**Subject:** Do what the scientists say

Water board,

Please do not increase unimpaired flows on the Stanislaus River. Look, if all of these scientists and researchers are PROVING that these unimpaired flows are harmful, THEN WHY DO THEM? Honestly people, we've existed on this planet for 6 million years, and it has provided for necessities such as food, shelter, resources, among countless other things. 6 million years, and we can't even give thought to the needs of mother nature. It's like biting the hand that fed you. Economical, agricultural, and environmental. If those three words don't scream California then I don't know what will. Those three words describe industries that will be NEGATIVELY impacted with these flows. A whole community begs you to please reconsider this action for its repercussions could and will harm California.

Respectfully,

Ty  
Campbell
