Subject: We need balanced water management

Water board,

I am opposed to increasing unimpaired flows on the Stanislaus River because of the economic impact in Stanislaus County. It also would increase the likelihood that farmers would be forced to pump more ground water and people like me would be forced to spend thousands of dollars to drill deeper for residential use water.

It is time we manage our water resource in a way that is fair to everyone and strikes a balance between water supply and the environment. Flushing our river water down the drain to keep certain species thriving with no concern for humankind is foolish.

Thank you.
