

**Remedial Action Plan
SFPP, L.P. Brisbane Terminal
950 Tunnel Avenue, Brisbane, California**

**June 29, 2007
028-09199-10-001**

Prepared by

SFPP, L.P.
Operating Partnership

June 29, 2007

Mr. Alec Naugle, P.G.
California Regional Water Quality Control Board- San Francisco Bay Region
1515 Clay Street, Suite 1400
Oakland, California 94612

**Subject: Remedial Action Plan,
SFPP, L.P. Brisbane Terminal
950 Tunnel Avenue, Brisbane, California**

Dear Mr. Naugle:

Kinder Morgan Energy Partners L.P., operating partners of SFPP, L.P. (SFPP), is pleased to present this Remedial Action Plan prepared by LFR Inc. (LFR) for the SFPP, L.P. Brisbane Terminal located at 950 Tunnel Avenue in Brisbane, California ("the site") to the Regional Water Quality Control Board – San Francisco Bay Region (RWQCB). This Remedial Action Plan was prepared in response to a letter from the RWQCB to SFPP, dated June 12, 2006 (June 12 letter).

If you have any questions regarding this report or wish to discuss other issues concerning the site, please contact me at (510) 412-8843 or Ms. Jennifer Boyer of LFR at (650) 469-7226.

Sincerely,

A handwritten signature in blue ink, appearing to read 'Robert Truedinger', is written over a faint, larger version of the same name.

Robert Truedinger

1.0 INTRODUCTION

This report has been prepared by LFR Inc. (LFR) on behalf of SFPP, L.P. (SFPP), an operating partnership of Kinder Morgan Energy Partners, L.P. for the SFPP Brisbane Terminal, located at 950 Tunnel Avenue in Brisbane, California (the “site”; see Figure 1). This report was prepared in response to a letter from the Regional Water Quality Control Board – San Francisco Bay Region (RWQCB) to SFPP dated June 12, 2006 (“the June 12 RWQCB letter”).

The June 12 RWQCB letter summarized RWQCB requirements to submit technical reports and information regarding characterization and cleanup of fuel hydrocarbons at the site, including submittal of a comprehensive remedial action plan (RAP) and the assessment for the potential discharges of hydrocarbons from groundwater to the adjacent timber-lined channel. SFPP submitted a work plan to the RWQCB to assess the hydrogeological relationship between shallow groundwater and the timber-lined channel on August 1, 2006. The RWQCB conditionally approved the work plan to assess the relationship between groundwater and surface water in a letter to SFPP, dated September 29, 2006. These activities were implemented in October 2006 and April 2007. The findings of the investigation are presented in Section 4.0.

As proposed in the June 12 RWQCB letter, the RAP report was to be submitted to the RWQCB by December 15, 2006. However, as discussed with RWQCB staff, additional information was needed to support the RAP, including a hydrogeological study of the relationship between groundwater in the vicinity of wells MW-29 and MW-30 and surface water in the timber-lined channel. Therefore, the RWQCB agreed to have SFPP prepare a report entitled *Monitored Natural Attenuation Evaluation in Support of the Remedial Action Plan* dated December 15, 2006 (the December 15 MNA Report). The December 15 MNA Report concluded that MNA was a viable remedial alternative for groundwater beneath the site. On May 3, 2007 the RWQCB conditionally approved the December 15 MNA Report, and requested SFPP prepare a comprehensive RAP based on the information presented in the MNA Report.

This RAP is organized into the following Sections:

- 1.0 Introduction;
- 2.0 Background;
- 3.0 Site Geology and Hydrogeology;
- 4.0 Hydrogeological Study;
- 5.0 Nature and Extent of Petroleum Hydrocarbon and Fuel Oxygenates;
- 6.0 Screening Level Risk Assessment;
- 7.0 Remedial Action Objectives and Proposed Cleanup Goals; and
- 8.0 Remedial Action Plan.

2.0 BACKGROUND

The site is located in a light-industrial area of Brisbane and is bordered by a timber-lined channel to the north, Tunnel Avenue to the east and south, and Union Pacific Railroad tracks to the west. San Francisco Bay is approximately 2,100 feet east of the site.

SFPP owns and operates a bulk petroleum storage and distribution terminal at the site. This facility was originally constructed in the 1960s. The eastern portion of the site is located on the former Brisbane Municipal Landfill. The aboveground storage tanks (ASTs) were constructed on bedrock in the western portion of the site. The current facility consists of 21 ASTs used to store diesel, gasoline, and aviation fuels. Five loading rack facilities, where transport trucks are filled with petroleum products, are also located at the site.

The Brisbane terminal is an important nexus in the fuel distribution system in Northern California and the Bay Area. In addition to supplying fuel to retail service stations in the Bay Area, it also provides aviation fuel to San Francisco International Airport.

2.1 Summary of Identified Source Areas and Documented Releases

There are four general sources areas at the site: 1) the manifold area, 2) tank farm (adjacent to AST BT-4 and BT-11), 3) loading rack number 5, and 4) the former manifold area (Figure 2). The documented releases contributing to these source areas are described below.

2.1.1 Manifold Area

July 1999 Release. On July 14, 1999, an unknown volume of jet fuel was released from a sampling pump line near the sample shed in the manifold area. Based on communication with site personnel, the release was reported to be a very small volume.

July 2005 Release. On July 22, 2005, a mixture of diesel and turbine NAPH was released from a valve within a trench during construction activities in the manifold area. Released fuel was primarily contained within the trench, and the majority of released fuel was recovered and placed into the trans-mix tank.

2.1.2 Tank Farm Area (AST BT-4 and BT-11)

February 2001 Release. On February 23, 2001 an unknown volume of ethanol was released from AST BT-11. The release volume was estimated to be between five and 50 barrels. The probable cause was “two cracks adjacent to welds in the floor plate of the tank of AST BT-11”. The AST bottom was repaired and recoated (Geomatrix, 2001).

October 2003 Release. On October 21, 2003, approximately 48 barrels of fluid was released from a sump used to collect off specification gasoline, diesel, and jet fuel when a transfer pump stopped working, and fluid overflowed the sump. The release occurred between ASTs BT-4 and BT-11 (Figure 2).

2.1.3 Elevated Loading Rack Number 5

June 2005 Release. On June 21, 2005, HiTEC™ 6476 Gasoline Fuel Additive was released onto the ground surface underneath the elevated loading rack 5 (previously loading rack E) due to a failure between the connection with an aboveground coupler. According to its material safety data sheet (MSDS), HiTEC™ 6476 Gasoline Fuel Additive consists primarily of aromatic solvent naphtha and various detergent solvents (LFR 2005).

2.1.4 Former Manifold Area

Information regarding a documented release in the vicinity of the former manifold was not available for review. However, based on the historical presence of sheen in wells MW-18 and MW-19, the former manifold is included as a potential source area. The former manifold area is located in the western portion of the site in the vicinity of AST BT-6 and BT-7.

2.2 Summary of Previous Soil and Groundwater Investigations

SFPP has conducted numerous subsurface assessments to evaluate soil and groundwater conditions at the site since the mid-1990s, as required by the Site Cleanup Requirement (SCR) No. 92-141 issued by the RWQCB on November 18, 1992. These activities included the installation of 29 groundwater monitoring wells, 12 soil borings, tidal studies and aquifer testing, assessment of bedrock and landfill refuse occurrence, and installation of five non-aqueous-phase petroleum hydrocarbon (NAPH) monitoring and recovery well points. Historical soil sampling results are included in Table 1, well construction details are summarized in Table 2, and well and soil boring locations are shown on Figure 2.

Installation of Monitoring Wells MW-1 through MW-10, MW-12, and MW-14 - July and August 1991. Initial investigation activities were conducted at the site during July and August 1991. These investigations were conducted by Alton Geosciences and Environmental Solutions and included the advancement of 15 soil borings, B-1 through B-14, and BH-11 (Alton Geosciences, 1993a). Twelve of these 15 soil borings were converted into groundwater monitoring wells MW-1 through MW-10, MW-12, and MW-14. Groundwater reportedly was encountered during this investigations at depths of 5 to 20 feet bgs with a gradient generally to the east. Analytical results of soil samples collected during this investigation are presented in Table 1.

Installation of Monitoring Wells MW-15 through MW-23 - May 1993. In May 1993, Alton Geosciences conducted an investigation to characterize the extent of dissolved-phase hydrocarbons and NAPH in on-site groundwater and to characterize the extent of petroleum hydrocarbons in site soils. Alton Geosciences advanced ten soil borings B-15 through B-23 and B-A1, of which nine were converted into monitoring wells, MW-15 through MW-23. Monitoring wells were installed at depths ranging from 19.5 to 29.5 feet bgs. Groundwater was encountered during well installation activities between 5 and 20 feet bgs. Collected soil samples results are present on Table 1 (Alton Geosciences 1993a).

Pump Test and Tidal Study - June 1993. In June 1993, Alton Geosciences performed a groundwater pumping test and a four-day tidal influence study to assess aquifer properties and estimate the radius of influence developed by groundwater extraction. Groundwater extraction was conducted at monitoring wells MW-17 and MW-19, and monitoring wells MW-2 and MW-18 were used as observation wells. Monitoring wells MW-1, MW-3, MW-9, MW-10, MW-14, MW-20, and MW-21 were used for the tidal study.

The study concluded that the shallow aquifer had an estimated transmissivity of 2.5×10^{-3} square feet per minute (ft^2/min) with average storativity of 1×10^{-5} for the Franciscan Formation (bedrock) and 5.9×10^{-3} ft^2/min with average storativity of 7.0×10^{-2} for the landfill refuse, and that wells MW-14, MW-20 and MW-21 were minimally tidally influenced, with total fluctuations less than 0.12 foot during the study. The other wells in the study did not show measurable tidal influence (Alton Geosciences 1993b).

Installation of Off-Site Monitoring Wells MW-24 through MW-27 - September and October 1994. In response to the Provision 2 of the SCR (which requested off-site investigations), Alton Geosciences conducted an off-site investigation in September and October 1994 to “characterize the lateral extent of NAPH and dissolved-phase hydrocarbons in groundwater downgradient from the site east of Tunnel Avenue, and characterize the lateral and vertical extent of hydrocarbons in soil on the western edge of the site”. Alton Geosciences advanced 13 soil borings B-24 through B-27 and B-51 through B-59, of which four were converted into monitoring wells MW-24 through MW-27. Monitoring wells MW-24 through MW-27 were installed along the eastern side of Tunnel Avenue and constructed to total depths of 24.5 to 33 feet bgs. Each well was screened within the landfill refuse. The remaining nine soil borings (B-51 through

B-59) were advanced along the western border of the site adjacent to the Union Pacific Railroad, into bedrock. Soil analytical results of the investigation are presented on Table 1 (Alton Geosciences 1994).

Soil and Groundwater Investigation - July 1999. On July 19, 1999, to assess the impacts due to the reported potential release of jet fuel at an incoming pipeline, TRC advanced one soil boring (ASB-1) in the area east of the sample shed, shown on Figure 2. The boring was advanced to a depth of 10 feet bgs. Soil samples were collected at 4 and 6 feet bgs and one grab groundwater sample was collected from the open borehole. Soil and groundwater results are presented in Tables 1 and 3, respectively.

Installation of Monitoring Well MW-28 - July 2000. In response to the presence of petroleum hydrocarbons in soil and groundwater samples collected from soil boring ASB-1, monitoring well MW-28 was installed to a depth of 20 feet bgs in the vicinity of soil boring ASB-1 on July 11, 2000. Groundwater was first encountered in the borehole at 7 feet bgs. One soil sample was collected at 7.5 feet bgs from the borehole.

One week after well installation activities, 0.09 foot of NAPH was measured in well MW-28 and a NAPH sample was collected for analysis. The analytical report indicated the NAPH sample had characteristics of gasoline and kerosene, and the absence of aromatic hydrocarbons (e.g., toluene) and normal alkanes indicated that the NAPH was substantially degraded. The NAPH also was reported to contain lead antiknock additives, which were added to gasoline from the 1960s until leaded gasoline was phased out in the 1980s to early 1990s. Therefore, the NAPH was determined to not be from a new release.

Evaluation of the Occurrence of Bedrock and Landfill Refuse - August 2000. In response to an RWQCB request, TRC prepared a report evaluating the lateral extent of the Brisbane Landfill beneath the site. The report contained maps, cross-sections, and historical boring logs. The report indicated that of the 26 on-site wells (MW-1 through MW-10, MW-12, and MW-14 through MW-28), 14 wells were screened within the landfill refuse. The wells screened within the landfill refuse include MW-1 through MW-5, MW-8, MW-12, MW-17, and MW-22 through MW-27. The boundaries of the landfill refuse extend from the bedrock shown on Figure 2 east past MW-24, MW-25 and MW-27 off-site. The northern and southern boundaries of landfill refuse extent were unknown past MW-16 in the north and MW-23 in the south. Limits of the landfill extending on-site are shown on Figure 2 and the cross-sections included as Figures 5, 6, and 7 (TRC 2000d).

Installation of Monitoring Wells MW-29, MW-30 and GM-13A - December 2004. Monitoring wells MW-29, MW-30 and GM13A were installed to depths of 11, 14, and 11.5 feet bgs, respectively, during December 2004. The well construction details are included in Table 2.

Installation of Monitoring Points MP-1 through MP-5 - October 2005. In response to the July 2005 release within the manifold area, five NAPH monitoring points (MP-1 through MP-5) were installed in the manifold area. Soil borings for monitoring point installation were advanced using an air knife until refusal was encountered due to the bedrock. Monitoring points were installed at total depths ranging between 7 and 10 feet bgs. The monitoring points were constructed of 2-inch diameter polyvinyl chloride (PVC) pipe with approximately 5 feet of screen.

2.3 Previous Remedial Activities

Several phases of remedial activities have been conducted at the site in response to documented release events or to address the presence of NAPH in specific portions of the site. A discussion of these remedial activities is presented below.

2.3.1 Manifold Area

Five-Day Dual-Phase Extraction Event - June and July 2000. In June and July 2000, TRC performed a five-day dual phase extraction (DPE) event on four monitoring wells (MW-2, MW-12, MW-19, and MW-28) at the site. The DPE event was cycled among the four wells. The collected groundwater and vapor samples were analyzed for TPH-P (GRO), BTEX compounds, and MTBE using EPA Test Method 8020. The mass removed was calculated using collected vapor and groundwater sample analytical results. A total of 58 gallons (362 pounds) of recoverable hydrocarbons were removed from MW-28 during the five-day DPE event (TRC 2000b).

NAPH Recovery – August 2000 through July 2001. NAPH was recovered from monitoring well MW-28 along with monitoring wells MW-2, MW-12, and MW-19 from August 2000 through July 2001. NAPH removal activities were conducted using passive skimmers and by hand bailing. Since, NAPH recovery has been implemented, NAPH thickness ranged from 0.20 feet to 0.46 feet. (Alton Geosciences 1998 and TRC 2001).

Soil Excavation – July 2005. In response to the July 22, 2005 release, approximately 390 cubic yards of visually stained soil was excavated and disposed of as non-hazardous soil at the Forward Landfill.

Ongoing NAPH Recovery - November 2005 to Present. As part of remedial activities associated with the July 2005 release in the vicinity of the manifold, NAPH has been hand bailed from monitoring points MP-1 through MP-5 when present, since November 2005. Beginning in October 2006, hydrophobic-absorbent socks were installed and used in conjunction with hand bailing. In addition to NAPH recovery efforts at monitoring points MP-1 through MP-5, NAPH has been removed when present since November 2005 from monitoring wells MW-2, MW-12, MW-17, and MW-28. NAPH recovery activities have resulted in significant decreases in NAPH thickness in the monitoring points and wells. NAPH recovery activities are

documented in Table 4, and graphs showing the decreasing trends of NAPH thicknesses at relevant monitoring points and wells are included in Appendix A.

2.3.2 Tank Farm Area (ASTs BT-4 and BT-11)

NAPH Recovery – August 1998 through July 2001. Initial remedial activities were performed in August 1998 through July 2001 by Alton Geosciences which included removal of NAPH in monitoring wells MW-2, MW-12, and MW-19. NAPH removal activities were conducted using passive skimmers and by hand bailing, in monitoring well MW-12 which is located downgradient of ASTs BT-4 and BT-11. During the NAPH removal activities, NAPH thickness in well MW-2 ranged from 0.24 feet to trace amounts and NAPH thickness MW-12 ranged from 0.11 feet to trace amounts. (Alton Geosciences 1998 and TRC 2001).

Five-Day DPE Event - June and July 2000. In June and July 2000, TRC performed a five-day DPE event on four monitoring wells (MW-2, MW-12, MW-19, and MW-28). Recovery of hydrocarbons from monitoring wells MW-2 and MW-12 totaled 675 gallons, including 674 gallons from MW-2 (TRC 2000b).

21-hour DPE Event – December 2002. On December 18 and 19, 2002, a 21-hour DPE event was performed in the leak detection tube for AST BT-11. The DPE event extracted approximately 9 gallons (56 pounds) of recoverable petroleum hydrocarbons from the leak detection tube. (TRC 2003).

Soil Excavation – October 2003. In response to the October 21, 2003 release, approximately 48 barrels of NAPH was recovered and 165 cubic yards of petroleum-affected soil was excavated and disposed as non-hazardous waste at a licensed disposal facility. Soil in this area was subsequently excavated to between 0.5 and 4 feet bgs, and excavation activities continued until petroleum-affected soil was removed based on visual observation and PID readings or until bedrock or other utility-related obstructions prevented further soil removal. Confirmation soil samples were collected from the base of the excavation at depths ranging from 0.5 to 4 feet bgs. Locations and the analytical results of the confirmation soil samples are presented on Figures 3 and 4 (LFR 2003).

2.3.3 Elevated Loading Rack Number 5

Soil Excavation – June 2005. Remedial activities conducted in response to the HiTEC™ 6476 Gasoline Fuel Additive release resulted in removal of visibly stained soil to depths of approximately 3 to 9 inches bgs. Approximately 15 cubic yards of soil was excavated and disposed as non-hazardous waste at the Forward Landfill in Manteca, California.

2.3.4 Former Manifold Area

NAPH Recovery – August 1998 through July 2001. Initial remedial activities were performed in August 1998 through July 2001 by Alton Geosciences which included removal of NAPH in monitoring wells MW-2, MW-12, and MW-19. NAPH removal activities were conducted using passive skimmers and by hand bailing. Monitoring well MW-19 is located in the vicinity of the former manifold area and during the NAPH removal activities, NAPH thickness ranged from 0.20 feet to trace amounts. (Alton Geosciences 1998 and TRC 2001).

Five-Day DPE Event - June and July 2000. In June and July 2000, TRC performed a five-day DPE event on four monitoring wells (MW-2, MW-12, MW-19, and MW-28). Recovery from monitoring well MW-19 totaled 26 gallons (362 pounds) of hydrocarbons (TRC 2000b).

3.0 SITE GEOLOGY AND HYDROGEOLOGY

The site is located in the City of Brisbane approximately 2,100 feet from the San Francisco Bay. A portion of the site is underlain by bedrock and the remaining portion is underlain by refuse of the Brisbane Landfill. The landfill refuse is underlain by fine-grained marine deposits that lie upon the Franciscan Formation.

According to the U.S. Geological Survey Topographic Map of the San Francisco South, California, Quadrangle, dated 1995, the site is located at an elevation of approximately 25 feet above mean sea level (msl). The San Bruno Mountains are located west of the site, which rise to approximately 1,200 feet msl. The surface-water drainage from the San Bruno Mountains flows east toward the San Francisco Bay, collecting into two surface-water drainage areas referred to as Visitacion Valley and Guadalupe Valley.

The site vicinity is underlain by the Santa Clara Formation of Pliocene- to Holocene-age continental deposits comprised of unconsolidated to semi-consolidated gravel, sand, silt, and clay. The Santa Clara Formation sediments are in turn underlain by bedrock, designated as the Franciscan Formation.

The site is located in the San Mateo Sedimentary and Groundwater Basin, which is within the San Francisco Bay Basin. The regional groundwater in the area of the site has been divided into two zones, (A and B). Zone A is the shallow water-bearing zone that lies above the bay mud and within refuse and some clean fill which is separated by a layer of silty clay. Zone B is located deeper beneath the bay mud. The bay mud acts as an aquitard between the two zones (TRC, 2000 a)

3.1 Lithology

Cross-section locations are shown on Figure 2 and geologic cross-sections depicting the lithologic conditions beneath the site are shown on Figures 5, 6, and 7. Soils encountered during previous site investigations reportedly consisted of gravelly silt underlain by shale/sandstone throughout the western portion of the site.

In the western portion of the site which lies adjacent to the Union Pacific Railroad tracks, sediments consist of native soil or fill material and gravelly silt from surface grade to approximately 2 to 6 feet bgs (Figure 5, cross-section A-A'). Below the gravelly silt, the bedrock was encountered to the maximum explored depth of 25 feet bgs. Fill material and bedrock were encountered in the vicinity of the tank farm and manifold area. As illustrated in cross-section B to B' (Figure 6), refuse from the Brisbane Landfill is encountered to the total depth explored in the eastern portion of the site, except at the location of well MW-16, where native sediments or construction material placed between the landfill cells was encountered.

3.2 Groundwater Conditions

Groundwater elevations have been measured on an approximately quarterly sequence in site wells since 1991. Historical groundwater elevation data are included in Table 5, and the most recent groundwater elevation contours are shown on Figure 8.

Groundwater elevations at the site have ranged from a minimum of 0.52 foot msl or 7.72 feet bgs (measured in well MW-23 on October 21, 2002) to a maximum of 16.85 feet msl or 3.06 feet bgs (MW-18 on December 27, 2005). Groundwater elevations typically exhibit seasonal fluctuations of approximately 1 to 4 feet.

As shown on Figure 8, groundwater flows in a radial pattern, outward from the center of the northern tank farm at the site at gradients ranging from approximately 0.09 foot per foot (ft/ft). Groundwater in the northern portion of the site (near the timber-lined channel) generally flows north to northeast towards the timber-lined channel. Along the eastern side of the site, adjacent to Tunnel Avenue, groundwater appears to flow west from the Brisbane Landfill towards the loading rack areas of the site. The groundwater gradients in the vicinity of the loading racks, in the center portion of the property are very small.

During the most recent groundwater monitoring event at the site (April 9, 2007), groundwater elevations ranged from 6.02 feet msl (well MW-29) to 16.10 feet msl (well MW-21), with groundwater flowing to the north at a gradient of approximately 0.03 ft/ft. These groundwater elevations and flow direction are generally consistent with historical groundwater elevations and flow directions.

3.3 Surface-Water Conditions

The closest surface-water body is the timber-lined channel that borders the northern portion of the site. This channel is tidally influenced, showing tidal water level fluctuations up to approximately three feet. Water within the timber-lined channel generally flows to the east towards the San Francisco Bay, which is located about one half-mile from the site. However, water has been observed flowing to the west, away from the San Francisco Bay, during high tides. Water levels in the creek typically range from 4.5 feet above msl to 6.5 feet above msl, with water levels measured during the highest high tides at approximately 10 feet above msl.

4.0 HYDROGEOLOGICAL STUDY

Two seven-day hydrogeological studies were performed to assess the relationship between surface water and groundwater at the site in accordance with the August 1, 2006 Work Plan (LFR, 2006a). The objectives of the studies were to assess the potential hydraulic relationship between groundwater and surface water, and to assess the potential for MTBE affected groundwater to enter the timber-lined channel.

4.1 Water Level Monitoring and Surface-water Sampling

Groundwater levels were monitored using pressure-recording transducers in five monitoring wells (MW-1, MW-3, MW-15, MW-29 and MW-30) and at the timber-lined channel gauging stations CGS-1 and CGS-2 for the study conducted during October 2006 and April 2007. Transducers were installed at depths corresponding to the middle of the water columns in each of the five monitoring wells, at the approximate mid-point of the water depth at CGS-2, and approximately 1- inch above the creek bottom at CGS-1. The locations of the monitoring wells used during the study are as follows:

- MW-1 is located approximately 385 feet south of the creek and is screened entirely within the landfill refuse.
- MW-3 is located approximately 1,000 feet south of the creek and is screened entirely within the landfill refuse.
- MW-15 is located approximately 130 feet south of the creek and is screened almost entirely within bedrock.
- MW-29 is located approximately 95 feet south of the creek and is screened entirely within fine-grained soils.
- MW-30 is located approximately 135 feet south of the creek and is screened entirely within fine-grained soils.

Surface-water “grab” samples were also collected from the timber-lined channel during high tide and low tide during both events and analyzed for TPH-P (GRO), BTEX compounds and MTBE.

4.2 Hydrogeological Study Results

Results from the surface-water samples are included in Table 6. Figures 9 and 10 depict the groundwater fluctuations at select wells. Significant findings of the hydrogeological study events are described below.

October 2006 Event

- Water level data show tidal fluctuations of approximately 2 to 3 feet in the timber-lined channel.
- Water levels in groundwater monitoring wells did not show significant evidence of tidal fluctuations, but did exhibit significant diurnal fluctuations. These daily fluctuations do not correlate with the lunar cycle and are therefore not considered to be a result of tidal influence. Rather, these daily fluctuations correlate to changes in barometric pressure that occur on a daily basis, and suggest that the pressure transducers may have been influenced by diurnal barometric pressure changes due to faulty pressure relief tubes.
- Groundwater elevations in wells MW-29 and MW-30, located closest to the channel, were generally lower than water elevations in the channel, except at periods of low tide. These data suggest that during the dry season, the channel is primarily a losing stream.
- Grab surface-water samples indicated no detections of TPH-P (GRO) or BTEX compounds in creek water above the laboratory method detection level (LMDL).
- Surface-water samples collected within the timber-lined channel downgradient of the site at location CGS-1, and during high and low tide contained concentrations of MTBE at less than 0.50 micrograms per liter ($\mu\text{g}/\text{l}$) and 4.5 $\mu\text{g}/\text{l}$, respectively. These MTBE concentrations are well below the Environmental Screening Level (ESL) of 180 $\mu\text{g}/\text{l}$ for MTBE in surface water in an estuary, as described in Section 6 below.
- Surface water samples collected within the timber-lined channel upgradient of the site at location CGS-2, during high and low tide contained concentrations of MTBE at 0.52 $\mu\text{g}/\text{l}$ and 2.6 $\mu\text{g}/\text{l}$, respectively. These MTBE concentrations are well below the ESL of 180 $\mu\text{g}/\text{l}$ for MTBE in surface water in an estuary, as described in Section 6 below. It is notable that these detections of MTBE in the timber-lined channel are consistent with reported concentrations of MTBE in surface water attributable to atmospheric precipitation mechanisms (Delzer, et al 1996; USGS, 2002).

April 2007 Event

- Water levels showed tidal fluctuations of up to 3 feet in the timber-lined channel.
- Water levels in groundwater monitoring wells did not show significant evidence of tidal fluctuations.
- Groundwater elevations in wells MW-29 and MW-30, located closest to the channel, were generally higher than surface-water elevations in the channel, except during periods of very high tide. These data suggest that during the wet season, the timber-lined channel may be a gaining stream.
- Surface water samples collected from upgradient and downgradient from the site and high and low tide did not have concentration of TPH-P (GRO) or BTEX compounds above the LMDL.
- MTBE was detected above the LMDL in the four samples collected from the timber-lined channel. The surface-water samples collected during high tide from CGS-1 and CGS-2, had detected concentrations of MTBE at 4.0 and 4.4 µg/l, respectively. During low tide, MTBE was detected in surface-water samples collected from CGS-1 at 1.3 µg/l and from CGS-2 at 1.9 µg/l.

4.3 Hydrogeologic Study Conclusions

Based on the above findings, the following conclusions can be made regarding the hydrogeologic relationship between groundwater and surface-water in the timber-lined channel.

- The timber-lined channel is tidally influenced.
- Groundwater beneath the site does not show significant evidence of tidal influence.
- In the vicinity of wells MW-29 and MW-30, the timber-lined channel generally appears to be a net losing stream during the dry season and a net gaining stream during the wet season.
- Water quality data collected at creek gauging stations CGS-1 and CGS-2 indicate that MTBE is present at concentrations approximately two orders of magnitude lower than the ESL for surface water in an estuary, as described in Section 6 below.

- A comparison of MTBE concentrations detected at CGS-1 and CGS-2 during net gaining and net losing stream conditions (i.e., wet season and dry season, respectively), indicates that there does not appear to be a significant difference in average MTBE concentrations in the timber-lined channel under these differing hydrologic conditions. These data indicate that MTBE present in groundwater beneath the site is not adding detectable mass to the timber-lined channel. Further, considering the presence of other sources of MTBE both upgradient and downgradient of the site, and the potential for MTBE impacts in surface water due to atmospheric precipitation mechanisms, there is generally a paucity of data suggesting that MTBE detected in groundwater beneath the site is contributing to MTBE detected in the timber-lined channel.

Based on the lack of significant tidal responses in groundwater monitoring wells at the site, despite significant tidal fluctuations in the timber-lined channel, there does not appear to be a significant hydrogeologic connection between the timber-lined channel and groundwater beneath the site. This information, combined with the lack of measurable change in MTBE concentrations in the timber-lined channel between seasonal gaining and losing conditions, suggests that although there is a potential for discharge from groundwater to the surface water in the timber-lined channel, such discharges are relatively minor, and do not contribute to increases in MTBE concentrations in surface water.

5.0 NATURE AND EXTENT OF PETROLEUM HYDROCARBON AND FUEL OXYGENATES

The following section provides a description of the nature and extent of petroleum hydrocarbons and fuel oxygenates detected in soil and shallow groundwater beneath the site.

5.1 Soil

The eastern portion of the site is underlain by landfill refuse and the western portion of the site is underlain by bedrock. The limits of the bedrock are shown on Figure 2, and depth to landfill refuse, soil, and bedrock are shown on Figures 5, 6, and 7. In total, soil sample data were collected from 18 of the 29 monitoring wells installed on-site and 15 additional soil borings. Figures 2, 3, and 4 show known locations of soil borings and Table 1 presents a summary of available soil analytical data. The distribution and concentrations of petroleum hydrocarbons and fuel oxygenates in soil in the four known source areas are described further below.

5.1.1 Manifold Area

Remedial activities conducted in response to releases in this area appear to have been generally successful at removing the majority of released NAPH and affected soil. Results of soil borings and/or confirmation samples are discussed below.

One soil boring, ASB-1, was advanced to a depth of 10 feet bgs on July 19, 1999, in the manifold area, as shown on Figure 2. Soil samples were collected at 4 and 6 feet bgs and one grab groundwater sample was collected at 9.5 feet bgs. The soil and grab groundwater samples were analyzed for total petroleum hydrocarbons-extractable as diesel range organics (TPH-E [DRO]); as jet fuel range organics (TPH-E [JFRO]); total petroleum hydrocarbons-purgeable as gasoline range organics (TPH-P [GRO]); benzene, toluene, ethylbenzene, and total xylenes, (BTEX compounds), and methyl tertiary-butyl ether (MTBE).

Laboratory analyses of these soil samples detected the presence of TPH-E (JFRO) at concentrations of 720 and 1,900 mg/kg, TPH-P (GRO) at concentrations of 1,800 and 2,000 mg/kg, benzene at 20 and 16 mg/kg, toluene at 7.3 and 6.2 mg/kg, ethylbenzene at 42 and 41 mg/kg, and xylenes at 190 and 150 mg/kg, at depths of 4 and 6 feet, respectively. Laboratory analyses of the collected grab groundwater sample detected the presence of TPH-E (JFRO), TPH-P (GRO) and BTEX compounds at concentrations of 200,000 micrograms per liter ($\mu\text{g/l}$), 71,000 $\mu\text{g/l}$, 14,000 $\mu\text{g/l}$, 900 $\mu\text{g/l}$, 3,000 $\mu\text{g/l}$, and 7,900 $\mu\text{g/l}$, respectively. TPH-E (DRO) and MTBE were not detected in collected soil and grab groundwater samples above the LMDLs (TRC 1999).

The second known release in the manifold area occurred in July 2005, when a mix of diesel and turbine hydrocarbon fuel was released from a valve within a trench in the manifold area during construction activities. Released fuel was primarily contained within the trench, and the majority of released fuel was recovered. Surface staining was excavated and disposed. Approximately 390 cubic yards of soil was subsequently excavated and disposed of as non-hazardous soil at the Forward Landfill.

5.1.2 Tank Farm Area (ASTs BT-4 and BT-11)

Remedial activities conducted in response to releases in this area of the site were generally successful at removing the majority of released NAPH and affected soil to the extent feasible. Some residual mass was left in place as a result of limitations on excavation activities due to existing site infrastructure and bedrock. The results of confirmation soil sampling associated with the October 2003 release event and subsequent remedial activities are described below.

As shown in Table 2 and on Figures 3 and 4, the maximum concentrations of TPH-P (GRO) and TPH-E (DRO) left in place following the October 2003 release were 17,000 mg/kg (CS-11) and 19,000 mg/kg (CS-1), respectively. Maximum concentrations of benzene and MTBE left in place were 58 mg/kg (CS-11) and 520 mg/kg (CS-11), respectively.

The residual petroleum-affected soil was left in place due to the location of the underground utilities. Locations and the chemical concentrations of the confirmation soil samples are presented on Figures 3 and 4.

5.1.3 Elevated Loading Rack Number 5

Remedial activities conducted in response to this release resulted in removal of the majority of released NAPH, based on visual observations and PID screening. One soil sample was collected from excavated soil for waste characterization purposes. The analysis of this waste characterization sample included TPH-E (DRO), TPH-E (petroleum range organics as motor oil range organics), TPH-E(JFRO), TPH-P (naphtha), TPH-P(GRO), CAM 17 metals, and VOCs (with 8010 list reported) including MTBE. Results of these analyses showed that relatively low concentrations of petroleum hydrocarbons were detected, including 24 mg/kg of TPH-E (DRO), 4.4 mg/kg of TPH-P (GRO), 0.33 mg/kg of TPH-P (naphtha), 10.4 mg/kg of total xylenes, and 1.2 mg/kg of ethylbenzene (LFR 2005). Benzene and MTBE were not detected in the waste characterization sample.

Based on the lack of more mobile compounds, such as benzene and MTBE, and the relatively low concentrations of other detected petroleum hydrocarbons, this area of the site does not represent a significant on-going source for continued contribution of petroleum hydrocarbon mass to groundwater.

5.2 Groundwater

Historical groundwater elevations and NAPH measurements are included in Table 5. Analytical results and natural attenuation parameters for groundwater samples collected during the first and second quarter 2007 sampling event are summarized in Tables 3 and 7. Figures 11 through 23 present dissolved phase petroleum hydrocarbon and fuel oxygenate concentration and isoconcentration contours for TPH-P (GRO), benzene, and MTBE for the fall 1998, 2001, 2004, and spring 2007 sampling events. Figure 24 presents a summary of bioparameter analytical results.

As part of the primary lines of evidence that natural attenuation is ongoing, the plume shows characteristics of a stable and shrinking plume. The NAPH thickness has decreased and concentrations of TPH-P (GRO), benzene, and MTBE are stable and decreasing. Additionally presented on Figure 11 through 23, since 1998 the plumes appear to be stable.

Graphs of concentration versus time for select wells are included in Appendix B.

5.2.1 Non-Aqueous-Phase Hydrocarbons

Graphs of NAPH thickness versus time for wells historically exhibiting NAPH are included in Appendix A.

As shown on Figures 9 through 20, and as presented in Appendix A, NAPH has been historically observed in wells MW-2, MW-12, MW-17, MW-18, MW-19, and MW-28. In general, there are three areas of the site that have exhibited NAPH; (1) in and downgradient from the manifold area (in the vicinity of the 2005 release from manifold area piping); (2) the area in the vicinity of ASTs BT-4 and BT-11 (in the

vicinity of the 2003 release from AST BT-11); and (3) in the vicinity of the former manifold area near ASTs BT-6 and BT-7. NAPH thicknesses in these areas have exhibited significant decreasing trends in measured thicknesses since their maximum observed thicknesses due to natural attenuation mechanisms and NAPH recovery activities.

Details of the historical observations of NAPH in wells near these locations are further described below.

Manifold Area

Well MW-28, located downgradient from the manifold area, has exhibited NAPH thicknesses ranging from 0.01 (sheen) to a historical maximum thickness of 3.68 feet in June 2005, coincident with a NAPH release in the manifold area. NAPH thicknesses have decreased significantly since June 2005 as a result of natural attenuation mechanisms (i.e., dilution/dispersion) and NAPH removal activities conducted at this well location. NAPH was measured at a thickness of 0.01 foot during the April 9, 2007 monitoring event.

NAPH thickness monitoring points MP-1 through MP-5 exhibited maximum NAPH thicknesses ranging from 0.39 to 3.14 feet shortly after their installation in October 2005. NAPH thicknesses in each monitoring point decreased significantly during 2005 and 2006 as a result of natural attenuation and NAPH removal activities conducted at these well locations. During monitoring conducted on June 4, 2007, NAPH was not present in monitoring points MP-1 through MP-4, and 0.06 feet of NAPH was measured in monitoring point MP-5.

Tank Farm Area (ASTs BT-4 and BT-11)

Well MW-12 has exhibited NAPH at thicknesses generally ranging from a sheen to 0.2 feet between 1992 and 2003. Observed NAPH thicknesses increased to a maximum of 1.06 foot in June 2005 as a result of a NAPH release from AST BT-11 in 2003. NAPH thicknesses have decreased significantly since June 2005 as a result of natural attenuation and NAPH skimming and absorption activities. NAPH was not observed in well MW-12 during April 9, 2007 monitoring and sampling event.

Well MW-2, located generally downgradient from well MW-12 in an area of relatively flat groundwater between Tunnel Avenue and the tank farm, has exhibited measurable NAPH beginning in December 2003. NAPH thicknesses subsequently ranged between a sheen to 0.15 foot between December 2003 and October 2006. NAPH was not observed in well MW-2 during April 9, 2007 monitoring and sampling event.

Similar to well MW-2, well MW-17 (located south approximately 20 feet from MW-2) exhibited NAPH thicknesses ranging from 0.01 to 0.37 foot during the period from September 2005 to October 2006. Sheen was observed during the most recent monitoring event on April 9, 2007. These data are consistent with observed NAPH thicknesses in well MW-12, and suggest that NAPH recovery activities in these wells

has been successful at reducing the thickness of NAPH resulting from the release of NAPH at AST BT-11.

Former Manifold Area

NAPH and sheen have been occasionally observed in wells MW-18 and MW-19, located near ASTs BT-6 and BT-7 and a western manifold area. Well MW-18 exhibited historical NAPH thicknesses of 0.01 foot from April 1994 through April 1996. NAPH has not been observed in well MW-18 since 1996. Well MW-19 has exhibited intermittent NAPH sheen since 1993, and NAPH was measured at a thickness of 0.01 foot in May 2006. NAPH was not measured in well MW-18 and MW-19 during the April 9, 2007 monitoring event.

5.2.2 TPH-E (DRO)

TPH-E (DRO) has been sampled at the site since October 2006, and detected in 22 of the 29 site monitoring wells. During the second quarter 2007 sampling event TPH-E (DRO) was detected above the LMDL in 22 wells at concentrations ranging from 94 $\mu\text{g/l}$ (wells MW-9 and MW-25) to 17,000 $\mu\text{g/l}$ (in well MW-28). TPH-E (DRO) dissolved chemical concentrations are presented on Figure 11. The distribution of TPH-E (DRO) is generally the same as the TPH-P (GRO). As noted in the analytical report, the TPH-E (DRO) range concentration may include contributions from lighter-end hydrocarbons (e.g., gasoline) that elute in the TPH-E (DRO) range.

5.2.3 TPH-P (GRO)

Since groundwater monitoring began in 1992, TPH-P (GRO) has been detected above laboratory reporting limits in 23 of 29 site monitoring wells. Historical TPH-P (GRO) concentrations have ranged from 56 $\mu\text{g/l}$ (well MW-1 in April 20, 1999) to 26,000 $\mu\text{g/l}$ (well MW-21 on September 14, 2004). During the second quarter 2007 sampling event, TPH-P (GRO) was detected above the LMDL (50 $\mu\text{g/l}$) in groundwater samples collected from 14 of the 23 wells, and ranged in concentration from 110 $\mu\text{g/l}$ (MW-18) to 25,000 $\mu\text{g/l}$ (MW-28).

The main portion of the TPH-P (GRO) plume in groundwater has been centered on the area affected by the release of hydrocarbons from AST BT-11 and the manifold area (Figures 12 through 15). A separate smaller affected area exists in the western portion of the site around ASTs BT-6 and BT-7. Also shown on Figures 12 through 15, TPH-P (GRO) in groundwater generally exhibited increasing concentration trends between 1998 and 2004. After 2004, many wells screened within bedrock in the vicinity of the tank farm and manifold areas generally exhibited decreasing concentration trends.

These data suggest that although the lateral extent of the plume has generally increased over time, remedial activities conducted in response to release events has been successful at reducing the thickness of NAPH observed in shallow groundwater. Further, reducing TPH-P (GRO) concentrations at many well locations near the source areas suggests that natural attenuation mechanisms are contributing to the relative stability of the plume. For more information regarding the historical TPH-P (GRO) refer to the MNA Report dated December 15, 2006 (LFR 2006b).

5.2.4 Benzene

Benzene has historically been detected above laboratory reporting limits in 25 of 29 site monitoring wells, at concentrations ranging from 0.53 $\mu\text{g/l}$ (well MW-3 in April 2001) to 1,800 $\mu\text{g/l}$ (well MW-21 in September 2004). During the second quarter 2007, benzene was detected above the laboratory reporting limit (0.5 $\mu\text{g/l}$) in seven monitoring wells at concentrations ranging from 1.3 $\mu\text{g/l}$ (well MW-17) to 1,700 $\mu\text{g/l}$ (well MW-28).

As shown on Figures 16 through 19, show that the main area affected by dissolved benzene is located in the center of the site with the two highest portions of the plume centered slightly downgradient from the two main areas of releases – AST BT-11 and the manifold area near well MW-28.

In general, the lateral extent of benzene in shallow groundwater has significantly decreased since 1998. However, benzene concentrations increased in the vicinity of the northern loading rack and the manifold area between 1998 and 2002, but then significantly decreased at these locations between 2002 and 2007.

Benzene has remained present at relatively low concentrations in well MW-23 near Tunnel Avenue in the southern portion of the site, and has been detected in well MW-30 in 2006 and 2007, despite significant reductions in other portions of the site.

These data strongly suggest that natural attenuation of benzene in groundwater is occurring. For more information regarding the historical TPH-P (GRO) refer to the MNA Report dated December 15, 2006.

5.2.5 MTBE and TBA

MTBE has historically been detected above laboratory reporting limits in 29 site monitoring wells. MTBE concentrations have historically ranged from 0.52 $\mu\text{g/l}$ (MW-15 on July 12, 2000) to 5,500 $\mu\text{g/l}$ (MW-10 on January 12, 1996). During the second quarter 2007 sampling event, MTBE was detected above the laboratory reporting limit (0.5 $\mu\text{g/l}$) in 19 wells. MTBE concentrations ranged from 1.3 $\mu\text{g/l}$ (well MW-8) to 6,800 $\mu\text{g/l}$ (well MW-28).

As shown on Figures 20 through 23, the MTBE plume in shallow groundwater is primarily centered around the manifold area and slightly downgradient from AST BT-11. Figures 20 through 23 show the lateral extent of MTBE has remained relatively stable or increased slightly from 1998 to 2007. MTBE concentrations near the observed occurrence of NAPH in the central portion of the plume increased from 1998 to 2004, and then decreased between 2004 and 2007.

Recent groundwater monitoring events have included the analysis of TBA. TBA was detected at 12 well locations during the most recent groundwater monitoring event in April 2007 at concentrations ranging from 21 $\mu\text{g/l}$ (well GM-13A) to 16,000 $\mu\text{g/l}$ (well MW-12). Wells located in strongly anaerobic portions of the plume (wells MW-10, MW-12, MW-16, MW-17, MW-29, MW-30, and GM-13A) exhibited TBA concentrations greater than current MTBE concentrations and similar to historical high MTBE concentrations, providing supporting evidence that MTBE is being biodegraded under anaerobic conditions and transformed to TBA.

These data suggest that natural attenuation mechanisms are contributing to the relatively stable plume configuration and reducing concentrations in several site wells.

5.2.6 Adjacent Site Conditions

The Brisbane Landfill is present beneath the eastern portion of the site and extends east (downgradient) toward the San Francisco Bay. The landfill monitors shallow and deep groundwater, surface water, leachate, and seeps located in the vicinity of the Guadalupe Lagoon. The monitoring program associated with the landfill includes some or all of the following; VOCs, metals, inorganic parameters, pesticides, PCBs, and water levels. There are 14 shallow monitoring wells located upgradient, crossgradient, and downgradient from the landfill. During the Brisbane Landfill's August 2006 monitoring and sampling event, MTBE was detected in 11 of the 14 shallow monitoring wells ranging from 25 $\mu\text{g/l}$ to trace amounts noted in the analytical report as below the laboratory reporting limit. Of the 11 wells having detections of MTBE, three wells are located cross to upgradient from the Brisbane terminal in an area adjacent to the Union Pacific Railroad that potentially contributes groundwater and surface water to the timber-lined channel. These wells had concentrations of MTBE ranging from 0.64 $\mu\text{g/l}$, in well MW-10A to 25 $\mu\text{g/l}$, in well MW-4A. There are two leachate wells (also designated as shallow groundwater monitoring wells) located within the interior of the Brisbane Landfill. The leachate wells were analyzed for VOCs including MTBE. MTBE was detected in leachate well LW-1 at 14 $\mu\text{g/l}$ and not detected in above the LMDL in LW-2.

For additional information regarding the monitoring program and results associated with the Brisbane Landfill, refer to the Summer/Fall (August) 2006 Semiannual Monitoring Report dated October 30, 2006 (Geo Syntec Consultants, Inc 2006)

5.3 Surface-water

As discussed in Section 4.0, surface-water samples were collected during October 2006 and April 2007 from the timber-lined channel. During the sampling events surface-water samples were collected during low and high tide and locations upgradient and downgradient from the site. MTBE was the only chemical detected above the LMDL.

During the October 2006 sampling event, surface-water samples collected from upgradient from the site, at CGS-2, and within the channel during high and low tide contained concentrations of MTBE at 0.52 µg/l and 2.6 µg/l, respectively. Surface-water samples collected downgradient from the site, at CGS-1, and within the channel during high and low tide had detected concentrations of MTBE at less than 0.50 µg/l and 4.5 µg/l, respectively.

During the April 2007 sampling event, surface-water samples collected from upgradient of the site, CGS-2, and within the channel during high and low tide contained concentrations of MTBE at 4.4 µg/l and 1.9 µg/l, respectively. Surface-water samples collected downgradient from the site, CGS-1, and within the channel during high and low tide had detected concentrations of MTBE at 4.0 µg/l and 1.3 µg/l, respectively.

5.3.1 Adjacent Site Conditions

The Brisbane Landfill collected surface-water samples from two locations within the timber-lined channel, SR-1 and SR-2 located downgradient from the SFPP, L.P. Brisbane Terminal. The locations are sampled semiannual for field parameters (including pH, temperature, and specific conductance), select dissolved metals, inorganic parameters, PCB, organochlorine pesticides, and volatile organic compounds (VOCs). MTBE has historically been detected in the collected surface-water samples from both locations. During the August 2006 sampling event MTBE was detected in SR-1 at 5.4 µg/l and SR-2 at 2.7 µg/l. No information relative to tidal cycles is provided in this report.

Five seep locations (SG-1 through SG-5) in the vicinity of the Guadalupe Lagoon are monitored as part of the semi-annual monitoring and sampling program associated with the Brisbane Landfill. The seep locations are located along Lagoon Way extending approximately 1,800 west to east toward Highway 101. The closest seep location (SG-5) to the Brisbane terminal is located 1,500 feet southeast. This seep location is crossgradient to downgradient from the terminal. During the August 2006 sampling event MTBE was detected at 0.69 µg/l in SG-5.

6.0 SCREENING LEVEL RISK ASSESSMENT

A screening level risk assessment was conducted as part of this RAP. The screening level risk assessment included a review of potential sensitive receptors on-site and in the site vicinity, and a comparison of current detected petroleum hydrocarbon and fuel oxygenate concentrations to the appropriate pathway-specific environmental screening level (ESL) concentrations provided in the document entitled "Screening For Environmental Concerns at Sites With Contaminated Soil and Groundwater (4th edition, February 2005)" prepared by staff of the California Regional Water Quality Board, San Francisco Bay Region (the RWQCB ESLs; RWQCB 2005). The RWQCB developed ESLs to address environmental protection goals presented in the "Water Quality Control Plan for the San Francisco Bay Basin". The ESLs were developed using U.S. EPA and DTSC health risk assessment methodology. Under most circumstances, the presence of a chemical in soil or groundwater at concentrations below the corresponding ESL can be assumed to not pose a significant threat to human health or the environmental. ESLs can be obtained from <http://www.swrcb.ca.gov/rwqcb2/ESL.htm>

6.1 Potential Exposure Pathways and Receptors

Potential exposure pathways identified include volatilization from groundwater to indoor air for on-site buildings, direct contact with soil and groundwater by site construction/maintenance workers, ingestion of groundwater, and discharge of groundwater to sensitive ecological habitat.

6.1.1 Indoor Air

As part of the screening level risk assessment, exposure of potential on-site workers to indoor air affected by volatile organic compounds (VOCs), such as benzene, was evaluated. The control room building was the only on-site building evaluated for indoor air exposure. Exposures in this building represent the most conservative conditions since the other on-site buildings are elevated mobile trailers or buildings that are occupied at a lower duration. The control room building is located directly east of the manifold area in the vicinity of well MW-28 (Figure 2). No indoor air data were available for the control room building. Therefore, the potential for vapor intrusion to affect the indoor air quality was assessed assuming volatilization from groundwater to indoor air based on the most recently collected groundwater data from well MW-28. Results of this comparison are presented in Section 6.2 below.

6.1.2 Direct Contact with Soil

Because the site is a controlled facility, direct contact with soil is likely to occur only for operations and maintenance personnel working at the site. However, these workers receive on-going health and safety training, and perform their work functions in compliance with existing health and safety plans that specify appropriate monitoring

and personal protective equipment (PPE) procedures developed for operations and maintenance activities at the site. A screening level assessment of the potential risks associated with direct contact to soil is provided in Section 6.2 below.

6.1.3 Groundwater

6.1.3.1 *Groundwater Ingestion*

As part of the evaluation of risk to potential receptors, LFR evaluated groundwater ingestion as a potential receptor by conducting a limited well survey. LFR obtained an EDR Radius Map with Geocheck (“the EDR Report”) which provided information regarding the presence of the Federal USGS and public water supply wells and State wells, and is included in Appendix C. According to the EDR report, no public water supply wells exist within a one-mile radius of the site. On-site municipal water is currently supplied by the City of Brisbane. The limited well search did not include door-to-door or drive by surveys; however, due to commercial and industrial zoning and the presence of the Brisbane Landfill downgradient of the site, it is assumed that domestic wells are not present and groundwater is not used for domestic or municipal supply in the vicinity and downgradient of the site.

6.1.3.2 *Potential Groundwater Discharge to Surface-Water*

Receiving waters within a one-mile radius of the site include the San Francisco Bay located 0.5 miles to the east, Guadalupe Lagoon located approximately 0.25 miles to the south, and the timber-lined channel located directly adjacent and to the north of the site. The San Francisco Bay and Guadalupe Lagoon are well outside of the current extent of petroleum hydrocarbons in groundwater attributable to the site, and are therefore not considered further in this evaluation.

The potential for discharge of site groundwater to the timber-lined channel is discussed above in Section 4. Although a comparison of groundwater and surface-water levels suggest that seasonal discharge from groundwater to the timber-lined channel may occur, the presence of significant tidal fluctuations in the timber-lined channel and the absence of significant tidal fluctuations in site groundwater suggest the hydraulic connection between surface water and groundwater is not significant. However, this water body is included in a further ecological screening evaluation, as discussed in Section 6.2 below.

6.1.4 Surface Water

Potential ecological receptors and wildlife habitats in the vicinity of the site include the surface water located in the timber-lined channel. The timber-lined channel is considered an estuarine habitat because the channel’s tidal fluctuation demonstrates a hydraulic connection with the Bay. As discussed in Section 4.0, based on the surface-water sample analytical results, wildlife could be exposed to MTBE through the timber-lined channel. Wildlife that may be exposed to MTBE in the vicinity of the site

may include invertebrates, vertebrates (including fish) and birds. A comparison of petroleum hydrocarbon and fuel oxygenate concentrations detected in surface water to their respective ESLs is presented In Section 6.2 below.

6.2 Comparison of Current Site Conditions to ESLs

This section presents a comparison of the site data representing petroleum hydrocarbon and fuel oxygenate concentrations in soil, groundwater, and surface water to the appropriate ESLs for each media and potential exposure pathway discussed above.

6.2.1 Indoor Air Evaluation

Petroleum hydrocarbon and fuel oxygenate concentrations in groundwater samples collected in April 2007 from monitoring well MW-28, located close to the control room building, are presented in Table 3 and discussed in Sections 2 and 5 above. In Table A below, these data are compared to the associated petroleum hydrocarbon and fuel oxygenate concentrations obtained from the RWQCB ESLs Table E-1a, which assumes groundwater volatilization to indoor air in highly permeable soil under a commercial setting.

Table A – Comparison of Maximum Detected Concentration to Groundwater ESLs Protective of Indoor Air

Constituent	Maximum Detected Concentration (µg/l)	ESL for the Protection of Indoor Air (µg/l) ^a
TPH-E (DRO)	17,000	NA
TPH-P (GRO)	25,000	72,000 ^b
Benzene	1,700	1,800
Toluene	81	530,000
Ethylbenzene	770	170,000
Xylenes	160	160,000
MTBE	6,800	80,000
TBA	1,100	8,700

Note:

a = Groundwater ESLs for protection of the commercial receptor exposed to indoor air (Table E-1a-Groundwater Screening Levels for Evaluation of Potential Vapor Intrusion Concerns for Commercial/Industrial Land Use with high permeable vadose-zone soil types).

b = Table E-2 Shallow Soil Gas Screening Levels for Evaluation of Potential Vapor Intrusion Concerns.

c = Maximum detected concentration were collected from current chemical concentrations from monitoring well MW-28.

Bold indicates the detected constituent concentration exceeds establish ESL.

As shown in Table A, the detected petroleum hydrocarbon and fuel oxygenate concentrations in well MW-28 are below the corresponding ESLs. Therefore, current site conditions are protective of human health under the volatilization from groundwater to indoor air scenario, and remedial action is not required for protection of human health under this scenario.

6.2.2 Direct Contact with Soil

Available data regarding petroleum hydrocarbons and fuel oxygenates in soil are presented in Table 1, and discussed in Sections 2 and 5 above. In Table B below, the maximum petroleum hydrocarbon and fuel oxygenate concentrations detected in soil are compared to associated ESLs obtained from Table K-3 of the RWQCB ESLs which covers exposures to contaminated soil by construction workers.

Table B - Comparison of Maximum Detected Concentration to Proposed Soil ESLs for Direct Exposure to Construction or Trench Workers Exposure

Shortcut (2) to Clier Constituent	Maximum Detected Concentration (mg/kg)	ESL for the Protection of Construction/Trench Worker(mg/kg) ^a
TPH-E (DRO)	19,000	15,000
TPH-P (GRO)	17,000	6,000
Benzene	58	16
Toluene	480	650
Ethylbenzene	160	400
Xylenes	589	420
MTBE	520	2,500
TBA	NA	3,700

Note:

a - Soil ESLs for protection of Construction or Trench Worker Exposure (Table K-3)

Bold indicates the detected constituent concentration exceeds establish ESL.

As shown in Table B, the historical concentrations of TPH-E (DRO), TPH-P (GRO), benzene, and xylenes are greater than their corresponding ESLs. However, as discussed in Section 6.1 above, site workers are trained and operate under existing health and safety plans that specify appropriate monitoring and PPE activities for operations conducted at the site. In addition, the data used for this comparison were obtained several years ago, and some decreases in soil concentrations have likely occurred due to natural attenuation mechanisms active at the site.

6.2.3 Groundwater

Concentrations of petroleum hydrocarbons and fuel oxygenates in groundwater beneath the site are summarized in Table 3 and shown on Figures 11 through 23. The maximum concentrations of these constituents are discussed in Section 5 and Section 6.2.1 above. Because groundwater is not currently used as a source of drinking water, further evaluation of this potential exposure pathway is not performed. As discussed in Section 6.1.3.1 above, there is potential for discharge of groundwater to surface water within the timber-lined channel. Therefore, in Table C below, maximum detected concentrations of petroleum hydrocarbons and fuel oxygenates in groundwater samples collected from wells in the vicinity of the timber-lined channel (MW-14, MW-15, MW-16, MW-29, MW-30 and GM-13A) are compared to ESLs obtained from the RWQCB ESL Table F-1b that are protective of discharges from groundwater to surface water.

**Table C – Comparison of Maximum Detected Concentration to ESLs
for Potential Groundwater Discharge to Estuary Habitat**

Constituent	Maximum Detected Concentration (µg/l)	ESL for the Protection of Groundwater Discharge to Estuary Habitat (µg/l) ^a
TPH-E (DRO)	280	640
TPH-P (GRO)	360	500
Benzene	25	46
Toluene	0.7	130
Ethylbenzene	<0.5	290
Xylenes	<0.5	100
MTBE	190	8,000
TBA	840	18,000

Notes:

a = Groundwater ESLs for protection of discharge to estuary habitat (Table F-1b)

b = Maximum detected concentrations were assemble from current site conditions in monitoring wells MW-14, MW-15, MW-16, MW-29, MW-30 and GM-13A.

Bold indicates the detected constituent concentration exceeds establish ESL.

As shown in Table C, the concentrations of petroleum hydrocarbons and fuel oxygenates in groundwater in the vicinity of the timber-lined channel are well below the corresponding ESLs. These data indicate that remedial actions are not required for protection of surface water and ecological receptors under current site conditions.

However, because several site wells further from the timber-lined channel and near the central area of the site exhibit maximum concentrations of petroleum hydrocarbons and

fuel oxygenates that exceed the ESLs presented in Table C, these ESLs have been retained as proposed cleanup goals for groundwater beneath the site, as described in Section 7 below.

6.2.4 Surface Water

Surface-water samples were collected from the timber-lined channel in October 2006 and April 2007 during completion of the hydrogeological study presented in Section 4. In Table D below, the maximum petroleum hydrocarbon and fuel oxygenate concentrations detected in surface water are compared to associated ESLs obtained from the RWQCB ESL Table F-2c for estuary habitat.

Table D – Comparison of Maximum Detected Concentration to ESLs for Estuary Habitats

Constituent	Maximum Detected Concentration (µg/l)	ESL for the Protection of Groundwater Discharge to Estuary Habitat (µg/l) ^a
TPH-E (DRO)	NA	640
TPH-P (GRO)	NA	500
Benzene	<0.50	46
Toluene	<0.50	40
Ethylbenzene	<0.50	30
Xylenes	<0.50	100
MTBE	4.4	180
TBA	NA	1,800

Notes:

a = Groundwater ESLs for protection of estuary habitat (Table F-2c)

Bold indicates the detected constituent concentration exceeds establish ESL.

NA – not analyzed

<0.50 = analyte not detected at or above noted LMDL.

As shown in Table D, MTBE was the only constituent for concern detected in surface water, at a maximum reported concentration of 4.5 µg/l. The maximum detected MTBE concentration is well below the ESL of 180 µg/l for estuary conditions. Since MTBE is not bioaccumulative, it is unlikely that bird and fish receptors would experience elevated risk as a result of food web transfer. Based on the relevant ESL of 180 µg/l, the current detected concentrations of MTBE in the surface water do not pose a risk to the ecological wildlife. Therefore, remedial actions are not required for protection of surface water and ecological habitat.

7.0 REMEDIAL ACTION OBJECTIVES AND PROPOSED CLEANUP GOALS

7.1 Remedial Action Objectives

The remedial action objectives were developed based on the current land use of an industrial/commercial property, where groundwater not being used as a source of drinking water, and surface water is in an estuarine environment.

The remedial action objectives (RAOs) for the site are to reduce concentrations of petroleum hydrocarbon and fuel oxygenates to levels below applicable human health and ecological risk protection criteria (ESLs).

7.2 Proposed Cleanup Goals

The proposed groundwater cleanup goals are based on the ESLs for appropriate environmental scenarios and potential exposure pathways, and are designed to be protective of human health and ecological risk. Proposed cleanup goals were developed for TPH-E (DRO), TPH-P (GRO), BTEX compounds, MTBE and TBA in soil and groundwater based on the screening levels risk assessment described in Section 6. As described in Section 6, current site conditions are protective of human health.

However, because groundwater beneath the site contains petroleum hydrocarbons and fuel oxygenates at concentrations that exceed ESLs for potential discharge to surface water, these ESLs have been retained as proposed cleanup goals for groundwater beneath the site. In addition, although current concentrations of MTBE are well below the ESL for MTBE in surface water, these ESLs are also being retained as proposed cleanup goals to be used as a decision-making tool for potential implementation of contingency plans if future monitoring indicates significant increasing trends in petroleum hydrocarbon and fuel oxygenate concentrations in surface water. Table E below provides a summary of the proposed cleanup goals for surface water and groundwater.

Table E - Proposed Cleanup Goals

Contaminant	Groundwater Cleanup Goals (µg/l)	Surface-water Cleanup Goals (µg/l)
TPH-E (DRO)	640	640
TPH-P (GRO)	500	500
Benzene	46	46
Toluene	130	40
Ethylbenzene	290	30
Xylenes	100	100
MTBE	1,800	180
TBA	1,800	18,000

8.0 REMEDIAL ACTION PLAN

As discussed in Section 2.3 and 5.0 above, SFPP has implemented remedial activities in response to several known releases to remove petroleum- and fuel oxygenate-affected soil and groundwater and remove NAPH. These remedial activities have generally been successful in removing the majority of petroleum hydrocarbon impacts to soil and groundwater, to the extent practicable, as evidenced by reducing NAPH thicknesses in source areas of the site. As discussed in the MNA Evaluation Report, site data strongly suggest that natural attenuation mechanisms, including biodegradation, are producing a stable to decreasing petroleum hydrocarbon and fuel oxygenate plume in shallow groundwater (LFR 2006). These data further suggest that MNA is a viable remedial alternative for the site. Site data that support this conclusion includes the following:

- TPH-P (GRO), benzene, and MTBE concentrations in groundwater generally exhibit stable to decreasing concentration trends within the plume boundaries, and NAPH thicknesses have decreased substantially in 2005 and 2006.
- The occurrence of high concentrations of TBA at locations previously exhibiting high MTBE concentrations strongly suggests MTBE is being biotransformed to TBA under anaerobic conditions.
- Analysis of bioparameters during recent groundwater monitoring events suggests bacteria in site groundwater are consuming petroleum hydrocarbons under anaerobic conditions present beneath much of the site, as evidenced by dissolved oxygen and nitrate depletion in most areas beneath the site, and iron-reducing, sulfate-reducing and borderline methanogenic conditions present within the core of the plume.

Based on these observations, the MNA Evaluation Report concluded that MNA is a viable remedial alternative for the site.

Because petroleum hydrocarbon and fuel oxygenate concentrations in groundwater beneath the site exceed ESLs and Basin Plan water quality objectives, remedial actions may be required to achieve the proposed cleanup goals. However, active remedial actions are not required as it is not necessary to achieve water quality objectives in a rapid time frame due to the lack of imminent threat to sensitive receptors. Supporting information for this conclusion is discussed in the screening level risk assessment presented in Section 6 above, and includes the following:

- groundwater beneath the site is not currently being used as a source of drinking water;
- concentrations of petroleum hydrocarbons and fuel oxygenates in groundwater in the vicinity of the on-site buildings are below ESLs associated with vapor intrusion from groundwater into indoor air;
- MTBE concentrations in the timber-lined channel are well below ESLs for estuary environments, and;
- there are no other sensitive receptors in the vicinity of the site that are imminently threatened by the presence of petroleum hydrocarbons in soil and groundwater beneath the site.

Therefore, MNA is selected as the preferred remedial action to achieve the proposed cleanup goals in a reasonable time frame. This methodology relies on the natural processes of intrinsic biodegradation, sorption, dilution, and dispersion to reduce the concentrations of petroleum hydrocarbons and fuel oxygenates in soil and groundwater beneath the site, and periodic monitoring to verify remedial alternative effectiveness.

8.1 Remedial Action Plan Implementation

Implementation of the selected remedy includes periodic evaluation of petroleum hydrocarbon and fuel oxygenate concentration trends and addition of various analytes described below to the on-going groundwater monitoring program. To provide assessment of the effectiveness and continued progress of the MNA remedy, groundwater samples will be collected on a semi-annual basis from the following select site monitoring wells.

- **Upgradient** - Monitoring wells MW-7, MW-9, and MW-23 will be sampled to provide data from the upgradient portion of the plume and areas outside the general plume boundary at cross gradient locations.
- **Center of the plume** - Wells MW-1, MW-8, MW-17, MW-20, and MW-21 will be sampled to provide data for the plume core area.

- **Downgradient** - Wells MW-24, MW-25, MW-27, MW-29, and MW-30 will be sampled to provide data for the downgradient portion of the plume and areas outside the general plume boundary in downgradient locations.

Groundwater samples will be analyzed the for following constituents, in addition to the routine analysis for total petroleum hydrocarbons as TPH-E (DRO) and TPH-P (GRO), BTEX compounds, and seven fuel oxygenates including methanol, ethanol:

- total alkalinity and total organic carbon by EPA Method 310.0,
- biochemical oxygen demand (BOD) by Standard Method 5210B,
- chemical oxygen demand (COD) by EPA Method 410.1,
- methane by modified method RSK-175,
- nitrate by EPA Method 300.0/9056, and
- sulfate by EPA Method 300.0/9056.

In addition to the above laboratory analyses, field measurements of dissolved oxygen (DO), ferrous iron, oxidation-reduction potential (ORP), and pH will be collected at each sample location.

Also, to assess the potential presence of organic lead antiknock additives reported to be present in NAPH released in the vicinity of well MW-28, groundwater samples will be analyzed for lead using EPA Method 200.8 during the next semi-annual groundwater monitoring event. If lead is not detected within one year of monitoring (2 semi-annual events) further analysis for lead will be discontinued. If lead is detected in groundwater samples collected from well MW-28, additional samples will be collected from adjacent monitoring wells during the subsequent semi-annual monitoring event and analyzed for lead to assess the extent of lead in groundwater beneath the site.

NAPH removal activities currently being implemented at the site will continue until NAPH is not observed in site wells.

8.2 Reporting

Analytical results from periodic groundwater monitoring will be reported in semi-annual groundwater monitoring reports, and an evaluation of petroleum hydrocarbon and fuel oxygenate trends will be included in annual groundwater monitoring reports. The overall effectiveness of the MNA approach will be evaluated as part of a five year evaluation, at which time SFPP will review site data to see whether they demonstrate that MNA should be continued as the approach toward achieving the RAOs for the site. Included as Table 9 is the proposed Self Monitoring Program (SMP) which presents the sampling schedule and analysis for monitoring wells associated with the site. This SMP will be appended to the Cleanup and Abatement Order required by RWQCB.

Groundwater monitoring for the above described parameters will continue on a semi-annual basis until the fourth quarter of 2010 (for a total of 5 years of sampling for MNA parameters). If decreasing trends are evident at this time, periodic groundwater monitoring will be reduced to an annual frequency.

If decreasing trends are not observed during this 5-year monitoring period or new releases occur within the facility, contingency plans will be evaluated and proposed to address petroleum hydrocarbons and fuel oxygenates in soil and groundwater. These contingency plans may include soil excavation, soil vapor or dual-phase extraction, or various in-situ treatment remedies, such as in-situ oxidation or bioremediation enhancement (oxygen addition) technologies.

9.0 LIMITATIONS

The opinions and recommendations presented in this report are based upon the scope of services, information obtained through the performance of the services, and the schedule as agreed upon by LFR and the party for whom this report was originally prepared. This report is an instrument of professional service and was prepared in accordance with the generally accepted standards and level of skill and care under similar conditions and circumstances established by the environmental consulting industry. No representation, warranty, or guarantee, express or implied, is intended or given. To the extent that LFR relied upon any information prepared by other parties not under contract to LFR, LFR makes no representation as to the accuracy or completeness of such information. This report is expressly for the sole and exclusive use of the party for whom this report was originally prepared for a particular purpose. Only the party for whom this report was originally prepared and/or other specifically named parties have the right to make use of and rely upon this report. Reuse of this report or any portion thereof for other than its intended purpose, or if modified, or if used by third parties, shall be at the user's sole risk.

Results of any investigations or testing and any findings presented in this report apply solely to conditions existing at the time when LFR's investigative work was performed. It must be recognized that any such investigative or testing activities are inherently limited and do not represent a conclusive or complete characterization. Conditions in other parts of the project site may vary from those at the locations where data were collected. LFR's ability to interpret investigation results is related to the availability of the data and the extent of the investigation activities. As such, 100% confidence in environmental investigation conclusions cannot reasonably be achieved.

LFR, therefore, does not provide any guarantees, certifications, or warranties regarding any conclusions regarding environmental contamination of any such property. Furthermore, nothing contained in this document shall relieve any other party of its responsibility to abide by contract documents and applicable laws, codes, regulations, or standard.

CS-31	11/3/2003	1.0 - 1.5	37	--	--	64	0.038	0.39	0.093	0.54	0.52

Notes:

(1) = Cuttings - Refer to Table 1 from Additional Site Assessment Report, presented to Santa Fe Pacific Pipeline Partners, L.P., dated July 15, 1993.

<0.005 = Analyte not detected at or above the noted laboratory method detection limit (LMDL).

-- = Not analyzed/not available

Bold = analyte detected at or above the laboratory method detection limit

ESL = Table B, Environmental screening level (ESLs), used for shallow soils and groundwater is not a current or potential source of drinking water for Commercial /Industrial Land Use

Detected value above the established ESL is noted with a box

Abbreviations:

bgs = below ground surface

ppm = parts per million

TPH-P (GRO) = total petroleum hydrocarbons-purgeable as gasoline range organics

TPH-E (DRO) = total petroleum hydrocarbons-extractable as diesel range organics

TPH-E (JFRO) = total petroleum hydrocarbons-extractable as jet fuel range organics

TPH-E (CRO) = total petroleum hydrocarbons-extractable as creosote

MTBE = methyl tertiary-butyl ether

**Table 2
Summary of Well Construction Details

Notes:

- (1) The data presented in this table prior to March 2006 were provided by the previous consultants. LFR has not verified the accuracy of these data.
- (2) ESL = Table B, Environmental screening level (ESLs), used for shallow soils and groundwater is not a current or potential source of drinking water for Commercial/Industrial Use Only
 Detected value above the established ESL is noted with a box
- ^k = DRO concentration may include contributions from lighter-end hydrocarbons (e.g., gasoline) that elute in the DRO range.
- ^v = Reporting limits were increased due to high concentrations of target analytes.
- ^x = Reporting limits are increased due to sample matrix interferences
- ^o = Reporting limits were increased due to sample foaming.
- ^z = DRO concentration may include contributions from lighter-end (e.g., gasoline) and heavier-end (e.g., motor oil) hydrocarbons that elute in the DRO range.

Abbreviations:

- µg/l = micrograms per liter
 <50 = analyte not detected at or above noted laboratory method detection limit (LMDL).
Bold = analyte detected at or above laboratory method detection limit
 --- = not applicable/available
 ND = not detected above LMDL
 TPH-P (GRO) = total petroleum hydrocarbons-purgeable as gasoline range organics
 TPH-E (DRO) = total petroleum hydrocarbons-extractable as diesel range organics
 TPH-E (JFRO) = total petroleum hydrocarbons-extractable as jet fuel range organics
 MTBE = methyl tertiary-butyl ether via EPA Method 8260 unless otherwise noted
 TBA = tertiary butyl alcohol
 DIPE = di-isopropyl Ether
 ETBE = ethyl tertiary butyl ether
 TAME = tertiary amyl methyl ether
 MNA = monitored natural attenuation
 NAPH = non-aqueous-phase petroleum hydrocarbon

Notes:

- (a) = The data presented in this table that were collected before March 2006 were provided by previous consultants. LFR has not verified the accuracy of these data.
- (b) = Monitoring wells resurveyed in August 2005.

Abbreviations:

- = not applicable/available
- NAPH = non-aqueous-phase petroleum hydrocarbons
- BTOC = below top of casing
- msl = mean sea level

April 27, 2007						
High Tide						
CGS-1	< 100 ^o	< 0.50	< 0.50	< 0.50	< 0.50	4.0
CGS-2	< 100 ^o	< 0.50	< 0.50	< 0.50	< 0.50	4.4
Low Tide						
CGS-1	< 50	< 0.50	< 0.50	< 0.50	< 0.50	1.3
CGS-2	< 50	< 0.50	< 0.50	< 0.50	< 0.50	1.9

Notes:

< 0.50 = analyte not detected at or above noted laboratory method detection limit (LMDL).

Bold = analyte detected at or above laboratory method detection limit

^o = Reporting limits were increased due to sample foaming.

VOC analyses conducted in accordance with EPA Method SW8260B

GRO analyses conducted in accordance with EPA Method SW8015B

(1) ESL = Table F-2c. Surface Water Screening Levels, Estuary Habitats

Abbreviations:

$\mu\text{g/l}$ = micrograms per liter

TPH-P (GRO) = total petroleum hydrocarbons-purgeable as gasoline range organics

MTBE = methyl tertiary-butyl ether

Notes:

Nitrate and Nitrite as N analyses conducted in accordance with EPA Method 353.3
Chloride and Sulfate analyses conducted in accordance with EPA Method 300.0
Alkalinity analyses conducted in accordance with EPA Method 310.0
Iron analyses conducted in accordance with EPA Methods 3005A, 6010B, 200.7
COD analyses conducted in accordance with EPA Method 410.4/SM5220D
TOC analyses conducted in accordance with EPA Method SW9060/415.1/SM-52310C
BOD analyses conducted in accordance with EPA Method 405.1
The data presented in this table prior to 3/29/06 were provided by the previous consultants. LFR has not verified the accuracy of these data.

Abbreviations:

< = Not detected at or above specified laboratory method detection limit
NAPH = non-aqueous-phase petroleum hydrocarbons
--- = data not collected
mg/l = milligrams per liter
µg/ml = micrograms per milliliter
mV = millivolts
BOD = biological oxygen demand
COD = chemical oxygen demand
TOC = total organic carbon
L = Concentration above detection limit of instrument

Abbreviations

- bgs = below ground surface
- ORP = oxidation-reduction potential
- DO = dissolved oxygen
- TPH-P (GRO) = total petroleum hydrocarbons-purgeable as diesel range organics
- TPH-E (DRO) = total petroleum hydrocarbons-extractable as diesel range organics
- Five fuel oxygenates = tertiary butyl alcohol (TBA), methyl tert-butyl ether (MTBE), di-isopropyl ether (DIPE), ethyl tertiary butyl ether (ETBE), and tertiary amyl methyl ether (TAME)
- BTEX = benzene, toluene, ethylbenzene and total xylenes
- TOC = total organic carbon
- COD = chemical oxygen demand
- BOD = biological oxygen demand

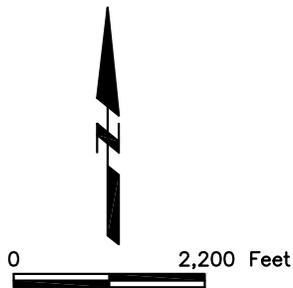

KEY

- Q = quarterly monitoring according to the following schedule:
 - 1st quarter = Jan thru Mar
 - 2nd quarter = Apr thru Jun
 - 3rd quarter = Jul thru Sep
 - 4th quarter = Oct thru Dec
- S = semi-annual monitoring during the second and fourth quarters
- A = Annual monitoring during the fourth quarter
- NA = not applicable/ data unknown
- = no sampling required

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/14/2007 has revealed that there is 1 CORRACTS site within approximately 1 mile of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
<i>QUICKSILVER PRODUCTS INC</i>	<i>200 VALLEY DR STE 1</i>	<i>1/4 - 1/2 SW</i>	<i>D17</i>	<i>41</i>

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-TSDF list, as provided by EDR, and dated 06/13/2006 has revealed that there is 1 RCRA-TSDF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Integrated Waste Management Board's Solid Waste Information System (SWIS) database.

A review of the SWF/LF list, as provided by EDR, and dated 03/12/2007 has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

<u>Lower Elevation</u>	<u>Address</u>	<u>Dist / Dir</u>	<u>Map ID</u>	<u>Page</u>
BRISBANE LANDFILL	245 TUNNEL RD.BETWEEN B	1/8 - 1/4 ENE	7	18

CORTESE: This database identifies public drinking water wells with detectable levels of contamination, hazardous substance sites selected for remedial action, sites with known toxic material identified through the abandoned site assessment program, sites with USTs having a reportable release and all solid waste disposal facilities from which there is known migration. The source is the California Environmental Protection Agency/Office of Emergency Information.

A review of the Cortese list, as provided by EDR, and dated 04/01/2001 has revealed that there are 4 Cortese sites within approximately 0.5 miles of the target property.

ENVIROSTOR: The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

A review of the ENVIROSTOR list, as provided by EDR, and dated 02/27/2007 has revealed that there are 5 ENVIROSTOR sites within approximately 1 mile of the target property.

APN Description:	Not reported
Comments:	Completed RA. DTSC contractors performed a removal action to allow for closure of Suite 1 which housed the formerly permitted hazardous unit. The removal action consisted of two primary actions: 1) removal and disposal or recycling 123 containerFact Sheet announces results of site inventory and how DTSC will undertake facility closure.Issued I&SE Determination because of the high levels of cadmium and mercury being released to the environment. During an inspection, it was found that Quicksilver had expanded its operations beyond the area where hazardous waste treatment and storalsued IS&E Order. Order required sampling and removal of all contaminated material found in the storm drain next to the site. DTSC's enforcement actions ultimately led to the San Mateo District Attorney's Office filing criminal charges against QuiCompleted RA. About 3 cubic feet of mercury contaminated storm drain sediments in two catch basins located next to the facility were removed. The remaining cleanup activities ongoing at the site will be overseen by the Surveillance and EnforcementBranch.ge were allowed under their permit. The permit only allowed operation in Suite 1, while Quicksilver Products had expanded its storage activities into Suites 2 through 5.icksilver Products' owner. The owner was convicted of a felony for illegal hazardous waste storage and treatment activities. As part of his sentence, the owner completed the closure of the unauthorized operation areas between 1994 and 1996. DTSC rs, parts, and pieces of equipment containing or contaminated by mercury and other hazardous wastes; and 2) decontamination or removal and disposal of interior walls and floors. A portion of the waste was removed by a contractor for Pacific Gas andevoked Quicksilver Products' permit in September 1996. Quicksilver abandoned the facility after its permit was revoked by DTSC in 1996 and had not completed closure of the permitted hazardous waste unit in Suite 1 because of insufficient financialElectric. Wipe sampling of the walls and floors wa performed to verify that the DTSC-calculated cleanup levels for mercury and cadmium were achieved. The cleanup levels for mercury and cadmium were 4 and 20 micrograms per 100 square centimeters ofresources.surface area, respectively.

 Comments: Very low concentrations of toluene (maximum of 0.049 parts per million [ppm]), ethylbenzene (maximum of 0.021 ppm) and xylenes (maximum of 0.15 ppm) have been found in shallow soils at the site. All but one sample collected from the northern edge of VCA signed with Loma Verde Properties for review of a PEA. The property and analyzed for polynuclear aromatic hydrocarbons (PNAs) contained no detectable PNAs. The one detection of total PNAs was 0.006 ppm. A maximum concentration of 48 ppm total lead was also found at the site. No detectable concentrations of benzene, TPH gasoline, MTBE or PCBs were found in the samples analyzed from the site. DTSC determined that no further action was necessary for this site.

Site Description: is expected to continue to fund site activities.
 This site, about 100 acres in size, was used by Southern Pacific Transportation Company for major railcar rehabilitation and locomotive maintenance operations from about 1914 to 1960.

Hazardous Waste Desc: Soil and ground water at the site are contaminated with a variety of hazardous substances, including arsenic, barium, chromium, copper, lead, zinc, oil, benzene, trichloroethane (TCA), trichloroethylene (TCE), dichloroethylene (DCE) and vinyl chlorid.

Threat To Public Health & Env: This site is located in Visitacion Valley, a basin tributary to the San Francisco Bay. The Bay is located about 2,000 feet east of the site. The site also overlays a discharge area and a potentially usable ground water source. Contaminants from the site may migrate offsite via surface water runoff, wind dispersion and ground water transport. This could result in human and animal exposure from direct contact with or ingestion of contaminated soil or water.

Site Activity Status: Southern Pacific recently completed a remedial investigation of the site. Additional remedial work may be necessary.

A soil removal was conducted. DTSC enters into agreement with Tuntex Properties (Respondent) for the operation and maintenance of the liquid phase/carbon adsorption extraction and treatment system for the remediation of the groundwater contaminated with volatile organic compound. A Remedial Design for the proposed cleanup was approved. DTSC approved a Remedial Action Plan which consisted of a liquid phase/carbon adsorption extraction and treatment system to treat contaminated groundwater with volatile organic compounds (VOCs). DTSC approved a Remedial Investigation/Feasibility Study which looked at the different cleanup alternatives for the site. TANK DTSC approved the Public Participation Plan. DTSC approved the Soil Sampling Report which indicated the presence of arsenic, lead and volatile organic compounds in both the San Francisco and Brisbane portions of the site. There were no significant findings on the Report. No comments were made except for requiring the P.E. stamp. Report approved with no modifications. Report approved. DTSC reviewed the Report without further comments. The RI Report indicated that the chemicals of concern at the Site are chlorinated volatile organic compounds, primarily perchloroethylene and trichloroethylene. The Report also identified three water-bearing zones at the site, the A-Fill, A-Sand and Report approved with no modifications or comments. Report summarizes recent sampling conducted on the property. Certified the cleanup of the site with an on-going operation and maintenance of the groundwater extraction and treatment system. Deed restriction recorded for the area 2 as described in the deed. The San Francisco Regional Water Quality Control Board (RWQCB) became lead agency for the South Area on August 22, 1995. The IS&E Order was modified to reflect that the South Area was transferred to the RWQCB. A Negative Declaration was adopted for the proposed Remedial Action Plan. An Order issued to require Responsible Party to conduct investigation and cleanup. Deed restriction recorded for the area 1 as described in the deed. First Amended Order requiring the Responsible Party to revise the Remedial Action Plan (RAP) to consider public comments which should become the Final RAP. nd B-Sand.s.</p>

 Comments: ORDER - AMEND - Amended I&SE Order to add Housing Authority of San Mateo County and the City of Daly City as responsible parties. Settlement with the United States of America regarding past costs for Midway Village. ORDER - AMEND - Amended I&SE Order for Midway Village to include Bayshore Park and DayCare Center in area to be sampled as part of the RI/FS. CERT - Certified Site. Ongoing operation and maintenance consists of periodic inspections of the cap. DEED - Recorded Deed Restriction on the Park to ensure that its use remains consistent with the approved remedy. FDNC - DTSC issued a final determination of non-compliance with the April 11, 2001 order amendment. ORDER - AMEND - Amended Order to require additional removal actions. ORDER - AMEND - Amended I&SE to include all requirements for Operation and Maintenance for the Midway Village Site. Also added requirements for public participation, emergency response and stop work orders for both Midway and Bayshore Park. RA - PIPE - Completed RA. The RA consisted of soil removal and management for the portion of the storm drain improvement project which occurred in Bayshore Park. RAW - Approved RAW. It addressed handling of soils excavated as part of replacement of the storm drain pipe under the Park (Bayshore Storm Drain Improvement Project) and removal of near surface hot spot soil areas. Soils within 2 feet of the surface. ORDER - I&SE - Issued I&SE Determination. Housing Authority excavating contaminated soil to install drainage system without notifying DHS. Negative Declaration for PG&E Martin Service Center Operable Unit 2 Remedial Action Plan and Bayshore Park Removal Action Workplan. Final Initial Study & Negative Declaration for the Explanation of Significant Differences for Midway Village and Bayshore Park. Completed Removal Action. 670-feet of chain link fence and gates were installed around the

perimeter of Bayshore Park. The fence is ten feet high and the gates are locked so access is controlled. RAW - ESD - Approved Explanation of Significant Differences to the 1998 RAW requiring excavation of the top two feet of soil across the entire park. RA - SOIL - Completed Removal Action. 12,261 cubic yards of contaminated soil was removed from the Park. Contaminated soils were disposed off-site at an appropriate landfill. The area was backfilled with at least two feet of clean soil. The entiData Report documenting location of PAH contaminated soils at Bayshore. Additional sampling to support Storm Drain Improvement Project. Report documenting results of samples collected in 1989 in Bayshore Park. PAHs were found in soils onsite. Public Participation Plan Update. Fact Sheet for Draft Explanation of Significant Differences to RAW. Project Update Order amended to require additional removal actions in both Bayshore Park and Midway Village. re Park was regraded to ensure proper drainage. Several new storm drains were also installed. The chain-link fence around the Day Care was replaced with a concrete block retaining wall topped by a 6-foot high chain link fence. A new playground wace are above the cleanup goal 10 ppm total PAHs will be excavated. Work on the Drainage project began in October 1999, with excavation in the Park beginning mid-December, and was completed in June 2000. s installed near the Midway Village Housing Office. A new baseball field backstop was installed and the original bleachers were returned. An expanded basketball court was constructed. One monitoring well and one deep artesian well were abandoned.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 01/25/2007	Source: EPA
Date Data Arrived at EDR: 01/31/2007	Telephone: N/A
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 05/03/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 07/30/2007
	Data Release Frequency: Quarterly

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006	Source: EPA
Date Data Arrived at EDR: 11/01/2006	Telephone: N/A
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 05/03/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 07/30/2007
	Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/28/2006	Source: EPA
Date Data Arrived at EDR: 01/31/2007	Telephone: N/A
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 05/03/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 07/30/2007
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991	Source: EPA
Date Data Arrived at EDR: 02/02/1994	Telephone: 202-564-4267
Date Made Active in Reports: 03/30/1994	Last EDR Contact: 03/26/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 05/21/2007
	Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/27/2007	Source: EPA
Date Data Arrived at EDR: 03/21/2007	Telephone: 703-603-8960
Date Made Active in Reports: 04/27/2007	Last EDR Contact: 03/21/2007
Number of Days to Update: 37	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/20/2006	Source: EPA
Date Data Arrived at EDR: 01/29/2007	Telephone: 703-603-8960
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 29	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

CORRACTS: Corrective Action Report

CORRACTS identifies hazardous waste handlers with RCRA corrective action activity.

Date of Government Version: 03/14/2007	Source: EPA
Date Data Arrived at EDR: 03/20/2007	Telephone: 800-424-9346
Date Made Active in Reports: 04/27/2007	Last EDR Contact: 03/05/2007
Number of Days to Update: 38	Next Scheduled EDR Contact: 06/04/2007
	Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Date of Government Version: 06/13/2006	Source: EPA
Date Data Arrived at EDR: 06/28/2006	Telephone: (415) 495-8895
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 05/04/2007
Number of Days to Update: 56	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Quarterly

ERNS: Emergency Response Notification System

Emergency Response Notification System. ERNS records and stores information on reported releases of oil and hazardous substances.

Date of Government Version: 12/31/2006	Source: National Response Center, United States Coast Guard
Date Data Arrived at EDR: 01/24/2007	Telephone: 202-267-2180
Date Made Active in Reports: 03/12/2007	Last EDR Contact: 04/24/2007
Number of Days to Update: 47	Next Scheduled EDR Contact: 07/23/2007
	Data Release Frequency: Annually

HMIRS: Hazardous Materials Information Reporting System

Hazardous Materials Incident Report System. HMIRS contains hazardous material spill incidents reported to DOT.

Date of Government Version: 11/28/2006	Source: U.S. Department of Transportation
Date Data Arrived at EDR: 01/17/2007	Telephone: 202-366-4555
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/17/2007
Number of Days to Update: 41	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Annually

US ENG CONTROLS: Engineering Controls Sites List

A listing of sites with engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

Date of Government Version: 01/24/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 703-603-8905
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

US INST CONTROL: Sites with Institutional Controls

A listing of sites with institutional controls in place. Institutional controls include administrative measures, such as groundwater use restrictions, construction restrictions, property use restrictions, and post remediation care requirements intended to prevent exposure to contaminants remaining on site. Deed restrictions are generally required as part of the institutional controls.

Date of Government Version: 01/24/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 703-603-8905
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

DOD: Department of Defense Sites

This data set consists of federally owned or administered lands, administered by the Department of Defense, that have any area equal to or greater than 640 acres of the United States, Puerto Rico, and the U.S. Virgin Islands.

Date of Government Version: 12/31/2005	Source: USGS
Date Data Arrived at EDR: 11/10/2006	Telephone: 703-692-8801
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 05/11/2007
Number of Days to Update: 62	Next Scheduled EDR Contact: 08/06/2007
	Data Release Frequency: Semi-Annually

FUDS: Formerly Used Defense Sites

The listing includes locations of Formerly Used Defense Sites properties where the US Army Corps of Engineers is actively working or will take necessary cleanup actions.

Date of Government Version: 12/31/2005	Source: U.S. Army Corps of Engineers
Date Data Arrived at EDR: 09/20/2006	Telephone: 202-528-4285
Date Made Active in Reports: 11/22/2006	Last EDR Contact: 04/02/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Varies

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients--States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Date of Government Version: 01/29/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 202-566-2777
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 03/12/2007
Number of Days to Update: 63	Next Scheduled EDR Contact: 06/11/2007
	Data Release Frequency: Semi-Annually

CONSENT: Superfund (CERCLA) Consent Decrees

Major legal settlements that establish responsibility and standards for cleanup at NPL (Superfund) sites. Released periodically by United States District Courts after settlement by parties to litigation matters.

Date of Government Version: 08/23/2006	Source: Department of Justice, Consent Decree Library
Date Data Arrived at EDR: 03/06/2007	Telephone: Varies
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 04/23/2007
Number of Days to Update: 35	Next Scheduled EDR Contact: 07/23/2007
	Data Release Frequency: Varies

ROD: Records Of Decision

Record of Decision. ROD documents mandate a permanent remedy at an NPL (Superfund) site containing technical and health information to aid in the cleanup.

Date of Government Version: 03/27/2007	Source: EPA
Date Data Arrived at EDR: 03/27/2007	Telephone: 703-416-0223
Date Made Active in Reports: 04/27/2007	Last EDR Contact: 03/27/2007
Number of Days to Update: 31	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Annually

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

Date of Government Version: 12/31/2005	Source: Department of Energy
Date Data Arrived at EDR: 11/08/2006	Telephone: 505-845-0011
Date Made Active in Reports: 01/29/2007	Last EDR Contact: 03/20/2007
Number of Days to Update: 82	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Varies

ODI: Open Dump Inventory

An open dump is defined as a disposal facility that does not comply with one or more of the Part 257 or Part 258 Subtitle D Criteria.

Date of Government Version: 06/30/1985	Source: Environmental Protection Agency
Date Data Arrived at EDR: 08/09/2004	Telephone: 800-424-9346
Date Made Active in Reports: 09/17/2004	Last EDR Contact: 06/09/2004
Number of Days to Update: 39	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

TRIS: Toxic Chemical Release Inventory System

Toxic Release Inventory System. TRIS identifies facilities which release toxic chemicals to the air, water and land in reportable quantities under SARA Title III Section 313.

Date of Government Version: 12/31/2004	Source: EPA
Date Data Arrived at EDR: 06/22/2006	Telephone: 202-566-0250
Date Made Active in Reports: 08/23/2006	Last EDR Contact: 04/27/2007
Number of Days to Update: 62	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Annually

TSCA: Toxic Substances Control Act

Toxic Substances Control Act. TSCA identifies manufacturers and importers of chemical substances included on the TSCA Chemical Substance Inventory list. It includes data on the production volume of these substances by plant site.

Date of Government Version: 12/31/2002	Source: EPA
Date Data Arrived at EDR: 04/14/2006	Telephone: 202-260-5521
Date Made Active in Reports: 05/30/2006	Last EDR Contact: 04/16/2007
Number of Days to Update: 46	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Every 4 Years

FTTS: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act)

FTTS tracks administrative cases and pesticide enforcement actions and compliance activities related to FIFRA, TSCA and EPCRA (Emergency Planning and Community Right-to-Know Act). To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 02/26/2007	Source: EPA/Office of Prevention, Pesticides and Toxic Substances
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-566-1667
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/18/2007

FTTS INSP: FIFRA/ TSCA Tracking System - FIFRA (Federal Insecticide, Fungicide, & Rodenticide Act)/TSCA (Toxic Substances Control Act) A listing of FIFRA/TSCA Tracking System (FTTS) inspections and enforcements.

Date of Government Version: 02/26/2007	Source: EPA
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-566-1667
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2005	Source: EPA
Date Data Arrived at EDR: 03/13/2007	Telephone: 202-564-4203

RADINFO: Radiation Information Database

The Radiation Information Database (RADINFO) contains information about facilities that are regulated by U.S. Environmental Protection Agency (EPA) regulations for radiation and radioactivity.

Date of Government Version: 01/30/2007	Source: Environmental Protection Agency
Date Data Arrived at EDR: 01/31/2007	Telephone: 202-343-9775
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 05/03/2007
Number of Days to Update: 27	Next Scheduled EDR Contact: 07/30/2007
	Data Release Frequency: Quarterly

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

Date of Government Version: 12/01/2006	Source: Drug Enforcement Administration
Date Data Arrived at EDR: 01/08/2007	Telephone: 202-307-1000
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 05/11/2007
Number of Days to Update: 3	Next Scheduled EDR Contact: 06/25/2007
	Data Release Frequency: Quarterly

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 03/01/2007	Telephone: 202-564-2501
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 03/19/2007
Number of Days to Update: 40	Next Scheduled EDR Contact: 06/18/2007
	Data Release Frequency: No Update Planned

ICIS: Integrated Compliance Information System

The Integrated Compliance Information System (ICIS) supports the information needs of the national enforcement and compliance program as well as the unique needs of the National Pollutant Discharge Elimination System (NPDES) program.

Date of Government Version: 11/06/2006	Source: Environmental Protection Agency
Date Data Arrived at EDR: 02/02/2007	Telephone: 202-564-5088
Date Made Active in Reports: 04/04/2007	Last EDR Contact: 04/16/2007
Number of Days to Update: 61	Next Scheduled EDR Contact: 07/16/2007
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

LUCIS: Land Use Control Information System

LUCIS contains records of land use control information pertaining to the former Navy Base Realignment and Closure properties.

Date of Government Version: 12/09/2005	Source: Department of the Navy
Date Data Arrived at EDR: 12/11/2006	Telephone: 843-820-7326
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 03/26/2007
Number of Days to Update: 31	Next Scheduled EDR Contact: 06/11/2007
	Data Release Frequency: Varies

DOT OPS: Incident and Accident Data

Department of Transportation, Office of Pipeline Safety Incident and Accident data.

Date of Government Version: 02/14/2007	Source: Department of Transportation, Office of Pipeline Safety
Date Data Arrived at EDR: 02/28/2007	Telephone: 202-366-4595
Date Made Active in Reports: 04/10/2007	Last EDR Contact: 02/28/2007
Number of Days to Update: 41	Next Scheduled EDR Contact: 05/28/2007
	Data Release Frequency: Varies

PADS: PCB Activity Database System

PCB Activity Database. PADS Identifies generators, transporters, commercial storers and/or brokers and disposers of PCB's who are required to notify the EPA of such activities.

Date of Government Version: 10/17/2006	Source: EPA
Date Data Arrived at EDR: 11/29/2006	Telephone: 202-566-0500
Date Made Active in Reports: 01/11/2007	Last EDR Contact: 05/11/2007
Number of Days to Update: 43	Next Scheduled EDR Contact: 08/06/2007
	Data Release Frequency: Annually

MLTS: Material Licensing Tracking System

MLTS is maintained by the Nuclear Regulatory Commission and contains a list of approximately 8,100 sites which possess or use radioactive materials and which are subject to NRC licensing requirements. To maintain currency, EDR contacts the Agency on a quarterly basis.

Date of Government Version: 01/11/2007	Source: Nuclear Regulatory Commission
Date Data Arrived at EDR: 01/26/2007	Telephone: 301-415-7169
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 32	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Quarterly

MINES: Mines Master Index File

Contains all mine identification numbers issued for mines active or opened since 1971. The data also includes violation information.

Date of Government Version: 11/15/2006	Source: Department of Labor, Mine Safety and Health Administration
Date Data Arrived at EDR: 12/28/2006	Telephone: 303-231-5959
Date Made Active in Reports: 01/29/2007	Last EDR Contact: 03/28/2007
Number of Days to Update: 32	Next Scheduled EDR Contact: 06/25/2007
	Data Release Frequency: Semi-Annually

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

Date of Government Version: 01/18/2007	Source: EPA
Date Data Arrived at EDR: 01/23/2007	Telephone: (415) 947-8000
Date Made Active in Reports: 02/27/2007	Last EDR Contact: 04/02/2007
Number of Days to Update: 35	Next Scheduled EDR Contact: 07/02/2007
	Data Release Frequency: Quarterly

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995	Source: EPA
Date Data Arrived at EDR: 07/03/1995	Telephone: 202-564-4104
Date Made Active in Reports: 08/07/1995	Last EDR Contact: 03/05/2007
Number of Days to Update: 35	Next Scheduled EDR Contact: 06/04/2007
	Data Release Frequency: No Update Planned

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

Date of Government Version: 12/31/2005	Source: EPA/NTIS
Date Data Arrived at EDR: 03/06/2007	Telephone: 800-424-9346
Date Made Active in Reports: 04/13/2007	Last EDR Contact: 03/06/2007
Number of Days to Update: 38	Next Scheduled EDR Contact: 06/11/2007
	Data Release Frequency: Biennially

STATE AND LOCAL RECORDS

HIST CAL-SITES: Calsites Database

The Calsites database contains potential or confirmed hazardous substance release properties. In 1996, California EPA reevaluated and significantly reduced the number of sites in the Calsites database. No longer updated by the state agency. It has been replaced by ENVIROSTOR.

Date of Government Version: 08/08/2005	Source: Department of Toxic Substance Control
Date Data Arrived at EDR: 08/03/2006	Telephone: 916-323-3400
Date Made Active in Reports: 08/24/2006	Last EDR Contact: 02/26/2007
Number of Days to Update: 21	Next Scheduled EDR Contact: 05/28/2007
	Data Release Frequency: No Update Planned

CA BOND EXP. PLAN: Bond Expenditure Plan

Department of Health Services developed a site-specific expenditure plan as the basis for an appropriation of Hazardous Substance Cleanup Bond Act funds. It is not updated.

Date of Government Version: 01/01/1989	Source: Department of Health Services
Date Data Arrived at EDR: 07/27/1994	Telephone: 916-255-2118
Date Made Active in Reports: 08/02/1994	Last EDR Contact: 05/31/1994
Number of Days to Update: 6	Next Scheduled EDR Contact: N/A
	Data Release Frequency: No Update Planned

SCH: School Property Evaluation Program

This category contains proposed and existing school sites that are being evaluated by DTSC for possible hazardous materials contamination. In some cases, these properties may be listed in the CalSites category depending on the level of threat to public health and safety or the environment they pose.

Date of Government Version: 02/27/2007	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 02/28/2007	Telephone: 916-323-3400
Date Made Active in Reports: 04/06/2007	Last EDR Contact: 02/28/2007
Number of Days to Update: 37	Next Scheduled EDR Contact: 05/28/2007
	Data Release Frequency: Quarterly

TOXIC PITS: Toxic Pits Cleanup Act Sites

Toxic PITS Cleanup Act Sites. TOXIC PITS identifies sites suspected of containing hazardous substances where cleanup has not yet been completed.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Date of Government Version: 07/01/1995

	Data Release Frequency: No Update Planned

DEED: Deed Restriction Listing

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Site Mitigation and Brownfields Reuse Program Facility Sites with Deed Restrictions & Hazardous Waste Management Program Facility Sites with Deed / Land Use Restriction. The DTSC Site Mitigation and Brownfields Reuse Program (SMBRP) list includes sites cleaned up under the program's oversight and generally does not include current or former hazardous waste facilities that required a hazardous waste facility permit. The list represents deed restrictions that are active. Some sites have multiple deed restrictions. The DTSC Hazardous Waste Management Program (HWMP) has developed a list of current or former hazardous waste facilities that have a recorded land use restriction at the local county recorder's office. The land use restrictions on this list were required by the DTSC HWMP as a result of the presence of hazardous substances that remain on site after the facility (or part of the facility) has been closed or cleaned up. The types of land use restriction include deed notice, deed restriction, or a land use restriction that binds current and future owners.

Date of Government Version: 04/03/2007	Source: Department of Toxic Substances Control
Date Data Arrived at EDR: 04/05/2007	Telephone: 916-323-3400

HAZNET: Facility and Manifest Data

Facility and Manifest Data. The data is extracted from the copies of hazardous waste manifests received each year by the DTSC. The annual volume of manifests is typically 700,000 - 1,000,000 annually, representing approximately 350,000 - 500,000 shipments. Data are from the manifests submitted without correction, and therefore many contain some invalid values for data elements such as generator ID, TSD ID, waste category, and disposal method.

Date of Government Version: 12/31/2005	Source: California Environmental Protection Agency

ENVIROSTOR: EnviroStor Database

The Department of Toxic Substances Control's (DTSC's) Site Mitigation and Brownfields Reuse Program's (SMBRP's) EnviroStor database identifies sites that have known contamination or sites for which there may be reasons to investigate further. The database includes the following site types: Federal Superfund sites (National Priorities List (NPL)); State Response, including Military Facilities and State Superfund; Voluntary Cleanup; and School sites. EnviroStor provides similar information to the information that was available in CalSites, and provides additional site information, including, but not limited to, identification of formerly-contaminated properties that have been released for reuse, properties where environmental deed restrictions have been recorded to prevent inappropriate land uses, and risk characterization information that is used to assess potential impacts to public health and the environment at contaminated sites.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data

Source: PennWell Corporation

Telephone: (800) 823-6277

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:

Source: American Hospital Association, Inc.

Telephone: 312-280-5991

The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing

Source: Centers for Medicare & Medicaid Services

Telephone: 410-786-3000

A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes

Source: National Institutes of Health

Telephone: 301-594-6248

Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools

Source: National Center for Education Statistics

Telephone: 202-502-7300

The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Licensed Facilities

Source: Department of Social Services

Telephone: 916-657-4041

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

Most Recent Revision:	1999

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

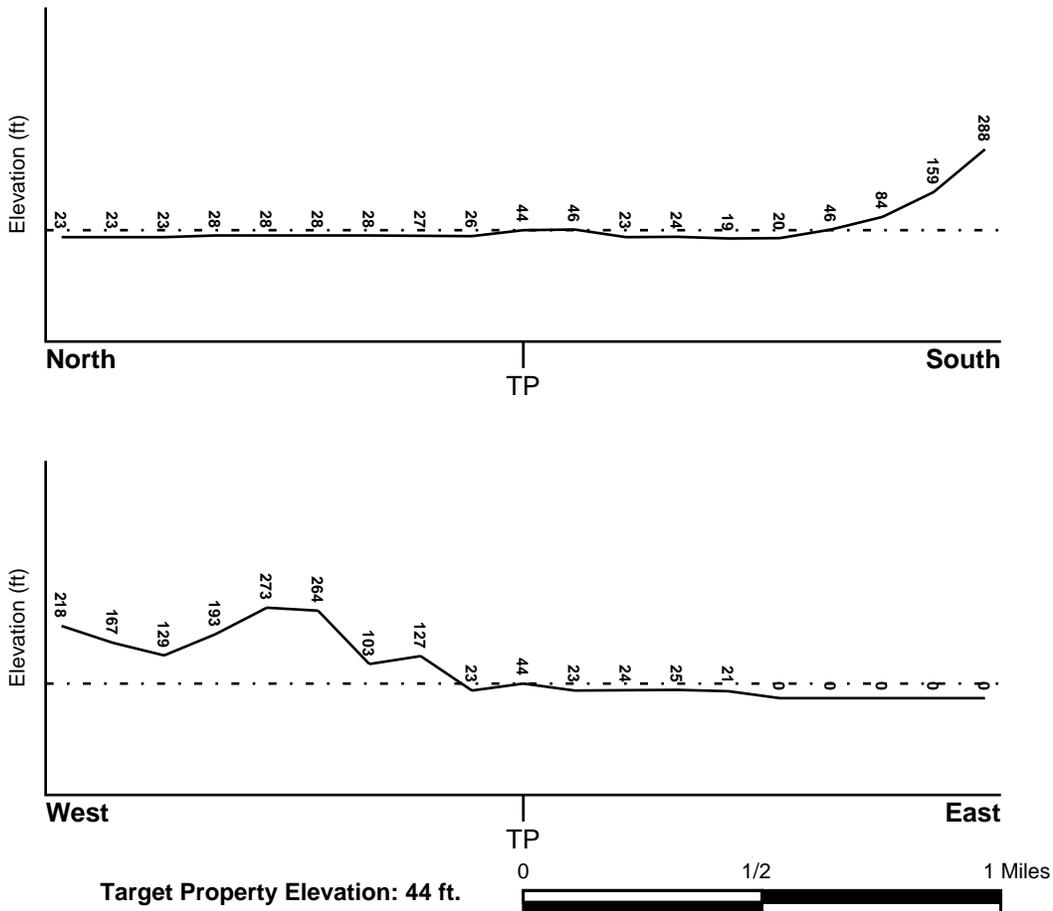

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General East

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

NATIONAL WETLAND INVENTORY

<u>NWI Quad at Target Property</u> SAN FRANCISCO SOUTH	NWI Electronic <u>Data Coverage</u> YES - refer to the Overview Map and Detail Map
---	--

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

A4	1/2 - 1 Mile NNW	E

For additional site information, refer to Physical Setting Source Map Findings.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Not reported

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 2

Soil Component Name: ORTHENTS

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	60 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 3

Soil Component Name: CANDLESTICK

Soil Surface Texture: fine sandy loam

Hydrologic Group: Class C - Slow infiltration rates. Soils with layers impeding downward movement of water, or soils with moderately fine or fine textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: MODERATE

Depth to Bedrock Min: > 20 inches

Depth to Bedrock Max: > 40 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	2 inches	fine sandy loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.60
2	2 inches	20 inches	loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Silty Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), silt.	Max: 2.00 Min: 0.60	Max: 6.50 Min: 5.60
3	20 inches	24 inches	sandy clay loam	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay	Max: 0.60 Min: 0.20	Max: 7.30 Min: 6.10

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
4	24 inches	28 inches	unweathered bedrock	Silt-Clay Materials (more than 35 pct. passing No. 200), Clayey Soils.	FINE-GRAINED SOILS, Silts and Clays (liquid limit less than 50%), Lean Clay Soils.	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

Soil Map ID: 4

Soil Component Name: URBAN LAND

Soil Surface Texture: variable

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Bedrock Max: > 0 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)
	Upper	Lower		AASHTO Group	Unified Soil		
1	0 inches	6 inches	variable	Not reported	Not reported	Max: 0.00 Min: 0.00	Max: 0.00 Min: 0.00

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)

Source: United States Geologic Survey

EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

HYDROLOGIC INFORMATION

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 and 2005 from the U.S. Fish and Wildlife Service.

HYDROGEOLOGIC INFORMATION

AQUIFLOW^R Information System

Source: EDR proprietary database of groundwater flow information

EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit

Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

PWS ENF: Public Water Systems Violation and Enforcement Data

Source: EPA/Office of Drinking Water

Telephone: 202-564-3750

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

EDR PUR-IQ[®] Report

"the intelligent way to conduct historical research"

for
KMEP Brisbane Terminal
950 Tunnel Avenue
Brisbane, CA 94005
Lat./Long. 37.69260 / 122.40020
EDR Inquiry # 1925533.1s

The EDR PUR-IQ report facilitates historical research planning required to complete the Phase I ESA process. The report identifies the *likelihood* of prior use coverage by searching proprietary EDR-Prior Use Reports[®] comprising nationwide information on: city directories, fire insurance maps, aerial photographs, historical topographic maps, flood maps and National Wetland Inventory maps.

Potential for EDR Historical (Prior Use) Coverage - Coverage in the following historical information sources may be used as a guide to develop your historical research strategy:

- 1. City Directory:** Coverage may exist for portions of San Mateo County, CA.
- 2. Fire Insurance Map:** When you order online any EDR Package or the EDR Radius Map with EDR Sanborn Map Search/Print, you receive site specific Sanborn Map coverage information at no charge.
- 3. Aerial Photograph:** Aerial photography coverage may exist for portions of San Mateo County. Please contact your EDR Account Executive for information about USGS photos available through EDR.
- 4. Topographic Map:** The USGS 7.5 min. quad topo sheet(s) associated with this site:
Historical: Coverage exists for San Mateo County
Current: Target Property: TP | 1999 | 37122-F4 San Francisco South, CA
- 5. Flood Insurance Rate Maps (FEMA) :** Coverage is available for San Mateo county.

EDR's network of professional researchers, located throughout the United States, accesses the most extensive national collections of city directory, fire insurance maps, aerial photographs, flood maps and historical topographic map resources available for Brisbane, CA. These collections may be located in multiple libraries throughout the country. To ensure maximum coverage, EDR will often assign researchers at these multiple locations on your behalf. Please call or fax your EDR representative to authorize a search.
