1 Wednesday, March 14, 2018 9:30 a.m.

- 2 PROCEEDINGS
- 3 ---000---
- 4 CO-HEARING OFFICER DODUC: Good morning,
- 5 everyone. Welcome back. It is 9:30. We are going to
- 6 resume this Water Right Change Petition Hearing for
- 7 California WaterFix project.
- 8 I am Tam Doduc. With me is Board Chair and
- 9 Co-Hearing Officer Felicia Marcus. To my left are
- 10 Andrew Deeringer, Conny Mitterhofer, and Hwaseong Jin.
- 11 We are also being assisted today by Jason Baker.
- 12 I see all familiar faces, so I will skip the
- 13 emergency announcement. You all know what that is. I
- 14 will skip the "speak into the microphone." You all do
- 15 that very well.
- 16 But I will not skip the most important item,
- 17 which is take a moment, put your noise-making devices
- 18 to silent, vibrate, do not disturb.
- 19 Yes, thank you. The Board Chair sets a great
- 20 example, except for when her phone goes off.
- 21 Are there any other housekeeping matters
- 22 before we begin today with the cross-examination of
- 23 Dr. Michael? We didn't do that on Friday because we
- 24 were trying to get Mr. Stroshane his opportunity to
- 25 cross-examine.

1 But before we do that, Mr. Ferguson, thank you

- 2 for obeying the traffic laws this morning.
- 3 MR. FERGUSON: You're welcome.
- 4 Aaron Ferguson, Sacramento County Water
- 5 Agency. I've been preparing to submit a letter this
- 6 morning to enter the Agencies' exhibits into evidence
- 7 because our case is complete last Friday. But it was
- 8 brought to my attention that others had orally
- 9 introduced theirs. So wanted to come this morning, and
- 10 if I need to orally introduce those now into the record
- 11 or I can follow through and submit a letter. I didn't
- 12 do that.
- 13 CO-HEARING OFFICER DODUC: You may do that.
- MR. FERGUSON: Okay. So I just wanted to
- 15 SCWA-300 through and inclusive of SCWA-308 into the
- 16 record.
- 17 CO-HEARING OFFICER DODUC: Are there any
- 18 objections?
- 19 Seeing none, they are so admitted. Thank you,
- 20 Mr. Ferguson.
- 21 (SCWA Exhibits 300 through 308 admitted
- into the record)
- MR. FERGUSON: Thank you.
- 24 CO-HEARING OFFICER DODUC: All right. Let me
- 25 get -- oh, Mr. Keeling, something else?

1 MR. KEELING: A point of clarification, the

- 2 rule, as I understand it, is that we get our exhibits
- 3 and we introduce them or submit them into evidence at
- 4 the end of our case in chief. But for many of us, that
- 5 phrase "case in chief" is somewhat complicated. For
- 6 example, the San Joaquin County protestants' will not
- 7 end until the very end of all the presentations with
- 8 Mr. Del Piero. So as I understand it, we wouldn't be
- 9 submitting until that time; is that correct?
- 10 CO-HEARING OFFICER DODUC: Until your case in
- 11 chief is completed, yes.
- MR. KEELING: Thank you.
- 13 CO-HEARING OFFICER DODUC: Which might, yes,
- 14 be a while.
- 15 All right. Time estimate, please, for those
- 16 who are planning on cross-examining Dr. Michael?
- MS. MESERVE: Osha Meserve for Group 19, I
- 18 have about ten minutes. Thank you.
- 19 CO-HEARING OFFICER DODUC: Welcome back,
- 20 Mr. Mizell.
- 21 MR. MIZELL: Thank you. Tripp Mizell, DWR, 15
- 22 minutes.
- 23 MS. TABER: City of Stockton for Group 22, 30
- 24 minutes or less.
- 25 CO-HEARING OFFICER DODUC: All right. Looks

1 like we will very quickly get to Mr. Nomellini. Is

- 2 that who's next?
- 3 MR. RUIZ: Yes, that is who is next, but based
- 4 on Friday's conversation at the end, it didn't seem
- 5 like we'd get to him before noon. So I told him to
- 6 come at 11:00, so we probably need to tell him to leave
- 7 now if we haven't already done so.
- 8 CO-HEARING OFFICER DODUC: That also depends
- 9 on whether you have redirect.
- 10 MR. RUIZ: That's true.
- 11 CO-HEARING OFFICER DODUC: And recross.
- 12 All right. With that, Mr. Mizell or
- 13 Ms. Ansley.
- MS. MORRIS: So it's actually,
- 15 Stefanie Morris, DWR and State Water Contractors,
- 16 coordinated for efficiency purposes.
- 17 CO-HEARING OFFICER DODUC: Thank you.
- 18 MS. MORRIS: About 15 minutes, the topics are
- 19 regarding the basis for backup for some of the opinions
- 20 and some of the agency participation that he testified
- 21 to.
- 22 CO-HEARING OFFICER DODUC: Thank you.
- DR. JEFFREY MICHAEL,
- called as a Panel 3 witness by Protestant
- 25 Group 21, having been previously duly

- 1 sworn, was examined and testified as
- 2 further as is hereinafter set forth:
- 3 CROSS-EXAMINATION BY MS. MORRIS
- 4 MS. MORRIS: Good morning, Dr. Michael, how
- 5 are you?
- 6 WITNESS MICHAEL: Good morning.
- 7 MS. MORRIS: Your optimistic analysis that you
- 8 provided for this hearing is based on Boundary 1
- 9 operations, correct?
- 10 WITNESS MICHAEL: No, the -- in the benefit
- 11 cost analysis, what I labeled the optimistic scenario,
- 12 it took values for water and some of the other areas of
- 13 benefits from analysis that was done for the Bay Delta
- 14 Conservation Plan by the Brattle Group.
- MS. MORRIS: What I was trying to get at is I
- 16 believe you testified -- and I reviewed the transcript
- 17 on Friday -- that the optimistic analysis for water
- 18 supply that you used in your testimony was based on the
- 19 Boundary 1 operational scenario.
- 20 WITNESS MICHAEL: Yeah. So if there was
- 21 some -- no. The water supply -- the difference in the
- 22 water supply values between those two scenarios is the
- 23 dollar -- the value that's attributed to the water
- 24 supply.
- 25 The assumption about the water supply with and

- 1 without the project is actually the same in the two.
- 2 It's just -- the same in the base scenario as the
- 3 optimistic scenario. And that particular assumption or
- 4 that particular value came from comparing the No Action
- 5 Alternative to the analysis in the Biological
- 6 Assessment because that was the most recent modeling
- 7 that was done at the time that I wrote that analysis.
- 8 So I believe that was in the neighborhood of 225,000
- 9 acre-feet, a little over 200,000 acre-feet.
- 10 That value it is used in both the base
- 11 scenario and optimistic scenario. The optimistic
- 12 scenario used values for water that I derived from
- 13 these consulting reports that were done to support BDCP
- 14 and WaterFix from the Brattle Group. The base
- 15 scenarios, I used values for water that I took from the
- 16 California Water Plan and other DWR documents.
- MS. MORRIS: Okay. So, again, I'm really
- 18 focusing on the operational scenario that you used. So
- 19 I'm hearing -- and I would just like you to confirm --
- 20 that all of your testimony that you're providing for
- 21 water supply is based on the Biological Opinion H3+
- 22 operational scenario?
- 23 WITNESS MICHAEL: That was what was in the
- 24 benefit cost analysis. There was one slide where I
- 25 believe the title of the slide was, you know, "How much

- 1 water supply would be required to get a benefit cost
- 2 analysis of one." And I made a rough calculation of I
- 3 believe it was 1 million acre-feet in the optimistic
- 4 scenario and about 2 million acre-feet in the base
- 5 scenario. And that calculation I did compare to the
- 6 boundary conditions.
- 7 And I don't remember whether it was bound- --
- 8 which boundary it was. But as I recall, the boundary
- 9 that had the highest water supply relative to No Action
- 10 did not reach that 1 million-acre-foot threshold. So
- 11 there was no overlap at all in my view.
- MS. MORRIS: Okay. Let's look at what's
- 13 labeled -- well, technically on the website it's
- 14 SDWA-275. And if we could pull that up, Mr. Baker.
- 15 Thank you. I just would like to confirm -- it's marked
- 16 as SDWA-147, but I think SDWA-147 was withdrawn. It
- 17 was from Part 1. So I just want to make sure we're
- 18 talking about the same document and that we maybe
- 19 correct the labeling for the record.
- MR. BAKER: You had said 275?
- MS. MORRIS: Yes, please.
- 22 MR. BAKER: That is not on the website. It
- 23 stops at -- oh, pardon me. My mistake.
- 24 MS. MORRIS: I've done that five times this
- 25 morning already.

1 It's labeled SDWA-147, but the -- am I correct

- 2 in assuming that it's -- should properly be and we
- 3 should refer to it as SDWA-275?
- 4 WITNESS MICHAEL: That's correct.
- 5 MS. MORRIS: Thank you. And this cost benefit
- 6 analysis of the California WaterFix that's dated August
- 7 2016, this is the -- these contain the water supply and
- 8 the benefit, cost benefit analysis that are also
- 9 included in your testimony and your PowerPoint,
- 10 correct?
- 11 WITNESS MICHAEL: Correct.
- 12 MS. MORRIS: And where can I find the
- 13 calculations for -- and the backup for the figures that
- 14 are referenced and the numbers and calculations that
- 15 you arrive at in SDWA-275?
- 16 WITNESS MICHAEL: All the -- the source for
- 17 all the values and the calculations is in the document
- 18 as well as an explanation of them. So they're easily
- 19 replicable.
- 20 MS. MORRIS: Do you have them in their native
- 21 format, I'm assuming, in Excel or something of that
- 22 nature?
- 23 WITNESS MICHAEL: I'm sure I do in my archive
- 24 somewhere.
- 25 MS. MORRIS: Could we produce -- have those in

- 1 their native format so we can see how they're
- 2 calculated because I don't believe it was produced in
- 3 this exhibit?
- 4 MR. RUIZ: Those can be produced.
- 5 MS. MORRIS: When can we have those, Mr. Ruiz?
- 6 MR. RUIZ: Probably tomorrow.
- 7 MS. MORRIS: Great. Thank you.
- 8 In your testimony on Friday, you said that you
- 9 received specific calculations from Dr. Rodney Smith,
- 10 correct?
- 11 WITNESS MICHAEL: That's correct.
- 12 MS. MORRIS: And what calculations were those?
- 13 WITNESS MICHAEL: Those were the calculations
- 14 of the cost per acre-foot of the yield from the tunnels
- 15 project.
- 16 MS. MORRIS: And do you have the backup data
- 17 for those calculations as well?
- 18 WITNESS MICHAEL: I would -- there's a memo
- 19 attached as an exhibit that explains how they've been
- 20 calculated. I will contact Dr. Smith and see if he
- 21 wants to -- if he's able to provide the programming
- 22 that he used.
- 23 MS. MORRIS: Okay. Mr. Ruiz, can we please
- 24 also have that information?
- MR. RUIZ: We will contact him by tomorrow,

1 and assuming that he's okay with that, we'll provide

- 2 that, yes.
- 3 MS. MORRIS: Thank you.
- 4 Looking at SDWA-292 -- I'm sorry, it's labeled
- 5 "292" but it's actually on the website SDWA-266. And
- 6 looking at Slide 15. Maybe while he's pulling that up,
- 7 I'll ask the question, and maybe you don't need to see
- 8 the slide perhaps, or we can also wait.
- 9 You stated in the slide that Westlands Water
- 10 District voted 7-1 against the WaterFix because it was,
- 11 quote, "not financially viable"; correct?
- 12 WITNESS MICHAEL: Correct.
- MS. MORRIS: Isn't it true, if we look at
- 14 Westlands Water District 16 and also at -- SDWA-278
- 15 that Westlands clarified that the participation
- 16 approach announced by Reclamation was really driving
- 17 the Board's vote? Do you recall seeing that?
- 18 WITNESS MICHAEL: I believe I quoted from a
- 19 statement after the vote. You're referring to a
- 20 different document?
- 21 MS. MORRIS: Let's go ahead and pull it up, if
- 22 you could, Mr. Baker, WWD-16. If we look at the second
- 23 full paragraph.
- MR. RUIZ: We don't have that up yet.
- 25 MS. MORRIS: Oh. Sorry. It's on the screen.

- 1 I apologize.
- 2 Do you see that it says that the Westlands
- 3 Board district [sic] was in large part a reaction to
- 4 the participation approach proposed by the Bureau of
- 5 Reclamation?
- 6 MR. RUIZ: Maybe, Counsel, just for the
- 7 record, I don't know that he's familiar with this
- 8 letter. Maybe you could just set it up a little bit
- 9 and say what it is and who it's from, et cetera.
- 10 MS. MORRIS: Have you seen this letter before?
- 11 WITNESS MICHAEL: Actually, I have seen it
- 12 before.
- MS. MORRIS: So I would just repeat my
- 14 question. I can --
- 15 WITNESS MICHAEL: Can you rephrase your
- 16 question? Yeah.
- 17 MS. MORRIS: Sure.
- 18 WITNESS MICHAEL: Or just restate it?
- 19 MS. MORRIS: Sure. Isn't it true that the
- 20 Westlands Board decision, as summarized by their
- 21 general manager, was in large part a reaction to the
- 22 participation approach proposed by the Bureau of
- 23 Reclamation?
- 24 CO-HEARING OFFICER DODUC: Hold on.
- Mr. Bezzera.

- 1 MR. BEZERRA: Yeah, I'm going to object to the
- 2 question as misstating the evidence. This is a letter,
- 3 I believe, from the general manager. Obviously the
- 4 Board of Directors took whatever action Westlands took.
- 5 So to characterize this as a statement by Westlands is
- 6 a misstatement of the evidence. If it's a statement by
- 7 the general manager, that's fine. But the question has
- 8 been asked in terms of, "Isn't it true that Westlands"
- 9 said something. And that's a misstatement.
- 10 MR. RUIZ: Which goes back to my initial
- 11 comment. We should figure out exactly who the letter
- 12 is from so we can get some clarification. If it's from
- 13 the GM, let's establish that.
- 14 CO-HEARING OFFICER DODUC: Let's scroll down
- 15 and see who signed this. But I suspect it's from the
- 16 general manager.
- 17 MS. MORRIS: Sure. We can do this a different
- 18 way.
- 19 If you'd pull up SDWA-278, which was an
- 20 exhibit produced by South Delta Water Agency, which is
- 21 an official statement and not the general manager
- 22 characterizing his board's actions. Do you see in
- 23 second paragraph, it says, "However, under the
- 24 participation approach announced by Reclamation for
- 25 CWF, only CVP contractors that choose to participate in

1 CWF would pay the costs of constructing and operating

- 2 the new facilities with no assurances that those
- 3 contractors would receive the water supply benefits
- 4 resulting from CWF." Do you see that?
- 5 WITNESS MICHAEL: Yes.
- 6 CO-HEARING OFFICER DODUC: And may I remind
- 7 counsel of the numerous objections voiced by some
- 8 parties when things are read into the record? Just a
- 9 reminder.
- 10 MS. MORRIS: Thank you.
- 11 So if we could go back to Westlands Water
- 12 District 16. Do you think that it's fair to say,
- 13 based -- in your opinion, having looked at both of
- 14 those letters, that the issue with Westlands Water
- 15 District wasn't necessarily that it wasn't financially
- 16 feasible but it wasn't financially feasible given the
- 17 participation approach put forth by USBR?
- 18 MR. RUIZ: Before you answer, I'll just going
- 19 to object. The document speak for itself. The
- 20 language speaks for itself. To ask Dr. Michael to
- 21 speculate as to what this Board or, in the other case,
- 22 the general manager meant is improper.
- 23 CO-HEARING OFFICER DODUC: Where are you going
- 24 with this, Ms. Morris?
- MS. MORRIS: I'm just trying to -- the slide

1 presented by Dr. Michael says that it's not financially

- 2 viable. And I'm trying to show that it's more than
- 3 that it's not financially viable, that it's based on
- 4 the participation approach. And if I could continue to
- 5 ask a few other questions, very limited, about whether
- 6 Westlands is still pursuing the project...
- 7 WITNESS MICHAEL: I don't mind answering this
- 8 question.
- 9 I mean, the participation approach is part of
- 10 the financial plan. My testimony was about the
- 11 financial plan and financial viability. So it says in
- 12 part -- it doesn't say in whole, but it says in part it
- 13 was based on the participation approach, participation
- 14 approach and cost allocation that refers to is the
- 15 financial that was provided to Westland.
- So I think saying that that's part of the
- 17 issue is important. It's also the water yield provided
- 18 by the project, I believe, is also referenced and the
- 19 uncertainty related to it which speaks to operations.
- 20 So all of those things are a factor.
- 21 MS. MORRIS: And by -- you're saying
- 22 "financial plan" you're -- again, this is talking about
- 23 a participation approach, correct?
- 24 WITNESS MICHAEL: The participation approach
- 25 includes -- it discusses the cost allocation, which is

- 1 a component of the financial plan. So it may not be
- 2 labeled "The Financial Plan" but it specifies their
- 3 understanding of how costs would be allocated at that
- 4 time.
- 5 MS. MORRIS: Thank you. And do you know if
- 6 Westlands is still pursuing participation in the
- 7 WaterFix project?
- 8 WITNESS MICHAEL: I don't know what they're --
- 9 no.
- 10 MS. MORRIS: Okay. Thank you. Again, looking
- 11 at that same slide, SDWA-266, 5 -- 15, you state -- and
- 12 you also testified, I believe, on Friday that MWD staff
- 13 white paper showed different operations than presented
- 14 to this Board, correct?
- 15 WITNESS MICHAEL: I said that it had a
- 16 different water yield and a different project
- 17 description. So rather than comparing the project to
- 18 the No Action Alternative, what the white paper did in
- 19 the presentation of the Board is it took elements of
- 20 the project that's in the project description presented
- 21 to this Board and took them and put them into the
- 22 without-tunnel project.
- 23 So if you take elements that are in your
- 24 project and it put it into the no-project alternative,
- 25 they are no longer part of the project.

- 1 So it's a -- you know, it's a change to the
- 2 project description.
- 3 MS. MORRIS: Okay. But let's look at your
- 4 slide. You specifically state and this was my question
- 5 about water supply, you said that the staff white paper
- 6 has different operations. Do you see that?
- 7 WITNESS MICHAEL: Oh, yeah. So I guess that's
- 8 being a bit loose with the term. It's a different
- 9 water yield, water yield that varies significantly and
- 10 a no-tunnel project that varies significantly.
- MS. MORRIS: But you agree that the
- 12 Metropolitan white paper analyzed a range of operations
- 13 between H3 and H4, correct?
- 14 WITNESS MICHAEL: Yes.
- MS. MORRIS: What kind of bonds will DWR issue
- 16 to finance the California WaterFix project?
- 17 WITNESS MICHAEL: I don't think they've
- 18 presented a financial plan with that level of detail.
- 19 MS. MORRIS: What type of funding mechanism
- 20 did you assume in your analysis when you testified on
- 21 Friday that there was risk to taxpayers and the State
- 22 General Fund?
- 23 WITNESS MICHAEL: Well, I don't know the type
- 24 of bonds that are planned. But with the -- you know,
- 25 if the agencies don't develop a -- I mean, if the

- 1 agencies haven't specified in their financial plan and
- 2 haven't shown evidence that they have revenues that are
- 3 sufficient to pay the debt, then there's a possibility
- 4 of that risk.
- 5 It's also worth noting that, at least in the
- 6 case of Metropolitan, they do receive revenue from
- 7 property taxes from households in their agency. So
- 8 they do have -- taxpayer funds are part of their
- 9 support.
- 10 MS. MORRIS: Do you know what percentage
- 11 taxpayer funds are for Metropolitan Water District?
- 12 WITNESS MICHAEL: I don't know that, and I
- 13 don't know that it's relevant.
- MS. MORRIS. Okay, thank you.
- We have no further questions.
- 16 CO-HEARING OFFICER DODUC: Thank you.
- 17 Ms. Meserve?
- MS. MESERVE: Good morning, I just have a
- 19 couple of questions about additional economic and
- 20 community impacts of the project.
- 21 CROSS-EXAMINATION BY MS. MESERVE
- MS. MESERVE: Good morning, Dr. Michael.
- 23 WITNESS MICHAEL: Good morning
- 24 MS. MESERVE: I represent local agencies of
- 25 the North Delta and I just have a few questions for

- 1 you.
- 2 In terms of private property required for --
- 3 to construct the project, have you looked at the number
- 4 of acres of private property that would need to be
- 5 taken to construct this?
- 6 WITNESS MICHAEL: I've looked at the total
- 7 agricultural acreage that would be lost due to
- 8 construction. I don't know if that's the totality of
- 9 property that would be taken.
- 10 (Reporter interruption)
- 11 WITNESS MICHAEL: I don't know if that's all
- 12 the property that would be taken to construct it, but
- 13 I've seen estimates of the amount of agricultural land
- 14 that would be lost in the Delta as a result of
- 15 construction.
- 16 MS. MESERVE: And that's around 4,000 acres of
- 17 direct, does that sound right?
- 18 WITNESS MICHAEL: Sounds right. I was
- 19 thinking it was 5,000 but in that range, yes.
- 20 MS. MESERVE: I believe the additional
- 21 thousand acres is tagged as temporary, which may be --
- 22 may be the reason.
- 23 And have you considered the issue of the
- 24 economic effects of large portions of land being taken
- 25 by eminent domain in that community?

- 1 WITNESS MICHAEL: Not in detail, no.
- MS. MESERVE: Have you read any of the
- 3 articles about what is happening with the land
- 4 acquisition process for the high-speed rail project,
- 5 which is another linear project here in California?
- 6 WITNESS MICHAEL: Not in detail, no.
- 7 MS. MESERVE: Are you familiar with how long
- 8 it might take to acquire the 4- or 5,000 acres of land
- 9 that would be required for this project through eminent
- 10 domain?
- 11 WITNESS MICHAEL: No.
- MS. MESERVE: If that process took several
- 13 years, for instance, would that lead to some properties
- 14 setting with no activity on them if they were acquired
- 15 through that process and the project was not being
- 16 constructed yet?
- 17 WITNESS MICHAEL: Could you be more specific
- 18 about when you mean "setting with no activity"?
- MS. MESERVE: Assuming the eminent domain
- 20 process took a long time and all the land couldn't be
- 21 acquired at one time, might some parcels of land be
- left with no use upon them for years?
- 23 WITNESS MICHAEL: It -- yeah. It's my view
- 24 that even, you know, a proposal like this that's in
- 25 place for a long time would have such an impact on a

- 1 region, can affect, you know, land use decisions,
- 2 property values, and investment before the eminent
- 3 domain process starts. Although I have not analyzed
- 4 it, it certainly is true in theory and would be my
- 5 expectation that the project's already affected land
- 6 use and property values within the Delta.
- 7 MS. MESERVE: Are you aware of any examples of
- 8 how the project has already affected property values in
- 9 the Delta?
- 10 WITNESS MICHAEL: I'm not specifically aware
- 11 of it, no.
- MS. MESERVE: And if some properties were
- 13 acquired and nothing is occurred on them -- if some
- 14 properties were acquired by the DWR or the JPA or
- 15 whoever is running this project and were held and
- 16 nothing occurred on them, would you be concerned about
- 17 what might happen on those lands if they were -- had no
- 18 activity?
- 19 WITNESS MICHAEL: Would I be concerned about
- what might happen?
- 21 MS. MESERVE: Would those lands likely be in
- 22 productive agricultural uses if they were -- had been
- 23 acquired for this project, for instance?
- 24 WITNESS MICHAEL: They may or may not,
- 25 depending upon what the agencies were to do. I mean,

- 1 they certainly they might make different investment
- 2 decisions than a, you know, a farmer that intended to
- 3 own the -- and produce on that property long-term,
- 4 whether that was, you know, infrastructure investment,
- 5 certain types of crops that have a longer term return.
- 6 MS. MESERVE: But if DWR or the JPA owned the
- 7 property, it's unlikely that DWR or the JPA would be
- 8 conducting agricultural operations; isn't it?
- 9 WITNESS MICHAEL: I don't know. I mean, they
- 10 may lease the land to a farmer in the area to generate
- 11 some, you know, revenue from their ownership. I'm not
- 12 specifically aware what their plans would be.
- MS. MESERVE: Would anyone be likely to make
- 14 investments to promote agricultural productivity on
- 15 land that has been acquired for the right of way?
- 16 WITNESS MICHAEL: No, I don't think they would
- 17 make, you know, long-term investments to promote the
- 18 productivity.
- 19 MS. MESERVE: Do you think that some of that
- 20 agricultural productivity in the right of way areas may
- 21 already be impacted?
- 22 WITNESS MICHAEL: I think -- I think it's
- 23 definitely possible that one could, you know,
- 24 theoretically explain why that would be true. But I
- 25 have not studied it or investigated it specifically.

1 MS. MESERVE: Would that be another layer of

- 2 economic impacts that's not covered in the study you've
- 3 done thus far on this issue?
- 4 WITNESS MICHAEL: That's correct.
- 5 MS. MESERVE: And if land was held for a long
- 6 time waiting for a large might that land also be
- 7 subject to vandalism?
- 8 WITNESS MICHAEL: I would think that would
- 9 increase the risk of that, yes.
- 10 MS. MESERVE: Now, have you had any experience
- 11 with a project that didn't have enough funds to
- 12 complete construction, that began but did not complete?
- 13 WITNESS MICHAEL: Do I -- I don't specifically
- 14 have experience with --
- MS. MESERVE: For instance, are you, just as
- 16 an example, aware of the mall in Elk Grove that is
- 17 partially built but not completed on Highway 99?
- 18 WITNESS MICHAEL: Yes, I'm very aware of that
- 19 case.
- 20 MS. MESERVE: Is that parcel, just as an
- 21 example, providing any economic benefit at this time to
- 22 your knowledge?
- 23 WITNESS MICHAEL: No, not at this time.
- 24 Although that particular parcel has changed hands and
- 25 after, you know, over a decade of sitting vacant and

- 1 deteriorating, may eventually attract investment.
- 2 MS. MESERVE: And given your assessment of the
- 3 economic feasibility of this project, do you think
- 4 there's a risk that this project could be commenced but
- 5 not completed?
- 6 WITNESS MICHAEL: I believe, yes, there is a
- 7 risk that it could be -- yes, commenced but not
- 8 completed, yes.
- 9 MS. MESERVE: What kind of implications would
- 10 that have?
- 11 WITNESS MICHAEL: Well, I mean, there
- 12 certainly would be some costs that delivered no
- 13 benefits. And depending upon what work was completed,
- 14 there could be permanent and disruptive, you know,
- 15 impacts and alterations on the -- on the Delta
- 16 landscape and economy if land was taken out of
- 17 agricultural production and, you know, construction was
- 18 started and not completed. You know, then that loss
- 19 would still exist even though the project was not
- 20 completed.
- 21 MS. MESERVE: And thinking about the
- 22 businesses in the Delta, what impact would it have on
- 23 businesses in the vicinity of those incomplete
- 24 construction areas?
- 25 WITNESS MICHAEL: I guess -- it's hard to --

- 1 it's hard for me to envision what an incomplete
- 2 construction area would look like. I mean, I don't
- 3 know enough about the specifics of the project to know
- 4 what would be left behind and how it might impact the
- 5 community.
- 6 MS. MESERVE: Just say, for instance,
- 7 Intake -- Proposed Intake No. 3 is just north of and
- 8 sort of on top of the town of Hood.
- 9 WITNESS MICHAEL: Mm-hmm.
- 10 MS. MESERVE: So if that intake was partially
- 11 constructed and then abandoned, what impact would that
- 12 have on a town like Hood?
- 13 WITNESS MICHAEL: It would certainly -- it
- 14 would certainly be a segment for that town. I mean,
- 15 property would be -- would have been taken, the project
- 16 would be -- you know, you would have a partially
- 17 constructed project or maybe even that element of the
- 18 project would be fully constructed but just sitting
- 19 there.
- I mean, it would be a concern, too, if a
- 21 project's abandoned and there isn't -- you know, it's
- 22 not generating a revenue stream for maintenance even of
- 23 what's already been produced. So one could foresee a
- lot of negative impacts that could result.
- 25 MS. MESERVE: If there was inadequate -- if I

- 1 might just have a couple more minutes?
- 2 CO-HEARING OFFICER DODUC: Okay.
- 3 MS. MESERVE: If there was inadequate
- 4 maintenance and staffing, might that lead to heightened
- 5 crime in an area such as Hood?
- 6 WITNESS MICHAEL: Well, abandoned structures
- 7 are known for risk of crime and deterioration, so I
- 8 think this would be no different
- 9 MS. MESERVE: And just thinking about Hood, if
- 10 the project -- if the intake and the project was
- 11 completed, do you see any economic benefit to a town
- 12 like Hood?
- 13 WITNESS MICHAEL: No, not after it's
- 14 completed. I mean, a town like Hood is an example of
- 15 an area that's probably already been negatively
- 16 impacted just by the proposal and the potential for
- 17 this plan. And, you know, to the extent that there was
- 18 any economic benefit for people who owned businesses in
- 19 town, it might accrue during the construction period.
- 20 After the construction period, probably not too much.
- 21 MS. MESERVE: And with the town basically
- 22 bisected, wouldn't that reduce the level of interest in
- 23 investment in new businesses and things like that?
- 24 WITNESS MICHAEL: Yeah, I would think that
- 25 Hood would be a very, you know, unattractive location

- 1 for business and housing if the project were built.
- 2 MS. MESERVE: And then just thinking about
- 3 across the river from Hood, do you think that there
- 4 could be negative economic implications even just from
- 5 the change in aesthetics across the river?
- 6 WITNESS MICHAEL: Oh, absolutely. I mean,
- 7 you're taking a rural area and putting a very --
- 8 enormous industrial structure in it. So it would
- 9 certainly affect the character of the community and the
- 10 rural environment. And it would affect, you know,
- 11 people's desire to recreate along that river.
- MS. MESERVE: Would that also include things
- 13 like agritourism and visiting farms?
- 14 WITNESS MICHAEL: Potentially.
- MS. MESERVE: And did you try to take account
- 16 of those longer term impacts on the community economics
- in your study?
- 18 WITNESS MICHAEL: No, I did not.
- 19 MS. MESERVE: So that would be an additional
- 20 layer of cost to the local community that might be
- 21 weighed in this project?
- 22 WITNESS MICHAEL: Yes.
- 23 MS. MESERVE: Thinking back to if a project
- 24 was partially constructed and then abandoned and then
- 25 restarted again, would that lengthen the amount of time

- 1 that the communities were subject to these kinds of
- 2 depression on investment?
- 3 WITNESS MICHAEL: Yes, it would because the
- 4 construction period would be the most -- you know,
- 5 would have the biggest amount of negative impacts. And
- 6 so if the -- if financial challenges extended to the
- 7 construction period, that would increase those impacts.
- 8 MS. MESERVE: And then finally, just thinking
- 9 about the Delta and if the tunnels project was never
- 10 built, would you have a positive outlook on the
- 11 economic future of the Delta?
- 12 WITNESS MICHAEL: How would you define Delta
- 13 in this instance? There's a lot of definitions of it.
- MS. MESERVE: I'm just thinking of the legal
- 15 Delta in general. Obviously, there's parts of the
- 16 Delta that are more directly impacted than others. But
- 17 you've opined in your report submitted with your
- 18 testimony about what kinds of economic impacts occur if
- 19 the tunnels are built. And I'm just wondering what
- 20 kind of future, with your experience, you see would if
- 21 they weren't built.
- 22 CO-HEARING OFFICER DODUC: Ms. Morris.
- 23 MS. MORRIS: Objection, calls for speculation.
- 24 There's been no foundation that this witness has done
- 25 such analysis.

1 CO-HEARING OFFICER DODUC: It is speculative;

- 2 we recognize that.
- 3 Dr. Michael, are you prepared to answer?
- 4 WITNESS MICHAEL: I do forecasts in the
- 5 regional economy, so -- but I wanted to know
- 6 specifically what areas. I mean, the legal Delta
- 7 includes -- you know, it is in a fast-growing region.
- 8 It's increasing in prosperity. So particularly, the
- 9 secondary zone has -- is an area that's experiencing
- 10 economic growth.
- 11 The primary zone is the area that would be
- 12 most impacted by the project. That area is very
- 13 protected from development by various rules and
- 14 statute. And so, you know, my outlook for it is tied
- 15 to the outlook for the agricultural industry, which is
- 16 generally a positive outlook at the moment. So we
- 17 would expect that to continue to do well.
- 18 The recreational economy in the Delta, I think
- 19 there will be increasing demand for those recreational
- 20 services. My concern is about, you know, the ability
- 21 in the Delta for -- to make investments and to continue
- 22 to, you know, improve and maintain that recreational
- 23 infrastructure that's needed, for the economy
- 24 associated with it to prosper. That could be a bit
- 25 challenging.

- 1 MS. MESERVE: But if the tunnels weren't
- 2 built, you still would have concerns about the
- 3 recreational future in the Delta?
- 4 WITNESS MICHAEL: Less, concern but, yes,
- 5 still concern.
- 6 MS. MESERVE: And doesn't the primary zone
- 7 provide important inputs for -- in terms of providing
- 8 produce locally and nationally and internationally?
- 9 WITNESS MICHAEL: It does. There's enormous
- 10 variety, particularly of vegetable crops grown in the
- 11 Delta and sometimes referred to as "truck crops" in our
- 12 report. So that's an important provider of those.
- 13 It's been a -- it's a growing area for wine
- 14 grape production, which that wine grape production
- 15 supports a lot more jobs and industry in the wineries
- 16 and distribution and the businesses associated with
- 17 that crop than, you know, even on the farms itself. So
- 18 it's an important source for that as well as processing
- 19 some of the vegetable crops like tomatoes.
- MS. MESERVE: And without the tunnels would
- 21 you be concerned about that economic prosperity
- 22 continuing?
- 23 WITNESS MICHAEL: No.
- MS. MESERVE: No further questions.
- 25 CO-HEARING OFFICER DODUC: Ms. Taber?

- 1 CROSS-EXAMINATION BY MS. TABER
- 2 MS. TABER: Good morning, Dr. Michael. I'm
- 3 Kelley Taber on behalf of the City of Stockton. And I
- 4 have some questions regarding methods that would be
- 5 used by an economist to study the Delta recreation
- 6 economy and compensation funds for impacts from public
- 7 works projects and a few questions about benefit cost
- 8 analysis assumptions and methods addressed in your
- 9 testimony.
- 10 Dr. Michael, referring to your testimony at
- 11 SDWA-265, in the section starting on Page 4, Line 28
- 12 through Page 5 Line 14 where you describe the effects
- 13 on the Delta recreation economy of construction-related
- 14 disruption, you state that -- all of the factors you
- 15 list in your testimony combine to make permanent
- 16 economic damage from the WaterFix project's
- 17 construction much more likely than in most public works
- 18 projects, correct?
- 19 WITNESS MICHAEL: Could you -- I was shuffling
- 20 through the wrong document when you gave me the
- 21 citation. So if you could give me --
- 22 MS. TABER: I'm sorry. Starting on Page 4,
- 23 Line 28 continuing on Page 15, Line 14 you discuss
- 24 characteristics of the WaterFix project that you
- 25 state -- and I'm summarizing -- combine to make

- 1 permanent economic damage from the WaterFix project's
- 2 construction much more likely than in most public works
- 3 projects --
- 4 WITNESS MICHAEL: Correct.
- 5 MS. TABER: -- is that an accurate summary of
- 6 your testimony?
- 7 WITNESS MICHAEL: Yes.
- 8 MS. TABER: Thank you. In your opinion,
- 9 Dr. Michael is a feasible to measure and quantify the
- 10 amount of permanent economic damage to Delta businesses
- 11 from the California WaterFix project construction.
- 12 WITNESS MICHAEL: I think that's -- would be
- 13 very difficult.
- 14 MS. TABER: Are there any generally accepted
- 15 methods that economists would use to attempt such an
- 16 analysis?
- 17 WITNESS MICHAEL: I think if we had a -- you
- 18 know, a clear description of a -- of the project and,
- 19 you know, mapped out the businesses and the traffic
- 20 patterns, there's -- certainly an estimate could be
- 21 made. It would be very -- it would just require a lot
- 22 of work. It would be a very detailed analysis that I
- 23 have not undertaken.
- 24 MS. TABER: Okay. Keeping in mind that you
- 25 said it would be very difficult, could you, sitting

- 1 here today, even estimate, based on your experience,
- 2 the amount of time or costs that would be required to
- 3 undertake such a study on an order of magnitude?
- 4 WITNESS MICHAEL: I wouldn't want to venture a
- 5 guess. I wouldn't say it's completely infeasible, but
- 6 it would be -- it would be significant.
- 7 MS. TABER: Recognizing the difficulty that
- 8 you described, would such an analysis of economic
- 9 impacts to the Delta recreation businesses be an
- 10 important element of any determination regarding the
- 11 costs and benefits of the California WaterFix project?
- 12 WITNESS MICHAEL: In the context of the
- 13 benefit cost analysis I talked about, it would be
- 14 important to include it to the extent possible.
- 15 But I don't think -- it would be unlikely to
- 16 be a really large factor in a benefit cost analysis of
- 17 a \$17 billion project.
- 18 MS. TABER. Thank you. In your testimony,
- 19 Dr. Michael, on Page 7, Line 24, you references the DWR
- 20 "Economic Analysis Guidebook." Do you recall that?
- 21 WITNESS MICHAEL: Yes.
- 22 MS. TABER: Thank you. To your knowledge,
- 23 Dr. Michael, does that guidebook list or otherwise
- 24 describe methods that could be used to undertake a
- 25 study of the Delta's recreational economy and the

- 1 California WaterFix project's effect on the Delta
- 2 recreational economy?
- 3 WITNESS MICHAEL: It describes socioeconomic
- 4 analysis that could be done. It doesn't get into the
- 5 level of detail for this application, but it describes,
- 6 you know, socioeconomic analysis in general that one
- 7 might conduct, yes.
- 8 MS. TABER: Is it your understanding that, as
- 9 it relates to the Delta's recreational economy, the
- 10 California WaterFix project does not include a fund for
- 11 compensating local Delta businesses that might be
- 12 harmed as a result of California WaterFix project
- 13 construction?
- 14 WITNESS MICHAEL: That's my understanding,
- 15 yes.
- 16 MS. TABER: And are you aware of any evidence
- 17 submitted in this proceeding by the petitioners that
- 18 describe compensation -- a compensation fund for local
- 19 Delta businesses that could be harmed by project
- 20 construction?
- 21 WITNESS MICHAEL: I'm not aware of any
- 22 testimony.
- MS. TABER: In your opinion as an economist,
- 24 Dr. Michael, should the State Water Board include a
- 25 permit condition that addresses a compensation fund for

- 1 local Delta businesses should the Board decide to
- 2 approve the Water Rights Change Petition for the
- 3 California WaterFix?
- 4 WITNESS MICHAEL: In my view, it should. My
- 5 interpretation of some of the documents that have been
- 6 submitted by petitioners, they've talked about the
- 7 construction economic impacts and, you know, that
- 8 they're going to be spending a tremendous amount of
- 9 money in these communities and that will generate
- 10 economic activity in places like Stockton from building
- 11 it, which is true.
- 12 But I don't think it would -- I don't think
- 13 that that's a sufficient reason not to create a
- 14 compensation fund because the businesses that could be
- 15 impacted are very different, those that could be
- 16 negatively impacted and those that could be positively
- 17 impacted. And those that could be negatively
- 18 impacted -- in particular some of the small
- 19 recreation-oriented businesses in the core of the Delta
- 20 are the ones that are critical to the community
- 21 character of the Delta.
- 22 And so -- and as I described, it's a difficult
- 23 area for there to be new investment. So there's a
- 24 public interest in making sure that those businesses
- 25 are able to endure the construction period. And the

- 1 nice thing for the petitioners about a compensation
- 2 fund is, if -- you know, there's a lot of uncertainty
- 3 about these offsetting effects.
- 4 If their theory is true and that the spending
- 5 from building the WaterFix would, you know, compensate
- 6 for any loss in recreational business, then the
- 7 compensation fund -- they wouldn't make any payments
- 8 because it's based on actual business. So there
- 9 wouldn't be any costs to them. There wouldn't be
- 10 outlays from the fund if in fact the businesses did not
- 11 see their business harmed.
- 12 And so in my view, I think it's essential.
- MS. TABER: Thank you, that's helpful.
- 14 Dr. Michael, are you familiar with DWR's Delta
- 15 levee subvention program which reimburses Delta
- 16 reclamation districts for a portion of their levee
- 17 maintenance costs?
- 18 WITNESS MICHAEL: Yes, I am.
- 19 MS. TABER: Did your benefit cost analysis
- 20 make any assumptions about DWR's levee subvention
- 21 program?
- 22 WITNESS MICHAEL: Not -- not specifically, no.
- 23 MS. TABER: So did it, just to clarify, did it
- 24 assume that the program would continue with full
- 25 funding and consistent availability to the Delta

- 1 reclamation districts' levee maintenance activities
- 2 over the hundred-year project operation period?
- 3 WITNESS MICHAEL: No, there's no specific
- 4 assumption of that. I mean, if I hesitated, it's
- 5 because in the section on earthquake risk there's some
- 6 discussion of the levee system in general and what --
- 7 what the meaning -- what the implication of assuming an
- 8 economic benefit from the earthquake risk, in
- 9 describing it and attaching that to the tunnels sort of
- 10 has some embedded assumptions about, you know, the
- 11 levee system going forward.
- 12 So there's some discussion of the levee system
- 13 in that part of the report, but there is no specific
- 14 discussion of the subventions program.
- 15 MS. TABER: Okay. Thank you. I think I may
- 16 have just one more question.
- Dr. Michael, on Page 11 of your testimony, on
- 18 Lines 10 through 11, you reference a favorable
- 19 assumption that you included in your cost benefit
- 20 analysis, that you use a discount rate below the
- 21 recommendation in DWR's Economic Analysis Guidebook,
- 22 correct?
- 23 WITNESS MICHAEL: Correct.
- 24 MS. TABER: Can you explain in laymen's terms
- 25 the significance of using a discount rate in your

1 analysis that is below the recommendation in DWR's

- 2 Economic Analysis Guidebook?
- 3 WITNESS MICHAEL: So a discount rate is
- 4 important because you're comparing economic
- 5 difficulties and costs that accrue at different periods
- 6 of time, different points in time. And so you need to
- 7 use a discount rate to calculate a present value so
- 8 that those values, costs, and benefits that occur in a
- 9 time series are directly comparable.
- 10 The discount rate, you know, accounts for the
- 11 time value money and, you know, the value of resources
- 12 and alternative investments. So when you use a higher
- 13 discount rate, you know, it tends to be less favorable
- 14 for a big infrastructure project because the costs are
- incurred early and the benefits are very far into the
- 16 future.
- 17 So the higher the discount rate is
- 18 generally -- you know reduces the benefits of the
- 19 project because it's accounting for the costs of having
- 20 to wait so long for those benefits to occur.
- 21 And so by using the DWR Economic Analysis
- 22 Guidebook recommends a 6 percent real discount rate. I
- 23 utilized a 3 1/2 percent real discount rate because I
- 24 wanted to use a current source that was accepted by the
- 25 State of California.

- 1 So that's what has been adopted by the
- 2 California Water Commission. And it's through a pretty
- 3 extensive process. And it's a review of Prop 1
- 4 funding. So I thought that that was the most
- 5 current -- current guidance that one could point to
- 6 for -- in use by the State of California. And I wanted
- 7 to ensure that I didn't use assumptions that someone
- 8 might argue were biased against the tunnels.
- 9 So I adopted that 3 1/2 percent discount rate.
- 10 Now, I'll say that it conflicts with that --
- 11 in the Economic Analysis Guidebook, there's certainly a
- 12 lot of people -- comments that would argue that that's
- 13 too low. The federal government actually recently
- 14 issued guidance on benefit cost analysis reaffirming
- 15 its support for higher discount rate, I believe, on the
- order of 7 percent is appropriate.
- 17 So anyway, that's probably a longer answer
- 18 than you were looking for.
- MS. TABER: No, that was very helpful.
- 20 So then just to make sure I understand, had
- 21 you used a higher rate, and specifically the rate in
- 22 DWR's Economic Analysis Guide Book, the calculation of
- 23 the project's overall benefits would have been lower?
- 24 WITNESS MICHAEL: Correct.
- 25 MS. TABER: Thank you. No more questions.

- 1 CO-HEARING OFFICER DODUC: Thank you
- 2 Ms. Taber. Any redirect?
- 3 MR. RUIZ: We actually do not have -- we don't
- 4 have any redirect.
- 5 CO-HEARING OFFICER DODUC: All right.
- 6 WITNESS MICHAEL: Am I allowed to request to
- 7 re-answer a question or at least to clarify a
- 8 statement?
- 9 CO-HEARING OFFICER DODUC: Why don't you
- 10 consult with your attorneys, and we'll hear from
- 11 Mr. Herrick while that's happening.
- 12 MR. HERRICK: I contacted Dante at 10:03 and
- 13 he's about 27 minutes away, not counting walking to a
- 14 parking place. So if we take a short break, he should
- 15 be here.
- 16 CO-HEARING OFFICER DODUC: We'll take a short
- 17 break after we find out whether or not there will be
- 18 any redirect.
- MR. RUIZ: Yes, we just have actually one
- 20 small point of clarification. And I'll do it in the
- 21 form of just one quick redirect question, if that's
- 22 okay.
- 23 CO-HEARING OFFICER DODUC: All right.
- 24 REDIRECT EXAMINATION BY MR. RUIZ
- MR. RUIZ: Dr. Michael, referring to your

- 1 PowerPoint presentation, Slide No. --
- 2 WITNESS MICHAEL: I don't have the number
- 3 listed on here, but this was the slide that says,
- 4 "Recent Water Agency Votes Show Project Is Not
- 5 Financially Feasible."
- 6 MR. RUIZ: Looking at the last bullet you have
- 7 regarding the Metropolitan Water District, the bullet
- 8 underneath the Metropolitan Water District point refers
- 9 to "Approved based on staff white paper on operations
- 10 that varies significantly..." What did you mean by
- 11 that specifically?
- 12 WITNESS MICHAEL: So I received a question
- 13 that focused -- it says "white paper on operations that
- 14 vary significantly," and my attention was directed to
- 15 the phrase playing off the white paper part and
- 16 operations that vary significantly, and I said that
- 17 the -- you know this is a grammatical point, but I said
- 18 what I've written was incorrect. But what I'm
- 19 referring to in the sentence, maybe I'm not a clear
- 20 writer, but the "on operations" is referring to the
- 21 white paper.
- 22 Metropolitan produced three white papers. The
- 23 white paper I submitted as an exhibit was the white
- 24 paper on operations. So maybe I should have used the
- 25 title of it. But I was referring to the white paper

- 1 varied significantly, not making testimony that the
- 2 operations in the white paper varied significantly.
- 3 CO-HEARING OFFICER DODUC: Thank you.
- 4 MR. RUIZ: And that's it. Thank you.
- 5 CO-HEARING OFFICER DODUC: Any recross?
- 6 MS. MORRIS: Can I have one minute, please?
- 7 I have no questions. Thank you.
- 8 CO-HEARING OFFICER DODUC: Thank you.
- 9 Thank you, Dr. Michael.
- 10 And before we take a break, though, let's get
- 11 a housekeeping matter done with Ms. Osha and DWR here,
- 12 which isMs. Ansley, I believe.
- 13 Ms. Ansley, in conducting cross-examination of
- 14 LAND's witnesses, you had voiced an objection -- or
- 15 perhaps you did not, but you mentioned LAND-3 and the
- 16 fact that LAND-3, according to you at the time, while
- 17 it was not admitted into the record, Ms. Meserve did
- 18 some homework and confirmed with us, and we also
- 19 confirmed that, I believe, that LAND-3 was entered into
- 20 evidence in Part 1.
- 21 Are you -- did you have a -- are we still
- 22 waiting for you to respond to LAND's argument, or are
- 23 you withdrawing the objection? Is there an outstanding
- 24 objection that we need to respond to?
- 25 MS. ANSLEY: No. I think if the Water Board

- 1 confirmed that it was after -- I guess it was either
- 2 rebuttal or surrebuttal. If it was indeed entered into
- 3 the record -- I'm sorry.
- 4 No. I'm withdrawing the objection. Since the
- 5 Water Board itself has confirmed that, after rebuttal
- 6 or surrebuttal, it was actually entered into the
- 7 record, that's fine.
- 8 CO-HEARING OFFICER DODUC: Have we so
- 9 confirmed?
- 10 MR. DEERINGER: I think Hearing Officer Doduc
- 11 needs to confer with counsel, and we'll come back at
- 12 the break and speak to that.
- MS. ANSLEY: Okay.
- 14 CO-HEARING OFFICER DODUC: With that, we'll
- 15 confer during the break and resume at 10:45
- 16 (Recess taken)
- 17 CO-HEARING OFFICER DODUC: All right. It is
- 18 10:45, welcome back. At this point, we welcome always,
- 19 Mr. Nomellini, and we'll turn it over to -- oh, I will
- 20 have to ask you to stand and raise your right hand.
- 21 (Witness sworn)
- DANTE JOHN NOMELLINI,
- called as a Panel 2 witness by Protestant
- 24 Group 21, having been first duly sworn,
- 25 was examined and testified as hereinafter

- 1 set forth:
- 2 CO-HEARING OFFICER DODUC: Mr. Ruiz,
- 3 Mr. Keeling.
- 4 DIRECT EXAMINATION BY MR. RUIZ
- 5 MR. RUIZ: Yes. Good morning, Mr. Nomellini.
- 6 Dean Ruiz on behalf of the SDWA parties.
- 7 Mr. Nomellini, did you prepare SDWA-300
- 8 Corrected, actually did you prepare your written
- 9 testimony SDWA-300?
- 10 WITNESS NOMELLINI: Yes.
- 11 MR. RUIZ: And do you have with you and have
- 12 you reviewed SDWA-300 which is your corrected
- 13 testimony?
- 14 WITNESS NOMELLINI: Correct.
- MR. RUIZ: And did you also prepare a
- 16 PowerPoint presentation that's SDWA-314?
- 17 WITNESS NOMELLINI: Yes, I did.
- 18 MR. RUIZ: Are you prepared to provide a
- 19 summary of your testimony at this time?
- 20 WITNESS NOMELLINI: Yes.
- 21 MR. RUIZ: Are you going to primarily use your
- 22 PowerPoint or written or a combination of both?
- 23 WITNESS NOMELLINI: A combination.
- 24 MR. RUIZ: Okay. Would you please proceed?
- 25 WITNESS NOMELLINI: All right. First of all,

- 1 my testimony was stricken in major part by staff. And
- 2 I'm not sure how to deal with that, and I don't know
- 3 what the ruling is of the Hearing Officer, if she ruled
- 4 on that deletion or not.
- 5 CO-HEARING OFFICER DODUC: We did.
- 6 WITNESS NOMELLINI: You have ruled in support
- 7 of it? Okay.
- First of all, the part that was not
- 9 redacted -- just to be careful, I'm just going to read
- 10 it to you.
- 11 CO-HEARING OFFICER DODUC: There is still
- 12 plenty there, Mr. Nomellini.
- 13 WITNESS NOMELLINI: Pardon me?
- 14 CO-HEARING OFFICER DODUC: There is still
- 15 plenty there.
- 16 WITNESS NOMELLINI: Oh, yes, I understand.
- 17 The current proceeding -- this is what staff
- 18 left in there. The current proceeding is basically
- 19 State of California ruling on its own actions. The
- 20 inherent conflict of interest in this proceeding is
- 21 greatly exacerbated by the aggressive and premature
- 22 support of the Governor's and high ranking federal
- 23 officials for an isolated conveyance facility,
- 24 separating Sacramento River water from the common
- 25 pooling of the watershed water in the Delta and

1 deliberately causing a significant degradation of water

- 2 quality in the Bay-Delta estuary.
- 3 The State Board has been entrusted with broad
- 4 responsibilities to protect the public trust and public
- 5 interest and should not ignore evidence indicating
- 6 corruption of the process.
- 7 And I speak to that with regard not to the
- 8 adequacy of the environmental document for DWR's
- 9 purposes but to your responsibility as a responsible
- 10 agency with regard to your determinations. And you
- 11 have very broad authority in that regard and some
- 12 special duties.
- 13 And so aside from the -- and this was left in
- 14 my testimony.
- 15 Aside from the adequacy of DWR's EIR for
- 16 purposes of CEQA compliance with public trust and
- 17 public interest concerns, you should encompass the need
- 18 for a fair and open public process and avoidance of
- 19 corruption and avoidance of predetermination other than
- 20 the CEQA processes.
- 21 In other words, in your handling I think you
- 22 have to take into consideration with regard to public
- 23 interest and the public trust the background of this.
- 24 We all recognize the Governor's position has been long
- 25 in favor of isolated facilities, and he's asserted

1 himself aggressively with regard to what we're dealing

- 2 with.
- I think, too, that the evidence that you
- 4 received the petition in this case for additional
- 5 intakes on the Sacramento River and tunnels ahead of
- 6 the completion of the environmental document indicates
- 7 further evidence of the predetermination on the issue.
- 8 And in my belief, it taints the whole process.
- 9 The projects that you're dealing with, the
- 10 change in point of diversion, will create more reliance
- on the Delta rather than less. Somebody's going to
- 12 invest billions of dollars, 10 billion, whatever the
- 13 number is. Once that investment is made, there's going
- 14 to be a strong pressure to go ahead and utilize the
- 15 facility.
- 16 And of course, the Delta Reform Act was very
- 17 specific about where we should go with regard to a
- 18 WaterFix or some other type of conveyance. And the
- 19 co-equal goals, of course, means the two goals of
- 20 providing more reliable water supply for California and
- 21 protecting, restoring, and enhancing the Delta
- 22 ecosystem.
- Now the Delta, of course is part of
- 24 California, so the reliability of its supply ought to
- 25 be equal to the reliability of export supply.

- 1 On the other hand, enhancing the Delta, how
- 2 can you enhance the Delta when you degrade the water
- 3 quality? And there's no question in the record that
- 4 the development of tunnels with two additional intakes
- 5 on the Sacramento River will mean that for part of the
- 6 time there will be water directly diverted from the
- 7 Sacramento River to the pumps without passing through
- 8 the Delta.
- 9 That, of course, reduces the dilution that
- 10 would come from the water of the Sacramento River,
- 11 which is our better water quality, moving across the
- 12 Delta. And of course as it moves across the Delta, it
- 13 mixes with the San Joaquin River water. And therefore,
- 14 it's no surprise that there will be a substantial
- 15 degradation in water quality, which the documents all
- 16 support.
- 17 The nondegradation policy of the State is of
- 18 serious concern to me, and I think it should be to your
- 19 Board. So any plan that will degrade water quality, I
- 20 think, really runs counter to one of the basic
- 21 principles and efforts of the State Board to try to
- 22 improve water quality with regard to discharges and all
- 23 other actions that could impact water quality. And
- 24 this would acknowledge a degradation in violation of
- 25 that policy.

1 Now, the underlying problem we have is that

- 2 the State and Federal project have not developed the
- 3 water necessary to meet the contractual commitments and
- 4 meet their other obligations, which include salinity
- 5 control in the Delta. And the reason for that is
- 6 that -- well, first of all, the plan was to develop
- 7 5 million acre-feet a year by the year 2000. And that
- 8 plan is in the SDWA-169, which is a December 1960
- 9 Bulletin 76 report to the legislature.
- 10 The reason that document is important is
- 11 because it's an early description of what the project
- 12 entails, and was that reported to the legislature as
- 13 such, which was shortly after the election for the
- 14 California Water Development Bond Act, which is we call
- 15 it the Burns-Porter Act.
- 16 That 5 million acre-feet was to be developed
- 17 primarily from north coast watersheds, and they were
- 18 going to start the first project on the north coast
- 19 under Governor Reagan. And because of ownership in the
- 20 Round Valley with -- the person that owned that was
- 21 concerned about his land being inundated, and he
- 22 happened to be a friend of Ike Livermore and Governor
- 23 Reagan at the time, they submitted it for further study
- 24 rather than proceed with the project. Wild and Scenic
- 25 Rivers legislation came in thereafter, and the water

- 1 has not been developed.
- 2 Now, the year 2000 is long passed. The State
- 3 Water Project itself has about 4 and a quarter million
- 4 acre-feet of entitlement. They didn't develop the 5
- 5 million acre-feet, so they have no water supply that
- 6 was planned to supply those contracts, much less meet
- 7 the salinity obligations in the Delta and the needs in
- 8 the areas of origin.
- 9 That's driving this, coupled with the lack of
- 10 a drain. The valley drain was supposed to be a part of
- 11 the federal commitment for the San Luis Act. They
- 12 weren't supposed to commit the water from the San Luis
- 13 unit unless there was a drainage outlet to the ocean.
- 14 And they didn't do that.
- 15 The State Water Project also was committed to
- 16 have a valley drain which hasn't been built. So we
- 17 have the degradation in water quality comes from the
- 18 drain, and we have the lack of water supply.
- 19 And I would say the State has not exercised
- 20 its due diligence in terms of developing water, and no
- 21 project such as this, which is going to increase
- 22 exports from the Delta, should be allowed without a
- 23 reckoning of what the real entitlement of the projects
- 24 is to water. So in my view, we have a premature
- 25 situation.

- 1 Now, I presented to you as an exhibit the
- 2 State Water Project Filing Delivery Capability Report
- 3 of 2015. That shows that their ability, the State
- 4 Water Project ability, which has this 4 and a quarter
- 5 million acre-feet of entitlement, by its own document
- 6 says in a dry year, single dry year like 1977, it has
- 7 the capability of delivering 454,000 acre-feet.
- 8 That's a big difference, that's about one
- 9 tenth, a little more than one tenth of what their
- 10 obligations are.
- 11 And this is a serious problem for us all
- 12 because this huge investment in tunnels is going to
- 13 take a major part of the capital that can be raised for
- 14 water development in the State and devoting it to
- 15 moving water from one part of the state to another
- 16 rather than solving the deficiency in the yield that we
- 17 need to meet our needs.
- 18 The drought, the State says the drought that
- 19 we experienced in 2013 through 2016, I guess, was
- 20 unexpected. It's not unexpected. I went through all
- 21 the hearings that we went for the past two majors
- 22 decisions on the Delta, and the structure of our water
- 23 quality plan anticipated significant droughts. And we
- 24 have dry year criteria, critical year criteria, we have
- 25 all of that.

1 And I have an exhibit -- let's -- maybe I'll

- 2 put my exhibits up there. Anyway -- we put the
- 3 exhibits in in the first round as well. But anyway,
- 4 the droughts that we've had over the years which are
- 5 available -- it's SDWA-173. Can we put that up?
- 6 MR. RUIZ: It will be here [indicating].
- 7 WITNESS NOMELLINI: There we go. I'm not sure
- 8 I can read it, but anyway, the significance is -- oh,
- 9 there you go.
- 10 We've had droughts that extend well beyond six
- 11 years, you know, a number of times in history. It's
- 12 not new information. The water projects were designed
- 13 around the '28 through '34, which is a significant dry
- 14 period. And I'd point out to you, I looked at John
- 15 Leahigh's testimony, and disappointingly, they gave you
- 16 information with regard to their compliance with water
- 17 quality standards for a period since 1934.
- 18 The projects were designed to go through
- 19 drought in '28 to '34. So I'm disappointed that
- 20 they're kind of hiding the ball in terms of their
- 21 representation and what their performance has been.
- 22 But I would point out to you, and I've got the
- 23 evidence in my testimony, in 2009, in February, they
- 24 claimed to lack the ability to meet the water quality
- 25 criteria which was the monthly quality for February of

- 1 that year.
- 2 And they did so based on the assertion that
- 3 they needed to preserve cold water in the reservoirs,
- 4 particularly in Shasta, in order to take care of the
- 5 salmon.
- 6 Well, as it turned out -- and the Board has
- 7 this evidence. The Board actually heard it. Nothing
- 8 was done, but the Board at that time heard it. The
- 9 State and Federal government were exporting the very
- 10 amount of water that could have been used to meet the
- 11 standard. So it wasn't saving water. But the fact is
- 12 that they ran out of water in one year.
- 13 So February of 2009, then we get to 2013. And
- 14 2013, we had that dry period for a number of months in
- 15 the year. And they said they needed cold water, to
- 16 save cold water in Shasta. And what they did was they
- 17 came to the Board -- well, they went to the executive
- 18 officer, I guess -- and said, "We want to work against
- 19 a critical year criteria instead of a dry year
- 20 criteria," although it was clearly a dry year, not a
- 21 critical year.
- 22 Fishery agencies came back -- and they
- 23 recommended that they violate -- or not meet the dry
- 24 year standard, instead, meet a critical year standard.
- 25 Fishery agencies came in and said, "Yeah, we support

- 1 that."
- Nobody said anything about exports. In other
- 3 words, they didn't plan on curtailing exports. But
- 4 there you go through the first year, not even a real
- 5 drought, they ran out of water that's sufficient to
- 6 meet the cold water obligation. Now, maybe they
- 7 discerned a difference between meeting water quality
- 8 standards and meeting the cold water requirements.
- 9 They are they're incorporated in your
- 10 standards, but they're subject to a variability based
- 11 on a committee review and then an executive officer
- 12 determination.
- 13 The long and the short of it is, these people
- 14 do not have the ability, in my opinion, to meet the
- 15 water quality standards even for the '28 through '34
- 16 period. And they operate the project only to meet one
- 17 year. Nobody has put their feet to the task as to what
- 18 is the planning to go over and carry over water
- 19 sufficient to meet the water quality standards through
- 20 a six-year drought. And I'd say the '28 through '34,
- 21 although we know we have much longer droughts in the
- 22 history of California.
- 23 And with the tunnels, it's going to be much
- 24 more pressure to go ahead and seek these variances. I
- 25 think the State Department of Water Resources has

- 1 called these things "minor adjustments for
- 2 conditions" -- oh, "temporary adjustments as occurred
- 3 pursuant to the Water Board's authority."
- In other words, your executive officer,
- 5 Tom Howard, issued a number of temporary urgency
- 6 changes. And those are the changes that these people
- 7 are trying to put in in their testimony to tell you,
- 8 when they say they can meet the standards, provided you
- 9 can have temporary adjustments as needed.
- 10 Now, the problem with that is that we have
- 11 depleted our groundwater basins in Northern California.
- 12 And of course, you're well aware -- and you people are
- 13 principally involved in, you know, sustainable
- 14 groundwater management effort. And we can no longer
- 15 depend on going to our groundwater to take care of the
- 16 needs of Northern California. So we have a shortage in
- 17 groundwater that's going to have to be taken care of.
- 18 And the obligations of the project are to take
- 19 care of the areas of origin, in priority, the exports.
- 20 And they ignore that. So they're assuming they're
- 21 going to be able to operate these tunnels in spite of
- 22 the law and the requirements for taking care of areas
- 23 of origin.
- Now I'm going to kind of jump through my
- 25 testimony. I don't know how much time I have, but

- 1 anyway.
- 2 The law is fairly clear that the projects have
- 3 to meet the area of origin requirements and
- 4 particularly in the Delta. In the Delta -- and I might
- 5 just deviate for a minute. A prior Board, your prior
- 6 Board in D1465 said, "To provide full mitigation of
- 7 project impacts on all fishery species now would
- 8 require the virtual shutting down of the project export
- 9 pumps." That was in 1978.
- 10 And of course, as you know, they did not
- 11 curtail exports. In addition, Suisun Marsh at that
- 12 time was thought to require up to 2 million acre-feet
- 13 of water outflow in dry and critical years.
- Now what happened to the marsh -- and I know
- 15 you know, but the Montezuma Gates were put in to supply
- 16 the marsh for an overland supply instead of with
- 17 offshore waters. So 2 million acre-feet, not only was
- 18 it taken away from Delta outflow, but it was used to
- 19 isolate the marsh, you know, from Suisun Bay and
- 20 whatever the fishery impacts of that, I think we could
- 21 argue about those at length.
- The idea put before you with the WaterFix is
- 23 that, instead of water for fish, we're going to have
- 24 habitat. In other words, we're going to develop
- 25 habitat for fish. You know, you've got the EcoRestore

- 1 separated from the water conveyance, which I think is
- 2 not legitimate to separate the two. But anyway, they
- 3 did.
- 4 They're using bond funds to finance
- 5 EcoRestore, which I think is in great part mitigation
- 6 for the projects, which should be paid for by the
- 7 projects.
- 8 Now, what they presented to you is the fat --
- 9 I call it the fat fish-skinny fish. And there's a --
- 10 they show this picture based on a test of the Cosumnes
- 11 River of fat salmon and skinny salmon.
- 12 The fat salmon were those that were in cages
- 13 in a wetland habitat along the Cosumnes River. It was
- 14 a floodplain, not a tidal marsh; it was a floodplain.
- 15 The advantage of the floodplain versus tidal marsh is
- 16 probably less predators.
- 17 But anyway, they showed that picture. And the
- 18 skinny fish were in the cages in the river where the
- 19 flow was coming down fast. So the question presented
- 20 was, well, are we better off with fat fish or skinny
- 21 fish. Well, I know in my fatter condition I'm less
- 22 athletic than I was when I skinny. So a skinny fish
- 23 might be able to survive better than a fat fish.
- 24 But what they forgot to tell you in that study
- 25 was there was a cage in the river upstream of the

- 1 habitat, the wetland habitat, and the fish did as well
- 2 there in terms of size versus those in the wetlands.
- 3 It's in the study, and I cited it in my exhibits.
- 4 The subsequent studies -- and we haven't seen
- 5 escapement detail supporting that, but there's no
- 6 question that you get fat fish in a tranquil area, and
- 7 those fish in a cage in the Cosumnes, they might not
- 8 have stayed in the fast water of the stream were it not
- 9 for the cage. They might have moved over to quieter
- 10 water. All I'm saying is the science, I think, does
- 11 not support the proposition that they put forth.
- Now, there was a subsequent study -- and that
- 13 Cosumnes study was by Jeff Opperman, and I think it was
- 14 a fellowship thing.
- 15 And the subsequent study was by Sommer. And
- 16 he experimented -- or his team -- in the Yolo Bypass.
- 17 And fish were released, fingerlings, in the Yolo Bypass
- 18 and in the river. And again they concluded that, well,
- 19 there's probably a benefit to that. But it's based in
- 20 large part on the high flow that was going through the
- 21 bypass, and it was a high flow period.
- 22 Then they did a subsequent study in 2004. And
- 23 that study indicated -- and there's a table on Page 31
- 24 of my testimony. And it shows you that, in 1998, there
- 25 was an advantage of the fish going through the bypass

- 1 versus the fish going through the river. Okay? In
- 2 1999, it was a push, even. And in 2000, it was the
- 3 other way.
- 4 So I would submit to you that that
- 5 conclusion -- and it's in the public interest. And
- 6 it's with regard to the impact on fish that I'm
- 7 concerned. And that conclusion is not supported in any
- 8 of the studies that I've seen.
- 9 Now, Vogel did a comprehensive study for the
- 10 Northern California Water Association. And he pointed
- 11 out that the flooding of Lower Liberty -- which is
- 12 Reclamation District 293 which I represented years back
- over a period of time. But the flooding of that
- 14 affects the downstream migration of salmon such that he
- 15 called it advection. In other words, they get drawn
- 16 off their path back to the ocean because of the tidal
- 17 effects of having that flooded.
- The bad thing about that is that there's
- 19 predators in that Lower Liberty area because it's
- 20 flooded all the time. It's like tidal wetlands or
- 21 deeper. So you have predators there. It's not a
- 22 floodplain.
- 23 And the idea that the Delta ought to be he
- 24 equipped with restoration back to the 1800s or
- 25 something like that by turning them back into tule

- 1 marsh or something, which is really tidal wetland, I
- 2 think is not supportable. The reason is the Delta was
- 3 fully reclaimed by 1930.
- 4 And our collapse of fishery -- and I think
- 5 this one we can go to my slides. If we can go to slide
- 6 starting at SDWA-178.
- 7 All right. This shows you exports -- this is
- 8 right out of their documents. And they've been
- 9 increasing steadily as time goes on. And then we look
- 10 at the next slide, please.
- 11 Okay. You can see that for some species of
- 12 fish, there's been a serious decline. For example, in
- 13 smelt, striped bass indices, and I think that you can
- 14 see somewhat in the salmon. But the period of time
- 15 that we're looking at that we're worried about fish
- 16 isn't 1850 or 1800. We're worried about what happened
- 17 between the '60s and now.
- 18 And the Delta's been fully developed. In
- 19 fact, we have more wetland than we had in the '30s.
- 20 Franks Tract hasn't been reclaimed, Mildred Island
- 21 hasn't been reclaimed. So I think the hypotheses that
- 22 we need more tidal wetlands is a mistake. We may need
- 23 more wetlands farther up in the system that could help
- 24 fish, but we need more information on the success of
- 25 that, and we shouldn't jump off the bridge and buy into

- 1 this idea until we get that better information.
- Now, the bad thing about tidal wetlands, in
- 3 the Delta, we have methylization of mercury because of
- 4 all the mining that went on. We've got mercury coming
- 5 down our system. You stir up the water, and it
- 6 releases the mercury, and then it methylizes in these
- 7 wetlands which causes a big problem with regard to fish
- 8 and for the health of the people that eat much fish
- 9 from the Delta.
- 10 The other thing that happens is the
- 11 evapotransporation of water greatly increases in these
- 12 tidal wetlands. And I pointed out in here and at
- 13 Page 33 of my testimony, the differences between, for
- 14 example, alfalfa and tules. Tules can use up to 9.63
- 15 acre-feet per acre. And that's based on DWR's study,
- 16 which is their Exhibit DWR-22. And at any rate,
- 17 whether it's 9.63 -- and they show in there that it's
- 18 14.63 per acre for cattails and, in another study,
- 19 13.48 acre-feet per acre for tules.
- 20 Well, as we go through process where we have
- 21 shortages of water, the project proponents are ignoring
- 22 the tremendous loss of freshwater that we're going to
- 23 incur. Now, is it good to lose that amount of water in
- 24 order to get the fishery benefit which is in question?
- 25 I would say that's a matter of public interest and

1 public trust for you to decide. I think it is reckless

- 2 to do that.
- 3 Now, with regard to the Delta -- and you guys
- 4 are probably tired of hearing all this stuff, fighting
- 5 over what our rights are and whatnot. But we went
- 6 through some big court battles, you know, and we got
- 7 some decisions which I would consider to be the law of
- 8 the case in terms of our relationship with you and the
- 9 projects.
- 10 And the Racanelli Appellate Court decision
- 11 pointed out that the Delta Protection Act, which is
- 12 12200 et seq of the Water Code, and it's quoted here in
- 13 my testimony, and you can look at the decision, "The
- 14 Act prohibits project exports from the Delta of water
- 15 necessary to provide water to which Delta users are
- 16 entitled, "okay? That's water rights. You guys would
- 17 say -- somebody would say, "Oh, you don't have any
- 18 water rights."
- 19 Is that the end of my time? All right. Let
- 20 me just finish this point or give me more time, if you
- 21 will.
- 22 CO-HEARING OFFICER DODUC: I think your
- 23 attorney managed to wrangle an extra ten minutes from
- 24 staff already.
- 25 WITNESS NOMELLINI: Okay.

1 CO-HEARING OFFICER DODUC: So please do wrap

- 2 up.
- 3 WITNESS NOMELLINI: I'll keep going. You tell
- 4 me when to stop.
- 5 CO-HEARING OFFICER DODUC: Finish this
- 6 thought, and then we'll wrap up.
- 7 WITNESS NOMELLINI: Okay.
- 8 All right. So we're -- that's the
- 9 entitlement. That's water rights.
- 10 Second thing is water needed for salinity
- 11 control. So over and above what the Delta needs to
- 12 have before you can export is salinity control. Now,
- 13 you guys, you know, we haven't -- we don't have an
- 14 agreement fixed -- fixing salinity control like in the
- 15 North Delta. We don't have it for Central or South.
- 16 But your standards set the salinity control.
- 17 And the third thing is an adequate water
- 18 supply for Delta users. Now, they don't have to give
- 19 us an adequate supply, but they can't export unless we
- 20 have an adequate supply. So the idea of these tunnels
- 21 is that, if the Delta levees fail because of some
- 22 earthquake scenario, that they will then use the
- 23 tunnels to take water and export.
- 24 Well, that water might be needed for salinity
- 25 control in the Delta if you deplete the reservoir, and

- 1 it's when we don't have an adequate water supply. So
- 2 they cannot use those tunnels for that purpose under
- 3 that circumstance.
- 4 Additionally, in 12205 of the Water Code, it
- 5 is the policy of the State that the operation and
- 6 management of releases from storage -- and this is
- 7 stored water if you want to call it that -- into the
- 8 Sacramento-San Joaquin Delta of water for use outside
- 9 the area in which the water originates shall be
- 10 integrated to the maximum extent possible to permit
- 11 fulfillment of the objectives of this part.
- 12 And that Delta Protection Act, there's two
- 13 objectives, salinity control in the Delta and an
- 14 adequate supply to fully develop all the needs of the
- 15 Delta.
- 16 So this concept of having the tunnels for the
- 17 purpose that they've indicated is going to be contrary
- 18 to law.
- 19 Okay. Unless you give me more time, I'm going
- 20 to shut up.
- 21 CO-HEARING OFFICER DODUC: Thank you very
- 22 much.
- 23 WITNESS NOMELLINI: And I'd I like to point
- 24 out, some of the exhibits we put in in the first part
- 25 I've referred to -- because it get with fish, I

- 1 referred to them now. So I put them in as the same
- 2 exhibit number, only Part 2. So I think we want those
- 3 at some stage to go into the record. They're already
- 4 there. And then I have some additional ones.
- 5 Thank you.
- 6 CO-HEARING OFFICER DODUC: All right.
- 7 Cross-examination of Mr. Nomellini? May I see those
- 8 who would like to conduct cross-examination come up and
- 9 provide me with a time estimate?
- 10 MS. ANSLEY: Five to ten minutes at most for
- 11 DWR.
- 12 CO-HEARING OFFICER DODUC: All right. I think
- 13 that might be it.
- In which case, is the Water Forum ready?
- MR. BEZERRA: I guess our witnesses are across
- 16 the street at City Hall, so we need a few minutes to
- 17 bring them over.
- 18 CO-HEARING OFFICER DODUC: Thank you. Please
- 19 have them make the trek over.
- 20 CROSS-EXAMINATION BY MS. ANSLEY
- 21 MS. ANSLEY: Pardon me, I'm looking for my
- 22 page. If we could go to Page 27 of Mr. Nomellini's
- 23 corrected testimony.
- 24 And good morning, Mr. Nomellini. My name is
- 25 Jolie-Ann Ansley. I'm with the Department of Water

- 1 Resources.
- 2 WITNESS NOMELLINI: Pleased to meet you. I
- 3 have Page 27.
- 4 MS. ANSLEY: So if you have it in front of you
- 5 or if you can see the screen on the right which tends
- 6 to be clearer, you referenced two exhibits, SDWA-304
- 7 and 305. Do you see that there, sir, at the very top
- 8 on Lines 2 through 5 roughly?
- 9 WITNESS NOMELLINI: Yes.
- 10 MS. ANSLEY: And you state that these are from
- 11 the Anadromous Fish Restoration Program. Do you see
- 12 that?
- 13 WITNESS NOMELLINI: Yes, some of them I have
- 14 from the fish restoration program. They're probably
- 15 identified, I think.
- MS. ANSLEY: If you want to look at your
- 17 testimony that paragraph or maybe that paragraph on the
- 18 page before, my question simply is which anadromous
- 19 fish restoration program website do you references here
- 20 on Lines 4 to 5?
- 21 WITNESS NOMELLINI: I just go to the -- my
- 22 Google Anadromous Fish Restoration Program website.
- 23 Now, their exhibits have change a little bit over time.
- 24 But that's where I found it. The only thing that
- 25 wasn't there was the smelt information, and I cite with

- 1 that --
- 2 MS. ANSLEY: Do you know if this is a State or
- 3 a Federal website?
- 4 WITNESS NOMELLINI: It's the Restoration -- I
- 5 think it's a Federal site.
- 6 MS. ANSLEY: I'm asking because these two
- 7 exhibits, on the face of these exhibits, do not provide
- 8 a website or an agency -- they don't provide any
- 9 information as to which agency these came from. So I'm
- 10 asking if you know who maintains this website.
- 11 WITNESS NOMELLINI: Yeah, I think it's the
- 12 U.S. Fish and Wildlife Service. But they have a -- I
- 13 think it's a joint effort to satisfy the CVP IA fish
- 14 doubling requirement. If you have time, whenever, we
- 15 can grab a computer and look for it and find it.
- 16 MS. ANSLEY: Do you recall the date that those
- 17 figures, 304 and 305, were downloaded by you?
- 18 WITNESS NOMELLINI: Well, I tried to get the
- 19 latest information when I prepared my testimony. So it
- 20 would have been right before submitting my testimony
- 21 because I had exhibits like this that were derived from
- 22 their website prior to that time. So I tried to use
- 23 the updated ones.
- MS. ANSLEY: Would that be before your Part 1
- 25 or your Part 2 testimony?

- 1 WITNESS NOMELLINI: It would be Part 2.
- 2 MS. ANSLEY: Okay. Then turning to your
- 3 statement of qualifications -- and these are my final
- 4 questions. I do know of you personally, and I know
- 5 that you have a long history in Delta litigation.
- 6 Looking at your statement of qualifications,
- 7 however, you have a bachelor's in civil engineering; is
- 8 that correct?
- 9 WITNESS NOMELLINI: Correct.
- 10 MS. ANSLEY: And then you have a -- obviously,
- 11 a law degree from Berkeley, Boalt.
- 12 WITNESS NOMELLINI: Yes.
- MS. ANSLEY: Do you have a degree or
- 14 professional experience in the biological sciences?
- 15 WITNESS NOMELLINI: I have no degree, but I'm
- 16 an enthusiastic naturalist and hunter, and I manage a
- 17 lot of wildlife habitat on my own. So I am familiar
- 18 somewhat. I don't -- I'm not the foremost expert, but
- 19 I consider I have some expertise in that area.
- 20 MS. ANSLEY: Have you yourself conducted any
- 21 field studies for salmon or smelt or striped bass?
- 22 WITNESS NOMELLINI: Well, other than fishing
- 23 for striped bass and salmon and witnessing my success
- or my lack of success, I've not conducted any
- 25 biological experiments.

- 1 MS. ANSLEY: Have you conducted a
- 2 comprehensive literature review?
- 3 WITNESS NOMELLINI: I've been particularly
- 4 interested in this idea of having more tidal wetlands
- 5 in the Delta. And I've gone through that fairly
- 6 carefully. And I've put the major items into the
- 7 record as evidence.
- 8 MS. ANSLEY: The major items that you are
- 9 aware of; is that true?
- 10 WITNESS NOMELLINI: Yeah. You know, I tried
- 11 to find the current stuff.
- MS. ANSLEY: Okay. I have no further
- 13 questions for Mr. Nomellini.
- 14 Thank you, sir.
- 15 CO-HEARING OFFICER DODUC: Thank you,
- 16 Ms. Ansley.
- 17 Anyone else? Any redirect?
- 18 MR. RUIZ: There's no redirect.
- 19 CO-HEARING OFFICER DODUC: All right. Thank
- 20 you, Mr. Nomellini. Always a pleasure.
- 21 WITNESS NOMELLINI: Always a pleasure to see
- 22 you all still well, still doing your job.
- 23 CO-HEARING OFFICER DODUC: All right.
- 24 Mr. Ruiz, does that conclude Central Delta, South Delta
- 25 case in chief?

1 MR. RUIZ: That does conclude it as far as our

- 2 witnesses are concerned, yes.
- 3 CO-HEARING OFFICER DODUC: Yes. Not
- 4 Mr. Keeling.
- 5 MR. RUIZ: Right. For us, for the agencies.
- 6 CO-HEARING OFFICER DODUC: Do you wish to
- 7 mover your --
- 8 MR. RUIZ: Yes. At this point in time, we
- 9 would request to have all of our exhibits moved into
- 10 evidence.
- 11 And I don't believe there's been --
- 12 CO-HEARING OFFICER DODUC: Ms. Ansley is
- 13 coming up.
- 14 MS. ANSLEY: I was just wondering if Mr. Ruiz
- 15 was going to read which numbers that he would like to
- 16 move to evidence. I only ask because a great deal of
- 17 testimony has been struck. So I've tried to sort of
- 18 prepare a list of which exhibits may have been from a
- 19 testimony that was struck. And so I'm just wondering
- 20 is he planning on reading which numbers he's talking
- 21 about as opposed to just moving everything into the
- 22 record.
- 23 MR. RUIZ: Well, I wasn't planning on -- the
- 24 evidence that was struck for Mr. Nomellini's had to do
- 25 with his written testimony. And that was already

- 1 stricken by the -- by staff, by the Hearing Officers.
- 2 So other than that, everything that we have submitted,
- 3 everything that's come in, everything that's been
- 4 parted of Part 2 we are requesting to be moved in.
- 5 MS. ANSLEY: For clarity's sake because so
- 6 much of Part 1 was submitted as part of his Part 2
- 7 testimony and the numbers were repeating, I would
- 8 appreciate a final list of what was intended to be
- 9 submitted so that is there is no mistake and I don't
- 10 have to come back to the Board later about any
- 11 particular exhibit.
- 12 CO-HEARING OFFICER DODUC: Mr. Ruiz, would you
- 13 like to have until 5:00 -- well, noon tomorrow to
- 14 submit --
- 15 MR. RUIZ: Yeah, let's do that because I think
- 16 she's -- there's -- she's speaking to some confusion to
- 17 Mr. Nomellini's versus the Part 1 versus the Part 2.
- 18 So we'll just clarify that and submit that as you
- 19 suggested.
- 20 CO-HEARING OFFICER DODUC: Right. You will
- 21 submit that by noon tomorrow, and the parties will have
- 22 until noon on Wednesday to file any objections.
- MR. RUIZ: Thank you.
- MS. ANSLEY: Yes. And just for the record, I
- 25 do have a list of what I believe were the exhibits that

1 were within the testimony that was struck, again, in

- 2 Part 2.
- 3 And I do also lodge an objection to Exhibits
- 4 304 and 305, which were the -- which were the figures
- 5 from the website that Mr. Nomellini could not
- 6 substantively identify that came from the Anadromous
- 7 Fish Program Restoration website.
- 8 CO-HEARING OFFICER DODUC: Thank you.
- 9 MS. ANSLEY: And I'm happy to argue that
- 10 further, but I'm really waiting to see what numbers
- 11 they try to move into evidence.
- 12 CO-HEARING OFFICER DODUC: Let's wait, and
- 13 then you'll have your chance then.
- 14 All right. Thank you Mr. Ruiz, and thank you
- 15 Mr. Nomellini.
- Mr. Bezzera.
- MR. BEZERRA: Yes, the Water Forum witness are
- 18 on their way, across the street.
- 19 CO-HEARING OFFICER DODUC: All right. We will
- 20 stand and stretch. How long does it take to cross the
- 21 street?
- 22 MR. BEZERRA: Hopefully not very long. I will
- 23 go figure that out. Thank you.
- 24 CO-HEARING OFFICER DODUC: Thank you.
- 25 (Recess taken)

- 1 CO-HEARING OFFICER DODUC: Please take a seat.
- 2 Are we still missing Mr. Bratovich?
- 3 MR. GOHRING: He's on his way.
- 4 CO-HEARING OFFICER DODUC: All right.
- 5 Ms. Morris.
- 6 MS. MORRIS: May I ask a housekeeping issue?
- 7 CO-HEARING OFFICER DODUC: Sure.
- 8 MS. MORRIS: On these panels, there's overlap.
- 9 CO-HEARING OFFICER DODUC: I'm sorry. There's
- 10 talking going on.
- 11 Ms. Morris.
- MS. MORRIS: There are two panels for
- 13 Water Forum. And I was thinking it would be more
- 14 efficient to ask questions -- because Mr. Gohring and
- 15 Mr. Bratovich are on both panels. And so it seems like
- 16 it might be more efficient to hold questions until the
- 17 second panel and then just ask all my questions at that
- 18 time.
- 19 CO-HEARING OFFICER DODUC: Any objection to
- 20 that?
- MR. BEZERRA: Well, we broke them up,
- 22 specifically part -- the first portion is injury, and
- 23 the second portion is a completely different set of
- 24 testimony on the technical bases. I mean, I suppose we
- 25 can have this testimony occur, and then if people want

- 1 to --
- 2 CO-HEARING OFFICER DODUC: Why don't we wait
- 3 until after the testimony, and then you may make your
- 4 request then, Ms. Morris.
- 5 MS. MORRIS: Okay.
- 6 MR. BEZERRA: We do have a logistical issue.
- 7 As we discussed, one of our witnesses has a health
- 8 issue, and we'll call him right -- if we're going to
- 9 handle cross after both panels, we need to call him
- 10 right now. And there may be some delay because he
- 11 needs to drive down from where he is.
- 12 CO-HEARING OFFICER DODUC: Does anyone else
- 13 have cross-examination for Mr. Gohring and
- 14 Mr. Bratovich?
- MS. MORRIS: I just -- because maybe I'm
- 16 mistaken, but I understand that there was only one set
- 17 testimony for each witness. And that's why I believe
- 18 it would be for efficient to ask the questions because
- 19 I -- until they're testifying, I'm just reading their
- 20 testimony, and my questions are based on that.
- 21 CO-HEARING OFFICER DODUC: Understood.
- Yes, please.
- 23 MS. AKROYD: Rebecca Akroyd, San Luis and
- 24 Delta Mendota Water Authority. I believe my questions
- 25 go more to the second panel, but again, it's the same

1 two witnesses; I just thought it related more to the

- 2 topic, and I would also prefer.
- 3 CO-HEARING OFFICER DODUC: Okay.
- 4 Ms. Aufdemberge.
- 5 MS. AUFDEMBERGE: Yes, very same issue.
- 6 CO-HEARING OFFICER DODUC: Mr. Bezzera, you
- 7 might want to get your other witnesses here.
- 8 MR. BEZERRA: Yes. Mr. Miliband and I just
- 9 confirmed. We'll let them know to come. And since
- 10 we're approaching the lunch hour, I suspect it's not
- 11 going to be much of a problem.
- 12 CO-HEARING OFFICER DODUC: Great. All right.
- MR. MILIBAND: Wes Miliband, representing the
- 14 City of Sacramento.
- 15 CO-HEARING OFFICER DODUC: Actually, before
- 16 you get comfortable, please stand and raise your right
- 17 hand.
- 18 (Witnesses sworn)
- 19 TOM GOHRING and PAUL BRATOVICH,
- 20 called as Panel 1 witnesses for Protestant
- 21 Group 11, having been first duly sworn,
- 22 were examined and testified as hereinafter
- 23 set forth:
- 24 CO-HEARING OFFICER DODUC: Thank you. Be
- 25 seated.

- 1 Mr. Bezzera?
- 2 MR. BEZERRA: Thank you very much.
- 3 CO-HEARING OFFICER DODUC: How much time do
- 4 you anticipate needing for direct testimony?
- 5 MR. BEZERRA: I anticipate it's about 40
- 6 minutes for Mr. Gohring and Mr. Bratovich to complete
- 7 their --
- 8 CO-HEARING OFFICER DODUC: Let's put 40
- 9 minutes on the clock, and then we will take our lunch
- 10 break then.
- MR. BEZERRA: Very good.
- 12 DIRECT EXAMINATION BY MR. BEZERRA
- MR. BEZERRA: Good morning, Mr. Gohring and
- 14 Mr. Bratovich.
- 15 Mr. Gohring, can you please state your name
- 16 for the record.
- 17 WITNESS GOHRING: I'm Tom Gohring.
- 18 MR. BEZERRA: And you just took the oath in
- 19 this hearing, correct?
- 20 WITNESS GOHRING: Yes.
- 21 MR. BEZERRA: Mr. Baker, if we could please
- 22 pull up Exhibit ARWA-301. And I think that is
- 23 Mr. Baker. Let me make sure.
- 24 It's actually a Part 1 exhibit. It's just
- 25 Mr. Gohring's resume. Thank you very much.

- 1 Mr. Gohring, is Exhibit ARWA-301 a correct
- 2 statement of your qualifications?
- 3 WITNESS GOHRING: Yes.
- 4 MR. BEZERRA: Mr. Gohring, is Exhibit ARWA-500
- 5 your written testimony for Part 2 of this hearing?
- 6 WITNESS GOHRING: Yes.
- 7 MR. BEZERRA: Is there any portion of the
- 8 Exhibit ARWA-500 you'd like to clarify?
- 9 WITNESS GOHRING: There is a typo in 501, and
- 10 I don't know if I want to clarify that now, or if I
- 11 want to clarify that in another submittal.
- 12 MR. BEZERRA: Did you mean Exhibit ARWA-500?
- 13 WITNESS GOHRING: I did.
- MR. BEZERRA: If this relates to the second
- 15 portion, the MFMS, you can clarify it now or later,
- 16 depending on your preference.
- 17 CO-HEARING OFFICER DODUC: Do it now, please.
- MR. BEZERRA: Why don't you go ahead,
- 19 Mr. Gohring.
- 20 WITNESS GOHRING: Okay. If you turn to
- 21 Paragraph 34, the first --
- 22 CO-HEARING OFFICER DODUC: Page number?
- 23 WITNESS GOHRING: Oh, I'm sorry. Do we have
- 24 the exhibit up? Paragraph 34, please.
- 25 And the first bullet has a bit of a typo. In

- between the words "acre-feet" and "and" on the first
- 2 line of the first bullet, the words, "During a
- 3 simulated 1977 drought and " -- so the bullet should
- 4 read, "maintain Folsom Reservoir storage above 90,000
- 5 acre-feet during a simulated 1977 drought and end of
- 6 December above 230,000 acre-feet in all simulated
- 7 years." Typo.
- 8 MR. BEZERRA: Thank you very much.
- 9 WITNESS GOHRING: Thank you.
- 10 MR. BEZERRA: Are Exhibits ARWA-501 through
- 11 ARWA-506 referenced in your testimony?
- 12 WITNESS GOHRING: Yes.
- MR. BEZERRA: Is Exhibit ARWA-702 referenced
- 14 in your testimony?
- 15 WITNESS GOHRING: Yes.
- 16 MR. BEZERRA: Is Exhibit ARWA-703 referenced
- in your testimony?
- 18 WITNESS GOHRING: Yes.
- 19 MR. BEZERRA: Does Exhibit ARWA-703 reflect
- 20 your understanding of the status of steelhead in the
- 21 Lower American River?
- 22 WITNESS GOHRING: Yes.
- MR. BEZERRA: Did you participate in the
- 24 preparation of Exhibit ARWA-702?
- 25 WITNESS GOHRING: Yes.

1 MR. BEZERRA: Does Exhibit ARWA-501 contain a

- 2 summary of your testimony?
- 3 WITNESS GOHRING: Yes.
- 4 MR. BEZERRA: Mr. Bratovich, could you please
- 5 state your name for the record?
- 6 WITNESS BRATOVICH: Paul Bratovich.
- 7 MR. BEZERRA: And if you could you please turn
- 8 your mike on by pressing the little button so the green
- 9 light comes on.
- 10 WITNESS BRATOVICH: Good.
- MR. BEZERRA: So Mr. Bratovich, could you
- 12 please restate your name for the record?
- 13 WITNESS BRATOVICH: Paul Bratovich.
- 14 MR. BEZERRA: Thank you. Have you taken the
- 15 oath in this hearing?
- 16 WITNESS BRATOVICH: Yes.
- 17 MR. BEZERRA: Is Exhibit ARWA-701 your resume?
- 18 WITNESS BRATOVICH: Yes.
- MR. BEZERRA: Mr. Bratovich, is Exhibit
- 20 ARWA-700 your written testimony?
- 21 WITNESS BRATOVICH: Yes.
- 22 MR. BEZERRA: Is Exhibit ARWA-703 referenced
- in your testimony?
- 24 WITNESS BRATOVICH: Yes.
- 25 MR. BEZERRA: Does Exhibit ARWA-703 state your

- 1 opinions concerning the effects of the California
- 2 WaterFix project on steelhead in the Lower American
- 3 River?
- 4 WITNESS BRATOVICH: Yes.
- 5 MR. BEZERRA: Does Exhibit ARWA-501 contain a
- 6 summary of your testimony?
- 7 WITNESS BRATOVICH: Yes.
- 8 MR. BEZERRA: Mr. Gohring, could you please
- 9 summarize your testimony concerning the effects of
- 10 California WaterFix and shift to Mr. Bratovich upon
- 11 reaching the summary of his testimony?
- 12 WITNESS GOHRING: Yes. Can I please see
- 13 ARWA-501?
- 14 Chair Doduc, Members of the Board, our team
- 15 was here during Part 1 testifying in kind of a shallow
- 16 drill-down of the Modified Flow Management Standard.
- 17 And we kept it shallow because we were doing our best
- 18 to respect the division between Part 1 and Part 2
- 19 topics.
- 20 I think the shallowness of that presentation
- 21 was somewhat unsatisfying for a number of folks. And
- 22 so we, I believe, as part of Part 1, committed that we
- 23 would bring back in Part 2 a deep dive. And we will be
- 24 doing that in the next panel. That will be the
- 25 panel -- Mr. Bratovich and I will both be testifying as

- 1 part of the next panel.
- 2 Do I get a clicker, or do I say "next slide"?
- 3 Ah, thanks.
- 4 So next panel, we'll have more of us. But
- 5 Paul -- excuse me, Mr. Bratovich and I will both be
- 6 testifying on Panel 2 as well.
- 7 This panel is about injury. A little context.
- 8 Our panel all represent the Sacramento Water Forum.
- 9 This is a consortium of environmental groups, water
- 10 agencies, public agencies, agricultural interests,
- 11 business interests in the Sacramento region who have
- 12 signed a comprehensive 30-year agreement to try to
- 13 simultaneously protect the region's water supplies and
- 14 the resources of the Lower American River including the
- 15 fishery resources.
- MR. BEZERRA: Mr. Gohring, just for the
- 17 record, when you click to the next slide, if you could
- 18 just say "next slide," so we know where you're going in
- 19 your presentation.
- 20 WITNESS GOHRING: Thank you.
- 21 And our area of study, our area of interest is
- 22 basically the watershed of the American River.
- Next slide.
- 24 So when I push this, nothing happens? I'll
- 25 say "next slide."

- 1 CO-HEARING OFFICER DODUC: Mr. Gohring, I
- 2 believe Mr. Bezzera is asking you to say "next slide"
- 3 for the transcript, so that --
- 4 MR. BEZERRA: Correct.
- 5 CO-HEARING OFFICER DODUC: But the clicker
- 6 should work. Maybe not?
- 7 WITNESS GOHRING: Can I get someone under 23
- 8 to please -- I'm sorry. Oh, I think it just finally
- 9 advanced. So can I go back one, please?
- There we go.
- We have a storage problem in the American
- 12 River watershed. And our problem is that, during
- 13 drought years or during successive low water years, the
- 14 storage in Folsom Reservoir ends up being so low that
- 15 it creates some water supply reliability issues, some
- 16 critical issues with water supply reliability. Our
- team testified on that in Part 1.
- 18 But it also creates environmental issues in
- 19 the Lower American River. Our injury testimony centers
- 20 on sort of three points. Number one, we have the
- 21 storage problem. It already exists in the Lower
- 22 American River -- in the lower American River and in
- 23 the American River watershed. The WaterFix project
- 24 exacerbates this existing problem. And then again, in
- 25 our next panel, we will talk about how the Modified

1 Flow Management Standard helps protect against the low

- 2 storage conditions.
- 3 Next slide, please.
- 4 This is an excerpt of data from the Biological
- 5 Assessment of the WaterFix, and it shows that -- if you
- 6 look the columns in June and July, it shows that the
- 7 WaterFix project reduces storage in many months during
- 8 June and July. This is for the current climate
- 9 scenario.
- 10 Next slide.
- 11 This is for central tendency climate scenario.
- 12 And, again, this shows reduced storage in June and July
- 13 with WaterFix compared to the No Action Alternative.
- 14 WaterFix reduces Folsom storage in June and July.
- Next slide.
- 16 Mr. Bratovich will testify in depth about the
- 17 relationship between water temperature and fishery
- 18 resources, but we know from direct experience that
- 19 low -- lower storage in Folsom Reservoir in June and
- 20 July directly results in warmer temperatures in the
- 21 Lower American River during the period when juvenile
- 22 steelhead are present.
- Next slide.
- 24 We also know that conditions in the Lower
- 25 American River are already degraded and any increase in

1 temperature, particularly in drier years, results in

- 2 harm to the species.
- 3 Next slide.
- 4 So the -- Mr. Bratovich is going to give a
- 5 much deeper and rigorous discussion. I'm trying to
- 6 make my point as simply as possible. Using the State's
- 7 own modeling, we see that the WaterFix reduces storage
- 8 in June and July. We know from direct experience that
- 9 lower storage in Folsom means a smaller cold water pool
- 10 which results in a warmer river. We know that the
- 11 warmer river creates harm to steelhead.
- 12 Put those three points together, and I
- 13 conclude that the WaterFix project would harm steelhead
- 14 in the Lower American River.
- 15 Paul.
- 16 WITNESS BRATOVICH: Thank you.
- Next slide, please.
- 18 I'm going to address the key issue raised by
- 19 the State Board in its August 31st ruling in this
- 20 proceeding, which identified the key issue to be
- 21 answered, the key issue being will the changes proposed
- 22 in the petition unreasonably affect fish and wildlife
- 23 or recreational users of water or other public trust
- 24 resources. I am limiting my testimony and presentation
- 25 of that testimony to steelhead in the Lower American

- 1 River.
- 2 I'm limiting it to steelhead the Lower
- 3 American River because, as Tom mentioned, we're here
- 4 representing the Water Forum and but technically it's
- 5 because it's a federally listed species and it was
- 6 thoroughly evaluated by Reclamation in the Biological
- 7 Assessment, or BA, and by NMFS in the Biological
- 8 Opinion, or BO.
- 9 Next slide, please.
- 10 So to answer this question, I developed an
- 11 analytical standard. I searched and tried to find a
- 12 handbook, guidelines how to assess what is an
- 13 unreasonable effect and was unable to locate any such
- 14 guidance. So what I did was I relied upon National
- 15 Marine Fishery Service -- which I'll call NMFS in my
- 16 testimony here --- in an approach that seemed
- 17 particularly germane. It's the habitat approach, which
- is what we're evaluating here, but specifically for
- 19 anadromous salmonids on the Pacific Coast, how to
- 20 implement the Endangered Species Act, Section 7 of that
- 21 act. And we used these two documents as guidelines.
- 22 The State Board corrected orders for the water
- 23 rights hearing in the Yuba River in 2008 came as close
- 24 to providing a standard that I could incorporate into
- 25 my analytical standard as I was able to find. And it

- 1 is -- the statements in those corrected orders were
- 2 that water temperature impacts listed species are of
- 3 special concern and that there is a low threshold for
- 4 unreasonable impact to listed species. That's the
- 5 closest thing I can find addressing "unreasonable
- 6 effect."
- 7 The NMFS guidelines for how to implement
- 8 Section 7 were quite useful as well. And it boils down
- 9 to the status of the species is poor if the habitat is
- 10 degraded under existing conditions or under the
- 11 existing analytic baseline, then any additional adverse
- 12 effects caused by the action will more likely be
- 13 significant.
- 14 So I incorporated those two guidance documents
- 15 into the analytic standards, tried to address the
- 16 question of would implementation of the WaterFix
- 17 exacerbate water temperature conditions in the Lower
- 18 American River where the analytic baseline is already
- 19 degraded and for which the status of steelhead is poor?
- Next slide, please.
- 21 We used what was presented in the BA and the
- 22 BO. We did that intentionally just to reexamine the
- 23 analyses and the results that were presented in those
- 24 two documents. One example of consistency is that
- 25 those documents analyzed water temperature effects at

1 two locations in the Lower American River, one up near

- 2 the upper boundary of Nimbus Dam at River Mile 23 at
- 3 Hazel and then the other a little bit more than halfway
- 4 at Watt Avenue, River Mile 9.4
- 5 Next slide, please.
- 6 We'll go right to my findings of my
- 7 reexamination addressing the analytical standard to
- 8 answer the Board's question. I've listed a couple of
- 9 examples here. There are other statements and examples
- 10 in my testimony, which is ARWA-700 on Pages 3 and 4. I
- 11 have six quotes from the BO itself describing the poor
- 12 status of steelhead in the Central Valley and, in some
- 13 cases, specifically in the Lower American River.
- One of the quotes from the BO that's not on
- 15 this slide but I think is particularly demonstrative is
- 16 directly from Page 56 of the BO which says, "In
- 17 summary, the status of the California Central Valley
- 18 steelhead DPS, "which stands for "distinct population
- 19 segment" a categorization of a tax on, "is likely to
- 20 become endangered within the near future throughout all
- 21 or a significant portion of its range." And the BO
- 22 cites NMFS 2016, which was the updated status review
- 23 addressing steelhead in the Central Valley.
- 24 So it was clear to me that NMFS themselves and
- 25 Reclamation in the BA recognize and clearly demonstrate

1 the poor status of steelhead in the Central Valley and

- 2 particularly also in the Lower American River.
- 3 Next slide, please.
- 4 Conditions in the Lower American River are
- 5 degraded. I think this is incontrovertible fact.
- 6 There are five quotes from the Biological Opinion
- 7 discussing the degraded habitat, one quote in the
- 8 Reclamation's BA, and five quotes from National Marine
- 9 Fisheries 2014 Anadromous Salmonid Recovery Plan.
- 10 Again, a couple of examples here, another really
- 11 demonstrative quote not included on this slide, but it
- 12 is in my testimony. It is talking to the fact that the
- 13 environmental factor probably most limiting to
- 14 steelhead production, natural steelhead production in
- 15 the Lower American River is high water temperatures
- 16 during the summer and fall.
- 17 So there are -- there's a plethora of
- 18 statements and findings discussing the degraded nature
- 19 particularly due to high water temperatures in the
- 20 Lower American River.
- 21 When we were in the course of developing our
- 22 testimony and developing the Modified Flow Management
- 23 Standard, our phrase that we used commonly was the
- 24 Lower American River is thermally challenged. I think
- 25 indeed that is true.

- 1 Next slide, please.
- Next finding in my testimony, presented on
- 3 Pages 5 and 6 of ARWA-700 uses the information
- 4 presented in the BO and in the BA to substantiate that
- 5 we find differences in water temperatures in the Lower
- 6 American River that indeed are substantial.
- 7 We looked through those, and I will now
- 8 present you some examples. In testimony, it has some
- 9 examples. I'll go over a couple of them now.
- Next slide, please.
- 11 This figure is taken directly from the NMFS
- 12 BO, Figure 2-35. And it is showing the percent
- 13 exceedance of water temperatures in the Lower American
- 14 River. In this case, it is at Watt Avenue during
- 15 August in critical years. So there's a lot of
- 16 categorization that occurs in the BA and the BO. So
- 17 there's different stratum. This stratum is a
- 18 combination of August, Watt, critical. So this figure
- 19 demonstrates what I consider to be a substantial
- 20 difference.
- 21 If you look -- you've probably have your fill
- 22 of exceedance figures in this proceeding. But just
- 23 quickly looking at this an interpreting it, on the
- 24 bottom it's probability of exceedance. We oftentimes
- 25 use percent of time. It's easier to comprehend that

- 1 way to some degree. But -- so it does represent
- 2 percent of time.
- 3 If you look at 50 percent and you go up, what
- 4 do we see? We see that approximately 50 percent of the
- 5 time during critical years in the month of August at
- 6 Watt Avenue, temperatures exceed 72 degrees. Those are
- 7 really warm temperatures for steelhead in any river,
- 8 let alone the American.
- 9 So when we look at this, then -- I looked at
- 10 this more closely, and there's some criteria that was
- 11 included in the BA and in the BO, one of which was they
- 12 sort of established a half a degree Fahrenheit as an
- 13 indicator of potential effect.
- 14 I adopted that. And when you look at this and
- 15 you examine this exceedance distribution, over 50
- 16 percent of the time there are water temperature
- 17 increases over a half a degree, up to 4 degrees at Watt
- 18 during critical water years.
- 19 I conclude that this is a substantial
- 20 increase. And I will provide some more information
- 21 documenting and justifying that conclusion.
- This also demonstrates the other category of
- 23 what I was just talking about. This is when conditions
- 24 are degraded. In the BA and the BO, they established
- 25 two what I call metrics for establishing what they

1 called threshold temperatures. I call them indicator

- 2 values, but it doesn't matter. They use them as
- 3 threshold temperatures.
- 4 And the threshold temperature for juvenile
- 5 steelhead rearing, they established two of them: 63
- 6 degrees mean monthly and 69 degrees, 7 datum. "7
- 7 datum" means seven-day average daily maximum. So it's
- 8 the maximum temperature that occurs for seven days in a
- 9 row and it's calculated on a running seven-day basis.
- 10 When you look at this, either one of them,
- 11 those differences of over a half a degree occur at
- 12 temperatures well above the threshold.
- 13 The significance of that is that's when these
- 14 temperatures are most adverse. When you are looking at
- 15 this and you have a threshold, what does that really
- 16 mean? How do you analyze that? And the way it is
- intended to be done is that you're not necessarily
- 18 concerned about temperatures below that stated
- 19 threshold, accepting that threshold as an indicator of
- 20 impact.
- 21 Below that threshold, the statement would be
- 22 that they're lower than that stated threshold,
- 23 therefore, they're acceptable, they're suitable. When
- 24 you're above that threshold, that's when they are most
- 25 adverse and damaging. And that's where your analysis

- 1 and your effects determination should focus.
- 2 So it's a gradation of affect to steelhead.
- 3 The higher the temperature above that stated threshold,
- 4 the more adverse that effect is. And it goes up from
- 5 the threshold up to lethal levels, by the way, which
- 6 we're actually seem to be exceeding here in this plot.
- 7 The upper incipient lethal temperature for
- 8 juvenile steelhead has been reported to be 75 degrees.
- 9 So when you look at this plot and you look at where 75
- 10 degrees intersects these two lines, you can see there's
- 11 a substantial amount of time where, under the analytic
- 12 baseline, the No Action Alternative it's below lethal
- 13 levels but above lethal levels with the Proposed
- 14 Action.
- 15 So when I talk about substantial differences,
- 16 it's the whole suite of considerations that I'm really
- 17 going into and making my determination. I'll try to
- 18 pick it up here a little bit.
- 19 Next slide, please.
- 20 Another example. This example is a different
- 21 life stage. It's smolting migration presented in the
- 22 BO and the BA by NMFS, when more than 40 percent of the
- 23 time, at temperatures above the stated threshold -- in
- 24 this instance, the stated threshold is 61 degrees; so
- 25 above that, it's adverse and increasing adverse the

1 warmer you get -- there is a substantial difference

- 2 between the Proposed Action and the baseline.
- 3 Next slide, please.
- 4 This demonstrates frequency of occurrence.
- 5 When we talk about substantial differences, it is in
- 6 consideration of both frequency and the magnitude of
- 7 the difference.
- 8 I've talked about a half a degree or more
- 9 being indicative of a potentially substantial change.
- 10 But in this instance, it's amazing to observe that
- 11 there is up to a 2 degree on the left part of this
- 12 curve, certainly over a half a degree increase over 80
- 13 percent of the time, nearly 80 percent of the time,
- 14 excuse me.
- 15 So 80 percent of the time during August of
- 16 critical years -- in this case, this is Hazel Avenue;
- 17 it's the upper station. So over 80 percent of the
- 18 time, we expect to see temperatures exacerbated at
- 19 levels above the stated threshold value during critical
- 20 years, over 80 percent of the critical years in August.
- 21 We consider that to be substantial.
- Next slide, please.
- Well, we went through, again, the logical
- 24 sequence of unreasonable effects. So we've identified
- 25 substantial effects. We also did determine that these

- 1 are significant. And we determined that these are
- 2 significant by applying that other component of the
- 3 guidance document, which was NMFS' own Section 7
- 4 implementation guidance document, where again, not to
- 5 be redundant, but the baseline is degraded, the status
- 6 is poor; any additional adverse effect is likely to be
- 7 significant.
- 8 So these substantial differences and these
- 9 substantial adverse effects and my determination and
- 10 our determination and consideration are substantial and
- 11 significant.
- 12 And then Finding No. 5, using the only
- 13 guidance I can find that there's a low threshold for
- 14 water temperature effects for listed species and
- 15 that -- excuse me, water temperature of special concern
- 16 for listed species, and that there is a low threshold
- 17 for effect to listed species leads me to conclude then
- 18 that the substantial significant effects are
- 19 unreasonable based upon that consideration.
- Next slide, please.
- 21 This is a simple summary of the major findings
- 22 I just presented demonstrating life stage, the extent
- 23 of the change, the frequency. So the less suitable
- 24 column actually would be a magnitude statement and then
- 25 the frequency statement identifying what month, what

- 1 water year type, and location.
- 2 To us, these represent clearly exacerbations
- 3 but also unreasonable effects.
- 4 Next slide, please.
- 5 So in conclusion, going through the process
- 6 and the analytic standard that we established, which is
- 7 would implementation of WaterFix exacerbate water
- 8 temperature conditions in the Lower American River with
- 9 the existing condition already degraded, the status of
- 10 steelhead poor, represent unreasonable effects? So
- 11 going through the status, the conditions, the
- 12 differences which were substantial, the substantial
- 13 differences being significant, and then the conclusion
- 14 that these significant adverse effects, with
- 15 implementation of the WaterFix BA, to address the
- 16 Board's stated question, we conclude they are
- 17 unreasonable effects. Thank you.
- 18 CO-HEARING OFFICER DODUC: Does that conclude
- 19 the direct, Mr. Bezzera?
- MR. BEZERRA: Yes, for this panel.
- 21 CO-HEARING OFFICER DODUC: Ms. Morris, are you
- 22 and the Department and others still requesting to hold
- your cross until the second panel?
- MS. MORRIS: (Nods head affirmatively).
- 25 CO-HEARING OFFICER DODUC: If there are no

- 1 objections --
- 2 MR. BEZERRA: No, that's fine. We came in
- 3 right at noon.
- 4 CO-HEARING OFFICER DODUC: Okay. Then we will
- 5 break for lunch and return at 1:00 o'clock with the
- 6 rest of your panel.
- 7 MR. MILIBAND: Yes. And just one note,
- 8 Hearing Chair Doduc, we have confirm all the Panel 2
- 9 witnesses can be here right at 1:00 o'clock. So we
- 10 might have a five-minute lag time.
- 11 CO-HEARING OFFICER DODUC: We will return at
- 12 1:05. Does that help?
- 13 MR. MILIBAND: Just -- hopefully that will. I
- 14 don't know if it's 1:05 or 1:10, but --
- 15 CO-HEARING OFFICER DODUC: I'll tell you what.
- 16 We will resume at 1:15.
- 17 MR. BEZERRA: I can add a little to this that
- 18 I think maybe helpful. The direct presentation of the
- 19 next panel is Mr. Bratovich and Mr. Gohring. The other
- 20 witnesses are here primarily to respond to
- 21 cross-examination.
- 22 So we could get started on direct examination,
- 23 and they can go through their summary and --
- 24 CO-HEARING OFFICER DODUC: Oh, forget the
- 25 longer break. We will resume at 1:00 o'clock.

1	MR. BEZERRA: Sorry, everyone.
2	CO-HEARING OFFICER DODUC: You may thank
3	Mr. Bezzera. See you at 1:00.
4	(Whereupon, the luncheon recess was taken
5	at 12:04 p.m.)

1	AFTERNOON	SESSION
<b></b>	ALIEKNOON	PEPPION

- 2 ---000---
- 3 (Whereupon, all parties having been
- 4 noted for the record, the proceedings
- 5 resumed at 1:01 p.m.)
- 6 CO-HEARING OFFICER DODUC: Welcome back. It
- 7 is 1:00 o'clock, and I see Ms. Morris at the
- 8 microphone, so I assume we have some housekeeping
- 9 matters.
- MS. MORRIS: We do.
- 11 CO-HEARING OFFICER DODUC: Ms. Morris.
- MS. MORRIS: Thank you. We were just
- 13 conferring, and it looks like maybe there's very
- 14 limited questioning for Mr. Addley. And given his
- 15 situation, we were wondering if it would be possible to
- 16 go ahead and let DWR, State Water Contractors do their
- 17 cross and then let him be dismissed, unless there was
- 18 somebody else. But it doesn't seem like there is.
- 19 I don't believe Ms. Akroyd has any questions
- 20 for him.
- 21 CO-HEARING OFFICER DODUC: Any -- no
- 22 objections?
- MR. MILIBAND: No objection.
- 24 CO-HEARING OFFICER DODUC: Actually, aside
- 25 from Mr. Gohring and Mr. Bratovich, will the rest of

- 1 you please --
- 2 MS. MORRIS: Oh, I --
- 3 CO-HEARING OFFICER DODUC: You have more?
- 4 MS. MORRIS: Yes, I apologize.
- 5 This is actually in regards to the last panel.
- 6 And at -- specifically, in the rough transcript,
- 7 Mr. Bratovich made statements and drew opinions on the
- 8 rough, Page 84, Line 18 through 85, Line 15 regarding
- 9 gradation of temperature effects as well as a lethal
- 10 temperature of 75 degrees.
- I represent to you that I have searched
- 12 through all of the exhibits, including ARWA-700,
- 13 ARWA-501, ARWA-701 and ARWA-703 that were cited by
- 14 Mr. Bratovich in his testimony, and none of this
- 15 testimony appears there. So this is new testimony and
- 16 new opinions that go beyond the scope of his direct,
- 17 and we would move to strike it.
- 18 CO-HEARING OFFICER DODUC: Response?
- 19 MR. MILIBAND: Yes, just if we can get
- 20 clarification as to what specifically about degradation
- 21 Ms. Morris thinks went beyond Mr. Bratovich's written
- 22 testimony, please.
- MS. MORRIS: I didn't say -- if I said
- 24 "degradation" -- I said gradation of temperature.
- 25 Gradation of temperature, not degradation, and the

- 1 lethal temperature of 75 degrees, which appears
- 2 nowhere.
- 3 MR. MILIBAND: If we can have a moment -- if
- 4 there's -- if we could just have a moment to confer.
- 5 CO-HEARING OFFICER DODUC: You may have until
- 6 the end of your panel.
- 7 MR. MILIBAND: Thank you.
- 8 CO-HEARING OFFICER DODUC: Anything else?
- 9 MR. BEZERRA: Actually, could I just make a
- 10 request? If we could have a copy of the rough
- 11 transcript you're talking about? We don't have a rough
- 12 transcript here.
- 13 CO-HEARING OFFICER DODUC: I don't think I can
- 14 provide that.
- MR. BEZERRA: If that's the basis of the
- 16 objection, I'd just ask the moving parties to provide
- 17 us a copy of that slice of the transcript.
- 18 CO-HEARING OFFICER DODUC: I don't think we
- 19 can do that either.
- 20 How did we handle it earlier? I think we just
- 21 took it under advisement for now.
- MR. DEERINGER: Yes. I think until
- 23 Mr. Bezzera and, I would hope the hearing team as well,
- 24 would have a chance to review the relevant portions of
- 25 the rough transcript, we would have to just take it

- 1 under advisement.
- MS. MORRIS: May I speak? Thank you.
- I think though, that this again is very
- 4 specific testimony. And I have gone through it. And
- 5 maybe the witness can show me where he has stated 75
- 6 degrees is lethal temperature. And I don't think that
- 7 that is in his testimony. And it should -- you know, I
- 8 don't think we need to wait for the rough transcript.
- 9 I just was giving that information to support
- 10 my motion. But I've pointed out the areas where there
- 11 are discrepancies and my -- in my belief, new opinions
- 12 that have been offered by this witness.
- 13 CO-HEARING OFFICER DODUC: Mr. Bratovich,
- 14 perhaps you can help us out. One, do you recall
- 15 testifying to that? And, two, if so, where might we
- 16 find it in your written testimony?
- 17 WITNESS BRATOVICH: Yeah, I'm hurriedly trying
- 18 to review 700, 702, and 703 to see if there is
- 19 reference specifically to UILT or not. I can't tell
- 20 you for sure there is or isn't without doing that
- 21 review. I apologize, but I would like to do that
- 22 before responding.
- MR. BEZERRA: And for the record,
- 24 Mr. Bratovich cites in a variety of his documents quite
- 25 a number of scientific studies. You know, there's

1 supporting material. He's an expert witness relying on

- 2 expert knowledge as reflected in the citations in his
- 3 materials.
- 4 So I'd like to have the opportunity go over
- 5 the motion based on the transcript so we can reply.
- 6 CO-HEARING OFFICER DODUC: We can only take it
- 7 under advisement at this time.
- 8 Mr. Mizell?
- 9 MR. MIZELL: Yes. Just for a complete record,
- 10 DWR would like to join in the motion as well. We've
- 11 reviewed as much we can, similar to Ms. Morris and the
- 12 State Water Contractors.
- 13 CO-HEARING OFFICER DODUC: So noted.
- 14 Now, will the three gentlemen who have not
- 15 taken the oath please stand and raise your right hands.
- 16 (Panel witnesses sworn)
- DR. CRAIG ADDLEY, JEFF WEAVER,
- DR. CHRIS HAMMERSMARK,
- 19 called as Panel 2 witnesses by Protestant
- 20 Group 11, having been duly sworn, were
- 21 examined and testified as hereinafter
- 22 set forth:
- 23 CO-HEARING OFFICER DODUC: Thank you. Be
- 24 seated.
- 25 And is it my understanding that, Ms. Morris,

1 you wanted to cross-examine Dr. Addley before the rest

- 2 of the panel present their direct testimony?
- 3 MR. MILIBAND: Hearing Chair Doduc, if I may,
- 4 I think what Ms. Morris was looking to do before lunch
- 5 was to reserve cross on Panel 1 so we could do direct
- 6 on Panel 2 --
- 7 CO-HEARING OFFICER DODUC: Correct.
- 8 MR. MILIBAND: And then commence cross with
- 9 all of the witnesses for Panel 1 and Panel 2, with
- 10 Dr. Addley now, first of all.
- 11 CO-HEARING OFFICER DODUC: Got it. So how
- 12 much time do you anticipate needing for now, this
- 13 direct?
- 14 MR. MILIBAND: Approximately 40 minutes.
- 15 CO-HEARING OFFICER DODUC: All right. Let's
- 16 do that.
- 17 DIRECT EXAMINATION BY MR. MILIBAND
- 18 MR. MILIBAND: Good afternoon, Mr. Weaver.
- 19 Would you please state your name and spell your last
- 20 name for the record?
- 21 WITNESS WEAVER: Jeffrey Weaver, W-E-A-V-E-R.
- 22 MR. MILIBAND: You've taken the oath in this
- 23 proceeding; is that correct?
- 24 WITNESS WEAVER: That's correct.
- 25 MR. MILIBAND: Does Exhibit ARWA-101 from

1 Part 1 of this proceeding remain a correct statement of

- 2 your professional credentials and experience?
- 3 WITNESS WEAVER: It does.
- 4 MR. MILIBAND: Mr. Weaver, is Exhibit ARWA-600
- 5 your written testimony for Part 2 of this proceeding?
- 6 WITNESS WEAVER: Yes, it is.
- 7 MR. MILIBAND: Are Exhibits ARWA-504 and 505
- 8 and 600 through 604 prepared by you or at your
- 9 direction?
- 10 WITNESS WEAVER: Yes.
- 11 MR. MILIBAND: Did you participate in the
- 12 preparation of Exhibits ARWA-502 and 702? And turn
- 13 your mike on, please.
- 14 WITNESS WEAVER: It is on. Sorry. Yes. Is
- 15 that loud enough?
- 16 CO-HEARING OFFICER DODUC: Closer to you.
- 17 WITNESS WEAVER: Yes.
- 18 MR. MILIBAND: That's much better. So to be
- 19 clear, you've taken the oath in this proceeding,
- 20 correct?
- 21 WITNESS WEAVER: That's correct.
- 22 MR. MILIBAND: ARWA-101 for Part 1 remains
- 23 your current resume or CV, correct?
- 24 WITNESS WEAVER: That's correct.
- MR. MILIBAND: And ARWA-600 is your written

- 1 testimony for Part 2?
- 2 WITNESS WEAVER: That's correct.
- 3 MR. MILIBAND: Did you participate in the
- 4 preparation of 502 and 702?
- 5 WITNESS WEAVER: I did.
- 6 MR. MILIBAND: Does Exhibit ARWA-501 contain a
- 7 summary of the key points of your testimony?
- 8 WITNESS WEAVER: It does.
- 9 MR. MILIBAND: Thank you, Mr. Weaver.
- 10 Dr. Hammersmark, good afternoon. Please state
- 11 your name and spell your last name for the record.
- 12 WITNESS HAMMERSMARK: Christopher Trevor
- 13 Hammersmark, H-A-M-M-R-S-M-A-R-K.
- MR. MILIBAND: You've taken the oath in this
- 15 proceeding, correct?
- 16 WITNESS HAMMERSMARK: Correct.
- 17 MR. MILIBAND: And, sir, if I could ask you to
- 18 bring your mike in a little bit close and make sure the
- 19 green light is lit.
- 20 WITNESS HAMMERSMARK: Correct.
- 21 MR. MILIBAND: Is Exhibit ARWA-801 a true and
- 22 correct statement of your professional credentials and
- 23 experience?
- 24 WITNESS HAMMERSMARK: Yes, it is.
- 25 MR. MILIBAND: Dr. Hammersmark, is Exhibit

- 1 ARWA-800 your written testimony for Part 2 of this
- 2 proceeding.
- 3 WITNESS HAMMERSMARK: Yes, it is.
- 4 MR. MILIBAND: And were Exhibits ARWA-800
- 5 through 802 prepared by you or at your direction?
- 6 WITNESS HAMMERSMARK: Yes, they were.
- 7 MR. MILIBAND: Did you participate in the
- 8 preparation of Exhibits ARWA-502 and 702?
- 9 WITNESS HAMMERSMARK: Yes, I did.
- 10 MR. MILIBAND: Thank you, Dr. Hammersmark.
- 11 Dr. Addley, good afternoon. Would you please
- 12 state your name for the record and spell your last for
- 13 the record.
- 14 WITNESS ADDLEY: It's Craig Addley,
- 15 A-D-D-L-E-Y.
- 16 MR. MILIBAND: And you've taken the oath in
- 17 this proceeding?
- 18 WITNESS ADDLEY: Yes.
- 19 MR. MILIBAND: Is Exhibit ARWA-901 a correct
- 20 statement of your professional credentials and
- 21 experience?
- 22 WITNESS ADDLEY: Yes.
- 23 MR. MILIBAND: Dr. Addley, is Exhibit ARWA-900
- 24 your written testimony for Part 2 of this proceeding?
- 25 WITNESS ADDLEY: Yes, it is.

1 MR. MILIBAND: Were Exhibits 900 through 908

- 2 prepared by you or at your direction?
- 3 WITNESS ADDLEY: Yes, they were.
- 4 MR. MILIBAND: Did you participate in the
- 5 preparation of Exhibits ARWA-502 and 702?
- 6 WITNESS ADDLEY: Yes, I did.
- 7 MR. MILIBAND: Does Exhibit 501 contain a
- 8 summary of the key points of your testimony?
- 9 WITNESS ADDLEY: Yes, it does.
- 10 MR. MILIBAND: Thank you, Dr. Addley.
- Mr. Bratovich, were Exhibits ARWA-700, 701,
- 12 and 703 prepared by you or at your direction?
- 13 WITNESS BRATOVICH: Yes.
- MR. MILIBAND: Did you participate in the
- 15 preparation of Exhibits ARWA-502 and 702?
- 16 WITNESS BRATOVICH: Yes.
- 17 MR. MILIBAND: Does Exhibit ARWA-501 contain a
- 18 summary of the key points of your testimony relating to
- 19 the Modified Flow Management Standard as terms and
- 20 conditions to address the injury that Mr. Gohring and
- 21 you testified to on Panel 1?
- 22 WITNESS BRATOVICH: Yes, it does.
- MR. MILIBAND: Thank you, Mr. Bratovich.
- Mr. Gohring, good afternoon.
- 25 WITNESS GOHRING: Good afternoon.

- 1 MR. MILIBAND: Were 500, 501, 503, and 506
- 2 prepared by you or at your direction?
- 3 WITNESS GOHRING: Yes.
- 4 MR. MILIBAND: Did you oversee and participate
- 5 in the preparation of Exhibit ARWA-502?
- 6 WITNESS GOHRING: Yes.
- 7 MR. MILIBAND: Mr. Gohring, does Exhibit 501
- 8 contain a summary of the key points of your testimony
- 9 relating to the Modified Flow Management Standard as
- 10 terms and conditions to address the injury that
- 11 Mr. Bratovich and you testified to on Panel 1?
- 12 WITNESS GOHRING: Yes.
- MR. MILIBAND: And do you refer to the
- 14 Modified Flow Management Standard as the Modified FMS
- or MFMS?
- 16 WITNESS GOHRING: I do.
- 17 MR. MILIBAND: Turning to Exhibit ARWA-501,
- 18 first of all, if I could ask -- it's not Mr. Baker. If
- 19 I could ask for 501 to be brought up and to the 23rd
- 20 slide, I believe it is, please.
- 21 Thank you.
- So, Mr. Gohring, turning here to Slide 23 of
- 23 Exhibit ARWA-501, would you please summarize your
- 24 testimony concerning the MFMS to address the injury
- 25 that Mr. Bratovich and you testified to? And in doing

1 so, please switch back and forth between Mr. Bratovich

- 2 as you see fit.
- 3 WITNESS GOHRING: Yes, I certainly will. And
- 4 I will also be switching off to Mr. Weaver as well.
- 5 MR. MILIBAND: Understood. Thank you.
- 6 WITNESS GOHRING: Next slide, please.
- 7 So we developed the Modified Flow Management
- 8 Standard for several reasons, one of which is that we
- 9 observed through modeling from the BDCP and then the
- 10 WaterFix that the existing dangers of low storage in
- 11 Folsom Reservoir were exacerbated by WaterFix.
- 12 Next slide, please.
- 13 Modified Flow Management Standard is not the
- 14 first flow standard on the American River. It's not
- 15 even the first flow standard developed by the Water
- 16 Forum. Before our Water Forum agreement in 2000, there
- 17 was already a flow regime required on the river. It
- 18 was circa -- is circa 1958, Decision 893 of the State
- 19 Board. And so as part of the Water Forum agreement, we
- 20 had a commitment to come up with a more protected flow
- 21 regime in D893.
- 22 We did so in cooperation with our state and
- 23 federal fish agencies, and Bureau of Reclamation
- 24 published that in 2006. Reclamation began voluntarily
- 25 implementing that standard at that time.

- 1 What was different from the -- from
- 2 Decision 893 was it had a floor in about 95 percent of
- 3 the years, a minimum flow floor, of 800 cfs as opposed
- 4 to the 250 cfs floor of D893. It also, for the first
- 5 time, incorporated an official approach, an explicit
- 6 approach for managing temperatures on the Lower
- 7 American River along with flows.
- 8 After 2009, we began working on the Modified
- 9 Flow Management Standard. The initial trigger that
- 10 started that work was the 2009 NMFS Biological Opinion.
- 11 That Biological Opinion incorporated our 2006 FMS by
- 12 reference for all of the flow requirements.
- 13 For the temperature requirements, NMFS went on
- 14 to say "do something more," "do something more
- 15 protective." They actually used words like, "Create an
- 16 iterative temperature approach," and that Reclamation
- 17 should consider curtailing discretionary deliveries in
- 18 order to meet a higher temperature result -- excuse me,
- 19 a more protective temperature result, which of course
- 20 would be a lower temperature.
- 21 So by October of 2015, we had developed and
- 22 published a version of the Modified Flow Management
- 23 Standard that also has a minimum floor. The minimum
- 24 floor is 500 cubic feet per second, which is higher
- 25 than the last version, which reverts down to the

1 250 standard part of the time. It has the same general

- 2 approach to temperature management, but it results in a
- 3 more protective temperature through the use of Folsom
- 4 Reservoir storage requirements, specifically an
- 5 end-of-December requirement of either 300,000 acre-feet
- 6 or 230,000 acre-feet, depending on hydrologic
- 7 conditions, and a sliding scale storage requirement at
- 8 the end of May that goes up to 900,000 cubic feet per
- 9 second.
- Next slide, please.
- 11 As we went through the work of developing the
- 12 Modified Flow Management Standard, we initially had two
- 13 objectives: protecting water supplies in the American
- 14 River Basin and improving conditions for fishery, in
- 15 particular, temperature. Those are roughly the Water
- 16 Forum's co-equal objectives.
- 17 As we went through different versions of
- 18 modifying the 2006 Flow Management Standard, we
- 19 ultimately ended up adopting a third objective and that
- 20 was to hold the fisheries of the Sacramento River
- 21 harmless in order to avoid redirected impacts,
- 22 particularly to winter-run and spring-run Chinook
- 23 salmon.
- Next slide.
- 25 How did we immediate those objectives? Well,

- 1 we met them by going through a lot of iterations and
- 2 checking our results. The green box up there looks at
- 3 the three objectives that I just mentioned: Folsom
- 4 Reservoir storage, which is a proxy for water supply
- 5 reliability; Lower American River water temperatures;
- 6 and impacts to or potential impacts to the Sacramento
- 7 River.
- 8 And I'll get more -- Paul -- Mr. Bratovich and
- 9 I will get into more of the metrics for how we
- 10 determined those.
- 11 As we iterated, we played with two primary
- 12 knobs. One was the approach to minimum flows, and the
- 13 other was the magnitude of our storage requirements.
- 14 And we played with those knobs until we found something
- 15 we called our sweet spot, a place where we have
- 16 demonstrable benefits in this basin to water supply
- 17 reliability and the environment. And we have convinced
- 18 ourselves and our wide variety of stakeholders that
- 19 we're avoiding redirected impacts to the Sac.
- This is a good time to mention that we have
- 21 updated some of those parameters, particularly the
- 22 definition of "minimum flows" --
- Next slide, please.
- 24 -- and a few other parameters since Part 1 of
- 25 this proceeding. The reason we updated those is

- 1 because we -- newer data became available to us,
- 2 particularly on the distribution of Chinook salmon and
- 3 steelhead redds in the Lower American River.
- 4 Water Forum has a longstanding commitment to
- 5 using the best available scientific information and the
- 6 best available technical tools. And when we found this
- 7 data to be available since the end of Part 1, we felt
- 8 that it was important to us to incorporate that into
- 9 our analysis. We reiterated, and we basically found a
- 10 new sweet spot, slightly different than the old one.
- 11 And there's a list there of a few other things
- 12 that we changed. The other substantive one besides the
- 13 definition of the -- sort of the hinge points on our
- 14 curves for minimum flows is that we extended our
- 15 fall-run redd dewatering protection into the month of
- 16 February. The other things on the list there are more
- 17 cleanup actions.
- Next slide, please.
- So how well have we met these objectives?
- 20 Let's start with storage, water supply reliability.
- 21 This is an exceedance graph that shows end-of-May
- 22 storage for Folsom Reservoir. This shows the Modified
- 23 Flow Management Standard in blue, the existing
- 24 condition or the 2006 Flow Management Standard in red.
- 25 And you can see that storage for about 46, 45 percent

1 of the time is noticeably higher for the Modified Flow

- 2 Management Standard.
- 3 Next slide.
- 4 By the way our -- our water rationale document
- 5 has a more complete listing of these exceedances; for
- 6 time, I'm going through a sampling.
- 7 This is end-of-September storage. Again, you
- 8 see that we have significantly higher storage for about
- 9 50 percent of the time with Modified FMS.
- Next slide, please.
- 11 Same thing with November. It's important to
- 12 note that November is usually the low point for Folsom
- 13 Reservoir, November or early December. In the modeling
- 14 world, it's almost always November. This basically
- 15 shows that the Modified Flow Management Standard avoids
- 16 what the modeling world would call dead pool, which you
- 17 see with the 2006 FMS.
- Next slide, please.
- 19 And then finally, December, I'm presenting
- 20 December because it is one of the months for which we
- 21 have a storage requirement in the Modified FMS, again
- 22 demonstrably higher storage in Folsom Reservoir.
- Next, we'll talk about water temperature, and
- 24 I'll turn it over to Paul.
- 25 WITNESS BRATOVICH: Next slide, please.

- 1 Thank you, Tom.
- 2 Obviously, with water temperature being
- 3 considered to be the most limiting factor to steelhead
- 4 natural production in the Lower American River, much of
- 5 our analyses emphasized water temperature suitability.
- 6 We examined water temperature differences between the
- 7 Modified FMS and the current regime, the 2006 FMS, by
- 8 month, by location. And we examined every month of the
- 9 year and compared that with the criteria, the numeric
- 10 criteria associated with the specific species and life
- 11 stage. But I'm going to simply go over real quickly
- 12 April through October as an example of that at Watt
- 13 Avenue, which is the middle station.
- 14 We added additional stations downstream
- 15 because, particularly for -- regarding the migratory
- 16 life stages, whether it is juvenile, salmon steelhead
- 17 migrating out of the river or adults migrating upstream
- 18 in the river, obviously they have to pass through the
- 19 lowermost portion of the river on their journeys, so we
- 20 included that as a station of examination.
- 21 So quite quickly and in effort of expediency,
- 22 we show improved water temperatures in Lower American
- 23 River. For this presentation, I'm just going to show
- 24 April through October. Those are the warmest months of
- 25 the year. And we can quickly go through them and look

- 1 and talk about quickly the water temperature
- 2 improvements that we see.
- 3 In April, we see up to 3 degrees cooler water
- 4 temperature at various portions of the exceedance
- 5 probability, as you can see on the graph, up to about
- 6 15 percent, the warmest, 15 percent of the
- 7 distribution.
- Next slide, please.
- 9 In May we see water -- cooler water
- 10 temperatures, oh, depending on the station, 20 to 35
- 11 percent of the probability distribution or 25 to 30
- 12 percent of the time during May at the stations of
- 13 Hazel, Watt, and Paradise Beach.
- In this instance, recalling that 63 degrees
- 15 would be a threshold value used by NMFS for juvenile
- 16 steelhead rearing, you can see the cooler water
- 17 temperatures above that threshold value associated with
- 18 the Modified FMS relative to 2006 FMS.
- 19 Next slide, please.
- June, there is a more extensive amount of time
- 21 or percent of time, I should say, when cooler water
- 22 temperatures are provided by the Modified FMS, up to
- 23 about a degree, roughly a degree over about 35 percent
- 24 of the time, when temperatures are warmest during June.
- 25 This is particularly beneficial to steelhead juvenile

- 1 rearing, juvenile Chinook salmon, out migration, and
- 2 rearing through June, as indicated by NMFS, and adult
- 3 pre-spawn staging as we call it. For fall-run, we call
- 4 it "staging" because it's slightly different and it has
- 5 been believed we have a shorter period of time than,
- 6 for example, spring run, which have a much longer
- 7 duration of holding after they return to freshwater..
- 8 Next slide, please.
- 9 In July, fairly substantial differences with
- 10 Modified FMS, meaning cooler water temperatures, up to
- 11 25 percent of the warmest temperatures, again, of the
- 12 distribution during in July at the various locations,
- 13 again, a benefit to steelhead juvenile rearing, which
- 14 was the focus of our first panel in demonstrating
- 15 adverse and substantial and significant and
- 16 unreasonable effects.
- Next slide, please.
- 18 August, same story, cooler water temperatures
- 19 with the Modified FMS.
- Next slide.
- 21 September, again, seeing improvements with
- 22 Modified FMS.
- Next slide, please.
- 24 And October, some lesser amount of improvement
- 25 but still some improvements during the month of

- 1 October.
- 2 So our conclusion here is that implementation
- 3 of the Modified FMS would provide more suitable water
- 4 temperatures during all of the warmer months of the
- 5 year at the various locations that apply to the various
- 6 life stages and specifically and particularly relative
- 7 to juvenile steelhead rearing, which was our concern
- 8 associated with Panel 1 and implementation of WaterFix
- 9 Tom?
- 10 WITNESS GOHRING: So we've covered water
- 11 supply reliability objective, fishery objective in the
- 12 lower American. For one of the metrics we used to look
- 13 at redirected impacts, potential redirected impacts to
- 14 Sac River, I'm going to turn to Jeff -- Mr. Weaver.
- 15 Excuse me.
- 16 WITNESS WEAVER: Thank you.
- 17 Next slide, please.
- 18 So we also, in order to look at avoiding
- 19 redirected impacts to the Sacramento River, we did look
- 20 at Shasta Reservoir storage and also the Shasta
- 21 Reservoir cold water pool. We extracted the cold water
- 22 pool volume out of the Sacramento River HEC5Q model
- 23 that was provided to us by Reclamation. And -- well, I
- 24 should say we ran the tool provided to us by
- 25 Reclamation and extracted these values from it.

1 So you could see -- we have the complete set

- 2 of output, as is in my testimony. So we just have some
- 3 excerpts here. We did see that there are some
- 4 year-to-year differences in storage, but the cold water
- 5 pool was something we really focused on for purposes of
- 6 evaluating redirecting impacts to Sacramento River
- 7 fisheries.
- 8 So what we see here, in the upper two lines,
- 9 the solid lines are the same, 2006 FMS and Modified FMS
- 10 from CalSim. And you see that the storage is on top of
- 11 each other throughout the -- pretty much the entire
- 12 distribution.
- 13 And then the lower figure shows the
- 14 distribution of the 49-degree temperature volume from
- 15 the models for the two scenarios. And same thing, the
- 16 red line is the 2006 FMS, and the blue line is the
- 17 Modified FMS.
- 18 We see here that the lines, all four lines,
- 19 the two -- each pair of lines are basically on top of
- 20 one another and are essentially indistinguishable.
- 21 Could we go to the next slide, please?
- 22 So here I pulled out September. And we see
- 23 more of the same throughout the distribution of the
- 24 storage and the cold water pool volume, very difficult
- 25 to ascertain any difference between the two.

1 Then we go to the next slide is December, and

- 2 so here we've -- the reservoir is starting to reset its
- 3 temperature. And so we see that, again, basically the
- 4 same temperatures throughout the entire -- excuse me,
- 5 same volume both of storage and 49-degree water
- 6 throughout the entire distribution.
- 7 And next slide.
- 8 WITNESS GOHRING: So that was one of our
- 9 matrices for looking at potential impacts to Sac River.
- 10 The second matrix is water temperature in the
- 11 Sacramento.
- 12 So back to Mr. Bratovich.
- 13 WITNESS BRATOVICH: As Tom mentioned, one of
- 14 our objectives was not to inadvertently create
- 15 redirected impact to the Sacramento River from
- 16 implementation of the Modified FMS. This is a very
- 17 integrated relationship.
- 18 So we examined specifically whether we would
- 19 have any water temperature changes in the Sacramento
- 20 River during the winter-run Chinook salmon spawning,
- 21 incubation, and alevin period, as it's called. We did
- 22 that for a couple reasons: one, obviously because
- 23 winter-run is in danger; two, because that's the
- 24 warmest time of the year; three, because the threshold
- 25 utilized by NMFS and by Reclamation in the BA was the

- 1 lowest of the thresholds, 55.4 degrees, with other
- 2 thresholds, other species and runs being higher than
- 3 that with the exception of other spawning.
- 4 So for the warm months and the lowest
- 5 threshold, that was -- took the most rigorous
- 6 examination that we thought we could actually
- 7 investigate to see if we had redirected impacts.
- 8 We looked at temperature differences at three
- 9 locations, from upstream to downstream, from below
- 10 Keswick and Balls Ferry and then Red Bluff.
- 11 NMFS and Reclamation in the BO and BA
- 12 respectively looked at five locations, including our
- 13 uppermost Keswick, our middle at Balls Ferry, and our
- 14 most downstream Red Bluff. They had a couple of
- 15 intermediate stations, but we examined these, which
- 16 covers both the uppermost, the lower most, and a
- 17 central location.
- 18 So we examined the water temperature
- 19 differences. And I'll, in the interest of expediency,
- 20 go through these a bit quickly.
- 21 There's very, very little to no change most of
- 22 the time. That includes April; that includes May.
- 23 Next slide, please. That -- next slide again.
- 24 That includes June.
- Next slide.

- 1 July. We did see a -- if you can look and
- 2 squint down at critical, and you'll see a little bit of
- 3 elevation here at Balls Ferry. We found a little bit
- 4 larger of a difference at Red Bluff during critical
- 5 years in July.
- 6 Next slide, please.
- 7 August, this one, again, for the water year
- 8 types, not much difference at all, with the exception
- 9 on the lowermost right-hand side. At Balls Ferry
- 10 during August, we see a little bit warmer under the
- 11 Modified FMS relative to the 2006 FMS.
- 12 It's relatively infrequent, as you can see.
- 13 It represents 4.6 percent of the distribution during
- 14 August of critical years, which actually represents
- 15 less than 1 percent, about 0.7 percent, of all August.
- 16 So it's of relatively small frequency that that is
- 17 encountered.
- 18 Next slide, please.
- 19 September, when looking at September, critical
- 20 again at Balls Ferry. This time we see the Modified
- 21 FMS being cooler. So in August, we had 4.6 percent of
- 22 the time it was warmer, but in September, 12.5 percent
- 23 of the time for the -- for the critical September
- 24 stratum, it's actually cooler.
- Next slide, please.

1 We see a similar but more dramatic cooling in

- October and, again, the bottom-most right-hand corner
- 3 of all of these plots, which include the "all years" on
- 4 the top left and then "by water type" specifically. In
- 5 critical years during the month of October, that
- 6 equates to a 25.7 percent of the time it's demonstrably
- 7 cooler.
- 8 So we did see some minor increases in August,
- 9 but we see larger decreases during September and
- 10 October of the same water year type.
- 11 So that was part of our consideration to
- 12 conclude that we don't have substantial changes and
- 13 unreasonable redirected effects on the Sacramento River
- 14 fisheries.
- 15 WITNESS GOHRING: Next slide please. Thanks.
- 16 As Paul said, our team concludes by looking at
- 17 those two matrices that -- no redirected impact to
- 18 Sacramento River fisheries.
- 19 Next slide, please.
- 20 Although it was not one of our objectives to
- 21 avoid other redirected impacts, we find that we have
- 22 achieved that. We have -- using the modeling tools at
- 23 our disposal, we've looked at delivery to CVP and SWP
- 24 contractors north and south of the Delta; we've looked
- 25 at other environmental factors such as X2 and Delta

- 1 outflow, we've looked at hydropower generation. What
- 2 we found for all of those factors was negligible change
- 3 between the Modified FMS and the existing flow
- 4 standard.
- Next slide, please.
- 6 Back to Paul.
- 7 WITNESS BRATOVICH: I'll take it from here,
- 8 Tom.
- 9 So we went through a full evaluation. We
- 10 evaluated various parameters, various life stages,
- 11 fall-run Chinook salmon and steelhead on the Lower
- 12 American River to determine what the differences would
- 13 be between implementing the Modified FMS relative,
- 14 again, as I said, to the 2006 FMS.
- This is a brief summary composition of our
- 16 findings for fall-run Chinook salmon in this case. And
- 17 I guess the overall conclusion is that pretty much
- 18 similar or slightly increased level of protection for
- 19 fall-run in the Lower American River.
- 20 We didn't see -- we frankly did not see really
- 21 large benefits to fall-run Chinook salmon with
- 22 implementation of the Modified FMS.
- Next slide, please.
- That is not the same finding for steelhead.
- 25 We did find an increased level of protection for

1 steelhead in the Lower American River by a compilation

- 2 of the various life stages. Obviously from our
- 3 previous testimony in Panel 1, through the
- 4 demonstration of water temperature changes that we
- 5 admittedly quite quickly just went through, we have
- 6 improved water temperature conditions in the Lower
- 7 American River, which would improve the level of
- 8 protection for steelhead with implementation of the
- 9 Modified FMS.
- 10 WITNESS GOHRING: Next slide at least, please,
- 11 two slides.
- 12 In conclusion, the first conclusion slide is,
- 13 given the evidence that we've submitted in this
- 14 proceeding, we -- and as you've heard summarized here
- 15 today, we believe that we have met the three objectives
- 16 we sought to meet. We're protecting -- helping protect
- 17 water users in the American River Basin from low
- 18 storage conditions. We're improving conditions for
- 19 steelhead, in particular, water temperature in the
- 20 Lower American River. And we're avoiding redirected
- 21 impacts to fisheries in the Sacramento River.
- Next slide.
- 23 Water Forum has a longstanding tradition of
- 24 not just complaining about things but trying to bring
- 25 solutions. So we have tried to do that as part of this

- 1 proceeding. We're not just here to testify about
- 2 injury, we're also -- we come for a partial solution,
- 3 at least a solution or a way to address the storage
- 4 conditions in the American River watershed, storage
- 5 conditions at Folsom, and the exacerbation of those
- 6 conditions created by WaterFix.
- 7 So in ARWA-502, we have updated terms and
- 8 conditions, and we submit them with all humility.
- 9 Thank you very much.
- 10 MR. MILIBAND: Thank you, Mr. Gohring and
- 11 members of Panel 1 and Panel 2.
- 12 If we could jump back, please, to Slide 25 of
- 13 ARWA-501.
- 14 And Mr. Gohring, I just -- a little
- 15 ticky-tacky point, I think somewhere in the direct
- 16 testimony on this, going to the fourth column, fourth
- 17 row, referring to the end-of-May storage requirement
- 18 with the Modified FMS, I thought I heard "900 cfs," but
- 19 I just wanted to clarify that it's 900,000 acre-feet.
- 20 WITNESS GOHRING: 900,000 acre-feet is
- 21 correct.
- MR. MILIBAND: Thank you.
- 23 That concludes our direct testimony on
- 24 Panels 1 and 2. And I think means we're up with Dr.
- 25 Addley for cross-examination.

- 1 CO-HEARING OFFICER DODUC: Thank you.
- 2 Actually, can I get an estimate from all
- 3 parties who intend to conduct cross-examination of this
- 4 panel, in particular, anyone who wishes to conduct
- 5 cross-examination of Dr. Addley?
- Go ahead, Mr. O'Brien.
- 7 MR. O'BRIEN: Kevin O'Brien, Group 7. About
- 8 15, 20 minutes, but I don't have any questions for
- 9 Dr. Addley.
- 10 CO-HEARING OFFICER DODUC: Okay.
- 11 MR. MIZELL: Tripp Mizell, DWR. We're
- 12 projecting about an hour.
- 13 CO-HEARING OFFICER DODUC: But not for
- 14 Dr. Addley?
- MR. MIZELL: Probably 10, 15 minutes for
- 16 Dr. Addley.
- 17 MS. AUFDEMBERGE: Amy Aufdemberge, Department
- 18 of the Interior. 10 minutes, none for Dr. Addley.
- 19 CO-HEARING OFFICER DODUC: Thank you.
- Ms. Akroyd?
- MS. AKROYD: 20 minutes, none for Dr. Addley.
- 22 CO-HEARING OFFICER DODUC: Mr. Ruiz?
- 23 MR. RUIZ: Yes. I'm just going to reserve 10
- 24 minutes, none for Dr. Addley. But it might not be
- 25 necessary at all.

- 1 CO-HEARING OFFICER DODUC: All right. And
- 2 Ms. Morris, your questions for Dr. Addley?
- 3 MR. BEZERRA: And, again, we very much
- 4 appreciate the professionalism to focus for
- 5 Dr. Addley and get him out of here guickly.
- 6 CROSS-EXAMINATION BY MS. MORRIS
- 7 MS. MORRIS: Good afternoon, Dr. Addley.
- 8 WITNESS ADDLEY: How are you doing?
- 9 MS. MORRIS: Good. How are you?
- 10 WITNESS ADDLEY: Good.
- MS. MORRIS: Good. On Page 4 of your
- 12 testimony, ARWA-900, you talk about operations within a
- 13 given year that negatively affect storage or multi-year
- 14 operations. Do you see that?
- 15 WITNESS ADDLEY: Yes.
- MS. MORRIS: Do those oper- --
- 17 WITNESS ADDLEY: I assume you're talking about
- 18 Paragraph 6?
- 19 MS. MORRIS: Yes. Do those operations in that
- 20 context include meeting D1641 water quality control
- 21 time requirements?
- 22 WITNESS ADDLEY: I would say that that -- that
- 23 paragraph isn't really referring to what you're asking.
- 24 The paragraph is really just saying that, if
- 25 operations -- and I didn't testify to injury.

1 But if any operations -- they could be State

- 2 Water Project or CVP, or they could be the Modified
- 3 FMS. If operations reduce the amount of cold water
- 4 storage in May, June or July, they can have a negative
- 5 effect on temperatures downstream.
- 6 MS. MORRIS: Though you weren't referring to
- 7 any specific requirements for operations on CVP or SWP?
- 8 WITNESS ADDLEY: That's correct.
- 9 MS. MORRIS: Okay. Thank you. Is it your
- 10 understanding that the Modified FMS Folsom Reservoir
- 11 storage requirements and MRRs were specifically
- 12 designed to ensure water temperatures in the Lower
- 13 American River are maintained or enhanced?
- 14 WITNESS ADDLEY: Yes.
- MS. MORRIS: And was that -- is the Modified
- 16 FMS not for water supply reliability also?
- 17 WITNESS ADDLEY: Yes, it is. You said "not,"
- 18 but it is developed for water supply reliability.
- 19 MS. MORRIS: Thank you. In Paragraph 11 of
- 20 your testimony, you have come to the opinion that the
- 21 Modified FMS protects temperature conditions in the
- 22 Lower American River for salmonids, correct?
- 23 WITNESS ADDLEY: Correct.
- 24 MS. MORRIS: Have you analyzed the impacts
- 25 from implementing the Modified FMS on Sacramento River

- 1 salmonids with the California WaterFix in place?
- 2 WITNESS ADDLEY: Ask that one more time.
- 3 MS. MORRIS: Okay. Have you analyzed the
- 4 impacts from implementing the Modified FMS on
- 5 Sacramento River salmonids with the WaterFix project in
- 6 place?
- 7 WITNESS ADDLEY: I haven't. And I don't
- 8 know -- Jeff Weaver might have done that work. My
- 9 recollection is no.
- 10 WITNESS WEAVER: Mr. Bratovich evaluated the
- 11 effects on fisheries.
- MS. MORRIS: I'm sorry. What?
- 13 WITNESS WEAVER: Mr. Bratovich evaluated the
- 14 effects on fisheries.
- MS. MORRIS: Of the -- I'm sorry. I want to
- 16 be clear here. Let me just ask Mr. Bratovich then.
- 17 Did you analyze the impacts of implementing
- 18 the Modified FMS on the Sacramento River salmonids with
- 19 California WaterFix in place?
- 20 MR. BEZERRA: And I'm going to object, vague
- 21 and ambiguous at this point because we've seen a wide
- 22 variety of modeling runs reflecting the California
- 23 WaterFix. So if there is some particular modeling run
- 24 she'd like to focus on, we should specify that.
- 25 CO-HEARING OFFICER DODUC: Do you have a

- 1 modeling run, or were you asking a general question?
- 2 MS. MORRIS: I'm asking the general question
- 3 but any modeling run. It could be H3+; it could be H3;
- 4 it could be H4. You can pick. If there's any that --
- 5 you could just let me know. I could ask one at a time
- 6 if counsel prefers.
- 7 CO-HEARING OFFICER DODUC: Overruled.
- 8 Mr. Bezzera?
- 9 WITNESS WEAVER: Maybe it is a question for
- 10 me. We did not do a model rum, a CalSim run that
- 11 included the WaterFix.
- 12 WITNESS GOHRING: And the FMS.
- 13 WITNESS WEAVER: And the FMS, I'm sorry.
- 14 Correct.
- MS. MORRIS: Thank you. That was my
- 16 understanding.
- 17 WITNESS ADDLEY: And I would add that we
- 18 didn't did do a temperature model run. We had great
- 19 concerns about the way that the WaterFix, the
- 20 hydrology, inflow hydrology into the rim dams was
- 21 developed and used in the WaterFix modeling because it
- 22 didn't take into account the storage upstream.
- 23 And I reviewed with Jeff Weaver, I reviewed
- 24 inflow hydrology into Folsom Reservoir. And in July
- 25 the climate change inflow hydrology said that inflows

1 into Folsom Reservoir would be about 40 percent of what

- 2 they would be without climate change.
- 3 And I know from working on PCWA's projects
- 4 that they have a large amount of storage,
- 5 350,000 acre-feet of storage upstream. So with climate
- 6 change, with earlier hydrology, earlier rainfall, they
- 7 would store that water.
- 8 But in July all the projects, even on the
- 9 SMUD, on the South Fork project, they would store the
- 10 water, and they would release in July. And there would
- 11 not be a 40 percent reduction in inflow hydrology to
- 12 Folsom. So we had some serious concerns about the
- 13 hydrology.
- MS. MORRIS: I respectfully ask that that
- 15 response be stricken from the record. That was not
- 16 based on my question. My question was answered, and it
- 17 was whether or not the modeling for the FMS included
- 18 WaterFix and was analyzed.
- 19 And I believe that that testimony Mr. --
- 20 Dr. Addley, excuse me, just gave was part of this
- 21 group's testimony in Part 1.
- 22 CO-HEARING OFFICER DODUC: Mr. Bezzera?
- MR. BEZERRA: I think all Mr. Addley was
- 24 trying to do was explain why he didn't do that. There
- 25 was a distinct reason; I believe it's in his testimony

- 1 even someplace.
- But, I mean, I would opposed the motion on the
- 3 grounds that he was just trying to explain what
- 4 happened.
- 5 CO-HEARING OFFICER DODUC: That's what I
- 6 understood.
- 7 Overruled, Ms. Morris.
- 8 MS. MORRIS: I have no further questions for
- 9 Dr. Addley.
- 10 CO-HEARING OFFICER DODUC: Actually, let me
- 11 get a clarification from you. Does the State Water
- 12 Contractors have other cross-examination for this
- 13 panel?
- MS. MORRIS: In conjunction with DWR.
- 15 CO-HEARING OFFICER DODUC: In conjunction.
- MS. MORRIS: With the hour.
- 17 CO-HEARING OFFICER DODUC: All right.
- 18 Anything else for Dr. Addley?
- 19 (No response)
- 20 CO-HEARING OFFICER DODUC: If not, then thank
- 21 you very much, Dr. Addley.
- 22 WITNESS ADDLEY: Thank you, very much.
- 23 CO-HEARING OFFICER DODUC: And let's get to
- 24 the rest of your cross-examination.
- 25 MS. MORRIS: Thank you. I'll start -- I'm

- 1 going to bounce around a little bit, so I should
- 2 probably give you my overview of topics.
- 4 operations for Mr. Gohring. I have questions for
- 5 Mr. Bratovich regarding his findings and the basis of
- 6 his findings regarding temperature. And I have some
- 7 questions for Mr. Weaver regarding his -- the work that
- 8 he did and is relied upon by Mr. Gohring.
- 9 CO-HEARING OFFICER DODUC: Proceed.
- 10 FURTHER CROSS-EXAMINATION BY MS. MORRIS
- 11 MS. MORRIS: Mr. Gohring, would you agree that
- 12 end-of-May storage, is a good indicator of available
- 13 cold water pool in Folsom?
- 14 WITNESS GOHRING: It is an indicator of cold
- 15 water pool for Folsom Reservoir, yes.
- 16 MS. MORRIS: And it's one that you used in
- 17 your presentation on Slide 8 ARWA-501, correct?
- 18 WITNESS GOHRING: Let me look at Slide 8.
- 19 As I just said, it is one of the matrices that
- 20 is on Slide 8.
- MS. MORRIS: Are you aware of the American
- 22 River Operations Group that Reclamation convenes?
- 23 WITNESS GOHRING: I am.
- MS. MORRIS: What is the purpose of that
- 25 group?

1 WITNESS GOHRING: It -- yeah. It's kind of a

- 2 deep answer. The group was actually first specified in
- 3 the Water Forum's 2006 Flow Management Standard. It is
- 4 essentially an inner agency staff working group that
- 5 invites members of the public, which includes the Water
- 6 Forum, to be present and make comments while they
- 7 deliberate about real-time operational decisions for
- 8 Folsom Reservoir and the American River.
- 9 MS. MORRIS: So is it true that the ARG is the
- 10 forum where Reclamation and stakeholders discuss the
- 11 American River operations for upcoming months,
- including the temperature management plan?
- 13 WITNESS GOHRING: That's a long -- see if I
- 14 can parse that out. Hit me again.
- MS. MORRIS: Is it true that the ARG is the
- 16 forum where Reclamation and stakeholders discuss the
- 17 American River operations for upcoming months,
- 18 including temperature management plans?
- 19 WITNESS GOHRING: Is one of the -- it is
- 20 probably the -- I mean, I want to be careful. It's not
- 21 the only forum where that happens. It is probably the
- 22 primary forum that Reclamation convenes to -- yeah, to
- 23 do exactly what you said.
- MS. MORRIS: And do you know if WaterFix is
- 25 proposing changes to the existence of this group?

- 1 WITNESS GOHRING: Not that I'm aware of.
- 2 MS. MORRIS: How about the function of the
- 3 group?
- 4 WITNESS GOHRING: Not that I'm aware of.
- 5 MS. MORRIS: And do you know if WaterFix is
- 6 proposing changes to the American River operations
- 7 requirements in the 2009 NMFS Biological Opinion?
- 8 MR. BEZERRA: Objection, vague and ambiguous
- 9 as to "operational requirements."
- 10 CO-HEARING OFFICER DODUC: Is he aware?
- 11 WITNESS GOHRING: Question again? Sorry.
- MS. MORRIS: Do you know if WaterFix is
- 13 proposing changes to the American River operations
- 14 requirements in the 2009 NMFS Biological Opinion?
- 15 WITNESS GOHRING: Operational requirements in
- 16 the Biological Opinion? I don't believe so.
- 17 MS. MORRIS: Thank you. A couple questions.
- 18 if -- could you please pull up -- thank you.
- 19 CO-HEARING OFFICER DODUC: Ms. Gaylon is doing
- 20 the duties today.
- MS. MORRIS: Thank you, Ms. Gaylon.
- 22 Could you please pull up the website has the
- 23 exhibit, and specifically ARWA and scroll to the top.
- Oops, sorry. I meant to the top of Part 2.
- Okay. I think these questions are for

1 Mr. Weaver, but I'm not sure. So if anyone can help me

- 2 by answering, if appropriate, that would and good.
- 3 The modeling files that are shown on the top
- 4 four, are those all of the modeling files for the
- 5 Modeling Flow Standard as well as the 2006 Flow
- 6 Management Standard that you used to create the -- your
- 7 exhibits for this proceeding?
- 8 WITNESS WEAVER: Yes.
- 9 MS. MORRIS: Are there other modeling files
- 10 that are not included that show other operations for
- 11 the Modified Flow Standard?
- 12 WITNESS WEAVER: Not that I'm aware of.
- 13 MS. MORRIS: So this also shows operations on
- 14 the American River? One of these files shows the
- 15 operations of the Modified Flow Standard on the
- 16 American River?
- 17 WITNESS WEAVER: Not the water temperature
- 18 modeling, but the CalSim results for flows on the
- 19 American River.
- 20 MS. MORRIS: Okay. So the temperature
- 21 modeling is included for the Sacramento River under the
- 22 HEC5Q.Zip, correct?
- 23 WITNESS WEAVER: That's correct.
- 24 MS. MORRIS: But not for the American River?
- 25 WITNESS WEAVER: That's correct.

1 MS. MORRIS: Where can I find that information

- 2 for the American River?
- 3 WITNESS WEAVER: That was -- Mr. Addley did
- 4 that modeling. I was not part of the American River
- 5 temperature modeling.
- 6 MS. MORRIS: But it's not included in the
- 7 exhibits for this panel, correct, or for this American
- 8 Rivers group?
- 9 CO-HEARING OFFICER DODUC: Does anyone know?
- 10 WITNESS GOHRING: It's tough to answer without
- 11 Dr. Addley, but ARWA-908 are the results of his
- 12 temperature modeling that we did for the Lower
- 13 American.
- MS. MORRIS: Right. Those are selected
- 15 results and not the full results. And I'm wondering if
- 16 Mr. Bezzera or Mr. Miliband can produce the modeling --
- 17 the modeling for the American River temperature as well
- 18 as the full suite of results.
- 19 MR. BEZERRA: I believe we can.
- 20 CO-HEARING OFFICER DODUC: Can you confirm
- 21 that and let us know?
- 22 MR. BEZERRA: I suspect we can confirm it at a
- 23 break, I suspect. I might be wrong about that, but I
- 24 suspect by the end of the day we can figure that out.
- 25 CO-HEARING OFFICER DODUC: Good. Thank you.

- 1 MS. MORRIS: Okay. Thank you.
- 2 Mr. Bratovich -- it's Mr. Bratovich, correct?
- 3 Or is it Doctor?
- 4 WITNESS BRATOVICH: No, it's Paul.
- 5 MS. MORRIS: Thank you. You can call me Stef,
- 6 but I think I should call you Mr. Bratovich.
- 7 WITNESS BRATOVICH: That's fine.
- 8 MS. MORRIS: I've couple -- I'm going to jump
- 9 around a bit, but I'll start with you.
- 10 In your --
- If we could pull up ARWA-703.
- 12 This is your exhibit that you prepared,
- 13 correct?
- 14 WITNESS BRATOVICH: Yes.
- 15 MS. MORRIS: And then if we could scroll to
- 16 the very last page. And then I just want to confirm
- 17 that the literature you cited for this particular
- 18 exhibit is these two studies under Section 4.0, which
- 19 includes National Marine Fishery Services 2017 and U.S.
- 20 Department of Interior 2016; is that correct?
- 21 WITNESS BRATOVICH: Yes.
- 22 MS. MORRIS: And then I also would like to ask
- 23 you if you could show me in your written testimony,
- 24 which is ARWA-701, which studies you cite for the
- 25 temperature findings.

1 WITNESS BRATOVICH: My testimony was ARWA-700

- 2 not 701.
- 3 MS. MORRIS: I'm sorry, I apologize. Thank
- 4 you for clarifying.
- 5 WITNESS BRATOVICH: That's fine. Could you
- 6 repeat your question?
- 7 MS. MORRIS: Sure. Let me just try to
- 8 short-cut this a bit.
- 9 WITNESS BRATOVICH: Yeah, okay.
- 10 MS. MORRIS: I read your testimony 700, and it
- 11 seems to rely, for studies cited, almost entirely on
- 12 703, which relies on -- the majority of the citations
- 13 are on the NMFS Biological Opinion for California
- 14 WaterFix.
- 15 Are there other studies that you cite to or
- 16 rely on for temperature findings? And can you please
- 17 point me to those?
- 18 MR. MILIBAND: I just want to interject a
- 19 little bit of an objection or point of clarification
- 20 maybe for Ms. Morris. In saying "cited" versus "relied
- 21 upon, " those are two very different things for an
- 22 expert. Things that are cited are obviously cited.
- 23 Things that are relied upon, almost becomes a memory
- 24 test for an expert that's been in this line of work for
- 25 35 years.

- 1 So I don't know if that question could be
- 2 narrowed a bit, or distinguishing between "cited"
- 3 versus "relied upon."
- 4 MS. MORRIS: I'm asking for the citations.
- 5 There was a comment earlier from Mr. Bezzera that this
- 6 witness cited to several studies, and so I'm asking for
- 7 the citations.
- 8 MR. MILIBAND: Fair enough with that
- 9 clarification for citations. Thank you.
- 10 WITNESS BRATOVICH: These are the citations
- 11 that I used, and I used them in 703, specific examples,
- 12 to illustrate status of the steelhead and the
- 13 conditions in the Lower American River. Also, when I
- 14 was looking at water temperatures, I referred to the
- 15 NMFS Biological Opinion and the Reclamation BA, which
- 16 themselves contain numerous citations.
- 17 So when I referred to the NMFS BO and where I
- 18 used quotations from the NMFS BO, oftentimes they were
- 19 citing another document or two. And that includes a
- 20 suite of considerations in those documents talking
- 21 about water temperature thresholds and such.
- 22 So I'm trying to answer your question.
- 23 Yeah, I included those two in my citations
- 24 here, but I think my references would include that
- 25 which was cited in those other documents.

- 1 MS. MORRIS: Let me ask you this question,
- 2 then. The two documents that you cited to, relied
- 3 upon, in either of those two documents, the Biological
- 4 Opinion or the Bureau of Reclamation document, is
- 5 Exhibit ARWA-702 the "Lower American River Biological
- 6 Rationale Development and Performance of the Modified
- 7 Flow Management Standard" cited in either of those
- 8 references?
- 9 WITNESS BRATOVICH: Is our Exhibit 702 cited
- in either the NMFS BO or Reclamation's BA?
- MS. MORRIS: Yeah, that's the question.
- 12 WITNESS BRATOVICH: Well, no, our 702 came out
- 13 subsequent to those documents.
- 14 MS. MORRIS: Okay. Thank you. Isn't it true
- 15 that the steelhead -- let me step back here for a
- 16 second.
- 17 Isn't it true that the steelhead produced at
- 18 the Nimbus Hatchery on the American River are not
- 19 protected by the ESA?
- 20 WITNESS BRATOVICH: I believe that is true.
- 21 MS. MORRIS: Are the Central Valley steelhead
- 22 listed under the California Endangered Species Act?
- 23 WITNESS BRATOVICH: Central -- California
- 24 Central Valley steelhead, are they listed under the
- 25 ESA?

- 1 WITNESS ADDLEY: CESA.
- 2 MS. MORRIS: CESA.
- 3 WITNESS BRATOVICH: Oh, under CESA. No,
- 4 steelhead are not listed under CESA.
- 5 MS. MORRIS: And, Mr. Gohring, I just wanted a
- 6 quick follow-up question for you. I think you state in
- 7 your testimony on Paragraph 19 -- so that's ARWA-500 --
- 8 that they are listed under CESA. So would you agree
- 9 with Mr. Bratovich that they are not?
- 10 WITNESS GOHRING: I agree with Mr. Bratovich.
- MS. MORRIS: You do?
- 12 WITNESS GOHRING: I do.
- 13 MS. MORRIS: Thank you. Mr. Bratovich, isn't
- 14 it true that a majority of the in-river steelhead
- 15 spawning in the American River are of hatchery origin?
- 16 WITNESS BRATOVICH: I don't know how easy of
- 17 an answer that is technically. I think there is --
- 18 there are some statements that the steelhead run is
- 19 supported by hatchery production in the Lower American
- 20 River. There are observations both, adipose
- 21 fin-clipped steelhead indicating a hatchery production,
- 22 hatchery marking -- is this on?
- MR. BAKER: We are having trouble with the
- 24 mike.
- 25 WITNESS BRATOVICH: What? Can you hear me

- 1 now?
- 2 Adipose fin-clipped individuals and
- 3 non-adipose fin-clipped individuals, the hatchery
- 4 production for steelhead, when they insert coded wire
- 5 tags into their heads, they clip off their adipose fin,
- 6 which is right in front of the caudal fin in the back
- 7 of the fish so they can be more readily distinguished
- 8 as a hatchery produced fish rather than a naturally
- 9 produced fish.
- 10 MS. MORRIS: Are you familiar with the Hanon
- 11 and Deason 2008 study, I believe, that was citation
- 12 under Biological Opinion that you cited in your
- 13 testimony?
- 14 WITNESS BRATOVICH: I believe I am. I think I
- 15 have reviewed that paper.
- 16 MS. MORRIS: And based on that paper, would
- 17 you agree that approximately 75 to 95 percent of the
- 18 steelhead on the American River are of hatchery origin?
- 19 WITNESS BRATOVICH: Well, I can't recollect
- 20 specifically what was said in that paper. But if
- 21 you're reading that from that paper, then I'll agree.
- MS. MORRIS: Would you like me to show you?
- 23 WITNESS BRATOVICH: No, that's okay. I'll
- 24 take your word for it.
- 25 MS. MORRIS: Sounds about accurate from your

- 1 understanding?
- 2 WITNESS BRATOVICH: As I said, there is a
- 3 documentation of the hatchery supporting the run as
- 4 well as some wild spawning fish, naturally produced
- 5 fish.
- 6 MS. MORRIS: Thank you.
- 7 Mr. Weaver, did you prepare the tables on
- 8 ARWA-501, Pages 6 and 7? They're also indicated
- 9 ARWA-504 and ARWA-505, which I believe comes from your
- 10 testimony.
- 11 WITNESS WEAVER: Yes, I did.
- 12 MS. MORRIS: And in this -- for these tables,
- 13 you used the BA modeling in your testimony, correct?
- 14 WITNESS WEAVER: That's correct. I did find,
- 15 however, that I used a slightly different methodology
- 16 to create these tables than was used in the BA. I
- 17 extracted the data from the BA modeling, and I had two
- 18 differences from the way that DWR or whomever wrote the
- 19 BA did it, and so the values will be slightly
- 20 different. But the data is from the same source.
- 21 MS. MORRIS: And what were the two different
- 22 methodologies that you used?
- 23 WITNESS WEAVER: Sure. The BA tables used an
- 24 equation or function in Excel called percentile.inc,
- 25 and I used an equation -- a function, the

- 1 percentile.exe. It's a slight different way that it
- 2 calculates the percentiles.
- 3 The second difference that the BA tables
- 4 relied upon a water year basis that went from March to
- 5 February, and I used October to September.
- 6 MS. MORRIS. Thank you. Can we agree that, in
- 7 the modeling that you're using, that the CWF BA is
- 8 labeled as PA for "project alternative"?
- 9 WITNESS WEAVER: I believe so, yes.
- MS. MORRIS: We don't have to agree it's
- 11 project alternative; it is PA, correct?
- 12 WITNESS WEAVER: That is project alternative,
- 13 yes.
- MS. MORRIS: Thank you. And then if we can
- 15 just look at 504, is it true that the difference in
- 16 Folsom -- whoops. Sorry.
- 17 MR. BEZERRA: Just for clarity of the record
- 18 we're now on Slide 6 of Exhibit ARWA-501, correct?
- 19 MS. MORRIS: Correct, which is the exact same
- 20 exhibit which is ARWA-504.
- 21 Is it true that the difference in Folsom
- 22 storage in every month between the PA and the NAA,
- 23 without climate change, are less than 10 percent in
- 24 every probability exceedance except for one, which is
- 25 11.2 percent, and that's the 90 percent exceedance in

- 1 July, correct?
- 2 MR. BEZERRA: Objection, compound.
- 3 CO-HEARING OFFICER DODUC: I'm just wondering,
- 4 can he do that math that quickly?
- 5 WITNESS WEAVER: I'm not sure I can calculate
- 6 the percent differences on this table.
- 7 MS. MORRIS: So you -- you're not familiar
- 8 what the percent differences are?
- 9 MR. BEZERRA: Objection, misstates prior
- 10 testimony.
- 11 WITNESS WEAVER: Are we referring to what's on
- 12 the screen here?
- 13 MS. MORRIS: Yeah. I'm looking at the June
- 14 and July in red. And what you're showing is one thing
- 15 minus the other. And I'm asking what the percent of
- 16 difference is.
- 17 CO-HEARING OFFICER DODUC: Between June and
- 18 July?
- MS. MORRIS: No, they're not comparing June
- 20 and July. They're comparing two different
- 21 alternatives.
- 22 WITNESS WEAVER: Yeah, Tom --
- 23 WITNESS GOHRING: Yeah, so I think I
- 24 understood the question.
- That's right. That's magnitude of change.

- 1 And I think percentage might be instructive. But when
- 2 you're talking about Folsom storage that's within 10-
- 3 or 20,000 acre-feet of dead pool, the magnitude, I
- 4 think, is most instructive. So when I look at the
- 5 90th percentile and the critical, and they're about
- 6 20,000 acre-feet difference, that's very concerning for
- 7 us.
- 8 MS. MORRIS: Okay. But my question was
- 9 regarding -- these are just comparing one action to the
- 10 other. And --
- 11 WITNESS GOHRING: Yeah, and I just -- by the
- 12 way --
- MS. MORRIS: -- I understand --
- 14 WITNESS GOHRING: I think it's "PA" is
- 15 "proposed action." I think you called it
- 16 "project alternative."
- MS. MORRIS: We agreed that we would not
- 18 characterize it, that it was just Biological Opinion.
- 19 But we'll call it proposed action.
- 20 Mr. Weaver, are you okay with that?
- 21 WITNESS WEAVER: The proposed action and PA,
- 22 that's fine, project alternative.
- MS. MORRIS: I appreciate that.
- 24 WITNESS WEAVER: But your question -- could
- 25 you repeat your question, please?

1 MS. MORRIS: Do you know what difference, the

- 2 percentage difference is in July and June between two
- 3 alternatives? You're just showing the actual impact.
- 4 What I'm asking is do you know the percentage?
- 5 WITNESS WEAVER: Do you have an exceedance
- 6 level you're questioning about, you're asking about?
- 7 MS. MORRIS: I'm asking for every -- I will
- 8 represent to you that I have calculated the change in
- 9 the percentage in June and July and that each of the
- 10 change in percentage for each exceedance is below
- 11 10 percent except for in the 90th percentile in July.
- 12 MR. BEZERRA: Objection, assumes facts not in
- 13 evidence. The Department has chosen not to produce
- 14 modeling tables reflecting the results for Folsom
- 15 storage or any other reservoir for every single month
- of every single year. The Department could easily do
- 17 that.
- 18 The Water Contractors are now asking
- 19 Mr. Weaver to calculate percentages based on assumed
- 20 numbers the Department has chosen not to put into this
- 21 record.
- 22 CO-HEARING OFFICER DODUC: Hold on. I
- 23 believe, however, that Mr. Gohring attempted to answer
- 24 your question by explaining why, in his opinion, the
- 25 percentage is not as --

- 1 WITNESS GOHRING: Instructive.
- 2 CO-HEARING OFFICER DODUC: -- instructive --
- 3 your words, not mine -- as what is shown.
- 4 So, Ms. Morris, where are you going with this
- 5 question? Obviously they did not calculate the
- 6 percentage.
- 7 MS. MORRIS: Right.
- 8 CO-HEARING OFFICER DODUC: And Mr. Gohring
- 9 explained why. So, your turn.
- 10 MS. MORRIS: Okay. Well, we -- I -- well,
- 11 I'll just ask this a different way.
- Mr. Weaver, would you agree with Mr. Gohring's
- 13 conclusion that the percentage difference is not
- 14 instructive?
- 15 WITNESS WEAVER: I think when we're seeing --
- 16 particularly, if you look at July and a 90 percent, now
- 17 you did indicate that that one did have a 10 percent
- 18 difference. And in that particular month, I'm looking
- 19 at the rest of ARWA-504, and the 90 percent exceedance
- 20 was 367,000 acre-feet.
- 21 So as you indicated, that one is greater than
- 22 10 percent. And I think that that lower storage -- I
- 23 don't think a storage differential when reservoir's
- 24 almost full is as meaningful as a storage differential
- 25 when the reservoir is almost empty.

1 So seeing a 41,000 acre-foot differential when

- 2 the reservoir is at 367- under the No Action I think is
- 3 concerning.
- 4 MS. MORRIS: So you would agree?
- 5 MR. BEZERRA: Objection, vague and ambiguous.
- 6 I don't know what he's being asked to agree to.
- 7 CO-HEARING OFFICER DODUC: Whether -- I
- 8 believe the question was whether he agreed with
- 9 Mr. Gohring's statement, which we might have to repeat
- 10 all over again, now.
- 11 WITNESS WEAVER: I believe that the storage
- 12 during low -- the difference in storage during lower
- 13 storage periods is of particular concern.
- MS. MORRIS: Okay. Mr. Gohring, in
- 15 Paragraph 19 of your testimony, is it correct that the
- 16 basis of your opinion regarding storage in June and
- 17 July is based solely on the info compiled in ARWA-501,
- 18 Pages 6 and 7, which is also ARWA-504 and 505?
- 19 WITNESS GOHRING: Okay. First of all, we're
- 20 looking at Paragraph 19 in my testimony?
- MS. MORRIS: Your testimony.
- 22 WITNESS GOHRING: Can we pull it up?
- 23 MR. BEZERRA: And I'm going to object that it
- 24 misstates prior testimony because Mr. Gohring also
- 25 relied on other testimony regarding the relationship

- 1 between low Folsom storage and water temperatures.
- 2 MS. MORRIS: I was asking specifically about
- 3 this paragraph. I think if we can give the witness a
- 4 minute to read it, he can answer.
- 5 CO-HEARING OFFICER DODUC: Let's do that.
- 6 WITNESS GOHRING: Let's have the question
- 7 again.
- 8 MS. MORRIS: Is the testimony in Paragraph 19
- 9 based solely on your -- is your opinion in Paragraph 19
- 10 based solely on the storage figures in June and July
- 11 shown in ARWA-501, Page 6 and 7 and also the they're
- 12 the same exhibits, ARWA-504 and 505?
- 13 WITNESS GOHRING: I understand the question.
- 14 No. I think they're also based on my direct
- 15 experience during the recent drought, particularly the
- 16 drought year 2015 when Water Forum was intimately
- 17 involved in real-time operations with Reclamation. We
- 18 saw firsthand the connection between low storage and
- 19 reduced cold water pool and a resultant elevated
- 20 temperature in the Lower American River.
- 21 So I'm drawing from that as well. And I
- 22 believe -- I might be able to find it, but I believe
- 23 there is a description of that experience here in the
- 24 testimony.
- MS. MORRIS: Okay. Thank you.

- 1 Mr. Weaver, are you familiar with the draft
- 2 Yolo Bypass Salmonid Habitat Restoration and Fish
- 3 Passage Project EIR and EIS?
- 4 WITNESS WEAVER: I'm familiar with portions of
- 5 it.
- 6 MS. MORRIS: Isn't it true that you were a
- 7 preparer of that document or portions of that document?
- 8 WITNESS WEAVER: I assisted in preparation of
- 9 a piece of it, yes.
- 10 MS. MORRIS: I'm sorry. You did?
- 11 WITNESS WEAVER: Yes, I assisted in the
- 12 preparation of a piece of it.
- MS. MORRIS: Were you specifically
- 14 participating for hydrologic modeling and water supply
- 15 analysis?
- 16 WITNESS WEAVER: Water supply analysis.
- MS. MORRIS: And modeling?
- 18 WITNESS WEAVER: I did not do any modeling.
- MS. MORRIS: Okay. Could we pull up, on the
- 20 jump drive, what's marked as "Pages from 17 Yolo Bypass
- 21 Draft EIR/EIS, Chapter 20." And could you scroll down
- 22 to Page 25-4, please. And can you go just a tiny bit
- 23 more. There we go.
- And do you see, Mr. Weaver, on this
- 25 document --

- 1 Whoops. There we go.
- 2 Do you see your name listed?
- 3 WITNESS WEAVER: I do.
- 4 MS. MORRIS: Does this refresh your
- 5 recollection that you were involved --
- 6 WITNESS WEAVER: I was involved. I was not
- 7 the primary author. A woman under my supervision,
- 8 Amy Kindle [phonetic] there, was the primary author of
- 9 the hydrologic analysis.
- 10 MS. MORRIS: And she was working on the
- 11 modeling?
- 12 WITNESS WEAVER: No, we were provided the
- 13 modeling by Bureau of Reclamation. Nancy Parker at
- 14 Reclamation did the modeling.
- 15 MS. MORRIS: I don't have any more questions.
- 16 Mr. Mizell might have one other question. I'll just
- 17 flip through and make sure.
- Oh, I'm sorry, I do have -- I had to re- -- I
- 19 apologize for being disorganized, but based on other
- 20 testimony I had to -- that was provided that we moved
- 21 to strike, I had to move through and cross a bunch of
- 22 questions out. So I just need one second.
- 23 Sorry, Mr. Bratovich, to jump back to you.
- 24 Again, so we went through what you looked at in
- 25 ARWA-703 is largely a compilation of quotations

- 1 regarding the status of steelhead in the NMFS
- 2 Biological Opinion, correct?
- 3 WITNESS BRATOVICH: That's part of it, yes.
- 4 MS. MORRIS: And in the NMFS Biological
- 5 Opinion, as you've shown with those excerpts that you
- 6 have, it's true that they still concluded that changes
- 7 in water temperature between the PA and the No Action
- 8 Alternative will not result in adverse effects of
- 9 juvenile steelhead in the American River, correct?
- 10 WITNESS BRATOVICH: Could you tell me where in
- 11 the Biological Opinion it says that?
- 12 MS. MORRIS: Sure.
- 13 We could pull up State Water Resources Control
- 14 Board 106, And it's pdf Page 409, I hope. And it's the
- 15 last paragraph. And starts on the -- yep.
- Right there, "NMFS concludes," do you see
- 17 that?
- 18 WITNESS BRATOVICH: I do see that.
- 19 MS. MORRIS: Okay. I have no further
- 20 questions.
- 21 MR. MIZELL: Mr. Weaver, earlier you explained
- 22 that the concern you had over Slide 6 of ARWA-501 is
- 23 that in the 90 percent exceedance in July you were near
- 24 dead pool at Folsom storage. Is that a correct
- 25 summarization of what you said?

1 WITNESS WEAVER: No, I didn't say we were near

- 2 dead pool. I said low storage.
- 3 MR. MIZELL: Near low storage?
- 4 WITNESS WEAVER: I said it's a low storage
- 5 condition. I think the No Action Alternative had a
- 6 367,000 acre-foot storage. And I think dead pool is
- 7 around 90,000 acre-feet. So that's -- that is a bit
- 8 above dead pool, but it's still low storage condition.
- 9 MR. MIZELL: Thank you. That's the only
- 10 question I had.
- 11 CO-HEARING OFFICER DODUC: Thank you,
- 12 Mr. Mizell.
- Ms. Aufdemberge.
- 14 We will take our break after Ms. Aufdemberge
- 15 finishes her cross. She estimated only about ten
- 16 minutes or so.
- MS. AUFDEMBERGE: Hello, my name is
- 18 Amy Aufdemberge. I'm with the Solicitor's Office for
- 19 the Department of Interior here, in Sacramento. And
- 20 with me is Kristin White, she is the deputy manager for
- 21 Central Valley Operations. She's sitting in with me
- 22 for this cross-examination. And all of my questions
- 23 are for Mr. Gohring.
- 24 These first couple questions are just to --
- 25 we've kind of covered this ground, but just to kind of

- 1 get to my other questions.
- 2 But Mr. Gohring -- or excuse me. It's
- 3 Gohring, right?
- 4 WITNESS GOHRING: Ms. Aufdemberge? You may --
- 5 you have license.
- 6 MS. AUFDEMBERGE: You discuss in your
- 7 testimony how you sought to find a sweet spot, as you
- 8 call it, for a modified floor management standard that
- 9 meets your stated objectives; is that correct?
- 10 WITNESS GOHRING: Yes.
- 11 MS. AUFDEMBERGE: And you're very clear that
- 12 the Modified FMS in ARWA-502, or just the Modified FMS
- 13 is what we've been calling it, has both water supply
- 14 reliability and river protection objectives; is that
- 15 correct?
- 16 WITNESS GOHRING: Yes.
- 17 WITNESS WEAVER: And one mechanism in the
- 18 Modified FMS for protecting water supply is the minimum
- 19 storage requirements; is that correct?
- 20 MR. BEZERRA: I'm going to object, vague and
- 21 ambiguous. I just -- Ms. Aufdemberge is speaking very
- 22 quickly, and I have to say, I just didn't catch the
- 23 question.
- 24 CO-HEARING OFFICER DODUC: Yes, please do slow
- 25 down, Ms. Aufdemberge.

1 MS. AUFDEMBERGE: Wow. I just -- normally I'm

- 2 much slower, so I must be a little nervous.
- 3 WITNESS GOHRING: Coffee.
- 4 MS. AUFDEMBERGE: Yes. One mechanism the
- 5 Modified FMS for protecting water supply is the minimum
- 6 storage requirements; is that correct?
- 7 WITNESS GOHRING: Partially correct. The
- 8 storage requirement, it was developed to protect water
- 9 supply objectives and to provide higher temperatures
- 10 for -- excuse me, higher temperature protection, lower
- 11 temperatures, for steelhead.
- 12 MS. AUFDEMBERGE: Thank you. I want to spend
- 13 a few seconds on a sentence we focused on in Part 1.
- 14 Can you bring up ARWA-502.
- 15 CO-HEARING OFFICER DODUC: I think you mean
- 16 Panel 1?
- 17 MS. AUFDEMBERGE: It was Part 1, but it's the
- 18 same FMS. Is it's the Modified FMS.
- 19 It's about a little over halfway down. It
- 20 starts, "Permitee shall not reduce water supply
- 21 allocations or deliveries" -- oh, sorry.
- 22 WITNESS GOHRING: Halfway down that --
- MS. AUFDEMBERGE: Of Paragraph 1, sorry.
- 24 "Permitee shall not reduce water supply
- 25 allocations or deliveries that are diverted from Folsom

- 1 Reservoir." Do you see that sentence?
- 2 WITNESS GOHRING: I do. Second to the last?
- 3 Yes.
- 4 MS. AUFDEMBERGE: Okay. If adopted by the
- 5 Board, this would essentially be a Board prohibition on
- 6 Reclamation under its federal American River contracts
- 7 from reducing contract allocations or deliveries due to
- 8 implementation of the minimum storage requirements; is
- 9 that correct?
- 10 WITNESS GOHRING: I don't -- I don't
- 11 understand how that would -- I don't know. I don't --
- 12 I don't know -- I don't know what you -- I'm not sure
- 13 what you said, so I can't agree with it.
- 14 MS. AUFDEMBERGE: You're asking the Board to
- 15 adopt this paragraph as a condition?
- 16 WITNESS GOHRING: Yes.
- 17 MS. AUFDEMBERGE: And this sentence says that
- 18 Reclamation would not be able to short allocations or
- 19 deliveries to American River contractors under the
- 20 federal contracts, and that would be a Board action; is
- 21 that correct?
- 22 WITNESS GOHRING: No, it doesn't say that they
- 23 can't short contracts. It says its intent is to say
- 24 that they can't short American River contracts beyond
- 25 what they would have done under normal M and I shortage

- 1 provisions.
- 2 MS. AUFDEMBERGE: Okay. I'll take that as
- 3 well.
- 4 Would the Water Forum advocate for the Board
- 5 to adopt this Modified FMS if it did not include this
- 6 protection for American River contracts? So in other
- 7 words, if the Board were to modify your Modified FMS
- 8 and take that sentence out and maybe the sentence after
- 9 it?
- 10 WITNESS GOHRING: I don't know.
- 11 MS. AUFDEMBERGE: Are you aware of any
- 12 unmetered water use within the Water Forum member
- 13 agency service areas?
- 14 WITNESS GOHRING: I am.
- MS. AUFDEMBERGE: In your testimony, you state
- 16 that an objective of the Modified FMS is to maintain
- 17 sufficient storage -- and you've said this repeatedly,
- 18 so it's not a trick question -- in Folsom basically
- 19 during a simulated repeat of the '76-'77 drought; is
- 20 that correct?
- 21 WITNESS GOHRING: Yes.
- MS. AUFDEMBERGE: And can we bring up DOI-36,
- 23 Page 2?
- 24 This is from rebuttal testimony of
- 25 Ron Milligan. And on Page 2 here, we have Congress's

- 1 definition of CVP yield in the CVP IA. Are you
- 2 familiar with this? Have you read this before?
- 3 WITNESS GOHRING: No, I don't think so.
- 4 MS. AUFDEMBERGE: Can you read it now, please?
- 5 WITNESS GOHRING: Be specific. Are you
- 6 talking about the indented part?
- 7 MS. AUFDEMBERGE: Yes.
- 8 WITNESS GOHRING: I have read it.
- 9 MS. AUFDEMBERGE: Okay. This is basically
- 10 Congress saying that CVP yield -- the delivery
- 11 capability of the CVP is during the '28 to 1934
- 12 drought; is that correct?
- 13 CO-HEARING OFFICER DODUC: Way too fast,
- 14 Ms. Aufdemberge.
- 15 MS. AUFDEMBERGE: This is Congress saying CVP
- 16 yield is the delivery capability of the CVP during the
- 17 1928 to 1934 drought; is that correct?
- 18 MR. BEZERRA: Objection, calls for legal
- 19 conclusion. Among other things, it says "for purpose
- 20 of this section." It's a specific part of the CVP IA,
- 21 so you can't conclude anything outside of this section.
- 22 And Mr. Gohring is not an attorney.
- MS. AUFDEMBERGE: I can ask my final question,
- 24 then.
- 25 CO-HEARING OFFICER DODUC: Please.

- 1 MS. AUFDEMBERGE: Are the years 1976 to 1977
- 2 different from the years 1928 to 1934?
- 3 MR. MILIBAND: Objection, vague.
- 4 CO-HEARING OFFICER DODUC: Different in what
- 5 way?
- 6 MS. AUFDEMBERGE: Just different.
- 7 MR. MILIBAND: Renew my objection.
- 8 CO-HEARING OFFICER DODUC: I'm sorry. Your
- 9 objection was?
- MR. MILIBAND: Vague and ambiguous.
- 11 CO-HEARING OFFICER DODUC: Sustained.
- MS. AUFDEMBERGE: I want to consult real
- 13 quick.
- 14 Is the hydrology in the years 1976 to 1977
- different than the hydrology of the years 1928 to 1934?
- 16 MR. BEZERRA: Objection, assumes facts not in
- 17 evidence. The hydrology of those periods is an
- 18 extraordinarily large amount of data points, I imagine.
- 19 CO-HEARING OFFICER DODUC: Overruled.
- To the extent that you are familiar with the
- 21 hydrological conditions and can answer that question.
- 22 WITNESS GOHRING: My understanding is that the
- 23 hydrology in 1976-'77 is different than the hydrology
- 24 of 1928 to 1934.
- MS. AUFDEMBERGE: Thank you.

- 1 No further questions.
- 2 CO-HEARING OFFICER DODUC: Thank you. I think
- 3 I'm exhausted just listening to that cross-examination.
- 4 We will take a break, and we will return at 2:50.
- 5 I'm sorry. I think I gave you way too much --
- 6 see, I am exhausted. 2:35.
- 7 (Recess taken)
- 8 CO-HEARING OFFICER DODUC: It is 2:35. We are
- 9 back in session.
- I see Ms. Ansley at the microphone for
- 11 housekeeping matter, I assume?
- 12 MS. ANSLEY: Just quickly. Do you
- 13 anticipate -- I understand that we're going through the
- 14 cross for the Water Forum group. Do you anticipate
- 15 reaching the County of Yolo's first panel today? And I
- 16 don't see Ms. Meserve around to ask her. I can't
- 17 remember if we had an agreement already about when they
- 18 would start or not.
- 19 CO-HEARING OFFICER DODUC: Even if we didn't,
- 20 I think I would be more than happy to adjourn a little
- 21 bit early today. Does anyone object?
- (No response)
- 23 CO-HEARING OFFICER DODUC: I see no objection.
- MS. ANSLEY: I hope she's listening then.
- 25 CO-HEARING OFFICER DODUC: Unless she rushes

- 1 here in the next, you know, ten minutes and tells me
- 2 they're ready to go, we will adjourn after completion
- 3 of this --
- 4 MS. ANSLEY: Of the Water Forum?
- 5 CO-HEARING OFFICER DODUC: Water Forum.
- 6 MS. ANSLEY: Thank you.
- 7 MR. MILIBAND: And for clarity, Hearing Chair
- 8 Doduc, I've had some communications with Ms. Meserve,
- 9 and I think she'll be very relieved to hear that based
- 10 on and understanding from last Friday that Panel 5
- 11 would not start -- or Group 5, rather, would not start
- 12 until Thursday.
- 13 CO-HEARING OFFICER DODUC: Okay.
- 14 MR. BEZERRA: One further housekeeping matter.
- 15 We understand that doctor -- the temperature model for
- 16 the American River that Dr. Addley used was provided to
- 17 Reclamation Central Valley Operations office two years
- 18 ago. That was the tool. We believe we could probably
- 19 post the actual model runs that were used within a few
- 20 days.
- 21 CO-HEARING OFFICER DODUC: Thank you. And
- 22 then since we are on it, with respect to I believe it
- 23 was Ms. Morris' earlier objection to something
- 24 Mr. Bratovich stated in his testimony, oral testimony,
- 25 I've been advised that it takes us about 15 business

- 1 days to get a copy of the transcript.
- 2 So once we have a copy of that transcript, in
- 3 particular, that section of Mr. Bratovich's testimony,
- 4 we will make it available to all parties.
- 5 MR. MILIBAND: And Hearing Chair Doduc, we
- 6 might be able to shortcut this one as well.
- 7 CO-HEARING OFFICER DODUC: Oh, perfect.
- 8 MR. MILIBAND: In fact, rather than to save
- 9 for redirect, I'm happy to address that now because
- 10 there is a specific reference to 75 degrees. And I'll
- 11 make this representation given that it's not on the
- 12 screen but it's in Exhibit 702, Page 41, Footnote 6.
- 13 And so that addresses, I believe, a comment or
- 14 basis for objection that Ms. Morris had as to not
- 15 having that figure quantified.
- 16 MS. MORRIS: It does not address it because I
- 17 specifically asked this witness in his opinions just on
- 18 cross-exam whether or not what citations and documents
- 19 he relied on and -- for the injury claim. And he
- 20 specifically said that the two that were cited in his
- 21 opinions, the Biological Opinion and the USBR document,
- 22 did not cite to ARWA-702.
- 23 And it is not incumbent upon us to search
- 24 thousands of pages of documents to find a footnote when
- 25 it wasn't -- if it was that important, it should have

1 been referenced in his opinion and the documents that

- 2 he relied on.
- 3 CO-HEARING OFFICER DODUC: Did that change
- 4 your cross-examination, Ms. Morris, of Mr. Bratovich?
- 5 MS. MORRIS: I couldn't change it because it
- 6 just came out this morning. And I have had no time to
- 7 consult with my experts. I'm not a fishery biologist.
- 8 CO-HEARING OFFICER DODUC: I'm sorry. What
- 9 I'm referring to is you made a comment while you were
- 10 trying to determine whether you had additional
- 11 cross-examination. You said you were striking some
- 12 things because of a motion that was made -- it had
- 13 nothing to do with this? Never mind.
- MR. MILIBAND: Well, I'm hearing something
- 15 entirely different. There were two grounds that I
- 16 heard Ms. Morris making earlier. One was as to not
- 17 having received through written testimony but instead
- 18 only now today, on oral testimony, references to 75
- 19 degrees, which we can demonstrate and has been
- 20 demonstrated is not true by way of Exhibit 702,
- 21 Page 41, Footnote 6.
- 22 CO-HEARING OFFICER DODUC: So let me stop
- 23 right there.
- 24 My understanding, Ms. Morris, was that you had
- 25 asked for that to be struck because it was surprise

- 1 testimony. And now Mr. Miliband is saying it is not
- 2 surprise but in fact is referenced in one of the
- 3 exhibits that were filed.
- 4 MR. MILIBAND: And I would even go one step
- 5 further because the written of Mr. Bratovich, ARWA-700,
- 6 specifically references ARWA-702. And it's within that
- 7 exhibit, Page 41, Footnote 6, that that quantification
- 8 figure is there.
- 9 And, frankly, I don't think that was adding a
- 10 new opinion. It was the basis for an opinion that was
- 11 timely provided through written testimony at the end of
- 12 November 2017.
- 13 CO-HEARING OFFICER DODUC: Thank you for
- 14 further clarifying that.
- 15 Ms. Morris.
- 16 MS. MORRIS: I would like to be clear that
- 17 ARWA-702, as denoted by counsel and his testimony, has
- 18 injury, which was the first panel, and it does not cite
- 19 to ARWA-702. It relies on his testimony in ARWA-703
- 20 and his written testimony regarding injury.
- 21 And the only thresholds that are identified in
- 22 his testimony are 63 degree and 69 degrees. And then
- 23 he has a second part of his testimony that has to do
- 24 with the Modified FMS. That is the testimony of
- 25 ARWA-702. And that was not referenced. And this

1 witness has already, on cross-examine, said he did not

- 2 rely on ARWA -- that ARWA-702 was not cited in any of
- 3 the documents he cited to for injury.
- 4 So it is still surprise testimony, and it is a
- 5 new opinion.
- 6 CO-HEARING OFFICER DODUC: Thank you for
- 7 attempting to clarify this, Mr. Miliband, but we will
- 8 revert to our initial approach, which is to wait for
- 9 the transcript, and we will allow you the opportunity
- 10 to respond then based on the transcript.
- 11 MR. MILIBAND: We appreciate that. Thank you.
- 12 CO-HEARING OFFICER DODUC: Where were we? I
- 13 think we are finally on Ms. Akroyd. Are there any
- 14 other housekeeping matters?
- 15 (Recess taken)
- 16 CO-HEARING OFFICER DODUC: Okay. Ms. Akroyd.
- 17 MS. AKROYD: Rebecca Akroyd for the San Luis
- 18 and Delta-Mendota Water Authority. My questions will
- 19 be for Mr. Gohring, Mr. Bratovich and maybe some for
- 20 Mr. Weaver as well.
- 21 And topics of my cross will be the
- 22 relationship between WaterFix and the Modified FMS and
- 23 some questions about modeling Modified FMS and then
- 24 also about potential impacts to other water users.
- 25 And I will be kind of cutting as I go along.

1 Some of the questions I have planned have already been

- 2 covered. Thank you.
- 3 MR. MILIBAND: We just have a telephone
- 4 ringing. Our apologies.
- 5 CROSS-EXAMINATION BY MS. AKROYD
- 6 MS. AKROYD: I'll begin with Mr. Gohring.
- 7 Earlier you testified about the three
- 8 objectives of the Modified FMS, which include the
- 9 second objective of addressing water temperature
- 10 conditions for fisheries in the Lower American River,
- 11 correct?
- 12 WITNESS GOHRING: Yes.
- 13 MS. AKROYD: Short-cut some of that, since
- 14 we've already gone there quite a bit. If we could
- 15 please pull up ARWA-700, Mr. Bratovich's written
- 16 testimony, the bottom of Page 5.
- 17 Thank you.
- 18 Mr. Bratovich, here you focus on specific
- 19 temperature increases in time periods relevant to
- 20 juvenile rearing and smolt immigration; is that right?
- 21 WITNESS BRATOVICH: Yes.
- 22 MS. AKROYD: In developing the Modified FMS to
- 23 meet the second objective of improving water
- 24 temperature conditions, did you focus the modified FMS
- 25 targets on avoiding specific temperature increases that

- 1 you identified from the WaterFix?
- 2 WITNESS BRATOVICH: I think I understand your
- 3 question, and I think my answer is no.
- We developed -- we've been working on the
- 5 Modified FMS for years. And what we did was we tried
- 6 to make sure that we were providing improved conditions
- 7 over the course of several months for those life
- 8 stages. So did we specifically address the changes
- 9 identified by the -- that we identified due to the
- 10 WaterFix? I would say no.
- 11 MS. AKROYD: Thank you. And if you know,
- 12 would the Modified FMS improve temperature conditions
- 13 beyond addressing impacts from the WaterFix?
- 14 WITNESS BRATOVICH: Could you repeat that,
- 15 please?
- 16 MS. AKROYD: If you know, would the Modified
- 17 FMS improve temperature conditions beyond addressing
- 18 impacts from the WaterFix?
- 19 WITNESS BRATOVICH: The implementation of the
- 20 Modified FMS would improve water temperature conditions
- 21 irrespective of the ones implemented by the WaterFix or
- 22 not. I'm trying to answer your question, I'm not sure.
- 23 But as we demonstrated, it could be a very large number
- 24 of improved temperature conditions --
- 25 (Reporter interruption)

- 1 MR. BEZERRA: His mike's cutting out.
- 2 WITNESS BRATOVICH: Oh, man. It's on. They
- 3 are on.
- 4 MR. BEZERRA: Try one or the other. No
- 5 stereo.
- 6 WITNESS BRATOVICH: Do you really want me to
- 7 repeat that?
- 8 CO-HEARING OFFICER DODUC: She is the boss.
- 9 If she wants it repeated, you will repeat it.
- 10 WITNESS BRATOVICH: Where do you want me to
- 11 start?
- 12 (Record read)
- 13 WITNESS BRATOVICH: The Modified FMS would
- 14 improve water temperature conditions in the Lower
- 15 American River.
- MS. AKROYD: Thank you. Moving on to a point
- 17 of clarification, as we've discussed through other
- 18 cross, you've presented testimony regarding fishery
- 19 impacts on the Sacramento River and the American River;
- 20 is that correct, Mr. Bratovich?
- 21 WITNESS BRATOVICH: We did address both, yes.
- 22 MS. AKROYD: Yes. Did you analyze temperature
- 23 effects of the Modified FMS on the Trinity River?
- 24 WITNESS BRATOVICH: No, I did not.
- 25 MS. AKROYD: Did you analyze temperature

- 1 effects of the Modified FMS on Clear Creek?
- 2 WITNESS BRATOVICH: No, I did not.
- 3 MS. AKROYD: Did you analyze temperature
- 4 effects of the Modified FMS on the Stanislaus River?
- 5 WITNESS BRATOVICH: No, I did not.
- 6 MS. AKROYD: Switching over to Mr. Weaver.
- 7 Mr. Weaver, in your written testimony, you
- 8 referred to ARWA-601, which contains selected modeling
- 9 results of the Modified FMS; is that right?
- 10 WITNESS WEAVER: Yes.
- 11 MS. AKROYD: If we could please bring up
- 12 ARWA-601 and go to PDF Page 71. Thank you.
- 13 Mr. Weaver, this table compares average South
- 14 of Delta CVP agricultural water service contract
- 15 deliveries with the 2006 FMS in place versus the
- 16 Modified FMS in place; is that right?
- 17 WITNESS WEAVER: That's correct.
- MS. AKROYD: And depending on the month and
- 19 year type, this table shows the long-term average
- 20 differences between the Modified FMS and 2006 FMS as
- 21 ranging between negative 39,000 cfs and positive
- 22 13,000 cfs in a given month.
- 23 WITNESS WEAVER: I don't see those numbers,
- 24 no.
- 25 MS. AKROYD: Am I on the wrong -- sorry.

1 We'll strike that question. I think I was referring to

- 2 a different table.
- 3 The comparisons on this table were made using
- 4 CalSim II output, which includes historical flow data
- 5 through September of 2003; is that right?
- 6 WITNESS WEAVER: The period of record for the
- 7 model is 1922 through 2003. I characterize it as
- 8 historical, I think is a little bit of a
- 9 simplification, but generally.
- 10 MS. AKROYD: Thank you. CalSim II model
- 11 results aren't reflective of the conditions during the
- 12 recent drought, correct?
- 13 WITNESS WEAVER: That's correct. The
- 14 recent -- the 2012 to 2015 drought was not in the
- 15 CalSim period of record, no.
- 16 MS. AKROYD: Have you performed any modeling
- 17 or analysis of possible effects of the Modified FMS
- 18 under the hydrology of the recent drought?
- 19 WITNESS WEAVER: I did. It's not part of
- 20 my testimony though -- or I don't have anything handy.
- 21 MS. AKROYD: Was there any change to Folsom
- 22 storage in that analysis?
- 23 WITNESS WEAVER: Yes.
- 24 MR. BEZERRA: Objection, vague and ambiguous
- 25 as to what analysis.

1 MS. AKROYD: We'll go back a step then. You

- 2 just testified that you did perform some modeling or
- 3 analysis of possible effects of the Modified FMS under
- 4 hydrology of the recent drought although that analysis
- 5 was not presented in your testimony here, correct?
- 6 WITNESS WEAVER: It was a very cursory, you
- 7 know, kind of desktop analysis. There was no modeling
- 8 involved.
- 9 MS. AKROYD: Will you please describe what
- 10 analysis you did perform.
- 11 WITNESS WEAVER: I took at look at historical
- 12 Folsom operations and I layered on -- I didn't have the
- 13 exact MRRs, minimum release requirement, that they had
- 14 in the historic operation, so we guessed what they were
- 15 and then calculated what the appropriate indices and
- 16 Modified Flow Management Standard requirements would
- 17 have been and evaluated the operations of the American
- 18 River against those.
- 19 But we didn't look at anything external to the
- 20 American River. We limited it purely to operations for
- 21 the minimum flow requirements and end of -- and the
- 22 storage requirements. And so we didn't try capture
- 23 what the operations would have been above the minimum
- 24 requirements.
- MS. AKROYD: Okay. So as part of that

- 1 analysis, which I understand with the caveats you've
- 2 given, did that analysis show any change to Folsom
- 3 storage during -- under hydrology conditions such as
- 4 those during the recent drought?
- 5 WITNESS WEAVER: Yes, it did.
- 6 MS. AKROYD: Can you please describe those
- 7 changes?
- 8 WITNESS WEAVER: It's all from memory, and I
- 9 haven't looked at that in probably six months to a --
- 10 at least six months.
- 11 My recollection is that it did show that, in
- 12 that recent drought, it would have provided increased
- 13 storage relative to what actually history occurred.
- MS. AKROYD: Do you recall what quantity of
- 15 increased storage?
- 16 WITNESS WEAVER: I would be guessing if I did.
- MS. AKROYD: And I think, based on what you
- 18 just told me, I know the answer to this one. But to
- 19 clarify for the record, did you analyze any impacts to
- 20 South of Delta CVP agricultural water service
- 21 deliveries from the Modified FMS under the hydrology of
- the recent drought?
- 23 WITNESS WEAVER: I did not.
- MS. AKROYD: Thank you.
- 25 If we could please pull up ARWA-501, the

- 1 PowerPoint presentation at PDF Page 51. Thank you.
- 2 And this question is either for Mr. Weaver or
- 3 Mr. Gohring. In reliance on the table we just briefly
- 4 looked at in discussion about impacts, you've testified
- 5 that the CalSim modeling you have done indicates that
- 6 the Modified FMS would not result in redirected impacts
- 7 to South of Delta CVP agricultural contractors; is that
- 8 right?
- 9 WITNESS GOHRING: I don't -- I don't think
- 10 that's exactly what we said.
- 11 I think we said we have avoided redirected
- 12 impacts to Sacramento River fisheries. We went on to
- 13 say -- or I went on to say in my testimony we also see
- 14 negligible changes in other parameters, including South
- 15 of Delta deliveries.
- 16 MS. AKROYD: How confident are you -- this
- 17 probably goes more to the modeling, so probably for
- 18 Mr. Weaver.
- 19 How confident are you that your modeling of
- 20 water supply impacts to South of Delta CVP agricultural
- 21 contracts showing negligible impacts is correct?
- 22 WITNESS WEAVER: I didn't do any evaluation of
- the model's representation of South of Delta water
- 24 supply. And in my -- the limit of my modification to
- 25 the model was just to do the American River. So I

1 can't speak to how they represented the South of Delta

- 2 operations, South Delta water supply deliveries.
- 3 WITNESS GOHRING: Can I take a shot as well at
- 4 that one?
- 5 Within the limits of these modeling tools, I
- 6 am confident that these are negligible changes to South
- 7 of Delta.
- 8 MS. AKROYD: Thank you. Mr. Gohring,
- 9 following up on that, is the Water Forum proposing any
- 10 terms or conditions that would prohibit redirected
- 11 impacts to South of Delta CVP agricultural contractors
- 12 that could result from the Modified FMS to ensure that
- 13 your modeled results match the actual results?
- 14 WITNESS GOHRING: No.
- MS. AKROYD: Is the Water Forum proposing any
- 16 terms or conditions that would prohibit reductions to
- 17 water supply allocations or deliveries that are
- 18 diverted from Folsom Reservoir or the lower American
- 19 River in order to comply with the Modified FMS?
- 20 WITNESS GOHRING: I'm going to have to ask for
- 21 the question again. I'm sorry.
- 22 MS. AKROYD: Is the Water Forum proposing any
- 23 terms or conditions that would prohibit reductions to
- 24 water supply allocations or deliveries that are
- 25 diverted from Folsom Reservoir or the Lower American

- 1 River in order to comply with the Modified FMS
- 2 MR. BEZERRA: Objection, asked and answered.
- 3 It's the same question Mrs. Aufdemberge asked regarding
- 4 the terms and conditions we've proposed.
- 5 CO-HEARING OFFICER DODUC: But it's said much
- 6 slower, so I can understand. Overruled.
- 7 Please answer.
- 8 WITNESS GOHRING: Yeah, I think if you look at
- 9 Paragraph 1 of ARWA-500, our proposed terms and
- 10 conditions, I think that we are proposing something
- 11 along the lines of if Reclamation is -- were to make a
- 12 change to the normal American River M and I shortage
- 13 provisions in order to make the -- in order to hit the
- 14 Folsom Reservoir storage targets, that that would be
- 15 unacceptable.
- 16 MS. AKROYD: Thank you. So you are proposing
- 17 terms and conditions that would protect some CVP
- 18 contractors from loss of water supply per the Modified
- 19 FMS but no terms and conditions to protect others; is
- 20 that right?
- 21 WITNESS GOHRING: We believe we've crafted
- 22 terms and conditions that hold people outside the
- 23 American River harmless while providing a modest
- 24 protection for the American River Basin.
- 25 MS. AKROYD: Thank you. I have no further

- 1 questions.
- 2 CO-HEARING OFFICER DODUC: Thank you,
- 3 Ms. Akroyd.
- 4 Mr. O'Brien?
- 5 And Mr. Ruiz is no longer here, so unless he
- 6 rushes in in the next 15 to 20 minutes, that will be
- 7 the end of cross.
- 8 CROSS-EXAMINATION BY MR. O'BRIEN
- 9 MR. O'BRIEN: Good afternoon. Most of my
- 10 questions are for Mr. Weaver. I'd like to start -- if
- 11 we could pull up ARWA-502 on Page 1. Paragraph 1.
- Mr. Weaver, it's my understanding that the
- 13 ARWA group is proposing terms and conditions reflected
- in this document, ARWA-502; is that correct?
- 15 WITNESS WEAVER: Yes.
- 16 MR. O'BRIEN: In the modeling that you did for
- 17 proceeding, did you always hit the storage targets that
- 18 are reflected in Paragraph 1 of ARWA-502?
- 19 WITNESS WEAVER: No, we did not.
- 20 MR. O'BRIEN: In some cases, did the modeling
- 21 undershoot those storage targets?
- 22 WITNESS WEAVER: Yes, it did. And --
- MR. O'BRIEN: How often?
- 24 WITNESS WEAVER: If we looked at -- I don't
- 25 have the exact statistics in memory, but probably I

- 1 think it was a few percentage of the years. And we
- 2 actually describe several conditions under which
- 3 missing end-of-December storage requirement is
- 4 acceptable.
- 5 We did include some forecasting for fall
- 6 inflows in the model, and so if the simulated inflows
- 7 were less than those -- those, then it would -- that
- 8 was -- it was understandable that the model would
- 9 miss -- say for instance, I don't remember the exact
- 10 numbers, but say we had 100,000 acre-feet forecasted
- 11 inflow for October through December but the actual --
- 12 the simulated year had 90,000 acre-feet, then we would
- 13 expect there to be a shortage or miss the
- 14 end-of-December requirement in that year.
- We also anticipate that there's going to be
- 16 some years where you're operating to the MRR the whole
- 17 year, or basically from June on. And under those
- 18 conditions, it would also be understandable that you
- 19 would possibly miss the end-of-December requirement.
- 20 We're not -- we're not anticipating that there would be
- 21 a reduction in minimum flows in order to hit the
- 22 end-of-December storage target -- or storage
- 23 requirement, excuse me.
- MR. O'BRIEN: If, as you've indicated modeling
- 25 in some years failed to meet the proposed storage

- 1 targets, would that have a tendency to understate the
- 2 impacts of the Modified FMS to other users in the CVP
- 3 system?
- 4 WITNESS WEAVER: It would depend on magnitude
- 5 of that. It could. But it depends on what else is
- 6 going on and what the other conditions were during that
- 7 same time.
- 8 MR. O'BRIEN: Have you attempted to quantify
- 9 or summarize the number of situations where you failed
- 10 to meet the storage targets?
- 11 WITNESS WEAVER: I don't believe so.
- MR. O'BRIEN: You haven't reduced that to
- 13 writing anywhere?
- 14 WITNESS WEAVER: I don't -- not that I'm aware
- 15 of.
- 16 MR. O'BRIEN: Is that a topic you've discussed
- 17 internally? And I'm not talking about conversations
- 18 with your attorneys. But is that a topic that's been
- 19 discussed within the technical team?
- 20 WITNESS WEAVER: The question of under what
- 21 conditions it would miss the end-of-December storage
- 22 requirement?
- MR. O'BRIEN: Yes.
- 24 WITNESS WEAVER: I'm sure it has. We talked
- 25 about a lot of things over the years.

- 1 MR. O'BRIEN: Did you ever consider the
- 2 possibility of redoing the modeling so that you fully
- 3 hit those targets?
- 4 MR. BEZERRA: Just at this point, I'm going to
- 5 object as to vague and ambiguous because there are two
- 6 end-of-December storage requirements in the Modified
- 7 FMS. Mostly it's 300,000 acre-feet, sometimes it's
- 8 230-.
- 9 CO-HEARING OFFICER DODUC: Are you referring
- 10 to a particular one or both?
- 11 MR. O'BRIEN: I'm just referring to what's in
- 12 Paragraph 1 of ARWA-502.
- 13 WITNESS WEAVER: Sure. So in our modeling, we
- 14 do not include an explicit requirement to hit the
- 15 end-of-December. It's set up as an objective. So
- 16 within CalSim, you can assign weights or penalties on
- 17 certain flows and -- or exceeding or undershooting
- 18 flows.
- 19 And so we don't include the end-of-December
- 20 storage requirement as a hard requirement. It is an
- 21 objective. And so we -- there I give CalSim some
- 22 flexibility to operate and to try to meet that.
- 23 But given that it's possible that there are
- 24 other conditions that have a higher weight, that those
- 25 would, based upon CalSim's algorithm, supersede the

- 1 end-of-December storage requirement.
- 2 MR. O'BRIEN: I'm not sure you answered my
- 3 question. My question was whether internally you ever
- 4 considered the option of redoing the modeling so that
- 5 those storage targets were met.
- 6 WITNESS WEAVER: We played -- we did adjust
- 7 some of the weights and tried to find -- to make -- to
- 8 try to -- you know, get them so that we would try to
- 9 hit that target at the end of the year without making
- 10 those weights too obscenely hard.
- I don't think we played with other metrics
- 12 besides that. We just used the CalSim penalties on --
- 13 it's actually on the flows that would meet the
- 14 end-of-December requirement.
- 15 MR. O'BRIEN: Let me make sure I understand
- 16 what you just said. Your response to my question of
- 17 whether you considered redoing the modeling, you said
- 18 you adjusted the weights. What exactly are the
- 19 weights?
- 20 WITNESS WEAVER: Again, CalSim includes --
- 21 rather than saying, you know, because there's a lot of
- 22 competing requirement for flows. And within the CalSim
- 23 model, we use weights for -- to allow the model to
- 24 balance out the different requirements. And so it's
- 25 possible you would get infeasibilities if you just said

- 1 it must equal this value. So you therefore use a
- 2 weight to allow the model to try to balance the
- 3 different requirements.
- 4 And so, like, for example, we use -- you know,
- 5 we don't let it reduce the flows below the MRR to hit
- 6 the end-of-December requirement; therefore, the MRR has
- 7 a higher weight than the end-of-December storage
- 8 requirement. So we've tried to set weights that were
- 9 appropriate to balance out the storage -- all the
- 10 different demands on the operations of the reservoir.
- 11 MR. O'BRIEN: So you could have, if you'd
- 12 wanted to, made the end-of-December storage
- 13 requirements, you could have weighted them higher in
- 14 the modeling so -- to ensure that you would have hit
- 15 those targets?
- 16 WITNESS WEAVER: We could have.
- MR. O'BRIEN: But you chose not to?
- 18 WITNESS WEAVER: We thought we had a good
- 19 balance.
- 20 MR. O'BRIEN: I'd like to move now to ARWA-61,
- 21 please, Page 33. I'm sorry, Page 35.
- This exhibit, Mr. Weaver, presents a number of
- 23 figures relating to simulations of end-of-July Shasta
- 24 Reservoir storage; is that correct?
- 25 WITNESS GOHRING: We have a page discrepancy.

1 WITNESS WEAVER: Yeah, this looks like Folsom

- 2 Reservoir to me.
- 3 WITNESS GOHRING: I think it may be PDF
- 4 Page 35.
- 5 MR. O'BRIEN: PDF Page 35, thank you. That's
- 6 it. Thank you.
- 7 There's a series of these figures, and I just
- 8 want to make sure I understand what these are
- 9 depicting. So we have some purple bars on the bottom
- 10 portion of the graph, and at the top we have some
- orange bars, some of which go up from the 4,500,000
- 12 acre-foot storage line and some go down.
- 13 Can you just explain to me what it means when
- one of the orange lines go down in that figure?
- 15 WITNESS WEAVER: Sure. And just as one
- 16 clarification, it's not using the 4,500
- 17 thousand-acre-foot [sic] storage.
- 18 It's actually -- there's a zero on the right,
- 19 but that does correspond to the 4.5 million-acre-foot
- 20 line.
- MR. O'BRIEN: My mistake.
- 22 WITNESS WEAVER: So those lines represent --
- 23 so there's two columns down below. There's a red
- 24 column and a blue column. They're very difficult to
- 25 see here. And this depicts the 82-year period of

1 record for CalSim. And so what we're showing there at

- 2 the top are the gold bars represent the difference in
- 3 storage between the two alternatives.
- 4 MR. O'BRIEN: So if I was going to determine
- 5 the impact of the Modified FMS on storage in Shasta
- 6 Reservoir end-of-July, I would look at this graph,
- 7 Figure 4.2-4, and I would -- if I was concerned in
- 8 particular about decreases in end-of-July Shasta
- 9 storage, I would focus on the orange lines that dipped
- 10 down below that zero point; is that fair?
- 11 WITNESS WEAVER: The -- yes, the orange bars
- 12 dip below -- the orange bars below the zero line do
- 13 represent the decreases in storage.
- 14 MR. O'BRIEN: And just kind of eyeballing that
- 15 figure, it looks like there's some years in the late
- 16 '80s early '90s. I assume that was during that drought
- 17 that occurred during that time period.
- 18 What's the just ballpark reduction that we're
- 19 looking at in end-of-July Shasta Reservoir storage in
- those drought years?
- 21 WITNESS WEAVER: It looks like the maximum
- there is about 150,000 acre-feet in one particular
- 23 year. And there might be another year that goes just
- 24 below a hundred.
- 25 MR. O'BRIEN: And just so I've got this right,

- 1 it's fair to attribute that reduction in Shasta
- 2 end-of-July storage to the Modified FMS; is that right?
- 3 WITNESS WEAVER: Yes.
- 4 MR. O'BRIEN: Okay. Let's move now the next
- 5 figure, which is Figure 4.2-5.
- I won't take quite as much time with this, but
- 7 this is the end-of-September Shasta storage figure. So
- 8 is it essentially the same thing we just went through
- 9 for July?
- 10 WITNESS WEAVER: Yes.
- 11 MR. O'BRIEN: So, again, if we were focusing
- on that drought period, late '80s, early 90's, what's
- 13 the ballpark reduction in end-of-September Shasta
- 14 storage attributable to the Modified FMS?
- 15 WITNESS WEAVER: It looks like in September
- 16 here, there's just less than 100,000 acre-feet in one
- 17 year and then probably not quite 150- in another year.
- MR. O'BRIEN: And then finally that next
- 19 figure just down below, 4.2-5 -- actually, no.
- 4.2-6 is the end-of-December.
- 21 WITNESS WEAVER: Scroll down a little bit,
- 22 please.
- 23 MR. O'BRIEN: Pull that one up. There we go.
- And same question, so if I'm trying to
- 25 understand the impacts of the Modified FMS on

1 end-of-December Shasta Reservoir storage, I would look

- 2 at the orange lines. And, again, if we focus on that
- 3 drought period, late '80s, early '90s, what does that
- 4 tell us?
- 5 WITNESS WEAVER: That one, that figure does
- 6 show that we have at most about a 100,000-acre-foot
- 7 storage differential.
- 8 I would point out the next two figures
- 9 actually show our cold volume. That was one of the big
- 10 metrics we looked at.
- 11 So if you could go down to Figures 4.2-7 and
- 12 4.2-8. For those same years, we do show that, in
- 13 particular, the 4.2-8 is the cold water pool volume.
- 14 And what we see here is that the effect on storage --
- 15 and you know, again, our target was to avoid redirected
- 16 impacts to Sacramento fisheries and what these figures
- 17 show is that we actually have -- the effects on storage
- 18 overall are greater than the effect on the cold water
- 19 pool volumes.
- 20 MR. O'BRIEN: You said that your objective was
- 21 to avoid impacts on Sacramento River fisheries. Was it
- 22 your understanding that one of the objectives was also
- 23 to avoid impacts to Sacramento River water right
- 24 settlement contractors?
- 25 WITNESS WEAVER: I think that our focus was on

- 1 the redirected impact of fisheries. I don't think that
- 2 we had an explicit stated goal to avoid impacts to
- 3 anything else.
- 4 MR. O'BRIEN: I'd like to turn to ARWA-601,
- 5 the very last page. There's no page number on this.
- 6 There it is, on that last figure.
- 7 This figure is labeled "Simulated Daily
- 8 Sacramento River Water Temperatures for WY," water year
- 9 "1992"; is that correct?
- 10 WITNESS WEAVER: That is correct.
- 11 MR. O'BRIEN: And this figure was prepared
- 12 under your direction as part of your modeling work?
- 13 WITNESS WEAVER: Yes, that's correct. We had
- 14 some -- we looked very closely at the water
- 15 temperatures in the model, in the model output. And
- 16 there were some -- when we looked at exceedance plots,
- 17 there were a couple of temperatures that concerned us.
- 18 So we did a real deep dive into it. So we included
- 19 this as one example of the deep dive we did into the
- 20 water temperature modeling.
- 21 If you could scroll up, please, to the
- 22 previous page.
- 23 And so if I could, I'd like to talk through
- 24 the sequence of slides -- of figures here and describe
- 25 what we observed when we dug into this particular year

- 1 here.
- 2 MR. O'BRIEN: Well, excuse me, Mr. Weaver.
- 3 This is my examination. You're attorneys can ask you
- 4 about other figures when they get a chance to redirect.
- 5 Thank you.
- 6 So back to that last figure, first of all, was
- 7 1992 a drought year?
- 8 WITNESS WEAVER: Yes, it was.
- 9 MR. O'BRIEN: And I believe it was a drought
- 10 year that followed a number of dry years?
- 11 WITNESS WEAVER: That's correct.
- 12 MR. O'BRIEN: I'm trying to understand, it's
- 13 kind of difficult graph for me to read, so bear with
- 14 me. I'm trying to understand what the modeling shows
- in terms of the difference in temperature on the
- 16 Sacramento River at Balls Ferry, which is one of the
- 17 items listed in the legend at the bottom, so if you
- 18 could help me with that.
- 19 Let's focus first on the dark -- the black
- 20 solid line, which is my understanding that's the line
- 21 that represents the Modified FMS; is that correct?
- 22 WITNESS WEAVER: That is correct.
- 23 MR. O'BRIEN: And let's compare that to the
- 24 red solid line, which is the line that represents the
- 25 2006 FMS; is that correct?

- 1 WITNESS WEAVER: That is also correct.
- 2 MR. O'BRIEN: What does a comparison of those
- 3 two lines tell us in terms of what the effect of the
- 4 Modified FMS would be on water temperature at Balls
- 5 Ferry in 1992?
- 6 WITNESS WEAVER: Sure. In this particular
- 7 year, what we're seeing is that the temperatures are
- 8 elevated at Balls Ferry under the Modified FMS relative
- 9 to the 2006 FMS. And that's largely due to -- again,
- 10 if you let me explain the conditions leading up to
- 11 that, I think this is an example -- a good example
- 12 here.
- MR. O'BRIEN: I'll continue with my
- 14 examination. Your lawyers will give you all the
- 15 opportunity you want to explain, I'm sure.
- 16 So you said that there was an effect of the
- 17 Modified FMS on temperature at Balls Ferry in 1992.
- 18 Can you tell me, based on that graph, how much sooner,
- 19 for example -- let's use the temperature of 56 degrees.
- 20 Can you tell me how much sooner the temperature, water
- 21 temperature as Balls Ferry would have hit 56 degrees in
- 22 1992 if Modified FMS had been in effect?
- 23 WITNESS WEAVER: I believe it's a little over
- 24 two weeks earlier.
- MR. O'BRIEN: Okay.

- 1 CO-HEARING OFFICER DODUC: As Mr. O'Brien
- 2 pauses here, just to straight -- lest there's confusion
- 3 later on when someone reads transcripts, the black line
- 4 to which Mr. O'Brien referred and to which Mr. Weaver
- 5 confirmed is a blue line.
- 6 WITNESS WEAVER: That's correct, a navy blue
- 7 line.
- 8 MR. O'BRIEN: My color-blindness coming out
- 9 again. Thank you for that.
- 10 CO-HEARING OFFICER DODUC: Just for the
- 11 record.
- 12 MR. O'BRIEN: I think maybe this is a question
- 13 for Mr. Bratovich.
- Mr. Bratovich, good afternoon.
- 15 WITNESS BRATOVICH: Good afternoon.
- 16 MR. O'BRIEN: You're familiar with temperature
- 17 issues on the upper Sacramento River I take it?
- 18 WITNESS BRATOVICH: Yes, sir.
- 19 MR. O'BRIEN: And that was one of the issues
- 20 that you examined as part of your work in connection
- 21 with this?
- 22 WITNESS BRATOVICH: Yes.
- 23 MR. O'BRIEN: Are you aware that there's a
- 24 process underway to reexamine the temperature
- 25 requirements?

- 1 WITNESS BRATOVICH: Yes. I am.
- 2 MR. O'BRIEN: Can you generally explain what
- 3 that process is?
- 4 WITNESS BRATOVICH: Well, what I understand
- 5 the process to be is that, in recent years, multi-year
- 6 drought, that there was -- National Marine Fisheries
- 7 Service undertook a process to reexamine the
- 8 temperature requirements on the Sacramento River
- 9 because of an investigation into the elevated adverse
- 10 effects on winter-run associated with those
- 11 temperatures.
- 12 So they're a reexamination of the temperature
- 13 requirement. My understanding, which I'm not sure is
- 14 exactly the case, my understanding was that they
- 15 undertook a review of the situation that occurred, and
- 16 actually, in the WaterFix BO itself, they talk about
- 17 changing the requirement from 56 degree mean daily to a
- 18 55.47 datum. That's my understanding.
- 19 MR. O'BRIEN: Thank you. I have nothing
- 20 further.
- 21 CO-HEARING OFFICER DODUC: Thank you,
- 22 Mr. O'Brien.
- 23 Any redirect?
- 24 MR. BEZERRA: Yeah, I believe we'll have some
- 25 redirect. If I could just take a minutes?

1 CO-HEARING OFFICER DODUC: Why don't you take

- 2 a few minutes. We'll take a short break, and we'll
- 3 return at 3:20.
- 4 (Recess taken)
- 5 CO-HEARING OFFICER DODUC: All right. It is
- 6 3:20. We are back.
- 7 Mr. Bezzera.
- 8 MR. BEZERRA: Thank you very much. I have a
- 9 few redirect questions I think primarily for
- 10 Mr. Weaver.
- 11 REDIRECT EXAMINATION BY MR. BEZERRA
- MR. BEZERRA: If we could please pull up
- 13 Exhibit ARWA-601. And there you go, that last -- we'll
- 14 start with the last page here, which is PDF Page 107.
- Mr. Weaver on that graph labeled "Simulated
- 16 Daily Sacramento River Water Temperatures For Water
- 17 Year 1992," did you investigate why the Modified FMS
- 18 results in higher temperatures sooner in the modeling?
- 19 WITNESS WEAVER: Yes, I did.
- 20 MR. BEZERRA: And if we could please school up
- 21 to the previous page, PDF Page 106 and a little bit
- 22 further.
- 23 Mr. Weaver, does that graph labeled "Simulated
- 24 Mean Monthly Nimbus Releases and MRR for Water Year
- 25 1992" help explain that change?

1 WITNESS WEAVER: Yes, it does, and the figure

- 2 above that.
- 3 MR. BEZERRA: Can you please explain why, in
- 4 your opinion, that change in Sacramento River
- 5 temperatures in 1992 occurred in the modeling?
- 6 WITNESS WEAVER: Sure. So what we see here is
- 7 that, under the -- again, the red line is the 2006 FMS,
- 8 and the dark blue line is the Modified FMS. So the
- 9 upper figure is Folsom Reservoir storage, and the
- 10 second figure is the Nimbus releases.
- 11 And so what we see here in the second figure
- 12 is that, in July of 1992, the releases from Folsom
- 13 Reservoir under the 2006 FMS are, for all intents and
- 14 purposes 5,000 cfs; whereas under the Modified FMS,
- 15 they're limited to about 3,000 cfs.
- What we see under the storage under this
- 17 condition is that the 2006 FMS drives Folsom Reservoir
- 18 storage down to essentially dead pool at the end of
- 19 July; whereas, in the Modified FMS, the storage is kept
- 20 up at much higher level.
- 21 And what we see when -- under 2006 FMS, when
- 22 the storage is down at dead pool, it's maintained at
- 23 dead pool essentially through the end of November.
- 24 So in this particular instance, when -- by
- 25 holding the Folsom storage up under the Modified FMS --

- 1 now if we scroll down to the third figure here, we
- 2 should see Shasta releases.
- 3 So what we see is, in that July, when Folsom
- 4 Reservoir storage or Folsom Reservoir releases are, in
- 5 essence, held back to protect storage under the
- 6 Modified Flow Management Standard, we see under 2006
- 7 FMS that the Shasta releases are substantially lower.
- 8 And in particular, again, in July the -- there's a very
- 9 similar flow differential here at Shasta as we's on the
- 10 American River. And this is really the trade-off
- 11 between American River and Sacramento River operations.
- 12 MR. BEZERRA: I'd like to unpack that a little
- 13 bit.
- So essentially, going back down do Page 107
- 15 and that last graph, "simulated Daily Sacramento River
- 16 Water Temperatures For Water Year 1992," the Modified
- 17 FMS results in warmer temperatures in Sac somewhat
- 18 earlier because it, in the modeling, holds somewhat
- 19 more water in Folsom Reservoir longer than the base
- 20 case, correct?
- 21 WITNESS WEAVER: That's correct, the --
- 22 because the Folsom -- the Modified FMS is maintaining a
- 23 higher Folsom Reservoir storage, it flips it around,
- 24 and we do have a decreased Shasta storage.
- 25 But what we believe is the operation under the

- 1 2006 FMS where the 2006 FMS is essentially pushing
- 2 reservoir -- Folsom Reservoir storage down to dead-pool
- 3 is inconsistent with --
- 4 MR. BEZERRA: Okay. Let me unpack the details
- 5 of that a little bit.
- 6 If we could please scroll back up to Page 106,
- 7 and that middle graph entitled "Simulated Mean Monthly
- 8 Nimbus Releases and MRR For Water Year 1992."
- 9 In the base case 2006 FMS in July, the base
- 10 case causes releases from Folsom Reservoir to be
- increased from 1500 to 5,000 cfs for one month,
- 12 correct?
- 13 WITNESS WEAVER: Yes.
- 14 MR. BEZERRA: And it reduces those flows back
- 15 down to less than a thousand the following month,
- 16 correct?
- 17 WITNESS WEAVER: That's correct.
- 18 MR. BEZERRA: And the modified FMS does not --
- 19 only increases flows for that month from 1500 to 3,000,
- 20 correct?
- 21 WITNESS WEAVER: From about 2,000 to 3,000.
- 22 MR. BEZERRA: 2,000 to 3,000 in that month.
- Now if we could scroll up to the previous
- 24 graph entitled, "Simulated Folsom Reservoir Storage For
- 25 Water Year 1992," in the base case, that July release

1 results in Folsom Reservoir hitting dead-pool at the

- 2 end of July, correct?
- 3 WITNESS WEAVER: Correct.
- 4 MR. BEZERRA: And Folsom Reservoir will then
- 5 stay at dead-pool until the end of November, correct?
- 6 WITNESS WEAVER: Correct.
- 7 MR. BEZERRA: And in the Modified Flow
- 8 Management Standard, that condition would not occur,
- 9 correct?
- 10 WITNESS WEAVER: Correct.
- 11 MR. BEZERRA: Okay. So if we could scroll
- 12 back down to that middle slide one more time,
- 13 "Simulated Mean Monthly Nimbus Releases," in your
- 14 experience, have you ever seen Fol- -- Reclamation
- operate Folsom Reservoir in this manner, causing Folsom
- 16 Reservoir to reach dead pool as occurs in the 2006 FMS
- 17 scenario?
- 18 WITNESS WEAVER: No, I don't believe so.
- MR. BEZERRA: Mr. Gohring, have you ever seen
- 20 Reclamation operate Folsom Reservoir in this manner?
- 21 WITNESS GOHRING: No.
- MR. BEZERRA: So if we could -- just to
- 23 conclude, if we could go back down to that final slide,
- 24 "Simulated Sacramento Water Temperatures For 1992,"
- 25 this effect in the modeling at Shasta Reservoir is the

- 1 result of a modified operation in which Folsom
- 2 Reservoir is pulled to dead-pool for six months,
- 3 correct?
- 4 WITNESS GOHRING: Yes.
- 5 MR. BEZERRA: And, again, that operation
- 6 nothing you've ever seen Reclamation conduct, correct?
- 7 WITNESS GOHRING: Correct.
- 8 MR. BEZERRA: Thank you.
- 9 That concludes redirect.
- 10 CO-HEARING OFFICER DODUC: Recross?
- MS. MORRIS: Thank you.
- 12 RECROSS-EXAMINATION BY MS. MORRIS
- MS. MORRIS: Mr. Weaver, the modeling that's
- 14 shown here is done with CalSim, correct?
- 15 CO-HEARING OFFICER DODUC: And for the record,
- 16 this is Ms. Morris recrossing on behalf of State Water
- 17 Contractors.
- MS. MORRIS: My apologies. Thank you.
- 19 WITNESS WEAVER: The figure on the screen
- 20 right now is from the Sacramento River water
- 21 temperature model.
- 22 MS. MORRIS: But what's -- can you go up what
- 23 you were showing about -- on the flows? Can you scroll
- 24 up?
- The charts that we just looked at that Mr.

- 1 Bezzera walked you through were based on CalSim
- 2 modeling, correct?
- 3 WITNESS WEAVER: That's correct.
- 4 MS. MORRIS: And none of the CalSim modeling
- 5 that's shown includes the Shasta RPAs, correct, for
- 6 NMFS, the NMFS Shasta RPAs?
- 7 WITNESS WEAVER: I'm not aware of what is or
- 8 not included. My understanding was that some of the
- 9 RPAs are included in the Sacramento River in the
- 10 CalSim.
- 11 MS. MORRIS: But you don't know if the NMFS
- 12 Shasta RPA is included in the CalSim modeling, correct?
- MR. BEZERRA: Objection, vague and ambiguous
- 14 as to the RPA. We have a 2009 Biological Opinion from
- 15 NMFS that includes an RPA. And we have discussion by
- 16 Mr. O'Brien previously as to a proposed RPA potentially
- 17 that is under consideration now.
- 18 CO-HEARING OFFICER DODUC: Ms. Morris,
- 19 obviously you're probably not talking about what's
- 20 under discussion now.
- MS. MORRIS: I am not because, as you know,
- 22 I've objected numerous times about that.
- 23 So I'm talking about the existing 2009 RPA for
- 24 Shasta.
- 25 WITNESS WEAVER: I am not -- I don't know

- 1 how -- it is or is not included in the model.
- MS. MORRIS: Assuming it isn't included,
- 3 wouldn't it be difficult to see potential impacts to
- 4 Shasta cold water pool if this modeling did not include
- 5 the Shasta RPA?
- 6 MR. MILIBAND: Objection, calls for
- 7 speculation, incomplete hypothetical.
- 8 CO-HEARING OFFICER DODUC: Yes, it is
- 9 speculating, but, Mr. Weaver, are you able to
- 10 speculate?
- 11 WITNESS WEAVER: I'm not sure which -- which
- 12 RPA you're referring to? Is it --
- MS. MORRIS: The NMFS, the cold water pool
- 14 management.
- 15 WITNESS WEAVER: The end-of-September cold
- 16 water pool?
- MS. MORRIS: Yes.
- 18 WITNESS WEAVER: I think this is actually run
- 19 at cold water in August. So I'm not sure how -- I
- 20 don't know if the RPA would be able to project it.
- 21 MS. MORRIS: In this particular scenario.
- 22 WITNESS WEAVER: So are you suggesting that
- 23 the 2006 FMS run here, where it goes up to 5,000 cfs is
- 24 incorrect?
- 25 MS. MORRIS: I'm not suggesting anything. I'm

- 1 asking you a question.
- 2 WITNESS WEAVER: I'm sorry. I'm not equipped
- 3 to evaluate how it responds there.
- 4 MS. MORRIS: Okay. Thank you.
- I have no further questions.
- 6 CO-HEARING OFFICER DODUC: Any other recross?
- 7 (No response)
- 8 CO-HEARING OFFICER DODUC: Not seeing any,
- 9 thank you very much, gentlemen.
- MR. BEZERRA: Thank you.
- 11 CO-HEARING OFFICER DODUC: Does that conclude
- 12 the Water Forum's case in chief?
- MR. MILIBAND: Yes, it does, Hearing Officer
- 14 Doduc, subject to moving our various exhibits, all of
- 15 them, into evidence, which I'm happy to enumerate. But
- 16 they are the ARWA series starting 500 concluding at
- 17 908.
- 18 CO-HEARING OFFICER DODUC: Any objections?
- 19 (No response)
- 20 CO-HEARING OFFICER DODUC: With the exception
- 21 of that one outstanding motion to strike by Ms. Morris,
- 22 the remaining exhibits are hereby received into the
- 23 record.
- MR. MILIBAND: Thank you.
- 25 CO-HEARING OFFICER DODUC: Thank you. Are

- 1 there any housekeeping matter -- actually, you know
- 2 what? Let me get a time estimate.
- 3 For those who are here, in terms of
- 4 cross-examination tomorrow, what is your estimate of
- 5 cross-examination for the first panel, which
- 6 includes -- I won't even try pronounce the names, but
- 7 two witnesses from the County of San Joaquin and Yolo.
- 8 Any cross-examination?
- 9 MS. ANSLEY: I put my sheet away. This is
- 10 Mr. Balaji and the other person?
- 11 CO-HEARING OFFICER DODUC: Yes.
- 12 MS. ANSLEY: I estimate 20 to 30 minutes. I
- 13 usually come in a little bit under as I throw out
- 14 questions, but 20 to 30 minutes at this time for that
- 15 first panel from County Yolo.
- 16 CO-HEARING OFFICE DODUC: Anyone else? What
- 17 about for the second panel, Ms. Ansley, which includes
- 18 Mr. Wilson, Mr. Heringer, and Mr. Slater?
- 19 MS. ANSLEY: I anticipate that will even be
- 20 more limited. At this time, I would estimate 10 to 15,
- 21 but it's very possible that it would be more limited
- 22 than that.
- 23 CO-HEARING OFFICER DODUC: All right. What
- 24 about the third panel?
- 25 MS. ANSLEY: The third panel has a number of

- 1 witnesses. I would say 30 to 40 minutes at this point,
- 2 but that one is still -- I'm still refining, so I'll
- 3 reserve my time estimate for the third panel. But I'd
- 4 be happy, the first thing when we shown up, to go back
- 5 over these numbers.
- 6 CO-HEARING OFFICER DODUC: So it looks like we
- 7 will get to EB MUD tomorrow.
- 8 MR. DEERINGER: No, Thursday.
- 9 CO-HEARING OFFICER DODUC: I'm sorry.
- 10 Thursday, yes, Thursday.
- 11 And so estimate of cross-examination for
- 12 EB MUD?
- MR. MIZELL: Tripp Mizell for DWR. We
- 14 estimate about an hour for East Bay MUD.
- 15 CO-HEARING OFFICER DODUC: Dr. Petrie is not
- 16 available until Monday. All right.
- 17 Let's do this. Is anyone here from Sac
- 18 Regional? Ah, Mr. Ferguson. It's possible we actually
- 19 might get to you late tomorrow afternoon -- I'm sorry,
- 20 Thursday.
- 21 MR. FERGUSON: Yeah. This is Aaron Ferguson
- 22 on behalf of Regional Sanitation. I've been talking to
- 23 Ms. Taber. Her witnesses have issues at the beginning
- 24 of next week, so she was trying to finagle things to
- 25 make sure she could go this week. So if that's going

- 1 to happen that would be great, I think, for her.
- 2 CO-HEARING OFFICER DODUC: Well, I don't know
- 3 if there are any other parties who are anticipating
- 4 cross-examining -- because right now we've only heard
- 5 from the Department. But if this is it, then we very
- 6 likely will get to Sac Regional tomorrow.
- 7 MR. FERGUSON: There's things that might help
- 8 that. If she's talked to East Bay MUD and they're
- 9 willing to have Regional San go before them, would that
- 10 be acceptable? I think we've talked to DWR -- and that
- 11 would actually split Dr. Paulsen up. And we understand
- 12 that. And I know we've requested already to have them
- 13 go together, but this would have Regional San going
- 14 ahead of East Bay MUD sometime this week hopefully.
- 15 CO-HEARING OFFICER DODUC: Any objection to
- 16 that?
- 17 MR. MIZELL: No. Mr. Ferguson checked with us
- 18 about Ms. Taber's proposal, and so long as -- yes, I
- 19 believe the Department is fine with that.
- 20 CO-HEARING OFFICER DODUC: So it is possible
- 21 then, Mr. Ferguson, that we might actually even get to
- 22 Sac Regional County Sanitation District late Thursday.
- MR. FERGUSON: Great.
- 24 CO-HEARING OFFICER DODUC: All right. Thank
- 25 you everyone. Enjoy your afternoon.

1	And we will being back here in this room, 9:30
2	on Thursday.
3	MR. BEZERRA: Just one clarifying so
4	cross-examination exhibits are submitted at the end of
5	Part 2, correct?
6	CO-HEARING OFFICER DODUC: Yes.
7	MR. BEZERRA: Thank you.
