<sup>1</sup>Released to assist Reclamation in meeting BO flows.

<sup>2</sup>Storage and withdrawal numbers do not include 2,451 AF of initial storage and withdrawal starting July 2 and ending July 12, since such storage was the result of downstream flow management to balance fishery needs against flood flow bypass.

<sup>3</sup>Numbers will be changed to reflect conservation account deductions due to flood conditions, per the 1988 Agreement.

Some numbers have changed because Tulloch consumptive use was further restrained by actual daily withdrawals (versus a monthly constraint). Numbers can also change when additional data changes the thirty day average used to determine when refill storage, etc is occurring.
