STATE OF CALIFORNIA
STATE WATER RESOURCES CONTROL BOARD

ORDER WQ 2013-0122 – UST

In the Matter of Underground Storage Tank Case Closure

Pursuant to Health and Safety Code Section 25299.39.2 and the Low Threat Underground Storage Tank Case Closure Policy

BY THE EXECUTIVE DIRECTOR¹:

Pursuant to Health and Safety Code section 25299.39.2, the Manager of the Underground Storage Tank Cleanup Fund (Fund) recommends closure of the underground storage tank (UST) case at the site listed below.² The name of the Fund claimant, the Fund claim number, the site name and the applicable site address are as follows:

Olympian
Claim No. 14060
Former Olympic Station
13250 Big Basin Way, Boulder Creek

Central Coast Regional Water Quality Control Board

I. STATUTORY AND PROCEDURAL BACKGROUND

Section 25299.39.2 directs the Fund manager to review the case history of claims that have been active for five years or more (five-year review), unless there is an objection from the UST owner or operator. This section further authorizes the Fund Manager to make recommendations to the State Water Resources Control Board (State Water Board) for closure of a five-year-review case if the UST owner or operator approves. In response to a recommendation by the Fund Manager, the State Water Board, or in certain cases the State Water Board Executive Director, may close a case or require the closure of a UST case. Closure of a UST case is appropriate where the corrective action ensures the protection of human health, safety, and the environment and where the corrective action is consistent with:

¹ State Water Board Resolution No. 2012-0061 delegates to the Executive Director the authority to close or require the closure of any UST case if the case meets the criteria found in the State Water Board’s Low Threat Underground Storage Tank Case Closure Policy adopted by State Water Board Resolution No. 2012-0016.

² Unless otherwise noted, all references are to the Health and Safety Code.
1) Chapter 6.7 of Division 20 of the Health and Safety Code and implementing regulations; 2) Any applicable waste discharge requirements or other orders issued pursuant to Division 7 of the Water Code; 3) All applicable state policies for water quality control; and 4) All applicable water quality control plans.

The Fund Manager has completed a five-year review of the UST case identified above, and recommends that this case be closed. The recommendation is based upon the facts and circumstances of this particular UST case. A UST Case Closure Review Summary Report has been prepared for the case identified above and the bases for determining compliance with the Water Quality Control Policy for Low-Threat Underground Storage Tank Case Closures (Low-Threat Closure Policy or Policy) are explained in the Case Closure Review Summary Report.

A. Low-Threat Closure Policy

In State Water Board Resolution No. 2012-0016, the State Water Board adopted the Low Threat Closure Policy. The Policy became effective on August 17, 2012. The Policy establishes consistent statewide case closure criteria for certain low-threat petroleum UST sites. In the absence of unique attributes or site-specific conditions that demonstrably increase the risk associated with residual petroleum constituents, cases that meet the general and media-specific criteria in the Low-Threat Closure Policy pose a low threat to human health, safety and the environment and are appropriate for closure under Health and Safety Code section 25296.10. The Policy provides that if a regulatory agency determines that a case meets the general and media-specific criteria of the Policy, then the regulatory agency shall notify responsible parties and other specified interested persons that the case is eligible for case closure. Unless the regulatory agency revises its determination based on comments received on the proposed case closure, the Policy provides that the agency shall issue a closure letter as specified in Health and Safety Code section 25296.10. The closure letter may only be issued after the expiration of the 60-day comment period, proper destruction or maintenance of monitoring wells or borings, and removal of waste associated with investigation and remediation of the site.

Health and Safety Code section 25299.57, subdivision (l)(1) provides that claims for reimbursement of corrective action costs that are received by the Fund more than 365 days after the date of a closure letter or a Letter of Commitment, whichever occurs later, shall not be reimbursed unless specified conditions are satisfied. A Letter of Commitment has already been issued on the claim subject to this order and the respective Fund claimant, so the 365-day timeframe for the submittal of claims for corrective action costs will start upon the issuance of the closure letter.
II. FINDINGS

Based upon the UST Case Closure Review Summary Report prepared for the case attached hereto, the State Water Board finds that corrective action taken to address the unauthorized release of petroleum at the UST release site identified as:

Claim No. 14060
Former Olympic Station

ensures protection of human health, safety and the environment and is consistent with Chapter 6.7 of Division 20 of the Health and Safety Code and implementing regulations, the Low-Threat Closure Policy and other water quality control policies and applicable water quality control plans.

Pursuant to the Low-Threat Closure Policy, notification has been provided to all entities that are required to receive notice of the proposed case closure, a 60-day comment period has been provided to notified parties, and any comments received have been considered by the Board in determining that the case should be closed.

Pursuant to section 21080.5 of the Public Resources Code, environmental impacts associated with the adoption of this Order were analyzed in the substitute environmental document (SED) the State Water Board approved on May 1, 2012. The SED concludes that all environmental effects of adopting and implementing the Low threat Closure Policy are less than significant, and environmental impacts as a result of complying with the Policy are no different from the impacts that are reasonably foreseen as a result of the Policy itself. A Notice of Decision was filed August 17, 2012. No new environmental impacts or any additional reasonably foreseeable impacts beyond those that were not addressed in the SED will result from adopting this Order.

The UST case identified above may be the subject of orders issued by the Regional Water Quality Control Board (Regional Water Board) pursuant to Division 7 of the Water Code. Any orders that have been issued by the Regional Water Board pursuant to Division 7 of the Water Code, or directives issued by a Local Oversight Program agency for this case should be rescinded to the extent they are inconsistent with this Order.
III. ORDER

IT IS THEREFORE ORDERED that:

A. The UST case identified in Section II of this Order, meeting the general and media-specific criteria established in the Low-Threat Closure Policy, be closed in accordance with the following conditions and after the following actions are complete. Prior to the issuance of a closure letter, the Fund claimant is ordered to:

1. Properly destroy monitoring wells and borings unless the owner of real property on which the well or boring is located certifies that the wells or borings will be maintained in accordance with local or state requirements;

2. Properly remove from the site and manage all waste piles, drums, debris, and other investigation and remediation derived materials in accordance with local or state requirements; and

3. Within six months of the date of this Order, submit documentation to the regulatory agency overseeing the UST case identified in Section II of this Order that the tasks in subparagraphs (1) and (2) have been completed.

B. The tasks in subparagraphs (1) and (2) of paragraph (A) are ordered pursuant to Health and Safety Code section 25296.10 and failure to comply with these requirements may result in the imposition of civil penalties pursuant to Health and Safety Code section 25299, subdivision (d)(1). Penalties may be imposed administratively by the State Water Board or Regional Water Board.

C. Within 30 days of receipt of proper documentation from the Fund claimant that requirements in subparagraphs (1) and (2) of paragraph (A) are complete, the regulatory agency that is responsible for oversight of the UST case identified in Section II of this Order shall notify the State Water Board that the tasks have been satisfactorily completed.

D. Within 30 days of notification from the regulatory agency that the tasks are complete pursuant to paragraph (C), the Deputy Director of the Division of Financial Assistance shall issue a closure letter consistent with Health and Safety Code section 25296.10,
subdivision (g) and upload the closure letter and UST Case Closure Review Summary Report to GeoTracker.

E. As specified in Health and Safety Code section 25299.39.2, subdivision (a) (2), corrective action costs incurred after a recommendation of closure shall be limited to $10,000 per year unless the Board or its delegated representative agrees that corrective action in excess of that amount is necessary to meet closure requirements, or additional corrective actions are necessary pursuant to section 25296.10, subdivisions (a) and (b). Pursuant to section 25299.57, subdivision (I) (1), and except in specified circumstances, all claims for reimbursement of corrective action costs must be received by the Fund within 365 days of issuance of the closure letter in order for the costs to be considered.

F. Any Regional Water Board or Local Oversight Program Agency directive or order that directs corrective action or other action inconsistent with case closure for the UST case identified in Section II is rescinded, but only to the extent the Regional Water Board order or Local Oversight Program Agency directive is inconsistent with this Order.

**Summary**

The Low-Threat Underground Storage Tank (UST) Case Closure Policy (Policy) contains general and media-specific criteria, and cases that meet those criteria are appropriate for closure pursuant to the Policy. This case meets all of the required criteria of the Policy. A summary evaluation of compliance with the Policy is shown in **Attachment 1: Compliance with State Water Board Policies and State Law**. The Conceptual Site Model upon which the evaluation of the case has been made is described in **Attachment 2: Summary of Basic Case Information (Conceptual Site Model)**. Highlights of the case follow:

An unauthorized release was reported in January 1999 following the removal of six USTs (five gasoline and one kerosene). Two smaller gasoline USTs had been removed in 1991. Approximately 1,200 tons of contaminated soil were excavated in 1999. Since 1994, fourteen active monitoring wells and two extraction wells have been installed and monitored regularly. According to groundwater data, water quality objectives have been achieved or nearly achieved for all constituents except benzene in source area monitoring well MW-11.

The petroleum release is limited to soil and shallow groundwater. According to data available in GeoTracker, there are no supply wells regulated by the California Department of Public Health or surface water bodies within 250 feet of the defined plume boundary. No other water supply wells have been identified within 250 feet of the defined plume boundary in files reviewed. Water is provided to water users near the Site by the San Lorenzo Valley Water District. The affected groundwater is not currently being used as a source of drinking water, and it is highly unlikely that the affected groundwater will be used as a source of drinking water in the foreseeable future. Other designated beneficial uses of impacted groundwater are not threatened, and it is highly unlikely that they will be considering these factors in the context of the site setting. Remaining petroleum hydrocarbon constituents are limited and stable, and concentrations are decreasing. Corrective actions have been
implemented and additional corrective actions are not necessary. Any remaining petroleum hydrocarbon constituents do not pose a significant risk to human health, safety or the environment.

Rationale for Closure under the Policy
- General Criteria: The case meets all eight Policy general criteria.
- Groundwater Specific Criteria: The case meets Policy Criterion 1 by Class 1. The contaminant plume that exceeds water quality objectives is less than 100 feet in length. There is no free product. The nearest water supply well or surface water body is greater than 250 feet from the defined plume boundary.
- Vapor Intrusion to Indoor Air: This case meets Policy Criterion 2b. Although no document titled “Risk Assessment” was found in the files reviewed, a professional assessment of site-specific risk from potential exposure to petroleum constituents as a result of vapor intrusion found there to be no significant risk of petroleum vapors adversely affecting human health. The maximum benzene concentration in groundwater is less than 100 µg/L, except in the vicinity of monitoring well MW-11 which is located where no building could be constructed according to building codes. Residual soil contamination only remains in the vicinity of MW-11 beneath a roadway, where no building can be constructed.
- Direct Contact and Outdoor Air Exposure: This case meets Policy Criterion 3b. Although no document titled “Risk Assessment” was found in the files reviewed, a professional assessment of site-specific risk from potential exposure to residual soil contamination found that maximum concentrations of petroleum constituents remaining in soil will have no significant risk of adversely affecting human health. The Site is paved and accidental access to site soils is prevented. Portions of the Site that contain the highest concentrations of residual hydrocarbons lie beneath City property and any maintenance of utilities will require permits, regulatory oversight and construction worker working at the Site will be prepared for exposure as part of their normal daily work.

Objections to Closure and Responses
By April 8, 2013 personal communications (email), the Regional Water Board opposes closure because soil and soil vapor issues have not been adequately addressed.
RESPONSE: The case meets all Policy criteria.

The County of Santa Cruz Health Services Agency submitted a December 19, 2012 letter with the following summarized comments:
- Historic soil analytical results at this Site exceed the San Francisco Regional Water Quality Control Board environmental screening levels (ESLs).
RESPONSE: The referenced soil samples meet the Policy criteria. ESLs have no regulatory effect in this closure review.
- Residual hydrocarbons in soil that remain beneath Pine Street/Lorenzo Street may migrate into future buildings or threaten the health and safety of utility workers.
RESPONSE: Residual hydrocarbons remain beneath Pine Street and Lorenzo Street. However, no buildings could be constructed near remaining soil contamination because there are required building setbacks. Utility work permits are required prior to excavation and utility workers would be made aware of site conditions.
• The lateral and vertical distribution of naphthalene and VOCs, other than BTEX and MTBE, has not been adequately characterized in soil at the Site and vicinity.

**RESPONSE:** There are no soil sample results in the case record for naphthalene. However, the relative concentration of naphthalene in soil can be conservatively estimated using the published relative concentrations of naphthalene and benzene in gasoline. Taken from Potter and Simmons (1998), gasoline mixtures contain approximately 2 percent benzene and 0.25 percent naphthalene. Therefore, benzene can be directly substituted for naphthalene concentrations with a safety factor of eight. Benzene concentrations from the Site are below the naphthalene thresholds in Policy Table 1. Therefore, the estimated naphthalene concentrations meet the thresholds in Table 1 and the Policy criteria for direct contact by a factor of eight. It is highly unlikely that naphthalene concentrations in the soil, if any, exceed the threshold.

**Determination**
Based on the review performed in accordance with Health & Safety Code Section 25299.39.2 subdivision (a), the Fund Manager has determined that closure of the case is appropriate.

**Recommendation for Closure**
Based on available information, residual petroleum hydrocarbons at the Site do not pose a significant risk to human health, safety, or the environment, and the case meets the requirements of the Policy. Accordingly, the Fund Manager recommends that the case be closed. The State Water Board is conducting public notification as required by the Policy. Santa Cruz County has the regulatory responsibility to supervise the abandonment of monitoring wells.

Lisa Babcock, P.G. 3939, C.E.G. 1235

ATTACHMENT 1: COMPLIANCE WITH STATE WATER BOARD POLICIES AND STATE LAW

The case complies with the State Water Resources Control Board policies and state law. Section 25296.10 of the Health and Safety Code requires that sites be cleaned up to protect human health, safety, and the environment. Based on available information, any residual petroleum constituents at the site do not pose significant risk to human health, safety, or the environment.

The case complies with the requirements of the Low-Threat Underground Storage Tank (UST) Case Closure Policy as described below.¹

<table>
<thead>
<tr>
<th><strong>Is corrective action consistent with Chapter 6.7 of the Health and Safety Code and implementing regulations?</strong></th>
<th>❌ Yes ☐ No</th>
</tr>
</thead>
<tbody>
<tr>
<td>The corrective action provisions contained in Chapter 6.7 of the Health and Safety Code and the implementing regulations govern the entire corrective action process at leaking UST sites. If it is determined, at any stage in the corrective action process, that UST site closure is appropriate, further compliance with corrective action requirements is not necessary. Corrective action at this site has been consistent with Chapter 6.7 of the Health and Safety Code and implementing regulations and, since this case meets applicable case-closure requirements, further corrective action is not necessary, unless the activity is necessary for case closure.</td>
<td>☑ Yes ☐ No</td>
</tr>
</tbody>
</table>

| **Have waste discharge requirements or any other orders issued pursuant to Division 7 of the Water Code been issued at this case?** | ☐ Yes ❌ No |

| **If so, was the corrective action performed consistent with any order?** | ☐ Yes ☐ No  ☑ NA |

**General Criteria**
General criteria that must be satisfied by all candidate sites:

| **Is the unauthorized release located within the service area of a public water system?** | ❌ Yes ☐ No |
| **Does the unauthorized release consist only of petroleum?** | ❌ Yes ☐ No |
| **Has the unauthorized ("primary") release from the UST system been stopped?** | ❌ Yes ☐ No |
| **Has free product been removed to the maximum extent practicable?** | ☐ Yes ☐ No  ☑ NA |

¹ Refer to the Low-Threat Underground Storage Tank Case Closure Policy for closure criteria for low-threat petroleum UST sites.

Has a conceptual site model that assesses the nature, extent, and mobility of the release been developed?

- Yes ☑ No ☐

Has secondary source been removed to the extent practicable?

- Yes ☑ No ☐

Has soil or groundwater been tested for MTBE and results reported in accordance with Health and Safety Code Section 25296.15?

- Yes ☑ No ☐

Nuisance as defined by Water Code section 13050 does not exist at the site?

- Yes ☑ No ☐

Are there unique site attributes or site-specific conditions that demonstrably increase the risk associated with residual petroleum constituents?

- Yes ☑ No ☐

<table>
<thead>
<tr>
<th>Media-Specific Criteria</th>
</tr>
</thead>
<tbody>
<tr>
<td>Candidate sites must satisfy all three of these media-specific criteria:</td>
</tr>
</tbody>
</table>

1. **Groundwater:**
To satisfy the media-specific criteria for groundwater, the contaminant plume that exceeds water quality objectives must be stable or decreasing in areal extent, and meet all of the additional characteristics of one of the five classes of sites:

   - Is the contaminant plume that exceeds water quality objectives stable or decreasing in areal extent? ☑ Yes ☐ No ☐ NA
   - Does the contaminant plume that exceeds water quality objectives meet all of the additional characteristics of one of the five classes of sites? ☑ Yes ☐ No ☐ NA

   If YES, check applicable class: ☑ 1 ☐ 2 ☐ 3 ☐ 4 ☐ 5

   For sites with releases that have not affected groundwater, do mobile constituents (leachate, vapors, or light non-aqueous phase liquids) contain sufficient mobile constituents to cause groundwater to exceed the groundwater criteria?

   - Yes ☑ No ☐ NA

2. **Petroleum Vapor Intrusion to Indoor Air:**
The site is considered low-threat for vapor intrusion to indoor air if site-specific conditions satisfy all of the characteristics of one of the three classes of sites (a through c) or if the exception for active commercial fueling facilities applies.

   - Yes ☑ No ☐

**Is the site an active commercial petroleum fueling facility?**
Exception: Satisfaction of the media-specific criteria for petroleum vapor intrusion to indoor air is not required at active commercial petroleum fueling facilities, except in cases where release characteristics can be reasonably believed to pose an unacceptable health risk.

- Yes ☑ No ☐
a. Do site-specific conditions at the release site satisfy all of the applicable characteristics and criteria of scenarios 1 through 3 or all of the applicable characteristics and criteria of scenario 4?
   If YES, check applicable scenarios:  □ 1 □ 2 □ 3 □ 4

b. Has a site-specific risk assessment for the vapor intrusion pathway been conducted and demonstrates that human health is protected to the satisfaction of the regulatory agency?

   □ Yes □ No □ NA

c. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, has the regulatory agency determined that petroleum vapors migrating from soil or groundwater will have no significant risk of adversely affecting human health?

   □ Yes □ No □ NA

3. Direct Contact and Outdoor Air Exposure:
The site is considered low-threat for direct contact and outdoor air exposure if site-specific conditions satisfy one of the three classes of sites (a through c).

a. Are maximum concentrations of petroleum constituents in soil less than or equal to those listed in Table 1 for the specified depth below ground surface (bgs)?

   □ Yes □ No □ NA

b. Are maximum concentrations of petroleum constituents in soil less than levels that a site specific risk assessment demonstrates will have no significant risk of adversely affecting human health?

   □ Yes □ No □ NA

c. As a result of controlling exposure through the use of mitigation measures or through the use of institutional or engineering controls, has the regulatory agency determined that the concentrations of petroleum constituents in soil will have no significant risk of adversely affecting human health?

   □ Yes □ No □ NA
ATTACHMENT 2: SUMMARY OF BASIC CASE INFORMATION (Conceptual Site Model)

Site Location/History

- This Site is located on the northwest corner of Big Basin Highway and Pine Street in Boulder Creek and is an empty lot.
- The Site is bounded by a parking lot across Oak Street to the west, a post office across Lorenzo Street to the north, a business across Pine Street to the east, and residences across Big Basin Highway to the south.
- Fourteen monitoring wells have been installed since 1994 and monitored regularly.
- A Site map showing the location of the former USTs, monitoring wells, and groundwater level contours is provided at the end of this closure review summary (CRA, 2008).
- Nature of Contaminants of Concern: Petroleum hydrocarbons only.
- Source: UST system.
- Date reported: January 1999.
- Status of Release: USTs removed.
- Free Product: None reported.

Receptors

- GW Basin: Unnamed basin.
- Watershed: Big Basin, Santa Cruz, San Lorenzo Valley.
- Beneficial Uses: Municipal and Domestic Water Supply
- Land Use Designation: Commercial.
- Public Water System: San Lorenzo Valley Water District.
- Distance to Nearest Supply Well: According to data available in GeoTracker, there are no public supply wells regulated by California Department of Public Health within 250 feet of the Site. No other water supply wells were identified within 250 feet of the defined plume in the files reviewed.
- Distance to Nearest Surface Water: There is no identified surface water within 250 feet downgradient of the defined plume.

Geology/Hydrogeology

- Stratigraphy: The Site is underlain by clayey silts, granitic sands, and crystalline rock.
- Maximum Sample Depth: 40 feet below ground surface (bgs).
- Minimum Groundwater Depth: 0.25 feet bgd at monitoring well MW-12.
- Current Average Depth to Groundwater: Approximately 6 feet bgd.
- Saturated Zones(s) Studied: Approximately 3 - 20 feet bgd.
- Appropriate Screen Interval: Yes.
- Groundwater Flow Direction: Northeast with an average gradient of 0.046 feet/foot.

### Remediation Summary
- Free Product: None reported in GeoTracker.
- Soil Excavation: Approximately 1,200 tons of petroleum hydrocarbon contaminated soil have been excavated and disposed offsite.
- In-Situ Soil Remediation: None reported.
- Groundwater Remediation: Approximately 40,000 gallons of contaminated groundwater have been extracted.

WQOs: Water Quality Objectives, Regional Water Board Basin Plan

NA: Not Analyzed, Not Applicable or Data Not Available
µg/L: Micrograms per liter, parts per billion
<: Not detected at or above stated reporting limit
TPHg: Total petroleum hydrocarbons as gasoline
MTBE: Methyl tert-butyl ether
TBA: Tert-butyl alcohol
WQOs: Water Quality Objectives, Regional Water Board Basin Plan
-: Regional Water Board Basin Plan does not have numeric water quality objectives for TPHg
*: California Department of Public Health, Response Level

Groundwater Trends

- There are 18 years of regular groundwater monitoring data for this case. Only benzene is exceeds water quality objectives and benzene was only detected in four source area monitoring wells (EX-1, MW-11, MW-12, and MW-13). Benzene trends are shown below: Source Area (EX-1 and EX-2) and Downgradient (MW-14 and MW-8).

Source Area Well

Source Area Well
Evaluation of Current Risk

- Estimate of Hydrocarbon Mass in Soil: Not reported.
- Soil/Groundwater tested for MTBE: Yes, see table below.
- Oxygen: 0.53 to 0.73 percent.
- Plume Length: <100 feet.
- Plume Stable or Decreasing: Yes.
- Contaminated Zone(s) Used for Drinking Water: No.
- Groundwater Risk from Residual Petroleum Hydrocarbons: The case meets Policy Criterion 1 by Class 1. The contaminant plume that exceeds water quality objectives is less than 100 feet in length. There is no free product. The nearest water supply well or surface water body is greater than 250 feet from the defined plume boundary.
- Indoor Vapor Risk from Residual Petroleum Hydrocarbons: This case meets Policy Criterion 2b. Although no document titled "Risk Assessment" was found in the files reviewed, a professional assessment of site-specific risk from potential exposure to petroleum constituents as a result of vapor intrusion found there to be no significant risk of petroleum vapors adversely affecting human health. The maximum benzene concentration in groundwater is less than 100 μg/L, except in the vicinity of monitoring well MW-11 which is located in an area where no building could be constructed according to building codes. Residual soil contamination only remains in the vicinity of MW-11 beneath a roadway, where no building can be constructed.
- Direct Contact Risk from Residual Petroleum Hydrocarbons: This case meets Policy Criterion 3b. Although no document titled "Risk Assessment" was found in the files reviewed, a professional assessment of site-specific risk from potential exposure to residual soil contamination found that maximum concentrations of petroleum constituents remaining in soil will have no significant risk of adversely affecting human health. The Site is paved and accidental access to site soils is prevented. Portions of the Site that contain the highest concentrations of residual hydrocarbons lie beneath City property and any maintenance of utilities will require permits, regulatory oversight and construction worker working at the Site will be prepared for exposure as part of their normal daily work.
