

We maintain exterior fabric awnings as part of our business. We implement water recycling techniques to capture water and either reuse it or use it for watering purposes. Would servicing of these structures be restricted as part of your hardscape provisions as they are technically not hardscapes nor can they effectively be cleaned by sweeping or brushing as anticipated by your regulation. Besides the obvious affect on my type of business, the inability to properly clean and maintain these items will substantially shorten the life of the fabric and ironically would add to landfill if they had to be replaced in addition to the increase of cost to the customer.

Your timely response would be appreciated. Thank you.
