Subject: Oppose the Delta Tunnels/"California Water Fix" (Alternative 4A)

Oct 22, 2015

Bay Delta Conservation Plan
CA

Dear Conservation Plan,

The proposed tunnels would devastate the Delta, while doing very little to mitigate the drought and provide long term water supplies. The solution to the drought is not more infrastructure, but rather more wisely using the resources we have through conservation, reduced and more efficient agriculture, and water recycling.

I am writing to express my strong opposition to the Delta Tunnels Plan.

The deceptively named "California Water Fix" does not address the multitude of adverse environmental, public health, and economic impacts the proposed Delta tunnels project would cause. Further, the plan ignores alternatives that would save California tax- and ratepayers billions of dollars, while investing in jobs and local water sources that build sustainability, instead of severely damaging the Delta and Bay ecosystems.

I urge you not to permit the Delta Tunnels/California Water Fix (Alternative 4A) project to move forward.

Sincerely,

Mr. Alex Neal

Subject: I Oppose This Project
Attachments: Letter-for-CA-Water-Fix-Delta-Tunnels-Comments.docx

My opposition to this project is stated in the attachment.

Larnice Swann Eklund

Subject: Oppose the Delta Tunnels/California Water Fix (Alternative 4A)

I am writing to express my strong opposition to the Delta Tunnels plan.

The Delta Reform Act of 2009, in which the California State Legislature committed to the "coequal goals" of providing a more reliable water supply for California AND protecting and restoring the cultural, recreational, natural resource, and agricultural values of the Delta, cannot be upheld if the Delta Tunnels come to pass.

The California Water Fix does not meet the restoration goals of the Delta Reform Act; it is simply a plan to export more water out of the San Francisco Bay-Delta estuary. The Delta Tunnels will also fail to provide more reliable water because the Delta watershed is already oversubscribed by five times in normal water years.

My objections to the tunnels are :

1. The destruction of irreplaceable agricultural, recreational, commercial and residential lands and resources..
2. Once done, there is no way to undo, or mitigate the damage this project will do.
3. It is not a solution to the water shortage when there is no water!
4. Tourism/recreation are vital to the economic strength of Northern California, the Proposed Delta Tunnels project will severely impact that strong revenue source for our region.
5. Alternative solutions to the problem of scarce water resources for all of California have not been given equal weight and consideration.
6. The process of developing this plan has not been transparent to all concerned. Equal benefit to all citizens is not evident.

The Delta Tunnels/California Water Fix should be stopped.

Very truly yours,

Larnice Swann Eklund

Subject: Public Comment Opposing BDCP

Hello,
I own and operate a small--54.6 acre--farm in Linden. I am opposed to the BDCP Delta Tunnels for all of the reasons everyone in the Sacramento-San Joaquin Delta Region is. This plan will devastate our entire environment and economy, and will not provide an extra drop of water to metropolitan Southern California. The real motive for this bad plan is to ship our water to irrigate large corporate-owned almond orchards. These orchards should never have been planted in an area that does not have the water to sustain thousands and thousands of acres of nut trees.

There are 55 watersheds in the state of California. The Regional Water Quality Control Board wants each of them to come up with a plan to make their water more sustainable. The Board also realizes that crops have changed since the last drought in 1977. More acreage has been planted in crops that take more water such as nut trees.

We are in a four-year drought, and with climate change, we are facing a scary future. We need to protect our water for our children and grandchildren and the following generations. We are not in a position to be diverting our most precious resource, our water.

There is nothing regionally sustainable about the BDCP Tunnels Plan. Restore the Delta has much better solutions for a water program:

Our tax and ratepayer dollars would be much better spent on:

- More aggressive water efficiency program statewide that would apply to both urban and agricultural users.
- Funding water recycling and groundwater recharging projects statewide that would be billions of dollars less expensive for rate payers than constructing a new version of the Peripheral Canal or major new surface storage dams. Meanwhile, these projects move communities towards water sustainability.
- Retiring thousands of acres of impaired and pollution generating farmlands in the southern San Joaquin Valley and using those lands for more sustainable and profitable uses, such as solar energy generation.
- Improving Delta levees in order to address potential earthquake, flooding, and future sea level rise concerns at a cost between \$2 to \$4 billion and is orders of-magnitude less expensive than major conveyance projects that are currently being contemplated.
- Increasing freshwater flows through the Delta to reduce pollutants so ecosystems and wildlife can be restored.
- Installing fish screens at the south Delta pumps to reduce the current salvage of marine life.

In addition to the above solutions, I would add that people need to start rethinking their ideas about what to grow. The bottom financial line is what all growers look at, but that bottom line is not necessarily what is best for the area. The Tunnels Fix merely provides water for greedy corporations to plant a monoculture of whatever is currently bringing in the biggest income, and leaves the rest of the population out of the equation.

In Summary

The Delta has problems that need to be addressed, but the CA Water Fix tunnels are a 20th century idea that won't fix them. It won't produce more water, more reliable supplies, or improved conditions for the environment in the Delta.

The new EIR/EIS has not adequately addressed my above stated concerns. That is why I oppose the Delta Tunnels/California Water Fix (Alternative 4A).

For a group of people who claim to be environmentalists, how in the world do Gov Brown and his cronies sleep at night knowing they will destroy the Delta region by draining the fresh water for the tunnel project? We already have an issue with salt-water creeping further and further inland; wells in the valley are showing signs of salt water. By draining the fresh water from our region to sell to Southern Californians and their swimming pools, this project will destroy thousands of acres of wetlands.

Stop the Tunnels!

PLEASE PRINT

NAME: Greg Rau DATE : 9-22-15
ORGANIZATION: E-MAIL ghrau@sbcglobal.net
ADDRESS: 18628 Sandy Road
CITY: Castro Valley STATE: CA ZIP: 94546

I read the Bay Delta Conservation Plan/California Water Fix Partially Recirculated Draft Environmental Impact Report/Supplemental Draft Environment Impact Statement.

I strongly oppose the construction of the water tunnels, which will divert water from the Delta to the Central Valley and to Southern California. The farmers in the Central Valley have continued to be extremely irresponsible in the way they use water. They are sucking the aquifer dry and there is has been no stringent legislation to ration water and to distribute it in a limited and equitable fashion. The farmers are continuing to uproot crops that use limited water and replacing them with almond and pistachio trees that require huge amounts of water. Whenever I've driven through the Central Valley, I see almond orchards that are flooded.

The citizens of Northern California have done an excellent job in heeding the governor's directive to conserve water. In our own household, our water use has decreased by 46.6% from our use in 2013. In Northern California we have exceeded the call for reducing water use by 25%. Are the citizens really scrimping and saving so the Central Valley farmers can squander it?

I am extremely dismayed that this project has had no involvement from the legislature. Shouldn't such a massive water project be decided by the people of California or by the legislature? Instead, it has all been planned behind closed doors by certain interest groups that have clearly ignored the wishes of the public. The public already spoke on the issue two decades ago when we voted against the Peripheral Canal.

The harm to the San Francisco Bay and to several fish species has been clearly delineated by many environmental organizations and by the federal government. I respectfully urge Governor Brown to rescind this harmful project.

Sincerely,
Greg Rau

Oh my god, some people did a pole of 1,500 people in California which has a population of 38,000,000 and came up with an answer to what was needed to be done regarding the tunnels. Who in heaven's name would believe what good that would do with coming up with an accurate and true feeling of the people living in California?

BPCPC

No DELTA TUNNELS

- I oppose Governor Brown's giant water tunnels, which will drain the life out of the Delta
- For years Governor Brown has promised that the BDCP (aka Delta Giant Tunnels) would be a "habitat conservation plan," that it would meet the "gold standard" for protection of the Delta by restoring tens of thousands of acres of marine habitat and restoring natural Delta flows. Now, suddenly, all that has been abandoned and the name has been changed to "water fix," with no habitat restoration or protections for the Delta—just the giant Delta-killing water tunnels.
- You can't change the rules at the last minute and shove these giant tunnels down our throats whether we like it or not. The governor must begin the process all over again and consider real solutions to California's water woes and the Delta's ecological decline.
- Solutions must include conservation, desalinization, water storage facilities, and reduced reliance on the Delta as a source of water supply. There is no excuse for turning a blind eye to these alternatives and instead adopting the Governor's multi-billion dollar water grab.
- These Mega-Tunnels can drain 9,000 cubic feet per second from the Sacramento River. That is over half the flow of the river in the summer months of a non-drought year.
- If any new tunnels or canal were ever to be built, the capacity should be absolutely no more than 3,000 cubic feet per second.
- This process has been dishonest from the beginning. It has always been a huge water grab dressed up as a "save the Delta" plan. The "Fix" was in from the very beginning.
- The Governor told critics of his tunnels to "shut up" as he spoke to his buddies the water contractors who profit from the tunnels. How dare you address the public that way. This shows there has never been any willingness to consider real alternatives to the tunnels, like storage, conservation, desalinization, and restoring Delta flows.
- Currently, without the tunnels, up to 65% of the water that flows into the Delta may be exported during large periods of the year. That leaves only 35% of natural flows in the Delta. We don't need tunnels to export more water.

- Currently, without the tunnels, up to 65% of the water that flows into the Delta may be exported during large periods of the year. That leaves only 35% of natural flows in the Delta. We don't need tunnels to export more water.

- The best Delta scientists recommend that 75% of the natural flow of water into the Delta should be maintained, leaving up to 25% available for export and diversion. That makes sense. The process must start over with the aim of meeting the goal of 75% of natural flow. It can be done.
- Governor Brown, the only possible alternative that you have put on the table is the no project alternative. At this point it is the only honest choice. Roll up your sleeves, get to work on real solutions, and lay this dishonest water tunnel plan to rest.
- We have been complaining for years that the tunnels can drain too much water from the Delta (as the pumping has been for years). The plan points to "adaptive management) but the Independent Science Board recently slammed the California Water Fix Adaptive Management Plan. The state keeps saying, "Trust us. We'll manage the tunnels appropriately and will not take more water than we should." Yet, for ten or more years the state has extracted more water than the system could support, causing the salmon and other fish populations to crash.
- During the drought, the state moved way to much water from the North to the South and now the reservoirs in the North are at their lowest points ever, threatening community drinking water and upstream salmon hatcheries while L.A.'s Pyramid Reservoir (filled with Delta water) is still full.
- The plan fails to recognize the importance of the Delta as a recreational area. The Delta should be made a National Recreation Site. It is unique and special. Yet boating is nearly completely ignored. Studies do not effectively analyze the effect on boating communities, nor on boating recreational areas.
- The effect of the plan on the economies of Delta communities is understated.
- If you are so sure about your recent California WaterFix poll, why don't you put it on the ballot and let the voters decide?

Sincerely -
 Catherine Marples

Bay Delta Conservation Plan
California Water Fix Comments
P.O.Box 1919
Sacramento, CA 95812

Subject: Support Alternative 4A of California Water Fix

Dear BDCP/Water Fix Comments:

On behalf of the California Asian Pacific Chamber of Commerce (CalAsian Chamber), we are writing to express our strong support for the California Water Fix (Alternative 4A). The California Water Fix represents a thoroughly vetted, viable plan to fix California's aging water distribution system that supplies water to 25 million Californians and 3 million acres of farmland, while also protecting the natural environment in the Delta.

The re-circulated documents are the culmination of nearly a decade of extensive expert review, planning and scientific and environmental analysis by the state's leading water experts, engineers and conservationists, and unprecedented public comment and participation. The California Water Fix (Alternative 4A) reflects significant changes and improvements to the plan to address comments from the state and federal governments and other stakeholders.

We urge the Department of Water Resources and the Administration to move forward to bring the California Water Fix to fruition.

Our state's system of aging dirt levees, aqueducts and pipes that brings water from the Sierra Nevada Mountains to 2/3 of the State is outdated and at risk of collapse in the event of a major earthquake or flood. Problems with this aging system have already resulted in significant water supply cutbacks and shortages for people, farms and businesses, as well as damage to fish, wildlife and the environment.

The California Water Fix will improve our water delivery infrastructure to allow us to responsibly capture and move water during wet years, so that we have a greater water supply during future droughts. The current drought has demonstrated that California's aging water infrastructure is not equipped to handle the regular boom and bust cycles of our climate. With above average rains predicted in the near future, we must move forward with improved infrastructure to capture the water when it's available.

The California Water Fix (Alternative 4A) will:

- Protect water supplies by delivering them through a modern water pipeline rather than relying solely on today's deteriorating dirt levee system.
- Build a water delivery system that is able to protect our water supplies from earthquakes, floods and natural disasters.
- Improve the ability to move water to storage facilities throughout the state so we can capture it for use in dry years.
- Restore more natural water flows above ground in rivers and streams in order to reduce impacts on endangered fish and other wildlife.
- Protect and restore wildlife and the environment of the Sacramento-San Joaquin Delta.

Getting to this point has been a long and thorough process. Now is the time to act and move forward to protect California's water security.

For these reasons, we support the California Water Fix (Alternative 4A).

Sincerely,

- Build a water delivery system that is able to protect our water supplies from earthquakes, floods and natural disasters.
- Improve the ability to move water to storage facilities throughout the state so we can capture it for use in dry years.
- Restore more natural water flows above ground in rivers and streams in order to reduce impacts on endangered fish and other wildlife.
- Protect and restore wildlife and the environment of the Sacramento-San Joaquin Delta.

Getting to this point has been a long and thorough process. Now is the time to act and move forward to protect California's water security.

For these reasons, we support the California Water Fix (Alternative 4A).

Sincerely,

Mark Thomas, Business Manager
Boilermakers Local 92
