surrogate outside of limits due to matrix interference

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Arsenic

Calculate the ~~Chromium~~ concentration, in ug/L, in the original sample as follows:

$$\text{Arsenic ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012883-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Arsenic ug/L} &= 16.166435824 * 1 * (25/25) \\ &= 16.166435824 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Arsenic ug/L} = 16$$

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 07, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Sample was received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012885-009A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.147835 * 1 \\ &= 0.147835\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 0.15$$

 7/11/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012885-011A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 1.082 * 1 \\ &= 1.082\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 1.1$$

7/11/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012885-004B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 2.5356783757 * 1 * (25/25) \\ &= 2.5356783757 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 2.5$$

RE: PGE Hinkley, 492584.UR.AU

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 07, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012886-001C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(64.0315-63.9947)*1000000}{100}$$

368 mg/L

Reporting result in two significant figures,

TDS =370mg/L

7/10/2014

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Sample Calculation

METHOD: EPA 200.8

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Uranium Radioactivity, in pCi/L, in the original sample as follows:

$$\text{Uranium, pCi/L} = A * DF * PF * 0.67 \text{ (pCi/ug)}$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

0.67 = conversion factor

For Sample **N012886-001A**, the Uranium Radioactivity in pCi/L is calculated as follows:

$$\begin{aligned} \text{Uranium, pCi/L} &= 4.36304018234123 * 1 * (25/25) * 0.67 \\ &= 2.92323692216862 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Uranium, pCi/L} = 2.9$$

Uranium	17.567	1.3	13.40	1.754	118	80	120				

Qualifiers:

- B Analyte detected in the associated Method Blank
- ND Not Detected at the Reporting Limit
- DO Surrogate Diluted Out
- E Value above quantitation range
- R RPD outside accepted recovery limits
- Calculations are based on raw values
- H Holding times for preparation or analysis exceeded
- S Spike/Surrogate outside of limits due to matrix interference

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012886-002B** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 1.941 * 5 \\ &= 9.705 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 9.7$$

RE: Project: N012886-001D/23-24-059-Q3
Pace Project No.: 30125007

Dear Mr. Cartin:

Enclosed are the analytical results for sample(s) received by the laboratory on July 15, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins
jacquelyn.collins@pacelabs.com
Project Manager

PROJECT NARRATIVE

Project: N012886-001D/23-24-059-Q3

Pace Project No.: 30125007

Method: EPA 900.0

Description: 900.0 Gross Alpha/Beta

Client: ASSET Laboratories

Date: August 05, 2014

General Information:

3 samples were analyzed for EPA 900.0. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

RE: PGE Hinkley, 492581.UR.SW.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 08, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

Qualifiers:

- B Analyte detected in the associated Method Blank
- ND Not Detected at the Reporting Limit
- DO Surrogate Diluted Out
- E Value above quantitation range
- R RPD outside accepted recovery limits
- Calculations are based on raw values
- H Holding times for preparation or analysis exceeded
- S Spike/Surrogate outside of limits due to matrix interference

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012896-012C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(63.0375-62.9943)*1000000}{100}$$

432 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 430 \text{ mg/L}$$

7/10/2014

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012896-007A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.194867 * 1 \\ &= 0.194867\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = \mathbf{0.19}$$

Nancy 7/14/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012896-016A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 3.3752 * 1 \\ &= 3.3752\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 3.4$$

 7/21/2014

Sample ID: **N012896-015D @ pH 7.54**

A. Standardization of Sulfuric Acid (titrant):

$$\text{Normality of acid} = (A)(B)/(53.00)(C)$$

Where:

A, grams weighed for Na₂CO₃ solution (Na₂CO₃ Standardization Solution)

B, mL Na₂CO₃ solution taken for titration, and

C, ml of sulfuric acid used to inflection point

Spike Standards

Na₂CO₃ Standardization Solution, ACS Grade (1.00 ml = 2500ug as CaCO₃):

Dissolve 2.650 grams of Na₂CO₃ in distilled water and dilute to 1 liter.

LCS/MS/MSD Stock NaHCO₃, ACS Grade (1.00 ml = 5000 ug as CaCO₃):

Dissolve 0.8398 grams of NaHCO₃ in distilled water and dilute to 1 liter.

Therefore,

$$\text{Normality of Acid} = (2.65\text{g/L}) (5\text{mL}) / (53.00) (10.95\text{mL})$$

$$= \mathbf{0.02283\ N}$$

B. CALCULATION OF ALKALINITY (for a 50 ml sample)

$$\text{Total Alkalinity (as CaCO}_3\text{), mg/L} = M_{\text{vol.}} * N \text{ H}_2\text{SO}_4 * \text{DF} * 1000$$

Where:

M_{vol.}, volume titrant used to reach pH 4.5, ml

N, Normality of H₂SO₄

DF, Dilution Factor = (50 ml) / (Vol. of Sample used)

Therefore,

$$\text{Total Alkalinity (as CaCO}_3\text{), mg/L} = (5.85) (0.02283\ \text{N}) (1) * 1000$$

$$= 133.55\ \text{mg/L}$$

Reporting results in two significant figures,

$$= 130.00\ \text{mg/L as CaCO}_3$$

mer
7/9/2014

C. SPECIATED ALKALINITY:

Phenolphthalein Alkalinity

$$\begin{aligned} \text{P alkalinity, mg/L as CaCO}_3 &= P_{\text{vol.}} * N \text{ H}_2\text{SO}_4 * \text{DF} * 1000 \\ &= (0) (0.02283 \text{ N}) (1) * 1000 \\ &= \mathbf{0} \end{aligned}$$

Total Alkalinity

$$\begin{aligned} \text{T alkalinity, mg/L as CaCO}_3 &= M_{\text{vol.}} * N \text{ H}_2\text{SO}_4 * \text{DF} * 1000 \\ &= (5.85 \text{ mL}) (0.02283) (1) * 1000 \\ &= \mathbf{133.55 \text{ mg/L as CaCO}_3} \end{aligned}$$

Where:

- $P_{\text{vol.}}$ - volume titrant used to reach pH 8.3, ml
- $M_{\text{vol.}}$ - volume titrant used to reach pH 4.5, ml
- N - Normality of H_2SO_4
- DF - Dilution Factor = (50 ml) / (Vol. of Sample used)

Then OH, CO_3 , HCO_3 alkalinities as CaCO_3 will be calculated as follows:

Result of Titration	OH Alkalinity as CaCO_3	CO_3 Alkalinity as CaCO_3	HCO_3 Alkalinity as CaCO_3
$P = 0$	0	0	T
$P < \frac{1}{2} T$	0	2P	$T - 2P$
$P = \frac{1}{2} T$	0	2P	0
$P > \frac{1}{2} T$	$2P - T$	$2(T - P)$	0
$P = T$	T	0	0

Therefore,

$$\text{OH Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{CO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{HCO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{130.00 \text{ mg/L}}$$

Reporting results in two significant figures,

$$\text{OH Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{CO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{HCO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{130.00 \text{ mg/L}}$$

gmer
7/9/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012896-015C** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 0.631 * 1 \\ &= 0.631 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = \mathbf{0.63}$$

 7/22/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012896-030D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [1.01190] [1] - 0.04960$$

$$\text{TOC} = 0.96230$$

Reporting results in two significant figures,

$$\text{TOC} = 0.96 \text{ mg/L}$$

since result is <PQL,

$$\text{TOC} = \text{ND}$$

PS 7/22/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Water

FORMULA:

Calculate the Sodium concentration, in mg/L, in the original sample as follows:

$$\text{Sodium, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012896-015B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Sodium, mg/L} &= 12.619905 * 5 * (25/25) \\ &= 63.099525 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Sodium, mg/L} = 63$$

RE: PGE Hinkley, 492581.UR.IR.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 08, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012897-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 8.4233 * 50 \\ &= 421.165\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 420$$

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012897-003B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0.691630795 * 1 * (25/25) \\ &= 0.691630795 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Iron, mg/L} = 0.69$$

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Arsenic concentration, in ug/L, in the original sample as follows:

$$\text{Arsenic, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012897-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Arsenic, ug/L} &= 0.85685164369 * 1 * (25/25) \\ &= 0.85685164369 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Arsenic, ug/L} = 0.86$$

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 08, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Reviewed By: gog 07/10/14

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012898-012A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.133503 * 1 \\ &= 0.133503\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 0.13$$

Nancy 7/14/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012898-007A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 2.3001 * 1 \\ &= 2.3001\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 2.3$$

Henry 7/14/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012898-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 1.77082397475801 * 1 * (25/25) \\ &= 1.77082397475801 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 1.8$$

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 09, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

Lab Order: N012906

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Analytical Comments for EPA 6020_Dissolved:

Because the results for total dissolved chromium (1.790 ug/L) and hexavalent chromium (0.707 ug/L) for sample N012906-009 (34-62-059-Q3) are discrepant, sample from both the total dissolved chromium and hexavalent chromium containers were redigested and analyzed for total dissolved chromium. The results from the redigested samples were 1.749 and 1.604 ug/L, respectively. Since these data confirmed the original result for total dissolved chromium, the original result is reported.

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012906-006A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.036265 * 1 \\ &= 0.036265\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

Nancy 7/15/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012906-007A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 3.8174 * 1 \\ &= 3.8174\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 3.8$$

Monney 7/15/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012906-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 1.19397713662391 * 1 * (25/25) \\ &= 1.19397713662391 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 1.2$$

RE: PGE Hinkley, 492584.UR.AU

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 09, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

The cover letter is an integral part of this analytical report. This Laboratory Report cannot be reproduced in part or in its entirety without written permission from the client and Advanced Technology Laboratories - Las Vegas.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012907-001C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(64.0252-63.9949)*1000000}{100}$$

303 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 300 \text{ mg/L}$$

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Sample Calculation

METHOD: EPA 200.8

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Uranium Radioactivity, in pCi/L, in the original sample as follows:

$$\text{Uranium, pCi/L} = A * DF * PF * 0.67 \text{ (pCi/ug)}$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

0.67 = conversion factor

For Sample **N012907-002A**, the Uranium Radioactivity in pCi/L is calculated as follows:

$$\begin{aligned} \text{Uranium, pCi/L} &= 43.0117475792441 * 1 * (25/25) * 0.67 \\ &= 28.8178708780936 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Uranium, pCi/L} = \mathbf{29}$$

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012907-002B** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 1.316 * 10 \\ &= 13.16 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 13$$

 7/22/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012907-001D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [0.17220] [1] - 0.04960$$

$$\text{TOC} = 0.12260$$

Reporting results in two significant figures,

$$\text{TOC} = 0.12 \text{ mg/L}$$

since result is <PQL,

$$\text{TOC} = \text{ND}$$

PS 7/18/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012907-001A**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0.001666001567 * 1 * (25/25) \\ &= 0.001666001567 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Iron, mg/L} = 0.0017$$

Since PQL of Iron is 0.02 mg/L,

$$\text{Iron, mg/L} = \text{ND}$$

RE: Project: N012907
Pace Project No.: 30125092

Dear Mr. Cartin:

Enclosed are the analytical results for sample(s) received by the laboratory on July 16, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins

PROJECT NARRATIVE

Project: N012907

Pace Project No.: 30125092

Method: EPA 900.0

Description: 900.0 Gross Alpha/Beta

Client: ASSET Laboratories

Date: August 04, 2014

General Information:

2 samples were analyzed for EPA 900.0. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Analytical Comments for EPA 218.6_Low Level:

Matrix Spike (MS) on QC sample N012908-024AMS is outside recovery criteria however, it passed in the regular level.. The associated Laboratory Control Sample (LCS) recovery was acceptable.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012908-010D, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(63.0279-62.9939)*1000000}{100}$$

340 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 340 \text{ mg/L}$$

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012908-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.012457 * 1 \\ &= 0.012457\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

 7/22/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012908-013A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 6.8941 * 1 \\ &= 6.8941\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 6.9$$

 7/22/2014

Sample ID: **N012908-010D @ pH 7.55**

A. Standardization of Sulfuric Acid (titrant):

$$\text{Normality of acid} = (A)(B)/(53.00)(C)$$

Where:

A, grams weighed for Na₂CO₃ solution (Na₂CO₃ Standardization Solution)
B, mL Na₂CO₃ solution taken for titration, and
C, ml of sulfuric acid used to inflection point

Spike Standards

Na₂CO₃ Standardization Solution, ACS Grade (1.00 ml = 2500ug as CaCO₃):
Dissolve 2.650 grams of Na₂CO₃ in distilled water and dilute to 1 liter.

LCS/MS/MSD Stock NaHCO₃, ACS Grade (1.00 ml = 5000 ug as CaCO₃):
Dissolve 0.8398 grams of NaHCO₃ in distilled water and dilute to 1 liter.

Therefore,

$$\begin{aligned} \text{Normality of Acid} &= (2.65\text{g/L}) (5\text{mL}) / (53.00) (10.95\text{mL}) \\ &= \mathbf{0.02283\ N} \end{aligned}$$

B. CALCULATION OF ALKALINITY (for a 50 ml sample)

$$\text{Total Alkalinity (as CaCO}_3\text{), mg/L} = M_{\text{vol.}} \cdot N \text{ H}_2\text{SO}_4 \cdot \text{DF} \cdot 1000$$

Where:

M_{vol.}, volume titrant used to reach pH 4.5, ml
N, Normality of H₂SO₄
DF, Dilution Factor = (50 ml) / (Vol. of Sample used)

Therefore,

$$\begin{aligned} \text{Total Alkalinity (as CaCO}_3\text{), mg/L} &= (5.90) (0.02283\ \text{N}) (1) \cdot 1000 \\ &= 134.69\ \mathbf{mg/L} \end{aligned}$$

Reporting results in two significant figures,

$$= 130.00\ \mathbf{mg/L}\ \text{as CaCO}_3$$

7/10/2014

C. SPECIATED ALKALINITY:

Phenolphthalein Alkalinity

$$\begin{aligned} \text{P alkalinity, mg/L as CaCO}_3 &= P_{\text{vol.}} \cdot N \text{ H}_2\text{SO}_4 \cdot \text{DF} \cdot 1000 \\ &= (0) (0.02283 \text{ N}) (1) \cdot 1000 \\ &= \mathbf{0} \end{aligned}$$

Total Alkalinity

$$\begin{aligned} \text{T alkalinity, mg/L as CaCO}_3 &= M_{\text{vol.}} \cdot N \text{ H}_2\text{SO}_4 \cdot \text{DF} \cdot 1000 \\ &= (5.90 \text{ mL}) (0.02283) (1) \cdot 1000 \\ &= \mathbf{134.69 \text{ mg/L as CaCO}_3} \end{aligned}$$

Where:

- $P_{\text{vol.}}$ - volume titrant used to reach pH 8.3, ml
- $M_{\text{vol.}}$ - volume titrant used to reach pH 4.5, ml
- N - Normality of H_2SO_4
- DF - Dilution Factor = (50 ml) / (Vol. of Sample used)

Then OH, CO_3 , HCO_3 alkalinities as CaCO_3 will be calculated as follows:

Result of Titration	OH Alkalinity as CaCO_3	CO_3 Alkalinity as CaCO_3	HCO_3 Alkalinity as CaCO_3
$P = 0$	0	0	T
$P < \frac{1}{2} T$	0	2P	$T - 2P$
$P = \frac{1}{2} T$	0	2P	0
$P > \frac{1}{2} T$	$2P - T$	$2(T - P)$	0
$P = T$	T	0	0

Therefore,

$$\text{OH Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{CO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{HCO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{130.00 \text{ mg/L}}$$

Reporting results in two significant figures,

$$\text{OH Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{CO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{0}$$

$$\text{HCO}_3 \text{ Alkalinity as CaCO}_3 = \mathbf{130.00 \text{ mg/L}}$$

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012908-011C** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 0.905 * 20 \\ &= 18.1 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 18$$

 7/22/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Water

FORMULA:

Calculate the Sodium concentration, in mg/L, in the original sample as follows:

$$\text{Sodium, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012908-017B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Sodium, mg/L} &= 14.41111242 * 5 * (25/25) \\ &= 72.0555621 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Sodium, mg/L} = 72$$

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012908-002B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 3.35078077771271 * 1 * (25/25) \\ &= 3.35078077771271 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 3.4$$

RE: PGE Hinkley, 492581.UR.IR.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 09, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

EOSINE and FLUORESCEIN were subcontracted to Ozark Underground Labs- Protem, Missouri.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012909-001C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(61.7636-61.7318)*1000000}{100}$$

318 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 320 \text{ mg/L}$$

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Jmer
7/15/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012909-002A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.000000 * 1 \\ &= 0.000000\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

 7/22/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012909-006A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 14.4693 * 100 \\ &= 1446.93\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 1400$$

 7/23/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012909-005C** concentration in mg/L is calculated as follows:

$$\begin{aligned}\text{Nitrate, mg/L} &= 1.872 * 2 \\ &= 3.744\end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 3.7$$

Nancy 7/22/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012909-005D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [0.45200] [1] - 0.04960$$

$$\text{TOC} = 0.40240$$

Reporting results in two significant figures,

$$\text{TOC} = \mathbf{0.40} \text{ mg/L}$$

since result is <PQL,

$$\text{TOC} = \mathbf{ND}$$

JT 7/22/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012909-002B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0.1036149325 * 1 * (25/25) \\ &= 0.1036149325 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Iron, mg/L} = 0.10$$

Project: PGE Hinkley, 492581.UR.IR.FW
Lab Order: N012916

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

EOSINE and FLUORESCEIN were subcontracted to Ozark Underground Labs- Protom, Missouri.

Analytical Comments for EPA 300.0:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) are outside recovery criteria for Orthophosphate, Dissolved (as P) possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Sample Receipt Checklist

- | | | | |
|---|---|--|---|
| 1. Shipping container/cooler in good condition? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | Not Present <input type="checkbox"/> |
| 2. Custody seals intact, signed, dated on shipping container/cooler? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | Not Present <input checked="" type="checkbox"/> |
| 3. Custody seals intact on sample bottles? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | Not Present <input checked="" type="checkbox"/> |
| 4. Chain of custody present? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 5. Sampler's name present in COC? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 6. Chain of custody signed when relinquished and received? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 7. Chain of custody agrees with sample labels? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 8. Samples in proper container/bottle? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 9. Sample containers intact? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 10. Sufficient sample volume for indicated test? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 11. All samples received within holding time? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | |
| 12. Temperature of rep sample or Temp Blank within acceptable limit? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | NA <input type="checkbox"/> |
| 13. Water - VOA vials have zero headspace? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |
| 14. Water - pH acceptable upon receipt?
Example: pH > 12 for (CN,S); pH<2 for Metals | Yes <input type="checkbox"/> | No <input checked="" type="checkbox"/> | NA <input type="checkbox"/> |
| 15. Did the bottle labels indicate correct preservatives used? | Yes <input checked="" type="checkbox"/> | No <input type="checkbox"/> | NA <input type="checkbox"/> |
| 16. Were there Non-Conformance issues at login? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |
| Was Client notified? | Yes <input type="checkbox"/> | No <input type="checkbox"/> | NA <input checked="" type="checkbox"/> |

Comments Sample MW-73D-059-Q3 was received at pH 3. Acid was added to pH <2.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012916-013C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(61.3564-61.3134)*1000000}{100}$$

430 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 430 \text{ mg/L}$$

7/16/2014

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Jmer
7/16/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012916-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.012968 * 1 \\ &= 0.012968\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

 7/23/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012916-002A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 1.0899 * 1 \\ &= 1.0899\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 1.1$$

 7/23/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012916-015C** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 1.244 * 10 \\ &= 12.44 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 12$$

Nancy 7/23/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012916-015D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [0.96470] [1] - 0.05580$$

$$\text{TOC} = 0.90890$$

Reporting results in two significant figures,

$$\text{TOC} = 0.91 \text{ mg/L}$$

$$\text{TOC} = \text{ND}$$

PS 7/23/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012916-002B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0 * 1 * (25/25) \\ &= 0 \end{aligned}$$

Since PQL of Iron is 0.02 mg/L,

$$\text{Iron, mg/L} = \text{ND}$$

RE: PGE Hinkley, 492581.UR.AU.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 10, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

Analytical Comments for EPA 218.6:

Dilution was necessary on sample N012917-001 due to failed Retention Time criteria when sample was analyzed at no dilution.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B) \cdot 1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

~~B\$%&- %+\$!\$\$%8~~

For ~~NO12917-017D~~, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(60.0016 - 59.9021) \cdot 1000000}{15}$$

6633.33 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 6600.00 \text{ mg/L}$$

7/16/2014

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

JML
7/16/2014

Sample Calculation

METHOD: EPA 200.8

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Uranium Radioactivity, in pCi/L, in the original sample as follows:

$$\text{Uranium, pCi/L} = A * DF * PF * 0.67 \text{ (pCi/ug)}$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

0.67 = conversion factor

For Sample **N012917-001B**, the Uranium Radioactivity in pCi/L is calculated as follows:

$$\begin{aligned} \text{Uranium, pCi/L} &= 36.19892684 * 1 * (25/25) * 0.67 \\ &= 24.2532809848 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Uranium, pCi/L} = 24$$

- Calculations are based on raw values
- H Holding times for preparation or analysis exceeded
- S Spike/Surrogate outside of limits due to matrix interference

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012917-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.2741 * 5 \\ &= 1.3705\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 1.4$$

 7/23/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012917-001C** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 0.23 * 20 \\ &= 4.6 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 4.6$$

 7/23/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012917-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 1.34433176677018 * 1 * (25/25) \\ &= 1.34433176677018 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 1.3$$

RE: Project: N012917
Pace Project No.: 30125091

Dear Mr. Cartin:

Enclosed are the analytical results for sample(s) received by the laboratory on July 16, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins

PROJECT NARRATIVE

Project: N012917
Pace Project No.: 30125091

Method: EPA 900.0
Description: 900.0 Gross Alpha/Beta
Client: ASSET Laboratories
Date: August 04, 2014

General Information:

1 sample was analyzed for EPA 900.0. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

QUALIFIERS

Project: N012917
Pace Project No.: 30125091

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PQL - Practical Quantitation Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Act - Activity

Unc - Uncertainty: SDWA = 1.96 sigma count uncertainty, all other matrices = Expanded Uncertainty (95% confidence interval).

Gamma Spec = Expanded Uncertainty (95.4% Confidence Interval)

(MDC) - Minimum Detectable Concentration

Trac - Tracer Recovery (%)

Carr - Carrier Recovery (%)

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 10, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012918-006A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.09825 * 1 \\ &= 0.09825\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = \mathbf{0.098}$$

Nancy

7/16/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012918-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 3.1236 * 1 \\ &= 3.1236\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 3.1$$

Money 7/16/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012918-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 2.91104745639337 * 1 * (25/25) \\ &= 2.91104745639337 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 2.9$$

RE: PGE Hinkley, 492584.UR.AU

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 10, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

Gross Alpha/Beta was subcontracted to Pace Analytical- Greensburg,PA.

SAMPLE CALCULATION

METHOD: SM 2540C

TEST NAME: Total Filterable Residue

MATRIX: Water

FORMULA:

Calculate TDS concentration in mg/L, in the original sample as follows:

$$\text{TDS, mg/L} = \frac{(A-B)*1000000}{C}$$

Where:

A = weight in g of dish + residue after drying

B = weight of dish in g

C = volume of sample used in mL

For N012919-001C, TDS concentration in mg/L is calculated as follows:

$$\text{TDS, mg/L} = \frac{(60.8804-60.8460)*1000000}{100}$$

342 mg/L

Reporting result in two significant figures,

$$\text{TDS} = 340.00 \text{ mg/L}$$

TOTAL DISSOLVED SOLIDS, TDS

$$\text{TDS, mg/L} = (\text{A}-\text{B}) \times 1000000 / \text{C}$$

WHERE:

A = weight in grams of dish + residue after drying

B = weight of dish in grams

C = volume of sample used in mL

Jmer
7/16/2014

Sample Calculation

METHOD: EPA 200.8

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Uranium Radioactivity, in pCi/L, in the original sample as follows:

$$\text{Uranium, pCi/L} = A * DF * PF * 0.67 \text{ (pCi/ug)}$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

0.67 = conversion factor

For Sample **N012919-001A**, the Uranium Radioactivity in pCi/L is calculated as follows:

$$\begin{aligned} \text{Uranium, pCi/L} &= 12.6945358043651 * 1 * (25/25) * 0.67 \\ &= 8.50533898892462 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Uranium, pCi/L} = 8.5$$

Nancy 7/23/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

A = mg/L, IC calculated concentration
DF = dilution factor

For **N012919-003B** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 0.767 * 20 \\ &= 15.34 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 15$$

 7/23/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012919-003E**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [0.93120] [1] - 0.05580$$

$$\text{TOC} = 0.87540$$

Reporting results in two significant figures,

$$\text{TOC} = 0.88 \text{ mg/L}$$

$$\text{TOC} = \text{ND}$$

PS 7/23/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012919-003A**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 0.01444114389 * 1 * (25/25) \\ &= 0.01444114389 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Iron, mg/L} = 0.014$$

Since PQL of Iron is 0.02 mg/L,

$$\text{Iron, mg/L} = \text{ND}$$

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Arsenic concentration, in ug/L, in the original sample as follows:

$$\text{Arsenic, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012919-003A**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Arsenic, ug/L} &= 2.041688115 * 1 * (25/25) \\ &= 2.041688115 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Arsenic, ug/L} = 2.0$$

RE: Project: N012919
Pace Project No.: 30125090

Dear Mr. Cartin:

Enclosed are the analytical results for sample(s) received by the laboratory on July 16, 2014. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Jacquelyn Collins

PROJECT NARRATIVE

Project: N012919
Pace Project No.: 30125090

Method: EPA 900.0
Description: 900.0 Gross Alpha/Beta
Client: ASSET Laboratories
Date: August 04, 2014

General Information:

3 samples were analyzed for EPA 900.0. All samples were received in acceptable condition with any exceptions noted below.

Hold Time:

The samples were analyzed within the method required hold times with any exceptions noted below.

Method Blank:

All analytes were below the report limit in the method blank, where applicable, with any exceptions noted below.

Laboratory Control Spike:

All laboratory control spike compounds were within QC limits with any exceptions noted below.

Matrix Spikes:

All percent recoveries and relative percent differences (RPDs) were within acceptance criteria with any exceptions noted below.

Additional Comments:

This data package has been reviewed for quality and completeness and is approved for release.

Hello, Katherine.

The sample for the above project has a collection year of 2013. Sample containers also say 7/10/2013. Please reference attached COC.

Thank you,

Amanda M. Cortes

ASSET LABORATORIES
ANALYTICAL SUPPORT SERVICES FOR ENVIRONMENTAL TECHNOLOGIES

ASSET LABORATORIES is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ASSET LABORATORIES is accredited by the State of California, NELAP and State of Nevada and holds various SBE, DBE and MBE certificates and a USDA soil permit. ASSET LABORATORIES takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. ASSET LABORATORIES - Your Partner for Quality Environmental Testing

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012928-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 1.7884 * 1 \\ &= 1.7884\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 1.8$$

 7/25/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012928-001B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 1.7045354081823 * 1 * (25/25) \\ &= 1.7045354081823 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 1.7$$

 7/25/2014

ASSET Laboratories

ICP-Metals in Water

Work Order No.: N012928
Test Method: EPA 6020
Analysis Date: 7/12/2014

Dilution Test Summary

Matrix: Water
Batch No.: 46029

Instrument ID: ICP-MS #2
Instrument Description: Agilent 7700x

Comments:

Analyzed By: Mary Claire Ignacio

Dilution test is not applicable to Cr. The calculated value is <25X RL. PS @ 2x passed criteria.

RE: PGE Hinkley, 492581.UR.IR.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 11, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Subcontracted Analyses:

EOSINE and FLUORESCEIN were subcontracted to Ozark Underground Labs- Protom, Missouri.

Analytical Comments for EPA 6010B_Dissolved:

Matrix Spike (MS) and Matrix Spike Duplicate (MSD) on QC samples N012929-011B-MS and N012929-011B-MSD are outside recovery criteria for Iron since the analyte concentration in the sample is disproportionate to the spike level. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Analytical Comments for EPA 6020_Dissolved:

Matrix Spike (MS) on QC sample N012929-019B-MS is outside recovery criteria for Manganese possibly due to matrix interference. The associated Laboratory Control Sample (LCS) recovery was acceptable.

Subject: RE: Sample Collection Time Discrepancy
Attachments: COC_CompB_071114_Revised.pdf

Hi Amanda,

The time on the COC should be 0904. Please see the revised COC (attached).

Please let me know if there are any other issues.

Thanks.

Katherine A.T. Blinn, E.I.T.

From: amanda.cortes@assetlaboratories.com [<mailto:amanda.cortes@assetlaboratories.com>]
Sent: Monday, July 14, 2014 1:34 PM

Cc: 'Marlon Cartin'; 'ASSET, Inc. Sample Control'
Subject: Sample Collection Time Discrepancy

Hello, Katherine.

Regarding the samples we received on Friday for Compliance-IRZB, we received one sample that has a sample collection time conflict with the COC. For sample ID CA-MW-204D-059b-Q3, the collection time on the COC is 0901, however, the sample container says the sample collection time was 0904. Please reference attached COC.

Thank you,

Amanda M. Cortes

ASSET LABORATORIES
ANALYTICAL SUPPORT SERVICES FOR ENVIRONMENTAL TECHNOLOGIES

ASSET LABORATORIES is a full-service environmental lab providing organic and inorganic analyses of soil, water, wastewater, storm water and hazardous waste samples. ASSET LABORATORIES is accredited by the State of California, NELAP and State of Nevada and holds various SBE, DBE and MBE certificates and a USDA soil permit. ASSET LABORATORIES takes pride in providing our customers with quick turnaround time, excellent customer service and defensible data while offering very competitive rates. 	1500		Received by: _____

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012929-008A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.017792 * 1 \\ &= 0.017792\end{aligned}$$

Since PQL is $0.06 \mu\text{g/L}$,

$$\text{Cr}^{+6}, \mu\text{g/L} = \text{ND}$$

 7/28/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Water

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012929-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 5.8915 * 5 \\ &= 29.4575\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 29$$

 7/25/2014

Sample Calculation

METHOD: EPA 300.0
TEST NAME: INORGANIC ANIONS BY IC
MATRIX: Water

FORMULA:

Calculate the Nitrate concentration, in mg/L, in the original sample as follows:

$$\text{Nitrate, mg/L} = A * DF$$

where:

$$\begin{aligned} A &= \text{mg/L, IC calculated concentration} \\ DF &= \text{dilution factor} \end{aligned}$$

For **N012929-012C** concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Nitrate, mg/L} &= 1.164 * 2 \\ &= 2.328 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Nitrate, mg/L} = 2.3$$

 7/25/2014

Sample Calculation

METHOD: SM5310C

TEST NAME: TOTAL ORGANIC CARBON

MATRIX: WATER

FORMULA:

Calculate the TOC concentration, in mg/L, in the original sample as follows:

$$\text{TOC} = [A] [\text{DF}] - B$$

where:

A = mg/L, instrument calculated concentration

DF = dilution factor

B = mg/L, TOC concentration in the calibration blank

For: **N012929-027D**

The concentration in mg/L is calculated as follows:

$$\text{TOC} = [1.43670] [1] - 0.06210$$

$$\text{TOC} = 1.37460$$

Reporting results in two significant figures,

$$\text{TOC} = \mathbf{1.40} \text{ mg/L}$$

PS 7/28/2014

Sample Calculation

METHOD: EPA 6010

TEST NAME: Heavy Metals by ICP

MATRIX: Groundwater

FORMULA:

Calculate the Iron concentration, in mg/L, in the original sample as follows:

$$\text{Iron, mg/L} = A * DF * PF$$

where:

A = mg/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Amt. of Sample mL

For Sample **N012929-011B**, the concentration in mg/L is calculated as follows:

$$\begin{aligned} \text{Iron, mg/L} &= 5.597320078 * 1 * (25/25) \\ &= 5.597320078 \end{aligned}$$

Reporting result in two significant figures,

$$\text{Iron, mg/L} = 5.6$$

Sample ID: N012929-011B-PS	SampType: PS	TestCode: 6010WD_HIN	Units: mg/L	Prep Date:	RunNo: 94121						
Client ID: ZZZZZ	Batch ID: 46042	TestNo: EPA 6010B EPA 3010A		Analysis Date: 7/14/2014	SeqNo: 1804554						
Analyte	Result	PQL	SPK value	SPK Ref Val	%REC	LowLimit	HighLimit	RPD Ref Val	%RPD	RPDLimit	Qual
Iron	10.472	0.040	5.000	5.597	97.5	80	120				

Qualifiers:

- | | | | | | |
|----|---|---|--------------------------------------|---|--|
| B | Analyte detected in the associated Method Blank | E | Value above quantitation range | H | Holding times for preparation or analysis exceeded |
| ND | Not Detected at the Reporting Limit | R | RPD outside accepted recovery limits | S | Spike/Surrogate outside of limits due to matrix interference |
| DO | Surrogate Diluted Out | | Calculations are based on raw values | | |

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Arsenic concentration, in ug/L, in the original sample as follows:

$$\text{Arsenic, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012929-002B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Arsenic, ug/L} &= 2.45675364267052 * 1 * (25/25) \\ &= 2.45675364267052 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Arsenic, ug/L} = 2.5$$

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 11, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.

Reviewed By:

gog 07/14/14

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC, LOW LEVEL
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012930-001A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.139333 * 1 \\ &= 0.139333\end{aligned}$$

Reporting results in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = 0.14$$

 7/21/2014

Sample Calculation

METHOD: EPA 218.6
TEST NAME: HEXAVALENT CHROMIUM BY IC
MATRIX: Groundwater

FORMULA:

Calculate the Hexavalent Chromium concentration, in $\mu\text{g/L}$, in the original sample as follows:

$$\text{Cr}^{+6}, \mu\text{g/L} = A * \text{DF}$$

where:

A = $\mu\text{g/L}$, IC Cr^{+6} calculated concentration
DF = dilution factor

For **N012930-002A** concentration in $\mu\text{g/L}$ is calculated as follows:

$$\begin{aligned}\text{Cr}^{+6}, \mu\text{g/L} &= 0.4562 * 1 \\ &= 0.4562\end{aligned}$$

Reporting result in two significant figures,

$$\text{Cr}^{+6}, \mu\text{g/L} = \mathbf{0.46}$$

 7/17/2014

Sample Calculation

METHOD: EPA 6020

TEST NAME: Heavy Metals by ICP-MS

MATRIX: Aqueous

FORMULA:

Calculate the Chromium concentration, in ug/L, in the original sample as follows:

$$\text{Chromium, ug/L} = A * DF * PF$$

where:

A = ug/L, calculated concentration

DF = dilution factor

PF = Final Vol. of Digestate in mL / Vol. of Sample used in mL

For Sample **N012930-003B**, the concentration in ug/L is calculated as follows:

$$\begin{aligned} \text{Chromium, ug/L} &= 2.44001612829721 * 1 * (25/25) \\ &= 2.44001612829721 \end{aligned}$$

Reporting results in two significant figures,

$$\text{Chromium, ug/L} = 2.4$$

RE: PGE Hinkley, 492584.UR.DM.FW

Attention: Shawn P. Duffy

Enclosed are the results for sample(s) received on July 14, 2014 by ASSET Laboratories . The sample(s) are tested for the parameters as indicated in the enclosed chain of custody in accordance with the applicable laboratory certifications.

Thank you for the opportunity to service the needs of your company.

Please feel free to call me at (702) 307-2659 if I can be of further assistance to your company.

Sincerely,

Jose Tenorio Jr.
Laboratory Director

CASE NARRATIVE

SAMPLE RECEIVING/GENERAL COMMENTS:

Samples were received intact with proper chain of custody documentation.

Cooler temperature and sample preservation were verified upon receipt of samples if applicable.

Information on sample receipt conditions including discrepancies can be found in attached Sample Receipt Checklist Form.

Samples were analyzed within method holding time.
