

Salton Sea Solution - zero cost to County & State.

Install a desalination plant near San Diego. Pump the fresh water over the mountain - hydro generators could be installed along the route this could help meet A.B.32 & help pay for project. Israel's Ashkelon seawater reverse osmosis plant produces 330,000 cubic meters per day.

We have a large pumping station that was built in the late 1960's at Medler, CA to pump the canal water over the mountains into Lake Pyrmid.

When the Salton Sea is filled with fresh water Imperial County would go from being one of the poorest to one of the richest Counties in CA. A very large tax base & this could help pay for project.

The Bond Broker's would show up in groves. When the Salton Sea shrinks & dies the P.M. dust starts blowing it will be the biggest public health disaster in CA history.

A direct violation of A.B.32. By cutting the Sea in half it will solve no problems. Look at Owen Valley, it cost billions & still costing.

The Bay Delta Conservation plan - Governor Jerry Brown is proposing a 35 mile long pair of tunnels to transport water from the Delta to Southern CA at a cost of upwards of 55 billion. Producing no water and is the worst threat to the Sacramento Delta in history. We need to send our Politicians to Sacramento to convey this message.
