Subject: Melones

Hi

I just read in the Modesto bee about the plan for Melones. This makes no sense to me. Can you explain to me how fish are more important than people? Most Stanislas run salmon and steelhead are far from native fish. Most are hatchery raised. What would these fish be doing without the dam? No run off. Dying is what they would be doing. When is the government going to wake up? This plan sickens me. To purposely allow water out of Melones for fish while we are in one of the worst droughts is absolute insanity. I have been in Tuolumne county my entire life and I remember when the old parrots ferry bridge was exposed due to low water-the difference now though is more agriculture, and people. People who need the water-not fish. By the way-I am a life long fisherman but even I understand gods plan. People first. Period
