Subject: Re: San Francisquito Creek Project - CWA Section 401 Application

Categories: Urgent

Margarete,

Have submitted my comments re San Francisquito Creek Project CWA Section 401 by both e-mail and by regular mail, including maps and photo attachments of lower reaches of site, and hope they are helpful.

Contingent to baylands flood project under review, understand EPA has recently chosen to revisit Hillview superfund site, an area that is ultimately impacted by San Francisquito Creek watershed's active percolation to adjacent Matadero Creek groundwater sub area. As groundwater pumping in this sub-basin is likely to affect saltwater intrusion, do hope Stanford University takes second look at restoring flows to Lake Lagunita.

Thank you again for so promptly fielding inquiries on this project.

Libby Lucas
