Subject: Comment Letter - CGP Reopener

Modifications to the CGP do not adequately define the LRP for projects that are done within the public Right-of-Way, but are associated with a private development. It appears that the LRP can only be responsible for projects that are on property that they own or control. However, the majority of private development projects are conditioned to make improvements to public facilities that are owned by a City or other Agency. In some cases the improvements are remote and disconnected from the private development completely. Can the private developer be the LRP for these projects since they do not control the property? If a City is conditioning a project to make public improvements within their right-of-way, shouldn't they be the LRP?
