PROTEST- PETITION

This form may also be used for objections

**PETITION FOR TIME EXTENSION, CHANGE, TEMPORARY URGENT CHANGE
OR TRANSFER ON**

APPLICATION _____ PERMIT (See Attachment Item 1.) LICENSE _____

**of the California Department Of Water Resources ("DWR") and the
United States Department Of The Interior, Bureau Of Reclamation ("Reclamation")**

**I (We) have carefully read the NOTICE OF PETITION, REQUESTING CHANGES IN
WATER RIGHTS OF THE DEPARTMENT OF WATER RESOURCES AND U.S. BUREAU
OF RECLAMATION FOR THE CALIFORNIA WATERFIX PROJECT, dated October 30,
2015**

Address, email address and phone number of protestant or authorized agent:

<u>DOWNEY BRAND LLP</u>	<u>David Aladjem</u>	<u>Kevin O'Brien</u>
<u>621 Capitol Mall, 18th Fl.</u>	<u>daladjem@downeybrand.com</u>	<u>kobrien@downeybrand.com</u>
<u>Sacramento, CA 95814</u>	<u>TEL (916) 444-1000</u>	<u>FAX (916) 444-2100</u>

ON BEHALF OF: Sacramento Valley Group (See Attachment Item 5.)

Supplemental sheets are attached. To simplify this form, all references herein are to protests and protestants although this form may be used to file comments on temporary urgent changes and transfers.

Protest based on ENVIRONMENTAL OR PUBLIC INTEREST CONSIDERATIONS (Prior right protests should be completed in the section below):

- the proposed action will not be within the State Water Resources Control Board's jurisdiction
- not best serve the public interest
- be contrary to law
- have an adverse environmental impact

State facts which support the foregoing allegations:

See Attachment Item 2.

Under what conditions may this protest be disregarded and dismissed? (Conditions should be of a nature that the petitioner can address and may include mitigation measures.)

See Attachment Item 3.

Protest based on INJURY TO PRIOR RIGHTS:

To the best of my (our) information and belief the proposed change or transfer will result in injury as follows:

See Attachment Item 4.

Protestant claims a right to the use of water from the source from which petitioner is diverting, or proposes to divert, which right is based on (identify type of right protestant claims, such as permit, license, pre-1914 appropriative or riparian right):

See Attachment Item 5.

List permit or license or statement of diversion and use numbers, which cover your use of water (if adjudicated right, list decree).

See Attachment Item 5.

Where is your diversion point located? See Attachment Item 5.

If new point of diversion is being requested, is your point of diversion downstream from petitioner's proposed point of diversion?

See Attachment Item 5.

The extent of present and past use of water by protestant or his predecessors in interest is as follows:

- a. Source See Attachment Item 5.
- b. Approximate date first use made See Attachment Item 5.
- c. Amount used (list units) See Attachment Item 5.
- d. Diversion season See Attachment Item 5.
- e. Purpose(s) of use See Attachment Item 5.

Under what conditions may this protest be disregarded and dismissed?

See Attachment Item 3.

All protests must be signed by the protestant or authorized representative:

Signed: Ken. O'Brien Date: 1/5/16

All protests must be served on the petitioner. Provide the date served and method of service used.

See attached Proof of Service

DIV OF WATER RIGHTS
SACRAMENTO

ATTACHMENT TO SACRAMENTO VALLEY GROUP'S PROTEST TO WATER RIGHTS CHANGE PETITION OF DWR AND RECLAMATION FOR CALIFORNIA WATERFIX PROJECT

Introduction

Protestant previously has coordinated and collaborated with other North State Water Alliance (NSWA) parties in preparing and submitting detailed comments on the Bay-Delta Conservation Plan Draft EIR/EIS (DEIR/EIS), and the California WaterFix Recirculated DEIR/Supplemental DEIS (RDEIR/SDEIS), all of which are incorporated herein by this reference. Protestant similarly will be coordinating with the other NSWA parties to present a consolidated case-in-chief during the SWRCB's hearing on certain common issues, including issues regarding whether the requested changes would operate to the injury of any legal user of the water involved and whether the requested changes would unreasonably affect fish and wildlife. Consistent with this approach, Protestant and the other NSWA parties have identified in their respective Notices of Intent to Appear both witnesses who will be providing testimony to support their individual protests and witnesses who will be providing testimony on certain common issues.

Item 1 (Petitioners' Permits)

DWR: Permits 16478, 16479, 16481 and 16482 (Applications 5630, 14443, 14445A, 17512)

Reclamation: Permits 11315, 11316, 11967, 11968, 11969, 11971, 11973, 12364, 12721, 12722 and 12723 (Applications 13370, 13371, 5628, 15374, 15375, 16767, 17374, 17376, 5626, 9363 and 9364)

Item 2 (Facts Supporting Protest Based on Environmental or Public Interest Considerations)

Water Code section 1701.2, subdivision (c), requires a water rights change petition to include “all information reasonably available to the petitioner, or that can be obtained from the Department of Fish and Game, concerning the extent, if any, to which fish and wildlife would be affected by the change, and a statement of any measures proposed to be taken for the protection of fish and wildlife in connection with the change.”

Although the supplement to DWR’s and Reclamation’s August 25, 2015 Petition (the “Petition”) contains some general statements about the California WaterFix Project’s alleged benefits to fish and wildlife (see Petition Supplement, pp. 14-15), the Petition does not contain sufficient information to satisfy the requirements of Water Code section 1701.2, subdivision (c).

The Petition does not discuss any of the evidence presented in NSWA’s July 28, 2014 comments on the DEIR/EIS or in NSWA’s October 30, 2015 comments on the RDEIR/SDEIS. That evidence describes in great detail the adverse effects that the proposed California WaterFix Project would have on fish and wildlife.

Among other things, NSWA’s comments include detailed comments by fisheries expert Dave Vogel, which concluded that the California WaterFix Project would cause catastrophic adverse impacts on anadromous salmonids. Most notably, because of the proposed Project intakes’ locations on the Sacramento River, there would not be sufficient sweeping velocities to avoid impingement of fish against the intake screens and associated injuries. The estimated fish exposure times in front of the proposed intakes (which is a measure of the threat to migrating salmonids) are very long, especially in comparison to exposure times for other fish screens in California.

NSWA’s comments also include expert analysis by Professor Robert Latour, which describes how operation of the proposed new California WaterFix diversion facilities would have adverse impacts on Delta smelt life stages, including survival, growth, maturation schedules, and reproductive success over short, medium and long time periods. The Petition does not discuss any of this information and instead simply states that the proposed new points of diversion would be located outside of the primary habitat of Delta smelt and longfin smelt. (Petition Supp., at pp. 7-8.)

NSWA’s comments also state that operation of the California WaterFix Project’s proposed north Delta diversion could adversely affect Sacramento Valley waterfowl and the Pacific Flyway by reducing diversions of water in the Sacramento Valley that support avian habitat values on both irrigated cropland and wetlands. Mark Petrie of Ducks Unlimited described these impacts in detail in his comments submitted to the State Water Resources Control Board in 2012. (See http://www.waterboards.ca.gov/waterrights/water_issues/programs/bay_delta/docs/comments111312/mark_petrie.pdf.)

Item 3 (Conditions Under Which This Protest May Be Dismissed)

Protestant is working with the other NSWA parties to develop proposed conditions for DWR's and Reclamation's water right permits that would be sufficient to allow protestant to dismiss its protest. Protestant and the NSWA parties plan to submit those proposed conditions for or during the SWRCB's hearing on DWR's and Reclamation's Petition. In general, those conditions would require DWR and Reclamation to operate the State Water Project and the Central Valley Project, respectively, in a manner that would eliminate the potential impacts described in Items 2 and 4 of this protest by: (i) satisfying the terms of all of the contracts and senior water rights held by the NSWA parties, (ii) reflecting the terms of the "area of origin" statutes that preserve water needed in areas where water originates, and (iii) precluding so-called "redirected impacts" on the NSWA parties due to the State Water Project and/or the Central Valley Project using the California WaterFix project.

Item 4 (Facts Supporting Protest Based on Injury to Prior Rights)

NSWA parties divert and use water under various water right permits and licenses, pre-1914 appropriative and riparian rights, and contracts with DWR and Reclamation. Protestant's specific rights are described in Attachment Item 5.

If the SWRCB were to grant DWR's and Reclamation's water rights change petition, and if DWR and Reclamation then were to operate the State Water Project ("SWP") and Central Valley Project ("CVP") to divert and re-divert water at the proposed new points of diversion, then NSWA parties could be injured in several ways, including the following: (a) the new operations of the SWP and CVP could result in lower SWP and CVP settlement contract and water service contract water supplies being available for diversion and use by NSWA parties than would occur without the California WaterFix project; (b) these new operations could change the amounts of storage in SWP and CVP reservoirs and the flows in rivers controlled by the SWP and CVP, and as a result, could create physical limitations on the abilities of NSWA parties to divert water under their SWP and CVP contracts, their Warren Act and other contracts or their water rights; and (c) the new Delta flow criteria required by Water Code section 85086, subdivision (c)(2) could be incorporated into a revised Bay/Delta Water Quality Control Plan, and NSWA members could be required to contribute to the implementation of those new requirements.¹ If the SWRCB issues an order approving DWR's and Reclamation's petition, then the order should include sufficient conditions on DWR's and Reclamation's operations of the SWP and CVP to ensure that such potential injuries to NSWA parties will not occur.

Water Code section 1702 provides that, before the SWRCB may issue an order granting a water rights change petition, "the petitioner must establish, to the satisfaction of the board, and it shall find, that the change will not operate to the injury of any legal user of the water involved." To meet the requirements in section 1702 that apply to petitioners, and to assist the SWRCB in meeting its obligations under Water Code section 1702, the SWRCB's regulations, and California Administrative Code, title 23, section 794, subdivision (a), require each water rights change petition to provide various types of information, including the following:

- (1) The amount(s) of water which would have been diverted, consumptively used, or stored under the water right in the absence of the proposed

¹ Water Code section 85086, subdivision (c)(2), provides that any SWRCB order approving the California WaterFix petition "shall include appropriate Delta flow criteria." Water Code section 85086, subdivision (c)(1) provides that these criteria "shall include the volume, quality, and timing of water necessary for the Delta ecosystem under different conditions." Parts I and II of the SWRCB's hearing on the California WaterFix petition will need to address the issue of ensuring that the appropriate flow criteria contained in any SWRCB order on the petition are capable of being implemented without causing injury to other legal users of water and without causing any unreasonable effects on fish and wildlife.

change(s), (a) during the period for which the change is requested, or (b) in a maximum year if the change is permanent;

(2) The amount(s) of water proposed for change, transfer or exchange;

...

(6) The existing and the proposed diversion, release and return flow schedules if stored water is involved or if the streamflow regime will be changed.

...

(9) Information identifying any effects of the proposed change(s) on other known users of water, including identification in quantitative terms of any projected change in water quantity, water quality, timing of diversion or use, consumptive use of the water, reduction in return flows, or reduction in the availability of water within the streams affected by the proposed change(s).

DWR's and Reclamation's Petition for the California WaterFix Project does not contain this required information. Instead, the Petition simply states that it is "limited in scope" and "proposes only to add points of diversion and rediversion" and not to change "any other aspect of existing SWP/CVP permits." (Petition Supp., at p. 1.)

The Petition goes on to state that "operations both now and in the future will not impact the quantity of water available for water users in the watershed because these demands are accounted for prior to diversions to storage or export." (Petition Supp., at p. 19.) The Petition, however, does not demonstrate that the proposed changes would not operate to the injury of any legal user of the water involved because: (i) the Petition does not describe any definite operation plan for the CVP and the SWP with the proposed new points of diversion, and (ii) the modeling conducted by DWR and Reclamation during the CEQA/NEPA process was flawed (see NSWA's July 28, 2014 comments on the DEIR/EIS and NSWA's Oct. 30, 2015 comments on the RDEIR/SDEIS.) As discussed in the MBK Engineers technical memoranda that were included in NSWA's comments, the modeling that DWR and Reclamation conducted for the DEIR/EIS and RDEIR/SDEIS has the following flaws:

1. The incorporation of climate change into the model improperly relies on only one climate change projection when many climate change scenarios are possible, and improperly ignores reasonably foreseeable adaptation measures.
2. The model was built on a benchmark study that had numerous inaccuracies.
3. The model coding and data issues significantly skew the analysis and conflict with actual real-time operational objectives and constraints.
4. The "high outflow scenario" is not sufficiently defined for analysis.

5. Delta Cross-Channel operational assumptions overestimate October outflow.
6. San Luis Reservoir operational assumptions produce results inconsistent with real-world operations.

The Petition refers to the analysis of Alternative 4A in the California WaterFix RDEIR/SDEIS. (Petition Supp., at pp. 12, 13.) However, neither the Petition nor the RDEIR/SDEIS contains sufficient information regarding the details of how the CVP and SWP would be operated if the SWRCB were to grant the Petition, particularly with respect to the amounts of spring outflow and the quantity and timing of water diverted at the proposed new points of diversion and re-diversion. For example, the RDEIR/SDEIS and the Petition state that additional outflow may be required in order to meet the needs of threatened and endangered fish species (RDEIR/SDEIS at p. 4.1-13; Petition Supp., at p. 13), but neither the Petition nor the RDEIR/SDEIS describes the quantity, the timing or the source of water for this additional outflow. In addition, the Petition does not state when water would be diverted at each of the various existing and proposed points of diversion or what the quantities of diversions at each point of diversion would be. The Petition does not even state how DWR and Reclamation would make the decisions about where and when to divert water. As a result, neither interested parties nor the SWRCB can evaluate the potential effect of proposed Project operations.

Moreover, the modeling runs used for the environmental analysis in the RDEIR/SDEIS: (i) do not comport with the proposed flows in Alternative 4A, and (ii) overestimate Delta outflow and underestimate exports by several hundred thousand acre-feet per year. For example, the model calculates compliance with salinity water quality objectives mandated by State Water Resources Control Board Revised Decision 1641 ("RD-1641") at Three Mile Slough. In contrast, Alternative 4A contemplates compliance with the same salinity requirement at Emmaton, which is located substantially downstream from Three Mile Slough. Compliance with this requirement at Three Mile Slough would require less outflow than would be required for compliance with the same requirement at Emmaton. Because the modeling analysis assumed compliance with this requirement would occur at Three Mile Slough while the proposed Alternative 4A now contemplates compliance with this requirement at Emmaton, the estimates of the outflows needed to meet salinity standards that were used in the modeling are too low.

Moreover, the flawed modeling that was used for the DEIR/S and not corrected for the RDEIR/SDEIS overestimated Delta outflows by about 200,000 acre-feet/year and underestimated exports to the CVP South of Delta and SWP contractors by about the same amount. That flawed modeling further underestimated diversions at the North Delta Diversion by about 500,000 acre-feet/year, thereby overestimating flows into the Delta and concluding that Project operations in the Delta would be much more benign than they actually would be.

Operations of the SWP and CVP using the proposed points of diversion and rediversion must preserve water right priorities. (*El Dorado Irrigation Dist. v. State Water Resources Control Board* (2006) 142 Cal. App. 4th 937, 966.) Petitioners must demonstrate how future operations of the CVP and SWP would avoid requiring upstream senior diverters and CVP and SWP contractors that would not be benefitted by the proposed changes to forego diversions so that the CVP and SWP can meet their operational requirements.

For example, in dry years such as those experienced in the last two years, DWR and Reclamation have not been able to meet the D-1641 flow and salinity requirements and have had to file several temporary urgency change petitions, which asked the SWRCB to reduce these requirements. Meeting existing flow and salinity requirements, therefore, could require additional flows in the interior Delta during future dry years. However, the proposed new diversion of water north of the Delta would reduce freshwater inflows into the Delta. To meet even existing standards while reducing Delta inflows, the CVP and SWP would need some new source of water, but no new source of water is described in the Petition.

The RDEIR/SDEIS states that such water would be obtained through water transfers, project reoperation or other sources. (RDEIR/SDEIS at 4.1-6.) However, this general statement does not meet the requirement that the petitioners demonstrate that the proposed California WaterFix Project would not injure other legal users of water. Petitioners must submit sufficient evidence and an adequate operational plan to establish that they would not operate facilities at the proposed points of diversion and re-diversion in a manner that would injure other legal users of water.

Finally, DWR and Reclamation must demonstrate that the future CVP and SWP operations with the proposed changes in points of diversion would not injure the ability of users within the area of origin to meet area of origin demands in the future. Protestants divert and use water within areas where water currently being exported originates. California law expressly recognizes the prior right of communities in these areas of origin to the water that is currently being exported, to the extent that water will be needed in the future to adequately supply the beneficial needs of those areas. (Water Code §§ 10505, 10505.5, 11460, 11463, and 11128; see also §§ 12200-12220.) Demand for water in counties of origin is expected to increase in the future and the likelihood that less water will be available for export is reasonably foreseeable.

	Note:						
Extent of Present Use:	<p>EID has a variety of different water rights, with different priority dates, different places of use, different seasons of use, and different purposes of use. EID manages this portfolio of water rights on a real-time basis, depending on hydrologic and reservoir conditions and operational needs, so as to best meet its customers' demands. As a result, it is misleading to use past usage of any single water right as the measure of that right; instead, the water rights of EID should be viewed as an integrated portfolio, with some rights being used consistently and others reserved for</p>						

	<p>less frequent circumstances. For these reasons, EID has included past usage of each water right, as requested by the SWRCB, but has also included the “face value” of those rights, which more accurately portrays the place of each right in the EID portfolio.</p> <p>Because EID manages its water use through this integrated portfolio, EID objects in advance to any claim by the SWRCB or any other legal user of water or party to the California WaterFix proceedings that the quantity of EID’s rights must be limited to recent usage or that EID is obliged to exercise its water rights in order of seniority. Such a limited construction of EID’s water rights would severely and inappropriately limit EID’s ability to match water deliveries to its customers’ demands and so would not put the water resources of the state to the greatest use of which they are capable.</p>

Extent of Present Use:	<p>EID has a variety of different water rights, with different priority dates, different places of use, different seasons of use, and different purposes of use. EID manages this portfolio of water rights on a real-time basis, depending on hydrologic and reservoir conditions and operational needs, so as to best meet its customers’ demands. As a result, it is misleading to use past usage of any single water right as the measure of that right; instead, the water rights of EID should be viewed as an integrated portfolio, with some rights being used consistently and others reserved for less frequent circumstances. For these reasons, EID has included past usage of each water right, as requested by the SWRCB, but has also included the “face value” of those rights, which more accurately portrays the place of each right in the EID portfolio.</p> <p>Because EID manages its water use through this integrated portfolio, EID objects in advance to any claim by the SWRCB or any other legal user of</p>						

	water or party to the California WaterFix proceedings that the quantity of EID's rights must be limited to recent usage or that EID is obliged to exercise its water rights in order of seniority. Such a limited construction of EID's water rights would severely and inappropriately limit EID's ability to match water deliveries to its customers' demands and so would not put the water resources of the state to the greatest use of which they are capable.

	Note:	Warren Act Contract executed and permit exercised in 2015. Full utilization of right will require expansion or replacement of Folsom Lake intake facilities, further expansion of the El Dorado Hills Water Treatment Plant, and transmission infrastructure improvements.					
Extent of Present Use:	<p>EID has a variety of different water rights, with different priority dates, different places of use, different seasons of use, and different purposes of use. EID manages this portfolio of water rights on a real-time basis, depending on hydrologic and reservoir conditions and operational needs, so as to best meet its customers' demands. As a result, it is misleading to use past usage of any single water right as the measure of that right; instead, the water rights of EID should be viewed as an integrated portfolio, with some rights being used consistently and others reserved for less frequent circumstances. For these reasons, EID has included past usage of each water right, as requested by the SWRCB, but has also included the "face value" of those rights, which more accurately portrays the place of each right in the EID portfolio.</p> <p>Because EID manages its water use through this integrated portfolio, EID objects in advance to any claim by the SWRCB or any other legal user of water or party to the California WaterFix proceedings that the quantity of EID's rights must be limited to recent usage or that EID is obliged to exercise its water rights in order of seniority. Such a limited construction of EID's water rights would severely and inappropriately limit EID's ability to match water deliveries to its customers' demands and so would not put the water resources of the state to the greatest use of which they are capable.</p>

P. SACRAMENTO MUNICIPAL UTILITY DISTRICT (SMUD)

Pre-1914

10,000 afa from the Rubicon River watershed, all of which is subsumed within direct diversions and storage allowed under License No. 11074 listed in this Section P, with the details of the diversion facilities and places of use described below.

Riparian

Riparian rights are diverted at the points of diversion and places of use identified in Licenses 10495, 10496, 10513, 11073, and 11074, and Permit 19025 listed in this Section P, described below. These rights are exercised periodically when flows exceed license and permitted amounts and can be used within the watershed correlatively with other riparian right holders, as reflected in Statement of Diversion and Use Nos., S021843, S021844, S021845, S021846, S021847, S021848, S021859, and S021860.

Direct diversion of Sacramento River water in Solano County on parcel No. 090-210-001 from a direct diversion point at Lat/long 38.08573737; -121.75371792, as reflected in Statement of Diversion and Use No. S015897. This right is exercised periodically when construction work is required on the parcel.

R. SUTTER EXTENSION WATER DISTRICT

Pre-1914

The following descriptions and information are not in any way intended to be an exhaustive list or description of all of protestant Sutter Extension Water District's (SEWD) water rights, but only includes primary water rights that would be subject to injury by the actions protested herein.

SEWD holds pre-1914 appropriative water rights to divert water from the natural flow of the Feather River. SEWD, in conjunction with other districts, owns and operates a water distribution system for agricultural and other beneficial uses to an area located within Butte and Sutter Counties ("SEWD System"). The water supply for the SEWD System is derived from rights to divert from the Feather River and other sources. Certain of those rights and entitlements are reported in Statement No. S000480, which relates to diversions made in conjunction with SEWD's status as one of the four "Joint Districts" (Butte Water District, Richvale Irrigation District, SEWD, and Biggs West Gridley Water District) exercising Pre-1914 rights to divert water of the Feather River.

SEWD's current Feather River water rights originated in 1902 through 1909 with appropriations made by five predecessor diverters. Following various conveyances, the rights of the original five diverters were ultimately consolidated through a 1911 instrument vesting all such rights in the Sutter Butte Canal Company.

Sutter Butte Canal Company was a party to the 1924 Sutter County Superior Court proceeding (*Sutter Butte Canal Co. v. Great Western Power Co., et al.*, Case No. 2360), which decreed various Feather River water rights as between the Sutter Butte Canal Company and the other parties in the proceeding. The 1924 Decree memorialized the rights of the Sutter Butte Canal Company to divert water in the amounts, and at the times and locations designated therein.

In several deeds and conveyances during the 1940's and 1950's, Sutter Butte Canal Company conveyed to SEWD an undivided twenty percent (20%) interest in and to all the water rights and facilities of the Company, and a percentage of certain excess flows in accordance with the 1924 Decree.

In 1969, SEWD, together with the other Joint Districts, entered into an "Agreement on Diversion of Water From the Feather River" with the State of California, acting by and through the Department of Water Resources (1969 Agreement). The 1969 Agreement memorialized the Joint Districts' collective rights to divert water in the quantities, and at the locations and times set forth therein. The 1969 Agreement states that, with the exception of one previously agreed upon change in a point of diversion, the Joint Districts did not surrender, modify, or terminate any of their rights to divert water or change the priority of their rights by agreeing to abide by its terms. The 1969 Agreement further provides that water diverted under the Agreement shall be deemed diverted under the Joint Districts' water rights (which includes SEWD's water rights).

Contractual:

Contract with	Department of Water Resources
Contract number	May 1969 Agreement with DWR for Diversions from the Feather River

Source from which contract water was diverted	Feather River
Point of diversion same as identified water right	No
Amount (Acre-Feet) authorized to divert under this contract	111000
Amount (Acre-Feet) authorized to be diverted in 2014	111000
Exchange or settlement of prior rights	Yes
All monthly reported diversion claimed under the prior rights	Yes
Extent of Present Use:	Presently, Sutter Extension Water District intends to use all of the water available under its right to the extent that such water can be put to reasonable and beneficial use.

PROOF OF SERVICE

I am a resident of the State of California, over the age of eighteen years, and not a party to the within action. My business address is Downey Brand LLP, 621 Capitol Mall, 18th Floor, Sacramento, California, 95814-4731. On January 5, 2016, I served the within document(s):

PROTEST – PETITION (Sacramento Valley Group)

NOTICE OF INTENT TO APPEAR (Sacramento Valley Group)

NOTICE OF INTENT TO APPEAR (Sacramento Municipal Utility District)

BY E-MAIL: by transmitting via e-mail or electronic transmission the document(s) listed above to the person(s) at the e-mail address(es) set forth below.

BY MAIL: by placing the document(s) listed above in a sealed envelope with postage thereon fully prepaid, in the United States mail at Sacramento, California addressed as set forth below.

BY OVERNIGHT MAIL: by causing document(s) to be picked up by an overnight delivery service company for delivery to the addressee(s) on the next business day.

BY PERSONAL DELIVERY: by causing personal delivery by _____ of the document(s) listed above to the person(s) at the address(es) set forth below.

California Department of Water Resources
c/o James Mizell
1416 Ninth Street, Room 1104
Sacramento, CA 95818
James.Mizell@water.ca.gov

U.S. Bureau of Reclamation
c/o Amy Aufdemberge
U.S. Department of Interior
Office of Regional Solicitor, Pacific
Southwest Region
2800 Cottage Way
Sacramento, CA 95825-1898
Amy.Aufdemberge@sol.doi.gov

I am readily familiar with the firm's practice of collection and processing correspondence for mailing. Under that practice it would be deposited with the U.S. Postal Service on that same day with postage thereon fully prepaid in the ordinary course of business. I am aware that on motion of the party served, service is presumed invalid if postal cancellation date or postage meter date is more than one day after date of deposit for mailing in affidavit.

I declare under penalty of perjury under the laws of the State of California that the above is true and correct.

Executed on January 5, 2016, at Sacramento, California.

Catharine F. Irvine
