

California Regional Water Quality Control Board
Santa Ana Region

October 26, 2012

STAFF REPORT

ITEM: *6

SUBJECT: Appeal of Staff's Denial of an Exemption from the Minimum Lot Size Requirements for Subsurface Disposal System Use – Jose and Martha Perez, 10427 Pebble Court, Alta Loma, San Bernardino County, APN 1074-291-23

DISCUSSION:

On September 25, 2012, Jose Perez contacted staff requesting approval for the use of an existing septic tank-subsurface disposal system at the above-referenced property to serve a new freestanding structure. Mr. & Mrs. Perez reside in a house located at the site. An existing subsurface disposal system is utilized for the discharge of domestic waste from the home. The property is less than one acre in size (21,780 sq ft or 0.50 acre gross). This area is unsewered and on-site septic tank-subsurface disposal systems are utilized for disposal of domestic wastes.

Mr. & Mrs. Perez are proposing to construct 2 detached open patios (1-280 sq. ft. and 1-384 sq. ft). One of the patio structures will include a 72 sq. ft. bathroom. Mr. and Mrs. Perez propose to connect the small bathroom to the existing 2,750-gallon septic tank-subsurface disposal system that currently serves the home.

On October 13, 1989, the Regional Board adopted Resolution No. 89-157, which requires new developments for which on-site subsurface disposal system use is proposed to have a minimum one-half acre of land per dwelling unit. The Board found that it was necessary to limit the density of new subsurface disposal systems to control the nitrate quality problems found in the groundwater of the Region.

In adopting the minimum lot size requirements (MLSR), the Board recognized that it was appropriate to distinguish between "existing" developments using subsurface disposal systems (i.e., those already in place or approved at the time the MLSR were adopted), and "new" developments. The Board specifically exempted from the one-half acre requirement existing developments where septic tank-subsurface disposal systems had been installed by September 7, 1989 or for which conditional approval (e.g. conditional use permit, or conditional approval of tentative parcel or tract map) had been obtained by that date. The one-half acre requirement applies only to "new" developments.

The Board also recognized that there would likely be proposals for additions to existing developments that would result in increased wastewater flow. The Board's MLSR address these circumstances. The MLSR distinguish between the types of additions to existing dwelling units. Additions to existing dwellings (bedrooms/bathrooms) are exempt from the MLSR. However, the MLSR state that any proposal to add a freestanding structure that would result in additional wastewater flows must be considered a "new" development. The intent of distinguishing between additions that are attached to existing dwellings and freestanding structures was to guard against the use of the freestanding structure as a second single-family residence on the property, which would result in substantial additional wastewater flows. The proposed covered patios (one with a detached bathroom) will be freestanding structures. As such, the project as a whole (the existing house and the detached bathroom) must now be considered a "new" development to which the one-half acre minimum lot size requirement applies. The proposal by Mr. and Mrs. Perez ~~proposal~~ does not comply with the Board's minimum lot size requirements, as the lot is only ½ acre in size. Accordingly, Board staff denied the request by Mr. and Mrs. Perez ~~request~~ for an exemption from the minimum lot size requirements.

The purpose of the covered patios (one to include a detached bathroom) is to provide convenience and an entertainment area near the pool so that guests would not need to walk up to the house to use the facilities. The detached bathroom will include a toilet, sink and shower. Mr. and Mrs. Perez have assured staff that the 72 sq. ft. bathroom structure will not be used as a second dwelling. They note that the total flow that would occur on their property as a result of this project would be no greater than the flow that is currently occurring from their home. Therefore, the existing septic tank-subsurface disposal system can accommodate the proposed detached bathroom.

RECOMMENDATION:

Approve the request by Mr. and Mrs. Perez ~~request~~ for an exemption from the minimum lot size requirements based on the small size and limited possible use of the 72 sq. ft. bathroom, which is not intended and cannot be ~~permitted-utilized~~ as a second dwelling unit.
