RE: Sausal Creek & EBMUD & fish kill in August 2010

I live in the neighborhood & have always been impressed with how hard the Friends of Sausal Creek restoration group has worked to improve the creek & the watershed. The discharge of super-chlorinated water into Sausal Creek & the death of rainbow trout is very disheartening.

The proposed SEP should be included as part of the settlement. The SEP is a gesture towards mitigating the damage from this discharge of water poisonous to fish. Of course, the impact on other water creatures is unknown.
