Subject: A bad idea all the way around

State water board,

Increasing unimpaired flows on the Stanislaus River is a bad idea. It is terrible for the environment and our water supply, especially during the drought years. People make money on the these rivers. Less water is less money for the economy. Less water is less food. Less water more dead fish and wildlife. It's absurd you would even consider this. The people whom make these decisions are people that it does not directly effect, unless we are talking pocket books.

Respectfully,

Denver Lyons
Arnold
