2	PROCEEDINGS
3	000
4	CO-HEARING OFFICER DODUC: (Banging gavel.)
5	Good morning, everyone. It is 9 o'clock.
6	Welcome back to the California WaterFix
7	Petition hearing.
8	I am Tam Doduc. To my right is Board Chair
9	Felicia Marcus. To the Chair's right will be Board
10	member Dee Dee D'Adamo, and to the far right is Diane
11	Riddle. To my left are Dana Heinrich and Kyle
12	Ochenduszko. We are also being assisted by other staff
13	here today.
14	Our usual quick announcements: Please take a
15	moment and identify the exits closest to you. If an
16	alarm goes off, we are evacuating down the stairs or into
17	a protected vestibule. For those exiting the building,
18	we will gather in the park.
19	Second announcement: The meeting is being
20	Webcasted and recorded, so please provide your comments
21	into the microphone and please begin by stating your name
22	and affiliation.

California Reporting, LLC - (510) 224-4476 www.CaliforniaReporting.com

joining us -- and a transcript will be made available

after Part IA. If you need to have it sooner, please

24

25

A court reporter is here -- thank you again for

- 1 work with the court reporter.
- 2 Finally, please take a moment. You know how
- 3 annoyed I get when these things go off. Please put your
- 4 noise-making devices on silent, vibrate, sleep mode,
- 5 whatever that does not make a noise.
- 6 Please check.
- 7 THE REPORTER: Mine is off.
- 8 CO-HEARING OFFICER DODUC: Thank you.
- 9 (Laughter)
- 10 CO-HEARING OFFICER DODUC: With that, unless
- 11 there's any other procedural matters . . .
- 12 I'm looking around. No, I'm not seeing any.
- We will resume with cross-examination by
- 14 Group 7, Mr. Hitchings.
- 15 MR. HITCHINGS: Good morning, Board Members,
- 16 Board staff and witness panel. Thank you for being here
- for answering questions this morning.
- 18 (Glenn-Colusa Irrigation District's
- 19 Exhibit 1 marked for
- 20 identification)
- 21 MR. HITCHINGS: I do want to start with some
- 22 questions regarding -- that are going to pertain to GCID
- 23 Exhibit 1, and I believe I provided paper copies to the
- 24 prior panel as well as the Board, and I have copies for
- 25 at least two of the main witnesses.

- 1 CO-HEARING OFFICER DODUC: Okay.
- 2 Mr. Hitchings, just for my purposes, how much time do you
- 3 think you'll need?
- 4 MR. HITCHINGS: Yes, Hearing Chair. I think
- 5 probably 20 minutes, 20 to 30 minutes, and I'll try to
- 6 make it shorter than that if I can.
- 7 CO-HEARING OFFICER DODUC: All right. Thank
- 8 you.
- 9 MR. HITCHINGS: Thank you.
- 10 (Documents distributed.)
- 11 ERIK REYES, TARA SMITH, JAMIE ANDERSON.
- 12 GWEN BUCHHOLZ, MICHAEL BRYAN, and KRISTIN WHITE,
- 13 called as witnesses for the Petitioners, having been
- 14 previously duly sworn, were examined and testified
- 15 further as follows:
- 16 CROSS-EXAMINATION BY
- 17 MR. HITCHINGS: So I'd like to direct most of
- 18 my questions to Mr. Munévar.
- 19 I just handed to you Exhibit 1 and that's the
- 20 Coordinated Operations Agreement. There was some
- 21 discussion about that yesterday.
- 22 Mr. Munévar, I -- I agree -- I -- I recall
- 23 that yesterday you indicated that you're generally
- 24 familiar with the Coordination -- Coordinated Operations
- 25 Agreement; otherwise, referred to as the COA; is that

- 1 correct?
- 2 WITNESS MUNÉVAR: That is correct.
- 3 MR. HITCHINGS: And generally with its
- 4 implementation; is that correct?
- 5 WITNESS MUNÉVAR: With its implementation with
- 6 respect to modeling, yes.
- 7 MR. HITCHINGS: Okay. If I could refer you to
- 8 Article 6 of the COA agreement, and let's pull it up on
- 9 the screen. It starts on Page 8 of that agreement, and
- 10 it's entitled Coordination of Operations.
- 11 (Document displayed on screen.)
- MR. HITCHINGS: And in particular -- Do you
- 13 have that in front of you there?
- 14 WITNESS MUNÉVAR: I do.
- 15 MR. HITCHINGS: In particular, Article 6(c) on
- 16 Pages 9 through 10 addresses the CVP and State Water
- 17 Projects sharing responsibility to meet Sacramento Valley
- in-basin use with storage withdrawals during balanced
- 19 water conditions; is that correct?
- 20 WITNESS MUNÉVAR: Correct.
- MR. HITCHINGS: And -- And under this
- 22 provision, the responsibility for storage withdrawals is
- assigned 75 percent to the CVP and 25 percent to the SWP;
- is that correct?
- 25 WITNESS MUNÉVAR: That's correct.

- 1 MR. HITCHINGS: And I recall you had provided
- 2 some testimony along the lines of your familiarity with
- 3 that -- that sharing approach; is that right?
- 4 WITNESS MUNÉVAR: Yes.
- 5 MR. HITCHINGS: And then under Article 6(d), on
- 6 Pages 10 and 11, that addresses the CVP and State Water
- 7 Project's sharing of responsibility during balanced water
- 8 conditions when unstored water is available for export;
- 9 is that correct?
- 10 WITNESS MUNÉVAR: Correct.
- 11 MR. HITCHINGS: And under that provision, the
- 12 sharing of available supply is assigned 55 percent to the
- 13 CVP and 45 percent to the SWP; is that correct?
- 14 WITNESS MUNÉVAR: That's correct.
- 15 MR. HITCHINGS: Okay. So, in -- in performing
- 16 the modeling for the Project, did DWR or Reclamation
- 17 provide any input to the Modelers regarding the COA in
- order to assure that the modeling for the Project
- 19 accurately reflected both Reclamation's and DWR's sharing
- 20 obligations under the COA?
- 21 WITNESS MUNÉVAR: Both DWR and Reclamation
- 22 Modelers were part of the model development and reviewed
- 23 the model. I won't speak for them in terms of their
- 24 specific reviews.
- 25 MR. HITCHINGS: Yeah. The question was: Did

```
1 they put -- Did they provide input as to how the Modelers
```

- 2 were to treat COA and the sharing of responsibilities
- 3 under COA in the modeling assumptions?
- 4 WITNESS WHITE: Are you specifically asking
- 5 whether the Operations staff provided input or whether
- 6 Reclamation Modelers provided input?
- 7 MR. HITCHINGS: Let's say anyone from DWR or
- 8 Reclamation. Did they provide that type of input with
- 9 regard to assumptions that should be made as to the
- 10 sharing of responsibility under COA with the Project in
- 11 place?
- 12 WITNESS MUNÉVAR: I don't recall specific
- assumptions that would be different than we assumed in
- 14 the No-Action.
- 15 MR. HITCHINGS: Did you make any assumptions
- 16 with regard to the sharing of responsibilities under COA
- in the No-Action Alternative?
- 18 WITNESS MUNÉVAR: Per -- Per the COA, for
- 19 long-standing description of the modeling for the past
- decade or so.
- MR. HITCHINGS: And how did you provide --
- 22 What -- What were those assumptions regarding the sharing
- of responsibility for the modeling inputs?
- 24 WITNESS MUNÉVAR: They're per the -- per the
- 25 COA, percentages that were just described in this

```
1 exhibit, in COA, the 75-25 under -- under balanced
```

- 2 conditions, under basin uses, releases under basin uses,
- 3 and the 45 -- 55-45 of unstored water for export.
- 4 MR. HITCHINGS: Okay. Well, in Alternative
- 5 4(a) modeling, limits are placed on total exports in
- 6 April and May to meet increased spring outflow; is that
- 7 correct?
- 8 WITNESS MUNÉVAR: 4(a) H4, there are export
- 9 restrictions to achieve the outflows, correct.
- 10 MR. HITCHINGS: And is the available export
- 11 capacity, the assumptions in that alternative, is it --
- 12 is the available exports capacity shared 50-50 between
- the CVP and the SWP and the modeling assumptions?
- 14 WITNESS MUNÉVAR: I believe so. I do not
- 15 recall. Maybe Kristin can chime in on that one.
- 16 WITNESS WHITE: Yes, I think that's correct,
- and that was based on input provided from both DWR and
- 18 Reclamation Operations staff, not specifically for this
- 19 Project. That's a longer-standing assumption that's been
- 20 in CalSim.
- MR. HITCHINGS: Okay. So, then, that 50-50
- 22 sharing in the assumptions under that alternative, that
- doesn't then track the 75-25 or the 55-45 that we just
- talked that in Article 6(c) and 6(d); is that correct?
- 25 WITNESS MUNÉVAR: I think in -- in the COA, the

1 COA did not envision some of the export restrictions that

- 2 have occurred even recently and so there's been an
- 3 understanding between the Projects that export capacity
- 4 under these revised -- or additional export restrictions
- 5 would be shared 50-50.
- 6 WITNESS WHITE: Right. The 75-25 and the 55-45
- 7 aren't referring to export restrictions. They're
- 8 referring to obligations for meeting requirements.
- 9 MR. HITCHINGS: So what COA provision was
- 10 relied upon for the assumption of the 50-50 sharing in
- 11 the Alternative 4(a) modeling that was just described?
- 12 WITNESS MUNÉVAR: Go ahead.
- 13 WITNESS WHITE: As I think Mr. Munévar said,
- 14 that was a -- When COA was developed, export restrictions
- 15 were not envisioned so it wasn't specifically addressed.
- 16 So that was added to CalSim based on input from the
- 17 Reclamation-DWR Operators but not specifically for this
- 18 Project. That was added some time ago.
- 19 MR. HITCHINGS: So there's no COA provision
- 20 that -- an expressed COA provision that supports that
- 50-50 assumption.
- 22 WITNESS WHITE: I do not believe so, although
- I'm not . . . an expert in the legal use of COA.
- 24 CO-HEARING OFFICER DODUC: Mr. Munévar, do you
- 25 have a different response?

1	WITNESS	MUNÉVAR:	No.

- 2 MR. HITCHINGS: Were the modelers that
- 3 performed the modeling for the different Project
- 4 alternatives have been -- Were they informed as to how
- 5 the CVP and the State Water Project are proposing to
- 6 share the new diversion facilities under the Project?
- 7 WITNESS MUNÉVAR: No, we were not. As far as I
- 8 understand, that is still uncertainty.
- 9 MR. HITCHINGS: Okay. I'd like to refer you to
- 10 DWR Exhibit 515. There was some discussion about that
- 11 yesterday and, in particular, Page 3, and specifically
- 12 the box for the H4 scenario Delta outflow requirements.
- 13 (Document displayed on screen.)
- MR. HITCHINGS: And it's at the bottom of
- Page -- Well, it's the bottom of the box on Page 3.
- 16 And there was a discussion yesterday. The last
- 17 sentence in that box referred to potential Oroville
- 18 releases to meet the outflow target.
- Do you recall that discussion yesterday?
- 20 WITNESS MUNÉVAR: I do.
- 21 MR. HITCHINGS: And during your testimony
- 22 yesterday, I believe you testified that those described
- 23 releases from Oroville are inconsistent with your current
- 24 understanding of the COA's requirements; is that correct?
- 25 WITNESS MUNÉVAR: The releases from Oroville

- 1 alone to meet an outflow, if it was termed an in-basin
- 2 use, would be inconsistent with current COA applications.
- 3 MR. HITCHINGS: And I also believe you
- 4 testified that the modeling of the export curtailments to
- 5 meet the outflow target under this scenario complied with
- 6 the COA's requirements as the export restrictions; is
- 7 that correct?
- 8 WITNESS MUNÉVAR: They were in terms of the
- 9 total export capacity.
- 10 MR. HITCHINGS: And -- And what were those
- 11 requirements that you had in mind when you provided that
- 12 answer?
- 13 WITNESS MUNÉVAR: Well, in particular, we were
- 14 speaking of H4, I believe, and the amount of export
- 15 curtailments that would be required to -- to achieve the
- outflow targets that are in H4.
- 17 MR. HITCHINGS: And -- And what would the --
- 18 What were the modeling assumptions as far as the sharing
- 19 percentages for that alternative analysis?
- 20 WITNESS MUNÉVAR: Again, I -- I may have to
- 21 seek some assistance here from my Panel Members,
- 22 but . . .
- 23 Kristin, you want to . . .
- 24 WITNESS WHITE: You're asking how the export
- 25 restrictions were shared between the State and Federal

- 1 Projects at the pumps?
- 2 MR. HITCHINGS: Yeah. There was a statement
- 3 that -- I believe, Mr. Munévar, your testimony was that
- 4 the modeling of the export curtailments to meet the
- 5 outflow target complied with COA's requirements as the
- 6 export restrictions, and -- and that's what I'm trying to
- 7 get clarification on.
- 8 What COA provisions did you have in mind when
- 9 you made that statement?
- 10 WITNESS MUNÉVAR: Yeah. So I -- I do not
- 11 recall whether the -- the total export capacity was
- 12 limited such that the outflow could be met without
- dropping below the 1500 cfs. I cannot recall whether the
- 14 50-50 split on the export curtailment was implemented or
- it was left to COA to apply the split between SWP and
- 16 CVP.
- MR. HITCHINGS: So, you were referring to that
- 18 50-50 sharing that we just spoke about a few moments ago?
- 19 WITNESS MUNÉVAR: No. I was referring to -- to
- 20 the COA split.
- 21 What I don't recall is whether the split was
- 22 50-50 for that particular requirement or left to the
- 23 COA -- COA logic to provide.
- 24 WITNESS WHITE: I think we're mixing up terms a
- 25 little bit here.

```
1 The COA split of 75-25 or 55-45 refers to the
```

- 2 obligation to meet in-basin demands. So the Delta
- 3 outflow responsibility would be shared according to
- 4 whatever those rules were depending on the balanced or
- 5 whatever the conditions were in the basin.
- 6 The export restriction talks about, when we're
- 7 restricted on pumping, how do we share that restriction?
- 8 So I think when we say it applies for COA,
- 9 we're talking about how much is being released from each
- 10 Project in order to meet an overall obligation. When we
- 11 talk about export restrictions, it's a -- it's not that
- it's inconsistent with how much we release.
- I don't know if that makes sense.
- MR. HITCHINGS: Well, what -- what percentage
- was applied with regard to the sharing of export
- 16 restrictions?
- 17 WITNESS WHITE: I think that's the 50-50
- 18 sharing, although I think we heard from Mr. Leahigh and
- 19 Mr. Milligan that exact operations south of Delta has not
- 20 been determined as far as the sharing between Projects.
- 21 CO-HEARING OFFICER DODUC: Mr. Munévar, can you
- 22 point to any specific COA requirements that pertain to
- 23 sharing of export restrictions?
- 24 WITNESS MUNÉVAR: I think the -- the export
- 25 restrictions that were included in COA -- And I don't

- 1 have them -- I don't have them, per se. They were
- 2 included in terms of amount of export available for each
- 3 of the Projects under certain conditions. That's the
- 4 55-45.
- 5 Then additional restrictions have been applied
- 6 to the Projects post-COA, and that's the assumption that
- 7 Kristin's talking about. The operations assumptions have
- 8 been 50-50 for many of those requirements.
- 9 MR. HITCHINGS: Okay. Thank you.
- I just have a couple more questions. And if we
- 11 could switch gears here and go to DWR-514. And this is
- on Page 15 of that document, and it's the Figure 12
- 13 simulated end-of-September Shasta storage exceedance
- 14 spot.
- 15 (Document displayed on screen.)
- MR. HITCHINGS: Page 15, Figure 12.
- 17 (Document displayed on screen.)
- 18 MR. HITCHINGS: And do you recall there was
- 19 some -- some questions and discussion regarding this
- 20 spot, I think from Mr. Lilly but also from Mr. Aladjem at
- 21 the end of the day yesterday?
- Do you recall them?
- 23 WITNESS MUNÉVAR: Yes.
- MR. HITCHINGS: And one of the lines of
- 25 questioning was the fact that several of the

- 1 alternatives, other than the No-Action Alternative,
- 2 provided for higher levels of upstream storage in -- in a
- 3 certain amount of the years, both in the H3, H4 and even
- 4 in the boundary analysis; is that correct?
- 5 WITNESS MUNÉVAR: Correct.
- 6 MR. HITCHINGS: And so my question is: Were
- 7 the modelers from the Project directed in the assumptions
- 8 that they provided in the modeling to achieve higher
- 9 end-of-September storage in Shasta under those other
- 10 Project alternatives?
- 11 WITNESS MUNÉVAR: No. The -- The desire in the
- 12 modeling, in terms of the way we set allocations and the
- 13 way we set the Rule Curve, is to achieve No-Action levels
- or higher. Those were the -- the modeling protocol that
- 15 we developed.
- 16 The higher storage assumptions were an outcome
- of that -- of that approach on a specific target we were
- 18 seeking to achieve.
- MR. HITCHINGS: So it was more almost a
- 20 performance target?
- 21 WITNESS MUNÉVAR: No, not a performance target.
- 22 It's an outcome of -- of the modeling assumptions that
- 23 were -- and the alternative assumptions that are
- 24 included.
- 25 MR. HITCHINGS: Well, were assumptions made in

- 1 the withholding input so that that result would be
- 2 achieved, higher end-of-September storage?
- 3 WITNESS MUNÉVAR: No.
- 4 MR. HITCHINGS: Okay. I think that's all I
- 5 have.
- 6 Thank you very much.
- 7 CO-HEARING OFFICER DODUC: Thank you,
- 8 Mr. Hitchings.
- 9 And according to my calculation, that concludes
- 10 the cross-examination for Group 7, except for the
- 11 Sacramento County Water Agency, who will be conducting
- their cross-examination with Group Number 15; is that
- 13 correct?
- 14 All right. We will move on to Group Number 8.
- 15 Is there anyone here from Group Number 8? Not
- 16 seeing anyone.
- Group Number . . .
- MS. NIKKEL: Nine.
- 19 CO-HEARING OFFICER DODUC: She's Group 9.
- MS. NIKKEL: I'm here for nine.
- 21 CO-HEARING OFFICER DODUC: Don't confuse me.
- 22 Group Number 9.
- 23 MS. NIKKEL: Good morning. Meredith Nikkel on
- 24 behalf of North Delta Water Agency, not Tehama-Colusa
- 25 Canal Authority for which I'm also representing, but my

- 1 questions this morning are for the North Delta.
- 2 CO-HEARING OFFICER DODUC: Miss Nikkel, how
- 3 much time do you anticipate needing?
- 4 MS. NIKKEL: About 45 minutes.
- 5 CO-HEARING OFFICER DODUC: Okay. And to help
- 6 me out, can you just briefly go over the topics you'll be
- 7 covering.
- 8 MS. NIKKEL: Sure.
- 9 I've got a few just general guestions that --
- 10 just a couple that are not repetitive, and then a couple
- 11 also on the boundary analysis framework that -- I think
- 12 from a different angle focusing more on the DSM-2 aspect
- of the modeling work that's been done.
- 14 And then the 1981 contract between the
- 15 Department of Water Resources and North Delta Water
- 16 Agency.
- 17 And then specifically the modeling results
- 18 regarding water quality and water levels.
- 19 CO-HEARING OFFICER DODUC: Finally, water
- 20 quality. I'm happy.
- MS. NIKKEL: There we go.
- 22 CO-HEARING OFFICER DODUC: Please proceed.
- MS. NIKKEL: Thank you.
- 24 CROSS-EXAMINATION BY
- 25 MS. NIKKEL: So, most of my questions will be

- 1 directed to Mr. Nader-Tehrani, although I welcome the
- 2 input from other panelists as well, as appropriate.
- 3 So, Mr. Nader-Tehrani, I just want to make sure
- 4 I understand your role in developing the modeling results
- 5 that were presented.
- 6 And your written testimony explains that your
- 7 job duties include directing and reviewing the modeling
- 8 that was done by DWR and its consultants for the
- 9 California WaterFix Project; correct?
- 10 WITNESS NADER-TEHRANI: That's correct.
- MS. NIKKEL: So are you the Department's most
- 12 knowledgeable witness on the water quality and water
- 13 level-related impacts associated with the operation of
- 14 the Proposed Project?
- 15 WITNESS NADER-TEHRANI: I would not necessarily
- 16 consider myself the most expert, but I have about 20
- 17 years of experience dealing with models in the Delta,
- 18 DSM-2 water quality, hydrodynamics, and so forth.
- 19 MS. NIKKEL: Okay. Is there somebody else with
- 20 the Department who would have more knowledge than you on
- 21 the impacts associated with the Project on water quality
- 22 and water levels in the Delta?
- MR. BERLINER: Objection: Relevance.
- 24 CO-HEARING OFFICER DODUC: Miss Nikkel.
- 25 MS. NIKKEL: I think we're entitled to know, of

```
1 all the witnesses that the Petitioners are putting
```

- forward, who the most knowledgeable person is on the key
- 3 question of impacts on water quality and water levels.
- 4 CO-HEARING OFFICER DODUC: You know,
- 5 Miss Nikkel, as long as the witness can answer your
- 6 question, we'll --
- 7 MS. NIKKEL: Of course.
- 8 CO-HEARING OFFICER DODUC: -- leave it at that.
- 9 MS. NIKKEL: If you --
- 10 CO-HEARING OFFICER DODUC: So go ahead with
- 11 your questions, your specific questions on water quality.
- 12 MS. NIKKEL: Water quality and water levels.
- 13 CO-HEARING OFFICER DODUC: And water levels.
- MS. NIKKEL: Yes.
- 15 WITNESS NADER-TEHRANI: I think I -- I can
- 16 answer those questions.
- 17 MS. NIKKEL: Is there anybody else at DWR, to
- 18 your knowledge, that has more knowledge than you do?
- 19 CO-HEARING OFFICER DODUC: Miss Nikkel, I don't
- think I made myself clear. I sustained the objection.
- 21 MS. NIKKEL: Oh, I'm sorry. I misunderstood
- 22 you.
- 23 CO-HEARING OFFICER DODUC: Please just ask him
- 24 the water quality questions you have.
- 25 MS. NIKKEL: Okay. I misunderstood. Thank

- 1 you.
- 2 So, also, I understand that your testimony and
- 3 your modeling work focused on water quality and water
- 4 levels.
- 5 Was DWR's analysis on any other -- Or was there
- 6 any analysis by DWR in any other aspects resulting from
- 7 the Project, such as flow or -- or velocity of flow in
- 8 the Delta?
- 9 WITNESS NADER-TEHRANI: We -- We've looked at
- 10 velocities and flows, but they're not specifically
- included in the testimony that I provided.
- 12 MS. NIKKEL: And where would that information
- 13 be available?
- 14 WITNESS NADER-TEHRANI: All that information is
- 15 available in the model output that was provided back in
- 16 the end of May, or middle of May.
- 17 MS. NIKKEL: And that's the information you're
- 18 referring to that's on the State Board's website and the
- 19 FTP website?
- 20 WITNESS NADER-TEHRANI: That's correct.
- MS. NIKKEL: Okay. Thank you.
- I want to shift focus and ask a couple of
- 23 questions about the boundary analysis that we've talked a
- lot about here.
- Were you involved personally in the development

- of the boundary analysis approach?
- 2 WITNESS NADER-TEHRANI: The boundary analysis
- 3 focus started with CalSim and assumptions in CalSim, so
- 4 in that aspect, I was not involved in the development of
- 5 the assumptions for the Boundary 1/Boundary 2.
- 6 What I was involving was, once the analysis was
- 7 done, then we ran DSM-2 to see the effects on water
- 8 quality and so forth. So that's -- From that portion on,
- 9 I was involved in making assessments about that.
- 10 MS. NIKKEL: Okay. Thank you for that
- 11 clarification.
- So, did you hear yesterday, Mr. Munévar
- 13 testified that -- that these boundaries represent, you
- 14 know, a spectrum of options, but they're -- but one could
- 15 come up with or concoct, I think was the word he used,
- 16 additional scenarios that are not contained within the
- 17 boundary analysis?
- Do you recall that testimony?
- 19 WITNESS NADER-TEHRANI: I recall that, yes,
- 20 um-hmm.
- 21 MS. NIKKEL: And do you agree with Mr. Munévar
- 22 that one could concoct additional scenarios that don't
- fall within the boundary analysis?
- 24 WITNESS NADER-TEHRANI: I don't have any
- 25 comments on that. I would leave that to Mr. Munévar.

```
1 MS. NIKKEL: Okay. And in your professional
```

- 2 opinion, having reviewed and executed, I would say, the
- 3 boundary analysis approach, would you agree that the
- 4 boundary analysis is an appropriate tool for analyzing
- 5 the wide range of effects on hydrodynamics in the Delta?
- 6 WITNESS NADER-TEHRANI: I -- I would consider
- 7 that a proper approach.
- 8 MS. NIKKEL: All right. Switching gears again.
- 9 Let's have a look at the 1981 contract that I
- 10 mentioned.
- So if staff could please pull up DWR-306.
- 12 (Document displayed on screen.)
- MS. NIKKEL: Mr. Nader-Tehrani, are you
- familiar with this document?
- 15 WITNESS NADER-TEHRANI: I have seen this
- 16 document, but not lately.
- 17 I have not reviewed all the detail. I do
- 18 recall looking at it and looking at some of the
- 19 requirements in the -- that was included in the contract.
- 20 MS. NIKKEL: Okay. Can you give us just a
- 21 generally understanding -- general description of what
- your understanding of this document is?
- 23 WITNESS NADER-TEHRANI: It is -- It -- I
- 24 believe -- And I could be wrong, but I believe it's an
- 25 agreement that was signed between DWR and North Delta

- 1 Water Agency to provide a certain water quality with --
- 2 you know, that would be different depending on the flows
- 3 or the, you know, precipitation patterns of the River
- 4 Flow Index at different locations in the North Delta
- 5 area.
- 6 MS. NIKKEL: Okay. And so it's your general
- 7 understanding that it's DWR who's obligated to meet the
- 8 requirements of this contract; correct?
- 9 WITNESS NADER-TEHRANI: Based on what I recall,
- 10 yes, um-hmm.
- 11 MS. NIKKEL: And is it also -- Based on what
- 12 you recall, is it also your general understanding that
- during certain times of the year, the water quality
- 14 requirements in this contract govern the State Water
- Project operations rather than D-1641 requirements at
- 16 Emmaton?
- 17 MR. BERLINER: Objection: Calls for a legal
- 18 conclusion.
- 19 CO-HEARING OFFICER DODUC: I believe he can
- answer to the best of his ability.
- 21 WITNESS NADER-TEHRANI: I don't know the answer
- 22 to that question.
- MS. NIKKEL: Let's try it this way:
- Do you know if -- in the modeling assumptions,
- 25 if there were periods when this governed -- this document

- 1 governs water quality? And by "govern," I mean, you
- 2 know, the model is designed to meet certain water quality
- 3 requirements of this document and this contract as
- 4 opposed to 1960 -- I'm sorry -- D-1641?
- 5 WITNESS NADER-TEHRANI: The water quality
- 6 provisions are implemented in CalSim.
- 7 So, for example, the D-1641 water quality
- 8 objectives, all of that is included in the assumptions in
- 9 CalSim. So CalSim determines the flows required to meet
- 10 specific water quality provisions.
- 11 DSM-2 is a tool that's used to -- to check
- 12 whether the -- the -- the desired response is achieved.
- MS. NIKKEL: Okay. So maybe --
- 14 WITNESS NADER-TEHRANI: So DSM-2 is not the
- 15 tool to enforce certain water qualities. It's a tool to
- 16 just check the desired outcome based on the assumptions
- 17 that were made in CalSim.
- 18 MS. NIKKEL: Okay. So maybe the question is
- 19 better directed to Mr. Munévar.
- But my -- my question goes to, either in DSM-2
- 21 or in CalSim, is there a modeling assumption that at some
- 22 times of the year this contract must be -- the water
- 23 quality requirements of this contract must be met and not
- 24 D-1641?
- 25 WITNESS NADER-TEHRANI: I'm not aware that

- 1 this -- This contract is part of the modeling, if that's
- what you're referring, but -- but Mr. Munévar could --
- 3 could prove me wrong.
- 4 MS. NIKKEL: Mr. Munévar, do you have a
- 5 different answer?
- 6 WITNESS MUNÉVAR: No. In the Calsim modeling,
- 7 D-1641 water quality requirements are what drive the
- 8 operations.
- 9 MS. NIKKEL: Okay. Thank you.
- 10 WITNESS NADER-TEHRANI: I have something
- 11 further --
- 12 MS. NIKKEL: Yes.
- 13 WITNESS NADER-TEHRANI: -- I want to add.
- I think Mr. Leahigh mentioned that, you know,
- 15 he uses in his day-to-day operations -- you know, he
- 16 considered only a handful of locations. And I think
- 17 he -- And I could be paraphrasing. He called them the
- 18 constraining, you know, locations, by -- and by meeting
- 19 the water quality objectives at those locations, that
- 20 the -- the other locations are met by -- by themselves.
- 21 And my understanding, based on what I recall
- 22 reading from the North Delta Water Agency contract, is a
- 23 similar idea that, when you meet the water quality at the
- 24 locations, specifically Emmaton, Jersey Point, and Contra
- 25 Costa, that you meet the requirements, at least most of

- 1 what's included -- what I recall -- the locations that
- 2 are included in the North Delta Water Agency contract.
- 3 MS. NIKKEL: Okay. And I have a similar
- 4 recollection of Mr. Leahigh's testimony.
- 5 I want to explore two different concepts,
- 6 though. There's two different things going on here.
- 7 There's one, a difference in the monitoring location, and
- 8 then the other is the time of year when requirements
- 9 apply.
- 10 So, is it your understanding that this contract
- 11 has water quality requirements at Emmaton?
- 12 WITNESS NADER-TEHRANI: My understanding is,
- 13 there -- there is a location included at Emmaton, and I
- 14 think the requirements are the same as the D-1641 during
- 15 April 1st to August 15.
- But based on what I recall, outside that
- 17 period, the requirement moves to a different location,
- and you know better, but that's what I recall.
- 19 MS. NIKKEL: That's what I'm asking for is your
- 20 understanding, so thank you.
- 21 WITNESS NADER-TEHRANI: I believe it moved to
- 22 Rio Vista based on what I -- not Rio Vista -- Sac --
- 3 miles from Sacramento River and Three Mile.
- MS. NIKKEL: Thank you.
- 25 And can you tell me in geographic terms where

- 1 Three Mile Slough is located relative to Emmaton?
- 2 WITNESS NADER-TEHRANI: I believe it's a couple
- 3 miles upstream. I can't be specific.
- 4 MS. NIKKEL: Approximately a couple miles
- 5 upstream of Emmaton?
- 6 WITNESS NADER-TEHRANI: Upstream, yes.
- 7 MS. NIKKEL: Can we zoom down to Attachment A
- 8 of this contract? I'm sorry, I don't have the exact page
- 9 number. It's probably Page 5.
- 10 (Document displayed on screen.)
- MS. NIKKEL: Go up one.
- 12 (Document displayed on screen.)
- MS. NIKKEL: Thank you.
- So Attachment A shows the -- the water quality
- 15 requirements.
- 16 Here in this version of the contract, it says
- 17 Sacramento at Emmaton. I will represent to you that that
- 18 was subject to a later amendment of the contract and it
- 19 moved to Three Mile Slough.
- 20 WITNESS NADER-TEHRANI: That's -- Yeah, I
- 21 recall something along those lines.
- 22 MS. NIKKEL: Okay. So looking at this -- this
- 23 water quality requirement, do you see where it says
- 24 August 23rd in the top left chart, August 23rd to 31st,
- 25 September, October, November?

```
1 WITNESS NADER-TEHRANI: I do see that.
```

- 2 MS. NIKKEL: And can you describe for us what
- 3 that -- if that -- what that means to you, if anything?
- 4 WITNESS NADER-TEHRANI: I believe that is
- 5 describing the starting goal for salinity during that
- 6 time period.
- 7 MS. NIKKEL: Okay. And the -- I think I also
- 8 heard from you that your understanding is that the D-1641
- 9 requirements are -- those end in August --
- 10 WITNESS NADER-TEHRANI: 15th.
- 11 MS. NIKKEL: -- on August 15th; correct?
- 12 WITNESS NADER-TEHRANI: Correct, at Emmaton,
- 13 yes.
- MS. NIKKEL: So, is it fair to say that the
- 15 requirements of this contract extend beyond, in terms of
- 16 time, the water quality requirements of D-1641?
- 17 WITNESS NADER-TEHRANI: At Emmaton, yes, but
- 18 there are other water quality objectives at other
- 19 locations in the Delta that go year-round.
- MS. NIKKEL: Thank you.
- But at Emmaton.
- 22 WITNESS NADER-TEHRANI: Emmaton, yes.
- 23 MS. NIKKEL: So, can you explain to me how, if
- 24 at all, this water quality objective at Three Mile Slough
- 25 under the 1981 contract with the North Delta Water Agency

- 1 is accomplished in the modeling after August 15th?
- 2 WITNESS NADER-TEHRANI: I think, as it was
- 3 pointed out, not all the D-1641 -- So let's go back to
- 4 the D-1641.
- 5 Only four or five of the locations that are
- 6 specified in D-1641 are actually modeled. And we -- I
- 7 refer to them as constraining occasions, and they are --
- 8 they are such that, when you meet the water quality at
- 9 those locations, you meet at -- at remaining locations.
- 10 So, based on what I recall, looking at the --
- 11 When the provisions of North Delta Water Agency contract
- 12 is met, that because of the fact that it's moved to
- 13 Rio -- to Three Mile Slough, the salinity is lower at
- 14 Three Mile Slough.
- 15 And by meeting the D-16 -- other D-1641 water
- quality objectives at other periods, and other
- 17 provisions, including minimum Rio Vista flows and so
- 18 forth, that you meet those same requirements most of the
- 19 time.
- I don't have anything specific to this
- 21 particular testimony that -- that I can point to right
- 22 now that would say that.
- 23 MS. NIKKEL: Okay. And I think I understand
- 24 that explanation, but I just want to make sure I'm
- 25 understanding that there is nothing in the model that

```
1 requires a certain water quality level at Three Mile
```

- 2 Slough from August 30 -- sorry -- August 15th through
- 3 November.
- 4 WITNESS NADER-TEHRANI: Yeah. For the same
- 5 reason, I think I said that not all the 1641 water
- 6 quality objectives are modeled, I would categorize this
- 7 as the same way.
- 8 MS. NIKKEL: I'm not asking for the reason.
- 9 I'm just asking if that's correct, that there --
- 10 WITNESS NADER-TEHRANI: That is correct.
- MS. NIKKEL: Okay. Thank you.
- 12 WITNESS NADER-TEHRANI: My understanding, it's
- 13 not part of the model. And as I explained that, that
- 14 kind of water quality objectives are -- they're all
- modeled in CalSim, and DSM-2 is just the tool.
- 16 CO-HEARING OFFICER DODUC: So let me cut to the
- 17 chase.
- It's not in the model, and sitting here today,
- 19 you cannot say whether these particular objectives are
- 20 met.
- 21 WITNESS NADER-TEHRANI: That is correct.
- 22 CO-HEARING OFFICER DODUC: All right. Was
- there anything else on this, Ms. Nikkel?
- MS. NIKKEL: No, thank you.
- 25 All right. I'm going to switch gears a little

```
1 bit and move to water quality modeling results more
```

- 2 generally.
- 3 So if staff could please pull up DWR-5.
- 4 And I assume this is the errata version.
- 5 That's the one I'm working on. So hopefully our page
- 6 numbers will correspond.
- 7 (Document displayed on screen.)
- MS. NIKKEL: And if we could move to Page 54,
- 9 please.
- 10 (Document displayed on screen.)
- MS. NIKKEL: So, I want to focus on this part
- 12 of your -- your presentation, Mr. Nader-Tehrani, on the
- 13 first bullet (reading):
- "Monthly average EC at selected Delta
- 15 locations."
- 16 And I think you already answered some of my
- 17 questions as to how those select locations account for
- 18 exchanges in other parts of the Delta.
- 19 Can you -- Can you describe for me whether any
- of these locations include locations along the sloughs
- 21 and channels -- and I'm going to be very specific here --
- 22 between the intakes and the -- Actually, I need to refer
- 23 to one other slide in your exhibit; just one moment --
- 24 and the Georgiana Slough.
- 25 WITNESS NADER-TEHRANI: And what is the

- 1 question? I'm sorry.
- 2 MS. NIKKEL: Do any of these select locations
- 3 for -- and I'm just thinking of EC compliance -- any --
- 4 any locations at -- in between the location of the
- 5 intakes and the Georgiana Slough.
- 6 WITNESS NADER-TEHRANI: They are not part of my
- 7 testimony, but I have looked at those results.
- 8 MS. NIKKEL: Okay. So those results, though,
- 9 would be available in the modeling trials that you
- 10 referenced.
- 11 WITNESS NADER-TEHRANI: That is correct.
- 12 MS. NIKKEL: Mr. Nader-Tehrani, can you tell
- 13 me:
- 14 Is DSM-2 a one-dimensional model?
- 15 WITNESS NADER-TEHRANI: That is correct.
- 16 MS. NIKKEL: And can you explain that for us
- 17 civilians? I think Mr. Lilly used that word as well
- 18 yesterday.
- 19 WITNESS NADER-TEHRANI: What a one-dimensional
- 20 model is?
- 21 MS. NIKKEL: Yes, as opposed a two-dimensional
- 22 model.
- 23 WITNESS NADER-TEHRANI: A one-dimensional model
- 24 assumes flow going in one direction -- I mean, in a
- 25 territory direction. It can go forward, backwards, but

- 1 not sideways, basically. So that's the short answer.
- 2 Do you need more detail?
- 3 MS. NIKKEL: No. I think that's helpful. I
- 4 think now we see there's one dimension forward and back
- 5 but not two dimensions up or down.
- 6 WITNESS NADER-TEHRANI: Up and down, sideways.
- 7 You could have a two-dimensional that -- that
- 8 goes forward, backwards and sideways. I mean,
- 9 technically you can have a model.
- 10 MS. NIKKEL: And water in the channel moves in
- 11 all those two-dimensional directions; correct?
- 12 WITNESS NADER-TEHRANI: That is correct, yes.
- MS. NIKKEL: So, in your opinion, is a
- one-dimensional model such as was used here sufficient to
- 15 capture the multifaceted hydrodynamics of how water moves
- in the Delta and its channels?
- 17 WITNESS NADER-TEHRANI: I think the answer
- depends on what questions you want to answer.
- MS. NIKKEL: Fair enough. For --
- 20 WITNESS NADER-TEHRANI: If -- In terms of the
- 21 information I provided, I think the one-dimensional model
- is more than adequate.
- 23 MS. NIKKEL: For water quality and for water
- 24 level analysis?
- 25 WITNESS NADER-TEHRANI: Yes.

1 MS. NIKKEL: And would that be the same for the

- 2 impact of the water velocity?
- 3 WITNESS NADER-TEHRANI: Yes.
- 4 MS. NIKKEL: I'm going to just go back to your
- 5 answer.
- 6 You said that, during your analysis, you did
- 7 review results of the model for salinity at locations
- 8 between the intakes and Georgiana Slough.
- 9 WITNESS NADER-TEHRANI: I have looked at them,
- 10 ves.
- 11 MS. NIKKEL: Do you recall which locations?
- 12 WITNESS NADER-TEHRANI: I haven't looked at
- 13 that location around -- near Sutter Slough, Sacramento
- 14 and Sutter and, moving on downstream, Sacramento and
- 15 Steamboat, upstream of Cross Channel, downstream of
- 16 Georgiana and -- Yeah, I've looked at all those, um-hmm.
- MS. NIKKEL: Was -- Sorry. Was -- Was upstream
- 18 of Georgiana something different than --
- 19 WITNESS NADER-TEHRANI: No. Upstream of Cross
- 20 Channel.
- MS. NIKKEL: Upstream of Cross Channel,
- 22 something different than Steamboat; correct?
- 23 WITNESS NADER-TEHRANI: That is right, um-hmm.
- MS. NIKKEL: And do you recall generally what
- 25 the results of the models showed at those locations?

- 1 WITNESS NADER-TEHRANI: Very similar water
- 2 quality under No-Action, and all the boundaries, and
- 3 H2/H4.
- 4 MS. NIKKEL: And switching gears for a moment
- 5 while we're on it, do you recall looking at those
- 6 locations for the water -- water level results?
- 7 WITNESS NADER-TEHRANI: I have included
- 8 actually water level analysis at a location immediately
- 9 downstream of the three intakes and a location near
- 10 Georgiana Slough.
- 11 MS. NIKKEL: Did you also look for water level
- 12 results at these locations: Sutter Slough, Steamboat and
- 13 upstream of the Cross Channel?
- 14 WITNESS NADER-TEHRANI: They are not included
- in my testimony but I have looked at them.
- MS. NIKKEL: Okay. And do you recall what the
- 17 results were of those?
- 18 WITNESS NADER-TEHRANI: I think consistent with
- 19 the information that I shared. So somewhere -- In
- 20 general, the farther you get from the intakes, the lower
- 21 the reduction in water level.
- 22 MS. NIKKEL: And all of these locations were
- along the Sacramento River; correct?
- 24 WITNESS NADER-TEHRANI: The ones that are
- 25 included in my testimony, yes, the two locations I just

- 1 described.
- 2 MS. NIKKEL: Let me back up.
- 3
 I'm focused on the ones that are not included
- 4 in the testimony because those are harder for me to -- to
- 5 know --
- 6 WITNESS NADER-TEHRANI: I looked at --
- 7 MS. NIKKEL: -- about.
- 8 WITNESS NADER-TEHRANI: I looked at Sutter
- 9 Slough; I looked at Steamboat Slough.
- 10 MS. NIKKEL: Those are on the sloughs
- 11 themselves.
- 12 WITNESS NADER-TEHRANI: Yes, yeah.
- MS. NIKKEL: Okay. Okay. Let's move to
- 14 Page 55, please.
- 15 (Document displayed on screen.)
- 16 MS. NIKKEL: And you presented this during your
- 17 direct testimony yesterday.
- 18 And in your written testimony, you estimated
- 19 that there is an increase of about 18 to 19 percent EC at
- 20 Emmaton in July and August; correct?
- 21 WITNESS NADER-TEHRANI: Yeah, something along
- 22 those lines, yes, for --
- MS. NIKKEL: Is it your understanding --
- 24 WITNESS MUNÉVAR: Let me be clear.
- 25 Yeah, that information relates to Boundary 1,

- 1 H3 and H4, and there is actually a reduction in EC for
- 2 Boundary 2 for the month of August.
- 3 MS. NIKKEL: Thank you for that clarification.
- 4 So, when I talk about the 18 to 19 percent
- figure, we're just going to focus on Boundary 1, H3 and
- 6 H4.
- 7 WITNESS NADER-TEHRANI: Yes.
- 8 MS. NIKKEL: So, is it your understanding that
- 9 this 18 percent figure, it's an -- it's an average
- 10 monthly projected increase; correct?
- 11 WITNESS NADER-TEHRANI: That is correct.
- 12 MS. NIKKEL: So, in any particular month in the
- 13 model, the EC could be greater than the 18 to 19 percent
- 14 above the No-Action Alternative; correct?
- 15 WITNESS NADER-TEHRANI: And others would be
- 16 lower. This is the average number, yes.
- MS. NIKKEL: And so, on a particular day, the
- 18 EC increase at Emmaton could be also much greater than 18
- 19 to 19 percent.
- 20 WITNESS NADER-TEHRANI: I wouldn't say much,
- 21 but that would not be the words I use.
- 22 MS. NIKKEL: Would it be -- Would there be
- 23 some --
- 24 WITNESS NADER-TEHRANI: Some could be higher;
- 25 some could be lower. That's how it is.

- 1 MS. NIKKEL: So some would be higher and some
- 2 would be lower. Thank you.
- 3 In -- In what types of scenarios would you
- 4 expect the EC to be greater than 18 or 19 percent?
- 5 WITNESS NADER-TEHRANI: I think this question
- 6 needs a little more clarification here.
- 7 This is a period where the D-1641 water quality
- 8 objectives apply.
- 9 And I think part of my testimony, I presented
- 10 information of the models -- what I refer to as modeling
- 11 artifact, the issues regarding the -- the discrepancy
- 12 between CalSim and DSM-2, the assumptions that are made,
- 13 and I believe part of the reason what -- for why you're
- 14 seeing this increase is related to -- to the fact that
- 15 the water quality objective that are implemented in
- 16 CalSim are implemented based on a monthly average scale,
- whereas the standards actually apply to 14-day average.
- 18 And -- And for the examples that -- that I
- 19 showed, that there are exceedances that are reported by
- 20 DSM-2 that are directly related to those inconsistencies.
- 21 If we had a perfect tool that -- that -- you
- 22 know, consistent between CalSim and DSM-2, it is my
- 23 belief that you may not see the increases you're seeing
- in the model.
- 25 MS. NIKKEL: And I want to get to that. I

- 1 appreciate that, and I want to get to that -- that
- 2 issue --
- 3 WITNESS NADER-TEHRANI: Yeah.
- 4 MS. NIKKEL: -- in a moment.
- 5 WITNESS NADER-TEHRANI: Yeah.
- 6 MS. NIKKEL: For now, I want to focus on
- 7 instances in the model where the EC on a particular month
- 8 or a particular day is higher than the 18 to 19 percent
- 9 increase and those instances that are not, in your
- 10 opinion, a result of those modeling anomalies that you
- 11 described.
- 12 Can you explain what such an instance would be
- and why it would occur?
- 14 WITNESS NADER-TEHRANI: There . . . In CalSim,
- 15 you know, the flows are monthly average, and then there
- 16 are procedures that are used to -- to change the monthly
- 17 flows into daily based on historical patterns.
- And so there could be a situation where,
- 19 because of the historical pattern that is applied,
- 20 certain days in a month, the flows happen to be lower in
- 21 the past, that you might -- that would reflect itself in
- increasing in EC corresponding to those years.
- This would be something that an Operator
- 24 would -- you know, seeing if there is an issue with the
- 25 D-1641, for example, for the water quality objective at

1 Emmaton would be easy to be able to detect ahead of time

- 2 and be able to respond accordingly.
- 3 MS. NIKKEL: But I think we can focus our --
- 4 our discussion now, just so I can understand the
- 5 modeling, on -- on the modeling.
- 6 WITNESS NADER-TEHRANI: Yeah.
- 7 MS. NIKKEL: So your testimony is that you
- 8 could see a -- an increase over the 18 to 19 percent in a
- 9 circumstance where there's a preceding dry condition.
- 10 WITNESS NADER-TEHRANI: Most of the -- the
- differences we see in the model, you know, are -- One of
- 12 the issues, that when you run CalSim, there could be
- 13 month-to-month differences where the -- You know, there
- 14 are many years you can meet the water quality objectives,
- 15 and, therefore, you may see results in the model that,
- 16 you know, are somewhat -- from looking at it from day to
- day or month to month, that are very different, just
- 18 because the different models that CalSim runs go about
- 19 meeting the objectives a different way that could show
- 20 itself up as an increase in salinity.
- So -- But I don't know if --
- 22 MS. NIKKEL: But I think you've identified one
- 23 example is --
- 24 WITNESS NADER-TEHRANI: Right.
- 25 MS. NIKKEL: -- if there's a preceding period

- 1 of dry conditions.
- 2 WITNESS NADER-TEHRANI: Yeah.
- 3 MS. NIKKEL: Okay. And now I do want to ask
- 4 about the distinction you drew in July and August on this
- 5 chart, that the Boundary 2 shows a reduction over the
- 6 No-Action Alternative.
- 7 WITNESS NADER-TEHRANI: Yes, that's true.
- 8 MS. NIKKEL: Can you explain why that is?
- 9 WITNESS NADER-TEHRANI: The water quality at
- 10 this location is predominantly governed by outflow, so
- 11 higher outflow, lower -- lower salinity, lower EC.
- 12 So it is my understanding that H -- that
- 13 Boundary 2 has a higher outflow that shows itself up as a
- 14 reduction in this year, this location.
- 15 MS. NIKKEL: Okay. Can we turn now to Page 66,
- 16 please.
- 17 (Document displayed on screen.)
- 18 MS. NIKKEL: Mr. Nader-Tehrani, this is the dry
- 19 year example that you walked us all through yesterday in
- 20 your direct testimony.
- 21 And I just wanted to clarify: This is only
- showing results through August of 1987; correct?
- 23 WITNESS NADER-TEHRANI: That's correct,
- 24 August 15.
- MS. NIKKEL: And do you know what the results

- 1 show for September of this same dry year example?
- 2 WITNESS NADER-TEHRANI: I don't recall.
- 3 MS. NIKKEL: But those -- That result will be
- 4 available in the modeling trials.
- 5 WITNESS NADER-TEHRANI: That objective would be
- 6 available in the models.
- 7 MS. NIKKEL: Can you explain why you chose 1987
- 8 in the example here?
- 9 WITNESS NADER-TEHRANI: I was trying to
- 10 illustrate the issues regarding the -- the
- inconsistencies between the modeling in terms of --
- 12 MS. NIKKEL: Maybe -- Let me try rephrasing my
- 13 question before you complete your answer.
- 14 WITNESS NADER-TEHRANI: I understand.
- 15 MS. NIKKEL: I'm trying to say -- I'm asking
- 16 why you chose 1987 as opposed to some other dry year.
- 17 WITNESS NADER-TEHRANI: I -- There was no
- 18 particular reason.
- 19 MS. NIKKEL: So is this an example of what we
- 20 can expect in all dry years?
- 21 WITNESS NADER-TEHRANI: I would not say that.
- 22 I would -- The point of this graph is to illustrate the
- 23 issues regarding a different set of assumptions that go
- 24 between the two models.
- 25 And June was an example in this case to

- 1 illustrate that the D-1641 model water quality examples
- 2 change in the middle of June, and the issue regarding
- 3 CalSim being a monthly time-step. So that was the whole
- 4 point of --
- 5 MS. NIKKEL: Okay. So --
- 6 WITNESS NADER-TEHRANI: There was no other
- 7 reason beyond that.
- 8 MS. NIKKEL: That's helpful.
- 9 So you weren't intending this to be an example
- 10 of how we can expect EC to behave in other years in the
- 11 modeling.
- 12 WITNESS NADER-TEHRANI: No.
- MS. NIKKEL: Okay. Thank you.
- So -- So we could expect other dry years to
- 15 behave differently depending on the conditions; correct?
- 16 WITNESS NADER-TEHRANI: Yes.
- MS. NIKKEL: Thank you.
- Okay. Moving to Page 67.
- 19 (Document displayed on screen.)
- MS. NIKKEL: Okay. So now I do want to talk a
- 21 little bit about the modeling anomalies that you've done
- 22 a very good job of explaining in your testimony so far.
- So, if those modeling anomalies that you
- 24 described were eliminated and the No-Action scenario in
- 25 the model reflected the 97.4 percent compliance that

```
1 Mr. Leahigh testified about, would you expect the -- the
```

- 2 increase in exceedances to be more or less than what is
- 3 shown in this figure?
- 4 WITNESS NADER-TEHRANI: The consistency -- or
- 5 the -- of the models were perfect?
- 6 MS. NIKKEL: If the models were perfect.
- 7 WITNESS NADER-TEHRANI: Perfect, yes. I would
- 8 expect that they will all achieve a similar . . . you
- 9 know, achievement in term of -- a similar achievement
- 10 that's done in operations are shown, yes, being the 97,
- 11 98 percent, achieving the water quality objective at
- 12 Emmaton, or Jersey Point, wherever.
- MS. NIKKEL: I think we're focusing on
- 14 Emmaton --
- 15 WITNESS NADER-TEHRANI: Yes. So --
- 16 MS. NIKKEL: -- so --
- 17 WITNESS NADER-TEHRANI: -- similar, yes.
- 18 MS. NIKKEL: Yeah. Let's just focus on Emmaton
- 19 because this is a hard enough concept as it is, so --
- 20 WITNESS NADER-TEHRANI: Right.
- So, if the compliance were not the 80 to
- 22 85 percent which was modeled but, rather, the compliance
- in the No-Action Alternative where -- the 97.4 percent.
- 24 WITNESS NADER-TEHRANI: Right.
- 25 MS. NIKKEL: Would you expect the increase in

- 1 the Project scenarios to be more or less than what is
- 2 shown in this figure? And the --
- 3 WITNESS NADER-TEHRANI: I'm sorry.
- 4 MS. NIKKEL: And the change --
- 5 WITNESS NADER-TEHRANI: I'm sorry. Can you --
- 6 MS. NIKKEL: -- the change in the increase.
- 7 WITNESS NADER-TEHRANI: Sorry. Can you repeat?
- 8 I'm sorry. I lost the question.
- 9 MS. NIKKEL: Yeah. Sure. It's a tough one,
- 10 for me especially.
- 11 WITNESS NADER-TEHRANI: Okay. Go ahead.
- 12 MS. NIKKEL: So, the -- if the modeling were
- 13 corrected and the No-Action Alternative showed a
- 14 97.4 percent compliance with the Emmaton standard --
- 15 WITNESS NADER-TEHRANI: Yes.
- 16 MS. NIKKEL: -- would you expect the Project
- scenarios -- so H3, H4, Boundary 1 and Boundary 2 -- to
- 18 show an increase over that No-Action Alternative which is
- more or less than what is shown here?
- 20 WITNESS NADER-TEHRANI: If the models were
- 21 perfect, we would have seen 100 percent for all -- or
- 22 close to 100 percent for all operational scenarios, not
- 23 less for --
- MS. NIKKEL: I'm talking about the change over
- 25 the No-Action Alternative.

```
1 WITNESS NADER-TEHRANI: I would expect the --
```

- 2 the -- the success to be similar for all operational
- 3 scenarios if the models were perfect.
- 4 MS. NIKKEL: So, let's assume -- and I don't --
- I don't know exact numbers here, but let's assume that
- 6 the change between the No-Action Alternative, which is
- 7 the black line --
- 8 WITNESS NADER-TEHRANI: Yes.
- 9 MS. NIKKEL: -- and the blue line, which I
- 10 believe is H4?
- 11 WITNESS NADER-TEHRANI: Yes.
- 12 MS. NIKKEL: Let's assume that increase in
- 13 the . . .
- Maybe I'm using the wrong word.
- 15 The difference between the black line and the
- 16 blue line --
- 17 WITNESS NADER-TEHRANI: Right.
- MS. NIKKEL: -- is probably, what, 2 percent?
- 19 WITNESS NADER-TEHRANI: Something like that.
- MS. NIKKEL: Something like that?
- 21 WITNESS NADER-TEHRANI: Yes.
- MS. NIKKEL: Would you expect, if the model
- were corrected, that 2 percent to go up or down?
- 24 WITNESS NADER-TEHRANI: I don't believe that
- 25 that -- In terms of meeting the -- the D-1641 objective,

- 1 I believe that that 2 percent would go away if the models
- were corrected, if the models were perfect.
- 3 MS. NIKKEL: You believe it would go away?
- 4 WITNESS NADER-TEHRANI: Yes.
- 5 MS. NIKKEL: So it would be -- The change would
- 6 be less.
- 7 WITNESS NADER-TEHRANI: Yeah. And -- Yeah,
- 8 that's correct.
- 9 MS. NIKKEL: So I want to think about this from
- 10 a different angle.
- 11 WITNESS NADER-TEHRANI: Sure.
- 12 MS. NIKKEL: And thank you for bearing with me.
- 13 This is a tough concept.
- So, in a -- in a year where a modeled
- 15 violation -- So let's kind of move away from the
- 16 Exceedance Plot --
- 17 WITNESS NADER-TEHRANI: Right.
- 18 MS. NIKKEL: -- concept and just think about a
- 19 year where there's -- a violation occurs.
- 20 But in reality, that was not --
- 21 WITNESS NADER-TEHRANI: A violation is not one
- 22 of them.
- 23 MS. NIKKEL: That's why I struggle. I've been
- 24 using the word "violation" because I'm trying to not
- 25 confuse it with the use of the word "exceedance" here.

- 1 Would you prefer that we use the word
- 2 "exceedance" as the objective?
- 3 WITNESS NADER-TEHRANI: I would prefer to use
- 4 "exceedance."
- 5 MS. NIKKEL: Okay. We're going to use the term
- 6 "exceedance" now to mean the exceedance of a water
- 7 quality objective.
- 8 WITNESS NADER-TEHRANI: That's right.
- 9 MS. NIKKEL: So, in a year where a modeled
- 10 exceedance was, in reality, in the actual operations that
- 11 year, just maybe a near miss -- you know, it came real
- 12 close to the objective but it didn't go over it --
- 13 wouldn't correcting the model to accurately depict that,
- it would put the near miss -- the near miss compliance
- 15 under the Project scenarios; right? So it would be -- it
- 16 would be under the compliance.
- 17 In the Project scenarios here, if you took that
- 18 2 percent of H4, you would bump that near miss up over
- 19 the compliance and you would see an additional exceedance
- 20 that you don't see under the current modeling results; is
- 21 that right?
- 22 MR. BERLINER: I'm going to object. That's a
- 23 very ambiguous, unclear question.
- 24 WITNESS NADER-TEHRANI: I mean, the -- one
- 25 thing I want to say is Mr. Leahigh's presentation, the

- 1 way he explained why the times that were successful isn't
- there was due to unusual circumstances, atmospheric
- 3 conditions and so forth, that -- that are really not
- 4 modeled.
- 5 So, the models know the tides, the -- you know,
- 6 all that information. So I believe, if the models were
- 7 perfect, you would have seen 100 percent.
- 8 CO-HEARING OFFICER DODUC: So, Miss Nikkel, let
- 9 me -- let me try --
- MS. NIKKEL: Sure.
- 11 CO-HEARING OFFICER DODUC: -- because I think I
- 12 understand what he's -- he's saying.
- 13 If the model had the capacity to truly reflect
- 14 operational flexibility, then that operational
- 15 flexibility would be reflected in all the scenarios and
- 16 all the scenarios would be in compliance is a simple way
- 17 to explain it.
- 18 WITNESS NADER-TEHRANI: Absolutely.
- 19 CO-HEARING OFFICER DODUC: So, Miss Nikkel,
- 20 what he's saying is, the adjustment would not be the same
- 21 for each scenario. If operational flexibility were to be
- truly captured, it would change with the different
- 23 scenarios and, therefore, all scenarios would be in
- 24 compliance.
- MS. NIKKEL: So, you're saying that . . .

```
1 (Laughter.)
```

- 2 MS. NIKKEL: I think I understand that and that
- 3 was helpful.
- 4 WITNESS NADER-TEHRANI: I think that that was a
- 5 very good answer.
- 6 (Laughter.)
- 7 CO-HEARING OFFICER DODUC: Having an
- 8 engineering background does help sometimes.
- 9 WITNESS NADER-TEHRANI: I appreciate.
- 10 MS. NIKKEL: Thank you.
- 11 So -- So, in my very simplified example of the
- 12 near miss, you're saying, under the H4 scenario, it would
- 13 also be modeled in a perfect modeling world as a near
- 14 miss.
- 15 WITNESS NADER-TEHRANI: The near miss that
- 16 you're referring to in terms of real, is that what you're
- 17 after?
- 18 MS. NIKKEL: Well, now I'm comparing the -- the
- 19 No-Action Alternative in my -- my perfect modeling
- 20 world.
- 21 WITNESS NADER-TEHRANI: Right.
- MS. NIKKEL: I'm changing the -- the -- the
- 23 model com -- exceedance into a almost near miss.
- 24 WITNESS NADER-TEHRANI: Right.
- MS. NIKKEL: And I'm asking you about what

- 1 would you expect the --
- 2 WITNESS NADER-TEHRANI: I'm sorry. The near
- 3 miss, you mean it actually goes above and --
- 4 MS. NIKKEL: No, it does not go above.
- 5 WITNESS NADER-TEHRANI: Okay.
- 6 MS. NIKKEL: And now I'm asking about your
- 7 testimony about what you would expect to occur to the H4
- 8 alternative.
- 9 Would it also stay within compliance or would
- 10 you expect it to increase by that 1 or 2 percent and
- 11 constitute an exceedance in the modeling?
- 12 WITNESS NADER-TEHRANI: I don't expect a
- 13 difference. I expect -- In a perfect model -- If the
- 14 models are perfect, I would -- I would guess a similar
- pattern in terms of meeting, you know, 100 percent.
- 16 MS. NIKKEL: A similar pattern as what? The
- 17 No-Action Alternative?
- 18 WITNESS NADER-TEHRANI: Among all the
- 19 alternatives, um-hmm.
- 20 MS. NIKKEL: Or the similar pattern that you're
- 21 seeing --
- 22 WITNESS NADER-TEHRANI: If you're asking which
- one comes closer to it? Is that your question? Which
- ones come closer to the -- to the -- the objective?
- MS. NIKKEL: No, that's not my question.

```
1 My question is whether the -- you would expect
```

- 2 the H4 scenario in a perfect modeling world --
- 3 WITNESS NADER-TEHRANI: Okay.
- 4 MS. NIKKEL: -- to exceed the compliance.
- 5 WITNESS NADER-TEHRANI: No.
- 6 CO-HEARING OFFICER DODUC: All right.
- 7 Miss Nikkel, you need to move on.
- 8 MS. NIKKEL: I'll move on.
- 9 All right. In your experience,
- 10 Mr. Nader-Tehrani, in analyzing models, would you agree
- 11 that once an exceedance of a water quality objective
- 12 occurs at Emmaton, it can require a lot of water in the
- model to correct that exceedance?
- 14 WITNESS MUNÉVAR: I would not characterize it
- as "a lot." It means -- If the model is showing an
- 16 exceedance, it means it's not using the right amount of
- 17 volume of water. That means you need to increase it. I
- 18 wouldn't characterize it as a lot.
- 19 MS. NIKKEL: What would you characterize it as?
- 20 WITNESS NADER-TEHRANI: Depends on the
- 21 circumstances and all that. But, often, it may not
- 22 require a lot of water to actually meet the water
- 23 requirements in the model.
- MS. NIKKEL: Okay. Are you aware of any
- analysis that's been done to analyze the impacts of the

```
1 modeled increase in exceedances of D-1641 on water users
```

- 2 in the North Delta?
- 3 WITNESS NADER-TEHRANI: I think it is my
- 4 testimony that those exceedances are not real to begin
- 5 with.
- 6 MS. NIKKEL: So you don't expect the Project to
- 7 result in any additional exceedances of the D-1641 --
- 8 WITNESS NADER-TEHRANI: Beyond --
- 9 MS. NIKKEL: -- objectives.
- 10 WITNESS NADER-TEHRANI: -- what they exists,
- 11 you are correct.
- 12 MS. NIKKEL: All right. Let's switch gears to
- 13 water levels, please.
- 14 If we could move to Page 75.
- 15 (Document displayed on screen.)
- MS. NIKKEL: Oh, and I think we actually
- 17 covered my questions on this, so we can move right along
- 18 to Page 82.
- 19 (Document displayed on screen.)
- 20 MS. NIKKEL: Okay. I want to focus on this
- 21 slide on the third dash there, a (reading):
- 22 "Maximum water level reduction of about .5 feet
- 23 during low flow events near the North Delta
- 24 Intakes . . ."
- 25 Can you describe how a low-flow event is

- 1 defined?
- 2 WITNESS NADER-TEHRANI: I'm referring to, you
- 3 know, the flow in Sacramento River can range from, you
- 4 know, 5, 6, 7,000 cfs all the way up to 50, 60, 70,000
- 5 cfs during high-flow periods.
- 6 So I would -- I would say anything below, like,
- 7 10,000 cfs coming from Sacramento.
- 8 MS. NIKKEL: Okay. And how often and for how
- 9 long do these low-flow events usually occur?
- 10 WITNESS NADER-TEHRANI: They occur during
- 11 summer of dry and critical periods, but they're not
- 12 necessarily occurring just during those years.
- MS. NIKKEL: Okay. That's helpful.
- 14 And -- And -- And is there a particular -- So
- 15 you said dry and critical and during the summer; correct?
- 16 WITNESS NADER-TEHRANI: Yeah, typically, but
- it's not unique to those time periods.
- 18 MS. NIKKEL: Okay. And can you -- Can you
- 19 identify for us what the lowest water elevation was in
- the No-Action Alternative?
- 21 WITNESS NADER-TEHRANI: You have to go back to
- 22 the . . .
- 23 Are you referring to this same location near
- 24 North Delta Diversion?
- 25 MS. NIKKEL: Yeah. Trying -- I'm trying to do

```
1 the math myself to how you got to the .5.
```

- 2 WITNESS NADER-TEHRANI: Yeah.
- 3 (Searching through document.)
- 4 Page 76.
- 5 (Document displayed on screen.)
- 6 MS. NIKKEL: Okay. And so it's -- Well, this
- 7 is just showing us change; right?
- 8 WITNESS NADER-TEHRANI: Yeah. Can you put that
- 9 slide, Page 76 of the same document.
- 10 (Document displayed on screen.)
- 11 WITNESS NADER-TEHRANI: Page 76.
- 12 (Document displayed on screen.)
- 13 WITNESS NADER-TEHRANI: Yeah. Okay. So the
- 14 way I was explaining it, the -- the points closer to the
- 15 left side of this figure correspond -- you know, the
- 16 bottom, you know, stage being high. Those correspond to
- 17 high-flow periods.
- 18 And then the points corresponding to the right
- 19 side of the diagram most likely correspond to the
- 20 low-flow period.
- 21 So the difference -- Half a foot is the
- 22 difference between the black line and the -- let's say
- 23 the gray line.
- 24 MS. NIKKEL: Yeah. That's covered all of them.
- 25 WITNESS NADER-TEHRANI: In fact, all four are

- 1 lined up together.
- 2 MS. NIKKEL: Um-hmm.
- 3 WITNESS NADER-TEHRANI: That distance is about
- 4 half a foot.
- 5 MS. NIKKEL: And what is that lowest point? Is
- 6 that zero feet above sea -- mean sea level?
- 7 WITNESS NADER-TEHRANI: Zero above mean sea
- 8 level, yeah. This is based on the NGVD~29 datum.
- 9 MS. NIKKEL: Can you describe what you just
- 10 said? Say that again.
- 11 WITNESS NADER-TEHRANI: Well, all the -- You
- 12 know, the stage, when it's reported, has to be in respect
- 13 to a certain datum.
- MS. NIKKEL: Yeah.
- 15 WITNESS NADER-TEHRANI: And so, in this case,
- it happens to be called NGVD 29. I don't know what
- 17 "NGVD" stands for.
- MS. NIKKEL: NGVD.
- 19 WITNESS NADER-TEHRANI: Yes.
- 20 WITNESS ANDERSON: "NGVD" is National Geodetic
- 21 Vertical Datum.
- 22 WITNESS NADER-TEHRANI: Yes. Thank you, Jamie.
- MS. NIKKEL: Thank you.
- 24 WITNESS NADER-TEHRANI: She's great.
- MS. NIKKEL: I'm glad we got to speak.

```
1 (Laughter.)
```

- 2 MS. NIKKEL: Okay.
- 3 WITNESS NADER-TEHRANI: Wait. I just want to
- 4 make sure I make myself clear because I remember showing
- 5 this information to someone.
- 6 Zero-foot stage does not mean zero depth. I
- 7 just want to be sure we're all --
- 8 MS. NIKKEL: Sure.
- 9 WITNESS NADER-TEHRANI: -- clear.
- 10 MS. NIKKEL: That's compared to this datum
- 11 point.
- 12 WITNESS NADER-TEHRANI: That's correct.
- 13 And so the bottom of the river is many feet
- 14 below --
- MS. NIKKEL: Yeah.
- 16 WITNESS NADER-TEHRANI: -- sea level.
- MS. NIKKEL: I understand. Thank you.
- 18 Okay. In your written testimony, and I think
- 19 also yesterday, you explained that water levels drop
- 20 below this -- this minimum level in the No-Action
- 21 Alternative only 73 days out of the entire model period
- 22 which, on average, is five days per year; is that right?
- 23 WITNESS NADER-TEHRANI: That's correct. The
- 24 way I said it -- I want to make sure I'm clear -- that I
- was referring to Boundary 1, but they're all similar.

1 But it happens to -- that I -- you know, that fact that I

- 2 was looking at Boundary 1 results.
- 3 And I was looking at the minimum water level
- 4 predicted under Boundary 1 and compared that to the
- 5 lowest water level that predicted under the No-Action.
- 6 This -- Each line here represents 5,000 --
- 7 about 5,500 points.
- 8 MS. NIKKEL: Yes.
- 9 WITNESS NADER-TEHRANI: And so of these 5,500
- 10 points that are represented here, only 73 days they go
- 11 below that black, the lowest number in the black.
- 12 MS. NIKKEL: And were those 73 days spread out
- evenly across all 5,000 of those datapoints?
- 14 WITNESS NADER-TEHRANI: No.
- MS. NIKKEL: And do you recall how many of
- 16 those 73 days occurred in -- in -- in the 16 years?
- 17 WITNESS NADER-TEHRANI: I did not specifically
- 18 look at that. There was one period I remember. It was
- 19 May of 1977. It happens to be a very dry -- dry year.
- 20 MS. NIKKEL: And you recall that it dropped
- 21 below that minimum water level . . .
- 22 WITNESS NADER-TEHRANI: Below the lowest
- 23 minimum level.
- MS. NIKKEL: Would you say more than five days
- 25 in that year?

- 1 WITNESS NADER-TEHRANI: No, no.
- 2 MS. NIKKEL: How many --
- 3 WITNESS NADER-TEHRANI: Okay. Sorry. Five
- 4 days?
- 5 MS. NIKKEL: In that year, yeah.
- 6 WITNESS NADER-TEHRANI: In that year? I don't
- 7 know. I don't know the answer to that question. I
- 8 don't -- I don't recall. I can get that information.
- 9 I -- I just don't have that information.
- 10 MS. NIKKEL: Okay. Do you recall generally if
- 11 those 73 days occurred during a specific time of year?
- 12 WITNESS NADER-TEHRANI: They were spread.
- 13 MS. NIKKEL: So it was a variety of different
- 14 types of conditions throughout the year?
- 15 WITNESS NADER-TEHRANI: Um-hmm.
- 16 MS. NIKKEL: And do they occur in successive
- days generally, or not?
- 18 WITNESS NADER-TEHRANI: Generally not.
- 19 MS. NIKKEL: Okay. In your written testimony,
- 20 Mr. Nader-Tehrani, you explained that it was your opinion
- 21 that there will not be negative effects to legal users of
- 22 water due to the results of these water level changes.
- 23 WITNESS NADER-TEHRANI: And I can explain why I
- 24 reached that conclusion.
- MS. NIKKEL: Okay. Let me try asking some

- 1 questions and see if we can get to it.
- 2 WITNESS NADER-TEHRANI: Sure.
- 3 MS. NIKKEL: Is your opinion on that point
- 4 supported by an analysis of how the reduced water
- 5 levels -- these reduced water levels that we've just
- 6 talked about -- will affect individual Points of
- 7 Diversion in the North Delta Water Agencies?
- 8 WITNESS NADER-TEHRANI: I'm sorry. Can you
- 9 repeat?
- 10 MS. NIKKEL: Sure. I'll try to shorten it up,
- 11 too.
- 12 WITNESS NADER-TEHRANI: Sure.
- MS. NIKKEL: Is your opinion supported by
- 14 analysis of how that reduction in water levels would
- 15 affect individual Points of Diversions at locations in
- 16 the North Delta Water Agency?
- 17 WITNESS NADER-TEHRANI: Yeah. That's not the
- 18 basis for my conclusion that I reached.
- 19 MS. NIKKEL: Okay. Did you or anybody at DWR,
- 20 to your knowledge, investigate all of the existing Points
- 21 of Diversion located between the existing Point of
- 22 Diversion and the proposed new intakes?
- 23 WITNESS NADER-TEHRANI: I don't know the answer
- 24 to that question.
- 25 MS. NIKKEL: Does anybody on the panel know if

- 1 anybody investigated all the Points of Diversion between
- 2 the points of the new -- on the existing Point of
- 3 Diversion?
- 4 CO-HEARING OFFICER DODUC: If they did, it
- 5 would be news, because I think other testimony has said
- 6 no.
- 7 MS. NIKKEL: I think I heard the testimony
- 8 yesterday on this point to refer to the Modeling Team,
- 9 which is why I'm asking, but I don't see any affirmative
- 10 answers, so I will -- I will move on.
- 11 So I have just a few remaining miscellaneous
- 12 types of questions.
- 13 Were you involved in the development of the
- 14 bypass flow criteria?
- 15 WITNESS NADER-TEHRANI: I was not.
- MS. NIKKEL: Do you understand it?
- 17 WITNESS NADER-TEHRANI: I do understand it.
- 18 MS. NIKKEL: And so do you know if the bypass
- 19 flow criteria is designed or -- or will result in having
- 20 any effect on the water level and water quality impacts
- 21 we've discussed today?
- 22 WITNESS NADER-TEHRANI: The way I see bypass
- 23 flows, they're actually designed to protect water levels
- 24 and water quality, and fish, for that matter.
- 25 MS. NIKKEL: Okay. And I think this question

- 1 is probably for Mr. Munévar.
- This is on Page 20 of DWR-5.
- 3 (Document displayed on screen.)
- 4 MS. NIKKEL: And yesterday I recall you
- 5 testifying, Mr. Munévar, that the No-Action Alternative
- 6 included more frequent inundation of the Yolo bypass of
- 7 the Fremont Weir.
- 8 Do you recall that testimony?
- 9 WITNESS MUNÉVAR: I do.
- 10 MS. NIKKEL: Has there been any analysis of how
- 11 that legal change affects legal users of water?
- 12 WITNESS MUNÉVAR: I don't know.
- 13 MS. NIKKEL: Does anybody on the panel know if
- 14 there's been any analysis of that?
- 15 WITNESS WHITE: That's an assumption that were
- 16 stated in all the alternatives, the No-Action and all the
- 17 alternatives, so it wouldn't have been something that
- 18 would have showed up in this process. But the
- 19 modification to the Fremont Weir notch is going --
- 20 undergoing a separate environmental analysis and an
- 21 impact analysis to determine what those impacts are.
- MS. NIKKEL: Thank you.
- 23 And that's not part of this Project?
- 24 WITNESS WHITE: That's correct.
- 25 MS. NIKKEL: Okay. I have nothing further.

- 1 CO-HEARING OFFICER DODUC: Thank you,
- 2 Miss Nikkel.
- 3 Group Number 10.
- 4 11?
- 5 Oh, 10 is coming up? Okay. Mr. Aladjem, you
- 6 need to at least wave a hand or something.
- 7 Just to do a time check, Mr. Aladjem, how much
- 8 time do you believe you'll need?
- 9 MR. ALADJEM: Madam Chair, I think I could
- 10 probably do it in half hour, but I'm going to try to do
- 11 it in 20 minutes.
- 12 CO-HEARING OFFICER DODUC: Okay. In that case,
- we will take a break after Mr. Aladjem is done.
- 14 And Mr. Aladjem, quick rundown for me of the
- points that you'll be exploring.
- 16 MR. ALADJEM: Madam Chair, first, I'm going to
- 17 explore hopefully with Mr. Munévar and Dr. Nader-Tehrani
- 18 some of the modeling assumptions of both the water
- 19 quality and water levels.
- Then I'd like to go in a little bit more detail
- 21 on those questions as it pertains to flood control in
- 22 the Delta.
- 23 CO-HEARING OFFICER DODUC: Okay. Thank you.
- 24 And I expect you will not be re-visiting any of
- 25 the modeling assumption aspects that have already been

- 1 explored.
- 2 MR. ALADJEM: That's not my intention.
- 3 CO-HEARING OFFICER DODUC: All right,
- 4 Mr. Aladjem.
- 5 CROSS-EXAMINATION BY
- 6 MR. ALADJEM: Good morning, Mr. Munévar,
- 7 Dr. Nader-Tehrani.
- 8 Thank you very much for being willing to talk
- 9 with us this morning.
- 10 Let me first address a question or two to
- 11 Mr. Munévar.
- 12 Mr. Munévar, are you familiar with DWR Exhibit
- 13 Number 305, which is an agreement between the Department
- 14 and East Contra Costa Irrigation District?
- 15 (Document displayed on screen.)
- 16 WITNESS MUNÉVAR: I'm not familiar with it.
- MR. ALADJEM: Can you tell me whether the
- 18 com -- compliance with the terms of this contract was
- included in the modeling effort?
- 20 WITNESS MUNÉVAR: I think I said I'm not
- 21 familiar with it, so I can't answer that.
- 22 MR. ALADJEM: Okay. No further questions about
- 23 that.
- Dr. Nader-Tehrani, I'd like to direct your
- 25 attention to DWR Exhibit 212, Page 67.

```
1 (Document displayed on screen.)
```

- MR. ALADJEM: Thank you, Mr. Baker (sic). I
- 3 appreciate you getting that up on the screen for us.
- 4 (Document displayed on screen.)
- 5 MR. ALADJEM: Yeah. Let's look at that.
- 6 Let me direct your attention,
- 7 Mr. Nader-Tehrani, to the very bottom of that page.
- Do you see, sir, where it says (reading):
- 9 "The BDCP is expected to include long-range
- 10 operating rules for the Delta . . ."
- 11 THE WITNESS: I see that, um-hmm.
- 12 MR. ALADJEM: And can you read that sentence,
- and it goes on to the next page.
- 14 WITNESS NADER-TEHRANI: How far down do you
- 15 want me --
- 16 MR. ALADJEM: Just the top, the first line.
- 17 WITNESS NADER-TEHRANI: Starting with "The BDCP
- is expected"?
- MR. ALADJEM: Yes.
- 20 WITNESS NADER-TEHRANI: You want me to read it
- 21 out loud or just --
- 22 MR. ALADJEM: Feel free to read it to yourself.
- 23 I just want to familiarize you with --
- 24 CO-HEARING OFFICER DODUC: Is it on your screen
- 25 that's right in front of you?

```
1 WITNESS NADER-TEHRANI: I see that better.
```

- 2 Thank you. These glasses don't work right.
- 3 Okay.
- 4 MR. ALADJEM: Dr. Nader-Tehrani, are you
- 5 familiar with DWR Exhibit 212?
- 6 WITNESS NADER-TEHRANI: I have not read it
- 7 recently, no.
- 8 MR. ALADJEM: But do you feel that this is part
- 9 of the information that you used in doing your modeling
- 10 analysis?
- 11 WITNESS NADER-TEHRANI: I -- You know, my
- 12 analysis was based on DSM-2 modeling results, so all --
- and that's kind of a reflection of what was modeled in
- 14 CalSim.
- 15 So any choices that are made -- for example,
- 16 for parameters such as bypass flow rules -- are already
- implemented in CalSim and, you know, the DSM-2 simply
- 18 takes that information and uses it in the modeling
- 19 results to simulate water levels, water quality and so
- 20 forth.
- 21 MR. ALADJEM: Okay. And perhaps my question is
- 22 better directed to Mr. Munévar.
- 23 Mr. Munévar --
- 24 If we could go to -- Mr. Baker (sic), if you
- could scroll back up on Page 67.

(Scrolling up document.)

1

```
MR. ALADJEM: There we go.
 2
 3
                Mr. Munévar, do you see where it says here the
      factor --
 4
 5
                Actually, Mr. Baker (sic), could you go a
      little further up? It would be helpful.
 6
 7
                It says (reading):
 8
                "Daily Operational Considerations for
           Withdrawal from Sacramento River."
 9
10
                Do you see that heading?
                WITNESS MUNÉVAR: Yes, I do.
11
12
                MR. ALADJEM: I'd like to ask you a few
      questions about the way in which these factors were
13
14
      incorporated in the modeling, Mr. Munévar.
15
                Where you -- Do you see that it says "Factor
      Hydrological"?
16
17
                WITNESS MUNÉVAR: Yes, I do.
```

- 18 MR. ALADJEM: Okay. And it says (reading):
- "Limitations on volume available for export 19
- 20 based on flow rate . . ."
- And can you tell us, sir, whether that is --21
- 22 those limit -- what limitations were incorporated in the
- CalSim modeling to effectuate this factor? 23
- WITNESS MUNÉVAR: Yeah. I think this refers to 24
- the Bypass Flow Diversion Table that was presented 25

- 1 yesterday, and multiple times before that, in terms of
- 2 how much flow would be required to bypass given a certain
- 3 amount of flow upstream of the intakes.
- 4 MR. ALADJEM: Okay. And would it be fair, sir,
- if you look at the second item there, "Limitations on
- 6 permissible time . . ."
- 7 Again, this is a bypass flow requirement.
- 8 WITNESS MUNÉVAR: I think -- I think this is
- 9 very similar to what I described in different periods, so
- 10 there are different bypass flow requirements for
- 11 different periods of time.
- MR. ALADJEM: Thank you.
- 13 And then in terms of high flood levels in the
- 14 Sacramento River, can you tell us how that was
- incorporated in the modeling.
- 16 WITNESS MUNÉVAR: In -- I can speak to the
- 17 CalSim modeling and maybe Parviz can talk about the
- 18 DSM-2.
- 19 But in terms of the high-flow levels in the
- 20 CalSim modeling, they were -- they're treated the same
- 21 way through the bypass criteria as -- as described.
- 22 So if we had 50,000 cfs on the Sacramento
- 23 River, which would be a very high flow, it just limits
- 24 the amount of bypass that could -- or it limits the
- 25 amount of diversion that could occur.

MR. ALADJEM: So, now I want to see if I

1

21

22

23

24

```
2
      understand correctly.
 3
                All these hydrologic considerations really go
      to the question of how much bypass flow will be at the
 4
      intakes in order -- Well, let me just leave it there. At
 5
      the intakes.
 6
 7
                Is that fair?
 8
                WITNESS MUNÉVAR: I believe at least the first
 9
      two points on hydrological, that is correct.
10
                MR. ALADJEM: Thank you.
11
                Mr. Baker (sic), could you scroll down a little
12
      bit further?
                (Scrolling down document.)
13
14
                MR. ALADJEM: And, again, this is a question
15
      either for Mr. Munévar or Dr. Nader-Tehrani.
16
                Do the two of you see the factor Water Quality?
17
                WITNESS MUNÉVAR: Yes.
18
                MR. ALADJEM: And it says there on the first
19
      line (reading):
20
                "Water quality monitoring (turbidity,
```

25 Could you describe for us how those factors

California Reporting, LLC - (510) 224-4476

www.CaliforniaReporting.com

chemicals) local to given intake."

(such as salinity)."

And then the second line is (reading):

"Water quality concerns elsewhere in Delta

- 1 were taken into account first in the CalSim modeling,
- 2 Mr. Munévar, and then in the DSM-2 modeling,
- 3 Dr. Nader-Tehrani.
- 4 WITNESS MUNÉVAR: I'm not sure. I think at
- 5 least for the first point there, the pulse protection
- 6 that's embedded in the bypass flows is, in particular,
- 7 targeting these protection of high flows early in the --
- 8 in the fall or in the winter, which often are the trigger
- 9 for high turbidity, which are related to fishery
- 10 presence.
- 11 The second bullet there is -- is if water is
- 12 required to bypass over and above the bypass flow
- 13 requirements in order to meet an Emmaton standard or a
- 14 Jersey Point standard, then water would not be diverted
- 15 from the North Delta Diversion facility.
- 16 MR. ALADJEM: And Dr. Nader-Tehrani, anything
- 17 to add?
- 18 WITNESS NADER-TEHRANI: No. I think Armin
- 19 characterized it well.
- MR. ALADJEM: And is it your understanding,
- both Dr. Nader-Tehrani and Mr. Munévar, that the
- 22 implementation of these factors here would be consistent
- 23 with D-1641?
- 24 WITNESS MUNÉVAR: Well, D-1641 doesn't control
- 25 the North Delta Diversion because it didn't envision --

- 1 MR. ALADJEM: Let me re-phrase the question.
- 2 That through -- The Project would be operated
- 3 applying these factors to meet the water quality
- 4 objectives contained in Decision 1641.
- 5 WITNESS MUNÉVAR: I think that's -- that's
- 6 correct.
- 7 MR. ALADJEM: Thank you.
- 8 Dr. Nader-Tehrani, in your testimony, which --
- 9 and your discussions with Miss Nikkel a few moments ago,
- 10 you talked about a reduction in water surface elevations
- 11 near the intakes of half a foot.
- Do you recall that?
- 13 WITNESS NADER-TEHRANI: Yes.
- MR. ALADJEM: And you also discussed with her
- 15 the use of a one-dimensional versus two-dimensional
- 16 modeling.
- 17 Do you recall that?
- 18 WITNESS NADER-TEHRANI: Yes.
- 19 MR. ALADJEM: Would it be correct to say that
- 20 the only analysis you did of water levels near the intake
- 21 was the DSM-2 modeling, which is a one-dimensional model?
- 22 WITNESS NADER-TEHRANI: That's correct.
- 23 MR. ALADJEM: Is it also correct to say that
- 24 DSM-2 would not address directional flows across the
- 25 channel?

1 WITNESS NADER-TEHRANI: You mean from one side

- 2 to the other?
- 3 MR. ALADJEM: From one side to the other.
- 4 WITNESS NADER-TEHRANI: That is correct.
- 5 MR. ALADJEM: Okay. In your analysis of water
- 6 levels near the intake, Dr. Nader-Tehrani, did you
- 7 incorporate the encroachment of the intake structures
- 8 into the channel as described by Mr. Bednarski in his
- 9 testimony?
- 10 WITNESS NADER-TEHRANI: That is not included in
- 11 the model.
- MR. ALADJEM: Did you incorporate into your
- 13 analysis in DSM-2 the augmented shoreline with the coffer
- dams that Mr. Bednarski included -- or discussed? Excuse
- 15 me.
- 16 WITNESS NADER-TEHRANI: That's not included.
- MR. ALADJEM: Did your analysis in DSM-2
- incorporate the channel margin habitat which
- 19 Mr. Bednarski described in his testimony?
- 20 WITNESS NADER-TEHRANI: That is not included.
- 21 MR. ALADJEM: Dr. Nader-Tehrani, in your
- 22 discussions of water level effects from the Project, you
- 23 said that the effects would be most pronounced near the
- 24 intakes.
- 25 That's correct?

- 1 WITNESS NADER-TEHRANI: What I said was, you
- 2 expect the largest reduction in water level to occur near
- 3 the vicinity of the intakes and the reduction in water
- 4 level gets smaller as you get further away from the three
- 5 intakes.
- 6 MR. ALADJEM: I'll take that as a yes.
- 7 Did you -- Are you familiar with the
- 8 configuration of the Delta, Dr. Tehrani? Do you know
- 9 where the community of Discovery Bay is?
- 10 WITNESS NADER-TEHRANI: I know where Discovery
- 11 Bay is, yes.
- 12 MR. ALADJEM: If there is a reduction in water
- 13 level during low -- periods of low flow of a half foot at
- 14 the intakes, would you then be able to say what the
- 15 reduction in water level near the Discovery Bay area
- 16 would be?
- 17 WITNESS NADER-TEHRANI: I -- I don't have the
- 18 answer here, but I would -- My best guess would be very
- 19 small change.
- 20 MR. ALADJEM: But you did not model that
- 21 reduction in water surface elevations, sir?
- 22 WITNESS NADER-TEHRANI: I did model. I looked
- 23 at model levels throughout the Delta, and it's my opinion
- 24 that I expect very little change in Discovery Bay water
- 25 levels.

1 MR. ALADJEM: But you just said it would be

- 2 your guess.
- 3 Are you guessing, or did you actually do the
- 4 analysis? And if you did the analysis, can you tell us
- 5 what the answer would be?
- 6 WITNESS NADER-TEHRANI: I can look to make
- 7 sure, but it is my opinion that that is what I expect to
- 8 see when I look at the models.
- 9 MR. ALADJEM: Okay.
- 10 WITNESS NADER-TEHRANI: Very small change.
- 11 MR. ALADJEM: And did your analysis of water
- 12 levels address any of the questions of changes in
- 13 velocity in Old River near Discovery Bay?
- 14 WITNESS NADER-TEHRANI: We have looked at
- 15 velocity patterns, yes.
- And I don't know, Mike, you want to talk?
- 17 WITNESS BRYAN: We looked at -- We looked at
- 18 peak daily velocity in the channels at a number of
- 19 different locations in the Delta as a part of our
- 20 analysis of microcystis and how microcystis may change or
- 21 not change.
- 22 And what we found was, when we did Exceedance
- 23 Plots and looked at the -- you know, the typical black
- line from the Project and another line for the Proposed
- 25 Project, that the lines basically fell on top of each

- 1 other.
- 2 So, from a peak daily velocity perspective, and
- 3 looking at it in an Exceedance Plot type format, we just
- 4 didn't see much change at all in peak velocity in -- in
- 5 most of the locations that we looked at. Any changes
- 6 that we did see were very normal.
- 7 MR. ALADJEM: Mr. Bryan, thank you very much.
- 8 And good morning to you as well.
- 9 WITNESS BRYAN: Good morning.
- 10 MR. ALADJEM: Mr. Baker (sic), could we put up
- 11 DWR-5 errata, Page 61.
- 12 (Document displayed on screen.)
- MS. RIDDLE: I'm just going to clarify: This
- is Kevin Long assisting the Board today.
- 15 Kevin Long.
- MR. ALADJEM: Pardon me?
- 17 MS. RIDDLE: Kevin Long is assisting the Board
- 18 today, not Jason Baker, just --
- 19 MR. ALADJEM: Oh, excuse me. I'm -- I'm sorry.
- Okay. Mr. -- Dr. Nader-Tehrani, if you're --
- 21 If I direct your attention here to this exhibit.
- 22 The estimated chlorides for Boundary 1 during
- 23 the fall and winter, from October through February, are
- 24 substantially higher than the No-Action Alternative; is
- 25 that correct?

```
1 WITNESS NADER-TEHRANI: I think my explanation
```

- 2 was when I was showing that, is -- also maybe in a
- 3 previous slide, I mentioned that Boundary 1 does not
- 4 include the Fall X2 action, which has a -- quite a bit
- of, you know effect on the water quality.
- 6 So it will -- To a large extent, the increases
- 7 you see -- in this case, October, November -- would be
- 8 due to -- due to the Fall X2 action not being included,
- 9 yes.
- 10 MR. ALADJEM: But, Dr. Nader-Tehrani, are you
- 11 saying that the Department would never operate the
- 12 boundary line?
- 13 WITNESS NADER-TEHRANI: That's not what I said.
- 14 MR. ALADJEM: Okay. So, Boundary 1 is part of
- 15 the Project, and this -- it may be that Fall X2 is the
- 16 reason that there's higher chloride there, but it is
- within the opportunity of the Project to operate to
- 18 Boundary 1 and, therefore, there could be that effect.
- 19 WITNESS NADER-TEHRANI: Well, what I was
- describing here is, we are comparing Boundary 1 that does
- 21 not include Fall X2 to a No-Action Alternative that
- 22 includes Fall X2, and so at least, to a large extent,
- 23 some of that difference is due to that.
- Now, that's -- that's where I leave it, you
- 25 know. You know, that's the way I was trying to explain

- 1 those increases.
- 2 MR. ALADJEM: Thank you.
- 3 Let me ask you a question here about the
- 4 overall magnitude of the effects.
- 5 Would it be fair, Dr. Nader-Tehrani, to say
- 6 that, with the exception of a few months, and
- 7 particularly the Boundary 1 scenario we were just
- 8 discussing, that estimated chloride levels at Contra
- 9 Costa Canal would be less than 150 milligrams per liter?
- 10 WITNESS NADER-TEHRANI: Yeah, that's correct.
- 11 MR. ALADJEM: Sir, what do you think the
- 12 likelihood of chloride levels at Contra Costa Canal
- exceeding 250 milligrams per liter would be?
- 14 WITNESS NADER-TEHRANI: You mean in real world
- or in the model?
- 16 What is your question? Is it in the -- Are you
- 17 talking about in the model or in the real-world
- 18 operation.
- 19 MR. ALADJEM: First, in the model and then,
- secondly, in the real-world.
- 21 Thank you for the clarification.
- 22 WITNESS NADER-TEHRANI: Yeah. In the model, I
- 23 think there is a slide that shows about the compliance,
- 24 the D-1641 compliance, to the 250-milligram per liter
- 25 chloride.

```
1 And the model shows that -- I believe it was
```

- 2 about a 5 percent chance that -- not Boundary 2, but the
- 3 other --
- 4 MR. ALADJEM: I believe in 1977; is that
- 5 correct?
- 6 WITNESS NADER-TEHRANI: Well, are you talking
- 7 about the number of days?
- 8 MR. ALADJEM: Yes.
- 9 WITNESS NADER-TEHRANI: Okay. That -- That
- 10 particular -- Yeah, it was 1977 that all except
- Boundary 2, including the No-Action, did not reach the
- 12 required number of days for that 150.
- 13 But another time to say that in real-world,
- 14 there was some barriers that were installed to reduce the
- ocean salinity intrusion, and those barriers were not
- 16 part of the model.
- 17 MR. ALADJEM: But, now, let me come back to my
- 18 original question.
- 19 WITNESS NADER-TEHRANI: Yes.
- MR. ALADJEM: Would it be fair to say that,
- 21 under the modeling, it is unlikely that 5 percent --
- 22 unlikely -- that there would be a chloride level of
- 23 250 milligrams per liter or more?
- 24 WITNESS NADER-TEHRANI: It is in my belief that
- 25 the increase you see, that 5 percent, falls in line with

- 1 the same modeling artifact that I was referring to
- 2 earlier, which is the difference in the model assumptions
- 3 between CalSim and DSM.
- 4 MR. ALADJEM: So if the model were, as
- 5 Ms. Nikkel was saying, accurate, we didn't have those
- 6 inconsistencies, we would show that there would not be an
- 7 exceedance of the 250-milligram per liter standard --
- 8 again, chloride -- here at Contra Costa Canal.
- 9 WITNESS NADER-TEHRANI: Yeah. If the models
- 10 were perfect, I would not expect to see an exceedance of
- 11 the 250.
- 12 MR. ALADJEM: And now Mr. Munévar and yourself
- 13 have all -- have said a number of times, models are not
- 14 used for prediction purposes. They're comparative;
- 15 correct?
- 16 WITNESS NADER-TEHRANI: That would be the best
- 17 use of the model.
- 18 MR. ALADJEM: But given the fact that the
- 19 chloride levels here are generally less than
- 20 150 milligrams per liter, would it be fair to say that it
- 21 is unlikely in the real-world, given the operational
- 22 flexibility that the two Projects have, that you would
- 23 not exceed 250?
- 24 WITNESS NADER-TEHRANI: Well, the numbers you
- see here are 16-year averages.

- 1 So, we are back to that some years will be
- 2 higher, some years will be lower.
- 3 MR. ALADJEM: That's a -- That's an interesting
- 4 question, Dr. Tehrani -- Nader-Tehrani.
- 5 Where would I find the data from your DSM-2
- 6 modeling here on chloride at Contra Costa Canal that
- 7 shows the maximum and minimum?
- 8 WITNESS NADER-TEHRANI: Well, if you look at
- 9 the slide that has the D-1641 compliance. You are not
- 10 limited to just the D-1641 -- the period that the D-16 --
- 11 Well, that's year-round.
- So, there's a slide --
- 13 WITNESS MUNÉVAR: Slide 71.
- 14 WITNESS NADER-TEHRANI: Slide 71?
- That's correct, Slide 71.
- 16 If you -- Yeah. If you see that, the red line
- 17 represent the standard. So, ideally, all lines should
- 18 go -- be below that.
- 19 So, at best, you see on the left side where the
- 20 values are, you know, with crosses at the line, I would
- 21 say about 230, 240. That means 230 milligrams per liter
- 22 below the threshold of 250.
- 23 So that means all operational scenarios in the
- 24 best of times are reporting about 20 milligrams per
- 25 liter.

- 1 The way I arrived at 20 was, I subtracted 250
- 2 by the 230 that are shown on the graph at the
- 3 intersection of those lines and the Y-Axis.
- 4 And, then, at the times where it goes above
- 5 zero, that's toward the right end of the graph, somewhere
- around 93, 94, you see that those are the ones going
- 7 above the 250 in the model world.
- 8 MR. ALADJEM: And, Dr. Nader-Tehrani, this is
- 9 very helpful. Let me summarize what I think I heard you
- 10 say.
- 11 Approximately, for the No-Action Alternative,
- 93, 94 percent of the time, the 250 part per million
- 13 standard -- chloride standard would be met with the
- 14 remaining 6 percent of the time, it would not.
- 15 WITNESS NADER-TEHRANI: Once again, I would
- 16 characterize this as a modeling artifact. In a perfect
- 17 model, that exceedance would not occur.
- 18 MR. ALADJEM: So let me -- let me try to
- 19 understand here.
- If we had a perfect model, there would be no
- 21 exceedance of the 250-milligram per liter standard for
- 22 chloride at Contra Costa canal.
- 23 WITNESS NADER-TEHRANI: That is my opinion,
- 24 yes.
- MR. ALADJEM: Thank you.

- 1 Turning back to water levels for just a second.
- 2 I'm not sure whether this is a question for you,
- 3 Dr. Nader-Tehrani, or Mr. Munévar.
- 4 WITNESS NADER-TEHRANI: I think I'd be able to
- 5 answer. I prefer the water level.
- 6 (Laughter.)
- 7 MR. ALADJEM: If there is a half -- a 6-inch or
- 8 a .05-foot reduction in water levels.
- 9 Was there an analysis, by the Department or by
- 10 Reclamation, of the effects of that reduction in water
- 11 levels on levee stability?
- 12 WITNESS MUNÉVAR: I -- I don't know.
- MR. ALADJEM: Mr. Munévar?
- 14 WITNESS MUNÉVAR: Yeah, I also don't know.
- MR. ALADJEM: Would it be fair to say that
- 16 there was no modeling analysis of levee stability
- 17 undertaken by the Project?
- 18 WITNESS NADER-TEHRANI: I'm not aware of it.
- 19 MR. ALADJEM: Madam Chair, if I could have a
- 20 moment or two to check my notes.
- 21 CO-HEARING OFFICER DODUC: Okay.
- 22 MR. ALADJEM: One last question for Mr. Munévar
- and Dr. Nader-Tehrani.
- 24 Yesterday, Mr. Mizell stipulated -- I believe
- 25 it was with Mr. Lilly -- that the Department and

- 1 Reclamation had not proposed any Permit terms or
- 2 conditions to address some of Mr. Lilly's concerns, his
- 3 questions about upstream storage.
- 4 Do you recall that discussion?
- 5 WITNESS NADER-TEHRANI: I do.
- 6 WITNESS MUNÉVAR: Yes.
- 7 MR. ALADJEM: Would it be fair to say,
- 8 gentlemen, that the Department of Reclamation have not
- 9 proposed any Permit terms or conditions to deal with
- 10 water level effects or water quality effects of the
- 11 Proposed Project?
- 12 WITNESS NADER-TEHRANI: That is my
- 13 understanding.
- MR. ALADJEM: Mr. Munévar?
- 15 WITNESS MUNÉVAR: That's, I think, the same
- 16 point that was made yesterday.
- 17 MR. ALADJEM: Madam Chair, no further
- 18 questions.
- 19 CO-HEARING OFFICER DODUC: Thank you. Thank
- 20 you, Mr. Aladjem.
- 21 Mr. Mizell, perhaps we should clarify your
- 22 stipulation.
- 23 My understanding of the stipulation yesterday
- 24 was that it applied to all -- that the Department does
- 25 not propose criteria for any aspect, and not just the

1 north storage that Mr. Lilly was interested in, and also

- 2 for the question that Aladjem just asked.
- 3 So a clarification: Was your stipulation, does
- 4 it apply to all aspects?
- 5 MR. MIZELL: Yes, Hearing Officer Doduc, you
- 6 understood my stipulation correctly. It applies to all.
- 7 The Department has not yet presented any
- 8 conditions for this Permit at this time.
- 9 CO-HEARING OFFICER DODUC: All right.
- 10 MR. ALADJEM: Thank you, Madam Chair.
- 11 My understanding was, it applied only to the
- 12 reservoir operations. That's very helpful.
- 13 CO-HEARING OFFICER DODUC: All right. Thank
- 14 you, Mr. Aladjem.
- 15 Before we take our break, let me do a check-in.
- 16 Group Number 11 has not shown, so I don't
- 17 expect them and they're not here.
- 18 Group Number 12?
- 19 13? Okay. I see a hand.
- So we will take a 15-minute break according to
- 21 that one (indicating). We'll go -- resume at 10:55
- 22 and -- with Sacramento Regional County Sanitation
- 23 District conducting its cross-examination.
- (Recess taken at 10:36 a.m.)
- 25 ///

- 1 (Proceedings resumed at 10:55 a.m.:)
- 2 CO-HEARING OFFICER DODUC: Welcome back to the
- 3 session.
- 4 Miss Taber, what topics will you be exploring
- 5 this morning?
- 6 MS. TABER: I anticipate to needing five to 10
- 7 minutes.
- 8 CO-HEARING OFFICER DODUC: Okay.
- 9 MS. TABER: And at most, my topics will be
- 10 related to the modeling inputs as they concern the
- 11 discharge from the Sacramento Regional Wastewater
- 12 Treatment Plant.
- 13 CO-HEARING OFFICER DODUC: Thank you.
- 14 Please proceed.
- 15 CROSS-EXAMINATION BY
- 16 MS. TABER: Good morning, panel. My name is
- 17 Kelley Taber. I represent the Sacramento Regional County
- 18 Water Irrigation District.
- 19 I have just a few questions about the input
- 20 into your modeling work, and I do not know who the best
- 21 person on the panel would be to answer my questions, so
- 22 I'll direct them to the panel and just ask that whoever
- 23 feels they can address the questions, feel free to speak
- 24 up.
- 25 And I would ask if the staff could please put

- 1 up Exhibit SWRCB-21, just to orient ourselves. I don't
- 2 intend to rely on this.
- 3 (Document displayed on screen.)
- 4 MS. TABER: And go to Page 190, please.
- 5 (Document displayed on screen.)
- 6 MS. TABER: Thank you.
- 7 So this, as you can see, is from District 1641,
- 8 and it includes a formula for calculating the Net Delta
- 9 Outflow, and it also has as part of that the formula for
- 10 calculating Delta inflow.
- 11 And you'll see that, if I understand this
- 12 correctly, the formula includes the average daily
- discharge from the Sacramento Regional Wastewater
- 14 Treatment Plant for the previous week.
- 15 And my question is: Did the modeling of the
- 16 No-Action Alternative include an assumption as to a
- 17 specific volume of discharge from the Sacramento Regional
- 18 Wastewater Treatment Plant?
- 19 WITNESS MUNÉVAR: It does. We're looking for
- 20 the value in the documents here, so . . .
- 21 MS. TABER: Okay. So, while you're looking,
- 22 because I -- I am curious about the value. We can wait
- 23 while you look, or I have some questions for --
- 24 WITNESS MUNÉVAR: Well, they're described in
- 25 Appendix 5A, so maybe if we can -- we can look for it,

- 1 but they're also in the documents of evidence submitted.
- 2 MS. TABER: Okay. I'm -- Just -- And I
- 3 apologize, because I haven't been able to be present for
- 4 all of the cross-examination.
- 5 When you refer to Appendix 5A, what is --
- 6 that's Appendix 5A to -- to which document?
- 7 WITNESS MUNÉVAR: I think it's the 5A that's
- 8 included in the -- in the Draft and the Recirculated
- 9 Draft. I believe it's also in the Biological Assessment.
- 10 They're all called Appendix 5A that outline model
- 11 assumptions.
- MS. TABER: Okay. So that assumption is
- included in the modeling of the No-Action Alternative --
- 14 An assumption is included in there, but -- And is anyone
- here on the panel today able to address the specific
- 16 volume that was assumed or answer questions as to what
- 17 that volume was?
- 18 WITNESS MUNÉVAR: I don't recall the volume.
- 19 MS. TABER: Okay. And do -- If you recall, was
- it a constant volume? Did it vary over time?
- 21 WITNESS MUNÉVAR: I do not recall.
- 22 MS. TABER: Okay. And this may wrap up my
- 23 questioning very quickly.
- But did the modeling of any of the alternatives
- include an assumption as to a specific volume of

- discharge from the treatment plant?
- 2 WITNESS MUNÉVAR: Any of the alternatives would
- 3 have the exact same assumption as the No-Action.
- 4 MS. TABER: Okay. So the -- Based on your
- 5 understanding, there wouldn't have been an adjustment for
- 6 growth over time in the discharge, or a fluctuation in
- 7 discharge volume?
- 8 WITNESS MUNÉVAR: I don't believe so. The
- 9 No-Action also represents a future condition, so it
- 10 would -- it would be the same as the -- as the Project
- 11 alternatives.
- 12 MS. TABER: Okay. So would it be likely to be
- 13 a constant volume?
- 14 WITNESS MUNÉVAR: Yeah. Again, I --
- MS. TABER: Okay.
- 16 WITNESS MUNÉVAR: I don't know at this point.
- MS. TABER: If you can, can you point to any --
- 18 be any more specific as to where we would look in
- 19 Appendix 5A to find that information?
- 20 WITNESS MUNÉVAR: At this point, I can't, but
- 21 if we were able to locate the location, we'll point that
- 22 out to you.
- MS. TABER: Okay. Great.
- Thank you. Those are all my questions.
- 25 CO-HEARING OFFICER DODUC: Thank you,

- 1 Miss Taber.
- 2 Number 14. Is there someone here from the
- 3 County of Yolo?
- 4 All right. 15, EBMUD and Sacramento County
- 5 Water Agency.
- 6 MR. SALMON: Good morning.
- 7 CO-HEARING OFFICER DODUC: Your microphone is
- 8 not on.
- 9 And, Mr. Salmon, how much time do you
- 10 anticipate needing, and what subject matters will you be
- 11 covering?
- 12 MR. SALMON: I'm Jonathan Salmon from East Bay
- 13 MUD. I'll try to keep it under an hour.
- 14 I'm going to be asking mostly questions of
- 15 Mr. Nader-Tehrani. And generally my questions pertain to
- 16 the issue of reverse flows at Freeport. So I'll be
- 17 asking him about his knowledge of the Freeport Project
- and the reverse flow issue, and the extent to which
- 19 reverse flows were analyzed in the modeling.
- 20 I'll also ask about the decision to use DSM-2
- 21 and the 16-year modeling period, and some questions
- 22 related to the adequacy and boundaries of that period.
- 23 Finally, I have a few additional questions
- 24 about the North Delta bypass flow criteria which was
- 25 touched on earlier this morning.

```
1 So, Mr. Ferguson of Sacramento County Water
```

- 2 Agency, I understand, has some questions following that
- 3 about groundwater impacts --
- 4 CO-HEARING OFFICER DODUC: All right.
- 5 MR. SALMON: -- that relate to his agency.
- 6 CO-HEARING OFFICER DODUC: Thank you.
- 7 Please --
- 8 MR. SALMON: And he'll --
- 9 CO-HEARING OFFICER DODUC: -- proceed.
- 10 MR. SALMON: -- appear after.
- 11 CROSS-EXAMINATION BY
- 12 MR. SALMON: Mr. Nader-Tehrani, are you aware
- of the Freeport Regional Water Project?
- 14 WITNESS NADER-TEHRANI: I am somewhat familiar
- 15 with it.
- 16 MR. SALMON: Are you aware that reverse flows
- 17 that exceed a certain threshold will result in a shutdown
- 18 of the Freeport Project intake?
- 19 WITNESS NADER-TEHRANI: I'm somewhat familiar
- 20 with that, yes.
- 21 MR. SALMON: Do you have an understanding of
- 22 why those shutdowns occur?
- 23 WITNESS NADER-TEHRANI: Yes, I -- I believe I
- 24 do.
- 25 It has to do with the Sacramento Regional, you

- 1 know, discharges that are occurring downstream from the
- 2 Freeport facility. If there are reverse flows that are
- 3 strong enough, it could affect the operations of Freeport
- 4 facility.
- 5 MR. SALMON: I'd like to ask about a couple of
- 6 meetings that took place several years ago. These
- 7 meetings discussed the predecessor project to WaterFix,
- 8 the BDCP, but bear with me.
- 9 Would staff please display Document 2 from our
- 10 flash drive?
- 11 (Document displayed on screen.)
- MR. SALMON: I'd like to identify this as
- 13 Exhibit East Bay MUD. Can I do X-1 to signify Cross-X?
- 14 (East Bay Municipal Utilities
- 15 District Exhibit X-1 marked for
- 16 identification)
- MR. SALMON: So this is a document titled,
- 18 "Meeting Minutes, Modeling of BDCP Impacts on FRWA's and
- 19 East Bay MUD's Operations."
- 20 And the document refers to a meeting that took
- 21 place on May 26, 2009, and indicates that the witness,
- 22 Mr. Nader-Tehrani, attended along with representatives
- from DWR, East Bay MUD, and Sacramento County Water
- 24 Agency.
- Mr. Nader-Tehrani, do you recall if you

- 1 attended this meeting?
- 2 WITNESS NADER-TEHRANI: I -- I recall, but I've
- 3 forgotten the details.
- 4 MR. SALMON: Can you look at the third bullet
- 5 point. I think we have to scroll down. Under --
- 6 (Scrolling down document.)
- 7 MR. SALMON: There, the highlighted, under
- 8 Roman Numeral II.
- 9 It reads, quote (reading):
- 10 "Parviz said that DWR will consider using a
- 'fingerprint' analysis using the DSM-2 model to
- 12 examine the reverse flow issue. The 'fingerprint'
- 13 analysis could determine the percent volume of the
- 14 wastewater effluent at any specific location."
- Do you recall --
- 16 WITNESS NADER-TEHRANI: That is --
- 17 MR. SALMON: -- if that fingerprint --
- 18 WITNESS NADER-TEHRANI: That is -- That is a
- 19 way to look at the -- the effects of the discharges.
- 20 That is a way of describing that, yes.
- 21 MR. SALMON: Do you recall if that analysis was
- 22 performed after that meeting?
- 23 WITNESS NADER-TEHRANI: We did not use the
- 24 fingerprint approach, if that's what you're asking, to --
- 25 to look at the effects of the discharges on Freeport

- 1 facility.
- 2 MR. SALMON: Thank you.
- 3 Can staff please display document three from
- 4 the flash drive.
- 5 (Document displayed on screen.)
- 6 MR. SALMON: I'll identify that as East Bay MUD
- 7 X-2.
- 8 MR. OCHENDUSZKO: Mr. Salmon?
- 9 MR. SALMON: Yes.
- 10 MR. OCHENDUSZKO: Just for point of
- 11 clarification, you didn't submit an exhibit
- identification index for these exhibits; did you?
- 13 MR. SALMON: I did not. My understanding was,
- 14 that was required for the case in chief.
- 15 MR. OCHENDUSZKO: All right. We'd like to work
- 16 with you during lunch to make sure that we properly
- identify these and can post them online for everybody's
- 18 use.
- 19 MR. SALMON: Sure. Be glad to work with you.
- 20 Thank you.
- 21 CO-HEARING OFFICER DODUC: For Mr. Salmon and
- 22 anybody that might be confused about that, an e-mail was
- 23 sent out last week, and also emphasized during the
- 24 hearing, that we would want a similar thing for the
- 25 cross-examination exhibits.

- 1 MR. SALMON: Okay. My apologies.
- MS. McCUE: Just one more thing.
- 3 Since there's no labels on them, can you just,
- 4 like, read the title just for the record so that we can
- 5 make sure we have the right one.
- 6 MR. SALMON: I will.
- 7 CO-HEARING OFFICER DODUC: And that is --
- 8 MR. SALMON: I believe I did.
- 9 CO-HEARING OFFICER DODUC: And that is why we
- 10 wanted that information in the Exhibit List ahead of
- 11 time.
- 12 MR. SALMON: Understood. My apologies again.
- So this document, which I would like to
- identify as East Bay MUD X-2, is a document titled, "BDCP
- 15 Modeling-for-Modelers Meeting," and refers to a meeting
- that took place June 18th, 2010, at CH2M Hill's
- 17 Sacramento office.
- 18 (East Bay Municipal Utilities
- 19 District Exhibit X-2 marked for
- 20 identification)
- 21 MR. SALMON: Mr. Nader-Tehrani, do you recall
- 22 this meeting?
- 23 WITNESS NADER-TEHRANI: Very vaguely.
- MR. SALMON: Can you please look at the first
- two bullets under Roman Numeral V on Pages 2 and 3 of

```
1 this document.
```

- 2 (Document displayed on screen.)
- 3 MR. SALMON: The bottom of Page 2, it starts --
- 4 Perhaps we could display the pages.
- 5 (Document displayed on screen.)
- 6 MR. SALMON: There we go.
- 7 So that portion of the document appears to
- 8 summarize modeling results regarding flow reversals; is
- 9 that right?
- 10 WITNESS NADER-TEHRANI: Let me read it. Sorry.
- 11 MR. SALMON: Okay.
- 12 WITNESS NADER-TEHRANI: I do see that, yes,
- um-hmm.
- 14 MR. SALMON: Okay. Does that appear to you to
- summarize modeling results regarding flow reversals?
- MR. MIZELL: Objection: Vague and ambiguous.
- 17 This document's referring -- well, was created
- 18 at a point in time when we were dealing with a different
- 19 Project than what's before the Board today. So if he
- 20 could refer to what modeling results he's referring to,
- 21 we could have clarity in the record.
- 22 CO-HEARING OFFICER DODUC: Mr. Salmon.
- MR. SALMON: I actually don't know what
- 24 modeling results. That's what I'm asking about is
- 25 whether modeling was performed of reverse flow impacts at

- 1 Freeport.
- 2 CO-HEARING OFFICER DODUC: Then let's just get
- 3 to that question.
- 4 WITNESS NADER-TEHRANI: Right.
- 5 So, at the time they proposed -- The Projects
- 6 that we were looking at included restoration areas, and
- 7 they're not part of the -- the Project that is presented
- 8 to the Board today.
- 9 CO-HEARING OFFICER DODUC: So, is your answer
- 10 that reverse flows were not modeled and considered?
- 11 WITNESS NADER-TEHRANI: No, they -- they -- I
- 12 have looked at those, if that's the question.
- 13 CO-HEARING OFFICER DODUC: Okay.
- 14 WITNESS NADER-TEHRANI: But -- But with respect
- 15 to, you know, the statement I see up there, it talks
- 16 about the tidal marsh restoration, and what I'm seeing
- is, those are not included in the current Project.
- 18 CO-HEARING OFFICER DODUC: So, Mr. Salmon,
- 19 perhaps instead of referring to previous meetings and
- documents, please just ask directly what is it that you
- 21 want to get from Mr. -- Dr. Nader-Tehrani in terms of the
- 22 analysis that he conducted --
- MR. SALMON: Sure.
- 24 CO-HEARING OFFICER DODUC: -- for this Project.
- 25 MR. SALMON: Sure. Well, I'm -- At this point,

- 1 I'm asking about analysis that was done at that time.
- 2 My question is whether there was analysis --
- 3 whether you recall an analysis -- I can see what the
- 4 document says, but do you recall performing an analysis
- of reverse flow impacts at Freeport of the BDCP Project
- 6 without tidal marsh restoration?
- 7 CO-HEARING OFFICER DODUC: And how does that
- 8 project relate to the project that's before us right now?
- 9 Why does -- Why are you pursuing that analysis instead of
- 10 the analysis that was done for this Project? Help me
- 11 understand that.
- 12 MR. SALMON: Yes. There's a similarity between
- 13 the Projects, acknowledging that there are differences.
- 14 There's a similarity between the BDCP without tidal marsh
- 15 restoration and the Project currently being proposed in
- 16 that both had North Delta Intakes.
- 17 And so where I'm going with this is, if reverse
- 18 flow impacts were analyzed for North Delta Intakes back
- 19 then, I'm -- what I want to know is whether now anything
- 20 has changed.
- 21 CO-HEARING OFFICER DODUC: Let's just ask that
- 22 question.
- 23 WITNESS NADER-TEHRANI: Right. I mean, I can
- 24 describe the effects of reverse flow with the -- with
- 25 respect to the Project as presented in the testimony, if

- 1 that's what you're after.
- 2 MR. SALMON: Okay.
- 3 CO-HEARING OFFICER DODUC: Yes, please do that.
- 4 MR. SALMON: Yes.
- 5 WITNESS NADER-TEHRANI: Okay. So what is
- 6 specifically -- You -- You're asking what kind of
- 7 analysis has been done?
- 8 MR. SALMON: Okay. So I --
- 9 WITNESS NADER-TEHRANI: For reverse flows on
- 10 East Bay MUD operations.
- 11 MR. SALMON: Yes. I -- Well, on the Freeport
- 12 Regional Water Project intake.
- 13 WITNESS NADER-TEHRANI: Correct.
- So, my understanding -- and correct me if I'm
- 15 wrong -- when I read the documents with regards to the
- 16 Freeport operation, and the way it's described is, if
- 17 the -- if the reverse flows that are occurring in
- 18 Sacramento River have an effective distance of .9-mile or
- 19 greater from -- measured from the Sac Regional, you know,
- 20 discharge location upstream towards Freeport facility, if
- 21 the reverse flow distance is greater than .9 miles, then
- the Freeport facilities have to shut down their
- 23 operations, because they don't want to see the effect of
- 24 that discharge.
- 25 So I -- I have looked at the reverse flows. It

- 1 is now part of the testimony that I presented. But I
- 2 have looked at it and compared the reverse flow distances
- 3 that are -- with respect to H3 scenario and compared it
- 4 to the No-Action.
- 5 And what I found is, there -- yes, there is
- 6 a -- an increase in the frequency of those reverse flows,
- 7 but those reverse flows are of the short duration and the
- 8 short distance, meaning up to about a .2-mile reversal
- 9 distance. That's the frequency of the reverse flows that
- 10 are increased with the H3 scenario.
- 11 The reason for those increased flows are the
- 12 reduction of flow in the river because of the taking of
- 13 water. Those occur -- The reverse flows typically occur
- 14 during low flows. At high flows, we don't see reverse
- 15 flows in Sacramento River, nor at Freeport facility.
- 16 And during low flows, the Project as described
- 17 does not take a large volume of water. And that's why we
- 18 are seeing the results that we're seeing, is that during
- 19 low flows, the volume of water that's going to be taken
- from the three intakes is nowhere close to the capacity
- of 3,000 cfs, and because of that, we are not seeing any
- 22 increase in frequency of the reverse flows that grow
- 23 larger than -- longer than .2 miles.
- 24 And for that reason, it is my belief that the
- 25 Projects are not going to affect the East Bay MUD

- 1 operation.
- 2 MR. SALMON: Thank you.
- 3 You mentioned an increase of .2 miles?
- 4 WITNESS NADER-TEHRANI: No, I did not say an
- 5 increase of .2 miles.
- 6 What I said -- Because the -- You know, the
- 7 shorter duration of reverse flows and -- as opposed to a
- 8 longer duration, higher distance.
- 9 What we are seeing is a small increase in the
- 10 events that go upstream between zero and 2.2 miles. It's
- 11 not an additional .2 miles. It is just within the zero
- 12 to .2-mile category of the reverse flows, we are seeing
- 13 an increase of those events.
- So I want to be clear, it's not an additional
- 15 .2 miles.
- 16 MR. SALMON: You mentioned earlier the criteria
- 17 for shutdown, the point --
- 18 WITNESS NADER-TEHRANI: .9 miles.
- 19 MR. SALMON: .9 miles at mega transport.
- 20 WITNESS NADER-TEHRANI: That's correct.
- 21 MR. SALMON: So that when you were looking at
- 22 the reverse flow issue, did you compare the modeled
- 23 results to those criteria to determine whether there
- 24 would be a shutdown in that?
- 25 WITNESS NADER-TEHRANI: I did not see any

- 1 increase in the frequency of the reverse flows that go
- beyond .9 miles. In fact, I didn't see an increase that
- 3 go beyond .2-mile.
- 4 MR. SALMON: Are you aware of whether there are
- 5 already shutdowns at the -- in Freeport intake that are
- 6 caused by reverse flows?
- 7 WITNESS NADER-TEHRANI: Yes, I think I heard
- 8 there are four events that happened since 19 -- 2014.
- 9 MR. SALMON: So --
- 10 WITNESS NADER-TEHRANI: And those happened
- 11 naturally because of the low flows in the river,
- 12 especially occurring during the drought that we had, the
- 13 extreme low flows that we had.
- MR. SALMON: So, do I understand you correctly
- 15 to -- that you're saying that there will -- there are no
- 16 increases in the number of reverse flow shutdown events
- 17 at Freeport and that you have analyzed that?
- 18 WITNESS NADER-TEHRANI: And I have looked at
- 19 it, and the answer is, we are -- the Projects do not
- increase the frequency of events even close to .9 miles.
- 21 It does not include a frequency of the events that cause
- 22 a shutdown, lead to the shutdown.
- 23 MR. SALMON: The frequency. So there --
- 24 WITNESS NADER-TEHRANI: Meaning the number --
- 25 If you look at the number of events that are modeled,

- 1 yes, you do see some events that go .9 miles.
- 2 But when you compare the No-Action to, in this
- 3 case, H3, you see a similar number. It's not there is no
- 4 increase in the number of events.
- 5 MR. SALMON: Did you examine the velocity
- 6 output of DSM-2 to reach this conclusion?
- 7 WITNESS NADER-TEHRANI: Yes.
- 8 MR. SALMON: And would you say that there is no
- 9 increase in reverse flow velocities . . . at Freeport?
- 10 Or downstream of Freeport?
- 11 WITNESS NADER-TEHRANI: Only a very small low
- 12 duration -- in the low duration between -- that cause an
- 13 upstream effective distance of 0.2 miles. That's it.
- 14 MR. SALMON: Based on your review of the
- 15 velocity output from DSM-2 --
- 16 WITNESS NADER-TEHRANI: Yes.
- MR. SALMON: -- is it -- is there a possibility
- 18 that the length of a shutdown event, based on those
- 19 criteria for shutdown that you mentioned before, could be
- increased due to the change that you just mentioned?
- 21 WITNESS NADER-TEHRANI: No.
- 22 MR. SALMON: Why -- why is that your opinion.
- 23 WITNESS NADER-TEHRANI: Because, as I said, my
- 24 understanding of the shutdown procedure is, whenever the
- 25 effective distance caused by the reverse flow above

- 1 .9-mile, that that would lead to a shutdown.
- 2 And based on what I see, we are not seeing any
- 3 increase in the frequency of such events.
- 4 MR. SALMON: Okay.
- 5 WITNESS NADER-TEHRANI: Therefore, I don't
- 6 expect the Projects will lead to higher frequency of
- 7 those shutdowns.
- 8 MR. SALMON: Okay.
- 9 CO-HEARING OFFICER DODUC: Mr. Salmon, before
- 10 you move on.
- I understood his question to not only be
- 12 frequency but the duration of the occurrences.
- 13 WITNESS NADER-TEHRANI: No.
- 14 CO-HEARING OFFICER DODUC: Okay.
- MR. SALMON: Thank you.
- 16 So, you mentioned your testimony focused on
- 17 possible changes to water quality in the lower levels; is
- 18 that correct?
- 19 WITNESS NADER-TEHRANI: That's correct.
- MR. SALMON: And which outputs of the DSM-2
- 21 model did you rely on to analyze water quality and water
- 22 level changes?
- 23 WITNESS NADER-TEHRANI: For water level, we
- 24 used a module called the DSM-2 Hydro. And for water
- 25 quality, we used EC -- electrical conductivity -- output

- 1 from DSM-2 Qual.
- 2 MR. SALMON: Okay. And did you use Stage EC?
- 3 WITNESS NADER-TEHRANI: Stage from DSM-2 Hydro,
- 4 and EC from DSM-2 Qual. Chloride, we used the
- 5 EC-to-chloride conversion.
- 6 MR. SALMON: And when you were analyzing
- 7 reverse flows, which of those outputs did you look at?
- 8 You mentioned velocity --
- 9 WITNESS NADER-TEHRANI: Velocity.
- MR. SALMON: Are there any others?
- 11 WITNESS NADER-TEHRANI: That's all you need to
- 12 compute the effective distance, you need the velocity
- output, which is generated for every 15 minutes. And
- 14 based on that, it's just a formula velocity times
- 15 distance accumulated when it's negative to compute the --
- 16 the effective distance in the reverse direction.
- MR. SALMON: So the velocity is what you use to
- 18 analyze the --
- 19 WITNESS NADER-TEHRANI: That's correct.
- 20 MR. SALMON: -- frequency and duration of
- 21 shutdowns?
- 22 WITNESS NADER-TEHRANI: That's correct.
- 23 MR. SALMON: Okay. Are you aware of whether
- 24 any other hydrodynamic modeling has been performed using
- any model to analyze whether the Delta tunnels may change

- 1 flow or velocity in the Sacramento River between
- 2 Steamboat Slough and Freeport?
- 3 WITNESS NADER-TEHRANI: I know there was some
- 4 modeling but I was not involved in that activity.
- 5 MR. SALMON: Do you -- Can you describe at all
- 6 the nature of the additional modeling that you're aware
- 7 of?
- 8 WITNESS NADER-TEHRANI: I'm sorry. I was not
- 9 included in that activity, so I don't know. I don't want
- 10 to speculate what it was.
- 11 MR. SALMON: Okay. So, returning to the DSM-2
- 12 model, how was that model modified to represent the new
- 13 North Delta Intakes, if at all?
- 14 WITNESS NADER-TEHRANI: Well, the input for the
- 15 volume of water that's going to be taken from each of the
- 16 three proposed intakes come from CalSim model. And so we
- 17 have nodes in DSM-2, and those volumes are assigned to
- 18 the nodes that correspond to physical location along
- 19 Sacramento River and the timing.
- 20 And then DSM takes into account other
- 21 concentrations that are not included in CalSim, including
- 22 the -- the fish passage velocity that was described by
- 23 Mr. Munévar, you know, making sure that water is diverted
- 24 only at times when you need the certain velocity required
- 25 by the fish passage, of course.

```
1 MR. SALMON: Were there any new coefficients
```

- 2 introduced in the model to represent the new intakes?
- 3 WITNESS NADER-TEHRANI: I -- I don't recall
- 4 changing any coefficients.
- 5 MR. SALMON: And you mentioned changes to the
- 6 nodes?
- 7 WITNESS NADER-TEHRANI: The nodal -- The
- 8 physical locations of nodes may have been adjusted to
- 9 better reflect the physical location of the intakes.
- 10 MR. SALMON: I'd like to ask some questions
- about the simulation period chosen for DSM-2.
- 12 WITNESS NADER-TEHRANI: Correct.
- 13 MR. SALMON: Basically, I want to determine
- 14 when were the start and stop dates for the modeling that
- 15 was done.
- 16 Can we bring up the witness' written testimony?
- 17 WITNESS NADER-TEHRANI: That's DWR-66.
- 18 MR. SALMON: Thank you.
- 19 (Document displayed on screen.)
- MR. SALMON: So on Page 4, Lines 2 and 3, it
- 21 states -- you stated (reading):
- 22 "All DSM-2 model runs (hydrodynamics and water
- 23 quality) were based on 16 years of record (1976 to
- 24 1991)."
- 25 Does that mean that your testimony, as it

- 1 relates to the DSM-2 modeling, is based on model data
- 2 starting with Water Year 1976 that began in October of
- 3 '75?
- 4 WITNESS NADER-TEHRANI: That's correct.
- 5 MR. SALMON: Thanks.
- 6 Can we look at DWR-513, please.
- 7 (Document displayed on screen.)
- 8 MR. SALMON: So we can just look at this slide
- 9 for the moment.
- 10 Actually, the first five pages contain similar
- 11 bar graphs to this that contain monthly averages; is
- 12 that --
- 13 WITNESS NADER-TEHRANI: That's --
- MR. SALMON: -- correct?
- 15 WITNESS NADER-TEHRANI: -- correct, yes,
- 16 um-hmm.
- MR. SALMON: So there aren't any labels on this
- 18 exhibit -- this chart to tell us which time period is
- 19 being averaged.
- Do these graphs show averages for October 1975
- through September 1991?
- 22 WITNESS NADER-TEHRANI: That's correct.
- MR. SALMON: Okay. Thank you.
- Can we look at Document 4 from the flash drive,
- 25 please.

```
1 (Document displayed on screen.)
```

- 2 MR. SALMON: Thanks. I'll identify this as
- 3 East Bay MUD X-3.
- 4 (East Bay Municipal Utilities
- 5 District Exhibit X-3 marked for
- 6 identification)
- 7 CO-HEARING OFFICER DODUC: And what is it for
- 8 the record?
- 9 MR. SALMON: So, this is a screenshot of DSSVue
- 10 software showing DSM-2 model output.
- Do you, Mr. Nader-Tehrani, recognize that as
- 12 such?
- 13 WITNESS NADER-TEHRANI: Yes.
- MR. SALMON: Do you see in the filing box near
- 15 the top of the letter that appears in the lower half
- 16 where it says it's a DSM-2 model file prepared for the
- 17 CWF hearing?
- 18 WITNESS NADER-TEHRANI: Yes, um-hmm.
- 19 MR. SALMON: And in the column where the red
- 20 box is, "Part D/range" --
- 21 WITNESS NADER-TEHRANI: Yes.
- MR. SALMON: -- do you see that?
- 23 WITNESS NADER-TEHRANI: Yes.
- MR. SALMON: I just want to -- And I'm asking
- 25 this just so that we -- for informational purposes. I

1 want to make sure we understand what data is included in

- 2 the model output.
- 3 So that data there says October 1st, 1974
- 4 through September 1st, 1991; right?
- 5 WITNESS NADER-TEHRANI: That's correct.
- 6 MR. SALMON: Okay. Is -- Why do you -- Do you
- 7 know why it says October 1974 instead of 1975?
- 8 WITNESS NADER-TEHRANI: Yes, I can explain
- 9 that.
- 10 MR. SALMON: Okay.
- 11 WITNESS NADER-TEHRANI: We routinely use
- 12 actually simulator models for 17 years, and so there's an
- 13 extra year in the beginning. We call that the warmup
- 14 period because we don't -- in order to run the model, we
- 15 need what's called an initial condition, which is --
- 16 means that they -- what is the Delta flows and -- and
- 17 water quality throughout the Delta?
- Because we don't have a good information on
- 19 that, we actually run the model for a year, and then at
- 20 the end of the year, now we have a much better estimate
- 21 of what the flows and water levels and water quality is.
- 22 So we basically ignore that first year. We
- 23 call that the warmup period, and only report the 16
- 24 years' followup after that.
- 25 MR. SALMON: Okay. So the Water Year 1975

```
1 data, which began in October 1974, is not included within
```

- 2 any of the results presented in your testimony --
- 3 WITNESS NADER-TEHRANI: That's correct.
- 4 MR. SALMON: -- is that correct?
- 5 WITNESS NADER-TEHRANI: That's correct.
- 6 MR. SALMON: All right. Thanks. That is
- 7 helpful.
- 8 The time period modeled with DSM-2 concluded in
- 9 September 1991 with the end of Water Year '91; is that
- 10 right?
- 11 WITNESS NADER-TEHRANI: That's correct.
- MR. SALMON: Why wasn't the full '87 to '92
- drought period simulated? And by -- What I'm referring
- 14 to as the Water Year 1992, why was that not included?
- 15 WITNESS NADER-TEHRANI: There -- I think there
- 16 was a -- This decision goes back several years ago as
- 17 part of the choice for the -- the years that are
- 18 simulated. This goes back to, probably, late 1990s.
- 19 DWR has an exhibit -- and I can point to that
- 20 exhibit -- that kind of discusses the rationale for
- 21 choosing the 16-year period.
- The goal was to have a similar spectrum of
- 23 Water Year types in the 16-year period as opposed to the
- 24 larger -- the longer time period included in CalSim.
- MR. SALMON: Is it your understanding that

1 Water Year '92 was excluded based on the similar spectrum

- 2 rationale?
- 3 WITNESS NADER-TEHRANI: I don't remember
- 4 specifically what, you know -- There was no special
- 5 reason to exclude '92 -- 1992 water year. It's just --
- 6 They're -- Within the 16-year period, we have a number of
- 7 wet years and dry years '76-77, very extreme dry year,
- 8 and the drought that extends from '87 to '91.
- 9 MR. SALMON: Is -- So, to the best of your
- 10 knowledge --
- 11 WITNESS NADER-TEHRANI: One second.
- MR. SALMON: Sorry.
- 13 WITNESS BRYAN: That memo that he referred to
- is in Appendix 5A, Section D12 of the Draft EIR/EIS.
- 15 MR. SALMON: And that explains the rationale
- 16 for why the specific years were chosen?
- 17 WITNESS BRYAN: It explains -- It compares why
- 18 the 16 years were chosen as opposed to an 82-year period
- in those 16 years, yes.
- MR. SALMON: I don't have that in front of me.
- 21 Was that the memorandum to Cathy Crothers or was that a
- 22 different document?
- 23 WITNESS BRYAN: It's also DWR Exhibit 511.
- MR. SALMON: So it is that document that
- 25 you're --

- 1 WITNESS BRYAN: Yes.
- 2 MR. SALMON: -- referring to?
- 3 Thank you.
- 4 To the best of your knowledge,
- 5 Mr. Nader-Tehrani, was there any data quality reason why
- 6 Water Year '92 is not included?
- 7 WITNESS NADER-TEHRANI: No.
- MR. SALMON: What about the years after '92,
- 9 from '92 up to 2015? Is it the same -- Well, let me just
- 10 ask:
- 11 Is there any reason that you're aware of why
- 12 that -- those water years were not included in the model?
- 13 WITNESS NADER-TEHRANI: Well, CalSim only goes
- 14 up to 2003, if I'm not mistaken, so the hydrology
- 15 information required to do DSM-2 modeling beyond 2003 is
- 16 not even available.
- 17 MR. SALMON: So how about for between '92 and
- 18 2003? Is there a reason why that was not included?
- 19 WITNESS NADER-TEHRANI: No. Again, the goal
- 20 behind the choice of the 16 years was, we wanted a period
- 21 that represent the kind of conditions that are
- 22 encountered in the entire spectrum of water years. And
- 23 we feel the 16 years that were chosen is an appropriate
- indication of what you would see under the longer period.
- MR. SALMON: Okay. I'd like to ask you about

- 1 that.
- 2 Yeah. You mentioned a similar spectrum in your
- 3 testimony.
- 4 WITNESS NADER-TEHRANI: Yes.
- 5 MR. SALMON: And I think you've explained what
- 6 you meant by "similar spectrum," but let me make sure I
- 7 understand.
- 8 You mean a similar distribution of Water Year
- 9 types?
- 10 WITNESS NADER-TEHRANI: Not exactly the same,
- 11 but similar.
- MR. SALMON: Can we look at DWR-511.
- 13 (Document displayed on screen.)
- MR. SALMON: And Page -- The page numbering is
- 15 a little different but it's 5A-D212. Looks like about
- 16 five pages down.
- 17 (Scrolling down document.)
- 18 MR. SALMON: There's a table on the page. You
- 19 should be able to spot it.
- 20 (Scrolling down document.)
- MR. SALMON: That's it. Thanks.
- 22 So do you -- You can take a moment to look at
- 23 it, but do you know what this table is showing?
- 24 WITNESS NADER-TEHRANI: Yes. Regarding this
- 25 document, I would -- I would like for Miss Tara Smith

- 1 to -- because she's better familiar with this document.
- 2 MR. SALMON: That's fine.
- 3 WITNESS SMITH: I -- I generally remember what
- 4 this table is in regard to, yes.
- 5 MR. SALMON: Can you describe what the table is
- 6 showing?
- 7 WITNESS SMITH: We're looking at -- You have
- 8 the different year types on the left, wet, above normal,
- 9 below normal, dry and critical. On the top, you have the
- 10 82-year, 16-year percentage types, and then number of
- 11 years in type, and years in type. And then you can see
- 12 the percentage number of years.
- 13 So, in a wet year, the '82-year percentage is
- 32 and the 16-year is about 25, above normal is 15 and
- 15 16-year percentage is 13, below normal 17 and 6, dry
- 22 percent, 25 percent, and critical 15-year versus
- 17 31 percent.
- 18 MR. SALMON: Okay. So the table is comparing
- 19 the distribution of water years in the CalSim water
- 20 period to the DSM-2 model period; is that correct?
- 21 WITNESS SMITH: That is correct.
- MR. SALMON: Okay. And what . . .
- Okay. Would -- Is it fair to say that the dry
- 24 and critically dry years receive greater representation
- in the 16-year period on a proportionate basis than they

- did in the CalSim 82-year period?
- WITNESS SMITH: Yes. On a percentage basis,
- 3 the dry and critical year, there was a higher percentage
- 4 in the 16-year.
- 5 MR. SALMON: Okay. And I would ask this to
- 6 anyone on the panel.
- 7 Why is a 16-year period that gives a greater
- 8 representation to drier year types than the longer term
- 9 average used for -- or longer term data set used for
- 10 CalSim appropriate to model the WaterFix Projects'
- 11 impacts?
- 12 WITNESS NADER-TEHRANI: I think I can make a
- 13 comment about that.
- I have -- Regarding the suitability of the
- 15 16-year period, I have specifically looked at the water
- 16 quality hydrodynamic results at different locations in
- 17 the Delta. We've -- I've -- We've looked at the 82-year
- 18 DSM-2 runs and compared them to the 16-year.
- 19 And, like I said and was said earlier, the
- 20 proper use of the model is looking at the incremental
- 21 changes between a base and a project.
- 22 And what I looked at was, looking at the
- incremental changes that are shown in the 16-year
- 24 simulation and compare that with the 82 years of
- 25 simulation, the question is, do we reach a similar

- 1 conclusion when you we that?
- 2 And -- And -- And, consistently, what I saw was
- 3 that I would -- I would reach the same conclusion with
- 4 respect to water quality, flows, in terms of incremental
- 5 changes of a project, in this case the California
- 6 WaterFix, to the No-Action Alternative.
- 7 And so that would make me feel that the 16-year
- 8 would be an adequate representation of what you would
- 9 expect to see under the 82 years.
- 10 MR. SALMON: Are you saying that, after the
- 11 model runs were complete, you compared -- you did a
- 12 comparison to see whether the DSM-2 matched the CalSim?
- 13 WITNESS NADER-TEHRANI: No.
- MR. SALMON: Okay. I'm --
- 15 WITNESS NADER-TEHRANI: Let me -- So take an
- 16 example, Emmaton, water quality at Emmaton. You saw the
- 17 bar graphs that describe the changes in water quality at
- 18 Emmaton comparing base versus the alternative.
- 19 Now, imagine we repeat the same analysis but
- 20 this time based on 82 years. And what I saw is that you
- 21 would see a similar pattern in terms of changes in water
- 22 quality when you look at the 16-year and compare it to
- 23 what you would expect to see under 82-year. And for that
- reason, I believe the 16-year would be an adequate
- 25 representation of the effects of the Project.

- 1 MR. SALMON: Is it possible that a different
- 2 mix of Water Year types in the 16-year sample could
- 3 affect the patterns that show up in that analysis that
- 4 you just described?
- 5 WITNESS NADER-TEHRANI: I think the analysis
- 6 that -- that I just described proved to me the adequacy
- 7 of the 16-year.
- 8 MR. SALMON: Is it possible that a different
- 9 mix of water types would change what you see when you do
- 10 that analysis?
- 11 WITNESS NADER-TEHRANI: Of course. If I choose
- 12 a different 16-year period, I may reach a different
- 13 conclusion.
- MR. SALMON: So your conclusion about the
- 15 adequacy of the 16-year period is limited to the specific
- 16 16 years that were chosen?
- 17 WITNESS NADER-TEHRANI: That is correct.
- 18 MR. SALMON: The WaterFix modeling shows that
- 19 North Delta Diversions would tend to occur primarily in
- 20 winter and spring, especially in wetter years.
- Do you agree with that?
- 22 WITNESS NADER-TEHRANI: I would say the
- 23 higher -- I mean, perhaps Armin should . . .
- 24 WITNESS MUNÉVAR: Yeah. I think that's
- 25 generally correct, although not exclusively in winter and

- 1 spring.
- 2 MR. SALMON: Okay. So given that the DSM-2
- 3 model period overweights drier years compared with the
- 4 82-year period, and given that the WaterFix -- the new
- 5 North Delta Intakes will tend to be used more often in
- 6 wetter conditions, why are you not -- why are you not
- 7 concerned about the adequacy of the representation of the
- 8 effects of WaterFix?
- 9 WITNESS NADER-TEHRANI: Well, if -- If there
- 10 was an issue with respect to the choices that were made
- in terms of a -- a bias towards the Water Year types, I
- would have been able to detect it with the analysis I
- made when I compared the 16-year results versus the 82,
- 14 and because of the fact that I didn't see, you know, a
- difference that would lead me to a different conclusion,
- 16 I -- I feel that the -- that the choice of the period was
- 17 appropriate.
- 18 MR. SALMON: Okay. Maybe Ms. White could
- 19 answer this because it's -- I have a question about the
- 20 Draft BA analysis.
- Is it true that 82 years were simulated under
- DSM-2 for purposes of the Draft BA analysis?
- 23 WITNESS WHITE: I'm going to refer to more
- 24 people familiar with the water quality analysis in
- 25 the Draft BA.

- 2 the Draft BA.
- 3 WITNESS BUCCHOLZ: Yes, the Draft BA analysis
- 4 included the 82 years.
- 5 MR. SALMON: Do you know why a decision was
- 6 made to model 82 years for purposes of the Draft BA under
- 7 DSM-2 but not for the WaterFix hearing analysis?
- 8 WITNESS MUNÉVAR: My understanding is that was
- 9 at the request of the fishery agencies, to conduct the
- 10 82-year DSM-2 simulation.
- MR. SALMON: Okay. Did you review those
- results, Mr. Nader-Tehrani, the 82 years?
- 13 WITNESS NADER-TEHRANI: Not specifically for
- 14 BA.
- 15 MR. SALMON: Okay. So you're not aware whether
- there are different patterns displayed in the 82-year
- 17 data set?
- 18 WITNESS NADER-TEHRANI: Not for the BA. The
- 19 analysis I made was actually based on the California
- 20 WaterFix alternatives.
- 21 MR. SALMON: Okay. One more clarifying
- 22 question that's related.
- Exhibit DWR-513.
- 24 (Document displayed on screen.)
- MR. SALMON: On Page 10 of that document.

- 1 (Document displayed on screen.)
- 2 MR. SALMON: So the -- This again relates to
- 3 the period that was modeled.
- 4 This graph on the X-Axis goes from 1975 through
- 5 1990.
- 6 Why does that differ from the '76 to '91 period
- 7 that's described in your testimony?
- 8 WITNESS NADER-TEHRANI: Yeah. This particular
- 9 graph refers to meeting the 150-milligram per liter
- 10 chloride concentration for a certain number of days in a
- 11 Calendar Year, and the simulations ended in September of
- 12 1991. There were not enough days in the simulation to
- 13 show the results for 1991.
- MR. SALMON: And, similarly, 1975 was included?
- 15 WITNESS NADER-TEHRANI: Well, that's because
- we -- we actually had the simulations for 1975.
- 17 MR. SALMON: So this is one place where the
- 18 1975 data from Calendar Year '75 was --
- 19 WITNESS NADER-TEHRANI: Yeah. Because that
- 20 was, again, nine months into the simulation. So, as far
- 21 as the adequacy of the warm water period I was referring
- 22 to, that there is -- there is adequate information that
- 23 we can rely on the first two months of 1975.
- MR. SALMON: So at least for purposes of this
- 25 analysis shown on this graph, there was a different --

- 1 different data -- data set period used than for --
- 2 WITNESS NADER-TEHRANI: Yes. Those three
- 3 months for this purpose.
- 4 MR. SALMON: Okay. I'd like to ask a few
- 5 additional questions about the North Delta bypass flows
- 6 and how they were modeled.
- 7 So, Mr. Nader-Tehrani, can you explain
- 8 physically where the bypass flow requirement would apply?
- 9 Or any of the panel?
- 10 WITNESS MUNÉVAR: Well, physically, it would --
- 11 it would apply at the downstream of the most downstream
- 12 intake.
- 13 MR. SALMON: And were the specific criteria
- developed using the DSM-2 model?
- 15 WITNESS NADER-TEHRANI: No.
- MR. SALMON: Were they developed using any
- 17 model?
- 18 WITNESS MUNÉVAR: Criteria were largely based
- 19 on -- on fishery agency input on the adequacy of flows in
- 20 the river at certain time conditions.
- 21 There -- There was also a consideration for the
- 22 flows in the river that might provide substantial
- 23 unidirection or downstream flow and to protect those
- 24 periods in which there could be some possibility of
- 25 reverse flows. That was the basis for the -- for the

- 1 tables that I presented.
- 2 MR. SALMON: Do you recall which stretch of the
- 3 river the reverse flows factored into that analysis?
- 4 Reverse flows where?
- 5 WITNESS MUNÉVAR: It was a broad consideration
- 6 along the Sacramento River, primarily for looking at
- 7 fishery impacts.
- 8 MR. SALMON: Okay. So, north of -- Or upstream
- 9 of Georgiana Slough up to Freeport, were reverse flows
- 10 taken into account, to your knowledge, in the development
- of the bypass flow criteria?
- 12 WITNESS MUNÉVAR: There was a consideration
- of -- of net flows in the Sacramento River in which
- 14 unidirectional flows might occur on an hourly basis.
- 15 There was a broad consideration over 2007 through 2010.
- MR. SALMON: What do you mean by
- "unidirectional"?
- 18 WITNESS MUNÉVAR: The flows in the Sac -- If
- 19 you look at a daily Sacramento River flow, at which flows
- 20 might you not see any single 15-minute or hourly reversal
- 21 on the tidal cycle.
- MR. SALMON: Okay.
- 23 WITNESS MUNÉVAR: So on very high flows, you
- don't get -- there is no reversal; at low flows, there
- 25 are reversals over some time period; and at moderate

- 1 flows, there's a chance there may be a few 15-minute or
- 2 hourly intervals in which you have reverse flows.
- 3 MR. SALMON: Okay.
- 4 WITNESS MUNÉVAR: These are reverse flows not
- 5 caused by the Project; it's tidal action in the system.
- 6 MR. SALMON: Understood.
- 7 So those -- The reverse flows were taken into
- 8 account in the development of the North Delta flow
- 9 criteria but with an eye towards fisheries' concerns; is
- 10 that accurate?
- 11 WITNESS MUNÉVAR: I think that's accurate, yes.
- MR. SALMON: Okay. Were the DSM-2 model
- 13 simulations for the two boundary scenarios checked for
- 14 compliance with the North Delta bypass flow criteria?
- 15 WITNESS NADER-TEHRANI: Yes, and to basically
- 16 use the information from CalSim. And, yes, so if CalSim
- 17 enforced a certain bypass flow, that would be naturally
- 18 met.
- 19 MR. SALMON: So there's no additional check
- 20 that you perform.
- 21 WITNESS NADER-TEHRANI: That's not, either.
- 22 MR. SALMON: Okay. And did CalSim -- What --
- 23 What CalSim checking was done to assess compliance of the
- 24 boundary scenarios with the North Delta bypass flow
- 25 criteria?

```
1 WITNESS MUNÉVAR: The boundary scenarios and
```

- 2 the WaterFix scenarios have an identical implementation
- 3 of the North Delta bypass flows, so those are -- are
- 4 simulated -- or input parameters into the CalSim II
- 5 model, and -- and the output has confirmed that the
- operations are per the input, per the required inputs.
- 7 MR. SALMON: Okay. I'd like to look at DWR-5,
- 8 or 5e, let's make it.
- 9 (Document displayed on screen.)
- MR. SALMON: Page 26.
- 11 (Document displayed on screen.)
- 12 MR. SALMON: That's a slide from the Modeling
- 13 presentation that's titled "NDD bypass Flow Requirements
- 14 Example Dry year (1987)."
- So, I'd like a little help interpreting the
- 16 slide, so the questions are for whichever Panel Members
- 17 are most knowledgeable about this chart.
- Does this chart show model results?
- 19 WITNESS MUNÉVAR: This chart shows model
- 20 results but it's an example, so I -- it's not necessarily
- 21 from one of the -- the operations that are -- that were
- 22 shown for the WaterFix. It's an example.
- 23 MR. SALMON: The model -- There was a model run
- 24 that was done to generate this output; is that correct?
- 25 WITNESS MUNÉVAR: Correct. But this -- This

- 1 model run was -- is meant to be an illustration but not
- 2 necessarily a 1987 output of one of the alternatives. I
- 3 believe this might have been -- might have been the
- 4 alternative in the BA H3+.
- 5 MR. SALMON: Okay. Thanks.
- 6 WITNESS MUNÉVAR: The graphic is meant to be
- 7 illustrative of the -- of the operation criteria under a
- 8 particular dry-year technology.
- 9 MR. SALMON: Okay. And is that a daily
- 10 time-step in that output data that's plotted on this
- 11 chart?
- 12 WITNESS MUNÉVAR: That's correct.
- MR. SALMON: Was -- So this example was not
- included within the DSM-2 or the CalSim modeling? Is
- this a separate -- Well, just the first question:
- 16 Was this included within the modeling analysis
- 17 that's presented in the testimony?
- 18 WITNESS MUNÉVAR: This operation is -- is from
- 19 a CalSim modeling that applies specifically for the North
- 20 Delta Diversion as a sub-monthly time-step, a daily
- 21 analysis that enables it to operate the North Delta
- 22 Diversion more adequately than a monthly analysis.
- 23 MR. SALMON: Did -- Did you perform the
- 24 analysis, Mr. Munévar?
- 25 WITNESS MUNÉVAR: I did.

```
1 MR. SALMON: Did you analyze October 1986
```

- 2 hydrodynamics? That's the first month there.
- 3 WITNESS MUNÉVAR: Well, hydrodynamics would be
- 4 related to the DSM-2 modeling, not the CalSim modeling --
- 5 MR. SALMON: Okay.
- 6 WITNESS MUNÉVAR: -- and I did not perform
- 7 that.
- 8 MR. SALMON: Did any member of the panel
- 9 analyze the hydrodynamics during that period?
- 10 WITNESS NADER-TEHRANI: I believe these are
- also based on CalSim flows; aren't they?
- 12 WITNESS MUNÉVAR: These are CalSim flows.
- MR. SALMON: Okay. So were reverse flows above
- 14 or below the intakes analyzed in the development of this
- 15 chart?
- 16 WITNESS MUNÉVAR: No. Again, this chart is
- 17 illustrative of the North Delta requirement. I think
- 18 Dr. Nader-Tehrani talked about the reverse flows that
- 19 have been analyzed for the whole 16-year period.
- MR. SALMON: Yeah. We're just trying to figure
- 21 out how that would -- how that would operate, how
- 22 operations -- modeled operations would interact with
- 23 those criteria, how the criteria would affect the
- 24 operations.
- 25 WITNESS MUNÉVAR: I understand.

```
1 MR. SALMON: So, in November 1986, just using
```

- 2 that as an example -- it's the second monitor -- is there
- 3 any reason why that green line, which I understand --
- 4 It's labeled "ND Diversion."
- 5 So the green line I understand to represent
- 6 use -- water diverted through the North Delta facilities.
- 7 Is there any reason, during that month of
- 8 November '86, why that green line could not be higher?
- 9 Why more -- In other words, why more water could not be
- 10 taken through the North Delta Intakes during that model?
- 11 WITNESS MUNÉVAR: My understanding would be
- that we may be having a constant low-level pumping
- 13 criteria applied to this period.
- MR. SALMON: Would that be a limiting factor on
- 15 these new North Delta intake?
- 16 WITNESS MUNÉVAR: No. I'm not -- There could
- 17 be other factors that are driving the operation this
- 18 particular November, so this has a -- This operation
- 19 considers many other things that are occurring in
- 20 the Delta, so it could be a salinity control that's
- 21 limiting the amount of diversion, or it could be an
- 22 outflow, it could be a Fall X2 condition.
- MR. SALMON: So --
- 24 WITNESS MUNÉVAR: I don't know, per se.
- 25 MR. SALMON: So the D-1641 requirements and the

- 1 RPAs and requirements along those lines are incorporated
- 2 into the assumed level of North Delta Diversions in this
- 3 chart?
- 4 WITNESS MUNÉVAR: Yes.
- 5 MR. SALMON: Okay. But you don't know sitting
- 6 here which -- which limiting factor might be limiting the
- 7 use of the North Delta Diversion in this example?
- 8 WITNESS MUNÉVAR: Not for that particular
- 9 November.
- 10 MR. SALMON: Okay. How about the summer months
- of 1987, July, August, September 1987? That's the last
- 12 three months on this chart, I believe.
- So it appears there's constant low-level
- 14 pumping going on at the North Delta intake during that
- 15 period; is that right?
- 16 WITNESS MUNÉVAR: Correct. But I think what
- 17 you're seeing here, and may be similar to the November,
- 18 is that there are other controlling requirements that are
- 19 limiting the amount that could be diverted from the North
- 20 Delta Diversion, not necessarily the bypass flows
- 21 themselves.
- 22 MR. SALMON: Okay. So, do you -- Could there
- 23 have been North Delta Diversions above the level of
- 24 diversion shown for those three months during that
- 25 period, to the best of your knowledge?

- 1 WITNESS MUNÉVAR: To the best of my knowledge,
- 2 it would be highly unlikely. These are low Sacramento
- 3 River flows. Generally, we find flows between 10 and
- 4 12,000 cfs in the summer are likely required to meet
- 5 Emmaton's salinity standard.
- 6 So it would be highly unlikely that the other
- 7 controlling requirements would enable North Delta
- 8 Diversions to occur.
- 9 MR. SALMON: So it's, in your view, likely an
- 10 in-Delta salinity standard that's limiting the level of
- 11 diversion at the new intake there?
- 12 WITNESS MUNÉVAR: Correct.
- 13 And then we also have a criteria in the North
- 14 Delta Diversion which says, in the summer, we would
- 15 prefer to take the first 3,000 cfs of diversion from the
- 16 South Delta intakes as opposed to the north.
- 17 I don't know what the specific South Delta
- 18 diversions are, but they would be preferred over the
- 19 North Delta in July, August and September.
- MR. SALMON: Is that an assumption incorporated
- into the model, that preference?
- 22 WITNESS MUNÉVAR: It is.
- MR. SALMON: Is there any operational
- 24 requirement that's been proposed to require that, or is
- 25 it an assumption of Operator flexibility, or something

- 1 else?
- 2 WITNESS MUNÉVAR: It's an assumption in the
- 3 modeling. I believe it's described in the modeling
- 4 details of Appendix 5A. And it was -- it was developed
- 5 largely for operational discretion for water quality in
- 6 South Delta.
- 7 MR. SALMON: Are you aware of whether it's a
- 8 requirement of operation that you were asked to model or
- 9 is it --
- 10 WITNESS MUNÉVAR: It's not an existing
- 11 requirement, and I'm not aware of it being applied as a
- 12 requirement on this Project.
- MR. SALMON: Okay. So were you trying to
- simulate Operator judgment in incorporating that 3,000
- 15 assumption?
- 16 WITNESS MUNÉVAR: Well, I think both Operator
- 17 judgment and it's been written into the assumptions for
- 18 the Proposed Project that, during those conditions, July,
- 19 August and September, preferential pumping would occur
- 20 from the South Delta in order to facilitate movement of
- 21 fresher water into the South Delta as opposed to
- 22 diverting from the North Delta.
- MR. SALMON: Okay. You said there were
- 24 assumptions. You're referring to the modeling
- 25 assumptions?

- 1 WITNESS MUNÉVAR: Modeling assumptions. And I
- don't recall if it's written in the Proposed Project
- 3 description. It may be.
- 4 WITNESS BUCHHOLZ: It's also in the alternative
- 5 assumptions in Chapter 3 in the EIR/EIS, and also in 5 of
- 6 the Biological Assessment.
- 7 MR. SALMON: Okay. Thank you.
- I have no further questions for the panel.
- 9 My colleague, I believe, has some questions for
- 10 Sacramento County Water Agency.
- 11 CO-HEARING OFFICER DODUC: Thank you.
- Mr. Ferguson?
- MR. FERGUSON: Yes.
- 14 CO-HEARING OFFICER DODUC: How much time do you
- 15 expect needing for your groundwater-related questions?
- MR. FERGUSON: Maybe 10 minutes.
- 17 CO-HEARING OFFICER DODUC: Okay.
- 18 MR. FERGUSON: Yeah.
- 19 CO-HEARING OFFICER DODUC: Proceed.
- 20 And we will take our lunch break after that.
- MR. FERGUSON: Good morning. My name's Aaron
- 22 Ferguson. I'm here on behalf of the Sacramento County
- 23 Water Agency.
- 24 CROSS-EXAMINATION BY
- MR. FERGUSON: I just have a few questions

- 1 related to groundwater levels and the potential
- 2 groundwater service water interaction and -- and
- 3 groundwater impacts.
- 4 So, I'll direct my questions initially at
- 5 Mr. Tehrani.
- 6 You testified that there will not be negative
- 7 effects to legal users of water due to water level
- 8 changes; is that correct?
- 9 WITNESS NADER-TEHRANI: That is correct.
- 10 MR. FERGUSON: Okay. How did you reach the
- 11 conclusion that there wouldn't be negative effects based
- on the model changes in water levels?
- 13 WITNESS NADER-TEHRANI: The graphs I showed,
- and perhaps we should put that on the . . .
- 15 MR. MIZELL: Mr. Long, if we could put DWR-5e
- 16 up for Mr. Tehrani.
- WITNESS NADER-TEHRANI: Page 76.
- 18 (Document displayed on screen.)
- MR. MIZELL: Page 76?
- 20 WITNESS NADER-TEHRANI: Page 76.
- 21 (Document displayed on screen.)
- 22 WITNESS NADER-TEHRANI: Four more down.
- 23 (Document displayed on screen.)
- 24 WITNESS NADER-TEHRANI: So, this is the plot I
- 25 showed. This is the water level output corresponding to

1 the location along Sacramento River downstream from the

- 2 three proposed intakes.
- 3 This represents the -- the largest change cause
- 4 in water surface elevation. And in order to look at the
- 5 changes in water level, I'm comparing the results for the
- 6 No-Action represented by the black line to all other ones
- 7 that kind of line up.
- 8 And looking at the changes in water level,
- 9 again, to reiterate, the points that are towards the
- 10 right end -- the left end of the graph represent the high
- 11 flows, and I -- and I explained that's about a foot, and
- 12 toward the low flows, about half a foot.
- 13 But I further explained that the water level
- 14 corresponding to the -- the four operational scenarios go
- 15 below the No-Action Alternative. Only three days in the
- 16 entire 16 years. That's five days in a year.
- And also the fact that those low events only
- 18 occurred during a short duration of time. There is a
- 19 tidal influence at this location and the low flows. The
- 20 tidal amplitude, the difference between low and high, is
- 21 between 2 to 4 feet, so -- And during the rest of the
- time, the water levels are going to be much higher than
- 23 the low waters that are reflected here.
- 24 And for those reasons, I made the -- reached
- 25 the conclusion that there would not be a -- an impact to

- 1 the legal users of water based on water level.
- 2 All other locations showed a lower change.
- 3 MR. FERGUSON: So it appears you're focused on
- 4 changes in minimum water levels in the river; is that
- 5 correct?
- 6 WITNESS NADER-TEHRANI: That is correct.
- 7 MR. FERGUSON: Okay. Were -- Were you -- Were
- 8 you directed to conduct such an analysis of minimum water
- 9 levels to assess injury to legal users of water?
- 10 WITNESS NADER-TEHRANI: That -- That was a
- 11 choice I made, but I consulted with the attorneys. I was
- 12 trying to figure out. I -- You know, I assume there are
- 13 farmers they're diverting water from -- from within that
- 14 area. And in order to assess whether WaterFix would
- 15 affect their ability, I assumed that the biggest concern
- 16 would be the lowest water levels, so that's the choice I
- 17 made at that point.
- 18 MR. FERGUSON: So it sounds like the concern
- 19 was a -- potential effects on surface water diversions;
- 20 is that correct?
- 21 WITNESS NADER-TEHRANI: That is correct.
- MR. FERGUSON: Okay.
- 23 WITNESS NADER-TEHRANI: I must add that I have
- looked at the -- the maximum daily stage plots, and they
- look very similar, with similar changes.

- 1 MR. FERGUSON: Okay. Thank you.
- 2 So, did you run any other types of water level
- 3 comparisons between the No-Action Alternative and the
- 4 Project alternatives?
- 5 For example, did you assess long-term changes
- 6 in water -- in average water levels?
- 7 WITNESS NADER-TEHRANI: What -- What you see
- 8 here is the long-term effects on water levels. This
- 9 line -- This graph represents a 16-year simulation, so
- 10 the entire spectrum from the very wet years to the very
- 11 dry years.
- 12 MR. FERGUSON: But it's only with respect to
- 13 minimum water levels; correct?
- 14 WITNESS NADER-TEHRANI: As I -- As I described
- 15 earlier, I have looked at the similar chart represented
- 16 by the daily maximum water levels, and I saw a similar
- 17 shape and similar change.
- 18 But I chose this one because that was my
- 19 assumption, that I'm looking at how it's going to affect
- anybody who's diverting surface water from that area.
- 21 That was the choice I made.
- Now, in hindsight, I perhaps should have
- 23 included the higher one, but I have looked at it, the
- 24 maximum daily water levels. And I saw it's very similar
- 25 shape and a similar change, you know, indicated by

- 1 those -- those levels.
- 2 MR. FERGUSON: So if you'd shown the high side,
- 3 as you indicated, what -- what -- what sort of
- 4 information would that give you with respect to -- to
- 5 water levels? Why did you suggest that?
- 6 WITNESS NADER-TEHRANI: Why -- What is your
- 7 question?
- 8 MR. FERGUSON: Sorry.
- 9 What sort of information would that give you
- 10 with respect to change in water levels comparing the
- 11 No-Action Alternative to the various Project alternatives
- if you were to include the -- the maximum?
- 13 WITNESS NADER-TEHRANI: Well, that chart, if I
- 14 chose the maximum stage, it would show the effect or the
- 15 reduction in water level based on maximum water level at
- 16 a given location. So that's really the basic different
- between that and the plot that you see in front of you.
- 18 MR. FERGUSON: Did you or anyone else on the
- 19 Modeling Team assess stream or groundwater interactions
- in the area of the North Delta Diversions?
- 21 WITNESS NADER-TEHRANI: I did not. I don't
- 22 know.
- 23 MR. FERGUSON: Do you know if changes in water
- levels are relevant in assessing stream water
- 25 interactions in the area of the North Delta Diversions?

- 1 Would there be?
- 2 WITNESS NADER-TEHRANI: That's not an area of
- 3 my expertise.
- 4 MR. FERGUSON: Does anybody else on the
- 5 Modeling Panel?
- 6 WITNESS BUCHHOLZ: What we did is, we used the
- 7 outputs -- We have a groundwater -- regional groundwater
- 8 model called Central Valley Hydrologic Model. It's
- 9 prepared by the United States Geological Survey.
- 10 And so that model, coming from the U.S.
- 11 Geological Survey, they provided all of the -- the
- 12 hydrogeological characteristics of the Delta -- well,
- 13 actually the entire Central Valley.
- 14 Based upon those characteristic assumptions, we
- 15 inputted the CalSim flows and ran a long-term basis to
- see whether or not we'd see any changes along the rivers
- 17 because of the groundwater surface water relationship due
- 18 to changes in flows when the river's coming out of CalSim
- 19 output.
- MR. FERGUSON: When you say changes along the
- 21 rivers, what do you mean?
- 22 WITNESS BUCHHOLZ: So, CalSim changed the --
- 23 the frequency and the flow patterns along the Sacramento
- 24 River as compared to the different alternatives as
- 25 compared to No-Action. And also with respect to

- 1 Sacramento River, American River, the changes in
- 2 Steamboat/Sutter Slough, the different parts of the -- if
- 3 we would see anyplace that we would have in CalSim
- 4 output.
- 5 MR. FERGUSON: Okay. So you're saying as part
- of that, that analysis, you did assess stream water
- 7 interactions in the area in or around the North Delta
- 8 Diversion?
- 9 WITNESS BUCHHOLZ: Right.
- 10 And then we looked, based upon using -- well --
- and I'll just the vernacular instead of saying it out --
- 12 CVHM, which is the acronym.
- We used that to determine whether or not we
- 14 would see higher or lower groundwater levels along those
- 15 rivers due to the change in -- for operations.
- 16 MR. FERGUSON: Where -- Where are those -- Are
- 17 those modeling results contained in the modeling package
- 18 that's been presented somewhere? Where would I find
- 19 those?
- 20 WITNESS BUCHHOLZ: So the -- the results that
- 21 we show for a peak -- for the maximum incremental
- 22 difference between No-Action and alternatives are in
- 23 figures for Chapter 7 of the Draft EIR/EIS. And there is
- 24 a -- I don't believe that the CVHM model runs are up on
- 25 the State Water Resources Control Board website, but I

1 know that State Water Resources has made them available

- 2 to whoever's asked for them.
- 3 MR. FERGUSON: Okay. So did those modeling
- 4 results should -- And maybe you said this. You said it
- 5 for a bit there.
- 6 Did those modeling results show a change in
- 7 groundwater recharge in what's called the South American
- 8 Subbasin adjacent to the intakes?
- 9 WITNESS BUCHHOLZ: Along the intakes, it's
- 10 actually interesting, because this set of model runs had
- 11 a -- another set of assumptions that's been subsequently
- 12 changed for the Project that we have in front of the
- 13 Board right now.
- 14 And -- And that was the change I spoke to in a
- 15 previous panel, the Engineering Panel, about the use of
- 16 slurry walls.
- 17 So we actually had a fair amount of additional
- 18 groundwater recharge occurring because of the
- 19 Intermediate Forebay.
- 20 And now that we have the slurry walls around
- 21 the Intermediate Forebay, that seepage has an adverse
- 22 impact that was occurring to groundwater because it was
- 23 raising the groundwater way high, and so that recharge
- doesn't occur.
- 25 However, just based upon the river changes, we

- 1 showed there's a slight increase in -- of -- let me get
- 2 my colors correct here -- of 1 to 5 feet around the
- 3 Freeport area. However, it could also go down -- down,
- 4 and then also along the Rio Vista area.
- 5 We also show that we could have a change of --
- 6 of a -- of a reduction in groundwater levels along the
- 7 American River area.
- 8 MR. FERGUSON: So, I think you -- you mentioned
- 9 that change. Did you say 1 to 5 feet?
- 10 WITNESS BUCHHOLZ: 1 to 5 feet increase, or 1
- 11 to 5 -- along the Sacramento River and a 1- to 5-foot
- 12 decrease along the Sacramento River.
- 13 MR. FERGUSON: And what sort of time period is
- 14 that over in terms of that change?
- 15 WITNESS BUCHHOLZ: So -- I knew you were going
- 16 to ask me that and I can't remember the years. It's not
- 17 the full 82 years on that. I -- Let me check Chapter 7
- on the -- on the -- the period of time we did it.
- 19 What it's done is, the analysis is run as a GIS
- 20 model output animation. And so what we did was, we
- 21 looked for the peak incremental differences during the
- 22 time frame that we -- the 42-year timeframe that we ran
- 23 the model runs.
- MR. FERGUSON: So you mentioned levels. Was
- 25 there any attempt to assess overall impacts on volume in

- 1 the basin --
- 2 WITNESS BUCHHOLZ: No.
- 3 MR. FERGUSON: -- volume of water in the basin?
- 4 WITNESS BUCHHOLZ: We did not analyze it in a
- 5 volumetric manner.
- 6 MR. FERGUSON: Okay. Do you -- Was that an
- 7 intentional decision not to analyze it in a volumetric
- 8 manner?
- 9 WITNESS BUCHHOLZ: We were focused in the
- 10 EIR/EIS on looking at where we anticipated -- how -- In
- 11 the EIR/EIS, we talk about in each of our chapters, and
- 12 including in Chapter 7 for groundwater, what would be the
- 13 best way to describe any changes that would occur under
- 14 the alternatives versus -- that would be meaningful as
- 15 compared to the No-Action and existing conditions.
- 16 We made a decision that water -- groundwater
- 17 elevations would be the most appropriate one to focus on.
- 18 MR. FERGUSON: Well, in -- in your opinion,
- 19 would a -- would a change in volumetric level be an
- 20 appropriate component for assessment of injuries to legal
- 21 users of water?
- 22 WITNESS BUCHHOLZ: The change in volumetric
- 23 level would be related to the change in groundwater
- 24 elevations, so --
- 25 MR. FERGUSON: So you -- In your opinion, you

- 1 felt comfortable that -- with the assessment in the
- 2 change in levels that served as a -- That's a surrogate
- 3 for -- or not surrogate?
- 4 WITNESS BUCHHOLZ: I think it's indicative of
- 5 the change in models --
- 6 MR. FERGUSON: Okay.
- 7 WITNESS BUCHHOLZ: -- you know.
- 8 MR. FERGUSON: And, so, is it your opinion with
- 9 the -- with the modeling indicating those changes in
- 10 levels, that there would not be injury to groundwater
- 11 users in the South American Subbasin?
- 12 WITNESS BUCHHOLZ: What we recommended in
- 13 the -- We -- We acknowledged that there potentially could
- 14 be, and we had mitigation measures within Chapter 7 of
- 15 the Draft EIR/EIS.
- We recognized that this is a regional
- 17 groundwater model, and so during design phase, there
- 18 would have to be very specific geotechnical surveys to
- 19 determine the types of hydrologic characteristics that
- 20 occur in the aquifer near the rivers as well as in
- 21 the intakes that could be affected by this, and that
- 22 would -- especially near the intakes because that's where
- 23 we're going to see the maximum change in elevations in
- 24 most cases.
- 25 And so we would also be looking at any specific

- 1 locations of water wells in that area at that time, as
- 2 I -- as I previously testified.
- 3 MR. FERGUSON: Right. I think we had a
- 4 conversation about some of these items.
- 5 I'm just trying to look a little more broadly
- 6 beyond the immediate impacts associated with the
- 7 construction, which is what I think we discussed
- 8 previously in talking --
- 9 WITNESS BUCHHOLZ: And those monitoring,
- 10 according to the mitigation measures, would be continuing
- in post as -- as operations start up, yes.
- 12 MR. FERGUSON: I'm trying to get you to answer
- 13 a little more broadly with respect to the area -- the
- 14 Reaches, you know, up and downstream of the intakes and
- in the surface water/groundwater interaction there, and
- 16 what we're seeing overall if there are any potential
- impacts to the basin --
- 18 WITNESS BUCHHOLZ: And we don't see that --
- 19 MR. FERGUSON: -- water levels or water
- 20 volumes.
- 21 WITNESS BUCHHOLZ: We don't see that in the
- 22 results of CVHM or CVHMD. The results in the -- in
- 23 Appendix 7A, as I said, or -- Actually, we show
- 24 increases, but that's because of the sea beach that would
- 25 have occurred at the Intermediate Forebay.

```
1 And we also show increases in groundwater
```

- 2 elevations down by Suisun Marsh in Rio Vista area, but
- 3 that was because of the tidal habitat restoration.
- 4 We did not redo these sets of models for any of
- 5 the other subsequent documents.
- 6 MR. FERGUSON: Okay. Thank you.
- 7 Was . . I'm going to come back to some of
- 8 your testimony, Mr. Tehrani.
- 9 Your testimony states that, with respect to the
- 10 water quality impacts, that except for Boundary 2 in the
- 11 months of July and August, there's an increase in EC at
- 12 Emmaton about 18 or 19 percent when compared to the
- No-Action Alternative; is that correct?
- 14 WITNESS NADER-TEHRANI: July and August, yes,
- um-hmm.
- MR. FERGUSON: Okay. So, in your opinion,
- 17 under these scenarios where EC is 18 or 19 percent higher
- 18 as compared to the No-Action Alternative, would you
- 19 expect to see a change in EC near the North Delta
- 20 Diversion?
- 21 WITNESS NADER-TEHRANI: Not near the North
- 22 Delta Diversion, no.
- MR. FERGUSON: And why is that?
- 24 WITNESS NADER-TEHRANI: Because it -- My -- My
- 25 understanding how Delta works, and I've actually looked

```
1 at the water quality data -- water quality output from
```

- 2 the model, and there's -- there's -- there is not a
- 3 salinity intrusion that go that far upstream.
- 4 MR. FERGUSON: So, in your opinion, it's the
- 5 salinity intrusion coming from the Bay which would --
- 6 which causes the salinity issues and the levels to go up
- 7 and down Emmaton. Is that what you're saying?
- 8 So you'd expect that same relationship, if you
- 9 will, or that same sort of . . . scenario, I quess, near
- 10 the North Delta Diversions; is that correct?
- 11 WITNESS NADER-TEHRANI: Well, as I said, I have
- 12 looked at the water quality results, and I see no trace
- 13 of ocean salinity intrusion anywhere near the intakes.
- MR. FERGUSON: Okay. Thank you.
- That concludes my questions. Thanks.
- 16 CO-HEARING OFFICER DODUC: Thank you,
- 17 Mr. Ferguson.
- 18 Let's do a quick check-in. Group Number 16?
- Okay. We will resume at 1:15 with
- 20 cross-examination by the South Valley Water Association
- 21 and Friant and et al., Group 16.
- 22 (Luncheon recess was taken at 12:14 p.m.)
- 23 WITNESS NADER-TEHRANI: Then perhaps, Armin,
- 24 you can --
- 25 WITNESS ANDERSON: I will go ahead and say:

- 1 For the DSM-2 model, it does not make any adjustments.
- 2 The flows that come into the DSM-2 model come straight
- 3 out of CalSim and are not further adjusted in the DSM-2
- 4 model.
- 5 WITNESS NADER-TEHRANI: Right.
- 6 And maybe you, Armin, can then explain what
- 7 would happen in the model if there is D-1641 water
- 8 quality objective.
- 9 WITNESS MUNÉVAR: Yeah.
- 10 As Parviz mentioned, CalSim believes it's
- 11 providing sufficient volumes of flow or export reductions
- in order to achieve the water quality results.
- 13 And through the -- the course of translating
- 14 CalSim to DSM-2, and daily time-stepping, those
- 15 exceedances are what Parviz has shown.
- 16 So there is no op -- There is no operational
- 17 response to a non-achievement in CalSim because it
- 18 believes it has achieved.
- 19 MS. MESERVE: Okay. Does the model look at --
- 20 Does it consider whether there would be any impacts on
- 21 levee stability due to the fluctuations in water level we
- 22 discussed earlier? Does it provide any information, I
- 23 guess I should say.
- 24 WITNESS NADER-TEHRANI: No.
- 25 MS. MESERVE: What steps are being taken now to

- 1 try to validate the model against real-time conditions in
- 2 the Delta that we've seen recently?
- 3 MR. BERLINER: Objection: Asked and answered.
- 4 CO-HEARING OFFICER DODUC: Remind me, please.
- 5 Please answer.
- 6 WITNESS SMITH: So, with DSM-2, we periodically
- 7 update the calibration of the model given new
- 8 information, new data, whether that's new telemetry data,
- 9 or we make changes to the model, we'll update the
- 10 calibration, when there is significant enough change to
- 11 where we think that that's going to make a change in the
- 12 modeling studies.
- So we continually work on that, including
- 14 consumptive use-related and drought-related activities.
- 15 MS. MESERVE: Okay. So it sounds like -- Is
- 16 your response that it's ongoing or . . .
- 17 WITNESS SMITH: Yes. Calibration is ongoing.
- 18 What we have currently for the California
- 19 WaterFix is the -- I would say there is no major changes
- 20 to significantly change what the calibration is. There's
- 21 been an updated calibration, but it's not significant
- 22 enough to -- to really affect the results of the
- 23 California WaterFix.
- MS. MESERVE: Let's see. I believe I already
- 25 asked that one.

1 Do the models try to include any assumptions

- 2 regarding seepage out of the channels as the water is
- 3 traveling, say, from a release from the storage into the
- 4 system?
- 5 WITNESS SMITH: Within the Delta Island
- 6 Consumptive Use Model, there is seepage included, so --
- 7 but . . . you're talking about seepage out of the islands
- 8 or seepage --
- 9 MS. MESERVE: Yeah. Actually, just to clarify,
- 10 I -- I believe the question refers to seepage upstream of
- 11 the Delta, if that's being taken into account somehow in
- 12 your model.
- 13 WITNESS MUNÉVAR: That's a different -- Yeah,
- 14 that's included in the CalSim model. There's a stream
- 15 groundwater interaction which incorporates the -- the
- 16 loss or the gain of water from groundwater into the
- 17 stream.
- 18 MS. MESERVE: Okay. Does the model try to --
- 19 Is there any assessment in the modeling to try to look at
- 20 the possible formation of the harmful algal blooms in the
- 21 Delta?
- 22 WITNESS BRYAN: Yeah. The -- So, in the EIR,
- 23 we looked at harmful algal blooms, microcystis in
- 24 particular. And one of the things that we can do is use
- 25 DSM-2 and its Particle Tracking Model to look at

- 1 residence times.
- 2 And the other aspect of hydrology that's very
- 3 important in microcystis is channel velocity, and we
- 4 talked about that earlier today, I think.
- 5 And so we looked at both residence time and how
- 6 that would differ between the Proposed Project and the
- 7 No-Action, as well as channel velocities.
- 8 MS. MESERVE: Did you use any specific models
- 9 that were designed for assessment of harmful algal
- 10 blooms, or were you just looking at those two factors?
- 11 WITNESS BRYAN: The way we did our assessment,
- 12 in a nutshell, is that if you look at microcystis, we
- 13 looked at its life history and how it accomplishes blooms
- in the Delta, what it needs in order to bloom in the
- 15 Delta.
- 16 It needs adequate nutrients, adequate light,
- 17 adequate temperature and typically doesn't bloom until
- 18 mid-to-late summer, and then adequate hydrology.
- 19 And so when you look at how the California
- 20 WaterFix alternatives can affect microcystis, they're not
- 21 going to affect those first three requirements very much
- 22 at all. So, really, the only way that the Proposed
- 23 Project can really affect microcystis is through the
- 24 hydrodynamic aspects, the hydrology aside.
- So, we had tools available through DSM-2 to

- 1 look at what's important here, both residence time and
- 2 velocities.
- 3 MS. MESERVE: Are there other models that
- 4 you're aware of that you didn't use for harmful algal
- 5 blooms?
- 6 WITNESS BRYAN: None that I'm aware of.
- 7 MS. MESERVE: Let's see. So you mentioned
- 8 about the late summer.
- 9 We've seen in the operational rules that --
- 10 that there would be a preference -- I believe it's a
- 11 preference for pumping out of the South Delta in the
- 12 summer.
- 13 How is that preference expressed in the
- 14 operational assumptions?
- 15 WITNESS MUNÉVAR: Yeah. During July, August
- 16 and September, if water can be ex -- diverted from either
- 17 the North or the South Delta facilities, then the
- preference is to divert from the South Delta up to 3,000
- 19 cfs before utilizing the North Delta Diversions.
- MS. MESERVE: Is that part of the -- what would
- 21 be the proposed operational rules under, say, H3 or H4,
- 22 or is -- Well, I'll just leave it at that.
- 23 WITNESS MUNÉVAR: Yes.
- MS. MESERVE: Okay. So -- Because when -- What
- 25 I heard was that it was a preference, and I didn't -- and

- 1 I guess I'm wondering, is there anything that would make
- 2 that preference a requirement that we're seeing in this
- 3 proposal that we're discussing today?
- 4 MR. BERLINER: We have the same continuing.
- 5 CO-HEARING OFFICER DODUC: (Nodding head.)
- 6 MR. BERLINER: Thank you.
- 7 WITNESS MUNÉVAR: So whether it's a requirement
- 8 or not, I don't -- I cannot say.
- 9 But I believe the operational preference will
- 10 be the same as that was modeled, because during summer
- and lower flow conditions, there may be a preference to
- 12 meet water quality considerations in the South Delta by
- diverting from the south; therefore, bringing more
- 14 Sacramento water into the interior part of the Delta.
- MS. MESERVE: But in any case, if other
- 16 standards weren't being violated, we would still be
- diverting the 900 cfs so-called low-flow -- low-flow
- 18 pumping in the north; is that correct?
- 19 WITNESS MUNÉVAR: As long as that water were
- 20 not required for any other downstream Delta requirement.
- MS. MESERVE: Would another reason why that
- 22 low-level pumping could still occur would be if there was
- 23 a TUCP in place?
- 24 WITNESS MUNÉVAR: I -- I can't say. I don't
- 25 know.

```
1 MS. MESERVE: All right. That concludes my
```

- 2 questions.
- 3 Thank you.
- 4 CO-HEARING OFFICER DODUC: Thank you,
- 5 Miss Meserve.
- 6 Group 20?
- 7 Group 21, Mr. Herrick.
- 8 Uh-oh. He has an entire box.
- 9 MR. HERRICK: This is my lunch.
- 10 (Laughter.)
- 11 CO-HEARING OFFICER DODUC: Just quickly to
- 12 check in with the witnesses.
- 13 How are you doing? You need a five-minute
- 14 break or are you good?
- 15 WITNESS ANDERSON: Five minutes?
- 16 CO-HEARING OFFICER DODUC: Okay. Five-minute
- 17 break? Let's take a five-minute break.
- You should have been faster, Mr. Herrick.
- 19 We will resume at 3:50, a six-minute break.
- 20 I'm so generous.
- 21 (Recess taken at 3:44 p.m.)
- 22 (Proceedings resumed at 3:50 p.m.)
- 23 CO-HEARING OFFICER DODUC: (Banging gavel.)
- 24 All right. Welcome back. It's 3:50 and you
- 25 can all thank Miss Anderson for that break. If it wasn't

- 1 for her, we would have just rushed through.
- 2 Mr. Herrick, a time estimate?
- 3 MR. HERRICK: I think it will take upwards of
- 4 two hours.
- 5 CO-HEARING OFFICER DODUC: All right. And not
- 6 that I'm agreeing to give you those two hours, but on
- 7 that, I just wanted to let -- I believe Miss Taber was up
- 8 next -- that we will not get to you until the morning.
- 9 Okay. The topics that you'll be exploring,
- 10 Mr. Herrick?
- 11 MR. HERRICK: Yes. I have some background on
- modeling assumptions and outputs that have not been
- 13 covered.
- 14 Then I move into the specifics of the models
- 15 with regard to South Delta water quality, how averaging
- 16 and daily amounts may compare, the problems with the
- 17 reliance on the modeling outputs, Head of Old River
- 18 Barrier operations and impaction, water level impacts,
- 19 affects of increased exports on river salts, a couple
- 20 issues on the prior modeling, just for context, and then
- 21 I have things like -- small things like Term 91 and there
- 22 may be one or two others, if that's a good enough summary
- 23 for now.
- 24 CO-HEARING OFFICER DODUC: Okay. We will start
- 25 you with an hour and see where that leaves us at close to

- 1 5 o'clock.
- 2 MR. HERRICK: I appreciate that. I believe
- 3 none of my questions deal with topics covered yet but I
- 4 certainly don't want to take too much time.
- 5 CROSS-EXAMINATION BY
- 6 MR. HERRICK: Thank you, Hearing Officers,
- 7 Board Members. My name is John Herrick. I represent the
- 8 Central Delta Water Agency and some other parties.
- 9 I know a couple members of the panel so I hope
- 10 nobody is offended if I refer to Parviz as "Parviz" or
- 11 Tara as "Tara," but the other members I'm not familiar so
- I won't be disrespectful if I don't use your name.
- 13 I'd like to start with Mr. Munévar.
- 14 There's still some confusion, I think, as to
- 15 how the model treats the conditions under which it
- 16 predicts dead pool conditions.
- 17 In the CalSim modeling that you performed, are
- 18 there instances in the 82-year timeframe where the model
- 19 shows dead pool being reached?
- 20 WITNESS MUNÉVAR: Yeah. As I indicated in my
- 21 exhibits, there are periods of time in both No-Action and
- 22 WaterFix in which dead pool is released, in Shasta and
- 23 Folsom in particular.
- MR. HERRICK: And in normal day-to-day -- not
- 25 day-to-day.

- 1 In normal operations, though, actions are taken
- 2 well before dead pool is reached to avoid dead pool; is
- 3 that correct?
- 4 MR. BERLINER: Objection: Asked and answered.
- 5 We covered this with Mr. Lilly at some length.
- 6 CO-HEARING OFFICER DODUC: I assume you're
- 7 asking a few preliminary questions to get to your main
- 8 point.
- 9 MR. HERRICK: Yes.
- 10 CO-HEARING OFFICER DODUC: Yes. Just a few.
- 11 WITNESS MUNÉVAR: In actual operations, I think
- they have more flexibility and improved forecasts to
- 13 understand when those conditions would occur.
- MR. HERRICK: So would you say that the
- 15 modeling for -- produced by CalSim II, then, doesn't
- 16 accurately represent what actions would be taken in those
- years when dead pool would be a threat?
- 18 WITNESS MUNÉVAR: I think the -- the CalSim II
- 19 modeling does not anticipate or include the dynamic
- 20 actions that might include -- be incorporated under
- 21 extreme dry conditions.
- 22 MR. HERRICK: And those dramatic (sic) actions,
- 23 would they or would they not affect the next year's, say,
- 24 carryover operations?
- 25 WITNESS MUNÉVAR: They could. To the extent

- 1 that they would increase storage or reduced deliveries,
- 2 it could impact next year's operations.
- 3 MR. HERRICK: Thank you.
- 4 Parviz, there have been some questions on this
- 5 but I just -- dealing with DSM-2.
- 6 We've discussed the -- The prior people have
- 7 discussed the 16-year period that was used.
- 8 Is there a reason why we -- why we didn't model
- 9 any years that included D-16 -- D-1641 obligations being
- 10 in effect? And by that, I mean the years after the plan
- 11 was -- or the -- excuse me -- the decision was adopted in
- 12 2000.
- 13 WITNESS NADER-TEHRANI: Again, these are the
- 14 historical simulations. These are planning simulations,
- so they're not meant to replicate a condition that
- 16 occurred in the past.
- 17 The same 16-year -- You know, it's been a
- 18 standard practice for the last 17, 18 years, ever since
- 19 the DSM was brought in, the same 16 years for reasons,
- 20 you know, that was expressed earlier.
- 21 There is no rationale beyond what I have
- 22 already described.
- MR. HERRICK: If we did model years that
- 24 included the timeframe D-1641 was in effect and then
- 25 compared them to actual data, wouldn't you think that

1 would allow people to get a better idea of what the

- potential effects might be?
- 3 WITNESS NADER-TEHRANI: I'm --
- 4 MR. BERLINER: Objection: Argumentative.
- 5 CO-HEARING OFFICER DODUC: Well, I believe you
- 6 can answer whether you agreed or not.
- 7 WITNESS NADER-TEHRANI: Would you mind
- 8 repeating the question? I want to make sure . . .
- 9 MR. HERRICK: Yes.
- 10 Since the models are just comparative between
- 11 each run --
- 12 WITNESS NADER-TEHRANI: Yes.
- 13 MR. HERRICK: -- would you think it would be
- 14 more -- I forget the word I used -- more beneficial to
- 15 examine model years with actual data so that we could get
- 16 a better feel of how the model might really affect the --
- 17 any legal user?
- 18 WITNESS NADER-TEHRANI: In this particular mode
- of operation, I think, as it was explained, the
- 20 conditions we're looking at include climate change and
- 21 sea-level rise.
- 22 These are not conditions that have occurred in
- 23 the past and, therefore, it does not make it very easy
- 24 to, you know, compare results with anything that really
- 25 occurred in the past.

```
1 MR. HERRICK: And if we could pull up DWR-513,
```

- 2 please, Page 3.
- 3 (Document displayed on screen.)
- 4 MR. HERRICK: Parviz, I believe this is the
- 5 exhibit referred to in much of your testimony.
- Do you see the figure EC5 at the top of that
- 7 page?
- 8 WITNESS NADER-TEHRANI: Yes.
- 9 MR. HERRICK: And that shows the modeling
- 10 results from DSM-2 for all months over the timeframe that
- 11 you -- the averaging over the timeframe that you did;
- 12 correct?
- 13 WITNESS NADER-TEHRANI: That's correct.
- MR. HERRICK: Okay. And so each bar is a -- an
- 15 average of all of the monthly results for that scenario.
- 16 WITNESS NADER-TEHRANI: That's correct.
- MR. HERRICK: So when you average monthly
- 18 scenarios over numerous years, one would expect that the
- 19 average would consist of both numbers above that and
- 20 numbers below that; correct?
- 21 WITNESS NADER-TEHRANI: That's correct.
- 22 MR. HERRICK: Have you broken out anywhere what
- 23 those -- what any of the increases are and -- for
- 24 presentation to the Board?
- 25 WITNESS NADER-TEHRANI: I -- I have not. It's

- 1 not part of my testimony, no.
- 2 MR. HERRICK: In your opinion as a Modeler,
- 3 would that be helpful in evaluating whether or not a
- 4 project has adverse effects on certain parties to be able
- 5 to see when and how often increases in salt occur? Or
- 6 EC. Excuse me.
- 7 WITNESS NADER-TEHRANI: Well, with respect to
- 8 this particular place, position, I believe I explained
- 9 the -- the only factor that seems to be causing a change
- 10 in EC at this location has to do with the Head of Old
- 11 River Gate operation. That's the only thing that's
- 12 different.
- 13 All the assumptions with respect to San Joaquin
- 14 flows and salinity that really affects the salinity at
- this location are identical among No-Action and other
- 16 operational scenarios.
- 17 What this picture illustrates to me is that the
- 18 fact that it was assumed Head of Old River Gate was
- 19 completely closed, and that that was the assumption for
- 20 Boundary 2 for the months of March, April and May, are
- 21 the -- is the cause for the increase that you're looking
- 22 at.
- 23 And that was kind of the main reason -- You
- 24 Know, I think that's the main message, I think, be -- you
- 25 know, behind this graph here that you're looking at.

```
1 MR. HERRICK: Did you check through the daily
```

- 2 average EC data to see if there were increases in EC that
- 3 you didn't attribute to the Head of Old River Gate?
- 4 WITNESS NADER-TEHRANI: There -- There's
- 5 nothing else that lead me to believe that anything be --
- 6 besides the Head of Old River Gate operation is causing
- 7 the increases that you see here.
- 8 MR. HERRICK: Did you check the daily data to
- 9 see if there were indications that something other than
- 10 Head of Old River Barrier was causing an increase in EC?
- 11 WITNESS NADER-TEHRANI: I did not necessarily
- include each and every day in the 16-day -- you know,
- years of simulation, if that's what you're asking.
- MR. HERRICK: No. I'm talking about --
- 15 WITNESS NADER-TEHRANI: But having looked at
- 16 water quality results and -- you know, and especially in
- the South Delta, and the familiarity I have with the
- 18 model, I -- I can convincingly say, you know, with a
- 19 great deal of confidence, that that's what I think the
- 20 result of that is.
- 21 MR. HERRICK: Well, hypothetically, then, if
- 22 the data showed a daily jump for a day, or three days, or
- 23 five days, or a month, which is not associated with a
- 24 change in Head of Old Barrier (sic) operations, would
- 25 that indicate to you that it was something other than

- 1 Head of Old River Barrier?
- 2 WITNESS NADER-TEHRANI: If I had seen something
- 3 other than those three months, you know, all other
- 4 months, everything else is the same, why would those
- 5 three months be any different than the other months?
- 6 MR. HERRICK: Okay.
- 7 WITNESS NADER-TEHRANI: And the only difference
- 8 in those three months is the Head of Old River Gate
- 9 assumption. With that -- With that, I think I don't have
- 10 to look anything further beyond that.
- 11 MR. HERRICK: That's why I asked you about
- 12 checking the daily data.
- 13 WITNESS NADER-TEHRANI: No, I did not check
- 14 every day, no.
- MR. HERRICK: So, my understanding, you're
- 16 looking at the average day.
- 17 WITNESS NADER-TEHRANI: That's correct. That's
- 18 correct.
- 19 MR. HERRICK: (Distributing documents.)
- 20 Parviz, I've handed you what is labeled
- 21 SDWA-27, and for speed, I'll just identify it as an
- 22 e-mail, the cover page of an update on the Department of
- 23 Water Resources and the Bureau of Reclamation's Notice to
- 24 people about ongoing transfer pumping.
- 25 ///

```
1 (Central Delta Water Agency, South
```

- Delta Water Agency (Delta
- 3 Agencies), Lafayette Ranch,
- 4 Heritage Lands Inc., Mark Bachetti
- 5 Farms and Rudy Mussi Investments
- 6 L.P. Exhibit 27 marked for
- 7 identification)
- 8 MR. HERRICK: Do you -- Do you recognize that
- 9 document?
- 10 WITNESS NADER-TEHRANI: I have not seen it
- 11 before.
- 12 MR. HERRICK: Okay. Are you not on the mailing
- 13 list of these?
- 14 WITNESS NADER-TEHRANI: I do not get -- If I
- do, you know, I might -- I've been super busy with other
- 16 things, actually.
- MR. HERRICK: That, I can understand.
- 18 WITNESS NADER-TEHRANI: Yeah. So I'm not being
- 19 connected to South Delta issues for a while. So I may be
- on that e-mail list but it's not -- it's not something
- 21 I've looked at.
- 22 MR. HERRICK: No, I'm not trying to trick you.
- 23 I didn't see your name on these. I just wanted to know
- 24 if you were familiar.
- 25 Are you familiar with the fact that updates for

```
1 transfers are sent out and those updates include both
```

- water quality and water level predictions, I'll say?
- 3 WITNESS NADER-TEHRANI: I only can take your
- 4 word on it.
- 5 MR. HERRICK: Okay. The document talks about,
- 6 in the -- in the very first sentence of the text, that
- 7 (reading):
- 8 ". . . Transfers which began on July 1st, and
- 9 will continue through September. The daily rate of
- 10 planned transfer is currently at 350 cfs during
- July."
- 12 Can you see that?
- 13 WITNESS NADER-TEHRANI: Can you help me? When
- 14 you talk about "transfer," can you explain more what --
- 15 what -- the transfer?
- 16 MR. HERRICK: Well, apparently the Department
- or the Bureau are pumping transfer water at this time,
- 18 and there's certain limitations on that, as I understand
- 19 it. And so they're notifying the public pursuant to --
- 20 WITNESS NADER-TEHRANI: That's additional --
- 21 additional export.
- MR. HERRICK: That's my understanding.
- 23 WITNESS NADER-TEHRANI: Okay.
- MR. HERRICK: So assuming that's correct for
- 25 now, if you'll turn the page and maybe go to the third

- 1 page, which is titled, "Forecasted Daily EC @ Old River
- 2 near Middle River."
- 3 (Document displayed on screen.)
- 4 MR. HERRICK: Do you see that?
- 5 WITNESS NADER-TEHRANI: Yes, I see that.
- 6 MR. HERRICK: And do you know whether or not
- 7 the simulation done on this to produce this chart --
- 8 Because it goes beyond the current date it predicts.
- 9 Do you know whether the simulation is a result
- of DSM-2 or some other model?
- 11 WITNESS NADER-TEHRANI: I did not do it, but I
- 12 can imagine the tool that was used to get that answer --
- 13 I mean, to get this. It would have had to have been
- 14 DSM-2.
- 15 MR. HERRICK: Okay. And so you see that there
- 16 are three lines indicated. One of them is -- You'll have
- 17 to bear with me on the color.
- 18 I believe one of them is bluish and it says
- 19 "Historic EC," and the second one says "Base Case" and
- 20 it's dark -- sorry -- and the third one says "Without
- 21 Transfer" and a dashed line.
- Do you see that?
- 23 WITNESS NADER-TEHRANI: Yes, I see that.
- MR. HERRICK: And you see that, when we get
- 25 over to, say, beginning on August 22nd of 2016, that the

1 Without Transfer in the Base Case but With Transfer start

- 2 separating.
- 3 Do you see that?
- 4 MR. BERLINER: Point of clarification: July
- 5 and August?
- 6 MR. HERRICK: It says -- Oh, did I say that
- 7 wrong? It says July 7. I'm starting at 7/21/2016 which
- 8 is about, what, three-quarters of the way through there.
- 9 Do you see that, Parviz?
- 10 WITNESS NADER-TEHRANI: I see that, um-hmm.
- 11 MR. HERRICK: And the two lines start diverging
- 12 for a while; is that correct?
- 13 WITNESS NADER-TEHRANI: Now, can you remind me
- 14 when you say "Old River near Middle River" with respect
- 15 to Old River, Tracy Road?
- MR. HERRICK: Old River near Middle River would
- 17 be one of the South Delta compliance stations --
- 18 WITNESS NADER-TEHRANI: Yeah.
- 19 MR. HERRICK: -- and it's basically the Head of
- 20 Old River, not the Middle.
- 21 WITNESS NADER-TEHRANI: Okay. In this
- 22 assumption, may I ask:
- 23 Was the Vernalis flow or EC changed between the
- 24 Base Case and Without Transfer?
- 25 MR. HERRICK: I don't know if the Board wants

```
1 you to testify, but this is not at a time when the
```

- 2 standard is changing back and forth. The standard is
- 3 from April through the end of August --
- 4 WITNESS NADER-TEHRANI: Right.
- 5 MR. HERRICK: -- and then September --
- 6 WITNESS NADER-TEHRANI: I'm --
- 7 MR. HERRICK: -- through --
- 8 WITNESS NADER-TEHRANI: I'm just asking whether
- 9 the assumptions that were used in the model --
- 10 MS. MORRIS: This is Stefanie Morris, State
- 11 Water Contractors.
- I think it's unclear what we're looking at. I
- understand the witness said he's familiar with it.
- But what transfer are we talking about? Is
- 15 this a transfer on the San Joaquin River, or is this some
- 16 other transfer coming from Sacramento River that's being
- 17 analyzed with the -- with this table?
- 18 CO-HEARING OFFICER DODUC: Mr. Herrick?
- 19 MR. HERRICK: Well, I don't know if anybody
- 20 wants me to testify, but --
- 21 CO-HEARING OFFICER DODUC: Okay. Instead of
- 22 testifying, then, help me understand -- Make the
- 23 connection for me.
- Why are you doing this?
- MR. HERRICK: Well, I'm doing this -- and I'll

- 1 get to these questions in a minute -- because this
- 2 indicates how the -- two things.
- 3 I'll soon be comparing it to the actual ECs
- 4 which are significantly different than the DSM-2 ECs
- 5 presented here; and then I'll be asking questions about
- 6 if 350 cfs of change of diversions at the South Delta
- 7 Pumping Plants can cause a change of 100 EC, isn't that
- 8 relevant to this process?
- 9 CO-HEARING OFFICER DODUC: And what is it
- 10 that's being shown on this graph?
- MR. HERRICK: Well, the graph shows the
- 12 projected changes in EC at Old River near Middle River
- under a scenario with the 350 cfs transfer and under
- scenario without the 350 cfs transfer.
- 15 And as everyone can see on the left part of the
- 16 graph, there's a historic EC number, which is some sort
- of average or something. I don't know what that is.
- 18 CO-HEARING OFFICER DODUC: And how does that
- 19 relate to the modeling results that these witnesses are
- 20 testifying to, which includes adjustments for climate
- 21 change and other factors?
- MR. HERRICK: Well, I --
- 23 CO-HEARING OFFICER DODUC: Because you're --
- MR. HERRICK: -- didn't know I had --
- 25 CO-HEARING OFFICER DODUC: -- trying to compare

- 1 the two results --
- 2 MR. HERRICK: I know.
- 3 CO-HEARING OFFICER DODUC: -- and I'm trying to
- 4 understand.
- 5 MR. HERRICK: I appreciate that. You know, I
- 6 don't know how long you want me to talk about this, but I
- 7 quess it's an offer of non-proof.
- 8 The -- The proponents have provided us with
- 9 modeling that shows averages --
- 10 CO-HEARING OFFICER DODUC: Um-hmm.
- 11 MR. HERRICK: -- and it shows very little
- 12 differences between the scenarios for EC changes.
- 13 The averages they all give are -- add up to
- 14 well below the standards when, in fact, the actual ECs
- 15 are above the standards. The modeling doesn't accurately
- 16 predict that; they say it won't. That's fine.
- 17 CO-HEARING OFFICER DODUC: They say it won't.
- MR. HERRICK: But then we see that small
- changes in export pumping have big effects on EC.
- 20 So if the modeling is being presented on
- 21 averages that don't show violations, I think it's very
- 22 relevant to show that, during violations, small changes
- in pumping can result in significant increases in EC.
- 24 CO-HEARING OFFICER DODUC: And why would this
- 25 not be your case in chief -- part of your case in chief?

- 1 MR. HERRICK: Because this is challenging the
- 2 Proponents' assertion with regard to the effects on EC.
- 3 CO-HEARING OFFICER DODUC: But did these
- 4 modelers -- Did -- Did you do this analysis and provide
- 5 this information?
- 6 WITNESS NADER-TEHRANI: I did not do this
- 7 analysis, no.
- 8 WITNESS SMITH: I believe this -- these
- 9 forecasts are done by John Leahigh's group, the modeling
- 10 forecasts --
- 11 MR. HERRICK: Let me start over.
- 12 WITNESS SMITH: -- for this particular thing.
- 13 MR. HERRICK: Because I -- I -- Just for the
- 14 record, no offense to the chairpersons --
- 15 CO-HEARING OFFICER DODUC: I won't take
- 16 offense. I'm just trying to understand --
- 17 MR. HERRICK: I understand.
- 18 CO-HEARING OFFICER DODUC: -- Mr. Herrick.
- 19 MR. HERRICK: The notion that I have to explain
- 20 where I'm going to go in my questioning seems rather odd,
- 21 but let me just lay it out.
- 22 If the model, the comparative results,
- 23 indicate, say, a 10 percent change in EC, the question
- 24 then falls from that:
- 25 If the modeling is not near what the actual EC

- 1 is, does that 10 percent then mean 10 percent of it is
- 2 real or does that percentage change under the real
- 3 conditions?
- 4 And it's the real conditions which will cause
- 5 injury, not the modeled conditions or the average
- 6 conditions.
- 7 So I think this is perfectly relevant to
- 8 question whether or not the data being presented
- 9 indicates there's no injury to third parties.
- 10 CO-HEARING OFFICER DODUC: No injury from a --
- 11 comparison purposes of the various alternatives with the
- 12 No-Action alternatives.
- MR. HERRICK: But that -- But that's the
- 14 problem with the -- with the Petition. We have
- 15 statistical analysis of averaging -- of impacts. Nobody
- has taken a, say, 10 percent change in EC at any
- 17 particular time and then compared that to a legal user.
- 18 So let's just hypothetically say there's a
- 19 10 percent change at the location I've -- I have on this
- 20 chart. Under real conditions -- Rather than the modeling
- 21 results, under real conditions, if the standard's already
- 22 being violated and there's a 10 percent increase, nobody
- on this panel or any other panel has the background or
- 24 has offered an explanation as to why or why not that
- doesn't constitute injury to anybody.

```
1 And so, of course, if the panel -- if the
```

- 2 Petitioners haven't presented the connection between data
- 3 and impacts -- which I think has clearly happened -- I
- 4 don't know why we would proceed.
- 5 CO-HEARING OFFICER DODUC: Thank you for the
- 6 commentary, Mr. Herrick.
- 7 Do you have anything to add, Mr. Mizell?
- 8 MR. MIZELL: Very briefly.
- 9 I would agree with your point that this seems
- 10 relevant to Mr. Herrick's case in chief, and to the
- 11 extent that the line of questioning relies upon facts
- 12 that have not yet been presented into evidence, it seems
- disconnected from the purpose of cross, which would be to
- 14 ask the witnesses to provide information helpful to this
- Board on the evidence that they presented and their
- 16 expertise as they've outlined it to you.
- So I would agree with you: This is -- This is
- 18 relevant to his case in chief but not cross-examination.
- 19 MR. HERRICK: I -- I -- I don't think it's an
- 20 objection or a basis for a ruling that somebody thinks it
- 21 should be in a case in chief.
- 22 The cross-examination of the witnesses is not
- 23 limited to what they've said specifically.
- 24 CO-HEARING OFFICER DODUC: All right. I see
- 25 people starting to stand up.

- 1 Very quickly, please. Ms. Morris.
- MS. MORRIS: If we're going to go into this
- 3 level of detail, Mr. Herrick hasn't laid a foundation for
- 4 this document.
- 5 He can't testify. He can't lay the foundation
- 6 he has no foundation. He has no witness to say where
- 7 this document came from, how it was prepared, what
- 8 assumptions were used, and, therefore, shouldn't be
- 9 allowed to ask questions about it.
- 10 CO-HEARING OFFICER DODUC: Thank you,
- 11 Miss Morris.
- 12 Mr. Jackson.
- 13 MR. JACKSON: Yeah. I think my question is
- 14 somewhat different.
- 15 We have a due process problem, as far as I'm
- 16 concerned, having listened to this.
- 17 Basically, all the testimony about legal injury
- 18 that we've heard so far is some models that do a limited
- 19 number of parameters in terms of injury.
- If we can't show the weakness of the model
- 21 results, how are we ever going to be allowed to convince
- 22 you that modeling like this is simply predicting that
- 23 there's no injury? And yet they keep saying it's only
- 24 useful for comparative purposes.
- This whole set of testimony seems to be a red

- 1 herring. And I think Mr. -- I -- John Herrick can
- 2 speak for himself. I'm up sometime probably tomorrow
- 3 morning.
- 4 But we're going to go through it again tomorrow
- 5 morning because I can't cross-examine a model, so I have
- to cross-examine the modelers. And that's what John's
- 7 doing here.
- 8 CO-HEARING OFFICER DODUC: All right. Thank
- 9 you, Mr. Herrick, with all of that back and forth.
- I will allow the line of questioning,
- 11 acknowledging that the witnesses may be limited in terms
- 12 of their ability to answer. And if they do not know the
- answer to something, they will say so.
- 14 Proceed, Mr. Herrick.
- 15 MR. HERRICK: Okay. Parviz, back to that third
- 16 page of SDWA-27. And, again, we're on the Forecasted
- 17 Daily EC at Old River near Middle River.
- 18 You said you did not produce this and you don't
- 19 necessarily know who did, but I'm going to ask you to
- 20 interpret it as best you can, if you will.
- 21 And back where we started: You see that
- 22 beginning on about August, or -- excuse me -- July 21st,
- 23 the Base Case and the Without Transfer start diverging;
- 24 is that correct?
- 25 WITNESS NADER-TEHRANI: Yeah, I see that.

- 1 MR. HERRICK: Okay.
- 2 WITNESS ANDERSON: Excuse --
- 3 MR. HERRICK: Now --
- 4 WITNESS ANDERSON: -- me.
- 5 Could you please clarify: Does the Base Case
- 6 have a transfer in there? This is the double line is
- 7 without transfer. Are we supposed to assume that?
- 8 MR. HERRICK: Well, just in time, I didn't read
- 9 the entire e-mail, but that's all covered in the e-mail.
- 10 WITNESS MUNÉVAR: I think it's important to
- 11 know where the transfer is occurring from as well --
- MR. HERRICK: Well, it's not --
- 13 WITNESS MUNÉVAR: -- whether it's Sacramento
- 14 or --
- MR. HERRICK: -- your time to cross-examine me.
- 16 All I can do is go over the document DWR gave me.
- 17 CO-HEARING OFFICER DODUC: You opened the
- 18 floodgates.
- 19 WITNESS SMITH: Well, and --
- MR. HERRICK: If they want me to answer those
- 21 questions, I will. I don't know if the Board wants me
- 22 to.
- 23 WITNESS SMITH: I think that would be very
- 24 helpful. I think you already said, you know, where you
- 25 were trying to get at this.

- 1 I think the calibration of the model is online.
- 2 And for this BDCP process of the model that was used for
- 3 that process, and for California WaterFix, is online.
- 4 And the differences, the concerns that you have, are that
- 5 they be shown with observed data on there also.
- 6 And we'd probably be more comfortable, I think,
- 7 looking at that because we're more familiar with that.
- 8 We haven't reviewed this.
- 9 MR. HERRICK: Okay. Parviz.
- 10 WITNESS NADER-TEHRANI: Just by -- Just by
- 11 looking at this information, and if I don't -- I don't
- 12 know all the details, and I tried quickly to read the
- e-mail to see if I can get some of the answers to the
- 14 questions I had.
- 15 But just by looking at this e-mail, my guess as
- 16 to why you're seeing this difference -- best guess, it's
- a guess -- is that the assumptions that were used to
- 18 drive the models in the base case and without transfer
- 19 differ on the assumptions on Vernalis flow and EC, in
- 20 addition to the transfer.
- 21 That's my best guess.
- 22 But if I look at the results, you know, and the
- 23 assumptions -- and I'll talk to the person who did it --
- 24 then I'll get a better answer. But that's based on what
- I see. That's the best answer I can give.

- 1 MR. HERRICK: Well, I appreciate that. I
- 2 wasn't asking you to explain the difference.
- 3 WITNESS NADER-TEHRANI: Yes. But you -- I
- 4 guess you were trying to -- I think the way you presented
- 5 this information, you were looking -- you know, showing
- 6 those two lines and -- and implied that those are the
- 7 only changes in transfer.
- 8 And I'm trying to explain what I think is
- 9 happening in the model is that there probably are other
- 10 changes in the model besides the changes in the export
- 11 level.
- 12 But I don't know. Until I ask the person that
- 13 did it, I can't say for sure. But that's the best most
- 14 likely answer I can give.
- 15 MR. HERRICK: Is it reasonable to conclude that
- 16 the DWR personnel who produced a forecast to measure or
- 17 indicate the difference between a transfer and a
- 18 non-transfer would change the criteria and the
- 19 assumptions and that would be responsible?
- 20 WITNESS NADER-TEHRANI: I don't know. I'm just
- 21 saying, based on past experience, a 350 cfs exchange in
- 22 export level, and the place that you're showing me should
- 23 not show in a -- an exchange in EC of the magnitude I'm
- 24 looking at.
- MR. HERRICK: And, of course, that would depend

- 1 upon whether it's a Federal or State Project taking the
- water in, whether the water rises, whether or not changes
- 3 in flow at Vernalis has occurred, or EC has occurred;
- 4 correct? All those things are factors.
- 5 WITNESS NADER-TEHRANI: All those things are
- 6 factors.
- 7 So if the only change that takes place is
- 8 in-basin without transfer, it's an additional 300 cfs.
- 9 And I'm assuming that 350 -- that extra 350 cfs
- 10 came from somewhere, either Sacramento or San Joaquin.
- 11 Then, yeah.
- 12 So I don't -- I don't anticipate a change of
- 13 that magnitude in the exports, CVP or SWP, would result
- in the changes we're looking at.
- 15 CO-HEARING OFFICER DODUC: Miss Morris.
- 16 MS. MORRIS: I'm going to renew my objection of
- 17 where the transfer is coming from, because -- Not to
- 18 testify, but since everybody else seems to be, it seems
- 19 that whether or not this water transfer is coming from
- the San Joaquin River and that's what's happening, it
- 21 could require waterfront -- it would allow more fresh
- 22 water to come in, and that may be showing, for instance,
- 23 in this pot.
- 24 But since Mr. Herrick hasn't identified that,
- 25 we have a long record where we don't really have any --

- 1 any meaningful testimony coming out of this.
- 2 CO-HEARING OFFICER DODUC: Thank you,
- 3 Miss Morris. So noted.
- 4 MR. HERRICK: I don't even know what that
- 5 means.
- 6 The -- The -- The whole idea of the questioning
- 7 is -- I just went through was to show that different
- 8 factors control and that makes differences in the
- 9 outputs.
- 10 So, the fact that I didn't --
- 11 CO-HEARING OFFICER DODUC: Just proceed with
- 12 your questions.
- MR. HERRICK: Thank you.
- 14 (Distributing documents.)
- 15 MR. HERRICK: Okay. Parviz, as in our earlier
- 16 discourse with the Hearing Officers, I'd like to ask you
- 17 questions about the changes in modeling and how that
- 18 translates into real-world effects. And you may not
- 19 know, but let me just ask this string of questions.
- 20 Let's say that a modeling result shows a, you
- 21 know, 10 percent change, and whatever the reasons for
- that, is there any way we know whether that 10 percent
- 23 would be a 10 percent change to the real or actual
- 24 numbers, or would it -- or how it might be less or more?
- 25 Is there any way we can determine that ahead of time?

- 1 WITNESS NADER-TEHRANI: I don't know if there
- 2 is a -- No. It's just -- What we can say is just
- 3 10 percent -- You know, if there's a 10 percent increase,
- 4 that's the best estimate in terms of the changes.
- 5 MR. HERRICK: Okay. And I'm not trying to beat
- a dead horse, but it's possible that the 10 percent of
- 7 the modeling may be some different percentage change from
- 8 the actual data when the -- when that -- whatever
- 9 necessarily occurs.
- 10 So let me just put it into an example.
- 11 So, if the modeling shows a 10 percent change
- 12 from -- you know, during one week.
- 13 WITNESS NADER-TEHRANI: Right.
- MR. HERRICK: If you took the actual data --
- 15 And you've predicted.
- 16 If you took the actual data from that week,
- 17 would we expect 10 percent of that to be from the Project
- 18 or would we not really know what the exact percentage
- 19 would be?
- 20 WITNESS NADER-TEHRANI: I -- It would be hard,
- 21 you know. This particular location is where sometimes
- 22 there is a deviation between model and, you know -- and I
- think that's probably what you're getting at.
- 24 And this is a location that we've had issues
- 25 with before. And it is somewhat -- So I would say not

- 1 the same percentage but the same actual difference, you
- 2 know, would be closer to the -- You know, if you take the
- 3 absolute difference between the alternative and the model
- 4 and the baseline and say that that would -- that would be
- 5 the best estimate for the increase over the actual, if
- 6 that makes sense.
- 7 WITNESS ANDERSON: And I think the word
- 8 "modeling" is being used to represent two different
- 9 things here.
- 10 Sometimes modeling is talking about the
- 11 modeling that was done for this Project, which was a
- 12 future planning Project, and then -- But when you're
- 13 comparing model to data, you're talking historical
- 14 simulation of a historical period and observed data.
- 15 Because they're two different things. Because
- 16 comparing the future modeling to observed data would be
- an incorrect kind of comparison, because they're kind of
- 18 apples and oranges.
- 19 So I don't know if you can be -- When you're
- 20 talking about just modeling, it's unclear to me if you're
- 21 asking us questions about historical modeling or if
- 22 you're asking us questions about modeling that was done
- for WaterFix. That is a future scenario.
- 24 MR. HERRICK: Well, both of those questions are
- 25 before the Board here.

- 1 So let me ask Parviz again:
- When we look at a model prediction, and say,
- 3 again, there's a 10 percent change from one scenario to
- 4 another, and then we look at the historical data from
- 5 that same timeframe, now that we can look back, would you
- 6 expect the actual data to be reflective of a different
- 7 change also or may it be a different change?
- 8 WITNESS NADER-TEHRANI: It may not be
- 9 10 percent.
- I would say the best estimate for the change
- 11 would not be the percentage change but what would be the
- 12 actual change, you know, the absolute difference between
- 13 them.
- 14 MR. HERRICK: But the historical data doesn't
- 15 show two scenarios. It shows one.
- 16 WITNESS NADER-TEHRANI: No.
- MR. HERRICK: There's nothing to compare.
- 18 WITNESS NADER-TEHRANI: If you're planning a
- 19 simulation, you run a case, and a base case, and an
- 20 alternative. And you -- You know, you subtract those two
- 21 and those give you an absolute change. And you can add
- 22 that to your -- whatever the historical simulation --
- 23 historical observed data would show later on.
- 24 That would be the best -- That would be the
- 25 best that I could say.

```
1
                (Central Delta Water Agency, South
 2
                 Delta Water Agency (Delta
 3
                 Agencies), Lafayette Ranch,
                 Heritage Lands Inc., Mark Bachetti
 4
                 Farms and Rudy Mussi Investments
 5
                 L.P. Exhibit 35 marked for
 6
 7
                 identification)
                MR. HERRICK: All right. So I've handed out
 8
 9
      SDWA-35.
10
                Do you have that in front of you?
11
                WITNESS NADER-TEHRANI: Yes, um-hmm.
12
                MR. HERRICK: And SDWA-35 is -- I'll represent
13
      to the Board -- a printout from the Department of Water
14
      Resources' Operations and Maintenance page -- web page --
15
      excuse me -- and from there, you can get export flows,
16
      water quality data.
17
                And this, I guess, chart, I guess, includes the
18
      days from July 4th, 2016, to August 2nd, 2016.
19
                Do you see that, Parviz?
20
                WITNESS NADER-TEHRANI: Yes.
21
                MR. HERRICK: And then it's got the four South
22
      Delta Stations with the measured EC and the 30-day
23
      running average EC; correct?
24
                WITNESS NADER-TEHRANI: I see that, yes.
                MR. HERRICK: And the reason I've handed this
25
              California Reporting, LLC - (510) 224-4476
```

www.CaliforniaReporting.com

- 1 out is to compare what actually happened with what was
- 2 forecasted on SDWA-27 on Page 3 of that.
- 3 And so if we could just pick -- And we'll start
- 4 on, let's say, July 22nd. Let's go to July 21st, excuse
- 5 me.
- 6 And the forecasting shows approximately that
- 7 the water quality at that location, whether it's with or
- 8 without the transfer, is somewhere around 500 EC; is that
- 9 correct?
- 10 WITNESS NADER-TEHRANI: At what period again?
- MR. HERRICK: On July 21st.
- 12 WITNESS NADER-TEHRANI: July 21st. Yes,
- 13 um-hmm.
- MR. HERRICK: Yeah. And then if we go to the
- 15 actual data, we see that July 21st at Old River near
- 16 Middle River is .84 EC; correct? That's on SDWA-35.
- 17 WITNESS NADER-TEHRANI: I see that, yeah,
- 18 um-hmm.
- 19 MR. HERRICK: So when DSM-2 modeled the future
- 20 predictions under this transfer scenario, it thought that
- 21 the EC at this location would be 500 EC but, in
- 22 hindsight, it was actually 800 EC; is that -- 840 EC; is
- 23 that correct?
- 24 WITNESS NADER-TEHRANI: That's what I see here,
- um-hmm.

```
1 MR. HERRICK: So, is -- As that -- As those two
```

- lines on SDWA-27 diverge, we see a difference in
- 3 predictions of somewhere around, what, 100 EC at the max
- 4 or maybe a little more than that?
- 5 (Witnesses confer.)
- 6 WITNESS NADER-TEHRANI: Okay. So, I think what
- 7 it shows -- what it shows me, this deviation, is probably
- 8 an indication of, the estimates that are used in the
- 9 forecasting were significantly different from what
- 10 actually occurred.
- MR. HERRICK: Correct. The way one would --
- 12 WITNESS NADER-TEHRANI: I'm talking --
- MR. HERRICK: -- assume that --
- 14 WITNESS NADER-TEHRANI: -- about --
- MR. HERRICK: -- there's --
- 16 WITNESS NADER-TEHRANI: I'm talking about the
- assumptions that were used in deriving the model, not the
- 18 observed data at the interior locations.
- 19 MR. HERRICK: You keep giving excellent answers
- 20 to questions I haven't asked.
- 21 WITNESS NADER-TEHRANI: Okay.
- MR. HERRICK: But, yes, the model is not
- 23 predicting, because it's not present to predict or not --
- 24 Let me start over.
- The model is not predicting what they actually

- 1 see was; correct?
- 2 WITNESS NADER-TEHRANI: I'm --
- 3 MR. HERRICK: In hindsight.
- 4 WITNESS NADER-TEHRANI: -- just saying -- Well,
- 5 in order to get diagrams such as the one you put in front
- of me, there was some assumptions to run the model. That
- 7 includes, for example -- as an example, flow at Vernalis
- 8 and EC at Vernalis. That's just one example of
- 9 information that's used.
- 10 What I'm trying to say is, when you get
- deviations such as the one you're showing me, it is a
- 12 reflection -- it is possibly a reflection of the fact
- 13 that the information that was used to run these model --
- 14 not the model output -- the information that was used to
- 15 run the model were significantly different than what
- 16 actually occurred.
- MR. ADAMS1: Again, thank you for that, but I'm
- 18 not asking you that.
- 19 WITNESS NADER-TEHRANI: Well, okay.
- 20 MR. HERRICK: The -- The question is: A
- 21 short-term prediction in the model --
- 22 WITNESS NADER-TEHRANI: Yes.
- 23 MR. HERRICK: -- and that's all this is; right?
- It's only, what, a month prediction.
- 25 WITNESS NADER-TEHRANI: Yes.

```
1 MR. HERRICK: A short-term prediction is
```

- 2 substantially off from what actually happened; correct?
- 3 WITNESS SMITH: I don't know if I'd agree with
- 4 "prediction."
- 5 So, I think John Leahigh -- and he may have
- 6 testified to this -- is that they -- they used the
- 7 forecasts to do comparisons, and sometimes they operate
- 8 to that forecast and sometimes they don't.
- 9 And within that forecast, there could be
- 10 issues. He did talk about issues in terms of operational
- issues, not being able to see storms or -- or -- or
- 12 barometric effects.
- 13 But it doesn't -- These -- Either -- Looking at
- 14 differences, sometimes they'll shift it up based on, you
- 15 know, what happens three days later. They might change
- 16 how they're going to do the operations, which may be --
- 17 you know, you could consider a prediction, but I don't
- think they've looked at it as a prediction.
- 19 It's a tool to look at what might happen given
- 20 two different alternatives in the future.
- 21 Now, if you hindcast it and see, okay, how we
- 22 did it, or if we did a historical case, that's a
- 23 different situation.
- MR. HERRICK: Okay. Let me get back to my
- 25 questions instead of very good justifications as to why

```
things are wrong; okay?
```

- 2 I'm going to run out of time here real quickly.
- 3 Parviz, the model -- we assume it was DSM-2 --
- 4 that was trying to forecast water quality during the
- 5 month of July, in hindsight, did not accurately forecast
- 6 what the EC was; correct?
- 7 You've already given a long explanation as to
- 8 why it might not have, but I'm just trying to get you to
- 9 answer that question.
- 10 WITNESS NADER-TEHRANI: Yes. The observe --
- 11 The model output did not match the observed data.
- 12 MR. HERRICK: Okay. So does that give you any
- 13 pause when you make conclusions about this Petition's
- modeling that might end up misleading the Board?
- In other words, when you have model results
- 16 that show averages over 16 years that don't exceed the
- 17 standard, is that giving the Board a -- an incorrect
- impression as to what the actual conditions may be?
- 19 MR. MIZELL: Objection: Argumentative; assumes
- 20 that the witness is trying to mislead the Board.
- 21 CO-HEARING OFFICER DODUC: I don't assume that,
- 22 so I will await the answer.
- 23 WITNESS NADER-TEHRANI: I guess so.
- So, we -- we use DSM-2 in two modes of
- 25 operations. There's a planning mode, and that's --

- 1 that's the way we use the model when we presented the
- 2 information and use information from CalSim.
- 3 And then there is -- There are the challenges
- 4 that you see in front of you in trying to meet the
- 5 observed data.
- 6 And I think the Board has heard issues related
- 7 to the water quality issues in the South Delta before,
- 8 and -- and -- and the challenges in terms of figuring out
- 9 estimates that are used in the forecasting.
- 10 And I think the deviations that you're showing
- 11 me is a reflection of the -- the challenges in figuring
- 12 out what the assumptions should be, talking -- used in
- forecasts, and not necessarily a model's weakness.
- 14 WITNESS ANDERSON: So, I'd like to clarify:
- There's actually three ways we use the DSM-2
- 16 model. There's the future planning, there's forecasting,
- 17 and then there's historical simulations.
- 18 WITNESS NADER-TEHRANI: Yeah.
- 19 WITNESS ANDERSON: With the historical
- 20 simulations, that's where we have calibrated and
- 21 validated our model to observed data.
- 22 And those results would give more of a feel for
- 23 the comfort level that you would want to have in using
- 24 these models for planning studies, not looking at how
- 25 well it forecasts something, or the operations might very

- 1 well have changed.
- 2 Do you want to look at the historical
- 3 simulation where we use the actual operations and then
- 4 compare it to the observed data?
- 5 WITNESS NADER-TEHRANI: And whatever Jamie
- 6 said.
- 7 (Laughter.)
- 8 CO-HEARING OFFICER DODUC: Thank you,
- 9 Miss Anderson.
- 10 MR. HERRICK: I appreciate the witness' desire
- 11 to make this a workshop.
- 12 CO-HEARING OFFICER DODUC: Enough with the
- 13 commentary, Mr. Herrick. Let's --
- MR. HERRICK: But I haven't --
- 15 CO-HEARING OFFICER DODUC: Ask your question.
- MR. HERRICK: I do have limited time.
- 17 CO-HEARING OFFICER DODUC: Ask your question.
- 18 MR. HERRICK: I did, and I'm not sure it's been
- 19 answered yet.
- 20 Parviz, let me go back to DWR-513 and Page 3,
- 21 which are your charts -- your charts of the monthly
- 22 averages EC, and we were looking at EC at Old River at
- 23 Tracy Boulevard.
- 24 WITNESS NADER-TEHRANI: Can we put that up,
- 25 please?

```
1 MR. HERRICK: DWR-513, Page 3.
```

- 2 (Document displayed on screen.)
- 3 WITNESS MUNÉVAR: Yes, um-hmm.
- 4 MR. HERRICK: Now, there are only a few times
- 5 when the average of your bar charts go above 700 EC; is
- 6 that correct?
- 7 WITNESS NADER-TEHRANI: That's correct.
- 8 MR. HERRICK: And those are the months where
- 9 the standard is 1,000 EC; correct?
- 10 I'm not trying to test you.
- 11 WITNESS NADER-TEHRANI: Yes.
- 12 MR. HERRICK: Those months are December --
- 13 WITNESS NADER-TEHRANI: That's correct.
- MR. HERRICK: -- January, and those are --
- 15 those are within the time period where the .1 EC or the
- 16 1,000 EC is.
- 17 WITNESS NADER-TEHRANI: Yes, that's correct.
- 18 MR. HERRICK: Okay. Now, if the State Board is
- 19 trying to analyze impacts to people and you show them a
- 20 chart that are always under the standard, isn't that
- 21 significantly different than presenting them with charts
- 22 which show times when the standards were being violated
- 23 what the effect of the Project might be?
- 24 WITNESS NADER-TEHRANI: To start off, I think
- 25 we -- we -- I think we made it clear that the assumptions

- 1 at San Joaquin River, whether it's flow or salinity, is
- 2 not changing. I think we made that clear.
- 3 And with that information, I think it's clear
- 4 that if you're not making the changes, then the only --
- 5 and I am clear -- the only parameter that's really going
- 6 to affect is salinities at Head of Old River. And, you
- 7 know -- And that's the reason for the exceedance at those
- 8 higher salinity that you see here.
- 9 There is nothing else to lead me to believe
- 10 that any portion of California WaterFix, whether it's the
- 11 North Delta Diversions or changes in the South Delta
- 12 exports, would cause any salinity changes at this
- 13 location.
- MR. HERRICK: Okay. Should I repeat my
- 15 question?
- 16 WITNESS NADER-TEHRANI: I gave you the best
- 17 answer I could.
- 18 MR. HERRICK: Well --
- 19 CO-HEARING OFFICER DODUC: Perhaps if you can
- 20 ask your question without insinuating devious
- 21 machinations from the Department, Mr. Nader-Tehrani would
- 22 be best able to answer it, Mr. Herrick.
- MR. HERRICK: Well, let me approach it this
- 24 way.
- 25 Under H3 scenario, aren't there additional

- 1 exports?
- 2 WITNESS NADER-TEHRANI: When you add both north
- 3 and south, yes.
- 4 MR. HERRICK: Okay. Has the -- Has any of your
- 5 modeling results -- Or maybe this is for Mr. Munévar.
- 6 Have -- Do any of the modeling results indicate
- 7 that there'll be an increase of salt delivered south of
- 8 the valley -- south end of the valley?
- 9 WITNESS NADER-TEHRANI: South of the valley.
- 10 Can you describe what geographic area?
- MR. HERRICK: CVP service area south of Tracy.
- 12 WITNESS NADER-TEHRANI: We only looked at EC
- 13 results. And then if somebody wants to find mass of
- 14 salt, they can do that.
- MR. HERRICK: I don't understand that.
- 16 Does the modeling show any incremental amount
- of salts being delivered to the CVP service areas south
- of Tracy under H3?
- 19 WITNESS NADER-TEHRANI: Can you -- The exports
- 20 come from either north or south. The exports that come
- 21 from north are usually better quality water, so if -- and
- 22 if you -- if you blend it altogether, the EIR would
- 23 contain, you know, the EC output that reflects that
- 24 blend.
- 25 So the overall blend results in better quality

- 1 of water. And so even with that additional volume of
- 2 water, but with the better quality water, so in terms of
- 3 mass purposes, we don't necessarily increase the mass of
- 4 salt.
- 5 But I think a better indicator would be the
- 6 actual concentration. And the answer is, no, we're not
- 7 increasing the concentration at the export locations.
- 8 MR. HERRICK: I'm going to need about 10 hours
- 9 apparently.
- 10 Parviz, buddy --
- 11 WITNESS NADER-TEHRANI: Yes, sir.
- MR. HERRICK: -- the question was -- Let's --
- 13 Let's change it slightly.
- 14 Under any WaterFix scenario, is additional salt
- delivered to the CVP service area south of Tracy?
- 16 WITNESS NADER-TEHRANI: By "additional salt,"
- 17 you're talking about mass flow times?
- 18 MR. HERRICK: Additional salt. I'm not talking
- 19 about concentrations.
- 20 WITNESS NADER-TEHRANI: Well, the only model
- 21 output that I continue to look at is the water quality
- 22 reflected in EC. I do not compute mass of salts.
- MR. HERRICK: Is that a "yes" or a "no"?
- 24 WITNESS NADER-TEHRANI: I have not looked at
- 25 mass of salt, so I don't have the answer. I gave the

- 1 best answer in terms of what I expect to see. I have not
- 2 looked at it.
- 3 MR. HERRICK: Okay. So has anybody examined
- 4 through modeling the potential impacts of additional salt
- 5 being delivered to that service area making its way back
- 6 into the river? Has any of the modeling done that?
- 7 Please don't explain to me --
- 8 WITNESS NADER-TEHRANI: No.
- 9 MR. HERRICK: Okay.
- 10 WITNESS NADER-TEHRANI: I'm not aware.
- MR. HERRICK: Thank you.
- 12 So if there were additional salt load coming
- down the river, that would be one of the factors that
- 14 determines water quality from Vernalis north into the
- 15 Delta; correct?
- 16 WITNESS NADER-TEHRANI: I don't agree with
- 17 that.
- MR. HERRICK: Additional salt would not --
- 19 WITNESS NADER-TEHRANI: No.
- 20 Well, when you say "salt," if you talk about
- 21 mass of salt, a greater mass of salt, if it comes with a
- 22 greater volume of water, that doesn't necessarily affect
- 23 the salinity at the South Delta.
- MR. HERRICK: I didn't say it would. I asked
- 25 you if it could.

- 1 WITNESS NADER-TEHRANI: It can go either way.
- 2 And, so, to me, because the salinity -- combined salinity
- 3 at the south, when you add the north and south, is
- 4 expected to be less -- you know, going down -- in
- 5 concentration, I don't -- I don't expect that there will
- 6 be -- that would lead to an increase in the EC.
- 7 MR. HERRICK: This is very difficult for me to
- 8 be nice.
- 9 Thank you, Parviz.
- 10 WITNESS NADER-TEHRANI: I don't mean to give
- 11 you a hard time. I'm -- I'm just --
- 12 CO-HEARING OFFICER DODUC: I'm staying out of
- 13 this.
- 14 WITNESS NADER-TEHRANI: I'm giving the best
- 15 answer I can.
- 16 MR. HERRICK: I don't mean to give you a hard
- 17 time. Okay.
- 18 WITNESS NADER-TEHRANI: I've not been computing
- 19 mass of salt because, to me, that's not a driver in terms
- of water quality at a record location.
- 21 MR. HERRICK: But just for the record, Parviz,
- do you understand that the Regional Board criteria is in
- 23 massive amounts of loads, not even concentrations?
- 24 WITNESS NADER-TEHRANI: I don't know the
- answer.

```
1 CO-HEARING OFFICER DODUC: I think, at this
```

- 2 point, I'm going to call a timeout. I think we need to
- 3 adjourn for the day, unless, Mr. Herrick, you'd like
- 4 further punishment this afternoon.
- 5 MR. HERRICK: I will agree to that.
- And I will try to hone my questioning skills
- 7 to -- to expedite this process.
- 8 CO-HEARING OFFICER DODUC: I would appreciate
- 9 that, Mr. Herrick. I -- I firmly believe you have some
- 10 valid issues that you would like to cover, and I strongly
- 11 encourage you to reframe your question in a manner that
- 12 would facilitate the witness answering of those
- 13 questions.
- 14 MR. HERRICK: I will abide by your wisdom.
- 15 CO-HEARING OFFICER DODUC: Thank you,
- 16 Mr. Herrick.
- 17 And on that note, thank you all, and we will
- 18 reconvene at 9 o'clock tomorrow.
- 19 Hang on. Hold on.
- 20 Mr. Herrick, you need to talk to staff because
- 21 you apparently have not submitted a form for your
- 22 exhibits.
- MR. HERRICK: He already told me that.
- 24 CO-HEARING OFFICER DODUC: And a reminder --
- Okay. I guess perhaps as a reminder for everyone else.

1	Reminder: If you're using exhibits for
2	cross-examination, please fill out an exhibit I.D. Index
3	form, submit it to staff.
4	And with that, we will Mr. Jackson.
5	MR. JACKSON: If you're not If you haven't
6	used the State Board's exhibits and the exhibits that
7	CO-HEARING OFFICER DODUC: Hang on. Hang on.
8	We're still on the record, so if you could
9	please come up so that the court reporter can hear you.
10	MR. JACKSON: If you're not planning on
11	introducing any new documents, you don't need to fill out
12	this form?
13	CO-HEARING OFFICER DODUC: That's correct.
14	MR. JACKSON: Thank you.
15	CO-HEARING OFFICER DODUC: All right. With
16	that we've given Mr. O'Laughlin enough amusement for
17	the day we'll adjourn and re-convene at 9 o'clock
18	tomorrow.
19	(Proceedings adjourned at 4:42 p.m.)
