Subject: RE: Update on cyanobacteria conditions in Stockton Deep Water Ship Channel

Hello Christine,

Thank you for the update. The media has been reaching out to our department. I have been communicating with Alisha Wenzel in your absence and she was very helpful. McLeod Lake and Weber Point are currently experiencing an increase of algal blooms and odors from the dying blooms are being reported. Our department is addressing the public questions and concerns. I will reach out to Connie Cochran and keep her updated. Thank you again. The status updates are critical is keeping our department informed.

Respectfully,

Lisa Medina
