Dear Honorable SWRCB board members,

Last week during your Sacramento River Temperature workshop I spoke about the life cycle of Winter Run Chinook Salmon historically being 1 – 8 years. I understand after I left the workshop other speakers refuted that biology. I obtained the information I provided from the Pacific States Marine Fisheries Commission website. The first is a link to their document and the second link below is their homepage. I encourage you to check it out for yourselves.

Thank you for your consideration of my comments last week and these here today.

Sincerely,

Dave
