Subject: water rationing

We have all done our part and cut back as much as we possibly can. We continually try to do more, but I'm not sure how much more we can do. To impose rationing that would severely cut us back from here after all we have done would be to jeopardize our whole community. If all the plantings die, tourists won't come, businesses will fail and one of the most beautiful tourist destinations in the country will be destroyed. The Coastal Commission needs to get out of Cal Am's way and LET US develop a further source of water. We try and try and still we're told, we can't implement the plans to create more water. That's not the fault of the people who are trying their darndest to conserve. You can't squeeze blood from a stone and that's what you are asking us to do.

I implore you not to put us under further water restrictions.
