**Subject:** Klamath River Dams

I am writing in regards to the question as to whether pacificorp should have its license to operate dams on the Klamath River renewed.

I stand united with my entire local community and local tribes in the conviction that the license should NOT be renewed, and all Klamath dams need to be removed, to restore safe water quality to the Klamath River and promote the health of the fisheries that my local community depends on.

It is unacceptable that such a major water source has become so dangerous to the health of the public and local wildlife, and these dam removal projects can NOT be delayed any longer. The water quality has been studied for decades and scientific consensus has determined that the dams are the cause of poor water quality for several years now. There is no mitigation or alternative to dam removal that will improve this situation.

I urge you to move forward with dam removal as quickly as possible to protect the health and livelihoods of the People of Northern California.

Respectfully yours,  
Sierra Rose Loucks
